- Flex master plan rules—Flex Benefits Master Plan Rules form (TKFSCR)
- Flex plan credit calculations—Flex Plan Credits Calculation form (FCCSCR)
- Flex plan components—Flex Master/Group Plan Components form (TP-SCR)

2. Enter the Effective Date

Type the date on which the change is effective.

3. Enter the changed information

Select or type an entry to replace the prior entry.

4. Process the entry

Click Save or press Enter to process the entry.

A new table record is created and the following message is displayed:

'—New table entry has been established—'.

5. Process the Recalc Benefit Coverage/Contributions report (85-RPT)

Process this report when any change has been made to the benefits tables that affects eligibility or the calculation of employee or company contributions. Use the report parameters to specify the plan to be recalculated and the effective date of the change.

☞ *Refer to either the eCyborg: Using the Web Client or Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.*

6. Process the HED Segment Changes Effective This Period report (8R-RPT)

Process this report to copy any contribution changes to Payroll.

☞ *Refer to either the eCyborg: Using the Web Client or Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.*

☞ *Refer to* **Benefits/Payroll Interaction** *(on page 535) for more information about the Recalc Benefit Coverage/Contributions report (85-RPT) and the HED Segment Changes Effective This Period report (8R-RPT).*

Identifying employees for de-enrollment from an obsolete plan

Prior to de-enrolling employees from an obsolete plan, you may produce a listing of employees and the plans from which they need to be de-enrolled. You may then use the report as a checklist from which to process the de-enrollments.

1. Process the Plan Premium Statements report (4I-RPT)

Process this report to produce a listing of all employees who must be de-enrolled from obsolete plans. Use the report parameters to specify the as-of date and the plan(s) to be included in the report.

☞ *Refer to either the eCyborg: Using the Web Client or Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.*

2. Review the report to determine which employees must be de-enrolled due to plan deactivation

Use this report as a working document from which to process plan de-enrollments for employees currently enrolled in the obsolete plan(s).

De-enrolling an employee from an obsolete plan

You may record plan de-enrollment on the same form on which enrollments, plan cost/coverage changes, and life status changes are recorded.

Note: *De-enrollments for large numbers of employees can also be submitted through the batch loading process.*

1. Access the benefits plan enrollment form

Access the appropriate enrollment form to de-enroll the employee:

- Welfare plan de-enrollment—Welfare Plan Enrollments/Changes form (55-SCR)
- Deferred plan de-enrollment—Deferred Plan Enrollments/Changes form (64-SCR)
- Flex plan de-enrollment—Flex Benefit Enrollments/Changes form (55FSCR)

2. Enter the Plan ID

Type the Plan ID for which the de-enrollment is to be processed.

3. Enter the Effective Date

Type the date on which the de-enrollment is effective.

4. Select the de-enrollment option

Select the de-enrollment option from the Option (welfare/deferred plans) or Enroll/Change Type (flex plans) list box.

5. Process the entry

Click Save or press Enter to process the entry.

☞ *Refer to* **Maintaining Employee Benefits Information** *(on page 411) for more information about de-enrolling employees from welfare, deferred, and flex plans.*

Copying deduction changes to Payroll

To ensure that plan contributions are no longer deducted through the payroll function, you must process the report that will copy the contribution HED changes to Payroll.

Process the HED Segment Changes Effective This Period report (8R-RPT)

Process this report to copy any contribution changes to Payroll.

☞ *Refer to either the eCyborg: Using the Web Client or Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.*

☞ *Refer to* **Benefits/Payroll Interaction** *(on page 535) for more information about the HED Segment Changes Effective This Period report (8R-RPT).*

Deactivating a benefits plan

To deactivate a benefits plan using the Benefit Plan Rules form (TK-SCR), follow these steps:

1. Access the Benefit Plan Rules form (TK-SCR)

Access this form by making the following selections from the Navigator:

Component:	Benefit Plan Setup and Maintenance
Process:	Welfare Plans
Task:	Plan Name and Basic Rules

Note: *If the form is not already displaying the record you wish to access, click the Selections button on the toolbar. Select the occurrence you want to display.*

For practice, access the Benefit Plan Rules form (TK-SCR) for Organization 999999 for plan 604.

2. Enter the Effective Date

Type a date that reflects the day on which the plan will be considered inactive and will no longer allow enrollments.

For practice, type a date that represents October 1 (US and Canada) or 1 October (elsewhere) of the current year, for example, '10-01-1998' (US and Canada) or '01-10-1998' (elsewhere).

3. Enter the Class

Select 'Inactive Plan' from the drop-down list. Options for this list are provided by the Plan Class option list (BA17).

For practice, select 'Inactive Plan'.

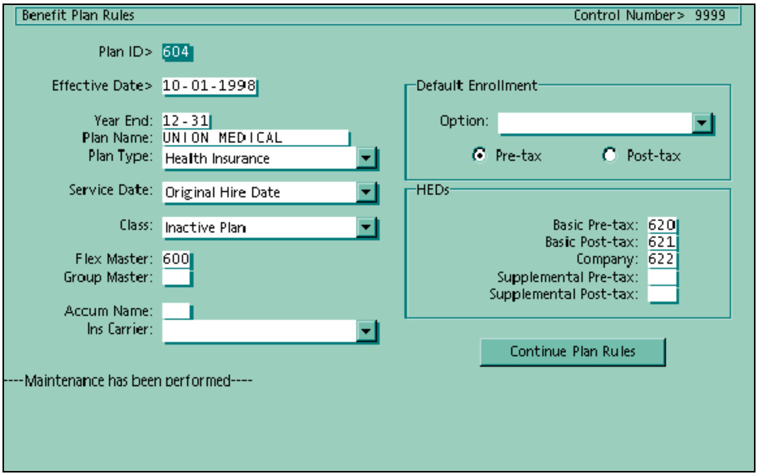
4. Click Save or press Enter

A new Benefit Plan Rules form (TK-SCR) is created, displaying the inactive status of the plan, and the following message is displayed:

'—New table entry has been established—'.

For practice, click OK.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Benefit Plan Rules
Control Number> 9999
Plan ID> 604
Effective Date> 10-01-1998
Year End: 12-31
Plan Name: UNION MEDICAL
Plan Type: Health Insurance
Service Date: Original Hire Date
Class: Inactive Plan
Flex Master: 600
Group Master:
Accum Name:
Ins Carrier:
Default Enrollment
Option:
Pre-tax
Post-tax
HEDs
Basic Pre-tax: 620
Basic Post-tax: 621
Company: 622
Supplemental Pre-tax:
Supplemental Post-tax:
Continue Plan Rules
----Maintenance has been performed----

☞ *Refer to* **Setting Up Welfare Plans** *(on page 53),* **Setting Up Deferred Plans** *(on page 111), and* **Setting Up Flex Plans** *(on page 173) for information about the Benefit Plan Rules form (TK-SCR).*

Review of Questions Answered

1. What organizational changes could result in benefits plan changes?

2. What considerations should be reviewed before you apply benefits plan changes?

3. What tasks must be completed to deactivate a benefits plan?

CHAPTER 16

Monitoring and Costing Plans

In This Chapter

Introduction

Benefits Administration provides capabilities for you to monitor benefits plan participation for compliance purposes and to ensure that your organization is providing employees with the right mix of benefits. In addition, it provides capabilities for you to project future costs for benefits plans.

Tasks

This chapter explains the following:

- Setting up future benefits plan costs
- Updating current enrollee costs
- Projecting monthly and annual plan costs
- Identifying plans for nondiscrimination testing
- Identifying highly-paid employees
- Recording average deferral percentage ratios
- Viewing balance information for flexible spending accounts
- Recording claims for flexible spending accounts

Prerequisites

Before you can monitor and cost your benefits plans, you must set up the following in:

- Organizations
- Employees
- Benefits plans

☞ *Refer to the '***Plan Design** *(on page 29)' section for more information on setting up benefits plans.*

- Employee enrollments

☞ *Refer to the '***Enrollment** *(on page 279)' section for more information on enrolling employees in benefits plans.*

Questions answered

The following questions are answered in this chapter:

1. What tools are available in Benefits Administration for monitoring regulatory compliance?
2. How can the current flexible benefits plan information be used to generate a trend analysis of option selections?
3. What method is available for determining the future cost of benefits plans?

Compliance

Benefits Administration can help you with compliance issues. Once you have defined the requirements for the tests, you can process reports against the information available on the Employee Database. Organizations world wide can benefit from an analysis of who is getting benefits.

For example, in the United States, the identification of highly-paid employees is defined in its legislation and applies to all compliance, nondiscrimination, and coverage testing programs.

Another example in the United States is the calculation of the average deferral percentage by contribution type for each plan in which an employee is enrolled.

Benefits Administration provides much of the information needed for a benefits statement. In the Flexible Benefits area, the Flexible Benefit Plan Personal Information report (4P-RPT) and the Flexible Benefit Plan Enrollment Confirmation report (4X-RPT) contain the components for a benefits statement. These reports can be modified to include workers compensation and employer tax information as well.

The following chart lists a sampling of reports that you can use to monitor plan participation and fill compliance reporting needs:

Report	Use this report to:
Deferred Plan Register (4J-RPT)	Analyze employee deferred plan participation by plan.
Dependent Listing for Plan ID:xxx (4D-RPT)	Verify benefit coverage eligibility, track covered dependents by plan, and coordinate benefit payments.
Flexible Benefit Plan Enrollment Confirmation (4X-RPT)	Verify component plans selected by employees, along with the associated plan options and costs.
Plan Beneficiary Listing (4C-RPT)	Analyze plan beneficiary information and track incomplete beneficiary records.
Plan Participation Register (4B-RPT)	Monitor employee plan participation and verify employee plan data.
Plan Premium Statements (4I-RPT)	Analyze plan costs and prepare a final premium summary for insurance carriers.
Welfare Benefits Register (4A-RPT)	Monitor employee welfare plan participation and verify employee plan data.

☞ *Refer to the* **Report Quick Reference** *(on page 615) for samples of these reports and the parameters used to define them.*

You may modify these reports to fit your particular needs. In addition, you may find it helpful to create customized reports for special requirements. Review the options available in Solution View that can make customized compliance reporting easier.

Apply the Concept

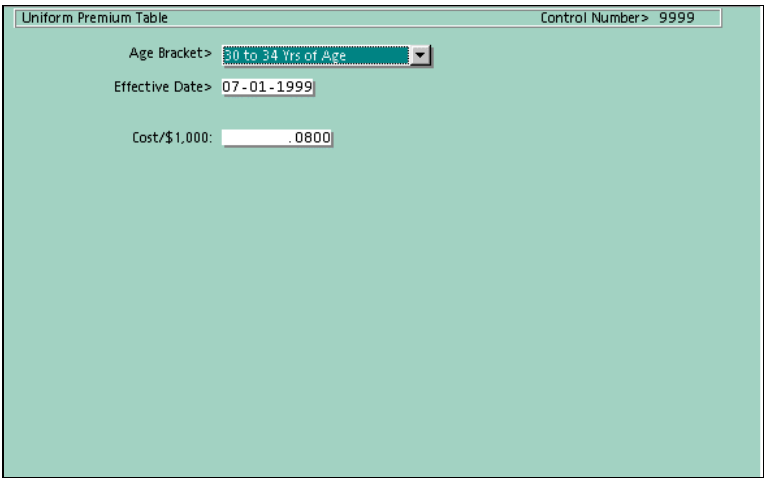
What processes will you have for monitoring benefits compliance?

Imputed income

Employers are required by Section 79 of the Internal Revenue Code to calculate an employee's taxable amount of imputed income from Group Term Life Insurance coverage in excess of 50,000. Benefits Administration provides the tools needed by employers to fulfill this obligation.

The Taxable Group Term Life Insurance Coverage Over $50,000 report (86-RPT) can be run to calculate taxable imputed income. The calculation is based on the employee's coverage amounts for the plan(s) specified on the Report Parameters for Group Insurance Over 50,000 Taxable form and the 'uniform premiums' prescribed in the I.R.C. Section 79(d) table. Contribution amounts are calculated using the appropriate Benefits Administration tables. You can view the current uniform premium rates by accessing the Uniform Premium Table form (TRSSCR). The rates on this table are maintained by Cyborg and should not be modified. Contribution amounts are calculated using the appropriate Benefits Administration tables.

In the following example, the current uniform premium rate for the age bracket 30 to 34 years old is displayed on the Uniform Premium Table form (TRSSCR).



Both basic and supplemental group term life insurance plans provided by the employer must be aggregated before calculations are performed. The amount of the employee contribution for both plans is used as an offset to create the HED that will be used in the Payroll process. Both the basic and supplemental plan IDs can be specified on the Report Parameters form for the Taxable Group Term Life Insurance Coverage Over $50,000 report. The taxable amount of imputed income is then calculated on both insurance types in a single Payroll run.

☞ *Refer to the* **Report Quick Reference** *(on page 615) for a sample of the Taxable Group Term Life Insurance Coverage Over $50,000 report (86-RPT) and the parameters used to define it.*

Dependent group term life insurance

As with employee coverage in group term life insurance plans, taxable imputed income must also be calculated for spousal and dependent coverage. In accordance with Section 79 of the Internal Revenue Code, the taxable amount of imputed income to be calculated for dependents is coverage in excess of 2,000.00. The Dependent Life Insurance Taxable report (86DRPT) is provided to complete this calculation.

The Dependent Life Insurance Taxable report (86DRPT) calculates taxable income using the coverage and contribution amounts for the plan(s) specified on the Report Parameters for Dependent Life Insurance Taxable form and the 'uniform premiums' prescribed in I.R.C. Section 79(d) table. You can view the current uniform premium rates by accessing the Uniform Premium Table form (TRSSCR). The rates on this table are maintained by Cyborg and should not be modified. Contribution amounts are calculated using the appropriate Benefits Administration tables.

☞ *Refer to the* **Report Quick Reference** *(on page 615) for a sample of the Dependent Life Insurance Taxable report (86DRPT) and the parameters used to define it.*

Excess contributions

Most thrift savings plans limit the amount of pre-tax dollars that a participant can contribute each year. The 401(k) Excess Contributions report (2I-RPT) is provided to identify the employees who are enrolled in the plan and have contributed more than the allowable amount of pre-tax dollars for the year.

☞ *Refer to the* **Report Quick Reference** *(on page 615) for a sample of the 401(k) Excess Contributions report and the parameters used to define it.*

Nondiscrimination testing

For a defined contribution plan to be qualified, the contributions under the plan must be nondiscriminatory. To satisfy this requirement, the plan must meet an actual deferral percentage (ADP) test by the close of each plan year. Actual deferral percentage is the percentage of each eligible employee's salary that is deferred into the plan. If a plan fails nondiscrimination testing, it loses its tax advantages. Employees will be taxed on their pre-tax contributions, and companies will have to pay taxes on the company contributions.

In preparation for completing nondiscrimination testing, you must identify which plans should be tested for nondiscrimination. This is accomplished in two steps. First, the Nondiscrimination Test Component Plans form (TV-SCR) must be completed, which identifies the plans to be tested. Second, the Identification of Excludable Employees Report (2A-RPT) must be run to identify the highly-paid employees who will be included in the nondiscrimination testing process.

The next step in applying the ADP test is to determine the actual deferral percentage for each eligible employee. This is done by dividing the amount of an employee's elective deferrals (contributions) by the amount of the employee's compensation. You may run the Nondiscrimination Earnings Update Report (2B-RPT) to complete this process. This report updates earnings on the Components of Highly-Paid Definition form (51-SCR), and calculates the ADP, which displays on the Average Deferral Percentage Ratios form (52-SCR). The employee's pre-tax and post-tax contributions, and the company contribution fields are populated by the Nondiscrimination Earnings Update Report (2B-RPT). As an alternative to running the Nondiscrimination Earnings Update Report (2B-RPT), these forms can be completed manually. You may also access these forms to modify the results of the report.

The final step in determining whether a plan is nondiscriminatory is to divide the eligible employees into two groups—the highly compensated employees and all other eligible employees (the non-highly compensated employees). For each of these groups, the individual actual deferral percentage for each employee is computed and the group average is found. If the average ADP for the highly compensated employees does not exceed the average ADP for the non-highly compensated employees by more than the allowable percentages, the test is satisfied for the year. This distinction is completed by the Determination of Highly-Paid Employees Report (2D-RPT).

☞ *Refer to the* **Report Quick Reference** *(on page 615) for sample Nondiscrimination Testing reports.*

Flexible spending accounts

The Benefits Administration Solution enables you to keep track of reimbursements made to employees from flexible spending accounts, as well as balances remaining in those accounts. The FSA Claims form (56-SCR) is used to enter claims and reimbursements, and the FSA Balance form (57-SCR) is used to monitor current FSA balances.

A flexible spending account (FSA) allows participants to contribute pretax income to fund the cost of any expense covered by the plan. The two most popular types of FSAs are a medical expense account, to reimburse an employee for medical expenses not covered by a health plan, and a dependent expense reimbursement plan. These accounts are subject to special Internal Revenue Code rules and limits to maintain their tax-free status

FSAs can be part of a Benefits program or a Flexible Benefits program. With either option, each employee either enrolls in or waives these plans using the Welfare Plan Enrollments/Changes form (55-SCR).

Enrolling employees

Enrolling employees into a flexible spending account plan during open enrollment is handled in the same manner as any other welfare plan. Mid-year enrollment and life status changes, however, must be properly handled so that the employee's contribution is calculated correctly.

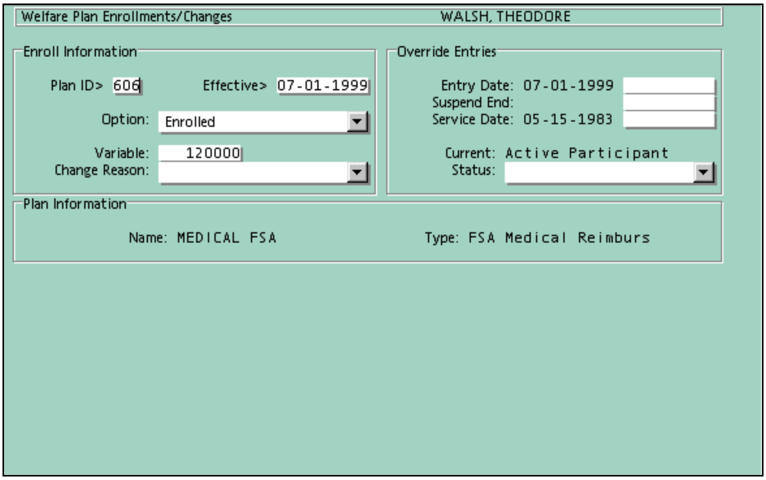
The Contribution Rule list box (option list BA31) on the Coverage And Contribution Factors form (TM-SCR) is used to determine how the contribution is calculated. The FSA Status/Pro-rate option (E8) is provided to calculate contribution amounts for flexible spending accounts. This code allows the system to pro-rate the contribution amount in the case of a mid-year enrollment or life status change, which is displayed on the Deduction Information From Benefit Plans form (54-SCR). The FSA plan must be based on a calendar year coincident with payroll processing pay periods. If this option is used, the following forms will be updated automatically for mid-year enrollments and life status changes:

- Plan Coverage Amount Entry (53-SCR)
- Deduction Information From Benefit Plans (54-SCR)
- FSA Balance (57-SCR)

Note: *No future-dated enrollments are allowed if this option is elected. All enrollments in the FSA plan must be completed during the payroll period in which the first deduction will occur.*

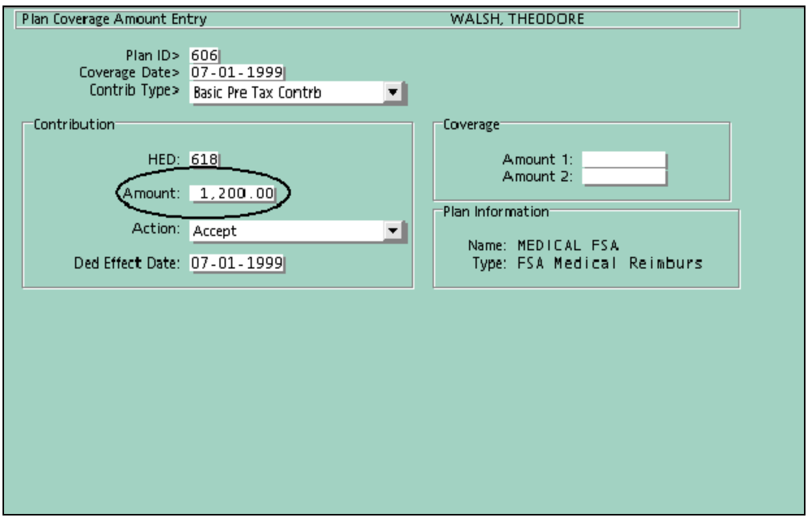
Note: *HR-only organizations need to manually adjust the figures on the Deduction Information From Benefit Plans form (54-SCR) for life status changes.*

In the following example, employee 3002, Theodore Walsh, who is paid monthly, enrolls in Plan 606, the company's medical expense account plan, on July 1, 1999 with an annual contribution of 1,200.00. Notice that the *annual* contribution amount is entered in the Variable text box.

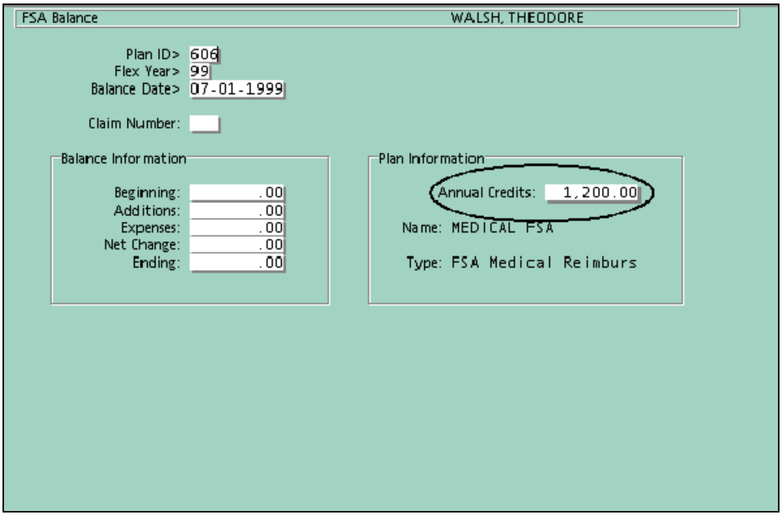


Once the Welfare Plan Enrollment/Changes form (55-SCR) is entered, the Plan Coverage Amount Entry (53-SCR), FSA Balance (57-SCR), and the Deduction Information From Benefit Plans (54-SCR) forms are automatically populated.

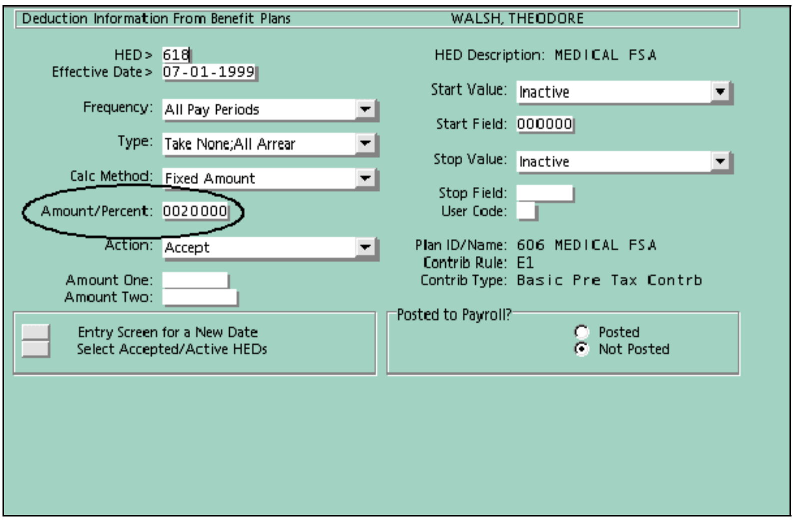
In the following example, notice that the *annual* contribution amount of 1,200.00 displays on the Plan Coverage Amount Entry form (53-SCR).



In the following example, notice that the *annual* contribution amount of 1,200.00 displays on the FSA Balance form (57-SCR).



In the following example, notice that the *per paycheck* contribution amount of 200.00 displays on the Deduction Information From Benefit Plans form (54-SCR). Walsh entered into the plan in July, with only 6 months to contribute. His annual contribution is 1,200.00, and therefore the resulting per paycheck contribution is 200.00.



In order for the system to perform the calculation correctly, several factors must be met. Cyborg suggests that the flexible spending account plan is set up with the following conditions:

- 'Annual Amount' is selected for the Result Freq(uency) list box and 'FSA Status/Pro Rate' is selected for the Contribution Rule list box on the Coverage And Contribution Factors form (TM-SCR) and '12-31' (December 31) is entered for the Year End text box on the Benefit Plan Rules form (TK-SCR)
- One of the following options is selected for the Frequency list box on the Benefit Plan Prototype Contribution HED form (TS-SCR):
  - All Pay Periods
  - All-Even Ded(uction) Cycle 9
- The current pay period's number for the year is entered in the Period Number text box on the Company Pay Frequencies form (AJ-SCR)

See also:

- Setting up future benefits plan costs ***(on page 597)***

For detailed directions on setting up future benefits plan costs.

Balancing accounts

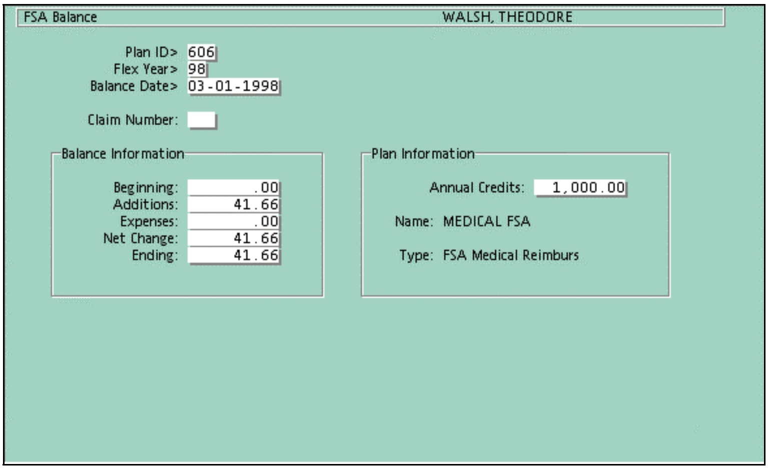
The FSA Balance form (57-SCR) is used to record a flexible spending account's balance information. The system tracks the running balance in the account as additions are made (through payroll deductions) and claims are submitted for reimbursement. The latest account balance always displays; however, all balance records for a plan year are on file and accessible.

The FSA Balance form (57-SCR) interacts extensively with the FSA Claims form (56-SCR), the Update Benefit Plan Balance program (BAXACT), the Update Pending Claim Amounts report (83BRPT) and the Welfare Plan Enrollments/Changes form (55-SCR). The following table explains in detail how these components interact with the FSA Balance form (57-SCR):

Component	Interaction with FSA Balance form
FSA Claims form (56-SCR)	When a claim is processed, the Claim Number text box is automatically updated with the identifying number from the FSA Claims form (56-SCR). Do not enter this text box manually. The Expenses text box displays the claim amount payable when an FSA Claims form (56-SCR) is established.
Update Benefit Plan Balance program (BAXACT)	The Additions text box displays the employee's contributions and is updated by the Update Benefit Plan Balance program(BAXACT).

Component	Interaction with FSA Balance form
Update Pending Claim Amounts report (83BRPT)	The Expenses text box displays a pending amount identified by the Update Pending Claim Amounts report (83BRPT).
Welfare Plan Enrollment/Changes form (55-SCR)	The Annual Credits text box is automatically completed using the amount entered in the Variable Factor text box of the Welfare Plan Enrollments/Changes form (55-SCR).

In the following example, employee 3002, Theodore Walsh, has been enrolled in Plan 606, the company's medical expense account plan, with an annual contribution amount of 1,000.00. To date, his contributions total 41.66.



Viewing account balance history

View the FSA Balance form (57-SCR) to see the total balances of flexible spending accounts recorded for a specified plan year. After you enter the FSA Plan ID and the Plan Year, a second form displays with the account activity and corresponding balances.

Note: *If you are using eCyborg Interactive Benefits, information from the FSA Balance form (57-SCR) is displayed to users when they select FSA Balances.*

During the first benefit year in which your organization installs eCyborg Interactive Workforce, employees will not be able to view flexible spending account (FSA) balances for the previous benefit year on online. After the first year, eCyborg Interactive Workforce will display balances for FSA accounts form the previous year until the cutoff date for submitting FSA claims.

See also:

- Viewing balance information for flexible spending accounts ***(on page 606)***

For detailed directions on viewing balance information for flexible spending accounts.

Recording claims and reimbursements

Record FSA claims using the FSA Claims form (56-SCR). Each time a claim is recorded on the FSA Claims form (56-SCR), the balance is updated and the current amount displays on the FSA Balance form (57-SCR). A current balance is always available online for each FSA because additions to the account are recorded when they are deducted from the employee's pay, and claims are recorded when you post them to be paid.

See also:

- Recording claims for flexible spending accounts ***(on page 607)***

For detailed directions on recording claims for flexible spending accounts.

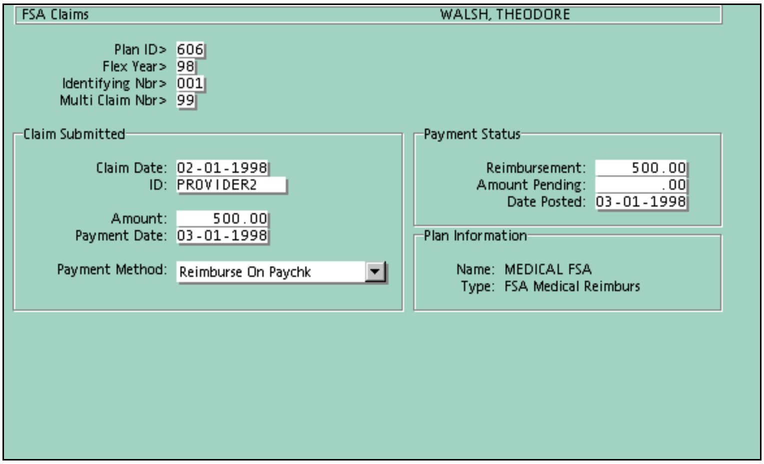
Reimbursement rules

Participants in a medical expense account can be reimbursed for uncovered medical costs, up to the annual amount elected, at any time during the plan year, regardless of the employee contribution to-date balance. Any balance remaining in an employee's medical FSA at the end of the year is forfeited.

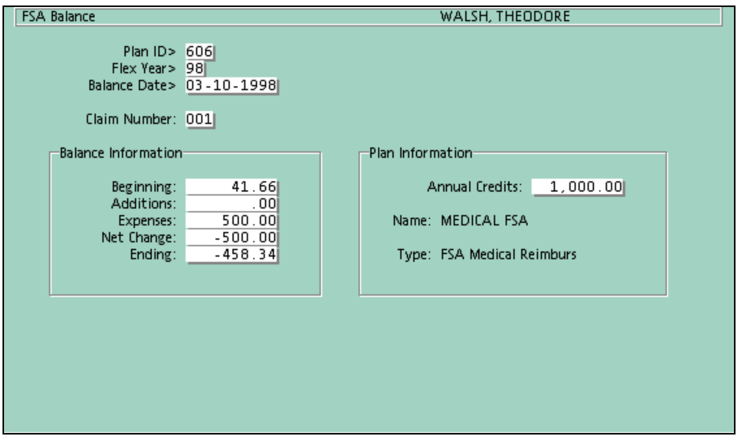
Participants in a dependent expense reimbursement plan can be reimbursed for eligible dependent care expenses up to the current year-to-date balance only. Reimbursements based on contributions that will be made by the employee later in the plan year are not allowed. Like a medical expense account, any balance remaining in a dependent expense reimbursement FSA at the end of the year is forfeited.

an in-depth analysis of the account balance and prior claims is performed when a claim is entered to determine if the entire claim, or any portion thereof, can be paid. If the FSA account does not allow a negative balance, the amount of the claim that exceeds the account balance will be placed in pending.

In the next example, a 500.00 reimbursement claim for Walsh is submitted on February 1 for his medical expense account. The payment is to be made as a reimbursement on Walsh's March 1 paycheck.



By looking at the FSA Balance form (57-SCR) for Walsh, you can see that because he had contributed only 41.66 at the time of the claim, his account has a negative ending balance of -458.34. This is the amount that will be deducted incrementally as Walsh makes additional contributions to the account through the remainder of the year.



Claim IDs

The Identifying Nbr text box and the Multi Claim Nbr text box are used to chronologically organize the claims recorded for each employee.

- The Identifying Nbr text box is a three-position number to be sequentially assigned to claims as they are made. Begin these numbers with 001 and increment the value each time a new claim is recorded, or begin with 999 and decrement the number for each new claim.

- The Multi Claim Nbr text box is reserved for a pending claim ID. This entry can be used as a key separator if there is a portion of the claim that can not be paid because there is not enough in the FSA balance, requiring multiple payments to be generated against the same claim. Enter 99 in this text box for all initial entries on new claims.

Reimbursement issues

Four entries on the FSA Claims form (56-SCR) explicitly define how reimbursements are made and the status of reimbursement payments.

- The Payment Method list box—Allows you to determine how FSA claims will be paid. For example, reimbursements may be paid through regular payroll processing procedures, or by individual check or voucher. Select an option in the Payment Method list box (option listBA34) to reflect how the claim will be paid to the employee. This entry is informational only and does not interact with payroll.
- The Payment Date text box—Identifies the status of a reimbursement payment. Leave the Payment Date text box blank until the reimbursement has been paid to the employee. At that time, enter the date of the reimbursement in this text box. This signals that the claim has been reimbursed and the claim process has been completed for that claim.
- The Reimbursement text box—Represents FSA claims that have been approved; that is, there is enough money in the account to pay the claim. When you see an amount in this text box, you should reimburse the employee for this amount. Then enter the payment date in the Payment Date text box to show that the amount is no longer pending and has been paid. Do not enter an amount in the Reimbursement text box. The account balancing process updates it automatically.
- The Amount Pending text box—Identifies the partial or whole amount of the claim that can not be paid because there is not enough money in the account. The Amount Pending is system-generated. Do not enter an amount in this text box. If you do, the FSA balance can not be generated.

Viewing claims with unpaid pending amounts

View the Pending Flexible Spending Account Claims form (56PSCR) to see the FSA claims that have unpaid pending amounts. FSA claims display on this form if the pending amount is greater than zero. For each claim, you can view the claim amount, pending amount, and account balance.

Viewing account claim history

View the FSA Claims form (56-SCR) to see the total balances of the flexible spending claims recorded for a specified plan year. After you enter the FSA Plan ID and the Flex Year, a second form displays the corresponding FSA claims.

Claim payment options

For each flexible spending account, you must decide the method for recording the pending payment of claims when employees submit expenses. You have four options for handling the payment of claims:

- Option 0—Pay only the amount in the FSA balance and place the remaining amount in pending.
- Option 1—Pay the claim only when the FSA balance exceeds the claim amount.
- Option 2—Pay what the FSA balance allows and ignore any pending amounts.
- Option 3—Pay all claims, even if there is not enough in the FSA balance.

In addition, you must specify a grace period for accepting claims after the close of the plan year. You may choose a 30-, 60-, or 90-day grace period.

Option 0---Pay only the amount in the FSA balance and place the remaining amount in pending

As delivered, the system pays only the amount in the FSA balance and places the remaining amount of the claim in pending, to be paid when additions are made to the account through the employee's payroll deductions. This option does not allow a negative balance.

Note: *This option does not apply to medical flexible spending accounts. Medical FSA plans are set up under option 3.*

For example, an employee has a beginning account balance of 211.53. A claim is processed using the FSA Claims form (56-SCR) for 300.00. The system applies the entire balance of 211.53 toward the plan, and places the remaining 88.47 in pending. The next time the account balance is updated with payroll deductions using the Update Benefit Plan Balance program (BAXACT) and the Update Account Balances report (83ARPT), the Update Pending Claim Amounts report (83BRPT) updates the pending amount and it is applied against the additions, resulting in a new balance.

If your plan has different rules for claims processing, you may deactivate the delivered option or modify Cyborg's Scripting Language to select one of the other three options. This must be done separately for each plan.

Option 1---Pay the claim only when the FSA balance exceeds the claim amount

Option 1 allows you to pay the claim only when the FSA balance exceeds the claim amount. If the balance amount does not exceed the claim amount, the total amount of the claim is placed in pending and will not be paid until the account balance has enough funds.

For example, an employee has an account balance of 211.53. A claim is processed using the FSA Claims form (56-SCR) for 300.00. Since the FSA balance does not exceed the claim amount, the entire claim (300.00) is placed in pending.

To use option 1, you must modify Cyborg's Scripting Language for the FSA Claims form (56-SCR) using the Edit Utility program (EDIT).

With option 1, the amount pending entry on the FSA Claims form (56-SCR) is updated to reflect any updates to the pending claim. The claim will not be paid until there is enough money in the account. After you update the account balance using the Update Benefit Plan Balance program (BAXACT) and the Update Account Balances report (83ARPT), run the Update Pending Claim Amounts report (83BRPT). This report will compare the new account balance to the amount pending entry. If the amount pending is greater than the new account balance, it will be ignored.

If the amount pending is less than or equal to the new account balance, the Update Pending Claim Amounts report (83BRPT) will create a new FSA Claims form (56-RPT) with the same Plan ID, Flex Year, Identifying Nbr, Claim Date, and ID. The following actions will occur:

- The Multi Claim Nbr will be decremented by 1.
- The amount pending will be moved to the reimbursement text box, indicating that there is now enough money in the account to pay the claim.
- The Date Posted entry will reflect the date that the FSA balance was updated.

Option 2---Pay what the FSA balance allows and ignore any pending amounts

Option 2 allows you to pay the claim up to the amount in the FSA balance and ignore any pending amounts. The employee must submit a second claim to be reimbursed for the pending amount.

For example, an employee has an account balance of 211.53. A claim is processed using the FSA Claims form (56-SCR) for 300.00. The system pays 211.53 of the claim, ignoring the remaining 88.47. The employee must submit a new claim to be reimbursed for the 88.47.

To use option 2, you must modify Cyborg's Scripting Language for the FSA Claims form (56-SCR) using the Edit Utility program (EDIT).

Option 3---Pay all claims, even if there is not enough in the FSA balance

Option 3 allows you to pay all claims, even if there is not enough money in the account. The only limit is the credit allocated to the FSA. As delivered, this option should always be left as is because it is specifically used for medical FSA plans.

For example, an employee has a medical FSA balance of 211.53. A claim is processed using the FSA Claims form (56-SCR) for 300.00. The system pays the entire claim, leaving a negative account balance of 88.47.

Grace period of the FSA

Once you have determined how you will handle claim payments, you need to determine the FSA's grace period; that is, how long after the close of the plan year you will continue to accept claims.

As delivered, the system accepts claims for 30 days following the close of the plan year. Alternate Cyborg Scripting Language code is available for a 60- or 90-day grace period. Instructions to modify the grace period are located in the code for the FSA Claims form (56-SCR).

Updating benefit plan balance information

When payroll makes deductions for flexible spending accounts, you need to record them in Benefits Administration as additions to the FSA balances. Use the Update Benefit Plan Balance program (BAXACT) to accomplish this. The program will perform the following:

- Extract payroll contributions from the current history records, and adjust and create FSA Balance form (57-SCR) transactions for FSA plans.
- Apply the contribution transactions so that the FSA balances reflect the current payroll deductions.

Note: *The Update Benefit Plan Balance program (BAXACT) can only be run in batch.*

Note: *You must run the program soon after recreating the Employee Database with the PAYMRG program to ensure that FSA balance forms have access to current amounts.*

Updating contributions to FSA accounts and deferred plans

After you run the Update Benefit Plan Balance program (BAXACT), you may update the account balances by running the Update Contributions To FSA Balance reports (83ARPT and 83BRPT). These reports have two functions:

- They report on balance changes just applied using the Update Benefit Plan Balance program (BAXACT).
- They process any claims that have been entered on the FSA Claims form (56-SCR). If necessary, they update the FSA Balance form (57-SCR) and the FSA Claims form (56-SCR) according to the specifications within the reports.

The FSA Claims form (56-SCR) and the Update Contributions To FSA Balance reports (83ARPT and 83BRPT) create new balance records whenever a claim or pending amount to be paid is identified. In addition, the Claim Number entry on the FSA Balance form (57-SCR) is updated with the claim number that has affected the FSA balance. If multiple claims are processed on the same day, 'MLT' displays in the Claim Number text box.

Note: *The payment options on the Update Contributions To FSA Balance reports (83ARPT and 83BRPT) must match the payment option defined on the FSA Claims form (56-SCR).*

☞ *Refer to the Technical Administration documentation for information on these and other programs involved in completing a pay run.*

Reports that generate information about Flexible Spending Accounts

In addition to the Update Contributions To FSA Balance reports (83ARPT and 83BRPT) the following reports also generate information about FSAs:

Report	Description
FSA Account Balances by Plan (8X-RPT)	Provides a list of all employees enrolled in the specified plan and their account balances. The report includes a listing of the contributions (additions) and claims (expenses) recorded during the plan year.
FSA Balance Statements report (8XERPT)	Provides a monthly statement to employees showing their FSA balance. The statement includes a listing of the contributions (additions) and claims (expenses) recorded during the month.

Report	Description
FSA Claim Payment Notification report (8V-RPT)	Notifies employees that payment has been or will be made to satisfy an authorized and pending claim. Employee notifications are printed when the Posted Date falls within the dates specified on the parameter form. Do not run this report multiple times with the same date range, as this may result in employees receiving duplicate notices.
FSA Claims Recorded By Year report (8W-RPT)	Lists all active employees who have claims recorded for the FSA plan specified on the report parameter form. Only the claims within the Flex Year and as-of date specified on the parameter form will be included on the report.
FSA Claims Recorded; Payments report (8WPRPT)	Lists all employee claims that have been recorded for the FSA plan specified on the report parameter form and have been processed but do not have any payment information recorded.
FSA Claims Recorded; History report (8WRRPT)	Provides a claim history for all active employees who have claims recorded for the FSA plan specified on the report parameter form. Only the claims within the Flex Year and as-of date specified on the report parameter form will be included on the report.
Terminated Employee's FSA report (8Z-RPT)	Lists all terminated employees who have a remaining balance greater than zero, or less than zero if the plan allows a negative balance.

Trend analysis of flexible benefits plan choices

To make durable decisions about your flexible benefits plan components, you may need to collect and analyze data on the popularity of the flex choices that are being offered to your employees. Use Benefits Administration reports to track plan option selections and analyze which plans are being waived.

Depending on the results of a trend analysis, you may want to fine tune the array of component plans being offered. Using Solution View, you can select data from the information recorded in Benefits Administration and create an extract file. The extract file can then be imported to a spreadsheet application that can generate a trend analysis of component plan choices.

Apply the Concept
What processes will you have for monitoring benefits cost?

Budget considerations

Administering benefits plans includes the need for monitoring the costs of those plans and projecting your organization's budget needs for the future. The Benefits Administration Solution can be used in a 'what-if' environment that will allow you to estimate future costs while monitoring your current benefits plan costs.

You can copy one or more of your current benefits plans into the test environment that you set up for your benefits implementation. Changes can then be made to the contribution tables that will reflect a future-dated cost of the plan(s). After a sampling of employees are enrolled in the plan(s) to be costed, reports can be processed against the test file, producing the estimated cost figures for a future period. This process can be repeated multiple times until an acceptable cost level has been achieved.

After you have evaluated the projected costs, you can then make the appropriate changes to the benefits plan tables on your production file, using the new effective dates. When the new effective dates are reached, contributions for the affected plans will be deducted at the new rate.

For detailed directions on projecting monthly and annual plan costs.

Apply the Concept

How will you determine which current flex choices to offer your employees in the future?

Detailed Directions

This section provides detailed directions on completing a business task.

Tasks

Setting up future benefits plan costs

In this task, the benefits plans that need to be costed are copied to a test environment. Then, make the appropriate changes to each contribution table record and process the entry.

1. Access the Coverage And Contribution Factors form (TM-SCR) for the plan(s)

You may access this form by making the following selections from the Navigator:

Component: Benefit Plan Setup and Maintenance
Process: Welfare Plans
Task: Coverage/Contributions

2. Enter a future date in the Effective Date text box

Enter the effective date of the cost information change.

3. Enter the changed cost information

Enter the new rule(s), factor(s), and cost(s).

4. Process the entry

Click Save or Press Enter to process the entry. The form displays the following message:

—New table entry has been established—

☞ *Refer to* **Setting Up Welfare Plans** *(on page 53) for more information about completing the Coverage And Contribution Factors form (TM-SCR).*

Projecting current enrollee costs

To project the enrollee costs and review the projected results, you may process a 'what-if' version of the Recalc Benefit Coverage/Contributions report (85-RPT) against the employees in your test environment.

1. Process the Recalc Benefit Coverage/Contributions report (85-RPT)

Process this report to see the effect of any change to the benefits tables that affects the calculation of employee or company costs.

Use the report parameters to specify the plan(s) to be recalculated and the effective date of the change. Indicate in the report parameters that the report is to be run in a 'what-if' or inquiry mode by leaving the 'Update Emp Records' check box blank. This will allow you to reflect various cost scenarios without updating the employee records.

☞ *Refer to either the eCyborg: Using the Web Client or Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.*

2. Review the report to see the projected effect of the change

Review the employee information that displays the 'before' and 'after' cost information for each employee enrolled in the plan(s).

☞ *Refer to* **Benefits/Payroll Interaction** *(on page 535) for more information about the Recalc Benefit Coverage/Contributions report (85-RPT).*

Projecting monthly and annual plan costs

You may process the Plan Premium Statements report (4I-RPT) in your test environment prior to making the contribution changes and then rerun it after the cost changes have been recorded. Use this report to project a monthly and annual cost estimate.

1. Process the Plan Premium Statements report (4I-RPT)

Process this report to produce a premium summary by benefit plan. Use the report parameters to specify the as-of date and the plan(s) to be included.

☞ *Refer to either the eCyborg: Using the Web Client or Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.*

2. Review the report to determine the monthly costs for each plan by option

The report displays the monthly contributions by option within plan and provides totals by plan.

3. Analyze the total cost of the plan(s)

You may calculate the total annual cost of any plan by multiplying the plan's monthly cost by 12. Compare this to the current contribution cost for the plan(s).

Identifying plans for nondiscrimination testing

To identify plans for nondiscrimination testing, follow these steps:

1. Access the Nondiscrimination Test Component Plans form (TV-SCR)

Access this form by making the following selection from the Navigator:

Component: Benefit Plan Setup and Maintenance
Process: Deferred Plans
Task: Nondiscrimination Plans

For practice, access the Nondiscrimination Test Component Plans form (TV-SCR).

2. Enter the Test ID

This is the Identification Option that denotes the Discrimination Test that will contain the Plans listed on the Table record. This three-digit code will be entered in all nondiscrimination test program report parameters fields.

For practice, type 'ABC'.

3. Enter the Test As Of Date

The last day of the Test Year as defined in your plan documents. If no designation is made for a Test Year-end, the calendar year-end should be used.

For practice, type '12-31-1998' (US and Canada) or '31-12-1998' (elsewhere).

4. Enter the Test Plans

These are the Plan IDs that are to be aggregated for nondiscrimination testing. All Plan IDs entered in these text boxes must be recorded on the Benefit Plan Rules form (TK-SCR).

For practice, type '510'.

5. Enter the Totals Test Group

This is the total number of employees who are part of the test group for this nondiscrimination test. This amount is calculated by the nondiscrimination test programs.

For practice, leave blank.

6. Enter the Highly Compd

This is the total number of employees who have been identified as highly compensated for the purposes of this nondiscrimination test. This amount is calculated by the nondiscrimination test programs.

For practice, leave blank.

7. Enter the Non Highly

This is the total number of employees who have been identified as non-highly compensated for the purposes of this nondiscrimination test. This amount is calculated by the nondiscrimination test programs.

For practice, leave blank.

8. **Enter the Test Non Highly**

This is the total number of employees who have been further selected for calculation purposes for this nondiscrimination test. This amount is calculated by the nondiscrimination test programs.

For practice, leave blank.

9. **Enter the Test Highly**

This is the total number of employees who have been further selected for calculation purposes for this nondiscrimination test. This amount is calculated by the nondiscrimination test programs.

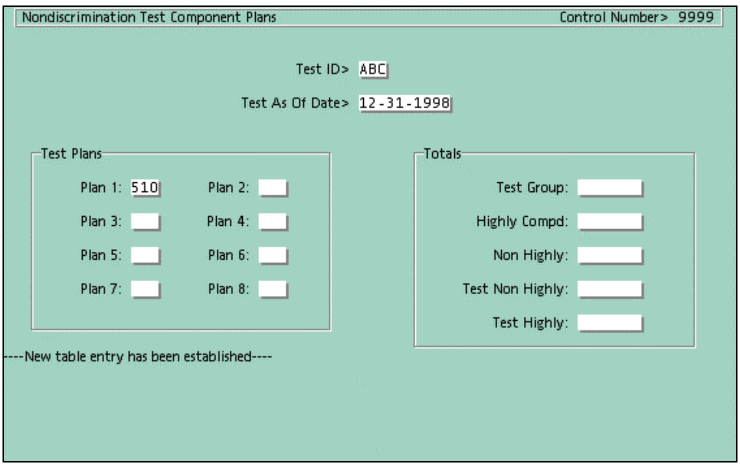
For practice, leave blank.

10. **Click Save or press Enter**

Plans for nondiscrimination testing are now identified.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Nondiscrimination Test Component Plans Control Number> 9999

Test ID> ABC

Test As Of Date> 12-31-1998

Test Plans

Plan 1: 510 Plan 2:

Plan 3: Plan 4:

Plan 5: Plan 6:

Plan 7: Plan 8:

Highly Compd:

Non Highly:

Test Non Highly:

Test Highly:

----New table entry has been established----

See also:

- Compliance ***(on page 579)***

For more information about nondiscrimination testing.

Identifying highly-paid employees

To identify a highly-paid employee, follow these steps:

1. **Access the Components of Highly-Paid Definition form (51-SCR)**

Access this form by making the following selection from the Navigator:

Component: Deferred Plan Enrollment/Maintenance
Process: Set up Highly-Paid Definitions
Task: Indicate Highly Paid Employee

For practice, access the Components of Highly-Paid Definition form (51-SCR) for employee 3002 in the '999999' organization.

2. Enter the Year End

This is the Plan Year-End that corresponds with the year-end of the Plans that are included in the nondiscrimination test defined on the Nondiscrimination Test Component Plans form (TV-SCR).

For practice, type '12-31-1998' (US and Canada) or '31-12-1998' (elsewhere.

3. Select the Exclude 20% Test

This entry indicates whether or not this employee is to be excluded from the determination of the top 20 percent paid employees.

For practice, leave this entry blank.

4. Enter the Current Year Earnings

This is the federal earnings that will be reported on the employee's W-2 for the current year from Tax record 102.

For practice, type '90000.00'.

5. Enter the Current Year Defer Earnings

This is the amount of deferred earnings that will be reported on the employee's W-2 for the current year

For practice, type '90000.00'.

6. Select the Current Year Top 100

This entry indicates whether or not the employee was in the top 100 paid employees in the current year.

For practice, select 'Yes Part of Top 100'.

7. Select the Current Year 5% Owner

This entry indicates whether or not the employee was a 5 percent Owner of stock in the organization in the current year.

For practice, leave blank.

8. Select the Current Year Officer

This entry indicates whether or not the employee is an officer in the current year.

For practice, leave blank.

9. Select the Current Year Top 20%

This entry indicates whether or not the employee was in the top 20 percent of paid employees in the current year.

For practice, click this check box.

10. Select the Current Year Highly Paid

This entry defines whether or not the employee is deemed a highly-paid employee for this year's testing.

For practice, click this check box.

11. Enter the Prior Year Earnings

This is the Federal earnings reported on the employee's W-2 for the prior year.

For practice, type '88000.00'.

12. Enter the Prior year Defer Earnings

This is the amount of deferred earnings reported on the employee's W-2 for the prior year.

For practice, type '88000.00'.

13. Select the Prior Year 5% Owner

This entry indicates whether or not the employee was a 5 percent Owner of stock in the organization in the prior year.

For practice, leave blank.

14. Select the Prior Year Officer

This entry indicates whether or not the employee was an officer in the prior year.

For practice, leave blank.

15. Select the Prior Year Top 20%

This entry indicates whether or not the employee was in the top 20 percent of paid employees in the prior year.

For practice, click this check box.

16. Enter the Owner Information Org

This is the Organization Number that contains the owner's employee record defined in the Owner Information Employee Number text box.

For practice, leave blank.

17. Enter the Owner Information Employee Number

This is the employee number of the 10 top-paid highly-paid employee or 5percent Owner who will have this employee's earnings and contribution aggregated with theirs for discrimination testing.

For practice, leave blank.

18. Select the Owner Information Family

This option indicates whether or not the employee is a lineal ascendant or descendant of one of the 10 top-paid highly-paid or of a 5 percent Owner. Lineal ascendant or descendant include the employee's parents, spouse, children, and children's spouses.

For practice, leave blank.

19. Select Prior Year Highly Paid

This entry defines whether or not the employee is deemed a highly-paid employee based on data in effect the prior year.

For practice, click this check box.

20. Select Prior Year 50000

This is the indicator of whether or not the employee earned 50,000 or more in the prior calendar year.

For practice, click this check box.

21. Select Prior Year 75000

This is the indicator of whether or not the employee earned 75,000 or more in the prior calendar year.

For practice, click this check box.

22. Select Current Year Highly Paid

This entry defines whether or not the employee is deemed a highly-paid employee based on data in effect the current year.

For practice, click this check box.

23. Select Current Year 50000

This is the indicator of whether or not the employee earned 50,000 or more in the current calendar year.

For practice, click this check box.

24. Select Current Year 75000

This is the indicator of whether or not the employee earned 75,000 or more in the current calendar year.

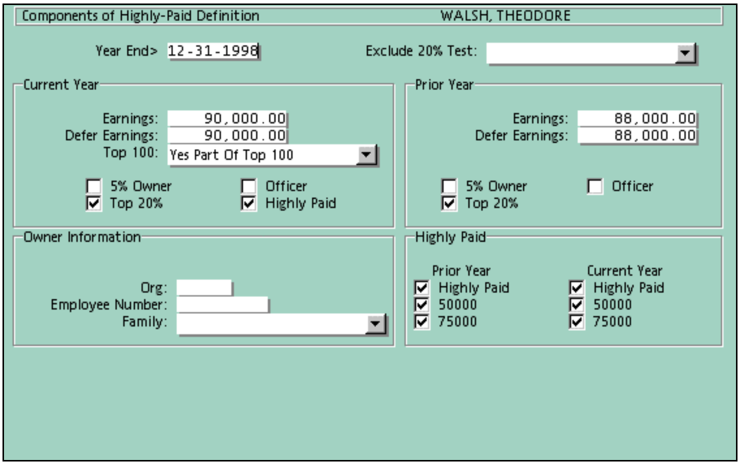
For practice, click this check box.

25. Click Save or press Enter

The highly-paid definition information is now recorded for the employee.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Compliance ***(on page 579)***

For more information about nondiscrimination testing.

Recording average deferral percentage ratios

To record average deferral percentage ratios, follow these steps:

1. Access the Average Deferral Percentage Ratios form (52-SCR)

Access this form by making the following selection from the Navigator:

Component: Deferred Plan Enrollment/Maintenance
Process: Set up Highly-Paid Definitions
Task: Average Deferral Ratio

For practice, access the Average Deferral Percentage Ratios form (52-SCR) for employee 3002 in the '999999' organization.

2. Enter the Plan ID

This is the unique Plan Identifier for a record containing Plan ADP data and ratios for a specific calendar year.

You must establish a Benefit Plan Rules table record (TK-SCR) before the Plan ID can be used on the employee master file.

For practice, type '510'.

3. Enter the Year

This is the year for which the ADP data pertains.

For practice, type '98'.

4. Enter the Earnings

This is the Federal Earnings reported on the employee's W-2 that are used in the calculation of Pre-Tax Post-Tax and employer ADP Average Deferral Percentage to be used in non-discrimination testing.

The number 123.45 would be entered as 123.45 or 12345.

For practice, type '90,000.00'.

5. Enter the Date Created

This is the date the record was initially created for this ADP year or updated if data has been modified.

For practice, type '01-31-1999' (US and Canada) or '31-01-1999' (elsewhere).

6. Enter the Pre Tax Contribution

This is the amount of Pre-Tax Contributions made for this plan in the ADP year.

For practice, type '9,000.00'.

7. Enter the Pre Tax Ratio

This is the ADP Pre-Tax Ratio that was calculated by dividing the Pre-Tax Contribution amount by the ADP Earnings.

For practice, type '.10'.

8. Enter the Post Tax Contribution

This is the amount of Post-Tax Contributions made for this plan in the ADP year.

For practice, leave blank.

9. Enter the Post Tax Ratio

This is the ADP Post-Tax Ratio that was calculated by dividing the Post-Tax Contributions amount by the ADP Earnings.

For practice, leave blank.

10. Enter the Company Contribution

This is the amount of Organization contributions made for this plan in the ADP year.

For practice, type '4500.00'.

11. Enter the Company Ratio

This is the ADP Company Ratio that was calculated by dividing the Organization contribution amount by the ADP Earnings.

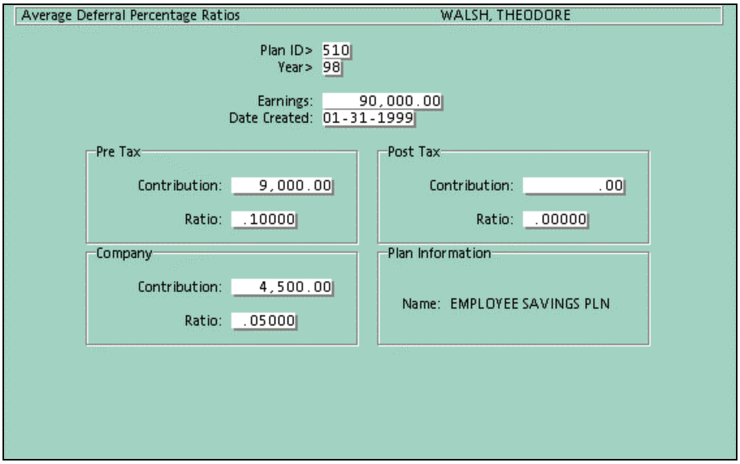
For practice, type '.05'.

12. Click Save or press Enter

The average deferral percentage ratios are now recorded.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Compliance ***(on page 579)***

For more information about nondiscrimination testing.

Viewing balance information for flexible spending accounts

To view balance information for an FSA, follow these steps:

Completing the Guided Practice

To complete the Guided Practice, you will need to enroll employee 3002, Theodore Walsh, into a flex spending plan using the Welfare Plan Enrollments/Changes form (55-SCR). Enroll him in plan 606, with an effective date of 01/01/98 and a variable amount of 1,000.

1. Access the FSA Balance form (57-SCR)

The FSA Balance form (57-SCR) is used to update and view the account balance of an employee's flexible spending account.

Access this form by making the following selection from the Navigator:

Component: Health/Welfare Plan Enrollment/Maintenance
Process: FSA Plan Claims
Task: Update/View FSA Balance

For practice, access the FSA Balance form (57-SCR) for employee number 3002, Theodore Walsh.

2. Click the Show selection list in the message area button

After clicking the Show selection list in the message area button, the message area of the window will display all the plans in which Theodore Walsh is enrolled.

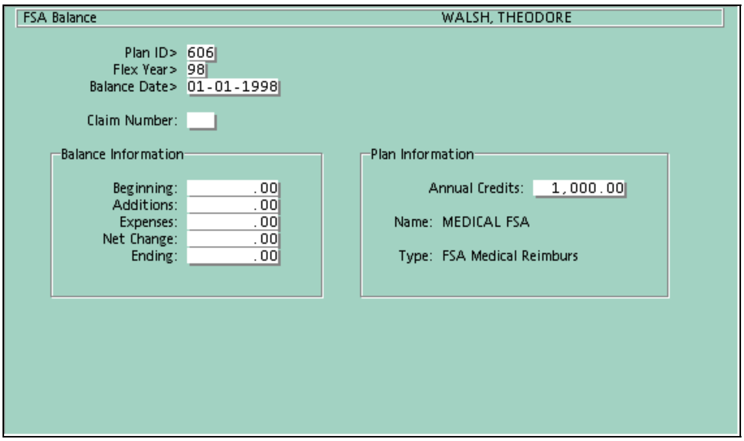
For practice, click the Show selection list in the message area button.

3. Click the button to the left of Plan 606 in the message area

After clicking the button for Plan 606, balance information about this plan will display.

For practice, click Plan 606.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



FSA Balance WALSH, THEODORE
Plan ID> 606
Flex Year> 98
Balance Date> 01-01-1998
Claim Number:
Balance Information
Beginning: .00
Additions: .00
Expenses: .00
Net Change: .00
Ending: .00
Plan Information
Annual Credits: 1,000.00
Name: MEDICAL FSA
Type: FSA Medical Reimburs

See also:

- Flexible spending accounts ***(on page 583)***

For more information about recording balance information.

Recording claims for flexible spending accounts

1. Access the FSA Claims form (56-SCR)

The FSA Claims form (56-SCR) is used to record claims for a flexible spending account.

Access this form by making the following selection from the Navigator:

Component: Health/Welfare Plan Enrollment/Maintenance
Process: FSA Plan Claims
Task: Record A Claim

For practice, access the FSA Claims form (56-SCR) for employee number 3002, Theodore Walsh.

2. Enter the Plan ID

This is the unique identifier of a specific Benefit Plan in which the employee is currently enrolled or will be eligible.

For practice, type '606'.

3. Enter the Flex Year

This is the year in which the employee is enrolled or eligible for the Flex Plan.

For practice, type '98'.

4. Enter the Identifying Nbr

This number is assigned sequentially to claims as they are entered for a flex spending account year.

For practice, type '001'.

5. Enter the Multi Claim Nbr

This is used as a key separator to allow multiple segments for the same flexible spending account claim.

For practice, type '99'.

6. Enter the Claim Date

This is the effective date of a claim being made against the flexible spending account.

For practice, type '02-01-1998' (US and Canada) or '01-02-1998' (elsewhere).

7. Enter the ID

This identifies a specific claim made in a valid claim category.

This entry has no pre-defined meaning and is intended to provide a means to record the actual service identification number/option used by the provider for billing purposes.

For practice, type 'PROVIDER 2'.

8. Enter the Amount

This is the amount to be debited against the employee's flexible spending account balance for the type of expense claim being made.

For practice, type '500.00'.

9. Enter the Payment Date

This entry identifies the date on which reimbursement was made for expenses incurred against a specific claim.

For practice, type '02-01-1998' (US and Canada) or '01-02-1998' (elsewhere.

10. Enter the Payment Method

This entry identifies the type of payment used to make reimbursement for expenses incurred against a specific claim.

For practice, select 'Reimburse on Paychk'.

11. Enter the Reimbursement amount

This is the pending amount that will be reimbursed on the next paycheck.

For practice, leave this entry blank.

12. Enter the Amount Pending

This is the amount of the claim that could not be paid with this reimbursement.

For practice, leave this entry blank.

13. Enter the Date Posted

This is the date on which the flexible spending account activity was posted.

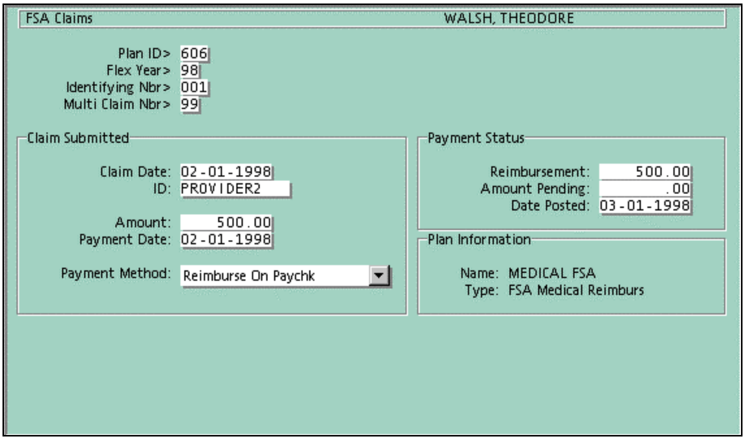
For practice, leave this entry blank.

14. Click Save or press Enter

The claim has been recorded.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Flexible spending accounts ***(on page 583)***

For more information about recording claims.

Review of Questions Answered

1. What tools are available in Benefits Administration for monitoring regulatory compliance?

2. How can the current flexible benefits plan information be used to generate a trend analysis of option selections?

3. What method is available for determining the future cost of benefits plans?

PART 6

Appendices

In This Section

APPENDIX A

Report Quick Reference

In This Appendix

Introduction

This appendix provides a quick reference guide to the Benefits Administration Solution reports covered in the instructional chapters of this manual.

401(K) Excess Contributions Report (2I-RPT)

The 401(K) Excess Contributions report (2I-RPT) prints a list of the employees who have contributed into their 401(K) plan more than the allowable amount of pre-tax dollars for the year.

Business Tasks

This report is used to complete the following business tasks:

- Determine the employees whose year-to-date pre-tax contribution to their 401(K) has exceeded the allowable amount.

Report field details

- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Plan ID**—Unique identifier for the 401(K) savings plan.
- **Plan Name**—Name of the savings plan.
- **HED**—HED assigned to the pre-tax deduction for the 401(K) plan.
- **HED Amount YTD**—Year-to-date amount deducted for the 401(K) plan.
- **Total Amount YTD**—Total amount contributed for the 401(K) plan.

Parameter options and setup

- **Date**—Enter the pay period end date from the in MM-DD-CCYY or CCYYMMDD format (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).
- **Plan ID**—Enter the three-character plan ID.
- **IRS Limit**—IRS dollar limit for the selected plan year.

See also:

- Compliance ***(on page 579)***

For information on how to use this report.

```

85-RPT Alternate Key Creation By Dates (85QRPT)

The 85-RPT Alternate Key Creation By Dates report (85QRPT) is used to create alternate key records for use by the Recalc Benefit Coverage/Contributions report (85-RPT). Employee selection for inclusion on the recalculation report can be based on dates, such as birth date or employment date. If the month and day values of any of the four dates listed below fall between the month and day values specified in the report parameters, an alternate key record will be created for the employee:

- Birth date
- Employment date
- Original Hire Date
- Adjusted Seniority Date

Business Tasks

This report is used to complete the following business tasks:

- Creating alternate key records using a date range

Report field details

- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Social Security Number**—Employee's social security number.
- **Alternate Key Creation**—Key used to narrow down the number of employees
- **Based On**—who will be included in the report.

Parameter options and setup

- **Date Range Start**—Enter the beginning date of the range for which you want the report run.
- **Date Range End**—Enter the ending date of the range for which you want the report run.

Actuarial Interface Output Tape (4L-RPT)

The Actuarial Interface Output Tape report (4L-RPT) provides the data needed to create a tape to be sent to your actuary for actuarial valuation. This report should be modified to meet your specific needs. The tape consists of 80-character transactions containing basic employee data. It includes information on anyone who is currently participating in the plan requested as well as all employees who were participating at the end of the prior period who are currently in a non-participating status.

Business Tasks

This report is used to complete the following business task:

- Provide a tape output for actuarial purposes.

Tape output details

- **Activity Date**—Date of event that affected an employee's employment or plan status.
- **Adjusted Seniority**—Used to determine an employee's length of service; same as new hire activity date unless a break-in-service has occurred.
- **Annual Salary**—Annualized employee rate of pay.
- **B I S Indicator**—Break-in-service switch that indicates which plan data is used. '00' = no break, otherwise shows rule code used to determine the break.
- **Benefit Service**—Date when service begins for purpose of accruing a benefit in a deferred benefits plan.
- **Birth Date**—Employee date of birth.
- **Considered Earnings**—Earnings paid to an employee that are to be accumulated to determine credited service or calculation of final benefit amounts.
- **Considered Hours Wkd**—Actual number of hours an employee worked.
- **Organization**—Identifies a company and its employees.
- **Ctrl Five**—Human Resource organization level five value.
- **Ctrl Four**—Human Resource organization level four value.
- **Ctrl Six**—Human Resource organization level six value.
- **Ctrl Three**—Human Resource organization level three value.
- **Employee Name**—First 25 positions of an employee's legal name.
- **Hire Date**—Employee's most recent hire date.
- **Hours Per Period**—Scheduled hours of work per pay period.
- **Leave End Date**—Date of return from a service interruption.
- **Leave Start Date**—Start date of a service interruption.
- **Original Hire Date**—Employee's first hire date with company.
- **Particip Service**—Date from which service is to be counted for participation in a deferred benefits plan.
- **Participation Option**—Plan option that determines an employee's status in the plan.
- **Participation Status**—Plan status as a result of a change in participation option.
- **Payment Frequency**—Interval at which an employee is paid.
- **Resulting Emp Status**—Employee's status as a result of an activity.
- **Sex Code**—Employee gender indicator.
- **Social Security Nbr**—Employee identification for earnings reporting (USA only).
- **Svc Calculation Date**—Date used by a deferred benefits plan as the basis from which service or other plan service dates are calculated.
- **Taxable Wages YTD**—Year-to-date wages subject to applicable tax.
- **Vesting Service**—Vesting start date for a deferred benefits plan.

Parameter options and setup

- **Plan ID**—Specfy a three-character plan ID.
- **Start Date**—Enter the plan year start date in MM-DD-CCYY or CCYYMMDD format (US and Canada) or DD-MM-CCYY or CCYYDDYY (elsewhere).
- **End Date**—Enter the end date of the valuation period in the format MM-DD-YY or YYMMDD (US and Canada) or DD-MM-YY or YYDDMM (elsewhere).

The Actuarial Interface Output Tape report (4L-RPT) generates no hard copy output.
```

ADP Earnings Report (2E-RPT)

The ADP Earning report (2E-RPT) prints the information that is recorded on the Average Deferral Percentage Ratios form (52-SCR). This form retains the compensation, pre-tax, post-tax, and company contribution amounts used for each plan's ADP ratios.

Business Tasks

This report is used to complete the following business tasks:

- View the company contribution amount for the average deferral percentage rations for each benefit plan.

Report field details

- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **ADP Earnings**—Employee's salary.
- **Pre-tax Contrib**—Amount that employee contributed pre-tax.
- **Pre-tax Ratio**—Percentage of the employee's pre-tax contribution.
- **Post-tax Contrib**—Amount that employee contributed post-tax.
- **Post-tax Ratio**—Percentage of the employee's post-tax contribution.
- **Company Contib**—Amount that the company contributed for the employee.
- **Company Ratio**—Percentage of the company's contribution.
- **Date Created**—Date on which the average deferral percentage ratio was calculated.

Parameter options and setup

- **ADP Date**—Enter the date on which the average deferral percentage ratio was calculated.
- **Plan ID**—Enter the three-character plan ID.

Benefit Plan Tables Report (9KARPT)

The Benefit Plan Tables Report (9KARPT) displays all of Benefits Administration table records associated with a plan or a range of plans specified on the parameter form.

Business Tasks

This report is used to complete the following business tasks:

- Review benefits plan rules and options
- Analyze plan coverage and cost
- Analyze plan eligibility rules
- Analyze vesting and participation rules
- Analyze HED prototype

Report field details

The fields on this report are listed in the documentation for each of Benefit Administration table record reports.

Parameter options and setup

- **Control Number**—Enter the Control Number of the table set you want to print. Specify this parameter and leave the As Of Date field blank to include all table records in the table set, regardless of date.
- **As Of Date**—Enter in CCYYMMDD or MM-DD-CCYY (US and Canada) or CCYYDDMM or DD-MM-CCYY (elsewhere) format to select the table records in effect as of this date. Specify this parameter and leave the Control Number field blank to include all table records.
- **Beginning Range Plan ID**—Enter the first benefit plan in the range to be printed. If you want to print only one plan, specify it here.
- **Ending Range Plan ID**—Enter the last benefit plan in the range to be printed.

Benefits Activity and Option Validation Table Records (9T-RPT)

The Benefits Activity and Option Validation Table Records report (9T-RPT) displays the Activity/Resulting Plan Status Rules form (TTASCR) and Option/Resulting Plan Status Rules form (TTOSCR) table records on a batch report.

Business Tasks

This report is used to complete the following business tasks:

- Review benefits plan options and activities
- Analyze changes to benefits plan options and activities

Report field details

- **Control Number**—Control Number assigned to the table entry.
- **Plan ID**—Plan ID associated with the table record.
- **Option Activity**—Either the Option Elected code or the Major Activity code to be valid for a benefit plan.
- **Search Argument**—Element used to search benefits tables to apply plan rules to specific groups of employees.
- **Table Date**—Effective date of the table record.
- **Date Calc Method**—Indicates the proper method for creating starting and ending dates for benefit plans.
- **TT Option Activity**—Two-position option or a three-position major activity code.
- **Status Ranges Low**—Code value of the low status for range.
- **Status Ranges High**—Code value of the high status for range.
- **Result Status Codes/Descriptions**—Plan status that will become the new plan status on the participant's record if the participant's current plan status falls within the range of plan status codes defined in the low and high status fields.
- **Delay Time**—Time span that will be added to the resulting effective date of the plan status change if the associated condition defined on the table record is met by the participant's record.

Parameter options and setup

- **As of Date**—Enter in CCYYMMDD or MM-DD-CCYY (US and Canada) or CCYYDDMM or DD-MM-CCYY (elsewhere) format to include the table records in effect as of this date. Specify this parameter and leave the Control Number field blank to print all table records.
- **Control Number**—Enter the Control Number of the table set you want to print. Specify this parameter and leave the As Of Date field blank to include all table records in the table set, regardless of date.

Benefits Eligibility Rules Table Records Batch Report (9L-RPT)

The Benefits Eligibility Rules Table Records Batch Report (9L-RPT) displays the Benefit Plan Eligibility Rules form (TL-SCR) table records on a batch report.

Business Tasks

This report is used to complete the following business tasks:

- Review benefits plan eligibility rules
- Analyze changes to benefits plan eligibility rules

Report field details

- **Cntrl Nbr**—Control Number assigned to the table entry.
- **Plan ID**—Plan ID associated with the table record.
- **Search Argument**—Element used to search benefits tables to apply plan rules to specific groups of employees.
- **Table Date**—Effective date of the table record.
- **Eligibility Code/Desc**—Formula used to calculate when an employee becomes eligible to participate in the plan.
- **Eligible Min Age**—Minimum age limitation for participation in the plan described by this table.
- **Eligible Max Age**—Maximum age limitation for participation in the plan described by this table.
- **Eligible Service**—Amount of service an employee must accumulate before participating in the plan.
- **Eligible Method**—Calculation method that defines how service is calculated.
- **Eligible Hours**—Amount of time (in hours) an employee must work before becoming eligible to participate in the plan.
- **Eligible Status 1–12**—Resulting employee status that defines the type of employee who may be eligible for this plan.
- **Eligible Date Method/Calc**—Formula used to calculate the eligibility date for the plan.

Parameter options and setup

- **As of Date**—Enter in CCYYMMDD or MM-DD-CCYY (US and Canada) or CCYYDDMM or DD-MM-CCYY (elsewhere) format to include the table records in effect as of this date. Specify this parameter and leave the Control Number field blank to print all table records.
- **Control Number**—Enter the Control Number of the table set you want to print. Specify this parameter and leave the As Of Date field blank to include all table records in the table set, regardless of date.

Benefits Plan Breaks-In-Service Rules Table Records (9U-RPT)

The Benefits Plan Breaks-In-Service Rules Table Records report (9U-RPT) displays the Benefits Plan Breaks-In-Service Rules form (TU-SCR) table records on a batch report.

Business Tasks

This report is used to complete the following business tasks:

- Review benefits plan breaks-in-service rules
- Analyze changes in benefits plan breaks-in-service rules

Report field details

- **Control Number**—Control Number assigned to this table entry.
- **Plan ID**—Plan ID associated with the table record.
- **Major Activity**—Major activity that is occurring.
- **Table Date**—Effective date of the table record.
- **Activity Low High**—Code value of the low and high activity for the range.
- **Break In Service Rule**—Method used to determine if an employee returning from a service interruption has incurred a break-in-service under the plan for the conditions described.
- **Delay Time**—Time to be added to an employee's leave date to form a date by which time an employee must return to active service to avoid incurring a break-in-service under plan rules.
- **Date Calculation**—Method used to adjust the date formed by adding the delay time to the leave date for purposes of determining if a break-in-service has been incurred when an employee returns from a service interruption.

Parameter options and setup

- **As of Date**—Enter in CCYYMMDD or MM-DD-CCYY (US and Canada) or CCYYDDMM or DD-MM-CYY (elsewhere) format to include the table records in effect as of this date. Specify this parameter and leave the Control Number field blank to include all table records.
- **Control Number**—Enter the Control Number of the table set you want to include. Specify this parameter and leave the As Of Date field blank to include all table records in the table set, regardless of date.

Benefits Plan Factors Table Records Batch Report (9M-RPT)

The Benefits Plan Factors Table Records Batch Report (9M-RPT) displays the Coverage And Contribution Factors form (TM-SCR) table records on a batch report.

Business Tasks

This report is used to complete the following business tasks:

- Review benefits plan coverage and contribution rules
- Analyze changes to benefits plan coverage and contribution rules

Report field details

Column title **Description**

- **Ctrl Nbr**—Control Number assigned to this table entry.
- **Plan ID**—Plan ID associated with the table record.
- **Opt Elect**—Option Elected code associated with this table's calculation definitions.
- **Ctrib Type**—Source of contribution to the plan.
- **Search Argumt**—Value for any field referenced by the table record search type.
- **Table Date**—Effective date of the table record.
- **Cov Rule**—Formula used to determine the coverage amount of a benefit plan for an individual employee.
- **Coverage Factor 1, 2, 3**—Numeric value used in an arithmetic formula (as described by the Coverage Rule) to calculate the coverage amount of a benefit plan for an individual employee.
- **Ctrib Rule**—Customer-defined code that identifies a particular calculation formula to determine an employee contribution amount towards a benefit plan.
- **Contribute Factor 1, 2**—Numeric value used in an arithmetic formula (as described by the Contribution Rule) to calculate the contribution paid towards a benefit plan.
- **Contrib Result Freq**—Frequency of the contribution amount.

Parameter options and setup

- **As of Date**—Enter in CCYYMMDD or MM-DD-CCYY (US and Canada) or CCYYDDMM or DD-MM-CYY (elsewhere) format to include the table records in effect as of this date. Specify this parameter and leave the Control Number field blank to include all table records.
- **Control Number**—Enter the Control Number of the table set you want to include. Specify this parameter and leave the As Of Date field blank to include all table records in the table set, regardless of date.

Benefits Plan Prototype Contribution HED Table Records (9S-RPT)

The Benefits Plan Prototype Contribution HED Table Records report (9S-RPT) displays the Benefit Plan Prototype Contribution HED form (TS-SCR) table records on a batch report.

Business Tasks

This report is used to complete the following business tasks:

- Review benefits plan contribution information
- Analyze changes in benefits plan contribution information

Report field details

- **Control Number**—Control Number assigned to this table entry.
- **Plan ID**—Plan ID associated with the table record.
- **Cont Type**—Source of contribution to the plan.
- **Search Argument**—Element used to search benefits tables to apply plan rules to specific groups of employees.
- **Table Date**—Effective date of the table record.
- **HED Code Frequency**—Pay period in which deductions are to be taken for the benefit.
- **HED Code Type**—Arrears handling rule.
- **HED Code Method**—Method used to determine the amount of deduction for the benefit.
- **HED Code Amt/Pct**—Deduction value for a particular benefit.
- **Auto Deduction Code/Description**—Determines whether or not the HED defined on the table record will be copied to Payroll.
- **Start Code Field**—Date or amount that, when reached, starts a deduction.
- **Stop Code Field**—Date or amount that, when reached, stops a deduction.
- **Amount One**—Equivalent of the HED Amount One field and may contain a value if it is relevant to the HED defined on the table record. If not, the field is left blank.
- **Amount Two**—Equivalent of the HED Amount Two field and may contain a value if it is relevant to the HED defined on the table record. If not, the field is left blank.

Parameter options and setup

- **As of Date**—Enter in CCYYMMDD or MM-DD-CCYY (US and Canada) or CCYYDDMM or DD-MM-CYY (elsewhere) format to include the table records in effect as of this date. Specify this parameter and leave the Control Number field blank to include all table records.
- **Control Number**—Enter the Control Number of the table set you want to include. Specify this parameter and leave the As Of Date field blank to include all table records in the table set, regardless of date.

Calculation of Credited Service Granted (40-RPT)

The Calculation of Credited Service Granted report (40-RPT) processing program calculates the credited participation, benefit, and vesting service. It determines if an employee has met the requirements necessary to be granted an additional year of credited service using the method defined for the plan.

Credited service must be calculated before processing the Calculation of Vesting Percentage Earned report (41-RPT).

Business Tasks

This report is used to complete the following business task:

- Determine if a plan participant is eligible for service credit

Report field details

- **Empl. No.**—Unique employee identifier, up to 10 characters in length.
- **Name**—Employee's legal name.
- **Particip Credit**—Value of an employee's years, months, and days of credited participation service in a deferred benefits plan.
- **Benefit Credit**—Value of an employee's years, months, and days of credited benefit service in a deferred benefits plan.
- **Vesting Credit**—Value of an employee's years, months, and days of credited vesting service in a deferred benefits plan.
- **Resulting Action**—Status resulting from the processing of a new participation option or separation activity.

Parameter options and setup

- **Last Day Of Plan/Calendar Year**—Enter a date in MM-DD-CCYY or CCYYMMDD (US and Canada) or CCYYDDMM or DD-MM-CCYY(elsewhere) format.
- **Plan ID**—Enter the plan ID for which the credited service is to be calculated.

Calculation of Vesting Percentage Earned (41-RPT)

The Calculation of Vesting Percentage Earned report (41-RPT) processing program determines if a participant in a plan is to begin the vesting process and, if so, at what percentage the participant is vested as of the date entered on the report schedule when the program is run.

The Calculation of Credited Service Granted report (40-RPT) must be run prior to processing this report.

Business Tasks

This report is used to complete the following business tasks:

- Determine if a plan participant is eligible for vesting
- Calculate the percent vested for each eligible participant

Report field details

- **Empl. No.**—Unique employee identifier, up to 10 characters in length.
- **Name**—Employee's legal name.
- **Vesting Pct**—Vesting percentage calculated as of the last vesting calculation date.
- **First Vested**—First date on which vesting percentage calculations determined the vesting percentage to be greater than zero for a deferred benefits plan.
- **Fully Vested**—First date on which vesting calculations determined the vesting percentage to be equal to 100 for a deferred benefits plan.
- **Current Vested**—Date on which the current vesting percentage was calculated.
- **Message**—Status resulting from the processing of a new participation option or separation activity.

Parameter options and setup

- **Last Day Of Plan/Calendar Year**—Enter a date in MM-DD-CCYY or CCYYMMDD (US and Canada) or CCYYDDMM or DD-MM-CCYY(elsewhere) format.
- **Plan ID**—Enter the plan ID for which the credited service is to be calculated.

Certificate of Group Health Plan Coverage (59KRPT)

The Certificate of Group Health Plan Coverage allows companies with a health plan to satisfy the requirement of the Health Insurance Portability and Accountability Act of 1996 (HIPAA) to provide its health plan members with a coverage certificate when coverage ceases for that plan. This certificate protects the employee and/or dependents from being denied coverage under a new health plan that excludes coverage for medical conditions which existed before eligibility for the health plan.

Business Tasks

This report is used to complete the following business task:

- Provide employees evidence of coverage in a health plan to protect them or their dependents from being denied coverage in another health plan because of a pre-existing condition.

Parameter options and setup

- **Plan ID**—Specify a three-character plan ID.
- **Range Start Date**—Enter the plan year start date in MM-DD-CCYY or CCYYMMDD format (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).
- **Range End Date**—Enter the end date of the valuation period in the format MM-DD-YY or CCYYMMDD or DD-MM-CCYY or CCYYDDMM (elsewhere).
- **Certificate Date**—Date that will appear on the certificate.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Dependent Xref**—Unique identifier of the employee's dependent.

Certificate of Group Health Plan Coverage (59KRPT) Example

```
                  CERTIFICATE OF GROUP HEALTH PLAN COVERAGE
* IMPORTANT - This certificate provides evidence of your prior health
coverage. You may need to furnish this certificate if you become eligible
under a group health plan that excludes coverage for certain medical
conditions that you have before you enroll. This certificate may need to be
provided if medical advice, diagnosis, care, or treatment was recommended
or received for the condition within the 6-month period prior to your
enrollment in the new plan. If you become covered under another group
health plan, check with the plan administrator to see if you need to provide
this certificate. You may also need this certificate to buy, for yourself or
your family, an insurance policy that does not exclude coverage for medical
conditions that are present before you enroll.
1.  Date of this certificate: 05-27-1999
2.  Name of group health plan: MEDICAL INSURANCE
3.  Name of participant: BLOOM, ALEXANDER
4.  Identification number of participant: 234-33-9001
5.  Name of any dependents to whom this certificate applies:
    BLOOM, BRENDA                BLOOM, ABAGAIL
    BLOOM, ELLEN                 BLOOM, THOMAS J.
    BLOOM, WILLIAM E.
6.  Name, address and telephone number of plan administrator or issuer
    responsible for providing this certificate:
    ACME MANUFACTURING, PRODUCTION CTL 1-2
    1142 N. RUSH STREET, COMMERCE PLAZA
    CHICAGO, IL         60606
7.  For further information, call: _____________________________________________
8.  If the individual(s) identified in line 3 and line 5 has at least 18 months
    of creditable coverage (disregarding periods of coverage before a 63-day
    break), check here ____ and skip lines 9 and 10.
9.  Date waiting period or affiliation period (if any) began: ________________
10. Date coverage began: 04-01-1983
11. Date coverage ended: 04-30-1999 (or check if coverage is continuing as of
    the date of this certificate: _ ).
Note: Separate certificates will be furnished if information is not identical
for the participant and each beneficiary.
```

Changed Beneficiary/Contingent Annuitant (8P-RPT)

The Changed Beneficiary/Contingent Annuitant report (8P-RPT) lists all employees who have changed their beneficiary or contingent annuitant designations within a user-defined range of dates.

Business Tasks

This report is used to complete the following business tasks:

- Analyze employee beneficiary/contingent annuitant changes for consistency
- Track missing beneficiary/contingent annuitant information

Report field details

- **Employee Name**—First 20 positions of employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Plan ID**—Unique identifier of a specific benefit plan an employee is currently enrolled in or will be eligible for.
- **Option**—Option elected by an employee.
- **Allocation Date**—Effective date of a beneficiary or contingent annuitant election for a benefits plan.
- **Bene Xref**—Cross-reference identifier of the beneficiary from the Beneficiary/Bond-Owner Information form (58-SCR).
- **Percent Alloc**—Percent of total benefit to be allocated to the beneficiary/contingent annuitant identified in the Beneficiary Xref field.
- **Beneficiary Name**—First 20 positions of beneficiary's name.
- **Sex**—Gender of beneficiary.
- **Relation**—Beneficiary's relationship to the employee.
- **Birth Date**—Date of birth of the named beneficiary or contingent annuitant.

Parameter options and setup

- **Start Date**—Enter the start date for a date range in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).
- **End Date**—Enter the end date for a date range in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Changed Retirement Election Data (8Q-RPT)

The Changed Retirement Election Data report (8Q-RPT) displays any changes that have been made to retirement data.

Business Tasks

This report is used to complete the following business task:

- Monitor retirement record changes

Report field details

- **Plan ID**—Unique identifier of a specific benefit plan an employee is currently enrolled in or will be eligible for.
- **Employee Name**—First 20 characters of an employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **History Rec Date**—Effective date of the pension plan election and payment information.
- **Election Date**—Date on which the form-of-payment election occurs.
- **Revoke Date**—Date on which the form-of-payment election was revoked.
- **Retirement Option**—Pre/post retirement option code used to identify the type of retirement an employee has elected.
- **Retirement Date**—Actual date of the retirement (or termination in the case of a vested termination).
- **Payment Date**—Date on which the monthly pension benefit first becomes payable.
- **Form of Payment**—How retirement benefits are to be paid to the beneficiaries and contingent annuitants.
- **Monthly Pmt**—Monthly pension benefit being paid to the retiree.
- **Stop Date**—Date on which payments of retirement benefits are to stop when the form of payments specifies a term of payment such as 5 year certain, 10 year certain installments, and so forth.
- **Date Of Death**—Date on which an employee, beneficiary, or contingent annuitant (whomever is receiving the monthly pension) died.

Report sort order

As delivered, the sort order of this report is CONTROL-1, CONTROL-2, PLAN-ID, HISTORY-RECORD-DATE, and EMPLOYEE-NAME-20.

Parameter options and setup

- **As Of Date**—Enter in CCYYMMDD or MM-DD-CCYY (US and Canada) or CCYYDDMM or DD-MM-CCYY (elsewhere) format.

COBRA: Dependents No Longer Eligible (4R-RPT)

The COBRA: Dependents No Longer Eligible report (4R-RPT) provides a listing, by welfare health plan, of all employees who are to be notified that their dependent(s) are, or no longer will be, eligible for specified benefits plans.

The report lists participating employees along with their dependent(s) who meet either of the following criteria:

- Older than 19 and younger than 23, and not a full-time student as of the date specified in the report parameters.
- 23 years old or older as of the date specified in the parameters.

Business Tasks

This report is used to complete the following business task:

- Identify dependents who are no longer eligible for welfare health plans and who need to be notified of the right to continuation of coverage under COBRA.

Report field details

- **Plan ID**—The welfare health plan in which the employee and dependent(s) are currently enrolled.
- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Option**—The value selected in the Option text box on the Welfare Plan Enrollments/Changes form (55-SCR).
- **Dependent Cross Reference**—The unique identifier assigned to a dependent on the Spouse/Dependent Information form (10-SCR). This identifier is also recorded on the Covered Dependents By Plan form (59DSCR) when assigning dependents to a welfare health plan.
- **Dependent Name**—The dependent's legal name.
- **Relationship**—The relationship of the dependent to the employee.
- **Student Code**—Indicates if the dependent is a full-time student.
- **Age**—The dependent's age.
- **Birth Date**—The dependent's date of birth.
- **Date Notified**—Column in which an administrator can manually enter the date that the dependent was notified of his or her loss of eligibility.

Parameter options and setup

- **As Of Date**—Enter the date to be used to calculate the age and eligibility of dependent(s). Enter in CCYYMMDD or MM-DD-CCYY format (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).
- **Plan ID**—Leave blank or enter 'ALL' to run the report for all plans. Enter a single plan ID to run the report for a single plan, for example, '102'. Or enter a range of plan IDs to run the report for a range of plans in the format '102/205'.

COBRA: Divorced/Separated Employees (4S-RPT)

The COBRA: Divorced/Separated Employees report (4S-RPT) provides a listing, by plan, of all employees who were divorced or separated during the range of dates specified in the report parameters.

Business Tasks

This report is used to complete the following business task:

- Identify spouses of employees who are no longer eligible for welfare health plans due to a divorce or separation and who must be notified of their right to continuation of coverage under COBRA.

Report field details

- **Plan ID**—The welfare health plan in which the employee and dependent(s) are currently enrolled.
- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Option**—The value selected in the Option text box on the Welfare Plan Enrollments/Changes form (55-SCR).
- **Marital Status**—Employee's current marital status.
- **Date**—Effective date of the change in marital status.
- **Spouse Cross Reference**—The unique identifier assigned to the spouse on the Spouse/Dependent Information form (10-SCR). This identifier is also recorded on the Covered Dependents By Plan (59DSCR) form when assigning a spouse to a welfare health plan.
- **Spouse Name**—The spouse's legal name.
- **Social Security #**—The spouse's Social Security number.
- **Date Notified**—Column in which an administrator can manually enter the date that the spouse was notified of his or her right to continue coverage.

Parameter options and setup

- **Start Date**—Enter the start date for a date range in MM-DD-CCYY or CCYYMMDD format (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).
- **End Date**—Enter the end date for a date range in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).
- **Plan ID**—Leave blank or enter 'ALL' to run the report for all plans. Enter a single plan ID to run the report for a single plan, for example, '102'. Or enter a range of plan IDs to run the report for a range of plans in the format '102/205'.

COBRA: No Response by Due Date (4U-RPT)

The COBRA: No Response by Due Date report (4U-RPT) provides a listing, by plan, of all employees (or spouse/dependent[s]) who have not elected to participate in an offered COBRA continuation coverage before the end of the enrollment period as defined by COBRA. The report lists all employees who have not responded by the due date of a Qualifying Event that occurred during the range of dates specified in the report parameters.

Business Tasks

This report is used to complete the following business task:

- Identify employees and/or dependents who have not elected to participate in an offered COBRA continuation coverage. The report can be used by an administrator to identify individuals who should be contacted for a follow up.

Report field details

- **Plan ID**—The welfare health plan in which the employee and dependent(s) are currently enrolled.
- **Qualifying Event**—The activity recorded on the Separations And Terminations form (96-SCR) that caused the employee and/or dependent to lose coverage and become eligible for COBRA coverage.
- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Option**—The value selected in the Option text box on the Welfare Plan Enrollments/Changes form (55-SCR).
- **Notified EE Rights**—The date on which the employee or their dependent was notified of their right to extended coverage under COBRA.
- **Respond Date Last**—The date by which the employee or dependent must submit notification of their intent to extend coverage.
- **Actual Response**—The date on which the employee or dependent submitted notification of their intent to extend coverage.
- **Accept Cover**—Indicates if the employee or dependent accepted extended coverage.
- **Dependent Cross Reference**—The unique identifier assigned to a dependent on the Spouse/Dependent Information form (10-SCR).
- **Dependent Name**—The name of the dependent.

Parameter options and setup

- **Start Date**—Enter the start date for a date range in MM-DD-CCYY or CCYYMMDD format (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).
- **End Date**—Enter the end date for a date range in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).
- **Plan ID**—Leave blank or enter 'ALL' to run the report for all plans. Enter a single plan ID to run the report for a single plan, for example, '102'. Or enter a range of plan IDs to run the report for a range of plans in the format '102/205'.

COBRA: Terminations and Deaths (4T-RPT)

The COBRA: Terminations and Deaths report (4T-RPT) provides a listing, by plan, of all employees who were terminated or died during the range of dates specified in the report parameters.

Business Tasks

This report is used to complete the following business task:

- Identify employees and/or dependents who are no longer eligible for welfare health plans due to the termination or death of an employee, and who must be notified of their right to continuation of coverage under COBRA.

Report field details

- **Plan ID**—The welfare health plan in which the employee and dependent(s) are currently enrolled.
- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Option**—The value selected in the Option text box on the Welfare Plan Enrollments/Changes form (55-SCR).
- **Dependent Cross Reference**—The unique identifier assigned to a dependent on the Spouse/Dependent Information form (10-SCR).
- **Dependent Name**—The dependent's legal name.
- **Relationship**—The relationship of the dependent to the employee.
- **Student Code**—Indicates if the dependent is a full-time student.
- **Age**—The dependent's age.
- **Birth Date**—The dependent's date of birth.
- **Date Notified**—Column in which an administrator can manually enter the date that the dependent was notified of his or her loss of eligibility.

Parameter options and setup

- **Start Date**—Enter the start date for a date range in MM-DD-CCYY or CCYYMMDD format (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).
- **End Date**—Enter the end date for a date range in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).
- **Plan ID**—Leave blank or enter 'ALL' to run the report for all plans. Enter a single plan ID to run the report for a single plan, for example, '102'. Or enter a range of plan IDs to run the report for a range of plans in the format '102/205'.

Considered Earnings/Hours Accumulator Earnings Definition (4O-RPT)

The Considered Earnings/Hours Accumulator Earnings Definition report (4O-RPT) displays the Considered Earnings/Hours Accumulators Definition form (TO-SCR) accumulators with the buckets and associated HEDs (Hours, Earnings, Deductions).

Business Tasks

This report is used to complete the following business task:

- Analyze which buckets have been added to accumulators

Report field details

- **Control Number**—Control Number assigned to this table entry.
- **Accumulator ID**—Unique three-position name for this accumulator.
- **Table Date**—Effective date of the table record.
- **Accumulator Freq/Description**—Indicator that represents the number of detail CE/H accumulators that will be created for the CE/H accumulator named.
- **Bkt Nbr**—One of 36 buckets into which an earning is to be added for CE/H processing.
- **HED Nbr**—Unique number assigned to the particular hours, earning, or deduction.
- **HED Name**—Description of the earnings or deduction.

Report sort order

As delivered, the sort order of this report is CONTROL-NUMBER, ACCUMULATOR-ID, TO-TABLE-DATE, ACCUM-FREQUENCY-CODE, and COMPANY-HED-NUMBER.

Parameter options and setup

There are no parameter options for this report.

Considered Earnings/Hours Accumulators (CONSID)

The Considered Earnings/Hours Accumulators program (CONSID) updates considered earnings/hours accumulators with earnings from the current pay period's payment history records. The program processes any adjustments made as well as the earnings paid.

Business Tasks

This program is used to complete the following business tasks:

- Generate and update the from-date-of-hire accumulator
- Update considered earnings/hours accumulators associated with benefits plans

Report field details

This program generates no hard copy output. The Considered Earnings/Hours Accumulators form (60-SCR) may be used to view considered earnings/hours accumulator records.

Parameter options and setup

Instructions for processing this batch program can be found in Chapter 14.

See also:

- After a pay run ***(on page 547)***

For information on how to process this report.

Considered Earnings/Hours Accumulators (CONSID) Example

```
The Considered Earnings/Hours Accumulators generator (CONSID) generates no hard copy output.
```

Considered Earnings/Hours Accumulators Audit report (CP-RPT)

The Considered Earnings/Hours Accumulators Audit report generates a report and deletes the historical Employee HED records which are dated prior to the date entered on the parameters form.

Business Tasks

This report is used to complete the following business task:

- Delete the considered earnings accumulators which are stored in Control 1-2 991111.

Report field details

- **Employee Social Security Number**—Unique employee identifier used for taxation in the USA.
- **Accumulator**—Unique 3-position name of the considered earnings/hours accumulator being referenced.
- **Effective Date**—Date on which the earnings took effect.
- **Hours Paid**—The total hours paid for the period.
- **Hours Worked**—The total hours worked for the period.
- **Earnings**—The total earnings accumulated for the period.
- **1000 Date**—The date on which the Hours Worked field reached 1000 hours for the current plan year.

Parameter options and setup

- **Purge Accumulator Records Prior To**—Date prior to which Accumulator Records are to be deleted.
- **Accumulator Name or 'ALL' to purge all accumulators**—Unique identifier for the accumulator to be deleted. Enter 'ALL' to purge all historical employee HED records.
- **Generate Audit Report**—Check to create an audit report without purging any records.
- **Generate Audit Report/Perform Purge**—Check to create an audit report and purge records.

Considered Earnings/Hours Accumulators Definition (9O-RPT)

The Considered Earnings/Hours Accumulators Definition report (9O-RPT) displays the Considered Earnings/Hours Accumulators Definition form (TO-SCR) table records on a batch report.

Business Tasks

This report is used to complete the following business tasks:

- Review the considered earnings/hours accumulator definitions
- Analyze changes to the considered earnings/hours accumulator definitions

Report field details

- **Ctrl Nbr**—Control Number assigned to this table entry.
- **Accumulator ID**—Unique 3-position name of the considered earnings/hours accumulator being referenced.
- **Table Date**—Effective date of the table record.
- **Accumulator Freq/Desc**—Number of detail CE/H accumulators that will be created for the CE/H accumulator named.
- **Accumulators 0-9, A-Z**—Indicates whether or not the earnings and hours accumulated from the pay run will be included as considered earnings and hours for the CE/H accumulator defined.

Parameter options and setup

- **As of Date**—Enter in CCYYMMDD or MM-DD-CCYY (US and Canada) or CCYYDDMM or DD-MM-CCYY (elsewhere) format to include the table records in effect as of this date. Specify this parameter and leave the Control Number field blank to print all table records.
- **Control Number**—Enter the Control Number of the table set you want to print. Specify this parameter and leave the As Of Date field blank to include all table records in the table set, regardless of date.

Considered Earnings/Hours Earnings Buckets (4N-RPT)

The Considered Earnings/Hours Earnings Buckets report (4N-RPT) displays a summary of the accumulator and earnings information recorded on the Company HED Benefits CE/H Accumulation Definition (A83SCR) and Company Earnings (A8ESCR) forms for the Considered Earnings/Hours Accumulators Definition form (TO-SCR) table buckets.

Business Tasks

This report is used to complete the following business tasks:

- Review considered earnings/hours accumulator definitions
- Analyze changes to the considered earnings/hours accumulator definitions

Report field details

- **Bk No**—One of 36 buckets into which an earning is to be added for CE/H processing.
- **Hrs-Accumulation Cd/Description**—Indicates whether earnings or deduction hours are to be added to hours worked, hours paid, both, or neither.
- **HED Number**—Unique number assigned to the particular hours, earning, or deduction.
- **HED Name**—Description of the earnings or deduction.
- **Earning-Category Cd/Description**—Indicates the use of default taxation rules and calculations.
- **Earning-Frequency Cd/Description**—Indicates if and when an earning is to be automatically calculated by the system.
- **Earning-Method Cd/Description**—Indicates how the earning is to be calculated.
- **Earning-Type Cd/Description**—Indicates which taxable wage fields are to updated for this earning.

Report sort order

As delivered, the sort order of this report is CE/H-EARNINGS-BUCKET and COMPANY-HED-NUMBER.

Parameter options and setup

There are no parameter options for this report.

Current Pensioners (4H-RPT)

The Current Pensioners report (4H-RPT) displays, by plan, all retirees receiving a pension payment as of a user-defined date. This includes vested terminated employees currently collecting a vested benefit, beneficiaries or contingent annuitants currently receiving the benefit of a deceased retiree or employee, as well as actual retirees.

Only records for your retiree organization (Company Category of 'Pay-Retiree Master' or 'Unpaid-Retiree Master') are printed.

The description of Form of Payment elected (for example, 50 percent to joint and survivor) is embedded in the report logic based on the delivered values of the Form of Payments option list (BA07). If you have added values to the option list because of additional optional forms of payment available under your plans, you must add literal descriptions for your codes to the report's logic.

Business Tasks

This report is used to complete the following business tasks:

- Review beneficiary/contingent annuitant information applicable to the retiree's participation in each plan
- Analyze changes to current pension information

Report field details

- **Plan ID**—Unique identifier of a specific benefit plan an employee is currently enrolled in or will be eligible for.
- **Employee Name**—Employee's legal name.
- **Soc Sec Nbr**—Unique employee identifier used for taxation in the USA.
- **Elected Payment**—Date on which the monthly pension benefit first becomes payable.
- **Payment Form**—How retirement benefits are to be paid to the beneficiaries and contingent annuitants.
- **Monthly Pension**—Monthly pension benefit amount being paid to the retiree.
- **Chg Typ**—Reason for changes to the previous monthly benefit amount.
- **Pension Increment**—Amount of the increase/decrease to the monthly benefit.
- **Stop Payment**—Date on which payments of retirement benefits are to stop when the form of payments specifies a term of payment such as 5 year certain, 10 year certain installments, and so forth.
- **Beneficiary Xref**—Cross-reference identifier of the beneficiary from the Beneficiary/Bond-Owner Information form (58-SCR).
- **Beneficiary Name**—First 20 positions of the beneficiary's name.
- **Perct Alloc**—Percent of total benefit to be allocated to the beneficiary/contingent annuitant identified in the cross-reference field (Beneficiary Xref 1-8).

Parameter options and setup

- **As Of Date**—Enter in CCYYMMDD or MM-DD-CCYY (US and Canada) or CCYYDDMM or DD-MM-CCYY (elsewhere) format.

Deferred Plan Register (4J-RPT)

The Deferred Plan Register report (4J-RPT) produces a roster for each deferred plan showing all employees participating in the plan as of a customer-defined date and data pertinent to the employee's participation in the plan.

Business Tasks

This report is used to complete the following business task:

- Analyze employee participation by plan

Report field details

- **Plan ID**—Unique identifier of a specific benefit plan an employee is currently enrolled in or will be eligible for.
- **Employee Name**—First 20 positions of employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Suspend End Date**—Date on which an employee's suspension from participation in a deferred benefits plan ends.
- **Cont Type**—Source of contribution to the plan.
- **HED Nbr**—Unique number assigned to the particular hours, earning, or deduction.
- **Effective Date**—Date on which the deduction is to take effect.
- **HED-Xref Amt/Pct**—Deduction value for a particular benefit.
- **HED-Xref Freq**—Pay period in which deductions are to be taken for the benefit.
- **Fund A–F**—Percent of the contributions (as identified by Contribution Type) that are to be invested in Fund A–F.
- **Option Effective**—Effective date of the plan enrollment for the specified plan.
- **Option**—Employee's choice of benefit levels when multiple options are available.
- **Plan Status**—Result of processing a new participation option or separation activity that affects an employee's status in a deferred benefits plan.

Parameter options and setup

- **As Of Date**—Enter a date in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) format.

Deferred Vested Terminated Employees (4K-RPT)

The Deferred Vested Terminated Employees report (4K-RPT) displays, by plan, all vested terminated employees and retirees who are entitled to a benefit from a plan but have deferred payment of the benefit until after a customer-defined date. Therefore, any vested terminated employee who is currently receiving a benefit is considered a retiree and is not listed on the report.

The description of the Form of Payment elected is derived from program logic based on the Form of Payments option list (BA07) values. Therefore, if you have added values to the option list because of additional forms of payment allowed under your plans, you must add literal descriptions for your codes to this report.

Business Tasks

This report is used to complete the following business tasks:

- Track vested terminated employees
- Monitor deferred benefit payments

Report field details

- **Plan ID**—Unique identifier of a specific benefit plan an employee is currently enrolled in or will be eligible for.
- **Employee Name**—First 20 characters of an employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Social Security Nbr—**Unique employee identifier used for taxation in the USA.
- **Termination Date**—Date on which an employee terminated his/her job.
- **Elected Payment Date**—Date when the monthly pension benefit first becomes payable.
- **Retirement Date**—Actual date of the retirement (or termination in the case of a vested termination).
- **Retirement Option**—Pre/post retirement option code used to identify the type of retirement an employee has elected.
- **Monthly Pension—**Monthly pension benefit amount being paid to the retiree.
- **Form of Payment—**How retirement benefits are to be paid to the retiree.
- **Normal Retire**—Date on which a plan participant can retire as a normal retiree according to plan rules. It can also be used to record the date on which an employee is expected to retire according to company rules.

Report sort order

As delivered, the sort order of this report is CONTROL-1, CONTROL-2, PLAN-ID-Q6, EMPLOYEE-NAME-20, and EMPLOYEE-NUMBER.

Parameter options and setup

- **As Of Date—**Enter a date in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) format.

Dependent Life Insurance Taxable (86DRPT)

The Dependent Life Insurance Taxable report (86DRPT) calculates the taxable amount of imputed income for employees with spousal or dependent coverage from the Dependent Group Term Life Insurance coverage in excess of $2,000.00. Employees who have company paid or company sponsored group-term life insurance for dependents must pay FICA tax on the premiums paid for coverage that exceeds the $2,000.00 limit based on a cost table supplied in the Internal Revenue Code, Section 79.

The report calculates taxable income using the coverage and contribution amounts recorded on Employee Database records for the plan(s) specified in the report parameters and the 'uniform premiums' prescribed in Section 79(d).

Business Tasks

This report is used to complete the following business tasks:

- Calculate the taxable amount of imputed income from Dependent Group Term Life Insurance coverage in excess of $2,000, based on the cost table set by the Internal Revenue Code, Section 79.
- Create the segment needed by payroll to add this taxable amount to the employee's earnings from which taxes will be taken.
- Complete a test run for employees with spousal or dependent coverage to examine the results before the HED is updated.

Report field details

- **Employee/Dependent**—Employee or dependent's legal name, up to 15 characters in length.
- **Emp ID/Dep ID**—Unique employee or dependent identifier.
- **Taxable Thousands**—The amount of life insurance over $2,000 for the dependents in which the premiums are either partially or wholly contributed by the company. The field is reported in thousands, for example, '2.00' indicates '$2,000'.
- **Government Factor**—The cost of $1,000 of group term life insurance provided for one month and computed on the basis of 5-year age brackets, as set forth by the government. The dependent's age is used to determine the government factor. When the dependent's birth date is not recorded, the employee's birth date is used to determine the government factor.
- **Government Amount**—The monthly dollar amount the employee must pay or be charged as taxable income, dependent upon the amount of employee contribution.
- **Employee Contribution**—The total life insurance premiums the employee paid in the month specified in the report parameters.
- **Taxable Amount**—The monthly dollar amount to be applied to the employee's gross income.
- **Comments**—Used for error messages or appropriate informational messages.

Parameter options and setup

- **Month End Date**—Date used to determine the imputed income. Enter the date in MM-DD-CCYY or CCYYMMDD format (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).
- **Dependent Life Insurance Plan**—The plan ID of the dependent life insurance plan. Type ALL to report on all dependent life insurance plans.
- **HED to be Updated**—The default HED number to be updated is 033. To use a different HED number, you must modify the Cyborg Scripting Language for this report and the Report Parameters form for Dependent Life Insurance Taxable form (R86DR).
- **Update Employees**—Click the checkbox to update employees HEDs. Leave blank to run report as a test and not update the HEDs.
- **Print All Employees For Specific Plan ID**—Click the checkbox to report only on those employees enrolled in the plan. Leave blank to report on all employees.

Dependent Listing for Plan ID:XXX (4D-RPT)

The Dependent Listing for Plan ID:xxx report (4D-RPT) displays covered dependents for each employee participating in the Plan ID requested on the report parameters.

A participant who does not have covered dependents is not listed on this report.

Business Tasks

This report is used to complete the following business tasks:

- Verify benefit coverage eligibility
- Track covered dependents by plan
- Coordinate benefit payments

Report field details

- **Ctrl Three**—Human Resource organization level three value assigned to this employee.
- **Ctrl Four**—Human Resource organization level four value assigned to this employee.
- **Ctrl Five**—Human Resource organization level five value assigned to this employee.
- **Ctrl Six**—Human Resource organization level six value assigned to this employee.
- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Option**—Employee's choice of benefit levels when multiple options are available.
- **ID**—Three-position unique identifier for a dependent entitled to coverage under this plan.
- **Name**—Name of spouse or dependent.
- **Relationshp**—Spouse or dependent relationship to an employee.
- **Age**—System calculated using the birth date for this spouse/dependent, the resulting age is reported as YY only.
- **SC**—Code that indicates whether or not the spouse or dependent named in this form is a student and what level of school participation is involved.
- **Insurance Carrier**—Spouse or dependent's insurance carrier

Report sort order

As delivered, the sort order of this report is CONTROL-1, CONTROL-2, EMPLOYEE-NAME, and DEPENDENT-ID.

Parameter options and setup

- **As Of Date**—Enter a date in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) format.
- **Plan ID**—Enter the plan ID for which dependents are to be listed.

Determination of Highly-Paid Employees (2D-RPT)

The Determination of Highly-Paid Employees Report sets the highly-paid indicator for each employee who meets the highly-paid definition based on data entered on the Components of Highly-Paid Definition form (51-SCR) and the data elements updated by the Identification of Excludable Employees Report (2A-RPT), Nondiscrimination Earnings Update Report (2B-RPT), and Top 20%, Top 10/100 Report (2C-RPT). Once an employee is designated as being 'highly-paid', the employee is considered highly-paid in testing each of the retirement and welfare plans administered by your company.

You only have to run the Determination of Highly-Paid Employees Report once for nondiscrimination and coverage tests for plans which have the same year-end date.

The Determination of Highly-Paid Employees Report (2D-RPT) is run for everyone on the Employee Database, regardless of their employment or benefits status.

The following three reports should be run for the plan year-end date defined in the Report Parameters for Determination of Highly-Paid Employees form before running the Determination of Highly-Paid Employees Report (2D-RPT), if they apply to your testing environment:

- Identification of Excludable Employees Report (2A-RPT)
- Nondiscrimination Earnings Update Report (2B-RPT)
- Top 20%, Top 10/100 Report (2C-RPT)

Note: The Top 20%, Top 10/100 Report probably should have been run with both the current and previous year options, as the definition for a highly-paid employee relies on having indicators set for both years.

The following are fields on the Components of Highly-Paid Definition form (51-SCR) that are used in highly-paid definition and must be entered manually before running the Determination of Highly-Paid Employees Report:

- PRIOR-YEAR-5%-OWNER
- PRIOR-YEAR-OFFICER
- CURR-YEAR-5%-OWNER
- CURRENT-YEAR-OFFICER
- OWNER-FAMILY
- OWNER-EMPLOYEE-NBR
- OWNER-C1-2

Business Tasks

- Identifying plans for nondiscrimination testing.
- Identifying highly-paid employees.
- Recording average deferral percentage ratios.

Report field details

- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Highly Paid**—Indicates whether the employee is considered highly-paid.
- **Current Top 100**—Indicates whether the employee ranks in the top 100 highly-paid employees for the current year.
- **Top 20%**—Indicates whether the employee ranks in the top 20% of the highly-paid employees.
- **Earnings**—Amount of employee's current earnings.
- **Deferred Earnings**—Amount of employee's deferred earnings.
- **5% Owner**—Indicates if the employee owns at least 5% of the company.
- **Officer**—Indicates if the employee is an officer of the company.
- **High Paid**—Indicates if the employee is considered highly-paid. The previous year displays on the top line; the current year displays on the bottom line.

Parameter options and setup

- **As Of Date**—The date in the 'Test As Of Date' field of the Nondiscrimination Test Component Plans form (TV-SCR). This field indicates when the testing process should begin.

Determination of Highly-Paid Employees (2D-RPT) Example

A sample report is not available at this time.

Employee Master File Space Analysis (10-RPT)

The Employee Master File Space Analysis report (10-RPT) calculates the amount of space available on each employee's record and compares that to the maximum number of segments required for an employee enrollment. You can then review the printed summary of available segment space for each employee. This information helps you decide whether or not you need to make a space allocation adjustment before or during benefits enrollment processing.

Business Tasks

This report is used to complete the following business tasks:

- Verify space availability on the Employee Master File.

Report field details

- **Employee name**—Employee's legal name.
- **Employee number**—Unique employee identifier, up to 10 characters in length.
- **Employee status**—Current employment status of the employee.
- **Employee Rcd size**—Number of bytes used for the employee record.
- **Maximum allowed**—Maximum number of bytes allocated for the employee record.
- **Available segments**—Number of segments allocated for the individual.
- **55-SCR indicator**—Indicates if there are enough segments available on the employee Master File (FILE02) to enroll the employee on the Welfare Plan Enrollments/Changes form (55-SCR).
- **55FSCR indicator**—Indicates if there are enough segments available on the employee Master File (FILE02) to enroll the employee on the Flex Benefit Enrollments/Changes form (55FSCR).

Parameter options and setup

There are no parameters for this report.

Employees with Less Than 1000 Hours in Plan Year (4M-RPT)

The Employees with Less Than 1000 Hours in Plan Year report (4M-RPT) provides a list of all plan participants who have not met the required 1000 hours in the plan year. This report examines the applicable CE/H accumulator 1000 Hours Date field for the plan ID requested to determine if the 1000 hours requirement has been met.

Business Tasks

This report is used to complete the following business tasks:

- Track total considered hours for participants
- Determine whether or not a participant is to be credited with a year of service

Report field details

- **Plan ID**—Unique identifier of a specific benefit plan an employee is currently enrolled in or will be eligible for.
- **Accum Name**—Name of the considered earnings/hours accumulator that contains the considered earnings and considered hours worked and hours paid for this plan.
- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Social Sec Number**—Unique employee identifier used for taxation in the USA.
- **Plan Status**—Employee's participation status in the plan.
- **Employee Status**—Employee's status as a result of an activity.
- **CE/H Freq**—Indicator that represents the number of detail CE/H Accumulators that will be created for the CE/H Accumulator named.
- **Accum Rec Date**—Date of the period end through which hours and earnings are recorded on the accumulator.
- **Considered Earnings**—Total earnings accumulated for the period according to the definition of considered earnings on the accumulator.
- **Consid Hrs Wkd**—Total hours worked for the period according to the definition of considered hours worked on the accumulator.

Parameter options and setup

- **As Of Date**—Enter a date in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) format.
- **Plan ID**—Enter the plan ID to be included on the report.
- **Plan Year**—Enter the plan year in the format YY.

Enrollable Employees by Employee (4F-RPT)

The Enrollable Employees by Employee report (4F-RPT) displays by employee all plans for which each employee is currently eligible but not participating.

This report lists only active employees eligible prior to a customer-defined date. If your plan states that an employee is eligible to enroll while on leave of absence or disability, for example, modifications to select active employees and those employee statuses will need to be made.

Business Tasks

This report is used to complete the following business tasks:

- Track the return of benefits enrollment forms
- Contact employees regarding plans for which they have not yet selected an option election

Report field details

- **Employee Name**—First 25 positions of an employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Status**—Employee's status as a result of an activity.
- **Ctrl Three**—Human Resource organization level three value assigned to this employee.
- **Ctrl Four**—Human Resource organization level four value assigned to this employee.
- **Ctrl Five**—Human Resource organization level five value assigned to this employee.
- **Ctrl Six**—Human Resource organization level six value assigned to this employee.
- **Mail Distribute**—Internal mail station or distribution data.
- **Plan ID**—Unique plan identifier for the pending plan enrollment.
- **Plan Name**—Name of the plan pending enrollment.
- **Suspense Date**—Date on which an employee becomes eligible to participate in the plan.

Report sort order

As delivered, the sort order of this report is CTRL-THREE, CTRL-FOUR, CTRL-FIVE, and CTRL-SIX.

Parameter options and setup

- **As Of Date**—Enter a date in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) format.
- **Pay Frequency Option**—Enter the pay frequency(s) to be included on the report using one of the following options: 'ALL' for all pay frequencies, pay frequency value in the format 'X' for one pay frequency, or pay frequency values in the format 'X/x' for a range of pay frequencies.

Enrollable Employees by Plan (4E-RPT)

The Enrollable Employees by Plan report (4E-RPT) displays by plan the employees who are currently not participating in a plan for which they are eligible.

This report is designed to list only active employees eligible prior to a customer-defined date. If your plan rules specify that an employee is eligible to enroll in a plan while on leave of absence or disability, for example, this report will require modifications to select those employee statuses as well as active employees.

Business Tasks

This report is used to complete the following business tasks:

- Distribute reminder notifications to eligible employees
- For automatic plans, enroll an employee in the plan and trigger the appropriate payroll deductions or company contribution accumulators

Report field details

- **Plan ID**—Unique plan identifier for the pending plan enrollment.
- **Plan Name**—Name of the plan pending enrollment.
- **Suspense Date**—Date on which an employee becomes eligible to participate in the plan.
- **Employee Name**—First 25 positions of an employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Status**—Employee's status as a result of an activity.
- **Ctrl Three**—Human Resource organization level three value assigned to this employee.
- **Ctrl Four**—Human Resource organization level four value assigned to this employee.
- **Ctrl Five**—Human Resource organization level five value assigned to this employee.
- **Ctrl Six**—Human Resource organization level six value assigned to this employee.
- **Mail Distribute**—Internal mail station or distribution data.

Report sort order

As delivered, the sort order of this report is PLAN-ID-RA.

Parameter options and setup

- **As Of Date**—Enter a date in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) format.
- **Plan ID**—Specify a three-character plan ID.
- **Pay Frequency Option**—Enter the pay frequency(s) to be included on the report using one of the following options: 'ALL' for all pay frequencies, pay frequency value in the format 'X' for one pay frequency, or pay frequency values in the format 'X/x' for a range of pay frequencies.

Flexible Benefit Plan Credit Allocations (4Y-RPT)

The Flexible Benefit Plan Credit Allocations report (4Y-RPT) displays all employees who have a flexible benefit plan credit recorded for the plan ID and plan year specified in the report parameters.

Business Tasks

This report is used to complete the following business tasks:

- Verify credit allocations by employee
- Analyze employee plan credits
- Track the return of employee enrollment forms

Report field details

- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Form Retn**—Indicator of whether or not an employee has returned a completed form and the enrollment form status.
- **Total Credits**—Total number of credits awarded to an employee for the purpose of purchasing benefits under a flexible benefit plan.
- **Applied Credits**—Number of credits that were used by an employee as defined on the Flex Benefit Enrollments/Changes form (55FSCR).
- **Remain Credits**—Number of credits remaining after an employee's flexible benefit enrollment has been processed and the cost of each plan has been subtracted from the total credits available.
- **Credits Spending**—Amount of the remaining credit balance that is to be applied to a flexible spending account.
- **Deferred Credits**—Amount of the remaining credit balance that is to be applied to a deferred plan balance.
- **Cash Credits**—Amount of the remaining credit balance that is to be paid to an employee in cash either as a lump sum or over the duration of the plan year.
- **Deduction Credits**—Amount of the remaining credit balance that is to be deducted from an employee's pay either as a lump sum amount or as an amount per pay for the duration of the flexible benefit plan year.
- **Credit Post**—Indicator of whether or not the credit distribution has been posted to the appropriate hours/earning/deduction or account balance.
- **Date Posted**—Date on which the flexible benefit remaining balance distribution was performed.

Parameter options and setup

- **Flex Master Plan ID**—Enter the three-character plan ID.
- **Plan Year Start Date**—Enter the date in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) format.

Flexible Benefit Plan Enrollment Confirmation (4X-RPT)

The Flexible Benefit Plan Enrollment Confirmation report (4X-RPT) displays a summary of all component plans an employee has selected for the Flexible Benefit Master Plan specified in the parameters. The summary lists each of the component plans an employee selected, the option, and the cost.

The report is generated for all selected employees enrolled in the plan on any day within the plan year. Only the plans an employee selected from the Flex Master/Group Plan Components form (TP-SCR) are included on the report.

A cover letter is printed for each employee if you specify it in the report parameters.

Solution View can be used to create a selection routine to limit the employees processed to those who meet the criteria you have defined. The name of the selection routine is specified in the report parameters.

Business Tasks

This report is used to complete the following business task:

- Provide employees with confirmation of their plan enrollment(s)

Report field details

- **Enrollment Confirmation For:**—Employee's legal name.
- **Employee Number:**—Unique employee identifier, up to 10 characters in length.
- **Flexible Benefit Plan**—Total number of credits awarded to the
- **Credits Available:**—employee for the purpose of purchasing benefits under a flexible benefit plan.
- **Plan Title**—Name of the plan.
- **Option Elected**—Employee's choice of benefit levels when multiple options are available.
- **Tax Pre/Post**—Indicator of the taxability of the option.
- **Coverage**—Level of benefit indicated by the plan rules using employee data and table data to perform the calculation.
- **Company**—Annual or pay period company contribution for a benefits plan.
- **Flex Cost**—Employee's annual or pay period cost for the option.

Parameter options and setup

- **Plan Year Start Date**—Enter the date in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) format.
- **Master Plan ID**—Enter the three-character plan ID.
- **Print Cover Letter**—Enter 'Y' to print the cover letter. Enter 'N' to not print the cover letter.
- **Selection Routine**—Enter the six-character customer-defined Solution View program name for the Selection Routine (optional).

Note: *This report must be executed in its own report group without any other reports.*

Flexible Benefit Plan Personal Information (4P-RPT)

The Flexible Benefit Plan Personal Information report (4P-RPT) produces a flexible benefits enrollment form that lists all the component plans for which an employee is eligible. All plans that an employee elected and is active in at the time the report is run are provided, so the employee will have both current and potential benefit data on which to base the new plan year selections.

This report can perform credit calculations for your employees. A report parameter is used to specify if you want these credit calculations performed.

Solution View can be used to create a selection routine to limit the employees processed by the report to those who meet the criteria you have defined. The name of the routine is then specified in a report parameter for this report.

In addition to the printed form, you can also create an extract file and use the data for other purposes. This report format option is specified on the Report Parameters For Flexible Benefit Personal Information form.

Business Tasks

This report is used to complete the following business tasks:

- Calculate flex plan credits
- Produce flexible benefits enrollment forms
- Produce customer-defined enrollment cover letters
- Produce an extract file of enrollment information

Report field details

- **Plan ID**—Unique identifier of a specific benefit plan.
- **Plan Name**—Name of the plan pending enrollment.
- **Options Available**—Employee's choice of benefit levels.
- **Price/Credits**—Value of an option for costing a flexible benefit plan.
- **Annual Your Cost**—Space available for enrollee to enter option prices.

Parameter options and setup

- **Plan Year Start Date**—Enter in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) format.
- **Master Plan ID**—Enter the three-character plan ID.
- **Final Form Return Date**—Enter in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) format.
- **Prior Year Master—**Enter the three-character prior year plan ID.
- **Plan ID**—Enter the three-character plan ID.
- **Print Cover Letter**—Enter 'Y' (yes) or 'N' (no).
- **Selection Routine**—Enter the six-character customer-defined Solution View program name for the Selection Routine (optional).
- **Report Format Option—**Enter one of the following options: 'A', 'S', or 'X'.
- **Credit Calculation—**Enter one of the following options: 'B', 'C', or 'R'.

JANUARY 01, 1998
BRENDA REYNOLDS
19919 BAYPORT DRIVE
WESTPORT, CT 70020

Dear BRENDA,
You are eligible to participate in ACME MANUFACTURING's
Flexible Benefit Program.  Through the Flexible Benefit Program
you have the opportunity to choose the benefit coverage that best
fits your needs.

You may use the Flexible Benefit Plan Credits you have been awarded
to purchase coverage for the Plans listed on the attached Personal
Information Report.  This report has been created especially for you
to help you complete the Flexible Benefit Plan Enrollment Form for
the year.

Your Personal Information Report contains information regarding the
Flexible Benefit Plans in which you are currently participating and
the Plans you are eligible to elect for this year.
Return your Completed Enrollment Form by FEBRUARY 1, 1998
If you do not return your form by this date you will be enrolled in
a series of default Plans.  You will not be able to change this
enrollment until the beginning of the next Flexible Benefit Plan Year.

Sincerely,

Joe Doe
Benefits Administrator

IRS Form 5500 - Schedule T Lines 4(c) & 4(d) (8B-RPT)

The IRS Form 5500 - Schedule T Lines 4(c) & 4(d) (8B-RPT) produces the data necessary for you to complete Lines 4(c) and 4(d) of Form 5500, the Annual Return/Report of Employee Benefit Plans. This report assumes that the plan is not subject to disaggregation, and that all employees are from one line of business for QSLOB purposes.

Note: *This report may be run for only one organization at a time.*

The information included in this report includes the number of:

- Total Employees of the Employer, including leased employees and self-employed individuals if they are on the Employee Database (FILE02)
- Employees excluded under the plan because of:
  - Minimum age or years of service—('Less than 6 Mo. Srv' (A), 'Less than 17-1/2 Hrs.' (B), 'Works < 6 Mo. '(C), or '< Age 21' (D) option in option list BA51
  - Employees on whose behalf retirement benefits were the subject of collective bargaining—'Collectively Bargained' (E) option in option list BA51
  - Nonresident aliens who receive no earned income from United States sources—'Non-resident alien' (F) option in option list BA51 and that the employee had less than $0 .01 in Current Year Earnings on the Components of Highly-Paid Definition form (51-SCR) for the plan year
  - Employees who fail to accrue a benefit in the plan year

Note: *To exclude an employee who has less than 500 hours and has not accrued a year of service, you must record an option of 'Less than 500 Hrs' (L)(option list BA51) in the Exclude 20% Test entry on the Components of Highly-Paid Definition form (51-SCR).*

- Number of nonexcludable employees—Subtract Line 4c(2) from Line 4c(1)
- Nonexcludable employees who are HCEs—Line 4c(3)
- Nonexcludable employees who benefit under the plan—Line 4c(3)

Note: *An employee is considered to benefit from a Thrift/Savings or Defined Contribution plan if the employee was eligible to contribute or receive an allocation of matching contributions, regardless of whether contributions were made. This requires that an individual must have a Deferred Plan Enrollment/Changes (64-SCR) segment established for the plan, even if the participant chooses not to contribute. If this is the case, the Q4 PARTICIPATION-STATUS should be a '2' Inactive Participant (Participant is enrolled in a Plan that does not require employee contributions in order to receive a company contribution and has chosen not to actively contribute), -OR- '3' Inactive Suspended (Participant is enrolled in the Plan but in a contributory Plan has voluntarily reduced their contributions to zero).*

- Nonexcludable employees who are HCEs—Line 4c(5)
- Ratio Percentage of Not Highly-Compensated to Highly-Compensated employees

The IRS Form 5500 - Schedule T Lines 4(c) & 4(d) (8B-RPT) depends on data from a number of segments in the Employee Database (FILE02) to produce accurate output. Your employees should be fully entered on the following forms to avoid erroneous totals:

- Components of Highly-Paid Definition (51-SCR)
- Deferred Plan Enrollments/Changes (64-SCR)
- Plan Retirement Elections/Payments (66-SCR)
- Plan Retirement/Notice/Counseling Dates (65-SCR)
- Plan Service Dates (62-SCR)
- Plan Vesting Information (63-SCR)

Note: *This report outputs information to FILE03 in the event that the report encounters employees who were employed at plan year end per the report parameter, were not excluded because of Components of Highly-Paid Definition form (51-SCR) status, yet do not have a valid Deferred Plan Enrollments/Changes form (64-SCR) entered. If you find employees of this type when you review your FILE03, you should either enter a Components of Highly-Paid Definition form (51-SCR) to exclude the employee or a Deferred Plan Enrollments/Changes form (64-SCR) to record participation in the plan. Then rerun the report.*

Business Tasks

This report is used to complete the following business task:

- Produce the data necessary to complete Lines 4(c) and 4(d) of IRS Form 5500, the Annual Return/Report of Employee Benefit Plans.

Report field details

- **Total Number of Employees of the Employer**—Total number of employees as of the last day of the plan year.
- **Employee Social Security Number**—Employee's social security number.
- **Employee Name**—Employee's legal name.
- **Number of Excludable Employees as Defined in IRS Regulations**—Detail and totals of employees excluded from coverage based on specific IRS rules (as listed in the following details).
- **Employees Who Have Not Attained Min Age/Service Requirements**—Detail and total of employees who have not met the age or service requirements of the plan as of the parameter date recorded on the Components of Highly-Paid Definition (51-SCR).
- **Collectively Bargained Employees**—Detail and total of employees who are excluded due to their status as collectively bargained employees, as of the parameter date recorded on the Components of Highly-Paid Definition (51-SCR).
- **Non-resident Aliens with No U.S. Source Income**—Detail and total of employees deemed to have US source income of less than $0.01, as recorded on the Components of Highly-Paid Definition (51-SCR).
- **Employees Who Fail to Accrue a Benefit Solely Because They**—Detail and total of employees who are excluded because they worked less than 500 hours, failed to accrue a benefit, or were not employed on the last day of the plan year recorded on the Components of Highly-Paid Definition (51-SCR).
- **Number of Nonexcludable Employees-Line 4C(3)-Who Are HCEs**—Detail and total of employees who display in 4(C)(3) as nonexcludables who are also highly compensated employees.
- **Number of Nonexcludable Employees-Line 4C(3)-Who Benefit Under the Plan**—Detail and total of employees who display in 4(C)(5) as benefiting nonexcludables who are also highly compensated employees.
- **Number of Benefiting Nonexcludable Employees-Line 4C(5) Who Are HCEs**—Detail and total of employees who display in 4(C)(5) as benefiting nonexcludables who are also highly compensated employees.
- **Line 4(D): Ratio Percentage Test**—Reflects the ratio percentage test based on the factors in the following detail.
- **Non-Highly Compensated Percent**—Denominator for the test.
- **Highly Compensated Factor**—Numerator for the test.
- **Ratio Percentage**—Result of dividing the Highly Compensated Factor by the Non-highly Compensated Percent.

Parameter options and setup

- **Plan Year-End Date**—Enter the plan year-end date in MM-DD-CCYY or CCYYMMDD format (US and Canada).
- **Plan ID**—Enter the three-character plan ID.

Note: *Your plan may be a component plan established under a flex master plan. This report is designed to run at the component plan level. If you have established separate eligibility criteria at the flex master level, results of this report may be inaccurate.*

FSA Account Balances by Plan (8X-RPT)

The FSA Account Balances by Plan report (8X-RPT) provides a list of all employees enrolled in the specified plan and their account balances. The report includes a listing of the contributions (additions) and claims (expenses) recorded during the plan year.

Business Tasks

This report is used to complete the following business task:

- Provides a list of the FSA balances for all active employees as of the specified date.

Report field details

- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **FSA Plan**—Unique identifier of a specific benefit plan.
- **FSA Year**—Year in which the employees are enrolled in the benefits plan.
- **Balance Date**—Effective date of the balance.
- **Begin Balance**—Balance at the beginning of the year.
- **Additions Total**—Total amount of employee contributions for the year.
- **Expenses Total**—Total amount of expenses for the year.
- **Net Change**—Difference between the Additions Total and Expenses Total.
- **FSA Balance**—Balance amount as of the effective date.
- **Total Credits**—Annual goal amount for the FSA.
- **FSA Claim**—Pending claim amount. Indicate whether you want this value to display on the Report Parameters for FSA Account Balances by Plan form.

Parameter options and setup

- **FSA Plan ID**—Enter the FSA Plan ID.
- **As Of Date**—Enter the As Of Date in the format CCYYMMDD or MM-DD-CCYY (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). If you want to print a total balance for the Flex Plan Year, this date should be the last day of the Flex Plan Year.
- **Claim Date**—Enter the Claim Year in the format YY.
- **Pending Claims Option**—Enter a 'P' to print the values for the FSA Claim column. If this field is left blank, only balances are printed.
- **Print History Option**—Enter an 'H' to print history for the Claim Year. If this field is left blank, only the current balance is printed.

FSA Balance Statements (8XERPT)

The FSA Balance Statements report (8XERPT) provides a monthly statement to employees showing their FSA balance. The statement includes a listing of the contributions (additions) and claims (expenses) recorded during the month.

Business Tasks

This report is used to complete the following business task:

- Provides the employee an FSA Balance Statement.

Report field details

- **Plan Balance Statement**—Identifies the FSA.
- **Month**—Identifies the month that the balance reflects.
- **Date**—Balance Date.
- **Beginning**—Balance at the beginning of the month.
- **Additions**—Employee contributions for the month.
- **Expenses**—Claims submitted for the month.
- **Ending**—Employee contributions as of the statement date.
- **Credits**—Annual amount elected for the FSA.
- **Date**—Effective date of the balance record.
- **Additions**—Employee contributions for the month.
- **Balance**—Balance of employee contributions.
- **Number**—Unique identifier of the provider of service.
- **Date**—Date of the claim.
- **Claim**—Amount of the claim.
- **Paid**—Date on which the claim was paid.
- **Payment**—Amount of claim paid.
- **Pending**—Amount of the claim to be paid once contributions are available (typical of non-medical FSAs).

Parameter options and setup

- **FSA Plan ID**—Enter the FSA Plan ID.
- **Report Month**—Enter the month in MM format.
- **Report Year**—Enter the year in YY format.

FSA Claim Payment Notification (8V-RPT)

The FSA Claim Payment Notification report (8V-RPT) notifies employees that payment has been or will be made to satisfy an authorized and pending claim. Employee notifications are printed when the Posted Date falls within the dates specified on the parameter form. Do not run this report multiple times with the same date range, as this may result in employees receiving duplicate notices.

Business Tasks

This report is used to complete the following business task:

- Provide notification to the employee that payment has been processed.

Report field details

- **Claim ID**—Unique identifier of the claim being paid.
- **Claim Amount**—Amount of the claim.
- **Claim Date**—Date of the eligible claim.
- **Check Date**—Date on which the check was written for reimbursement.
- **Check Type**—Type of payment.
- **Pending Amount**—Amount of the claim pending employee contribution (typical for non-medical FSAs).
- **Authorized Payment**—Amount of the authorized payment.

Parameter options and setup

- **Claim Year**—Enter the claim year in YY format.
- **FSA Plan ID**—Enter the FSA Plan ID.
- **Claim Date Range**—Enter the range of dates for claim payments.
- **Start**—Enter the start date for claim payments in CCYYMMDD or MM-DD-CCYY format (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).
- **End**—Enter the end date for claim payments in CCYYMMDD or MM-DD-CCYY format (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

     MARCH 15, 1999
     THEODORE WALSH
     4318 W KAMERLING
     CHICAGO, IL 60651

     Dear THEODORE,
     This letter is your notification that the claim listed below which you
submitted for
     payment against the 606 MEDICAL FSA has been received and recorded.  If the
Check
     Date is blank, the payment has been authorized, but has not yet been printed.
     If the Claim Amount and the Authorized Payment amount are not the same one of
the
     following has occurred:

        1.  The Claim Amount was greater than your FSA Balance Amount.
        2.  This is a payment notification for a Claim Pending Amount.

     Claim ID:  PROVIDER2          Claim Amount:   $    500.00

       Claim       Check                            Pending      Authorized
       Date        Date        Check Type           Amount       Payment
       02-01-1998  03-01-1998  Reimburse On Paychk  $   .00  $500.00

     If you have any questions regarding this Claim, please contact your Employee
Benefits
     Administration Department

     Sincerely,

     JANET B. SMYTH
     BENEFITS ADMINISTRATOR
```

FSA Claims Recorded By Year (8W-RPT)

The FSA Claims Recorded By Year report (8W-RPT) lists all active employees who have claims recorded for the FSA plan specified on the report parameter form. Only the claims within the Flex Year and as-of date specified on the parameter form will be included on the report.

Business Tasks

This report is used to complete the following business task:

- Provide a listing of all FSA claims paid within the year

Report field details

- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **FSA Plan**—Unique identifier of a specific benefit plan an employee is currently enrolled in.
- **Flex Year**—Year in which the employee is enrolled in the benefit plan.
- **Claim Date**—Date of the claim.
- **Claim ID**—Unique identifier of the provider of service for the eligible FSA expense.
- **Claim Amount**—Amount of the claim.
- **Payment Date**—Date on which reimbursement was paid.
- **Payment Type**—Option list BA34; 0 = no system check; 1 = reimburse on paycheck; 3 = separate check Sum of Type; 5 = separate check Each Claim; 9 = pending.
- **Payment Posted**—Date on which the payment was posted.
- **Pending Amount**—Amount of the claim pending employee contribution (typical of non-medical FSAs).
- **Pending Amount Paid**—Amount of reimbursment.

Parameter options and setup

- **FSA Plan ID**—Enter the FSA Plan ID.
- **As Of Date**—Enter the date that the report should reflect in CCYYMMDD or MM-DD-CCYY format (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).
- **Claim Year**—Enter the claim year in CCYYMMDD or MM-DD-CCYY format (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

FSA Claims Recorded; History (8WRRPT)

The FSA Claims Recorded; History report (8WRRPT) lists all employee claims that have been recorded for the FSA plan specified on the report parameter form and have been processed but do not have any payment information recorded.

Business Tasks

This report is used to complete the following business task:

- Provide a listing of claims that need to be paid.

Report field details

- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **FSA Pln**—Unique identifier of a specific benefit plan an employee is currently enrolled in.
- **Flex Year**—Year in which the employee is enrolled in the benefit plan.
- **Claim Nbr**—Claim identification number.
- **Pnd ID**—Another identification number, particularly important when pending payments are required and claims must be further distinguished (typically for non-medical FSAs).
- **Claim Date**—Date on which the service was incurred.
- **Claim ID**—Unique identifier of the provider of service for the eligible FSA expense.
- **Claim Amount**—Amount of the claim.
- **Payment Date**—Date on which payment was made.
- **Payment Type**—Option list BA34; 0 = no system check; 1 = reimburse on paycheck; 3 = separate check Sum of Type; 5 = separate check Each Claim; 9 = pending.
- **Payment Posted**—Date on which the payment was recorded in *The Solution Series/ST*.
- **Pending Amount**—Amount of the claim pending employee contribution (typical of non-medical FSAs).
- **Pending Amount Paid**—Amount of the claim eligible for payment once employee contributions are made.

Parameter options and setup

- **FSA Plan ID**—Enter the Plan ID.
- **As Of Date**—Enter the date that the report should reflect in CCYYMMDD or MM-DD-CCYY format (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).
- **Claim Year**—Enter the claim year in CCYYMMDD or MM-DD-CCYY format (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

HED Segment Changes Effective This Period (8R-RPT)

The HED Segment Changes Effective This Period report (8R-RPT) produces an audit report listing benefits contributions that have been added or changed. It details benefit plan deductions or company cost accruals for which employee deduction records have been updated or inserted.

Business Tasks

This report is used to complete the following business tasks:

- Track new deductions and deduction changes
- Verify that deductions have copied correctly to Payroll

Report field details

- **Plan ID**—Unique identifier of a specific benefit plan an employee is currently enrolled in or will be eligible for.
- **HED Xref—**Unique number assigned to this deduction.
- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Pay Freq**—Interval at which an employee is paid.
- **Start Field**—Date or amount that, when reached, starts the deduction.
- **Effect Date**—Date on which the deduction is to take effect.
- **Amount/Pct**—Amount of the deduction.
- **Xref Freq—**Pay period in which deductions are to be taken for the benefit.
- **Xref Type**—Arrears handling rule.
- **Xref Meth**—Method used to determine the amount of deduction for the benefit.
- **Xref UC**—User Code. Undefined field on the Benefit Plan Prototype Contribution HED form. For payroll purposes, this field is often used to further define the maximum yearly allowable amount of contributions for the plan.
- **Warning**—Any specific warning messages may appear in this area.

Report sort order

As delivered, the sort order of this report is EMPLOYEE-NAME-20, EMPLOYEE-NUMBER within PLAN-ID, and HED-XREF-NUMBER.

Parameter options and setup

- **Pay Period End Date**—Enter in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) format.
- **Pay Frequency**—Enter the pay frequency(s) to be included on the report using one of the following options: 'ALL' for all pay frequencies, pay frequency value in the format 'X' for one pay frequency, or pay frequency values in the format 'X/x' for a range of pay frequencies.

Identification of Excludable Employees Report (2A-RPT)

The Identification of Excludable Employees Report is the first step in identifying highly-paid individuals for nondiscrimination testing in Benefits Administration. This report is optional and should only be run if you have determined that you want to, and can, exclude certain employees or employee groups from the highly-paid determination and nondiscrimination testing process.

You should determine which groups of individuals may be excluded to help your benefits plans pass the nondiscrimination tests. It is assumed that you have performed, or had your outside agent or auditor perform, the required analysis to determine which individuals or groups of individuals can be excluded by law.

It is also assumed that this evaluation has been performed for each of your test groups in the event that different groups of individuals can be excluded for each test series. It is necessary to run this program as the first step of each nondiscrimination testing process because different individuals may be excluded for each process.

If you do not have employees who may be excluded because they do not meet the necessary requirements, DO NOT run this program and proceed directly to the Nondiscrimination Earnings Update Report (2B-RPT).

Business Tasks

- Identifying plans for nondiscrimination testing.
- Identifying highly-paid employees.
- Recording average deferral percentage ratios.

Report field details

- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Exclude 20% Test**—Value for the criteria which allows the employee to be excluded from determination of the top 20% of highly compensated employees. See the online help for definitions of each value.
- **Excluded-20%-Test**—The exclusion value that the employee meets based on the specified exclusion criteria.
- **Excludable Reason**—The name of the field which determined that the employee met the criteria to be excluded, and the value of that field.

Parameter options and setup

- **Plan Year End Date**—The date in the 'Test As Of Date' field of the Nondiscrimination Test Component Plans form (51-SCR). This field indicates when the testing process should begin.
- **Exclusion Criteria Switches—**Each value indicates a specific criterion defined by the Internal Revenue Code. The employees who meet this criteria can be excluded from determination of the top 20% of highly compensated employees.

IRS Form 5500 - Lines 7(a) - 7(h) (8A-RPT)

The IRS Form 5500 - Lines 7(a) - 7(h) report (8A-RPT) produces data necessary to complete Lines 7(a)-(h) of Form 5500, the Annual Return/Report of Employee Benefit Plans.

Note: This report may be run for only one organization at a time.

The information on this report includes the number of:

- Active plan participants who are fully vested, partially vested, or nonvested
- Retired or separated participants receiving benefits
- Retired or separated participants entitled to future benefits
- Deceased participants whose beneficiaries are receiving or are entitled to receive benefits
- Participants with account balances as of the end of the year (DC Plans)
- Participants who terminated employment during the plan year with accrued benefits that were less than 100% vested (Deferred Plans only)

The IRS Form 5500 - Lines 7(a) - 7(h) report (8A-RPT) depends on data from a number of segments in the Employee Database (FILE02) to produce accurate output. Your employees should be fully entered on the following forms to avoid erroneous totals:

Deferred plans

- Deferred Plan Enrollments/Changes (64-SCR)
- Defined Contribution Plan Balance Entry (76-SCR)
- Plan Retirement Elections/Payments (66-SCR)
- Plan Service Dates (62-SCR)
- Plan Vesting Information (63-SCR)
- Service Interruptions (61-SCR)
- Stock Plan Employee Account Totals (89-SCR)
- Thrift / Savings Plan Balance Entry (84-SCR)

Welfare plans

- Welfare Plan Enrollments/Changes (55-SCR)
- Flex Benefit Enrollments/Changes (55FSCR)

Business Tasks

This report is used to complete the following business task:

- Produce the data necessary to complete lines 7(a) - (h) of IRS form 5500, the Annual Return/Report of Employee Benefit Plans.

Report field details

- **Employee Social Security Number**—Employee's social security number.
- **Employee Name**—Employee's legal name.
- **Active Participants, Fully Vested**—Detail and total of employees who are fully vested.
- **Active Participants, Partially Vested**—Detail and total of employees who are partially vested.
- **Active Participants, Non-Vested**—Detail and total of employees who are not vested.
- **Total Active Participants (Welfare Plans Complete Only Lines (7) A, B, C, and D)**—Detail and total of employees enrolled in the benefit plan.
- **Retired or Separated Participants Receiving benefits**—Detail and total of employees who are retired or separated and receiving benefits.
- **Retired or Separated Participants Entitled to Future Benefits**—Detail and total of employees who are retired or separated and entitled to benefits in the future.
- **Deceased Participants with Beneficiaries Receiving or Entitled to Benefits**—Detail and total of deceased participants with beneficiaries entitled to future benefits.
- **Participants with Account Balances as of the End of the Year (DC Plans Only)**—Detail and total of participants with a defined contribution plan account balance as of year end.
- **Participants Terminated During the Year with Accrued Balances <100% (Deferred Only)**—Detail and total of participants with a deferred plan accrued balance less than 100% as of year end.

Parameter options and setup

- **Plan Year-End Date**—Enter the plan year end date in MM-DD-CCYY or CCYYMMDD format (US and Canada).
- **Plan ID**—Enter the three-character plan ID.

Note: Your plan may be a component plan established under a flex master plan. This report is designed to run at the component plan level. If you have established separate eligibility criteria at the flex master level, results of this report may be inaccurate.

Schedule SSA Lines 4(b)-4(h) (8C-RPT)

The Schedule SSA Lines 4(b)-4(h) (8C-RPT) produces information that can assist in the preparation of Schedule SSA, the Annual Registration Statement Identifying Separated Participants with Deferred Vested Benefits. Schedule SSA is filed as an attachment to Form 5500 for each plan year in which one or more participants with deferred vested benefits are separated from service. Only deferred plans are subject to Schedule SSA reporting.

This report is designed to identify any participant with a deferred vested benefit who has separated from service in the plan year prior to the plan year being reported. Participants are reported on Schedule SSA unless the participant has, before the report run date:

- Received some or all of the deferred vested retirement benefit
- Returned to service covered by the plan
- Forfeited all of the deferred vested retirement benefit

Note: This report may be run for only one organization at a time.

Note: If the separated employee's status is still 'terminated' as of the system date when the report is run, then the participant will be reported if there is a deferred vested benefit due.

The Schedule SSA Lines 4(b)-4(h) (8C-RPT) depends on data from a number of segments in the Employee Database (FILE02) to produce accurate output. Your employees should be fully entered on the following forms to avoid erroneous totals:

- Deferred Plan Enrollments/Changes (64-SCR)
- Deferred Plan Vesting (63-SCR)
- Defined Contribution Plan Balance Entry (76-SCR)
- Plan Retirement Elections/Payments (66-SCR)
- Plan Service Dates (62-SCR)
- Plan Vesting Information (63-SCR)
- Service Interruptions (61-SCR)
- Stock Plan Employee Account Totals (89-SCR)
- Thrift / Savings Plan Balance Entry (84-SCR)

Business Tasks

This report is used to complete the following business tasks:

- Produce the data necessary to complete Schedule SSA, the Annual Registration Statement Identifying Separated Participants with Deferred Vested Benefits.

Report field details

- **Soc. Sec. Number**—Employee's social security number.
- **Participant Name**—Employee's legal first and last name.
- **Type of Annuity**—Normal form of payment the participant is scheduled to receive under the plan.
- **Payment Frequency**—How often the benefit is awarded to the employee.
- **Benefit/Period**—Amount of periodic payment the participant is entitled to receive based on the normal form of benefit.
- **Units/Shares**—Number of units or shares the employee holds (DC Stock Plans only).
- **Account Value**—Total value of the benefit (DC plans only).
- **Separation Date**—Date on which employee separated from employment.

Parameter options and setup

- **Plan Year-End Date**—Enter the plan year-end date in MM-DD-CCYY or CCYYMMDD format (US and Canada).
- **Plan ID**—Enter the three-character plan ID.

Note: Your plan may be a component plan established under a flex master plan. This report is designed to run at the component plan level. If you have established separate eligibility criteria at the flex master level, results of this report may be inaccurate.

Master Plan Components Table Records Batch Report (9P-RPT)

The Master Plan Components Table Records Batch Report (9P-RPT) displays the Flex Master/Group Plan Components form (TP-SCR) table records on a batch report.

Business Tasks

This report is used to complete the following business tasks:

- Review and analyze flex master plan components
- Review and analyze group plan components

Report field details

- **Control Number**—Control Number assigned to this table entry.
- **Plan ID**—Plan ID associated with the table record.
- **Plan Date**—Effective date of the table record.
- **Plan Type**—Code that indicates the kind of benefits plan.
- **Plan 1-17**—Plan ID of the benefits plan that belongs to this group.

Parameter options and setup

- **As of Date**—Enter in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) format to include the table records in effect as of this date. Specify this parameter and leave the Control Number field blank to print all table records.
- **Control Number**—Enter the Control Number of the table set you want to print. Specify this parameter and leave the As Of Date field blank to include all table records in the table set, regardless of date.

New Plan Participants (8J-RPT)

The New Plan Participants report (8J-RPT) displays, by plan, all employees who have become new participants in a plan within a specified range of dates.

An employee is considered a participant in a plan even if he or she has waived the right to participate in a plan.

Business Tasks

This report is used to complete the following business tasks:

- Verify plan eligibility
- Track deferred plan enrollment

Report field details

- **Plan ID**—Unique identifier of a specific benefit plan an employee is currently enrolled in or will be eligible for.
- **Ctrl Three**—Human Resource organization level three value.
- **Ctrl Four**—Human Resource organization level four value.
- **Ctrl Five**—Human Resource organization level five value.
- **Ctrl Six**—Human Resource organization level six value.
- **Employee Name**—First 20 positions of an employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Birth Date**—Employee date of birth.
- **Service Calc Date**—Date that is used by the benefits plan as the basis from which service or other plan service dates are calculated.
- **Plan Entry**—Employee's original participation date in a welfare benefits plan.
- **Eligibility Date**—Date on which an employee is first eligible to participate in a deferred benefits plan.
- **Option Elected**—Employee's choice of benefit levels when multiple options are available.

Report sort order

As delivered, the sort order of this report is PLAN-ID, CTRL-THREE, CTRL-FOUR, CTRL-FIVE, and CTRL-SIX.

Parameter options and setup

- **Start Date**—Enter the start date for the range in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) format.
- **End Date**—Enter the end date for the range in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) format.

Next Retirement Counseling Date This Period (8T-RPT)

The Next Retirement Counseling Date This Period report (8T-RPT) lists all employees scheduled to attend a retirement counseling session during a user-defined range of dates.

This report lists counseling notification data only for employees who are active and currently participating in the plan. If you want to include other employee statuses and/or employees regardless of plan status, modifications to this report will be required.

Business Tasks

This report is used to complete the following business tasks:

- Generate a checklist for preparing materials for counseling sessions
- Track scheduled retirement counseling dates

Report field details

- **Plan ID**—Unique identifier of a specific benefit plan an employee is currently enrolled in or will be eligible for.
- **Plan Name**—Name of plan associated with Plan ID.
- **Employee Name**—First 25 characters of an employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Next Counsel Type**—Translation of the type of the next counseling session to be given to a plan participant who is nearing a projected retirement date.
- **Counsel Date**—Projected date of the next counseling session to be given to a plan participant who is nearing a projected retirement date.
- **Mail Distribute**—Employee's internal mail station or distribution data.
- **Next Retire Date**—Either the earliest, normal, or mandatory date on which an employee can retire according to company rules. The date that displays is determined by the Next Counsel Type that has been recorded.

Parameter options and setup

- **Start Date**—Enter the start date for a date range in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) format.
- **End Date**—Enter the end date for a date range in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Nondiscrimination Earnings Update Report (2B-RPT)

The Nondiscrimination Earnings Update Report (2B-RPT) updates current and prior year earnings. These earnings are used to determine whether or not an employee is considered highly-paid in your nondiscrimination testing. It is run against every employee in the organization group specified on the Report Parameters for Non-Discrimination Earnings Update form, regardless of employee or benefits status, EXCEPT employees who have been excluded from further testing by the Identification of Excludable Employees Report (2A-RPT).

The Nondiscrimination Earnings Update Report should be run with U.S. companies, after running the Identification of Excludable Employees Report (2A-RPT) (if this report was applicable to your organization). The Nondiscrimination Earnings Update Report reads P20 Master File History records and updates or creates the appropriate employee Components of Highly-Paid Definition form (51-SCR) with current and/or prior Federal W-2 earnings and deferred (pre-tax) contributions.

You may update current history records or previous history records within a range of dates. If you are not keeping history records, the report may only be run to accumulate current history from the P20 Master File. The report must be run after every pay run in this case, so data is not lost before it is accumulated.

If you are keeping history records, you may update the highly-paid segments from these history records on a periodic basis, e.g., monthly, quarterly, or annually, using the time span feature on the Report Parameters for Nondiscrimination Earnings Update Report.

IMPORTANT: Be careful when using the time span feature as ALL history records within the time span will be processed. If you overlap dates on subsequent runs, you will be adding monies that have already been written to the employee Components of Highly-Paid Definition form (51-SCR).

Business Tasks

- Identifying plans for nondiscrimination testing.
- Identifying highly-paid employees.
- Recording average deferral percentage ratios.

Report field details

- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Recon Code**—Payroll reconciliation code.
- **High Pd Year End**—Plan year that you want to test.
- **Payment Date**—Date of the most recent pay.
- **Prior Yr Earnings**—Amount of earnings for the previous year.
- **Period End Date**—Last pay period of the test year.
- **Prior Yr Def Earn**—Amount of deferred earnings for the previous year.
- **History Wages**—Amount of wages for the previous year.
- **Current Earnings**—Amount of earnings for the current year.
- **History Def**—Amount of deferred earnings for the previous year.
- **Current Def Earn**—Amount of deferred earnings for the current year.
- **High Curr**—Indicates if employee is considered highly compensated for the current year.
- **Paid Prior**—Indicates if employee was considered highly compensated for the previous year.

Parameter options and setup

- **Test Year End Date**—The date in the 'Test As Of Date' field of the Nondiscrimination Test Component Plans form (TV-SCR). This field indicates when the testing process should begin.
- **History Records Start Date**—The first date in the time span that history records are accumulated.
- **History Records End Date**—The last date in the time span that history records are applied.
- **Salary Data**—Specifies how you want to update the Current Year Earnings and Current Year Deferred Earnings fields on the Components of Highly Paid Definition form (51-SCR). Enter 'S' to update the fields with the value from the Annual Salary field on the Salary Assignments/Changes form (40-SCR). Enter 'C' to update the fields with zeros.
- **ADP Earnings**—Specifies whether you want to update the Average Deferral Percentage earnings on the Average Deferral Percentage Ratios form.
- **ADP Plan ID**—Test ID from the Nondiscrimination Test Component Plans form (TV-SCR).

Nondiscrimination Earnings Update Report (2B-RPT) Example

A sample report is not available at this time.

Plan Beneficiary Listing (4C-RPT)

The Plan Beneficiary Listing report (4C-RPT) provides a listing of all participants in a customer-specified plan as well as beneficiary data, as of a report parameter date. If multiple beneficiaries are recorded for a plan, a line for each beneficiary is printed that includes name, relationship, and the percent of benefit to which the beneficiary is entitled.

Business Tasks

This report is used to complete the following business tasks:

- Verify plan beneficiary information
- Track missing plan beneficiary information

Report field details

- **Ctrl Three**—Human Resource organization level three value assigned to this employee.
- **Ctrl Four**—Human Resource organization level four value assigned to this employee.
- **Ctrl Five**—Human Resource organization level five value assigned to this employee.
- **Ctrl Six**—Human Resource organization level six value assigned to this employee.
- **Employee Name**—First 20 characters of an employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Option Elected**—Employee's choice of benefit levels when multiple options are available.
- **Total Coverage**—Level of benefit indicated by the plan.
- **Beneficiary Data ID**—Beneficiary identifier relating to an employee.
- **Beneficiary Data Name**—First 20 characters of the beneficiary's name.
- **Beneficiary Data Percent**—Percent of total benefit to be allocated to the beneficiary/contingent annuitant.
- **Beneficiary Data Relationship**—Relationship of the beneficiary to the employee.

Report sort order

As delivered, the sort order of this report is CONTROL-1, CONTROL-2, PLAN-ID, EMPLOYEE-NAME-15, EMPLOYEE-NUMBER, and BENEFICIARY-XREF-X.

Parameter options and setup

- **As Of Date**—Enter the date in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) format.
- **Plan ID Option**—Enter the value(s) using one of the following options: 'ALL' or blank for all plans, plan ID value in the format 'XXX' for one plan, or plan ID values in the format 'XXX/xxx' for a range of plans.

Plan Participation Register (4B-RPT)

The Plan Participation Register report (4B-RPT) produces a register showing all employees who participate in at least one welfare or deferred benefits plan along with data pertaining to all plans in which they participate as of the report parameter date. The register prints two or more pages per employee. If there is more data, additional pages will print until all plans have been printed.

Business Tasks

This report is used to complete the following business tasks:

- Monitor employee plan participation
- Verify employee plan data

Report field details

- **Ctrl Three**—Human Resource organization level three value.
- **Ctrl Four**—Human Resource organization level four value.
- **Ctrl Five**—Human Resource organization level five value.
- **Ctrl Six**—Human Resource organization level six value.
- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique up-to-10 character employee identifier.
- **Social Security Nbr**—Unique identifier used for taxation in the USA.
- **Activity Date**—Date of event that affected an employee's employment or plan status.
- **Resulting Emp Status**—Employee's status as a result of an activity.
- **Job Effective**—Effective date of most recent job assignment.
- **Job Title**—Name assigned to job.
- **Birth Date**—Employee's date of birth.
- **Marital Status**—Employee's current marital status.
- **Total Dep**—Number of employee's dependents.
- **Original Hire Date**—Employee's first hire date with company.
- **Adjusted Seniority**—Used to determine length of service; same as new hire activity date unless a break-in-service has occurred.
- **Annual Salary**—Salary expressed as an annual amount.
- **Maiden Name**—Employee's surname prior to marriage.
- **ID**—Identifier for dependent covered under this plan.
- **Dependent Name**—Name of dependent.
- **Birth Date**—Dependent's date of birth.
- **Age**—Dependent's age.
- **Sex**—Dependent's gender.
- **Soc Security Number**—Unique identifier used for taxation in the USA.
- **Stud Status**—Indicates that person is a student and what level of school participation is involved.
- **Insurance Carrier**—Name of dependent's insurance carrier.
- **Relation**—Relationship of dependent to the employee.
- **Plan ID**—Unique identifier of a specific benefit plan an employee is currently enrolled in or will be eligible for.
- **Plan Name**—Name of the plan associated with the Plan ID.
- **Def Opt**—Employee's choice of benefit levels when multiple options are available.
- **Option Effect**—Participation effective date.
- **Part Status**—Plan status as a result of a participation option change.
- **Deferred Entry Dt**—Deferred plan entry date.
- **Suspend End Dte**—Date on which an employee's suspension from participation in a welfare benefits plan ends.
- **Cont Type**—Source of contribution to the plan.
- **Coverage Amt**—Level of benefit indicated by the plan rules.
- **Dependent or**—Identifier for dependent covered under this plan.
- **Beneficiary ID**—Beneficiary identifier relating to an employee.

Parameter options and setup

- **As Of Date**—Enter in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) format.

Plan Premium Statements (4I-RPT)

The Plan Premium Statements report (4I-RPT) displays a standard format premium summary by benefit plan.

It is designed to report welfare plans only and reports actual contribution amounts stored in Benefits Administration.

Business Tasks

This report is used to complete the following business tasks:

- Analyze worksheet to prepare final premium statement
- Submit premium summary to insurance carriers

Report field details

- **Plan ID**—Plan ID associated with the table record.
- **Plan Opt**—Employee's choice of benefit levels when multiple options are available.
- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Emp Stat**—Employee's status as a result of an activity.
- **Option Effect**—Effective date of the welfare plan enrollment for the specified plan.
- **Annual Salary**—Employee salary expressed as an annual amount.
- **Contribution Type**—Source of contribution to the plan.
- **Coverage Amt-1**—Level of benefit indicated by the plan rules using employee data and table data to perform the calculation.
- **Coverage Amt-2**—Additional coverage amounts in the case where a plan has more than one coverage.
- **Monthly Contribution**—Annual contribution divided by 12.

Parameter options and setup

- **As Of Date**—Enter a date in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) format.
- **Plan ID Option**—Enter the value(s) using one of the following options: 'ALL' or blank for all plans, plan ID value in the format 'XXX' for one plan, or plan ID values in the format 'XXX/xxx' for a range of plans.

Plan Retirement Dates Rules Table Records Batch Report (9J-RPT)

The Plan Retirement Dates Rules Table Records Batch Report (9J-RPT) displays the Benefits Retirment Dates Rules Table form (TJ-SCR) table records on a batch report.

Business Tasks

This report is used to complete the following business tasks:

- Review the rules for calculating participant retirement dates
- Analyze retirement date rules for early, normal, and latest retirement dates

Report field details

- **Ctrl Nbr**—Control Number assigned to this table entry.
- **Plan ID**—Plan ID associated with the table record.
- **Search Argument**—Element used to search benefits tables to apply plan rules to specific groups of employees.
- **Table Date**—Effective date of this table record.
- **Disable Retire Age**—Earliest possible age an employee can go on disability retirement.
- **Disable Ret Service**—Minimum period of service required before an employee could go on Disability Retirement.
- **Disable Adjust**—Method by which the disability retirement service date is rounded after it has been calculated.
- **Retirement Rule**—Rule for determining early, normal, and latest retirement eligibility under the plan.
- **Retirement Service**—Period of service an employee must attain before becoming eligible for early, normal, or latest retirement.
- **Retirement 1st Notice**—First timeframe during which an employee must be notified of pending early, normal, or latest retirement eligibility.
- **Retirement 2nd Notice**—Second timeframe during which an employee must be notified of pending early, normal, or latest retirement eligibility.
- **Adjustment**—Method by which the early, normal, or latest retirement service date is rounded after it has been calculated.

Parameter options and setup

- **As of Date**—Enter in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) format to include the table records in effect as of this date. Specify this parameter and leave the Control Number field blank to print all table records.
- **Control Number**—Enter the Control Number of the table set you want to print. Specify this parameter and leave the As Of Date field blank to include all table records in the table set, regardless of date.

Plan Rules Table Records Batch Report (9K-RPT)

The Plan Rules Table Records Batch Report (9K-RPT) displays the Benefit Plan Rules form (TK-SCR) table records on a batch report.

Business Tasks

This report is used to complete the following business tasks:

- Review the benefits plan rules
- Analyze changes to the benefits plan rules

Report field details

- **Cntl Nbr**—Control Number assigned to this table entry.
- **Plan ID**—Plan ID associated with the table record.
- **Plan Name**—First 10 positions of the name of the plan.
- **Plan Type Cd/Desc**—Category of benefits plan.
- **Plan Yr End**—Month and day the plan year ends.
- **Flex/Group Master**—Plan ID of the flex or group master plan.
- **Plan Clas**—Whether the plan is optional, mandatory, inactive, and so forth.
- **Basic HED Pre Post**—HED designation used to deduct the amount of the basic pre- or posttax contribution.
- **Supl HED Pre Post**—HED designation used to deduct the amount of the supplemental pre- or posttax contribution.
- **Co HED**—HED designation used to deduct the amount of the company contribution.
- **Accum Name**—CE/H accumulator for this plan.
- **Type/Desc**—Search argument category.
- **Search Argument**—Element used to search benefits tables to apply plan rules to specific groups of employees.
- **Serv Cd**—Identifies which date from an employee's record is to be moved into the Service Date field.
- **Mid-Year Chg Reasons**—Indicates that the rule will remain constant for the plan for the remainder of the year (Y), or not (N).

Parameter options and setup

- **As of Date**—Enter in CCYY-MM-DD (US and Canada) or CCYY-DD-MM (elsewhere) format to include the table records in effect as of this date. Specify this parameter and leave the Control Number field blank to print all table records.
- **Control Number**—Enter the Control Number of the table set you want to print. Specify this parameter and leave the As Of Date field blank to include all table records in the table set, regardless of date.

PBGC Premium Report (8D-RPT)

The PBGC Premium report (8D-RPT) produces the data necessary to determine the flat-rate portion of the annual PBGC premium. This report does not address the variable rate portion of the annual premium. A separate manual actuarial calculation to produce this figure may be required if your plan is underfunded.

Note: This report may be run for only one organization at a time.

Note: For plan years beginning before 2001, a terminated non-vested individual ceases to be a participant for premium purposes when the individual incurs the greater of a one-year Break in Service (BIS) under the plan, or an absence of one full year. For plan years beginning after 2000, a terminated non-vested individual ceases to be a participant for premium purposes when the individual incurs a one-year BIS under the plan, regardless of the length of the individual's absence from employment. Thus, for post-2000 years, an individual may be dropped from the premium participant count earlier than under the pre-2001 definition.

Note: Only Defined Benefit plans are subject to PBGC reporting.

The information provided in this report includes:

- Detail of Plan Participants by category
- Number of Plan Participants by category and in total
- Employer Premium Due

The PBGC Premium report (8D-RPT) depends on data from a number of segments in the Employee Database (FILE02) to produce accurate output. Your employees should be fully entered on the following forms to avoid erroneous totals:

- Deferred Plan Enrollments/Changes (64-SCR)
- Plan Retirement Elections/Payments (66-SCR)
- Plan Service Dates (62-SCR)
- Plan Vesting Information (63-SCR)
- Service Interruptions (61-SCR)

Business Tasks

This report is used to complete the following business task:

- Produce the data necessary to complete lines 13 - 15 of the PBGC Form 1, the Premium Payment Report.

Report field details

- **Plan**—Plan ID and description of plan
- **Plan Start**—Beginning date of the range for which the report is run.
- **Plan End**—Ending date of the range for which the report is run.
- **Employee Social Security Number**—Employee's social security number.
- **Employee Name**—Employee's legal name.
- **Totals for Company**—Organization for which the report is run.
- **Active Participant**—Number of actively employed participants enrolled in the plan.
- **Vested Term Separated Participants**—Number of participants enrolled in the plan who have separated from employment with a vested benefit due.
- **Non-Vested Terminated w/o BIS**—Number of participants enrolled in the plan who have separated from employment, are not due a benefit, but who have not experienced a break-in-service.
- **Premium Due**—Flat-rate premium amount due from the employer.

Parameter options and setup

- **Plan Year-End Date**—Enter the plan year-end date in MM-DD-CCYY or CCYYMMDD format (US and Canada).
- **Plan ID**—Enter the three-character plan ID.
- **Employer Plan**—Select the plan type, either Single Employer or Multiple Employer. Your selection will determine the premium rate per participant.

Projected Retirements report (3J-RPT)

The Projected Retirements report (3J-RPT) displays a listing of active employees that have general retirement information. The retirement date is taken from the Benefits Information form (PB-SCR).

Business Tasks

This report is used to complete the following business task:

- Review projected participant retirement dates

Report field details

- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique up-to-10-character employee identifier.
- **Ctrl Three**—Human Resource organization level three value assigned to this employee.
- **Ctrl Four**—Human Resource organization level four value assigned to this employee.
- **Ctrl Five**—Human Resource organization level five value assigned to this employee.
- **Ctrl Six**—Human Resource organization level six value assigned to this employee.
- **Birth Date**—Employee's date of birth.
- **Age**—Employee's age calculated as current date minus birth date.
- **Original Hire Date**—Employee's first date of hire with this company.
- **Service Years**—Number of years of employment with this organization since date of hire.
- **Retire Date**—Date on which an employee can elect to retire, as recorded on the Benefits Information form (PB-SCR).
- **Job Code**—Alphanumeric identifier of the job to which the employee is currently assigned.
- **Job Code Extent**—Four-digit number that works in conjunction with the job code text box to further identify the job to which the employee is currently assigned.
- **Employee status**—Current employment status of the employee.

Report sort order

As delivered, the sort order of this report is CONTROL-1, CONTROL-2, RETIREMENT-DATE-2, and EMPLOYEE-NUMBER.

Parameter options and setup

There are no parameters for this report.

Recalc Benefit Coverage/Contributions (85-RPT)

The Recalc Benefit Coverage/Contributions report (85-RPT) recalculates employee coverage and employee and company contribution amounts for plans in which an employee is enrolled.

This report handles both processes—table changes and employee changes/modifications that result in new eligibility status, coverage, or contribution amounts.

Which plans are recalculated and whether plan or employee data is to be processed is handled by report parameters.

Business Tasks

This report is used to complete the following business tasks:

- Recalculate coverages and contributions based on plan changes
- Recalculate coverages and contributions based on changed employee data

For flex plans, this report is used to complete the following business tasks:

- Check eligibility for flex plans in which employees are enrolled
- Recalculate coverage only for life insurance plans

Note: *The report does not recalculate credits on the Flexible Benefit Annual Plan Credits form (55CSCR) for any of the plans that have to be recalculated. A life status change or plan cost/coverage change must be entered on the Flex Benefit Enrollments/Changes form (55FSCR) for a recalculation of credit to occur.*

Report field details

- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique up-to-10-character employee identifier.
- **Plan Name**—Name of the plan associated with the plan ID.
- **Plan ID**—Unique identifier of a specific benefit plan an employee is currently enrolled in or will be eligible for.
- **Effective Date**—Date on which change became effective.
- **Plan Status**—Result of eligibility determination.
- **Option Elected**—Employee's choice of benefit levels when multiple options are available.
- **Plan Entry Date**—Date on which employee was first covered by plan.
- **Plan Type**—Category of benefits plan.
- **Suspend End Date**—Date on which an employee's suspension from participation in a benefits plan ends.
- **Service Date**—Date used by a benefits plan as the basis from which service or other plan service dates are calculated.

Report sort order

As delivered, the sort order of this report is CONTROL-1, CONTROL-2, and EMPLOYEE-NUMBER.

Parameter options and setup

When setting up the parameters for the report, you will indicate the way you want the report to be run. You cannot run the report both ways at the same time. The Employee Changes and Plan Changes checkboxes can not both be selected.

- **Pay Frequency**—Enter 'ALL' to recalculate all pay frequencies. Enter a single pay frequency in the format 'X' or a range of frequencies in the format' X/x'.
- **Effective Date Of Change**—Enter in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).
- **Last Day Of Pay Period**—Enter in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). This may also be a customer-defined date.
- **Plan(s) to Recalc**—Enter 'ALL' for all plans, plan ID value in the format 'XXX' for one plan, or plan ID values in the format 'XXX/xxx' for a range of plans.
- **Effective Date Of Plan Changes**—Enter in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).
- **Flex Plans**—Select to include flex plans.
- **Include Welfare**—Select to include welfare plans.
- **Include Deferred**—Select to include deferred plans.
- **Update Emp Records**—Select to update employee records.

Retiree Deceased (49-RPT)

The Retiree Deceased report (49-RPT) lists, by plan, all retirees who have died during the period specified by the report parameters.

This report also lists any beneficiaries who have died but are still receiving payments during the period indicated. Only records for your retiree organization will be printed by this report.

In the event of an employee's death, the beneficiary's information is printed where the employee's data formerly existed. To avoid confusion, this report prints the social security number in the beneficiary's data area.

The description of Form of Payment elected is hard coded into the report logic based on the delivered Form of Payment (BA07) option list values. If you have added additional values to the option list because of additional optional forms of payment available under your plans, you must add literal descriptions for your codes to this report's logic.

Business Tasks

This report is used to complete the following business tasks:

- Track proper distribution of benefits for deceased retirees
- Monitor distribution of benefits for deceased beneficiaries

Report field details

- **Plan ID**—Plan ID associated with the table record.
- **Employee Name**—Employee's legal name.
- **Social Security**—Unique employee identifier, up to 10 characters in length.
- **Plan status**—Result of eligibility determination.
- **Elected Payment**—Date when the monthly pension benefit first becomes payable.
- **Payment Form**—Method of payment elected by an employee.
- **Monthly Pension**—Monthly pension benefit being paid to the retiree.
- **Date of Death**—Date on which an employee, beneficiary, or contingent annuitant (whomever is receiving the monthly pension) died.
- **Bene Xref**—Cross-reference identifier of the beneficiary from the Beneficiary/Bond-Owner Information form (58-SCR).
- **Beneficiary Name**—First 20 characters of the beneficiary's name.
- **Perct Alloc**—Percent of total benefit to be allocated to the beneficiary/contingent annuitant identified in the Beneficiary Xref field.

Parameter options and setup

- **Start Date**—Enter the start date for a date range in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).
- **End Date**—Enter the end date for a date range in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Retiree Payment Stop Date Passed (48-RPT)

The Retiree Payment Stop Date Passed report (48-RPT) lists, by plan, all retirees who have reached their stop payment date on the indicated benefit.

This report also lists any retiree and beneficiary whose payment has stopped due to death. Only records for your retiree organization will be printed. A special condition exists if the stop payment is for the beneficiary; in the event of an employee's death, the beneficiary's information is printed where the employee's data formerly existed. To avoid confusion, this report prints the social security number in the beneficiary's data area.

The description of Form of Payment elected is hard coded into the report logic based upon the delivered Form of Payment (BA07) option list values. If you have added additional values to the option list because of additional optional forms of payment available under your plans, you must add literal descriptions for your codes to the report logic.

Business Tasks

This report is used to complete the following business task:

- Monitor retirees and beneficiaries for whom a payment stop date has passed

Report field details

- **Plan ID**—Plan ID associated with the table record.
- **Employee Name**—Employee's legal name.
- **Social Security**—Unique employee identifier, up to 10 characters in length.
- **Plan Status**—Result of eligibility determination.
- **Elected Payment**—Date when the monthly pension benefit first becomes payable.
- **Payment Form**—Method of payment elected by an employee.
- **Monthly Pension**—Monthly pension benefit being paid to the retiree.
- **Stop Payment**—Date on which payments of retirement benefits are to stop.
- **Bene Xref**—Cross-reference identifier of the beneficiary from the Beneficiary/Bond-Owner Information form (58-SCR).
- **Beneficiary Name**—First 20 characters of the beneficiary's name.
- **Perct Alloc**—Percent of total benefit to be allocated to the beneficiary/contingent annuitant identified in the Beneficiary Xref field.

Parameter options and setup

- **Start Date**—Enter the start date for a date range in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) format.
- **End Date**—Enter the end date for a date range in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).
- **Plan ID Option**—Enter the value(s) using one of the following options: 'ALL' or blank for all plans, plan ID value in the format 'XXX' for one plan, or plan ID values in the format 'XXX/xxx' for a range of plans.

Retirement Notifications Due This Period (8L-RPT)

The Retirement Notifications Due This Period report (8L-RPT) displays, by plan, all employees scheduled to receive a notification of retirement from the plan within a specified range of dates.

Business Tasks

This report is used to complete the following business tasks:

- Monitor retirement notifications
- Counsel employees on retirement

Report field details

- **Plan ID**—Unique identifier of a specific benefit plan an employee is currently enrolled in or will be eligible for.
- **Plan Name**—Name of the plan associated with the plan ID.
- **Employee Name**—First 20 characters of an employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Notice Type**—Description that indicates early, normal, or latest notice.
- **Next Notice Date**—Date on which the retirement notification is due to be sent to an employee.
- **Retire Date**—Date on which an employee can elect to retire according to the rules of the plan.
- **Mar Stat**—Marital status of an employee.
- **Spouse Name**—First 20 characters of the spouse or dependent's name.
- **Mail Distribute**—Internal mail station or distribution data.

Parameter options and setup

- **As Of Date**—Enter the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).
- **Start Date**—Enter the start date for a date range in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) format.
- **End Date**—Enter the end date for a date range in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Retirements This Period (8N-RPT)

The Retirements This Period report (8N-RPT) lists all employees who have a retirement activity recorded with an effective date that falls within a specified range of dates.

Retirement data for each employee is printed for each plan ID an employee has on file. If no retirement data exists, the following message is printed:

* NO PLAN RETIREMENT DATES ON FILE *

An abbreviated description of the activity code for the retirement activity is printed. Therefore, if any changes are made to the descriptions in the Activity Codes (HR09) option list, you should change the report logic to reflect the changes.

Business Tasks

This report is used to complete the following business tasks:

- Monitor retirement activity
- Verify the posting of retirement activity entries

Report field details

- **Ctrl Three**—Human Resource organization level three value assigned to this employee.
- **Ctrl Four**—Human Resource organization level four value assigned to this employee.
- **Ctrl Five**—Human Resource organization level five value assigned to this employee.
- **Ctrl Six**—Human Resource organization level six value assigned to this employee.
- **Employee Name**—First 20 characters of an employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Activity Date**—Date on which an employee's major activity is effective.
- **Retiree Type**—Type of retirement benefit the retiree has elected.
- **Birth Date**—Retiree's date of birth.
- **Plan ID**—Unique identifier of a specific benefit plan an employee is currently enrolled in or will be eligible for.
- **Retirement Date**—Date on which a plan participant can retire according to plan rules.

Report sort order

As delivered, the sort order of this report is CONTROL-1-2, CTRL-THREE, CTRL-FOUR, CTRL-FIVE, CTRL-SIX, EMPLOYEE-NAME-20, EMPLOYEE-NUMBER, and PLAN-ID.

Parameter options and setup

- **Start Date**—Enter the start date for a date range in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) format.
- **End Date**—Enter the end date for a date range in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Service Interruptions Ended This Period (8O-RPT)

The Service Interruptions Ended This Period report (8O-RPT) lists, by plan, all employees who have ended a service interruption during a specified range of dates and for whom a service interruption record has been created.

An employee may have returned from a leave of absence, disability, or been rehired, reinstated, and so forth.

Business Tasks

This report is used to complete the following business task:

- Monitor and adjust employee plan-dependent service dates

Report field details

- **Plan ID**—Unique identifier of a specific benefit plan an employee is currently enrolled in or will be eligible for.
- **Plan Name**—Benefits plan name associated with plan ID.
- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Leave Start**—Effective date of the start of a service interruption.
- **Leave End**—Effective date of the return from a service interruption.
- **Leave Reason**—Activity code that originated the separation.
- **Leave Span**—Period of time between an employee's leave start date and leave end date.
- **Parity Requalif**—Date by which a separated employee must return so as not to cause a break in prior service.
- **Brk-N-Svc Indicator**—Indicator switch if a break-in-service has occurred due to a service interruption.

Parameter options and setup

- **Start Date**—Enter the start date for a date range in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) format.
- **End Date**—Enter the end date for a date range in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Social Security Projection (87-RPT)

The Social Security Projection report (87-RPT) provides an estimate of each employee's approximate monthly Social Security benefits at retirement. Projections are made for early, normal, and late retirement amounts for the primary individual receiving the benefit. This does not take into account family members, disabilities, death, and so on. The Social Security benefit estimate is not retained on the employee's Master File record.

The Social Security Projection report (87-RPT) assumes that all employees will have earned the forty required credits to be fully insured to qualify for Social Security benefits at retirement.

An employee must have a status of Active, Disabled, LOA with Pay, or LOA without PAY to appear on the report. The employee also must have an annual salary recorded on the Salary Assignment/Changes form (40-SCR). Estimates are made for employees 21 years of age and older. The National Average Wage Index figure and OASDI maximum compensation amount for the projection calculation on this report are stored on the Social Security Table Process form (SS1SCR).

The amount of time required to run this report will be dependent on the number of employees being reported on and your computer environment.

DISCLAIMER: The approximations generated by this report are intended to be estimates only. Actual monthly Social Security benefits for your employees may differ greatly from the amounts estimated here. Cyborg Systems shall not be held accountable for the amounts estimated here matching those of the Social Security Administration or your employees' actual Social Security benefits. Employees can request a more accurate estimate through the Social Security Administration (on the Internet at www.ssa.gov).

Business Tasks

This report is used to complete the following business tasks:

- Estimate monthly Social Security benefits at retirement.

Report field details

- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Social Security Number**—The employee's Social Security number.
- **Retirement Date**—The date the employee will reach retirement age. For example, if the retirement age is 65, then this date will be the employee's 65th birthday.
- **Estimated Average Index**—The employee's projected average monthly
- **Monthly Earnings**—earnings based on a career average. The actual earnings are indexed to reflect nationwide wage inflation.
- **Estimated Primary Insurance Amount**—The estimated monthly benefit at the normal retirement date.
- **Estimated Monthly Social Security Benefit**—The estimated Social Security benefit payable on the employee's retirement date.

Parameter options and setup

- **Year End Date**—Enter the year end date for which the report is to be run in MM-DD-CCCYY or CCYYMMDD format (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). A year prior to the current year minus 1 is invalid.
- **Beginning Age**—Enter the youngest age in the range of ages to be included in the report. The age entered must be between 21-99. If no age is entered, a default of 21 is used.
- **Ending Age**—Enter the oldest age in the range of ages to be included in the report. The age entered must be between 21-99. If no age is entered, a default of 65 is used.
- **Retirement Age**—Enter the age upon which the retirement calculation will be based. The age entered must be between 62-69. If no age is entered, a default of 65 is used.
- **Prior Year Accumulator**—Enter 'Y' to have Prior Year Earning accumulators from the Considered Earnings/Hours FICA Accumulators form (60FSCR) used until an accumulator is not found for year. At that point, the remaining years are estimated. Enter 'N' to have a Prior Earnings formula used to estimate prior year earnings. Enter '0' (zero) to have Prior Year Earning Accumulators from the Considered Earnings/Hours FICA Accumulators form (60FSCR) used until an accumulator is not found for a year. At that point, zero earnings will be used for remaining years.

Social Security Projection Detail (87DRPT)

The Social Security Projection Detail report (87DRPT) provides an estimate of each employee's approximate monthly Social Security benefits at retirement. The report performs the same calculations as the Social Security Projection report (87-RPT), but includes details on the data used to make the projections. One employee is printed per page.

All of an employee's Prior Year Earnings (if applicable) are printed double-spaced. An asterisk (*) appears to the left of a year in which the Prior Year Earnings amount was taken from a Considered Earnings/Hours FICA Accumulators form (60FSCR). The maximum amount for each year is also provided for comparison.

All of an employee's Future Year Earnings are printed single-spaced. The maximum amount for each year is provided for comparison.

The National Average Wage Index figure and OASDI maximum compensation amount for the projection calculation on this report are stored on the Social Security Table Process form (SS1SCR).

DISCLAIMER: The approximations generated by this report are intended to be *estimates* only. Actual monthly Social Security benefits for your employees may differ greatly from the amounts estimated here. Cyborg Systems shall not be held accountable for the amounts estimated here matching those of the Social Security Administration or your employees' actual Social Security benefits. Employees can request a more accurate estimate through the Social Security Administration (on the Internet at *www.ssa.gov*).

Business Tasks

This report is used to complete the following business tasks:

- Estimate the monthly Social Security benefits at retirement.

Report field details

- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Social Security Number**—Employee's Social Security number.
- **Date of Birth**—Employee's birth date.
- **Date of Retirement**—Date the employee will reach retirement age. For example, if the retirement age is 65, then this date will be the employee's 65th birthday.
- **Annual Salary**—The employee's annual salary as recorded on the Salary Assignment/Changes form (40-SCR).
- **Base Years**—Number of years reported, beginning with 1951, or with the year of attaining age 22 if later, up through the year before attainment of age 62, minus the so-called five dropout years. (This is the 'Low Years' when calculating retirement at age 62.)
- **Future Years**—Year count from run date to the date of retirement.
- **Prior Years**—Years count prior to the year in which the report is run.
- **Computation Years**—The Base Years minus the Low Years.
- **Low Years**—Dropout years that are provided so that the lowest five years of earnings can be eliminated. Also, years of high earnings in or after the year of attaining age 62 can be substituted for earlier, lower years.
- **Prior Year Earnings**—The year, actual earnings, and the maximum earnings used to calculate the estimated benefit.
- **Future Year Earnings**—The year, estimated earnings, and estimated maximum earnings used to calculate the estimated benefit.

Parameter options and setup

- **Year End Date**—Year-end date in MM-DD-CCCYY or CCYYMMDD format (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). A year prior to the current year minus 1 is invalid.
- **Beginning Age**—Youngest age in the range of ages to be included in the report (21-99). If no entry, 21 is used.
- **Ending Age**—Oldest age in the range of ages (21-99) to be included in the report. If no entry, 65 is used.
- **Retirement Age**—Age (62-69) upon which the retirement calculation will be based. If no entry, 65 is used.
- **Prior Year Accumulator**—'Y'= Prior Year Earning accumulators from the Considered Earnings/Hours FICA Accumulators form (60FSCR) used until an accumulator is not found for year. Then, the remaining years are estimated. 'N'= Prior Earnings formula used to estimate prior year earnings. '0' (zero) = Prior Year Earning Accumulators from the Considered Earnings/Hours FICA Accumulators form (60FSCR) used until an accumulator is not found for a year. Then, zero earnings will be used for remaining years.

Spouse/Dependent Changes by Plan (8K-RPT)

The Spouse/Dependent Changes by Plan report (8K-RPT) lists, by plan, all employees who have made changes to their spouse/dependent designations for at least one plan within a specified range of dates.

Business Tasks

This report is used to complete the following business tasks:

- Monitor spouse/dependent designations
- Review changes to covered dependents by plan

Report field details

- **Plan ID**—Unique identifier of a specific benefit plan an employee is currently enrolled in or will be eligible for.
- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Option**—Employee's choice of benefit levels when multiple options are available.
- **Dependent Date**—Effective date of spouse or dependent coverage under a benefit plan.
- **Dep Xref**—Cross-reference identifier of the beneficiary from the Spouse/Dependent Information form (10-SCR).
- **Dependent Name**—First 20 characters of the dependent's name.
- **Sex**—Dependent's gender.
- **Birth Date**—Dependent's date of birth.
- **F/T Stdt**—Code that indicates whether or not the spouse or dependent is a student and what level of school participation is involved.
- **Relation**—Relationship of the spouse or dependent to an employee.
- **Insurance Carrier**—Name of the spouse or dependent's insurance carrier.

Parameter options and setup

- **Start Date**—Enter the start date for a date range in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) format.
- **End Date**—Enter the end date for a date range in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Suspense Segment Audit Listing (4G-RPT)

The Suspense Segment Audit Listing report (4G-RPT) lists all the suspense segments on the file by plan ID.

These suspense segments exist for all plans for which an employee might become eligible at a later date or for which an employee is to be de-enrolled because of ineligibility. This report audits suspense segments on the file to identify segments that need to be purged.

Business Tasks

This report is used to complete the following business tasks:

- Monitor system file space
- Delete unused or obsolete plan enrollment/de-enrollment information

Report field details

- **Plan ID**—Unique identifier of a specific benefit plan an employee is currently enrolled in or will be eligible for.
- **Plan Name**—Name of benefits plan associated with this plan ID.
- **Suspense Date**—Date on which an employee becomes eligible to participate in the plan.
- **Action Code**—Code that identifies whether an employee is eligible for enrollment or is to be de-enrolled from the plan.
- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Current Status**—Employee's status as a result of an activity.
- **Birth Date**—Employee's date of birth.
- **Adjusted Seniority**—Used to determine an employee's length of service; same as new hire activity date unless this date has been manually adjusted due to an event such as a break in service.
- **Original Hire Date**—Employee's first date of hire with this company.
- **Calc Action Date**—Effective date of most current activity.

Report sort order

As delivered, the sort order of this report is SUSPENSE-DATE.

Parameter options and setup

- **As Of Date**—Enter a date in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) format.

Taxable Group Term Life Insurance Over $50,000 (86-RPT)

The Taxable Group Term Life Insurance Over $50,000 report (86-RPT) calculates an employee's taxable amount of imputed income from Group Term Life Insurance coverage in excess of $50,000. Employees who have company paid or company sponsored group-term life insurance must pay FICA tax on the premiums paid for coverage that exceeds the $50,000 limit based on a cost table supplied in the Internal Revenue Code, Section 79.

The report calculates taxable income using the coverage and contribution amounts recorded on Employee Database records for the plan(s) specified in the report parameters and the "uniform premiums" prescribed in Section 79(d). The Taxable Group Term Life Insurance Over $50,000 report (86-RPT) will be modified by Cyborg Systems to reflect any future Internal Revenue Code changes to these premium amounts.

Both basic and supplemental group term life insurance plans provided by the employer are to be aggregated before calculations are performed. The amount the employee contributes (posttax) to both plans is used as an offset to create the HED that will be used in the payroll process. Both the basic and supplemental plan IDs can be specified in the report parameters. The taxable amount is then calculated for both insurance plans in a single run.

Business Tasks

This report is used to complete the following business tasks:

- Calculate the taxable amount of imputed income from Group Term Life Insurance coverage in excess of $50,000, based on the cost table set by the Internal Revenue Code, Section 79.
- Create the segment needed by payroll to add this taxable amount to the employee's earnings from which taxes will be taken.

Report field details

- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Taxable Thousands**—The amount of life insurance over $50,000 for the employee in which the premiums are either partially or wholly contributed by the company. The field is reported in thousands, for example, '2.00' indicates reported in thousands, for example, '2.00' indicates '$2,000'.
- **Government Factor**—The cost of $1,000 of group term life insurance provided for one month and computed on the basis of 5-year age brackets, as set forth by the government.
- **Government Amount**—The monthly dollar amount the employee must pay or be charged as taxable income, dependent upon the amount of employee contribution.
- **Employee Contribution**—The total life insurance premiums the employee paid in the month specified in the report parameters.
- **Taxable Amount**—The monthly dollar amount to be applied to the employee's gross income.
- **Comments**—Used for error messages or appropriate informational messages.

Parameter options and setup

- **Month End Date**—Date used to determine the imputed income. Enter the date in MM-DD-CCYY or CCYYMMDD format (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).
- **Group Term Life Insurance Plan ID**—The plan ID of the basic life insurance plan.
- **Group Term Supplemental Life Insurance Plan ID**—The plan ID of the supplemental life insurance plan.
- **HED to be Updated**—The default HED number to be updated is 034. To use a different HED number, you must modify the Cyborg Scripting Language for this report and the Report Parameters form for Group Insurance Over $50,000 Taxable form (RPTARG).
- **Update Employees**—Click the checkbox to update employees HEDs. Leave blank to run report as a test and not update the HEDs.
- **Print All Employees**—Click the checkbox to report on all regardless of Status employees. Leave blank to report only on those employees enrolled in the plan.

Terminated Employee's FSA (8Z-RPT)

The Terminated Employee's FSA report (8Z-RPT) lists all terminated employees who have a remaining or pending balance greater than zero, or less than zero if the plan allows a negative balance.

Business Tasks

This report is used to complete the following business task:

- Provide a listing of terminated employees who have FSA balances other than zero.

Report field details

- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Code/Activity**—Unique identifier for an employment status. This is the same identifier as the code/activity that created the Termination record.
- **Plan ID/Name**—Unique identifier and name of a specific benefit plan an employee is currently enrolled in.
- **FSA Balance Date**—Effective date of the balance.
- **FSA Balance Amount**—Balance amount as of the termination date.
- **Pending Claim for**—Flex plan year of the pending claim.
- **Claim**—Pending claim identification number.
- **Pend-ID**—Another identification number, particularly important when pending payments are required and claims must be further distinguished (typically for non-medical FSAs).
- **Date**—Date on which the pending claim was incurred.
- **Clm-ID**—Unique identifier of the provider of service for the FSA expense.
- **Amt**—Amount of the claim that has been paid.
- **Pend**—Amount of the claim pending employee contribution (typical for non-medical FSAs).

Parameter options and setup

- **Separation As Of Date**—Enter the effective date of the report in CCYYMMDD or MM-DD-CCYY format (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).
- **Pending Claim Year**—Enter the pending claim year in YY format.

Terminations This Period - Vested vs. Non-Vested (8M-RPT)

The Terminations This Period—Vested vs. Non-Vested report (8M-RPT) lists, by plan, all employees who have had a major activity of termination, retirement, or death recorded. The effective date of the major activity must fall within the specified range of dates.

Business Tasks

This report is used to complete the following business tasks:

- Monitor employee termination information
- Track employee retirements and deaths for benefits impact

Report field details

- **Plan ID**—Unique identifier of a specific benefit plan an employee is currently enrolled in or will be eligible for.
- **Vested Status**—Indicator for vested or non-vested.
- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Activity**—Description of the termination, retirement, or death activity.
- **Activity Date**—Effective date of an employee's activity.
- **Vesting Calc Date**—Date on which the vesting percentage was calculated.
- **Current Vested**—Date on which the current vesting percentage was calculated.
- **Vesting Pct**—Vesting percentage calculated as of the last vesting calculation date.
- **Vesting Service**—Date when vesting service begins for a deferred benefits plan.
- **Vesting Credit**—Value of an employee's years, months, and days of credited vesting service in a deferred benefits plan.

Report sort order

As delivered, the sort order of this report is CONTROL-1-2, PLAN-ID, vested versus non-vested status, EMPLOYEE-NAME-20, and EMPLOYEE-NUMBER.

Parameter options and setup

- **Start Date**—Enter the start date for a date range in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) format.
- **End Date**—Enter the end date for a date range in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Top 20%, Top 10/100 (2C-RPT)

Before determining which of your employees are highly-paid, you must identify individuals as being in any of the following three categories as described by I.R.C. Section 414(q)(2), (4), and (6)(A):

- TOP 20% -- In Top 20% of Paid Employees
- TOP 10 -- One of Top 10 Paid Employees
- TOP 100 -- One of Top 100 Paid Employees

The Top 20%, Top 10/100 Report bases this identification on either current year or prior year earnings from the Components of Highly Paid Definition form (51-SCR) (updated by the Nondiscrimination Earnings Update Report) depending on your Report Parameters For Top 20%, Top 10/100 form parameter specification.

The Top 20%, Top 10/100 Report must be run in two different runs. The number of the run you are performing is indicated in the Run Number field on the Report Parameters for Top 20%, Top 10/100 form. The second run should always IMMEDIATELY follow the first run.

During the first run, an extract record is created for every employee in the organization group on the Limit Companies form (RGLC12), unless they have been excluded from further testing by the Identification of Excludable Employees Report (2A-RPT).

During the second run, the extract records from the first run and the Total-Test-Group and Total-Highly-Compd fields from the Nondiscrimination Test Component Plans form (TV-SCR) are used to update the Components of Highly Paid Definition form (51-SCR).

Business Tasks

- Identifying plans for nondiscrimination testing.
- Identifying highly-paid employees.
- Recording average deferral percentage ratios.

Report field details

- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Employee Name**—Employee's legal name.
- **Computed Earnings**—Amount of annual wages for the test plan year.
- **Prior Year Top 20%**—Indicates whether the employee ranked in the top 20% of the highly-paid employees for the previous year.
- **Current Year Top 100**—Indicates whether the employee ranks in the top 100 highly-paid employees for the current year.
- **Current Year Top 20%**—Indicates whether the employee ranks in the top 20% of the highly-paid employees for the current year.
- **Exclude 20% Test**—Indicates whether the employee is to be excluded from the 20% test.

Parameter options and setup

- **Plan Year End Date**—The date in the 'Test As Of Date' field of the Nondiscrimination Test Component Plans form (TV-SCR). This field indicates when the testing process should begin.
- **Run Number**—This selection indicates the number of the run that you would like to perform.
- **Earnings**—This selection indicates whether you want to report on the earnings for the current year or prior year.

Top 20%, Top 10/100 (2C-RPT) Example

A sample report is not available at this time.

Update Account Balances report (83ARPT)

The Update Account Balances report (83ARPT) provides a list of balance updates that were applied through the Update Benefit Plan Balance Information program (BAXACT) for flexible spending accounts and deferred plan contributions.

The Update Benefit Plan Balance Information program (BAXACT) must have been run for this report to generate output.

Business Tasks

This program is used to complete the following business task:

- Provide balance information for flexible spending accounts and deferred plan contributions.

Report field details

- **Employee Name**—Employee's legal name.
- **Number**—Unique employee identifier, up to 10 characters in length.
- **Total Credits**—Annual goal amount for the FSA.
- **Plan ID**—Unique identifier of a specific benefit plan.
- **Begin Bal**—Balance at the beginning of the year.
- **Additions**—Amount of employee contributions as of the Balance Date.
- **Expenses**—Amount of expenses as of the Balance Date.
- **Balance Date**—Effective date of the balance.
- **Claim**—Claim amount.
- **Flex Year**—Year in which the employee is enrolled in the benefits plan.
- **Net Chg**—Difference between the Additions and Expenses.
- **End Bal**—Balance amount as of the Balance Date.

Parameter options and setup

There are no parameters for this report.

```

Update Benefit Plan Balance Information (BAXACT)

The Update Benefit Plan Balance Information program (BAXACT) is used to extract amounts from the current pay period's history records in order to update flexible spending account (FSA) balances and deferred plan accumulations. You need not retain history records on the random file to use this program, as it obtains history records from the Sequential P20 Master File. All current history records and adjustments are processed.

Business Tasks

This program is used to complete the following business task:

- Apply balance transactions to deferred benefits accounts

Report field details

This program produces no hard copy output. The Update Account Balances report (83ARPT) and the Update Pending Claim Amounts report (83BRPT) can be used to verify the results of the Update Benefit Plan Balance Information program (BAXACT). The Update Account Balances report (83ARPT) creates extract records that reflect updates to the deferred plan contributions and also to flexible spending accounts (FSA). These records are used by the Update Pending Claim Accounts report (83BRPT) to produce report output.

Parameter options and setup

Instructions for processing this batch program can be found in ***Benefits/Payroll Interaction*** (on page 535).

See also:

- After a pay run ***(on page 547)***

For information on how to process this report.

Update Benefit Plan Balance Information (BAXACT) Example

```
The Update Benefit Plan Balance Information generator (BAXACT) generates no hard copy output.
```

Update Pending Claim Amounts report (83BRPT)

The Update Pending Claim Amounts report (83BRPT) updates the pending claim amount on the FSA Balance form (57-SCR). In order to produce results, this report must be run after the Update Benefit Plan Balance Information program (BAXACT) and the Update Account Balances report (83ARPT) are run. Hard copy output is produced showing the amount of the pending claim that has been paid.

Business Tasks

This program is used to complete the following business task:

- Update pending claim amounts for flexible spending accounts.

Report field details

- **Employee Name**—Employee's legal name.
- **Number**—Unique employee identifier, up to 10 characters in length.
- **Pending ID**—Identification number particularly important when pending payments are required and claims must be further distinguished.
- **Pending Amt**—Amount of the claim pending employee contribution.
- **Plan ID**—Unique identifier of a specific benefit plan.
- **FSA Posted**—Date on which the pending claim amount was updated.
- **Pending Amt Paid**—Amount of the claim that has been paid.
- **Claim Date**—Effective date of the claim.
- **Claim Nbr**—Claim identification number.
- **Claim Amt**—Amount of the claim submitted.
- **Flex Year**—Year in which the employee is enrolled in the benefits plan.
- **Claim ID**—Unique identifier of provider of service for the FSA expense.

Parameter options and setup

There are no parameters for this report.

US Savings Bond Register report (SB-RPT)

The U.S. Savings Bond Register report produces a file to be sent to the Federal Reserve Board (FRB) and a summary report detailing the number of U.S. Savings Bonds purchased, bond denomination, and total purchase price.

The report program performs various edits, calculates the number of bonds to be purchased, and prints a three-part report. If you enter the value that creates the file, the bond deduction ending balance information on the employee record [stored in the Amount Two field on the Employee Earnings And Deductions form (HH-SCR)] is updated based upon the number of bonds purchased.

The printed report provides three types of information:

- A one-page summary containing bond purchase totals and the Report Group Activities form (RGMSTR) information used on the file
- Purchase details for employees for whom bonds will be purchased
- Error pages for employees who have errors associated with their bond deductions and for whom bond purchases will not be made

The file includes three record types:

- Record type A, containing totals for the bond order
- Record type B, containing bond purchase information. There is one record for each employee ID deduction number combination for which a purchase is being made.
- Record type C, containing the trailer record

Special considerations

After the U.S. Savings Bond Register report is run, the system updates the ending balance in the employee's Amount Two field for each Savings Bond deduction. The system will not update this ending balance if you choose not to create a tape. The report will identify all employees for whom the system could not make purchases due to errors associated with their Savings Bond deductions. Cyborg recommends that you run the report with the Create Tape value set to N for No until you resolve all errors.

If the Report Group Activities form (RGMSTR) has been completed correctly, you will get purchase detail pages for employee ID deduction number combinations that have no associated errors, as well as error pages for any employee deduction combinations that still contain errors.

Technical processing considerations

This report requires the online Employee Database (FILE02), not the P20IN Sequential Master File.

This should be the only report in the Report Parameters form. If you choose to create the file, all operators must be signed off the system.

Other required form entries

The U.S. Savings Bond Register report processes all of the organizations entered on the Limit Companies form. If any employees have a Savings Bond deduction and an ending balance amount other than 0 (zero) on the Employee Earnings And Deductions form, they will be included in the report, regardless of their pay frequencies. The Company Deductions form recognizes a Savings Bond deduction with a Category value of Savings Bonds (59).

The Limit Companies form must be completed to process this report. This form is accessed from the Report Group Activities form (RGMSTR) by highlighting your Report Group selecting the Companies button. Select the organizations that you want included on the report. If you do not select any, the report will be created for all organizations.

Bond processing is allowed only for U.S. organizations. You must select United States (0) from the Country option list (PP31) on the Company Options form (AF-SCR).

Specific organization and employee information is required to produce the FRB file or to include employee purchases on the tape. Below is a summary of the forms that supply that information:

- The Savings Bond Company Control Information form (TVASCR) must be completed for each organization included on the report. This form supplies address and Federal Reserve Bank information for the company, and is required for submission of the file to the Federal Reserve Board. This information makes up record A on the file.
- The deduction must be established on the Company Deductions form (A8-SCR) with a Category value of Savings Bonds (59).
- The deduction must be set up for the employee on the Employee Earnings And Deductions form (HH-SCR). Each bond deduction set up for the

employee on this form must have a matching Savings Bond Information form (SB-SCR) with the appropriate fields entered.

- Any person other than the employee who is designated as an owner, co-owner, or beneficiary must be identified on the Beneficiary/Bond-Owner Information form (58-SCR).
- If the bond is to be mailed to a name and address combination other than the employee's, owner's, co-owner's, or beneficiary's, that information must be established on the Employee Name And Address form (FF-SCR).

Report Requests form entries

The U.S. Savings Bond Register report is not produced with the Report Requests form (DD-SCR). Instead, use the Report Group Activities form (RGMSTR).

Report field details

The U.S. Savings Bond Register report provides purchase detail information for each employee as well as a purchase summary by bond denomination. The following chart describes the purchase detail information.

- **CTRL THREE**—Payroll Organization Level 3 label
- **CTRL FOUR**—Payroll Level Organization 4 label
- **CTRL FIVE**—Payroll Level Organization 5 label
- **CTRL SIX**—Payroll Level Organization 6 label
- **EMPLOYEE NUMBER/NAME**—Employee Number and Name
- **STATUS**—Resulting Employee Status
- **HED NBR**—Savings Bond Deduction Number
- **BOND DENOM**—Bond Denomination
- **PUR. PRICE**—Contents of the Amount One Field on the Employee Earnings And Deductions form for the Savings Bond deduction containing the purchase price
- **NBR PURCH**—Number of bonds purchased
- **BEG. BAL**—Contents of the Amount Two Field on the Employee Earnings And Deductions form (HH-SCR) before the Savings Bond deduction
- **END. BAL**—Balance left in the Amount Two Field on the Employee Earnings and Deductions form (HH-SCR) after the Savings Bond purchase

In addition, the following information is shown for each bond denomination for each employee:

OWN

Bond owner name and Social Security number as taken from the Beneficiary/Bond-Owner Information form (58-SCR) or the Employee Name And Address form (FF-SCR), as specified on the Savings Bond Information form (SB-SCR).

BEN

Bond beneficiary name as taken from the Beneficiary/Bond-Owner Information form (58-SCR) or the Employee Name And Address form (FF-SCR), as specified on the Savings Bond Information form (SB-SCR).

MAIL

Bond mailing name and address as taken from the Beneficiary/Bond-Owner Information form (58-SCR) or the Employee Name And Address form (FF-SCR), as specified on the Savings Bond Information form (SB-SCR).

The following chart describes the summary page totals shown for every organization as well as for all organizations included in the report.

- **BOND DENOMINATION**—Value of the bond, as selected from the Bond Denomination Option list (BA65) on the Savings Bond Information form (SB-SCR).
- **PURCHASE PRICE**—This figure in this column is associated with the Bond Denomination. When you select a value from the Bond Denomination option list (BA65), the price of the denomination automatically appears in a display-only field next to it. The purchase price also appears in the Amount One field on the Employee Earnings And Deductions form (HH-SCR) for the Savings Bond deduction.
- **TOTAL NBR PURCHASED**—Ending balance from the Amount Two field on the Employee Earnings And Deductions form (HH-SCR) divided by the purchase price.
- **VALUE BY DENOMINATION**—The total number of bonds purchased times the denomination value.
- **TOTAL PURCHASE PRICE**—The total number of bonds times the purchase price associated with the denomination value of the bond from the Amount One field on the Employee Earnings And Deductions form (HH-SCR).
- **TOTAL B RECORDS**—Total of employee ID deduction number combinations for which a purchase is being made.

The following information is shown below the summary totals:

ISSUE DATE
Month and year bonds are issued.

FRB COMPANY
Transmitting organization.

PAY ENDING DATE
Pay period-end date.

DISTRICT
FRB district.

A RECORD CONTROL-1-2
Organization Number, name, and address of organization reported in A record.

TAPE CREATED AND FILE UPDATED
Yes or no.

CONTROL-1-2 INCLUDED IN ORDER
The organizations included on the tape in order by Organization Number.

Report totals details

This report provides totals by denomination. The summary is produced first, followed by the error listing and the employee detail.

Totals are printed for each organization processed, and grand totals for organizations are printed on the summary page. The report displays the total number of bonds purchased by denomination, the value by denomination, and the total purchase price. The total number of employee purchase records (B records) written to the tape is also included on the printed report.

An overall beginning and ending balance total for all of the employees who were printed on the purchase detail pages prints for each organization and for all the combinations of all organizations. For additional information about combining organizations on the Report Group Activities form (RGMSTR), see the Other Required Form Entries topic in this section.

Note: *Employee ID deduction number combinations with errors are not included in these totals.*

Balancing

- After you resolve outstanding errors, if any, you can use the beginning and ending balance totals from this report and from the Savings Bond Balance Register report to create an audit trail of bond balances. The ending balance from a particular process, such as a payroll run, should be the beginning balance of the next process, such as another payroll run or a U.S. Savings Bond Register report run.
- If the Savings Bond deduction for an employee has been deleted and the Savings Bond Information form (SB-SCR) has not been deleted, the employee's information will be included in the Savings Bond Register report (SB-RPT) in error. To correct this, delete the information recorded on the Savings Bond Information form (SB-SCR) for the employee.

Vested Employees by Percent Vested (42-RPT)

The Vested Employees by Percent Vested report (42-RPT) displays vested employees by the percent they are vested.

Business Tasks

This report is used to complete the following business tasks:

- Track employee's vested percentages
- Provide benefits counseling

Report field details

- **Plan ID**—Unique identifier of a specific benefit plan an employee is currently enrolled in or will be eligible for.
- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Vesting Pct**—Vesting percentage calculated as of the last vesting calculation date.
- **First Vested**—First date on which vesting percentage calculations determine the vesting percentage to be greater than zero for a deferred benefits plan.
- **Fully Vested**—First date on which vesting calculations determine the vesting percentage to be equal to 100 for a deferred benefits plan.
- **Vesting Calc Date**—Date on which the vesting percentage was calculated.
- **Current Vested**—Current vesting percentage.

Parameter options and setup

- **As Of Date**—Enter a date in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) format.

Welfare Benefits Register (4A-RPT)

The Welfare Benefits Register report (4A-RPT) lists all active, leave of absence, or disabled employees participating in at least one welfare benefits plan.

One information line appears for each employee plan.

Business Tasks

This report is used to complete the following business tasks:

- Monitor employee plan participation
- Verify employee plan data

Report field details

- **Ctrl Three**—Human Resource organization level three value assigned to this employee.
- **Ctrl Four**—Human Resource organization level four value assigned to this employee.
- **Ctrl Five**—Human Resource organization level five value assigned to this employee.
- **Ctrl Six**—Human Resource organization level six value assigned to this employee.
- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Current Emp Status Date**—Date on which an employee's activity is effective.
- **Current Emp Status Description**—Employee's status as a result of an activity.
- **Plan ID**—Unique identifier of a specific benefit plan an employee is currently enrolled in or will be eligible for.
- **Option Effective**—Effective date of the welfare benefits plan participation and coverage information.
- **Option Elected**—Employee's choice of benefit levels when multiple options are available.
- **Plan Stat**—Employee's participation status in a welfare benefits plan.
- **Plan Entry**—Employee's original participation date in a welfare benefits plan.

Report sort order

As delivered, the sort order of this report CONTROL-1, CONTROL- 2, CTRL-3, CTRL-4, CTRL-5, CTRL-6, and EMPLOYEE-NAME.

Parameter options and setup

There are no parameter options for this report.

Withdrawal Suspension End Date Passed (8U-RPT)

The Withdrawal Suspension End Date Passed report (8U-RPT) lists all employees who, because of withdrawals from their defined contribution accounts or thrift/savings plan, were subject to withdrawal penalties and whose suspension end dates have already passed a customer-defined date.

This report assumes that an employee's plan participation status is Suspended Plan Rules during a withdrawal suspension period. If your company allows other statuses from the Plan Status option list(BA04), or considers an employee a different status while suspended due to a withdrawal penalty, modifications to this report will be required.

Business Tasks

This report is used to complete the following business tasks:

- Notify employees that they can now resume making contributions to a plan in which they are currently enrolled
- Advise employees of any other plan benefits to which they are now entitled

Report field details

- **Plan ID**—Plan ID associated with the table record.
- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Participation Status**—Plan status as a result of a change in participation option.
- **Contrib Type**—Source of contribution to the plan.
- **Fund Code**—Investment vehicle for accumulated contributions.
- **Withdrawal Type**—Description of reason for withdrawal of funds.
- **Suspend End Date**—Date on which an employee's suspension from participation in a welfare benefits plan ends.

Parameter options and setup

- **Suspension End Prior To This Date**—Enter the date in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) format.

APPENDIX B

Calculation Option List Quick Reference

In This Appendix

Introduction

This section describes the calculation option lists used in the Benefits Administration component. Two types of information are provided: a table listing each calculation option list used in Benefits Administration and the tables/forms where each is used, and detailed information on each value for the option lists.

Calculation Option Lists Used in Benefits Administration

Option list Name	Option list Description	Table(s)/Form(s) where Calculation Option list is used
Option Elected (BA03)	Identifies the option an employee has elected when enrolling in a benefits plan.	Welfare Plan Enrollments/Changes (55-SCR) Deferred Plan Enrollments/Changes (64-SCR)
Plan Status (BA04)	Identifies an employee's plan status based on the rules defined on the benefits tables.	Welfare Plan Enrollments/Changes (55-SCR) Deferred Plan Enrollments/Changes (64-SCR)
Auto HED Creation Switch (BA05)	Rounds benefit deduction dates for payroll (for example, Start With Effective Date).	Benefit Plan Prototype Contribution HED (TS-SCR)
Search Type (BA14)	Identifies elements used to select appropriate benefits plan tables to check eligibility, determine participation, calculate coverage & contributions, and set up HEDs (for example, Union Option).	Benefit Plan Rules (TK-SCR)
Date Calculation Method (BA15)	Rounds dates (for example, First of the Month Coincident Following).	Benefit Plan Eligibility Rules (TL-SCR) Benefits Retirement Dates Rules (TJ-SCR) Benefits Participation Rules (TN-SCR) Activity/Resulting Plan Status Rules (TTASCR) Option/Resulting Plan Status Rules (TTOSCR) Benefits Plan Breaks-In-Service Rules (TU-SCR)
Eligibility Type (BA18)	Determines the employee's plan eligibility (for example, Days Waiting Period).	Benefit Plan Eligibility Rules (TL-SCR)
Coverage Calculation Method (BA20)	Calculates the employee's amount of coverage based on the option elected and plan rules (for example, Multiply Coverage Factor 1 times Annual Salary, round to the next 1,000, and so forth).	Coverage And Contribution Factors (TM-SCR)
Final Average Earnings Calc (BA21)	Methods used to calculate employee's final average earnings for the purpose of calculating a retirement amount (for example, Highest 5 Consecutive Years out of the last 10 Complete Years).	Final Average Earnings Factors and Results (92-SCR)

Option list Name	Option list Description	Table(s)/Form(s) where Calculation Option list is used
Service Date (BA24)	Used as base date for calculations (for example, Employment Date).	Benefit Plan Rules (TK-SCR)
Vesting Schedules (BA26)	Method used to determine vesting (for example, 5 Yr Cliff 0% Before).	Benefits Participation Rules (TN-SCR)
Retirement Age Rules (BA29)	Method used to calculate retirement dates (for example, Age and Service).	Benefits Retirement Dates Rules (TJ-SCR)
Service Rules (BA30)	Method used to calculate service dates (for example, Months Waiting Period).	Benefits Participation Rules (TN-SCR)
Contribution Rules (BA31)	Calculates contribution amounts (for example, Use Factor 1 as Amount).	Coverage And Contribution Factors (TM-SCR)
Breaks in Service Rules (BA32)	Method used to determine whether a break in service has occurred (for example, No break has occurred).	Benefits Plan Breaks-In-Service Rules (TU-SCR)
Allocation Methods (BA35)	Method used to allocate benefit account monies back to the individual employee accounts (for example, Account Balance Ratio).	Benefits Plan Allocations (TRCSCR) Benefits Plan/Fund Allocations (TRDSCR)
Service Calculation Method (BA45)	Method used to determine how credited service is calculated (for example, Elapsed Time).	Benefit Plan Eligibility Rules (TL-SCR) Benefits Participation Rules (TN-SCR)

Option list BA04 - Plan Status

The Plan Status (option list BA04) identifies an employee's plan status based on the rules defined on the benefits tables.

Do not change the meaning of any of the options in this option list.

Option	Name	Description
0	No Prior Status	
1	Active Participant	The employee is enrolled in the plan and is making contributions, if applicable.
2	Inactive Participant	The employee is enrolled in a plan that does not require employee contributions in order to receive a company contribution. The employee has chosen not to contribute actively to the plan.
3	Inactive Suspended	The employee is enrolled in a contributory plan but has voluntarily stopped contributing.
4	Suspended Plan Rules	The employee is enrolled in a plan but, based on plan rules, has been involuntarily suspended from making contributions. This may be the result of a withdrawal that involves a penalty period.
5	Inactive Lost Cover	The employee has lost coverage based on plan rules and is ineligible for plan participation.
6	Vested Terminated	The employee has terminated with a vested plan benefit that is payable at a later date.
7	Waived	The employee is eligible for participation, but declined.
8	Retiree	The employee has terminated employment but is currently receiving a retirement benefit payable under the plan.
9	Beneficiary Rec'g Ben	The employee's beneficiary is receiving the benefit payments from the plan.
F	Particnt Frozen Bnft	The employee has accrued a benefit under a plan that is either a terminated plan or one in which the employee is inactive.
G	Grandfathered Servce	The employee has been grandfathered into a plan for service accrued while participating in the plan, or for service while employed by an acquired or merged company.

Option list BA14 - Search Type

The Search Type (option list BA14) identifies the data element from the employee's Master Record for the purpose of checking eligibility, determining participation, calculating coverage, and/or contributions and setting up HEDs for writing deductions to Payroll.

Option	Name	Description
00	E/L-PROGRAM-REQUIRED	The rules for identifying these employee groups can not be defined by one field's value on the Master File. Therefore, a Cyborg Scripting Language program is required. This program must contain the rules that define the Search Argument values used for each group of employees.
01	UNION-CODE	
02	PAY-FREQUENCY	
03	ANNUAL-SALARY	
04	HOURLY-RATE	
05	HOURS-PER-PERIOD	
06	WORKER-COMP-CODE	
07	SALARY-GRADE	
08	JOB-CODE	
09	FUNCTION-CODE	
10	PAYMENT-CODE	
11	MARITAL-CODE	
12	SEX-CODE	
13	PLAN-ID	
14	JOB-TYPE	
15	YEARS-OF-SERVICE	
16	RESULTING-EMP-STATUS	
17	RESULTING-STATUS-1	This is the first position of the RESULTING-EMP STATUS field, which refers to an employee's employment status, such as Active, Disabled, or on a Leave of Absence.
18	RESULTING-STATUS-2	This is the second position of the RESULTING-EMP STATUS field, which refers to an employee's employee type, such as Salaried Full-Time or Hourly Full-Time.
19	FLSA-CLASS	
20	ZIP-CODE	
21	OPTION-ELECTED	
22	PARTICIPATION-OPTION	
23	CONTROL-3	Payroll organization level 3.

Option	Name	Description
24	CONTROL-4	Payroll organization level 4.
25	CONTROL-5	Payroll organization level 5.
26	CONTROL-6	Payroll organization level 6.
27	CTRL-THREE	Human Resource organization level 3.
28	CTRL-FOUR	Human Resource organization level 4.
29	CTRL-FIVE	Human Resource organization level 5.
30	CTRL-SIX	Human Resource organization level 6.
31	SMOKER-ID	
32	JOB-UNION-CODE	
33	POSITION	
34	MULTI-INC-TOT-HRS	If Position Management is in use, this is the total number of hours, as recorded on the Salary Assignment/Changes form (40-SCR) and displayed on the Alternative Compensation Totals form (BACSCR), attributable to the current multi-incumbency. For instance, an employee may not be eligible for benefits using the primary incumbency normal hours, but when all incumbencies are aggregated, the employee has the requisite number of hours for participation in a plan.
35	FROZEN-SALARY	This is the frozen salary, as recorded on the Alternative Compensation Totals form (BACSCR). For example, an employer could offer one benefit level to employees whose FROZEN-SALARY is less than a certain amount, and another benefit level to those employees whose FROZEN-SALARY is greater than a certain amount.
36	MULTI-INC-TOT-SAL	If Position Management is in use, this is the total salary, as recorded on the Salary Assignment/Changes form (40-SCR) and displayed on the Alternative Compensation Totals form (BACSCR), attributable to the current multi-incumbency. For instance, an employee may not be eligible for benefits using the primary incumbency salary, but when all incumbencies are aggregated, the employee has the requisite salary amount for participation in a plan.
37	PREVIOUS-YR-SALARY	
99	NO-SEARCH-ARGUMENT	

Option list BA15 - Date Calc Method

The Date Calc Method (option list BA15) rounds dates in the method specified by the option. Enter the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) as described below:

Option	Name	Description	Begin Date	Event Date	Rounded Date
A	FOM Coincidnt/follow	First of the month coincident with or following the event date.	Feb-28-94	Mar-28-94	April-1-94
B	First Of Event Month	First of the month of the event date.	Feb-28-94	Mar-28-94	Mar-1-94
C	FOM Follow Event Dte	First of the month following the event date month.	Feb-28-94	Mar-28-94	April-1-94
D	FOM Prior Event Date	First of the month prior to the event date.	Feb-28-94	Mar-28-94	Mar-1-94
E	Actual Event Date	Use the actual event date calculated.	Feb-28-94	Mar-28-94	Mar-28-94
F	FOM Nearest Event Dt	First of the month nearest the event date.	Feb-28-94	Mar-28-94	April-1-94
G	Last Of Event Month	Last day of the event month.	Feb-28-94	Mar-28-94	Mar-31-94
H	LOM Prior Event Date	Last day of the month prior to the event date.	Feb-28-94	Mar-28-94	Feb-28-94
I	FO Cal Quar Coin/fol	First of the calendar quarter coincident with or following the event date.	Feb-28-94	Mar-28-94	April-1-94
J	FO Pay Period Follow	First of the pay period following the event date.	Feb-28-94	Mar-28-94	Mar-30-94
K	FO Plan Yr Follow Ev	First of the plan year following the event date.	Feb-28-94	Mar-28-94	Mar-1-95
L	FO Cal Yr Follow Evt	First of the calendar year following the event date.	Feb-28-94	Mar-28-94	Jan-1-95
M	FOM 2 Mth After Evnt	First of the month two months following the event date.	Feb-28-94	Mar-28-94	May-1-94
N	Last Day Worked	Last Day Worked.			
O	Last Day Paid	Last Day Paid.			

Option list BA18 - Eligibility Type

The Eligibility Type (option list BA18) performs the determination of an employee's plan eligibility.

Do not change the meaning of the options. If you need to add an option, you must also add method option logic.

Option	Name	Description
A	Immediate Elig At Hr	Immediately Eligible on Date of Hire. A pending segment will be created for this plan as soon as an applicable 90-SCR is entered.
B	Hours Waiting Period	Hours Waiting Period Required. The From Date of Hire CE/H Accumulator’s Considered Hours Worked value is compared to the Hours value to determine if the employee has worked the minimum hours required. If not, eligibility has not been met.
C	Days Waiting Period	Days Waiting Period Required. The number of days is added to the date defined on the TK Table and the resulting date compared to the effective date entered. If the eligibility date calculated is after the date entered, the employee has not met the eligibility requirement. Enter number of days in the Hours field for this calculation.
D	Months Waiting Period	Months Waiting Period Required. The number of months is added to the date defined on the TK Table and the resulting date compared to the effective date entered. If the eligibility date calculated is after the date entered,the employee has not met the eligibility requirement. Enter months in the Service field for this calculation.
E	Elig At Age Specifd	Eligible At Age Specified. The age specified is added to the employee’s birth date, the resulting eligibility date is compared to the effective date entered. If the eligibility date calculated is after the date entered, the employee has not met the eligibility requirement.
F	Elig At Srvce Specfd	Eligible At Service Specified. The service time is added to the date defined on the TK Table and the resulting date compared to the effective date entered. If the eligibility date calculated is after the date entered, the employee has not met the eligibility requirement.
G	Age Or Service Specf	Eligible At Age or Service Specified. The date calculations defined for Codes E and F above are performed. The two resulting dates are compared and the earliest date compared to the effective date entered. If the eligibility date calculated is after the date entered, the employee has not met the eligibility requirement.

Option	Name	Description
H	Age And Service Spec	Eligible At Age and Service Specified. The calculations defined for Codes E and F above are performed. The two resulting dates are compared and the latest date compared to the effective date entered. If the eligibility date calculated is after the date entered, the employee has not met the eligibility requirement.
J	Age,Service&Hours Sp	Eligible At Age, Service, and Hours Specified. The calculations defined for Codes B, E and F above are performed. The three resulting dates are compared and the latest date compared to the effective date entered. If the eligibility date calculated is after the date entered the employee has not met the eligibility requirement.
U	System Use Only - D	Month Waiting Period Required. This code is used in the Pending Enrollment/De-enrollment process. It is NOT a valid entry for any Benefits Table. The valid Table code entry for this requirement is D - see code description above.
V	System Use Only - B	Hours Waiting Period Required. This code is used in the Pending Enrollment/De-enrollment process. It is NOT a valid entry for any Benefits Table. The valid Table code entry for this requirement is B - see code description above. During the Pending E/D process, a Pending segment (with a suspense date calculated as follows) will be created as soon as an applicable 90-SCR is entered. [Eligible Hours divided by the employee's Hours per Period times 7 divided by 30.42. The result is a number of months in decimals. The decimal portion number of months in decimals. The decimal portion of a month is multiplied by 30.42 to determine the number of days. The resulting time span is added number of days. The resulting time span is added to the date defined on the TK to determine the projected eligibility date.]
W	System Use Only - E	Eligible At Age Specified. This code is used in the Pending Enrollment/De-enrollment process. It is NOT a valid entry for any Benefits Table. The valid Table code entry for this requirement is E - see code description above. During the Pending E/D process, a Pending segment (with a suspense date calculated by adding the required age to the employee's birth date) will be created as soon as an applicable 90-SCR is entered.
X	System Use Only - G	Eligible At Age or Service Specified. This code is used in the Pending Enrollment/De-enrollment process. It is NOT a valid entry for any Benefits Table. The valid Table code entry for this requirement is G - see code description above. During the Pending E/D process, a Pending segment (with a suspense data calculated by performing W and F, comparing the two and using the earlier date) will be created as soon as an applicable 90-SCR is entered.

Option	Name	Description
Y	System Use Only - H	Eligible At Age and Service Specified. This code is used in the Pending Enrollment/De-enrollment process. It is NOT a valid entry for any Benefits Table. The valid Table code entry for this requirement is H - see code description above. During the Pending E/D process, a Pending segment (with a suspense data calculated by performing W and F, comparing the two and using the latest date) will be created as soon as an applicable 90-SCR is entered.
Z	System Use Only - J	Eligible At Age, Service, and Hours Specified. This code is used in the Pending Enrollment/ De-enrollment process. It is NOT a valid entry for any Benefits Table. The valid Table code entry for this requirement is J - see code description above. During the Pending E/D process, a Pending segment (with a suspense data calculated by performing B, W, and F, comparing the dates and using the latest date) will be created as soon as an applicable 90-SCR is entered.

Option list BA20 - Coverage Calc Method

The Coverage Calc Method (option list BA20) defines and calculates the amount of an employee's coverage based on the option elected and plan rules.

Do not change the meaning of the options. If you need to add an option, you must also add method option logic.

Option	Name	Description
A	Method A	Use Coverage Factor 3 if not blank; else use Coverage Factor 2 if not blank; else use Coverage Factor 1.
B	Method B	Use Coverage Factor 2 if not blank; else use Coverage Factor 1.
C	Method C	Use Coverage Factor 1.
D	Method D	Multiply Coverage Factor 1 times Annual Salary Equivalency. Round up to the next 1000 if not already an exact multiple. Add Coverage Factor 2.
E	Method E	Multiply Coverage Factor 1 times Monthly Salary Equivalency. Round up to the next even dollar. If Coverage Factor 2 is greater than zero, compare to the calculated value. Move the lesser value to Coverage Amount.
F	Method F	Multiply Coverage Factor 1 times Annual Salary Equivalency. Round up to the next 1000 if not already an exact multiple. If Coverage Factor 2 is greater than zero, compare to the calculated value. Move the lesser value to Coverage Amount.
G	Method G	Multiply Coverage Factor 1 times Annual Salary Equivalency. Round to the nearest 1000. If Coverage Factor 2 is greater than zero, compare to the calculated value. Move the lesser value to Coverage Amount.
H	Method H	Multiply Coverage Factor 1 times Annual Salary Equivalency. Round to the nearest 1000. If Coverage Factor 2 is greater than zero, compare to the calculated value. Move the lesser value equal 'X'. If Coverage Factor 3 is greater than zero, compare to Coverage Amount. Move the greater value to Coverage Amount.
I	Method I	Multiply Coverage Factor 1 times Annual Salary Equivalency. Round to the nearest 100. If Coverage Factor 2 is greater than zero, compare to the calculated value. Move the lesser value to Coverage Amount.
J	Method J	Multiply Coverage Factor 1 times Weekly Salary Equivalency. Round to the nearest dollar. If Coverage Factor 2 is greater than zero, compare to the calculated value. Move the lesser value to Coverage Amount.

Option	Name	Description
K	Entered Var Coverage	Use the amount entered in the Variable field as the Coverage Amount.
L	Entered Var Method D	Multiply Entered Variable times Annual Salary Equivalency. Round up to the next 1000 if not already an exact multiple. Add Coverage Factor 2.
M	Entered Var Method E	Multiply Entered Variable times Monthly Salary Equivalency. Round up to the next whole dollar. If Coverage Factor 2 is greater than zero, compare to the calculated value. Move the lesser value to Coverage Amount.
MF	Method MF	Multiply Coverage Factor 1 times Total Annual Salary. Round up to next 1000, if not already an exact multiple. If Coverage Factor 2 is greater than zero, compare to calculated value. Move lesser value to Coverage Amount.
MG	Method MG	Multiply Coverage Factor 1 times Total Annual Salary. Round to nearest 1000. If Coverage Factor 2 is greater than zero, compare to calculated value. Move lesser value to Coverage Amount.
MI	Method MI	Multiply Coverage Factor 1 times Total Annual Salary. Round to nearest 100. If Coverage Factor 2 is greater than zero, compare to calculated value. Move lesser value to Coverage Amount.
MN	Entered Var Method M	Multiply Entered Variable times Total Annual Salary. Round up to next 1000 if not already an exact multiple. If Coverage Factor 2 is greater than zero, compare to calculated value. Move lesser value to Coverage Amount.
MQ	Entered Var Method M	Multiply Entered Variable times Total Annual Salary. Round to nearest 100. If Coverage Factor 2 is greater than zero, compare to calculated value. Move lesser value to Coverage Amount.
MS	Entered Var Method M	Multiply Entered Variables times Average Annual Hourly Rate. Round to nearest dollar. If Coverage Factor 2 is greater than zero, compare to calculated value. Move lesser value to Coverage Amount.
N	Entered Var Method F	Multiply Entered Variable times Annual Salary Equivalency. Round up to the next 1000 if not already an exact multiple. If Coverage Factor 2 is greater than zero, compare to the calculated amount. Move the lesser value to Coverage Amount.
O	Entered Var Method G	Multiply Entered Variable times Annual Salary Equivalency. Round to the nearest 1000. If Coverage Factor 2 is greater than zero, compare to the calculated amount. Move the lesser value to Coverage Amount.

Option	Name	Description
P	Entered Var Method H	Multiply Entered Variable times Annual Salary Equivalency. Round to the nearest 1000. If Coverage Factor 2 is greater than zero, compare to the calculated amount. Move the lesser value equal 'X'. If Coverage Factor 3 is greater than zero, compare to Coverage Amount. Move the greater value to Coverage Amount.
Q	Entered Var Method Q	Multiply Entered Variable times Annual Salary Equivalency. Round to the nearest 100. If Coverage Factor 2 is greater than zero, compare to the calculated value. Move the lesser value to Coverage Amount.
R	Entered Var Method J	Multiply Entered Variable times Weekly Salary Equivalency. Round to the nearest dollar. If Coverage Factor 2 is greater than zero, compare to the calculated value. Move the lesser value to Coverage Amount.
S	Entered Var Method S	Multiply Entered Variable times Hourly Rate Equivalency. Round to the nearest dollar. If Coverage Factor 2 is greater than zero, compare to the calculated value. Move the lesser value to Coverage Amount.
T	Entered Var Method T	Multiply Entered Variable times Hourly Rate Equivalency. Round to the next whole dollar. If Coverage Factor 2 is greater than zero, compare to the calculated value. Move the lesser value to Coverage Amount.
U	Method U	Multiply Coverage Factor 1 times Annual Salary Equivalency. Round to nearest Coverage Factor 2 increment.
X	Method X	Use Coverage Factor 1 for Amount One and use Coverage Factor 2 for Amount Two.

Option list BA21 - Final Average Earnings Calc

The Final Average Earnings Calculation (option list BA21) defines the calculation method used to calculate the employee's final average earnings amount for the purpose of calculating a retirement amount.

Do not change the meaning of the options. If you need to add an option, you must also add method option logic.

Option	Name	Description
A	Hgh Cnsc3/last 10 Cm	Highest 3 consecutive years out of the last 10 complete years.
B	Hgh Cnsc3/last 5 Com	Highest 3 consecutive years out of the last 5 complete years.
C	Hgh Cnsc5/last 10 Cm	Highest 5 consecutive years out of the last 10 complete years.
D	Hgh Cnsc5/last 15 Cm	Highest 5 consecutive years out of the last 15 complete years.
E	Hi 36cnsc Mth/lst120	Highest 36 consecutive months out of the last 120 complete months.
F	Hi 60cnsc Mth/lst120	Highest 60 consecutive months out of the last 120 complete months.
G	Hi 60cnsc Mth/lst180	Highest 60 consecutive months out of the last 180 complete months.
P	Hi X Cns Mo/lst Y Cm	Highest 'X' consecutive months out of the last 'Y' complete months.
Q	Hi X Cns/last Y Comp	Highest 'X' consecutive years out of the last 'Y' complete years.
R	Hi X Cns Mths/career	Highest 'X' consecutive months out of career.
S	Hi X Cnsc Yrs/career	Highest 'X' consecutive years out of career.
Z	Career Average	Average annual over career.

Option list BA24 - Service Date

The Service Date (option list BA24) identifies which date on the employee's Master Record is to be used as the base date for time span or date calculations for a Benefit Plan.

Do not change the meaning of the options. If you need to add an option, you must also add method option logic.

Option	Name	Description
1	Original Hire Date	This code indicates the Original Hire Date is used to calculate plan service.
2	Adjusted Seniority	This code indicates the Adjusted Seniority date is used to calculate plan service.
3	Employment Date	This code indicates the Employment Date is used to calculate plan service.

Option list BA26 - Vesting Schedules

The Vesting Schedules (option list BA26) define the Vesting Schedule to be used to determine the vesting of a Plan participant.

Please note there are codes in this option list that would not be considered as adhering to the Internal Revenue Code after January 1, 1989. These codes are included because the system provides the means of recording historical Plan summary descriptions, and therefore, must supply codes for schedules that have been used by our client base.

Do not change the meaning of the options. If you need to add an option, you must also add method option logic.

Option	Name	Description
A	20 Yr Cliff/0% Befor	100% vested after 20 years - 0% before 20 years
B	15 Yr Cliff/0% Befor	100% vested after 15 years - 0% before 15 years
C	10 Yr Cliff/0% Befor	100% vested after 10 years - 0% before 10 years
D	5 Yr Cliff/0% Before	100% vested after 5 years - 0% before 5 years
E	4 Yr Cliff/0% Before	100% vested after 4 years - 0% before 4 years
F	3 Yr Cliff/0% Before	100% vested after 3 years - 0% before 3 years
G	100% Immediate&full	100% fully vested immediately
H	25% 5yr/15% Thereaft	25% vested after 5 years and 15% each year for the following 5 years - 100% vested after 10 years.
I	50% 10yr/10% Thereaf	50% vested after 10 years and 10% each year for the following 5 years - 100% vested after 15 years.
J	Standard 5/15 Graded	25% vested after 5 years; 5% for each of the next 5 years; 10% for each of the next 5 years - fully vested after 15 years.
K	10% Straight Line	Additional 10% vested each year - fully vested after 10 years.
L	Rule Of 45	50% vested when Age plus Service equals 45 provided Service equals at least 5 years, or 10 years of service, whichever occurs first; then 10% additional for each of the next 5 years.
M	Standard 4/40	40% vested after 4 Years; 5% for each of the next 2 years; then 10% for each of the next 5 years - fully vested after 11 years ('IRS Penalty' Method).
N	7 Year Graded	20% vested after 3 years; 20% for each of the next 4 years - fully vested after 7 years.
P	5 Year Graded	33% vested after 3 years; 66% after 4 years - fully vested after 5 years.
Q	20% Straight Line	Additional 20% vested each year - fully vested after 5 years.
R	6 Year Graded	20% vested after 2 years, 20% for each of the next 4 years - fully vested after 6 years.

Option list BA29 - Retirement Age Rules

The Retirement Age Rules (option list BA29) define the method of calculating a Plan participants retirement dates.

Do not change the meaning of the options. If you need to add an option, you must also add method option logic.

Option	Name	Description
E	Age	This code indicates the Retirement Ages are calculated by adding the NORMAL-RETIRE-AGE or EARLY-RETIRE-AGE field from the TJ Table to the Employee's Birth Date.
F	Service	This code indicates the Retirement Ages are calculated by adding the NORMAL-RET-SERVICE or EARLY-RETIRE-SERVICE field from the TJ Table to the Employee's Hire Date.
G	Age Or Service	This code indicates the Retirement Ages are the earlier of AGE or SERVICE calculated as: AGE = EARLY-RETIRE-AGE or NORMAL-RETIRE-AGE from the TJ Table + the Employee's Birth Date. SERVICE = EARLY-RETIRE-SERVICE or NORMAL-RET-SERVICE from the TJ Table + the Employee's Hire Date.
H	Age And Service	This code indicates the Retirement Ages are the later of AGE or SERVICE calculated as: AGE = EARLY-RETIRE-AGE or NORMAL-RETIRE-AGE from the TJ Table + the Employee's Birth Date. SERVICE = EARLY-RETIRE-SERVICE or NORMAL-RET-SERVICE from the TJ Table + the Employee's Hire Date.
S	SSA Def Hr 1900	Social Security Administration Definition - HR1900. The retirement date is calculated based on the year after 2000 in which the employee turns age 65.

Option list BA30 - Service Rules

The Service Rules (option list BA30) define the method of calculating the Plan participant's service dates.

Do not change the meaning of the options. If you need to add an option, you must also add method option logic.

Option	Name	Description
A	Immediate	Immediately at Hire. Service date will be the date defined on the TK Table.
D	Months Waitng Period	Months Waiting Period Required; enter number of months in the Service field.
E	At Age Specified	At Age Specified. Service date will be the date the employee reaches the age specified.
F	At Service Specified	At Service Specified. Service date will be the date the employee has the amount of service specified when added to the service date to be used on the TK Table.
G	Age Or Service	At Age or Service Specified. Service date will either be the date the employee reaches the age specified or has the amount of service specified when added to the service date to be used on the TK Table, whichever date is earlier.
H	Age And Service	At Age and Service Specified. Service date will either be the date the employee reaches the age specified or has the amount of service specified when added to the service date to be used on the TK Table, whichever date is later.
J	Age Servce And Hours	At Age, Service, and Hours Specified. Service date will be the date the employee reaches the age specified, has the amount of service specified when added to the service date to be used on the TK Table, or has worked the number of hours specified whichever of the dates is latest.
K	At Eligibility Date	At Eligibility Date. Service date will be the date the employee became eligible for the plan.
L	At Partic Serv Date	At Participation Service Date. Service date will be the date calculated as the Participation Service date. This option is only available for the Benefit Accrual or Vesting Accrual Service Date calculations.
M	At Benefit Accr Date	At Benefit Accrual Date. Service date will be the date calculated as the Benefit Accrual Date. This option is only available for the Vesting Accrual Service Date calculation.
P	Hours Paid Specified	Hours Paid Specified. Service date will be the date the employee reached the specified number of Hours Paid on the Considered Earnings/Hours Accumulator for this Plan.

Option	Name	Description
W	Hours Worked Specifd	Hours Worked Specified. Service date will be the date the employee reached the specified number of Hours Worked on the Considered Earnings/Hours Accumulator for this Plan.

Option list BA31 - Contribution Rules

The Contribution Rules (option list BA31) calculate the contribution amount for each of the contribution types available for a plan.

Do not change the meaning of the options. If you need to add an option, you must also add method option logic.

Option	Name	Description
00	Coverage No Contrib	The employee is covered by the plan, but there is no employee contribution.
A1	Use Factor 1 As Pct	The percentage entered in the Contribution Factor 1 field is the contribution percentage. Enter the percent as four decimals. For example, enter 3 1/2 percent as ‘0350’.
A2	Use Factor 1 As Amt	The amount entered in the Contribution Factor 1 field is the contribution amount. Enter the amount with two decimals. For example, 15.25 is entered as ‘1525’ but displays on the form as ‘.1525’.
B1	Rate/100 Of Coverage	The calculated coverage amount is divided by 100 and the result is multiplied by the value in the Contribution Factor 1 field. Enter the rate as four decimals. For example, enter 47 per 100 of coverage as ‘4700’.
B2	Rate/1000 Of Coverge	The calculated coverage amount is divided by 1000 and the result is multiplied by the value in the Contribution Factor 1 field. Enter the rate as four decimals. For example, enter 62 1/2 cents per 1,000 of coverage as ‘6250’.
B3	Rate Of Coverage	The calculated coverage amount is multiplied by the value in the Contribution Factor 1 field. Enter the rate as four decimals. For example, enter 1 times the coverage (where the coverage is the amount of contribution) as ‘10000’.
C1	B1 To Max Factor 2	The calculated coverage amount is divided by 100 and the result is multiplied by the value in the Contribution Factor 1 field. The resulting contribution amount is compared to the amount in the Contribution Factor 2 field. Whichever is less is used as the contribution amount. Enter the rate in the Factor 1 field as four decimals. For example, enter 40 per 100 of coverage as ‘4000’. Enter the maximum contribution in the Factor 2 field as two decimals. For example, enter a maximum contribution of 45.00 as ‘4500’.
C2	B2 To Max Factor 2	The calculated coverage amount is divided by 1000 and the result is multiplied by the value in the Contribution Factor 1 field. The resulting contribution amount is compared to Contribution Factor 2. Whichever is less is used as the contribution amount. Enter the rate in the Factor 1 field as four decimals. For example, enter 42 1/2 per 1,000 of coverage as ‘4250’. Enter the maximum contribution in the Factor 2 field as two decimals. For example, enter a maximum contribution of 45.00 as ‘4500’.

Option	Name	Description
D1	Company Match Rule 1	The Contribution Factor 1 field is the match percent and the Contribution Factor 2 field is the maximum annual amount. The amount from the Contribution Factor 2 field is moved to the TS-Stop field of the company HED. The company contribution will stop accumulating when it reaches this amount. Enter the Factor 1 field with four decimals. For example, enter 2 percent as ‘0200’. Enter the Factor 2 field with two decimals. For example, enter 250.00 as ‘25000’. This rule is used only for welfare plans.
E1	Use Variable As Amt	The amount entered in the Variable Amount is the contribution amount. Enter the amount with two decimals. For example, enter 15.25 as ‘1525’.
E2	Entered Var X Factr1	The variable entered on the form is multiplied by the value entered in the Contribution Factor 1 field. Enter the rate as four decimals. For example, enter 1 times the coverage (where the coverage is the amount of the contribution) as ‘10000’.
E3	Ent Var To Max F2 C1	The calculated coverage amount is divided by 100 and the result is multiplied by the value in Entered Variable. The resulting contribution amount is compared to Contribution Factor 2. Whichever is less is used as the contribution amount. Enter the rate in Entered Variable as four decimals. For example, 40 per 100 of coverage is entered as ‘4000’. Enter the maximum contribution the Factor 2 field as two decimals. For example, enter a maximum contribution of 45.00 as ‘4500’.
E4	Ent Var To Max F2 C2	The calculated coverage amount is divided by 1000 and the result is multiplied by the value in Entered-Variable. The resulting contribution amount is compared to Contribution Factor 2. Whichever is less is used as the contribution amount. Enter the rate in Entered Variable as four decimals. For example, enter 42 1/2 per 1,000 of coverage as ‘4250’. Enter the maximum contribution in the Factor 2 field as two decimals. For example, enter a maximum contribution of 45.00 as ‘4500’.
E5	Fb Vacation Purchase	The variable entered on the form is multiplied by the hourly rate equivalency as the contribution amount. The variable entered is put into the Amount One field of the HED.
E6	Use Variable Fac 1	The amount entered in the Variable Amount is compared to Contribution Factor 1. The lower amount is used.
E7	Use Variable Fac 1/2	The amount entered in the Variable Amount is compared to Contribution Factor 1 and Contribution Factor 2. If the Entered Variable is below Contribution Factor 1, the Factor 1 amount is used. If the Entered Variable is above Contribution Factor 2, the Factor 2 amount is used.
E8	FSA Status/Pro-rate	This code allows for pro-rations due to mid-year enrollments and life status changes. The amount entered in the Variable Amount field is the contribution amount. Enter the amount with two decimals. For example, 15.25 is entered as ‘1525’ but displays on the screen as ’15.25’.

Option	Name	Description
H1	Max % In Factor 1	Contribution Factor 1 is the maximum percent contribution allowable. This rule is used for deferred plans only. The employee’s contribution must be specified as a percent. Enter the maximum percent in the Factor 1 field with four decimals. For example, enter a maximum allowable contribution of 6 percent as ‘0600’.
H2	Max Whole % In Fctr1	Contribution Factor 1 is the maximum percent contribution allowable. The contribution percent must be a whole percent. This rule is used for deferred plans only. The employee’s contribution must be specified as a percent. Enter the maximum percent in the Factor 1 field with four decimals. For example, enter a maximum allowable contribution of 10 percent as ‘1000’.
H3	Max Even % In Fctr1	Contribution Factor 1 is the maximum percent contribution allowable. The employee’s contribution must be a whole, even percent: 2 percent, 4 percent, 6 percent, and so forth. This rule is used for deferred plans only. Enter the maximum percent in the Factor 1 field with four decimals. For example, enter a maximum allowable contribution of 6 percent as ‘0600’.
H4	Range Of Percents	Contribution Factor 1 is the minimum percent contribution and Contribution Factor 2 is the maximum percent contribution allowable. This rule is used for deferred plans only. Enter both the Factor 1 and Factor 2 fields with four decimals. For example, enter an allowable range of contributions from 2 1/2 percent to 10 percent as ‘0250’ in the Factor 1 field and ‘1000’ in the Factor 2 field.
H5	Range Of Whole Pcts	Contribution Factor 1 is the minimum percent contribution and Contribution Factor 2 is the maximum percent contribution allowable. The contribution percent must be a whole percent, such as 5 percent. This rule is used for deferred plans only. Enter both the Factor 1 and Factor 2 fields with four decimals. For example, enter an allowable range of contributions from 4 percent to 12 percent as ‘0400’ in the Factor 1 field and ‘1200’ in the Factor 2 field.
H6	% Annual Sal Maximum	Contribution Factor 1 is the percent of annual salary considered the maximum contribution allowable. The result of the employee’s annual salary times the percent in Contribution Factor 1 is compared to the contribution amount entered, annualized. The lesser value is used as the employee’s contribution. This rule is only used for deferred plans. Enter Contribution Factor 1 on the Coverage And Contribution Factors form (TM-SCR) as a percent of salary. The employee’s contribution is entered as a monetary amount. Enter Factor 1 as a four decimal percent. For example, enter 4 1/2 percent as ‘0425’.
I6	% Total Ann Sal Max	Contribution Factor 1 is the percent of total annual salary considered the maximum contribution amount. The result of the employee’s annual salary times the percent in Contribution Factor 1 is compared to the contribution amount entered, annualized. The lesser value is used as the employee contribution.

Option	Name	Description
I16 (cont.)	% Total Ann Sal Max (cont.)	Contribution Factor 1 is entered on the Coverage And Contribution Factors form (TM-SCR) as a percent of salary. Enter Factor 1 as a four decimal percent. For example, 4 1/2 percent is entered as ‘0425’. This rule is only used for deferred plans.
LH	Max Amt In Factor 1	The amount in the Contribution Factor 1 field is the maximum annual contribution amount. This value is moved into the TS-Stop field and a value of A is moved into the TS-Stop Option field. This option is used for welfare plans only. If there is a maximum amount applicable to a deferred plan, enter the stop option and amount directly on the applicable Benefit Plan Prototype Contribution HED form (TS-SCR). Enter Factor 1 as a two decimal amount. For example, enter a maximum amount of 150.00 as ‘15000’.
M1	Company Match Rule 2	The company will match a percent of the employee contribution, up to a maximum percentage. Basic pretax and posttax contribution percents entered on the employee form are totaled and compared to Contribution Factor 2. If the totaled percent is greater than Contribution Factor 2, the Contribution Factor 2 value is multiplied by the match percent in Contribution Factor 1. If the totaled percent is equal to or less than Contribution Factor 2, the totaled percent is multiplied by Contribution Factor 1. The resulting percent is the company match percent and is moved to the company contribution TS-HED Amt/Pct field. The employee pretax and posttax contributions must be entered as percents. The Coverage And Contribution Factors form (TM-SCR) entries for Factor 1 and Factor 2 are entered as percents with four decimals. For example, if the company match is 50 percent of the first 6 percent of the employee’s basic contribution, 50 percent is entered as ‘5000’ in Factor 1 and 6 percent is entered as ‘0600’ in Factor 2. This option is used only for deferred plans.
MW	Company Match Rule 3	The company will match a percent of the employee contribution. Basic pretax and posttax contribution percents entered on the employee form are totaled and multiplied by the match percent entered in Contribution Factor 1. The resulting percent is the company contribution and is moved to the company contribution TS-HED Amt/Pct field. The employee pretax and posttax contributions must be entered as percents. Enter the percent match with four decimals. For example, if the company is matching 75 percent of the employee’s contribution, enter ‘7500’ in Factor 1.

Option	Name	Description
MX	Company Match Rule 4	The company will match 100% of the employee contribution up to the percentage of compensation specified in Factor 1. Beyond the percentage of compensation in Factor 1, the company will match 50% of the employee contribution up to the maximum percentage specified in Factor 2. If, for example, the company will match 100% of the employee contribution up to 3%, enter ‘0300’ in Factor 1. And if the company will match 50% of the employee contribution from 3-5%, enter ‘0500’ in Factor 2 to indicate a maximum of 5%. Basic pretax and posttax contributions entered on the form are totaled. Any posttax contribution percent entered, however, will be ignored. The employee pretax and posttax contributions must be entered as percents with four decimals. For example, if the company matches the first 3% of employee contribution, enter ‘0300’ in Factor 1. Employers can use this option as a matching method for 401(k) Safe Harbor to avoid nondiscrimination testing on the plan.

Option list BA32 - Breaks in Service Rules

The Breaks in Service Rules (option list BA32) define the method to be used to determine whether or not a break in service has occurred and its code performs the determination.

Do not change the meaning of the options. If you need to add an option, you must also add method option logic.

Option	Name	Description
00	No Break Has Occured	No Break-In-Service has occurred.
01	Leave Exceeds Grace	A Break-In-Service will occur if the Leave Span exceeds the time specified in the associated Delay Time field.
02	Rule Of Parity	A Break-In-Service will occur if the Return Date is later than the Parity Requalification Date.
03	No Brk Due To Actvty	No Break-In-Service will occur regardless of Leave Span, due to type of Activity.
04	No Brk If Ret Act Ft	No Break-In-Service will occur if the employee returns to Full-Time Active status.

Option list BA35 - Allocation Methods

The Allocation Methods (option list BA35) define the method used to allocate Benefit Account monies back to individual employee accounts.

Do not change the meaning of the options. If you need to add an option, you must also add method option logic.

Option	Name	Description
1	Account Balnce Ratio	
2	Compensation Ratio	
3	Comp/Service Units	
A	Account Balance Unit	
C	Compensation Units	
S	Service Units	

Option list BA45 - Service Calculation Method

The Service Calculation Method (option list BA45) determines how the credited service will be calculated for the plan and its program code performs the determination.

Do not change the meaning of the options. If you need to add an option, you must also add method option logic.

Option	Name	Description
E	Elapsed Time	An amount of time that has past is used to determine if an additional year of service is to be granted.
P	Hours Paid	The HOURS-PAID from the CE/H Accumulator for the plan are used to determine if an additional year of service is to be granted.
W	Hours Worked	The HOURS-WORKED from the CE/H Accumulator for the plan are used to determine if an additional year of service is to be granted.

APPENDIX C

Funding of Deferred Plans

In This Appendix

Introduction

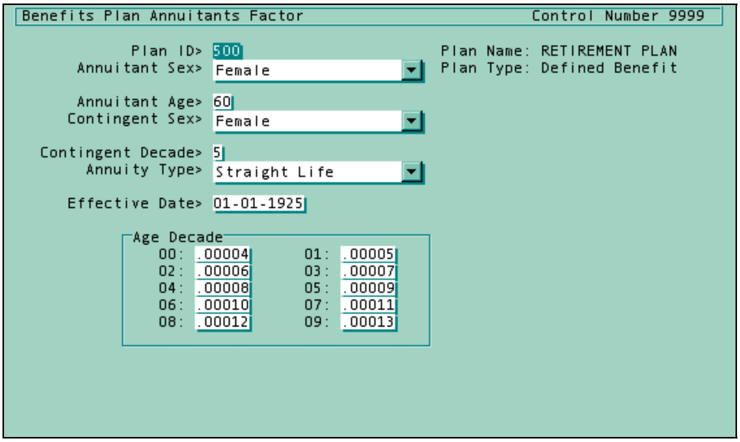
This section contains additional options for administering your benefits plans. These forms are optional and are not required to effectively implement the Benefits Administration Solution.

Benefits Plan Annuitants Factor form (TQ-SCR)

The Benefits Plan Annuitants Factor form (TQ-SCR) is an optional table for deferred plans only. It can be used to record reduction factors used to actuarially convert a retirement benefit to an annuity. The annuity may continue to pay a benefit to a contingent annuitant after the retiree's death.

This table contains a code identifying the form of payment to which these reduction factors apply, for example, '50% Joint and Survivor', 'Life', and 'Certain 15 years'. It also contains the age and sex of the annuitant (retiree), and the sex of the contingent annuitant. It has a text box to indicate the contingent decade and ten Factor text boxes, one for each age year within the decade reported on this table, for example, '50–59'.

Since each table contains only ten factors, multiple table records are required to store the annuity conversion factors for one annuity type.

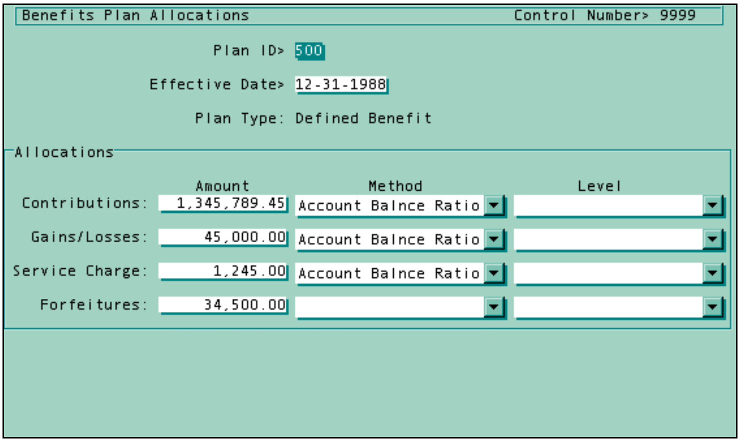


Benefits Plan Allocations form (TRCSCR)

The Benefits Plan Allocations form (TRCSCR) is an optional table for deferred plans only. It is used to record the total amount allocated to a deferred plan. It also defines the level and method of the allocations.

When the form is entered and subsequently viewed, the Contributions text box displays the initial dollar amount put aside by the company for employee benefits. The Gains/Losses text box reflects the dollar amount of gain or loss through contribution investment activity.

The Service Charge text box records the dollar amount of any brokerage fees. The Forfeitures text box records the dollar amount of any benefit forfeitures. A benefit forfeiture occurs when an employee leaves the company before being fully vested.

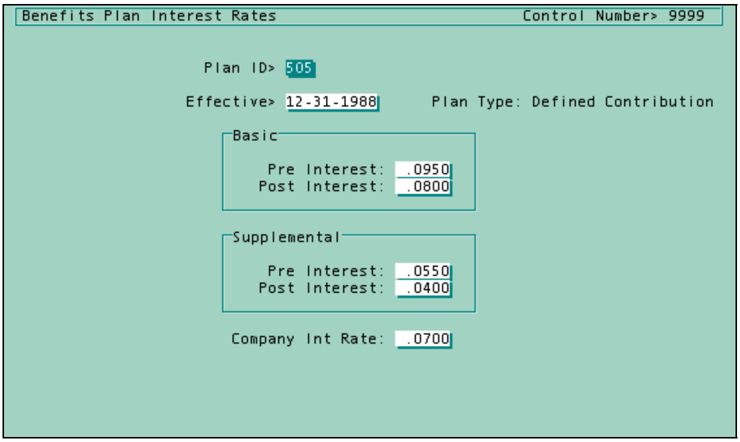


Benefits Plan Interest Rates form (TRASCR)

The Benefits Plan Interest Rates form (TRASCR) is an optional table for deferred plans only. It is used to record the interest rates applied to a deferred plan by contribution type.

It contains the percent of the employee's contributions that is matched by the company and the basis on which the percent is matched, for example, a company matches 50 percent of the first 6 percent of the employee contribution.

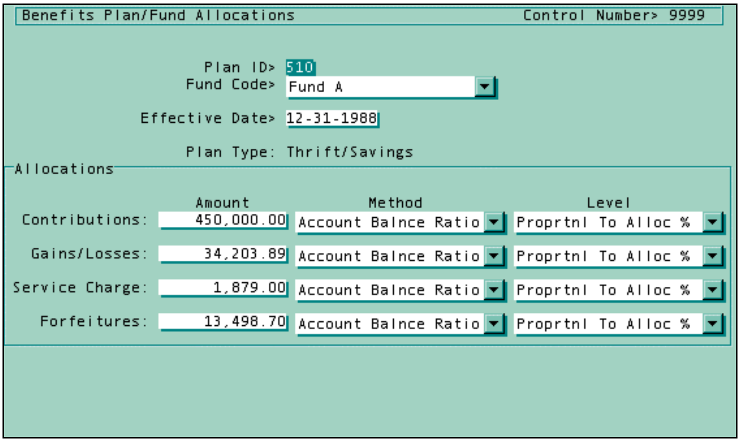
This table can be used to specify the allocation type, amount to be allocated, and the method for allocation, forfeitures, service charges, or distribution of other allocable amounts to plan participants.



Benefits Plan/Fund Allocations form (TRDSCR)

The Benefits Plan/Fund Allocations form (TRDSCR) is an optional table for thrift/savings plans only. It is used to record the amount allocated to a particular fund. It also defines the level and method of the allocation.

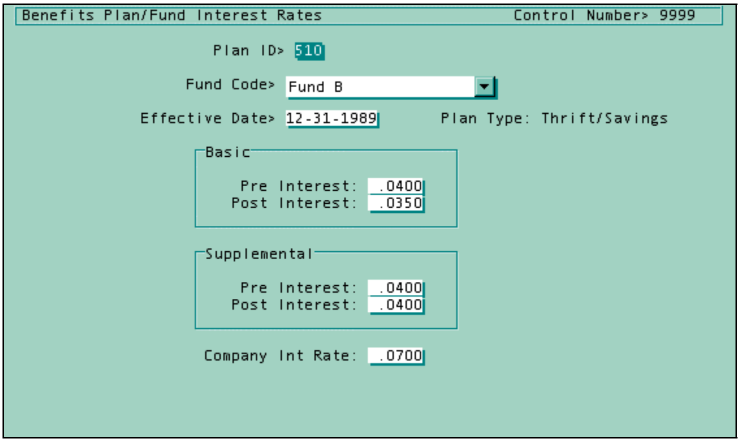
This form has text boxes identical to those on the Benefits Plan/Fund Interest Rates form, but also displays a Fund Code text box. This text box specifies the fund type chosen by the employee for a benefits plan. These fund codes are edited against option list BA27.



Benefits Plan/Fund Interest Rates form (TRBSCR)

The Benefits Plan/Fund Interest Rates form (TRBSCR) is an optional table for thrift/savings plans only. Its purpose is to record the interest rates applied to the account balance of each fund in a particular thrift/savings plan. Each plan can support six different funds.

The entry text boxes in this form are nearly identical to those found in the Benefits Plan Interest Rates form (TRBSCR), but here you must also specify the plan fund in the Fund Code text box. These fund codes are edited against option list BA27.



Benefits Plan/Fund Interest Rates Control Number> 9999

Plan ID> 510

Fund Code> Fund B

Effective Date> 12-31-1989 Plan Type: Thrift/Savings

Basic

Pre Interest: .0400

Post Interest: .0350

Supplemental

Pre Interest: .0400

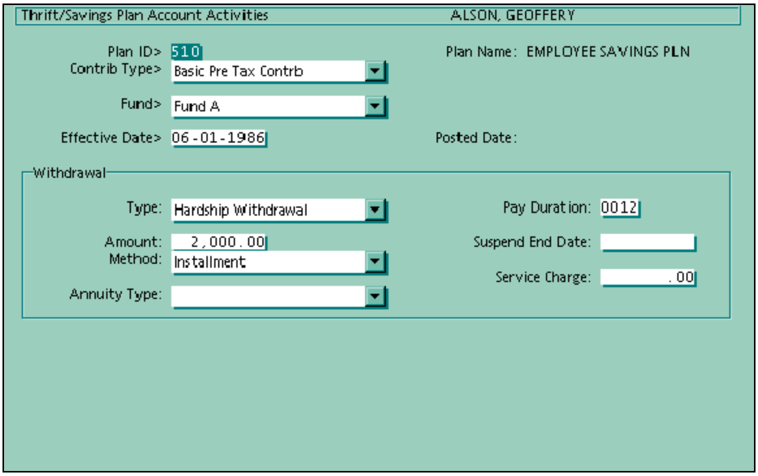
Post Interest: .0400

Company Int Rate: .0700

Thrift/Savings Plan Account Activities form (80-SCR)

The Thrift/Savings Plan Account Activities form (80-SCR) is used to record, by contribution type and fund, activities that affect the account balance. The form allows the entry of the amount and type of employee withdrawals and any suspension period that may result from the withdrawal.

Also, employee-paid service charges can be recorded here. When service charges are allocated among participants through batch entry format, the allocated amount can be viewed on this form.



Thrift/Savings Plan Balance Entry form (84-SCR)

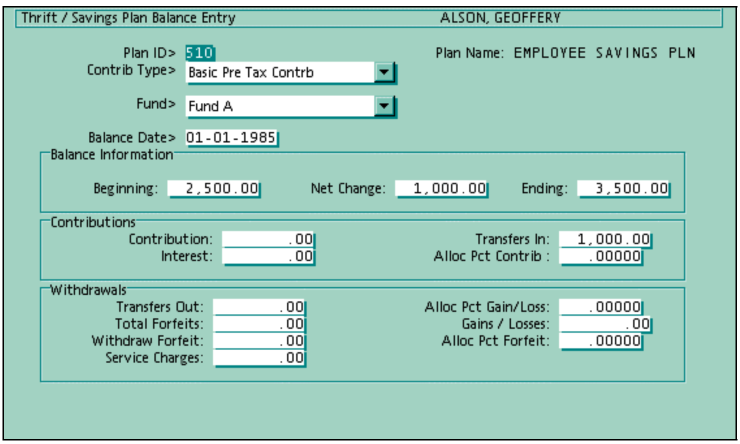
The Thrift/Savings Plan Balance Entry form (84-SCR) is used to record the components of an employee's thrift/savings plan account balance for a specific balance date. This information is recorded by fund and contribution type.

All currency text boxes are entered with two decimal places; percent are entered with five decimals. Any loss entered in a Gains / Losses text box must be entered preceded by a negative (-) sign.

Form edits will reject the form if the system calculations do not balance:

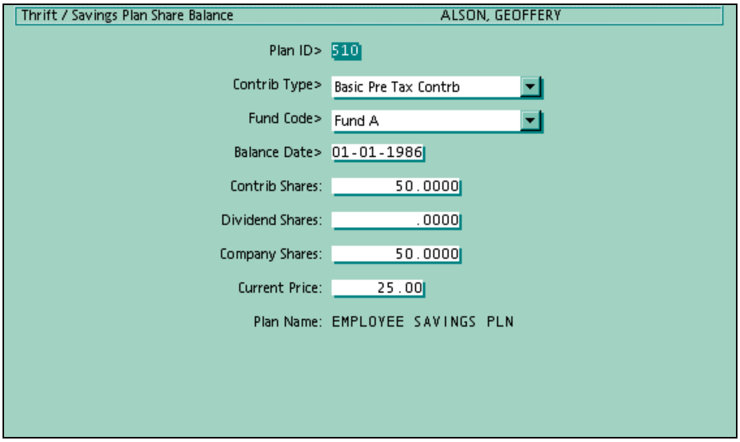
1. Beginning Balance plus or minus the Net Change amount must equal the Ending Balance.
2. The Net Change amount must equal the sum of the following components:

Total Contribution	
plus	Transfers In
plus	Interest
plus (minus)	Gains (Losses)
minus	Transfers Out
minus	Total Forfeitures
minus	Withdrawal Forfeitures
minus	Service Charges



Thrift/Savings Plan Share Balance form (84SSCR)

The Thrift/Savings Plan Share Balance form (84SSCR) is used to record the share balances for a thrift/savings plan fund. This form records shares that were allocated to the employee based on a contribution made to the fund, the dividends paid on stock, or shares attributable to a company contribution. You may not enter a Thrift/Savings Plan Share Balance form (84SSCR)until the employee is enrolled in the plan using the Deferred Plan Enrollments/Changes form (64-SCR).



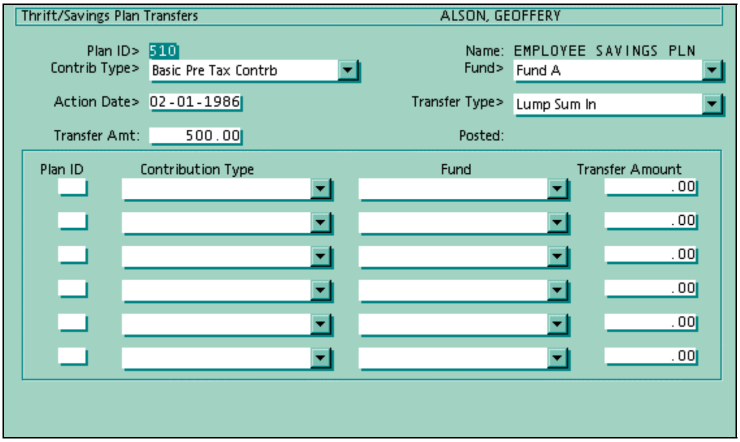
Thrift/Savings Plan Transfers form (81-SCR)

The Thrift/Savings Plan Transfers form (81-SCR) is used to record funds transferred between thrift/savings plans, funds, or contribution types. It also can be used to record lump sum contributions that are not payroll deductions or that are rollover contributions from another plan.

There are two halves to this form. The top half is used to record an amount that is being transferred from the plan/contribution type/fund recorded or is being transferred to the plan/contribution type/fund recorded.

The bottom half of the form contains a series of Plan ID, Contribution Type, Fund, and Transfer Amount text boxes so that you can record the areas the monies are being transferred from or transferred to, depending upon the Type of Transfer.

A system edit requires that the total of the Transfer Amount text boxes on the bottom half of the form equals the Transfer Amount recorded on the top half.



Thrift/Savings Total Balance form (83TSCR)

The Thrift/Savings Total Balance form (83TSCR) displays the plan balance for a thrift/savings plan as of a specific balance date. The Beginning Balance, Total Credits, Total Debits, Net Change, and Ending Balance are displayed by Contribution Type.

When the Thrift/Savings Total Balance form (83TSCR) is first displayed, there are two entry text boxes—Plan ID and Balance Date. After you enter a Plan ID and Balance Date and execute the form, the system searches for the thrift/savings plan fund balances entered through the Thrift/Savings Plan Balance Entry form (84-SCR) that are closest to, but not greater than, the date entered as the Balance Date. All funds for a single contribution type are accumulated and a single balance displayed.

The Beginning Balance, Net Change, and Ending Balance figures displayed here by Contribution Type are calculated by totaling those text boxes for each fund balance for each contribution type. In other words, if a participant contributes to funds A, B and C with basic posttax contributions, the beginning balance amount for fund A and B and C will be totaled and displayed as the beginning balance for contribution type 'Basic-Employee-Post-Tax'. The fund balances used for the totaling are those with a balance date closest to, but not greater than, the balance date entered on the Thrift/Savings Total Balance form (83TSCR). The balance dates for all funds used to calculate the contribution types totals will not necessarily match unless all funds have a balance stricken simultaneously regardless of whether or not the account is active.

The Total Credits and Total Debits text boxes are system calculated in the same manner using the individual fund balance components from the balances entered on the Thrift/Savings Plan Balance Entry form (84-SCR). Totals of all Contribution Types are system calculated for each category. This form can not be entered in batch entry format; it must be processed online.

Thrift/Savings Total Balance By Fund form (84TSCR)

The Thrift/Savings Total Balance By Fund form (84TSCR) displays the plan balance for a thrift/savings plan as of a specific balance date. The Beginning Balance, Total Credits, Total Debits, Net Change, and Ending Balance are displayed by Fund.

When the Thrift/Savings Total Balance By Fund form (84TSCR) is first displayed, there are two entry text boxes—Plan ID and Balance Date. After you enter a Plan ID and Balance Date and execute the form, the system searches for the fund balances entered through the Thrift/Savings Plan Balance Entry forms (84-SCR) that are closest to, but not greater than, the date entered as the balance date. The Beginning Balance, Net Change, and Ending Balance figures displayed here by fund are taken directly from the Thrift/Savings Plan Balance Entry form (84-SCR).

This form can not be entered in batch entry format; it must be processed online.

T/S Plan Contribution Balances form (83-SCR)

The T/S Plan Contribution Balances form (83-SCR) displays (by Contribution Type) an employee's thrift/savings plan account balance data as of the last account balance date. All funds for a single contribution type are accumulated and a single balance is displayed.

Enter three text boxes on the form—Plan ID, Contribution Type, and Effective Date. Detailed account balance data is displayed on the returned form. Plan totals for each account are displayed based on the balance date closest to, but not after, the effective date you entered.

Also, any withdrawals from funds attributed to this contribution type after the balance date are displayed at the bottom of this form.

Defined Benefit Data form (69-SCR)

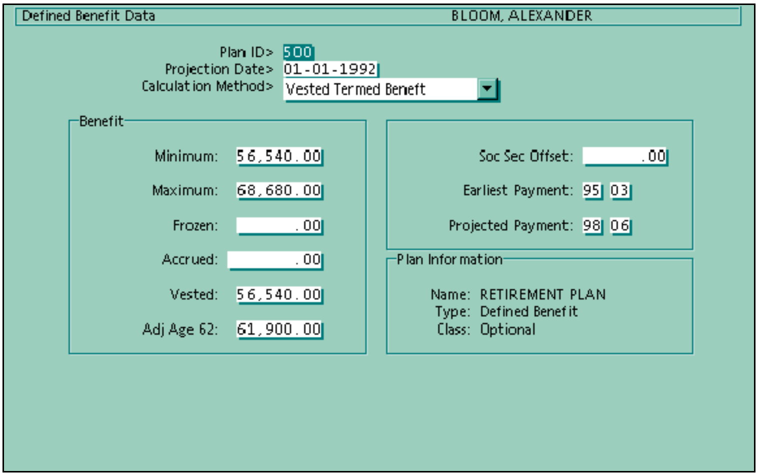
The Defined Benefit Data form (69-SCR) is used to record the estimated benefit payable under a defined benefit pension plan.

The amount recorded on this form can be either:

- An actual amount provided to a terminated, vested, or retiring employee
- An estimated projection, provided to a plan participant or calculated as a result of an annual benefits statement

You can use this form to manually enter defined benefit projection data or enter data from an outside source (Actuaries, Consultants) in batch entry format.

This form can also be used to record a minimum or maximum benefit payable under a prior or terminated plan or a frozen benefit. These amounts can be paid at a later date or used within the pension calculation formula of the current pension plan.



Defined Benefit Plan Account Balance form (67-SCR)

The Defined Benefit Plan Account Balance form (67-SCR) is used to view and record information about an employee's defined benefit plan account balance. When first accessed, the form displays in Inquiry (display) mode. Balance entries can be made by clicking on the Entry button.

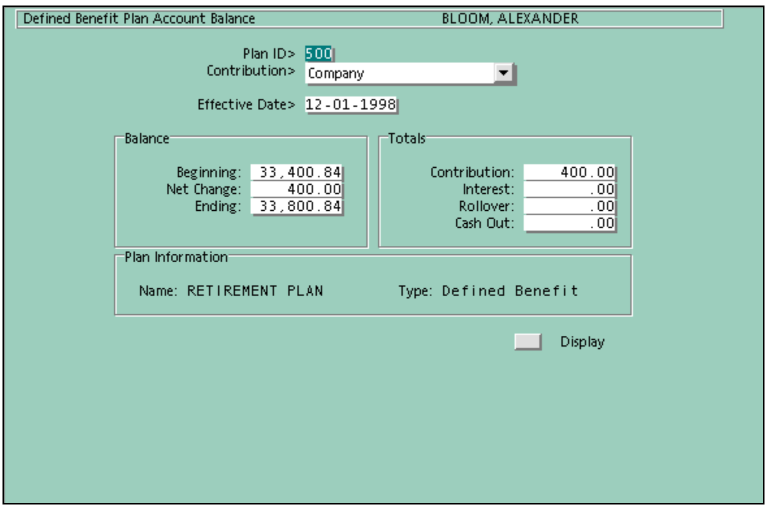
Information is shown by contribution and includes beginning balance, net change, and ending balance as of the most recent effective date.

All amount text boxes are entered with two decimal places. Any loss entered in a text box must be preceded by a negative sign (-).

The form will reject if the following is not true:

- Beginning Balance plus or minus Net Change must equal Ending Balance.
- Net Change must equal the total of the following:

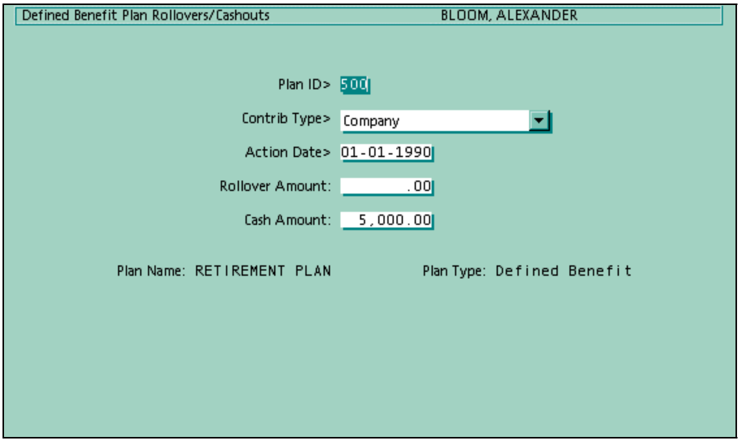
```
Total Contribution
+ Total Interest
+ Total Rollover
- Total Cash Out
------------------------------
  Net Change
```



Defined Benefit Plan Rollovers/Cashouts form (71-SCR)

The Defined Benefit Plan Rollovers/Cashouts form (71-SCR) is used to record two types of account activities for a defined benefits plan—lump sum contributions from another retirement account (rollovers) and amounts paid to the employee (cashouts).

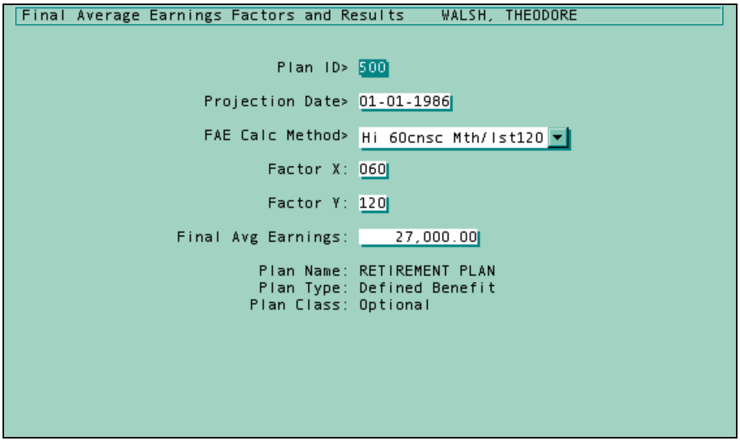
This 'cash out' may actually be due to an employee's termination or receipt of a retirement benefit, even if the 'cost of the employee's retirement benefit' is not the 'cashed out' amount. By debiting the account balance with the balance amount, the value of the employee's account will reflect zero.



Final Average Earnings Factors and Results form (92-SCR)

The Final Average Earnings Factors and Results form (92-SCR) is used to display the results and detail information that supports a final average earnings calculation. Final average earnings are used by many defined benefits plans as a factor in calculating the benefit level accrued as of a specific date.

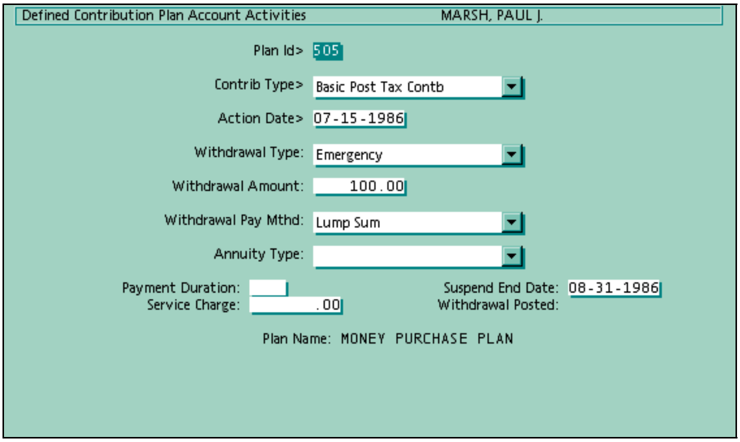
This form does not calculate the average earnings for the specified period. The average earnings are meant to be recorded on this form with a manual entry after the calculation has been completed.



Defined Contribution Plan Account Activities form (73-SCR)

The Defined Contribution Plan Account Activities form (73-SCR) is used to record, by contribution type, activities that affect the plan's account balance.

The form can be used to record the amount and type of employee withdrawals and any suspension period that may result from the withdrawal. In addition, employee-paid service charges can be recorded here. In the case where service charges are allocated among participants through batch entry format, the allocated amount can be viewed on this form.



Defined Contribution Plan Account Activities MARSH, PAUL J.

Plan Id> 505

Annuity Type:

Payment Duration: Suspend End Date: 08-31-1986

Service Charge: .00 Withdrawal Posted:

Plan Name: MONEY PURCHASE PLAN

Defined Contribution Plan Balance Entry form (76-SCR)

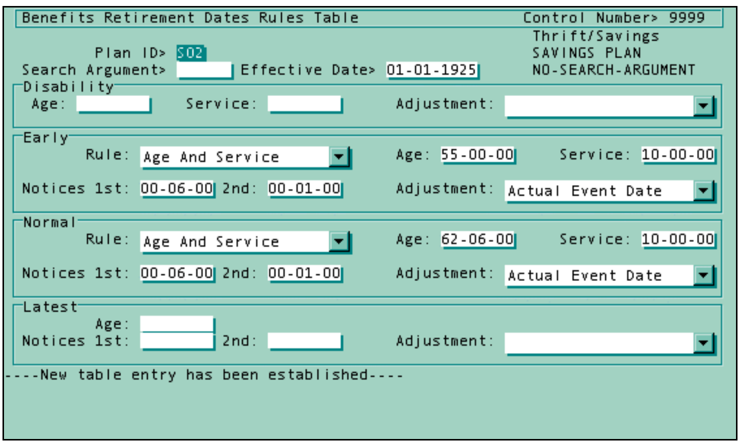
The Defined Contribution Plan Balance Entry form (76-SCR) is used to record the components of an employee's defined contribution plan account balance for a specific balance date. This information is recorded by contribution type.

All amounts are entered with two decimal places; percent text boxes are entered with five decimals. Any loss entered in a text box must be preceded by a negative (-) sign.

Form edits require the following relationships to be true and will reject the form with an edit error if the system calculations do not balance:

- Beginning Balance plus or minus the Net Change amount must equal the Ending Balance.
- The Net Change amount must equal the sum of the following components:

Total Contributions	
plus	Transfers In
plus	Interest
plus (minus)	Gains (Losses)
minus	Total Forfeitures
minus	Transfers Out
minus	Withdrawal Forfeitures
minus	Service Charges



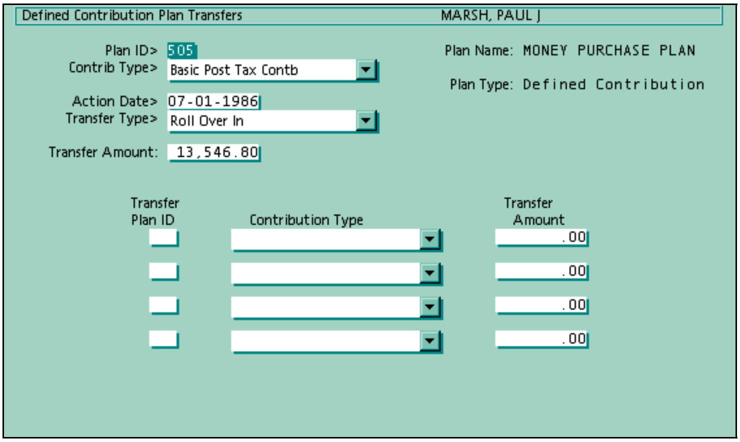
Defined Contribution Plan Transfers form (74-SCR)

The Defined Contribution Plan Transfers form (74-SCR) is used to record funds transferred between defined contribution plans or contribution types. Use it to record contributions that are rollover contributions from another plan or non-payroll deductions.

There are two halves to this form. The top half is used to record an amount that is being transferred from the Plan/Contribution Type recorded or is being transferred to the Plan/Contribution Type recorded.

The bottom half of the form is then used to record the reverse information. For example, when the top half of the form is being used to record the 'transfer from' information, the bottom half of the form is used to record information to tell the system where the top line amount is being transferred to. You must select a Transfer Type to advise the system how you are recording this information.

The bottom half of the form contains four series of Transfer Plan ID, Contribution Type, and Transfer Amount text boxes so that you can record up to four areas the monies are being transferred from or transferred to, depending on the Transfer Type. A system edit requires that the total of the Transfer Amount text boxes on the bottom half of the form equals the Transfer Amount recorded on the top half.



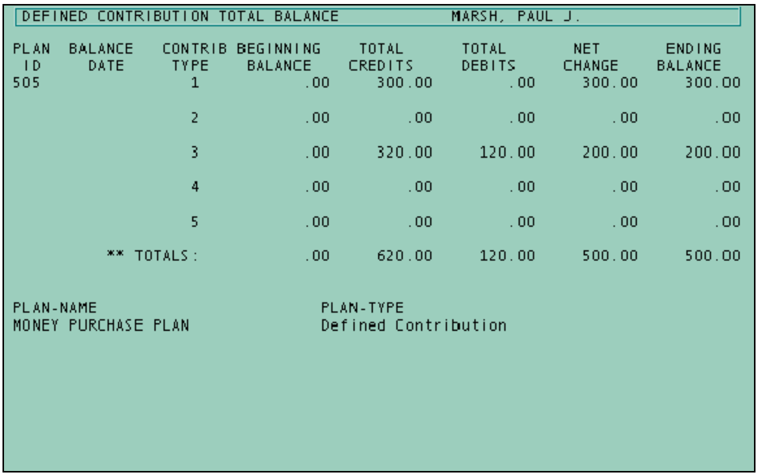
Defined Contribution Total Balance form (76TSCR)

The Defined Contribution Total Balance form (76TSCR) displays the plan balance for a defined contribution plan as of a specific balance date. The Beginning Balance, Total Credits, Total Debits, Net Change, and Ending Balance are displayed by Contribution Type.

After you enter a Plan ID and Balance Date and execute the form, the system searches for the defined contribution plan balances entered through the Defined Contribution Plan Balance Entry form (76-SCR) that are closest to, but not greater than, the date you entered. The beginning balance, net change, and ending balance figures are then displayed here.

The Total Credits and Total Debits text boxes are calculated using the individual balance components from the Defined Contribution Plan Balance Entry forms (76-SCR). Totals of all Contribution Types are system calculated for each category.

This form can not be entered in batch entry format; it must be processed online.



DEFINED CONTRIBUTION TOTAL BALANCE MARSH, PAUL J.

Inquiry forms

The following forms can be used to view plan rules.

Form	Description
Plan Annuitants Factor Table form (TQISCR)	Reflects data from the Benefits Plan Annuitants Factor form (TQ-SCR).
Plan Fund Interest Rates Table (TRAISC)	Reflects data from the Benefits Plan Interest Rates form (TRASCR).
Plan/Fund Allocations Table (TRCISC)	Reflects data from the Benefits Plan Allocations form (TRCSCR).

Benefit Plan Annuitants Factor Table Records report (9Q-RPT)

The Benefit Plan Annuitants Factor Table Records report (9Q-RPT) displays the Benefits Plan Annuitants Factor form (TQ-SCR) entries on a batch report. These records contain the reduction factors used to actuarially convert a retirement benefit (life only) to an annuity that might continue to pay a benefit to a contingent annuitant after the retiree's death.

Business Tasks

This report is used to complete the following business task:

- Review the annuitant conversion factors

Report text box details

- **Ctrl Nbr**—Control Number assigned to the table entry.
- **Plan ID**—Plan ID associated with the table entry.
- **Annuitant Sx Cd/Age**—Gender of the annuitant used in the calculation; age of annuitant used in the calculation.
- **Contingent Sx Cd/Decade**—Gender of the contingent annuitant used in the calculation; value that specifies the age of the contingent annuitant expressed as a decade.
- **Anuity Typ Cd**—Value that defines the type of annuity used to make a retirement payment.
- **TQ Table Date**—Last date on which this table was effective.
- **Age D0**—Fractional annuity factor to calculate the benefit for persons corresponding to the Annuitant Age and the (Contingent ecade * 10).
- **Age D1**—Same as Age D0 except (Contingent Decade * 10 + 1).
- **Age D2**—Same as Age D0 except (Contingent Decade * 10 + 2).
- **Age D3**—Same as Age D0 except (Contingent Decade * 10 + 3).
- **Age D4**—Same as Age D0 except (Contingent Decade * 10 + 4).
- **Age D5**—Same as Age D0 except (Contingent Decade * 10 + 5).
- **Age D6**—Same as Age D0 except (Contingent Decade * 10 + 6).
- **Age D7**—Same as Age D0 except (Contingent Decade * 10 + 7).
- **Age D8**—Same as Age D0 except (Contingent Decade * 10 + 8).
- **Age D9**—Same as Age D0 except (Contingent Decade * 10 + 9).

Parameter options and setup

- **As of Date**—Enter the date in the format CCYYMMDD or MM-DD-CCYY (US and Canada, excluding Quebec) or CCYYDDMM or DD-MM-CCYY (elsewhere) to select the table records in effect as of this date. Specify this parameter and leave the Control Number text box blank to include all table records.
- **Control Number**—Enter the Control Number of the table set you want to print. Specify this parameter and leave the As Of Date text box blank to include all table records in the table set, regardless of date.

Benefits Plan/Fund Allocation Table Records report (9RCDPT)

The Benefits Plan/Fund Allocation Table Records report (9RCDPT) displays the Benefits Plan Allocations form (TRCSCR) and/or the Benefits Plan/Fund Allocations form (TRDSCR) table records on a batch report.

Business Tasks

This report is used to complete the following business tasks:

- Review the total amount allocated to a deferred plan account or fund account
- Analyze changes made to the level and method of allocations

Report text box details

- **Control Number**—Control Number assigned to this table entry.
- **Plan ID**—Plan ID associated with the table record.
- **Fund Code**—Fund type chosen by an employee for a benefits plan.
- **Table Date**—Effective date of the table record.
- **Allocation Amount**—Total amount of service charges that are to be, or have been, allocated.
- **Allocation Method**—Method of total service charge allocation.
- **Allocation Level**—Level to which the service charges are to be allocated.

Parameter options and setup

- **As of Date**—Enter the date in the format CCYYMMDD or MM-DD-CCYY (US and Canada, excluding Quebec) or CCYYDDMM or DD-MM-CCYY (elsewhere) to include the table records in effect as of this date. Specify this parameter and leave the Control Number text box blank to include all table records.
- **Control Number**—Enter the Control Number of the table set you want to include. Specify this parameter and leave the As Of Date text box blank to include all table records in the table set, regardless of date.
- **Table Type Option**—Enter 'C' to print the Benefits Plan Allocations form (TRCSCR) or 'D' to print the Benefits Plan/Fund Allocations form (TRDSCR) table records. Leave the text box blank to print both.

Benefits Plan/Fund Interest Rates Table Records report (9RABPT)

The Benefits Plan/Fund Interest Rates Table Records report (9RABPT) displays the Benefits Plan Interest Rates form (TRASCR) and/or the Benefits Plan/Fund Interest Rates form (TRBSCR) table records on a batch report.

Business Tasks

This report is used to complete the following business tasks:

- Review benefits plan account and fund interest rates
- Analyze changes to interest rates applied to a plan account balance
- Analyze changes to interest rates applied to a thrift/savings plan account balance

Report text box details

- **Control Number**—Control Number assigned to this table entry.
- **Plan ID**—Plan ID associated with the table record.
- **Fund Code**—Location of contributions that are invested in a deferred benefits plan.
- **Table Date**—Effective date of the table record.
- **Basic Pre Interest**—Percent of interest paid on employee basic pretax contributions to a deferred benefits plan.
- **Basic Post Interest**—Percent of interest paid on employee basic posttax contributions to a deferred benefits plan.
- **Suppl Pre Interest**—Percent of interest paid on employee supplemental pretax contributions to a deferred plan.
- **Suppl Post Interest**—Percent of interest paid on employee supplemental posttax contributions to a deferred plan.
- **Company Int Rate**—Percent of interest paid on company contributions to a deferred benefits plan.

Parameter options and setup

- **As of Date**—Enter the date in the format CCYYMMDD or MM-DD-CCYY (US and Canada, excluding Quebec) or CCYYDDMM or DD-MM-CCYY (elsewhere) to include the table records in effect as of this date. Specify this parameter and leave the Control Number text box blank to include all table records.
- **Control Number**—Enter the Control Number of the table set you want to include. Specify this parameter and leave the As Of Date text box blank to include all table records in the table set, regardless of date.
- **Table Type Option**—Enter 'A' to print the Benefits Plan Interest Rates form (TRASCR) or 'B' to print the Benefits Plan/Fund Interest Rates form (TRBSCR) table records. Leave the text box blank to print both.

```

APPENDIX D

Working with Stock Plans

In This Appendix

Introduction

This section contains additional information for administering stock plans. These forms are optional and are not required to effectively implement Benefits Administration.

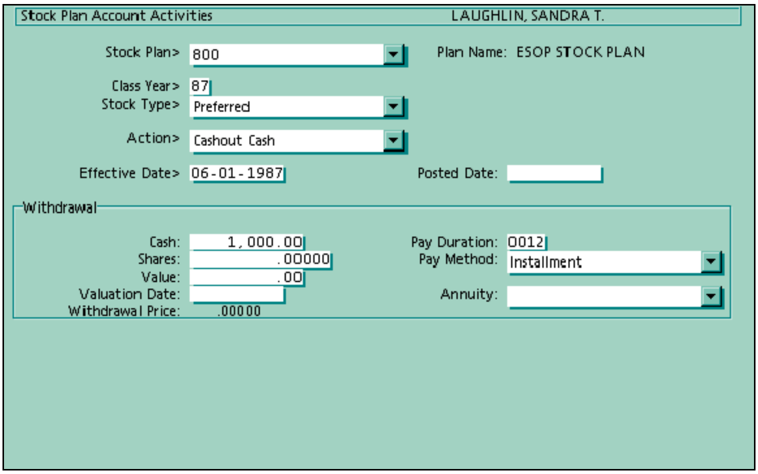
A stock plan is considered a defined contribution plan. It is any plan that maintains an account balance in terms of shares/units of stock owned and their comparable monetary value. This may include ESOPs (employee stock ownership plan), TRASOPs (tax reduction act stock option plan), PAYSOPs (payroll-based stock ownership plan), Qualified Incentive Stock Option plans, Stock Appreciation Rights, and Stock Purchase Plans.

Stock Plan Account Activities form (77-SCR)

The Stock Plan Account Activities form (77-SCR) is used to record employee withdrawals of stock account balance amounts in the form of cash, or shares by class year and stock type. You may also record the withdrawal payment method and duration. If the withdrawal is in the form of an annuity, use this form to record the annuity type.

Prior to entering this form, update the Stock Plan Number option list with any stock plan IDs that you have added to the system.

Note: *This form is only valid with benefits plans that have a plan type of 'ESOP', 'PAYSOP', 'Stock Purchase Plan', or 'TRASOP'.*

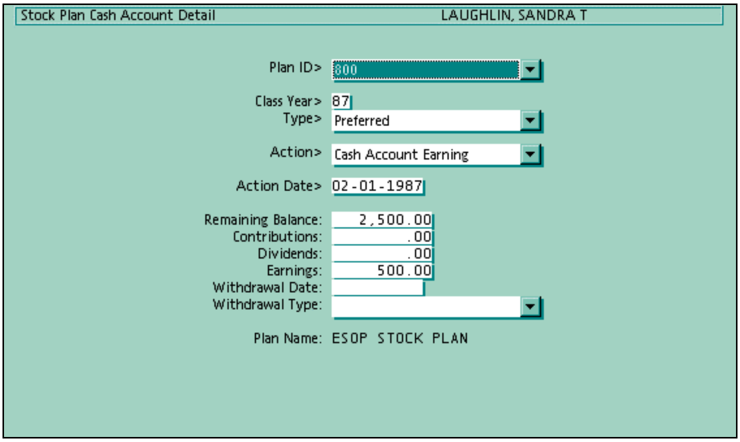


Stock Plan Cash Account Detail form (88-SCR)

The Stock Plan Cash Account Detail form (88-SCR) is used to record the components of an employee's stock cash account by class year and the remaining balance. You may also use this form to record the contributions, dividends, and earnings for the plan.

Prior to entering this form, update the Stock Plan Number option list (BA52) with any stock plan IDs that you have added to the system.

Note: *This form is only valid with benefits plans that have a plan type of 'ESOP', 'PAYSOP', 'Stock Purchase Plan', or 'TRASOP'.*

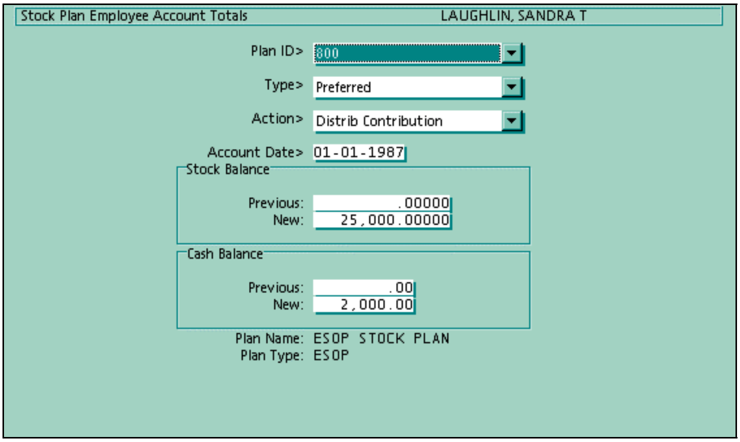


Stock Plan Employee Account Totals form (89-SCR)

The Stock Plan Employee Account Totals form (89-SCR) is used to record an employee's stock account balance in terms of stock and cash amounts.

Prior to entering this form, update the Stock Plan Number option list (BA52) with any stock plan IDs that you have added to the system.

Note: *This form is only valid with benefits plans that have a plan type of 'ESOP', 'PAYSOP', 'Stock Purchase Plan', or 'TRASOP'.*

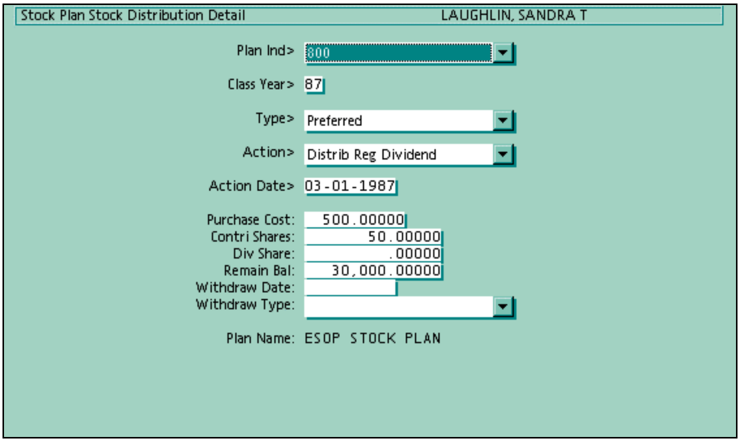


Stock Plan Stock Distribution Detail form (87-SCR)

The Stock Plan Stock Distribution Detail form (87-SCR) is used to record stock account distributions by class year for each stock type. You may also record the stock purchase cost, contribution shares, dividend shares, and the remaining stock account balance.

Prior to entering this form, update the Stock Plan Number option list (BA52) with any stock plan IDs that you have added to the system.

Note: *This form is only valid with benefits plans that have a plan type of 'ESOP', 'PAYSOP', 'Stock Purchase Plan', or 'TRASOP'.*



APPENDIX E

Sample Benefits Plans

In This Appendix

Introduction

Benefits Administration administers functions for welfare, deferred, and flex benefits plans. This appendix displays three sample plans, showing you the plan summary and tables required to set up each plan.

The dating of the tables within these sample plans assumes that the company was established on January 1, 1950 and that the most recent plan year for the Flexible Benefits Plan is 1998.

Welfare Plan - Life Insurance

Plan Summary	
Plan ID:	301

APPENDIX G

Batch Loading of Benefits Forms

In This Appendix

Introduction

This section contains general information about batch layouts for benefits forms that you may want to submit in large volumes through the batch process. For more specific instructions, refer to the online CUBBS FAQ sheet.

About batch transaction layouts

The Batch Transaction Layout (BATCHL) is a batch-only program. It produces a report called the Batch Layout Report that shows batch transaction layouts for application form entries. The report contains form-specific literals, field information, and comments associated with the entry boxes.

The Batch Transaction Layout (BATCHL) creates the report from one of two sources:

- Form Appearance Table entries
- The field list displayed at the end of a form's documentation

If Form Appearance Table entries are present for a given application form, these entries will be used in preference to the documentation field list.

The Batch Layout Report (BATCHL) can be very helpful when you design conversion and/or interface programs.

Specifying BATCHL control records

You can request a Batch Layout Report (BATCHL) for a single form or multiple forms, depending on the value you specify in the batch control record's Key field (starting in position 31). Look at these examples:

Requesting a Batch Layout Report for a single form:

```
         1    1    2    2    3    3    4    4    5          7
1...5....0....5....0....5....0....5....0....5....0          5
P BATCHLJ00100  999999BATCHL  55-SC1    A 13                C
```

Requesting a Batch Layout Report for multiple forms:

```
         1    1    2    2    3    3    4    4    5          7
1...5....0....5....0....5....0....5....0....5....0          5
P BATCHLJ00100  999999BATCHL  55-SC1    A 13                C
P BATCHLJ00100  999999BATCHL  54-SCR    A 134               C
P BATCHLJ00100  999999BATCHL  53-SCR    A                   C
```

Section header setup information

In the previous examples of BATCHL control records, you saw entries in positions 41–49. These positions are used to designate special information for the form sections on some forms the system. The following chart displays the valid entries for these positions:

Position	**Entry**
41	'A' or 'C'—Add or change. Default is blank (change).
42	'R' or 'S'—Regular or special. 'S' is mainly for AS400.
43–49	'1' through '7'—for section number of form.
75	'C'—forces a page break between layouts.

The following list indicates the section numbers required by the forms for the batch layouts:

Form	Section number(s) needed in positions 43–49 of the BATCHL control record
Welfare Plan Enrollments/Changes (55-SCR)	1, 3
Deduction Information From Benefit Plans (54-SCR)	1, 3, 4
Plan Coverage Amount Entry (53-SCR)	No section numbers(s) required.
Deferred Plan Enrollments/Changes (64-SCR)	1, 2
Deferred Plan Contribution Amt/Pcts (64CSCR	No section numbers(s) required.
T/S Plan Contributions/Fund Allocation (79-SCR)	No section numbers(s) required.
Flex Benefit Enrollment/Changes (55FSCR)	No section numbers(s) required. (See Batch loading flex benefit plan enrollments section for batch layout.)
Pending Plan Enrollment/De-enrollment (90-SCR)	No section numbers(s) required.

Printing the Batch Layout Report

When you execute the Batch Transaction Layout (BATCHL), the program writes the Batch Layout Report to FILE03. Print the contents of FILE03 to obtain a printed copy of the report.

☞ *Refer to the Technical Administration documentation for more information about control record formats and processing the BATCHL transactions.*

Batch loading welfare plan enrollments

When you batch load welfare enrollments, you have two options:

- Option 1—Batch load only the Welfare Plan Enrollments/Changes form (55-SCR) and let the system calculate the Deduction Information From Benefit Plans form (54-SCR) and the Plan Coverage Amount Entry form (53-SCR).

Use this option when you want the system to calculate all deduction segments automatically. The system checks the appropriate tables and generates the segments. If no prior deduction segments exist, the new segments will be created with a contribution action of 'Accept' for all contribution types.

If prior deduction or coverage segments exist, then the new segments will be created with the same contribution action as the prior segments. Therefore, if you are batch loading enrollments for a new benefits plan year and do not want prior contribution actions propagated, consider using option 2.

- Option 2—Batch load each form individually.

Use this option when you want to override or reject a contribution. It requires that each form be loaded individually. Type an 'E' in the Code 1 field on the Welfare Plan Enrollments/Changes form (55-SCR) to generate it without the Deduction Information From Benefit Plans (54-SCR) and Plan Coverage Amount Entry (53-SCR) forms.

When entering the Deduction Information From Benefit Plans form (54-SCR) for the first time, the batch layout must contain an 'E' in the Code 1 field, so the system knows to generate that particular segment.

If the employee has already been enrolled in a plan and you are loading all three forms, you need to load only the Deduction Information From Benefit Plans (54-SCR) and Plan Coverage Amount Entry (53-SCR) forms that need to be changed. For example, you would include these forms if you needed to reject a posttax HED on them.

The system expects that the forms will be loaded starting with the Welfare Plan Enrollments/Changes form (55-SCR). The Deduction Information From Benefit Plans form (54-SCR) will be loaded second, and the Plan Coverage Amount Entry form (53-SCR) third.

It is important to use an asterisk (*) as an end-of-record marker when you have completed a batch layout record.

Batch loading deferred plan enrollments

Batch enrollment of deferred plans requires independent segment loading, as compared to online enrollment where several segments are created by entering one form. Use the following chart as a reference tool:

Online Form	**Segment Created**	**Additional Segments Automatically Generated**	**Batch Equivalent**
Deferred Plan Enrollments/Changes (64-SCR)	LQ4	**LQ0**—Plan Retirement/Notice/Counseling Dates form (65-SCR), **LQ3**—Plan Service Dates form(62-SCR)	Deferred Plan Enrollments/Changes form (64-SCR)
DB Plan Contributions (68-SCR)	LQE	**LQ5**—Deduction Information From Benefit Plans form (54-SCR)	Deduction Information From Benefit Plans form (54-SCR), Deferred Plan Contribution Amt/Pcts form (64CSCR)
DC Plan Contributions (72-SCR)	LQE	**LQ5**—Deduction Information From Benefit Plans form (54-SCR)	Deduction Information From Benefit Plans form (54-SCR), Deferred Plan Contribution Amt/Pcts form (64CSCR)
T/S Plan Contributions/ Fund Allocation (79-SCR)	LQA	**LQE**—Deferred Plan Contribution Amt/Pcts form (64CSCR), **LQ5**—Deduction Information From Benefit Plans form (54-SCR)	Deduction Information From Benefit Plans form (54-SCR), Deferred Plan Contribution Amt/Pcts form (64CSCR), T/S Plan Contributions/Fund Allocation form (79-SCR) in Entry mode

Enrollments are processed on the Deferred Plan Enrollments/Changes form (64-SCR), sections 1 and 2, which must be loaded first. When this form is loaded, the system automatically generates the Plan Retirement/Notice/Counseling Dates form (65-SCR) and the Plan Service Dates form (62-SCR).

You must load the following forms in this order when entering deferred plans in batch:

Form	For the following plans
Deferred Plan Enrollments/Changes form (64-SCR)	All deferred plans
Deduction Information From Benefit Plans form (54-SCR)	All deferred plans with contributions
Deferred Plan Contribution Amt/Pcts form (64CSCR)	All deferred plans with contributions
T/S Plan Contributions/Fund Allocation form (79-SCR) in Entry mode	Thrift/savings plans only

Note: *If you are loading a thrift/savings plan, the T/S Plan Contributions/Fund Allocation form (79-SCR), with 'E' in the Code-1 field, will also need to be loaded. You can load this form before or after the Deferred Contribution Amt/Pcts form (64CSCR).*

Note: *The Deferred Plan Contribution Amt/Pcts form (64CSCR) processes against the system date. If you intend to load future-dated enrollments, you will not be able to load this form until that date.*

It is important to use an asterisk (*) as an end-of-record marker when you have completed a batch layout record.

Batch loading flex benefit plan enrollments

Normal system batch processing using the Batch Layout Facility (BATCHL) will not work for the Flex Benefit Enrollments/Changes form (55FSCR). It is necessary to create the batch loading as follows.

The following Batch Layout Facility records are needed for each employee enrollment:

- One record with Master Plan information
- A set of two records for each group of four plans into which the employee is to be enrolled. (The two-record sets hold the information comparable to a page of entries on the form for four plans at a time.)

Note: *Plan IDs must be in numeric order, not in the order shown on the Flex Master/Group Plan Components form (TP-SCR).*

The Enroll/Change Type code entry on the Master Plan record triggers the correct type of form processing, such as Open Enrollment, Life Status Changes, and so forth.

On the last batch record, when all entries are complete for all plans, enter a 'P' to trigger the 'Process' command that completes the form processing. The 'P' to indicate process is only entered on the last record of the last set of plans and always follows the last plan of the enrollment. If the last set contains less than four plans (the final plans for this individual, for example), the 'P' must be placed in the position immediately following the last Pre/Post Indicator.

The following batch load example for the Flex Benefit Enrollments/Changes form (55FSCR) shows the Plan IDs (bolded) in numeric sequence: 101, 105, 203, 303, 500, 505, 510, 601, 602, 603, 604, 605, 606, and 607. It also shows the Process command ('P') in the last position of the last batch layout record:

```
         1    1    2    2    3    3    4    4    5    5    6    6    7    7
1...5....0....5....0....5....0....5....0....5....0....5....0....5....0....5
P CONTRLT00010  99999955FSCR  123456789                60001-01-1997O
P CONTRLT00010  99999955FSCR  123456789                10105          41*
P CONTRLT00020 0520          420320          430322          4
P CONTRLT00010  99999955FSCR  123456789                50020          45*
P CONTRLT00020 0520          451040          460101          4
P CONTRLT00010  99999955FSCR  123456789                60201          46*
P CONTRLT00020 0301          460401          460522          4
P CONTRLT00010  99999955FSCR  123456789                60699          46*
P CONTRLT00020 0799          4P
```

The following example shows the setup of a batch load to default to prior plans for an employee enrolled in a flexible benefits plan:

```
         1    1    2    2    3    3    4    4    5    5    6    6    7    7
1...5....0....5....0....5....0....5....0....5....0....5....0....5....0....5
P CONTRLT00010  99999955FSCR  123456789                600199701010 P  P
```

Batch loading pending plan enrollments/de-enrollments

As part of your conversion effort, you may want to batch the Pending Plan Enrollment/De-enrollment form (90-SCR).

If you are loading the Pending Plan Enrollment/De-enrollment form (90-SCR) for the first time, type 'E' (new hire) in the Form Code2 Opts field (position 69) for the segments to be created. If you want to run a 'recheck' or another form function, type the appropriate option from option list PP66 in the Form Code2 Opts field and then run the batch job. The following codes are valid for the position:

Code	Description
A	Recheck
B	Change
C	Rehire/reinstate
D	LOA Return
E	New Hire

The following is an example of a batch load for new-hire pending plan enrollments for employees 6002, 6003, and 6004:

```
         1    1    2    2    3    3    4    4    5    5    6    6    7    7
1...5....0....5....0....5....0....5....0....5....0....5....0....5....0....5
P CONTRLT00010  99999990-SCR  6002                                E     *
P CONTRLT00020                   *
P CONTRLT00010  99999990-SCR  6003                                E     *
P CONTRLT00020                   *
P CONTRLT00010  99999990-SCR  6004                                E     *
P CONTRLT00020                   *
```

It is important to use an asterisk (*) as an end-of-record marker when you have completed a batch layout record.

APPENDIX H

Technical Considerations

In This Appendix

Introduction

This section provides information about the technical issues concerning the amount of space available in the Employee Database, future shut-offs of flexible benefits, and program temporary fixes related to Benefits Administration.

Segment-Form cross-reference

Each form in the system is associated with one or more segment codes. This form/segment cross-reference is presented in three tables for those forms that are most commonly modified:

- Sorted by form name/form title/segment code
- Sorted by form title/form name/segment code
- Sorted by segment code/form title/form name

One way to determine the segment code associated with a specific form is to complete the following steps:

1. Access the Display Utility form (DISPLY)

- Access this form by making the following selections from the Navigator:

Component: Development Tools
Process: System Control Repository Utilities
Task: List Control Repository Object

- Select 'EL Source' from the Object list box.
- Type the form program name in the Object Key text box, for example, '53-SCR'.
- Click Save or press Enter.

2. View the segment code for the form

- Look at the last three-character text entry on line 00002.
- The segment type (L) and segment code (Q8) is displayed. In this example, it displays 'LQ8'.

```
P 53-SCR 00000 SECURITY 'BA'. @ Plan Coverage Amount Entry          MEBA
P 53-SCR 00001 @LAST MODIFIED ON:  04-14-97  BY:  MACO  AUTHOR:  JAS
P 53-SCR 00002 @0314DT170123                          LQ8
P 53-SCR 00003 @The 53-SCR screen is used to record or view the Q8
P 53-SCR 00004 @segments that contain an employee's coverage and
P 53-SCR 00005 @contribution amounts in a Welfare Benefits Plan.
```

Form name/form title/segment code

Employee Database space analysis for benefits enrollment

Once you have set up your benefits plans, you are ready to process employee flex credits (if you have flex plans) and enroll employees. First, however, it may be important to check the employee record length, since enrollments will add several segments to each employee's record. The amount of space needed to accommodate enrollment segments will depend on your plan requirements.

The Employee Master File Space Analysis report (10-RPT) calculates the amount of space available on each employee's record and compares that to the maximum number of segments required for an employee enrollment. You can then review the printed summary of available segment space for each employee. This information helps you decide whether or not you need to make a space allocation adjustment before or during benefits enrollment processing.

☞ *Refer to the Technical Administration documentation for more information about working storage expansions.*

Estimating expansion for flex enrollments

You can use the following formula to estimate the maximum number of segments per employee that you will be adding with your flex enrollment:

```
4   +   (7A)   +   B   =   segments per employee
```

where

'4' is the number created for the Flex Master:

- 1 QO segment—Flexible Benefit Annual Credits form (55CSCR)
- 1 Q1 segment—Enrollment
- 1 Q5 segment—HED Prototype (deduction or earning HED)
- 1 Q8 segment—Coverage

'7' is the number of possible segments per plan that are created at enrollment:

- 1 Q1 segment—Enrollment
- 3 Q5 segments—HED Prototype (Pre/Post/Company)
- 3 Q8 segments—Coverage (Pre/Post/Company)

'A' is the number of plans, including Flexible Spending Accounts (FSAs) and Deferred

'B' is the number of Flexible Spending Account plans (which have an extra segment, the 'QT' segment)

Modifying the report code for the number of plans

The program code for the Employee Master File Space Analysis report (10-RPT) is based on an arbitrary number of plans. You may adjust the lines that contain the coded numbers, increasing or decreasing the numbers (10 and 114 respectively) if you have more or less plans. Instructions are shown on the commented '@' lines preceding the program lines. The report may then be run at any time.

The specific code that can be altered is shown in the following example:

```
10-RPT 02500 @The number of segments required to store 55-SCR information
10-RPT 02600 @for 1 plan with 5 contrib types is 11 segments. If you
10-RPT 02700 @have fewer contrib types, reduce the number by 2 for each
10-RPT 02800 @unavailable contrib type; then RELOAD 10-RPT.
10-RPT 02900  IF PERM-02-V0 GREATER :10 PRINT 'Y' ELSE PRINT 'N'
10-RPT 03000 @The number of segments required to store 55FSCR information
10-RPT 03100 @for 16 plans with 3 contrib types is 115 segments. If you
10-RPT 03200 @have fewer plans, reduce the number by 9 for each plan less
10-RPT 03300 @than 16. If you have fewer contrib types, reduce the
10-RPT 03400 @number by two for each contrib type less than 3 FOR EACH
10-RPT 03500 @AFFECTED PLAN.  Then RELOAD 10-RPT.
10-RPT 03600   IF PERM-02-V0 GREATER :114 PRINT 'Y' ELSE PRINT 'N'.
10-RPT 03700   MOVE :1 TO PERM-03-V0.
10-RPT 03800   OUTPUT PERM-03-V0. WRITE-EXTRACT.
```

Report output

The two fields on the right side of the report (55-SCR INDICATOR and 55FSCR INDICATOR) are used to let you know if there are enough segments available on the Employee Database (Master File; FILE02) to enroll the employee on the Welfare Plan Enrollments/Changes form (55-SCR) or Flex Benefit Enrollments/Changes form (55FSCR).

For welfare plan processing, this report verifies if there are enough segments available to process a welfare plan enrollment. If enough segments are available, a 'Y' displays under the 55-SCR INDICATOR heading. If there are not enough segments available, an 'N' displays.

For flexible benefits processing, this report verifies if there are enough segments available to process a flexible benefit plan enrollment, based on the maximum number of component plans with three Contribution Types for each plan.

If enough segments are available, a 'Y' displays under the 55FSCR INDICATOR heading. If there are not enough segments available, an 'N' displays.

☞ *Refer to the Technical Administration documentation for more information about managing working storage.*

Employee Master File Space Analysis (10-RPT)

The Employee Master File Space Analysis report (10-RPT) lists all employees and the condition of their Employee Database (Master File; FILE02) regarding available space for an employee enrollment. You may modify this report to verify a lesser amount of space if your Flexible Benefits program has fewer plans and contribution types available.

Business Tasks

This report is used to complete the following business task:

- Estimate a space allocation adjustment before or during benefits enrollment processing.

Report field details

- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Employee Status**—Employee's status as a result of an activity.
- **Employee Rcd Size**—Current employee record size.
- **Maximum Allowed**—Employee record maximum size.
- **Available Segments**—Number of segments available for benefits plan enrollment.
- **55-SCR Indicator**—'Y' indicates adequate space for a welfare enrollment. 'N' indicates inadequate space.
- **55FSCR Indicator**—'Y' indicates adequate space for a flexible benefits enrollment. 'N' indicates inadequate space.

Parameter options and setup

There are no parameter options for this report.

Flexible benefits component plan future shut-offs

The Flex Component Plan Future-Dated Shut-offs report (81-RPT) creates future-dated shut-off segments for all employees participating in component plans that are part of the current Master Plan and the new year's Master Plan.

Plans are shut-off if they are entered on either the current or new year Flex Master/Group Plan Components table (TP-SCR). If an employee does not re-elect participation in the same plans in the current Flex Year, this program ensures the employee does not continue to have contributions deducted for the 'old' plans. The Flex Master Plan is also shut-off as of the plan year-end in preparation for the new year enrollment.

Note: *To create shut-off segments for Deferred Plans, the Scripting Language (English Language) code must be modified. HED numbers may be entered at Paragraph P235-SHUTOFFS to trigger the shut-off of specific Q5 HED segments.*

Solution View can be used to create a selection routine to be used by the report. The selection routine limits the employees processed to those who meet the criteria you have defined. The name of your selection routine can be specified in the report parameter options.

☞ *Refer to Using the Solution View documentation for more information on creating a selection routine.*

Flex Component Plan Future-Dated Shut-offs (81-RPT)

The Flex Component Plan Future-Dated Shut-offs report (81-RPT) creates future-dated shut-off records for all employees participating in component plans that are part of the current master plan and the new year's master plan. If an employee does not re-elect participation in the same plans in the current flex year, this program ensures the employee does not continue to have contributions deducted for the prior year's plans. The flex master plan is also shut-off as of the plan year-end in preparation for the new year enrollment.

Solution View can be used to create a selection routine to limit the employees processed to those who meet the criteria you have defined. The name of your selection routine is specified in the report parameters.

Business Tasks

This report is used to complete the following business tasks:

- Stop deductions from being processed when employees no longer belong to a plan.
- Stop deductions from being taken for prior year flex plans after enrollment in new plan year.

Report field details

- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Flex Plan ID**—Three-character identifier of the flex plan.
- **Plan Name**—Name assigned to the plan.
- **Flex Plan Year**—Beginning date of the flexible benefit plan.
- **Welfare Effective**—Employee enrollment date.
- **Resulting Plan-Stat**—Employee's participation status in the plan.
- **Option Elected**—Employee's choice of benefits level.
- **Plan Entry Date**—Employee's original participation date in a welfare plan.
- **Plan Type**—Code that indicates the kind of benefits plan.
- **Suspend End-Date**—Date on which an employee's suspension from participation in a welfare plan ends.
- **Service Calc-Date**—Date from which service dates are calculated.
- **Variable Factor**—Amount used in the calculation of the coverage or contribution.
- **HED**—Three-character identifier of the deduction for Payroll.
- **Eff-Date**—Date on which the deduction is to take effect.
- **Freq/Type/Meth**—When deductions are to be taken; action to be taken for arrears; calculation of amount of deduction.
- **Amt-Pct**—Deduction value for a particular benefit.
- **Start Cd/Fl**—When to start a deduction.
- **Stop Cd/Fl**—When to stop a deduction.
- **Amt One, Two**—Values specific to Payroll.
- **Plan**—Plan ID associated with the deduction.
- **Contrib**—Source of contribution funding.
- **Act**—Code indicating plan contribution acceptance.
- **Rule**—Formula to determine contribution.
- **Post**—Indicator that the deduction has been copied to Payroll.

Parameter options and setup

- **New Plan Year Start Date**—Enter the date in the format CCYYMMDD or MM-DD-CCYY (US and Canada) or CCYYDDMM or DD-MM-CCYY (elsewhere).
- **New Flex Master Plan ID**—Enter the three-character plan ID.
- **Current Flex Master Plan ID**—Enter the three-character plan ID only if different than the New Flex Master Plan ID.
- **Selection Routine**—Enter the six-character customer-defined Solution View program name for the Selection Routine (optional).

Benefits program temporary fixes (PTFs)

When you identify a situation in which the system does not work as documented, you can communicate this to Cyborg by completing a Problem Notification form and submitting it to the Problem Notification Coordinator at your nearest Cyborg office.

You can obtain these forms from Cyborg account managers and installation specialists. For tracking purposes, each Problem Notification (PN) is assigned a unique number. A technician will work with you on resolving the problem.

If it is determined that a coding change is required, a temporary fix will be developed and distributed.

Temporary fixes--defined

Program Temporary Fixes (PTFs) are resolutions to Problem Notifications (PNs). They are fixes applied temporarily until they are made part of the system by being included in an update bulletin or upgrade. PTFs may encompass Scripting Language (English Language) changes and/or COBOL changes.

Before submitting a Problem Notification form, you may want to look at existing PTFs to see if a program fix is available for the problem.

Note: *Temporary fixes have only been unit tested. They have not been system tested.*

How temporary fixes are distributed

Temporary fixes are distributed on the Cyborg bulletin board. As a subscriber to the Cyborg User Bulletin Board Service (CUBBS), you can obtain update bulletins as well as Program Temporary Fixes through data transfer 24 hours a day, seven days a week.

You should have received the software and instructions for using the Cyborg bulletin board as part of the installation process. If you are not currently using this service, you may request it from Cyborg. You will receive the bulletin board software and product documentation.

Determining whether a temporary fix has been applied

You can view temporary fixes that have been applied to a form by using the Display utility (DISPLY) and selecting an object of 'PTF History'. Complete the following steps to view applied temporary fixes on your system:

1. **Access the Display Utility form (DISPLY)**

   Access this form by making the following selections from the Navigator:

   Component: Development Tools
   Process: System Control Repository Utilities
   Task: List Control Repository Object

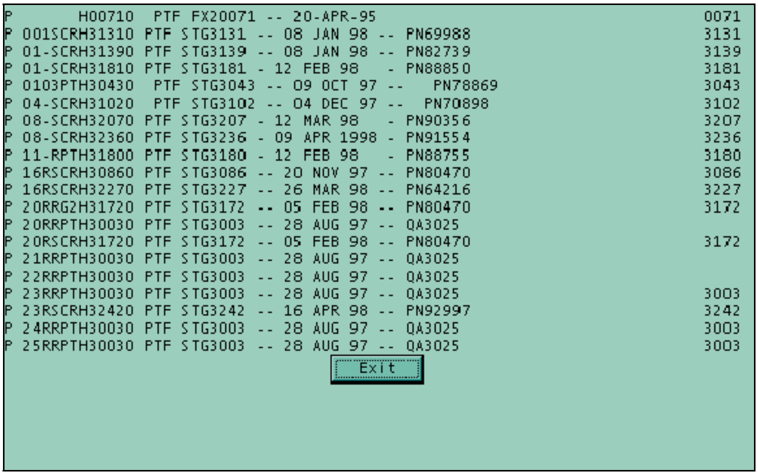
2. **Select an Object**

   Select 'PTF History'.

3. Click Save or press Enter

The Display Utility form (DISPLY) displays one line for each applied Program Temporary Fix (PTF).

The resulting form should look similar to the example that follows:



```
P       H00710  PTF FX20071 -- 20-APR-95                       0071

APPENDIX I

Accumulation HEDs and 401(k) Plans

In This Appendix

Introduction

This section provides an explanation of how to use Accumulation Method Code 8A for 401(k) plans. It shows how Method Code 8A can be used to track limits on applicable wages and employee pretax contributions and to ensure the company contribution is calculated correctly.

Overview of accumulation HEDs

When setting up a benefit plan on the Benefit Plan Prototype Contribution HED form (TS-SCR), the value in the 6-position Stop Field normally indicates the maximum amount that, when reached, stops a deduction or automatic earning for the HED being defined. In the case of 401(k) and other deferred benefit plans, which have a pretax maximum, this field can not accommodate the required 7-position value. For 401(k) plans, an accumulation HED must be set up to handle the maximum amount.

An accumulation HED is set up whenever there is a need to accumulate, combine, and/or track groups of earnings and deductions for special purposes. The totals of a number of different earnings HEDs can be combined to establish the base for any of the following:

- Calculating wages subject to 401(k) deductions
- Calculating 401(k) deductions and company match
- Accumulating life-to-date dollars and/or hours

Accumulation Method Code 8A is provided to handle the need to accumulate or combine earnings and/or hours. This special method code enables you to do the following:

- Add any accumulation of hours or dollars from multiple HEDs for any purpose
- Set an annual maximum or limit on an HED accumulation

Method Code 8A uses the list of HEDs defined on the HED Accumulation Method Setup form (MCASCR) to accumulate hours and/or dollars into a single HED. It also uses entries on the HED Accumulation Method Limits form (MCALIM) to calculate a maximum contribution or annual earning amount and create a WL Record Maintenance form (WL-SCR) or company record.

Each of the HEDs that is to be combined or accumulated must be set up on both the Company Earnings And Deductions form (A8-SCR) and the Employee Earnings And Deductions form (HH-SCR) with the Accumulation Method option selected in the Calc Method drop down box of both.

Note: *HEDs can be set up or modified for all paying Organizations by selecting Propagate To All on the Company Earnings And Deductions form (A8-SCR). Because an HED can not be deleted once it is created, ensure that you want the HED created for **all** paying Organizations before selecting Propagate To All.*

The special accumulation HED then must be set up as a memo HED on the HED Accumulation Method Setup form (MCASCR), listing each of the HEDs that is to be accumulated. Up to ten HEDs can be recorded on each setup form. To accumulate more than ten HEDs, enter the HEDs in additional setup forms, linking the forms with consecutively numbered entries in the Sequence text box. For example, the first setup form would have an entry of '1' in its Sequence text box, the second screen would have an entry of '2', and so on.

After accumulating the hours or dollars in the specified HEDS, the accumulation HED can perform the calculation specified in the Calculation Action drop down box. If no

Calculation Action option is selected, the accumulation HED stores the total of the HEDS being combined.

Once the accumulation and optional calculation are complete, the resulting total can then be compared to the annual maximum or limit defined on the HED Accumulation Method Limits form (MCALIM). The limit can be the amount of one accumulation HED, or it can be the total of up to eight accumulation HEDs, which are listed on the HED Accumulation Method Limits form (MCALIM).

After the defined limit is reached, the accumulation HED continues to be calculated, but no deductions are taken unless a posttax HED is specified in the Post Tax HED text box of the HED Accumulation Method Limits form (MCALIM). If no limit is entered, the accumulation HED continues to take deductions until it is shut off.

An accumulation HED is linked to a limit by entering the same numeric value in both the Limit Definition text box of the HED Accumulation Method Setup (MCASCR) and the Limit Definition ID text box of the HED Accumulation Method Limits form (MCALIM).

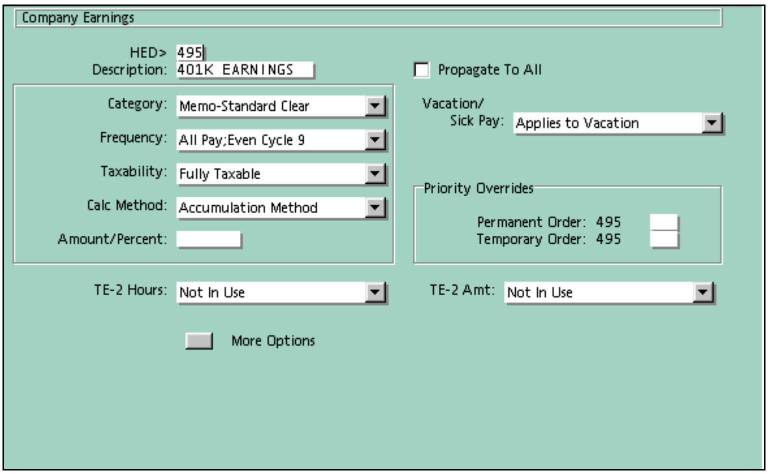
Setting up accumulator HEDs for 401(k) plans

The Company Earnings and Company Deductions panels of the Company Earnings And Deductions form (A8-SCR) are used to establish HEDs. An earnings HED is set up on the Company Earnings panel and must be numbered from 001 to 500. A deduction HED is set up on the Company Deductions panel and must be numbered from 501-998.

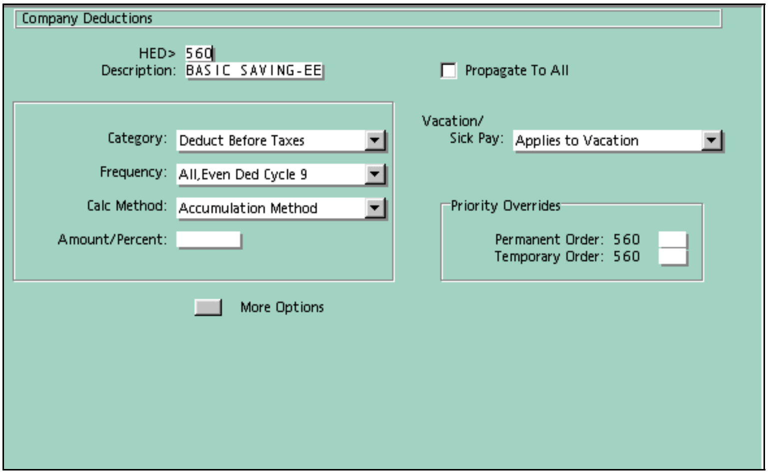
When setting up an accumulation HED, the number you assign to it must be higher than the numbers assigned to any of the HEDs being combined or accumulated into it. For example, the accumulation HED set up to accumulate values from HEDs 534, 618, and 622 must be numbered 623 or higher. The value in the Calc Method drop down box for any accumulation HED or any HED that is to be combined into an accumulation HED must be Accumulation Method.

The following examples show how HEDs can be set up to handle 401(k) limits. HED 495 will be set up as an accumulation HED for earnings subject to 401(k), HED 560 will be set up as an accumulation HED for basic pretax deductions, HED 561 will be set up for supplemental posttax deductions, and HED 562 will be set up as an accumulation HED for the company match.

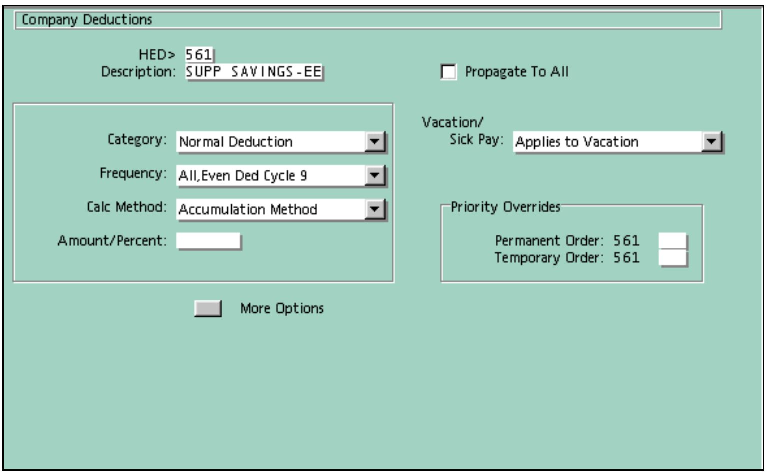
First set up basic earnings HED 495 on the Company Earnings panel of the Company Earnings And Deductions form (A8-SCR), using the values shown in the following example. HED 495 will be used for earnings subject to 401(k). It will be defined as an accumulation HED in a later step.



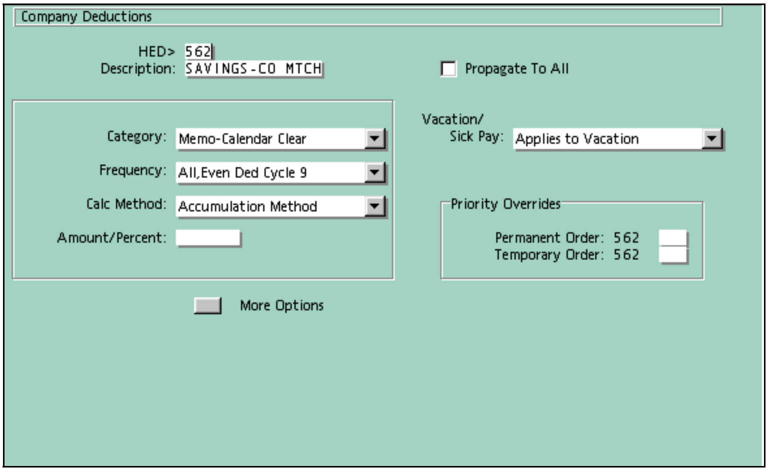
Next, set up HED 560 on the Company Deductions panel of the Company Earnings And Deductions form (A8-SCR), using the values shown in the following example. HED 560 will be used for basic pretax deductions. It will be defined as an accumulation HED in a later step.



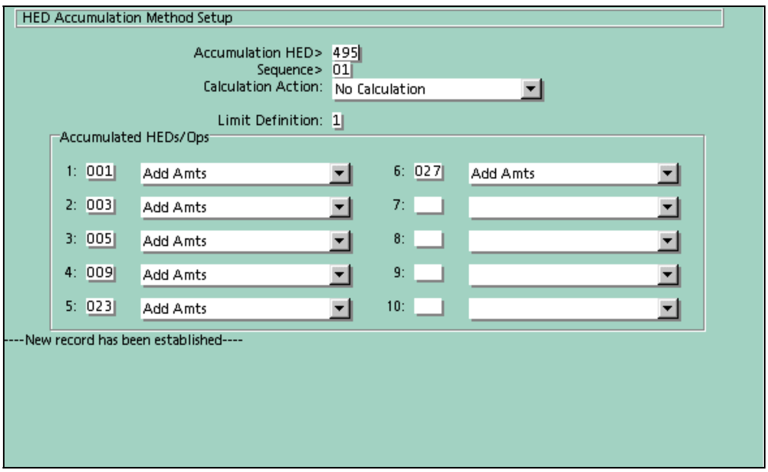
Next, set up HED 561 on the Company Deductions panel of the Company Earnings And Deductions form (A8-SCR), using the values shown in the following example. HED 561 will be used for supplemental posttax deductions.



Next, set up HED 562 on the Company Deductions panel of the Company Earnings And Deductions form (A8-SCR), using the values shown in the following example. HED 562 will be used for the company match. It will be defined as an accumulation HED in a later step.

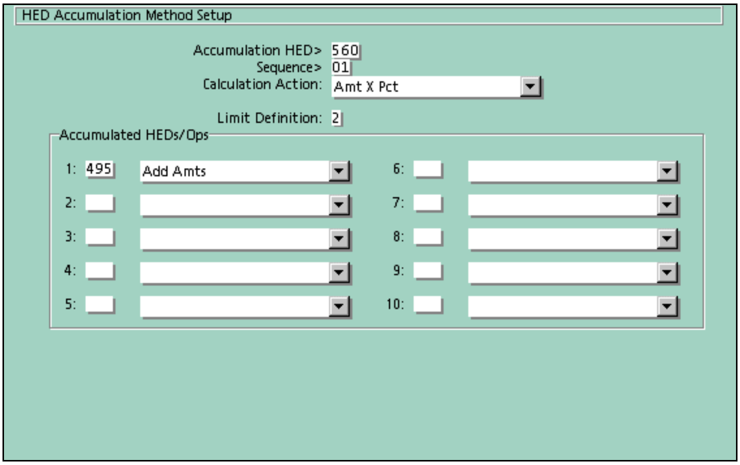


Now you can set up the accumulation HEDs on the HED Accumulation Method Setup form (MCASCR). First set up HED 495 to specify the earnings HEDs that will be accumulated or combined as earnings subject to 401(k).



There are six earnings HEDs that will be added together into HED 495. This will be the total amount of earnings subject to 401(k). The number '1' in the Limit Definitions text box is used to tie HED 495 to an earnings limit. The earnings limit will be defined on an HED Accumulation Method Limits form (MCALIM), which will have a corresponding number '1' in its Limit Definition ID text box.

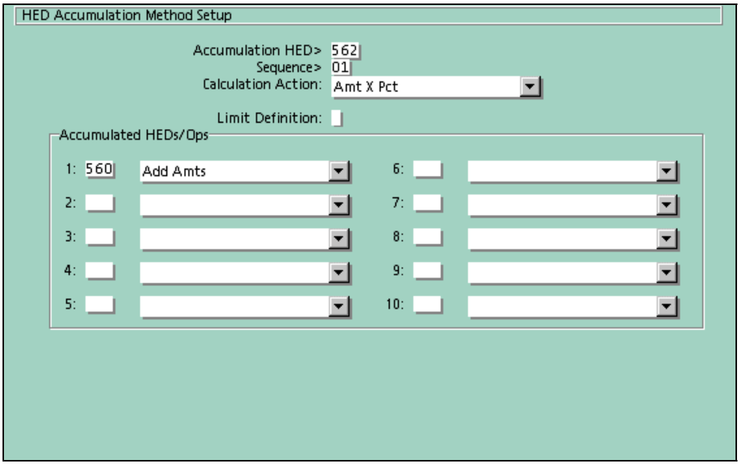
Accumulation HED 560 can now be set up to define the percentage of earnings that will be contributed to a 401(k) plan as a basic pretax deduction.



The total earnings to be considered for 401(k) will be taken from HED 495. The Amt X Pct value in the Calculation Action drop down box indicates that the total earnings taken from HED 495 will be multiplied by the percent specified in the Amount/Pct text box of the employee's Employee Earnings And Deductions form (HH-SCR). The result will be the amount to be contributed to 401(k).

The number '2' in the Limit Definitions text box is used to tie HED 560 to an deduction limit. The deduction limit will be defined on a HED Accumulation Method Limits form (MCALIM), which will have a corresponding number '2' in its Limit Definition ID text box.

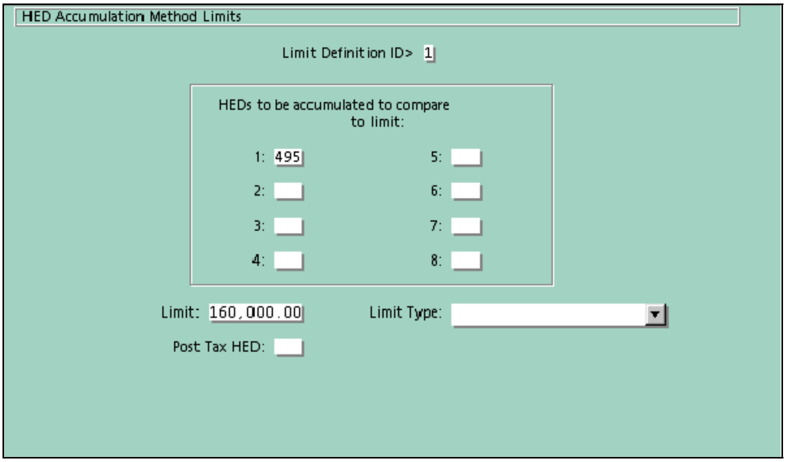
Accumulation HED 562 can now be set up to define the company contribution to a 401(k) plan.



The amount of the employee contribution to the 401(k) will be taken from HED 560. The Amt X Pct value in the Calculation Action drop down box indicates that the employee contribution taken from HED 560 will be multiplied by the percent specified in the Amount/Pct text box of the Company Earnings And Deductions form (A8-SCR). The result will be the amount to be contributed by the company to 401(k).

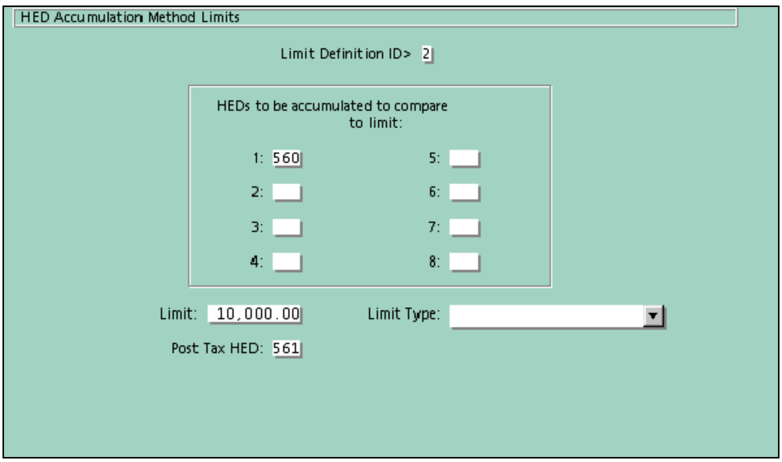
Annual contribution limits or maximums can now be set up on the HED Accumulation Method Limits form (MCALIM). In order for a limit to be in effect, the User Fields/Code text box on an employee's Employee Earnings And Deductions form (HH-SCR) must have an 'L' in the first position, followed by the value from the Limit Definition ID text box of the HED Accumulation Method Limits form (MCALIM) for the appropriate HED. A value of 'L1', for example, would indicate that the limit set up on the HED Accumulation Method Limits form (MCALIM) with a '1' in its Limit Definition ID text box should be used.

First set up the annual limit for HED 495, earnings subject to 401(k).



The '1' in the Limit Definition ID text box provides the link to accumulation HED 495, which had a corresponding '1' in the Limit Definition text box of its HED Accumulation Method Setup form (MCASCR). The value of '160,000.00' in the Limit text box sets the annual limit for earnings to be considered for 401(k) at $160,000.00.

Now set up an annual limit for HED 560, the percentage of earnings to be contributed to a 401(k) as a pretax deduction. Then define the HED that will be used for posttax contributions once the limit is reached.



The '2' in the Limit Definition ID text box provides the link to accumulation HED 560, which had a corresponding '2' in the Limit Definition text box of its HED Accumulation Method Setup form (MCASCR). The value of '10,000.00' in the Limit text box sets the annual limit for pretax contributions to a 401(k) at $10,000.00, and the value of '561' in the

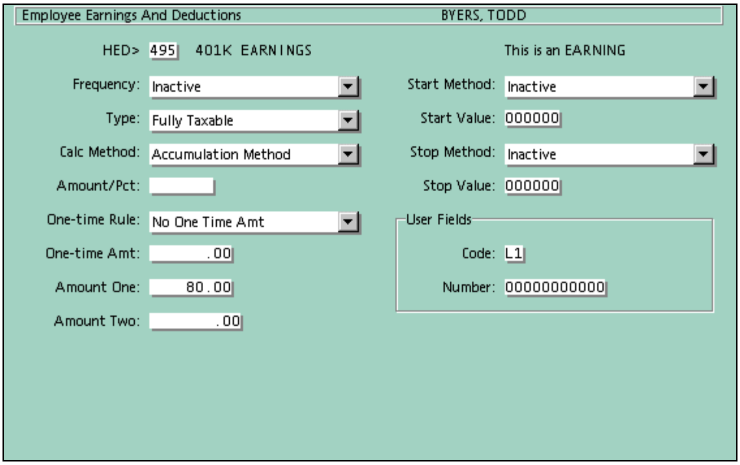
Post Tax HED text box indicates that, once the $10,000.00 limit is reached, additional 401(k) contributions will be taken as posttax deductions.

Note: *Method Code 8A is associated with sort 5G and must be extracted as 5G8A from CYBMST. In addition, the Payroll Audit Trail report (0101) must be selected on all payroll runs, with the Print Every Run option selected in the Other Record drop down box.*

Assigning 401(k) accumulator HEDs to employees

Once you have set up accumulator HEDs for 401(k) plans, you need to assign them to the appropriate employees. Use the Employee Earnings And Deductions form (HH-SCR) to assign HEDs to individual employees, or use the HED Employee Mass Update form (HHMSCR) to assign HEDs to groups of employees.

When you assign an accumulation HED to an employee, the value in the Calc Method drop down box must be Accumulation Method. The values in other fields can be customized to meet the requirements of the particular employee or group of employees.



In this example, accumulation HED 495 has been assigned to employee Todd Byers. The 'L1' in the User Fields/Code text box indicates that the limit or maximum employee earnings amount set up on the HED Accumulation Method Limit form (MCALIM) with a '1' in its Limit Definition ID text box will be used for this employee.

Using Accumulation Method Code 8A for catch-up contributions

Your organization may establish one or more 401(k) deductions. Using the HED Accumulation Method Limits form (MCALIM), a combined limit is established. Your organization then has the option of establishing a posttax HED for contributions that exceed the 401(k) limit. The posttax HED must be processed after all the appropriate pretax HEDs. It is also required that the posttax HED be established for all employees.

☞ *Refer to Defining Organization Earnings, Deductions, and Accruals in the Payroll Organization Setup documentation for detailed information.*

Example

This section includes an example of the steps required to set up Accumulation Method Code 8A for 401(k) plans. The steps include instructions for tracking limits on applicable wages and employee pre-tax contributions, as well as for ensuring the company contribution is calculated correctly.

The following basic rules should be considered when dealing with 401(k) plans:

- Only certain wages are to be considered for the 401(k) wage base.
- The limit on the 401(k) wage base for tax year 1998 is $160,000.00
- The limit on the total employee pretax contribution to a plan for tax year 1998 is $10,000.00.
- The company contribution applies to the employee pretax contribution only.
- The company contribution is defined as a percentage of the employee pretax contribution.

Sample plan rules

In the example that follows, plan 710 will be set up as a typical 401(k) plan. The rules for the plan include the following:

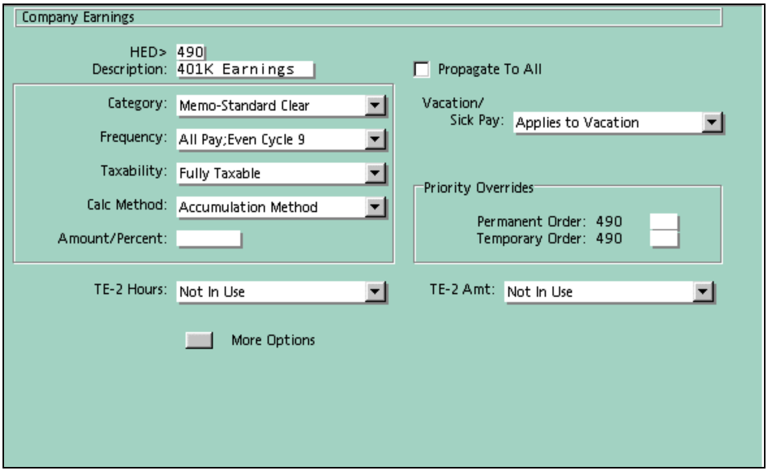
- An employee may contribute a total of 18%, pretax and posttax.
- The total pretax deduction can not exceed 12%.
- The company will match 50% of the first 6% of an employee's pretax deduction.
- The amount that the company matches must always be entered as the basic pretax deduction.

A total of five HEDs must be defined for plan 710:

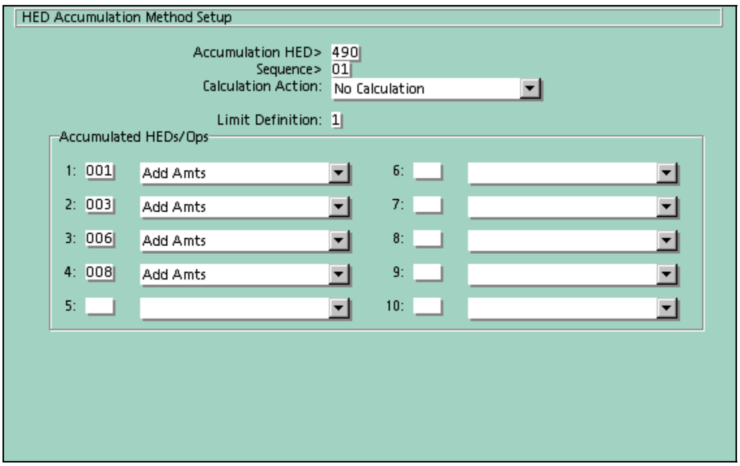
- HED 760 basic pretax - up to 6%
- HED 761 supplemental pretax - up to 6%
- HED 762 basic posttax - up to 6%
- HED 763 supplemental posttax - rollover HED for HEDs 560 and 561
- HED 764 company match - 50% of HED 760

Setting up the HEDs

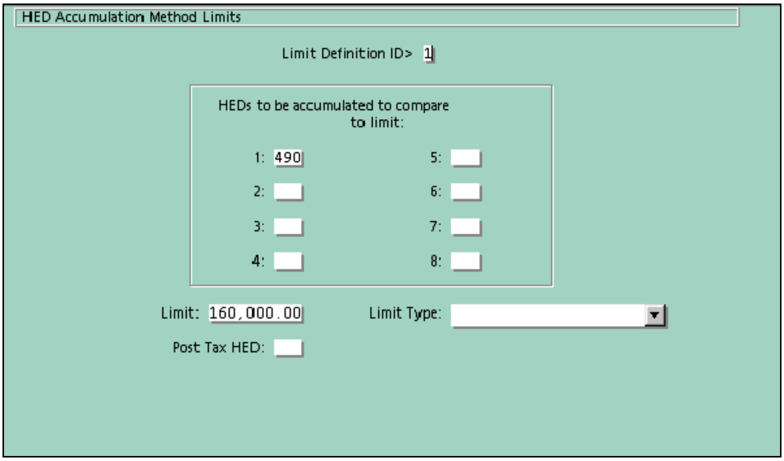
Each HED must be set up on the Company Earnings/Deductions form (A8-SCR).



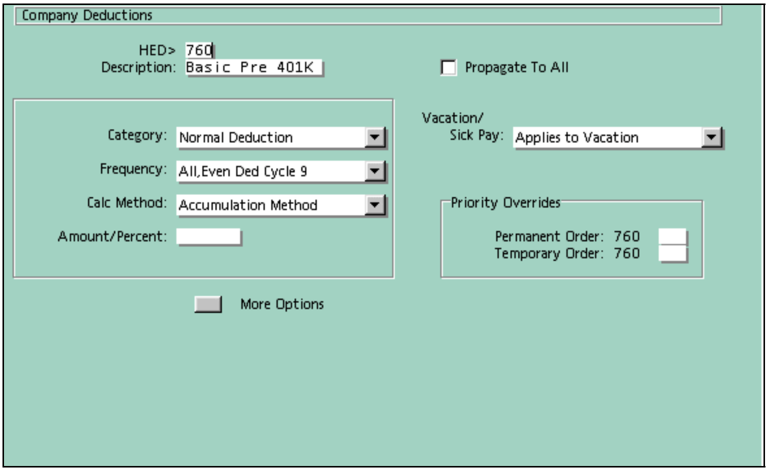
HED 490 is the memo earning HED used to accumulate wages subject to the 401(k) wage base.

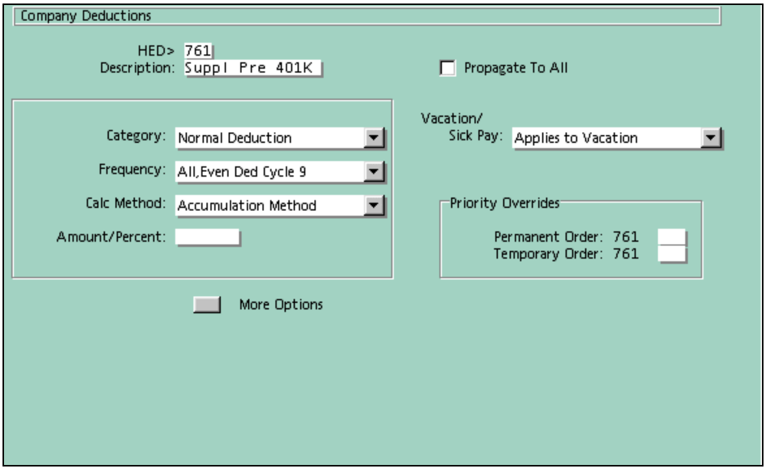


The HED Accumulation Method Setup form (MCASCR) for HED 490 defines the HEDs that are to be accumulated. A value of '1' is entered in the Limit Definition text box.

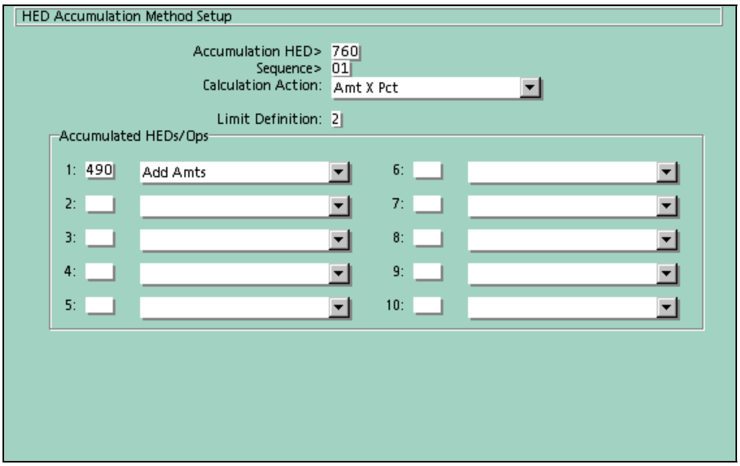


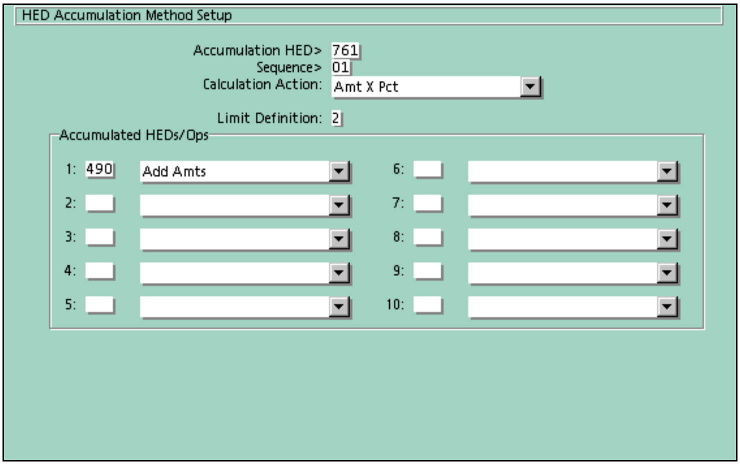
An HED Accumulation Method Limits form (MCALIM) is set up to use the totals from HED 490 only. The value in the Limit text box is $160,000.00, the 1998 tax year 401(k) wage base. The value of '1' in the Limit Definition ID text box is the same value that was entered in the Limit Definition text box of the HED Accumulation Method Setup form (MCASCR) for HED 490. This value is what links the accumulation HED to the specified limit.



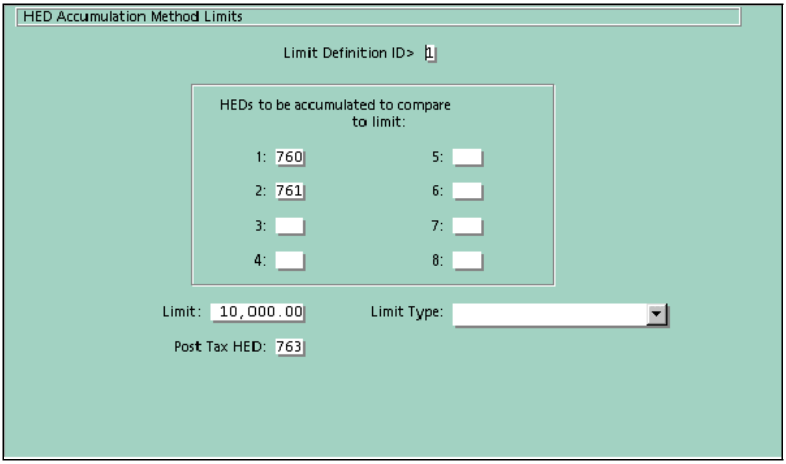


The calculations of the two pretax deductions, HED 760 and HED 761, are set up on the Company Deductions form (A8-SCR). Both HEDs will be based on the 401(k) wage base.

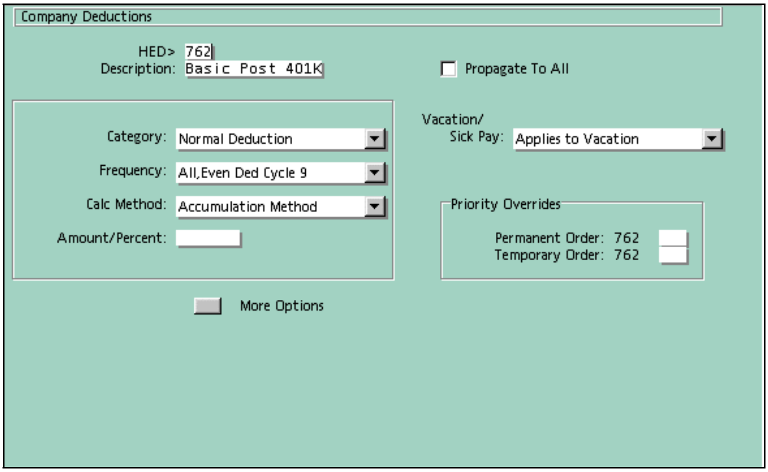




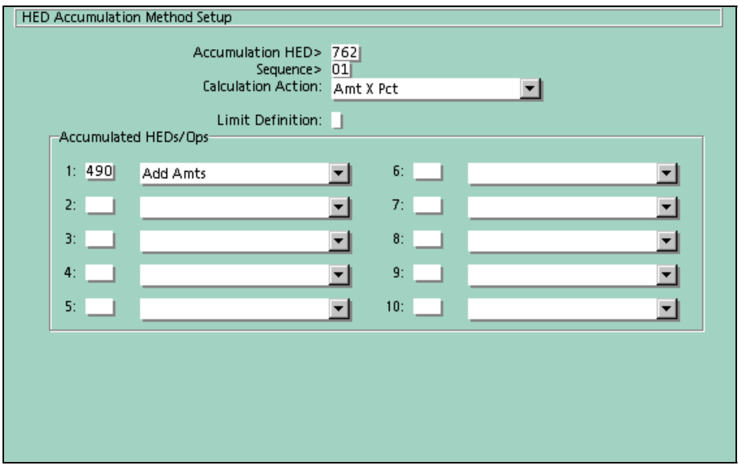
An HED Accumulation Method Setup form (MCASCR) is completed for each pretax HED, with a value of '2' in the Limit Definition text box for each.



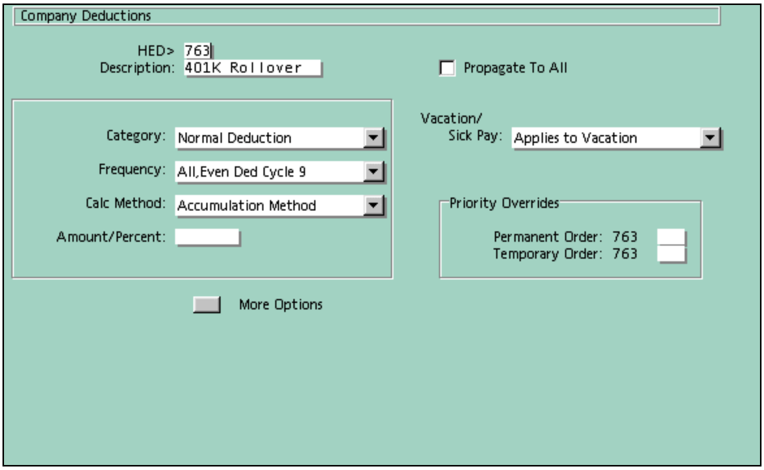
A limit of $10,000.00 is established for HEDs 760 and 761 on the HED Accumulation Method Limits form (MCALIM). The value of '2' in the Limit Definition ID field links this form to the HED Accumulation Method Setup forms (MCASCR) entered for HEDs 760 and 761. When the $10,000.00 limit is met, the calculation will still be done based on the two pretax HEDs. The amount over the limit, however, will be rolled over to HED 763 and taken as a posttax amount.



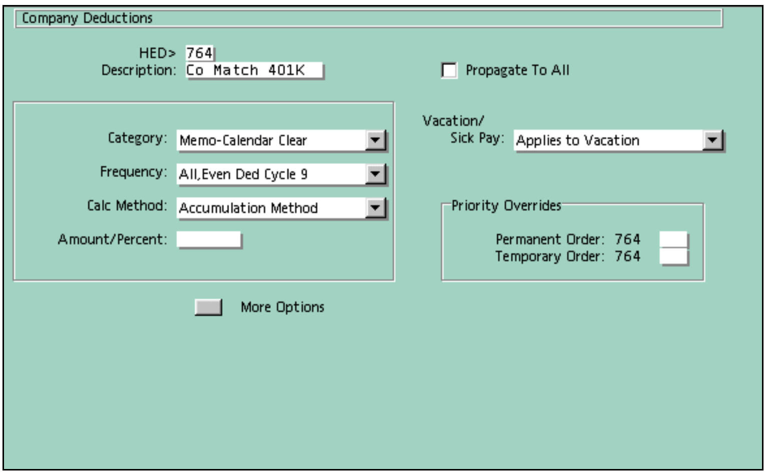
HED 762 is set up as the posttax deduction for the 6% not applicable as pretax but still allowed by the plan rules.



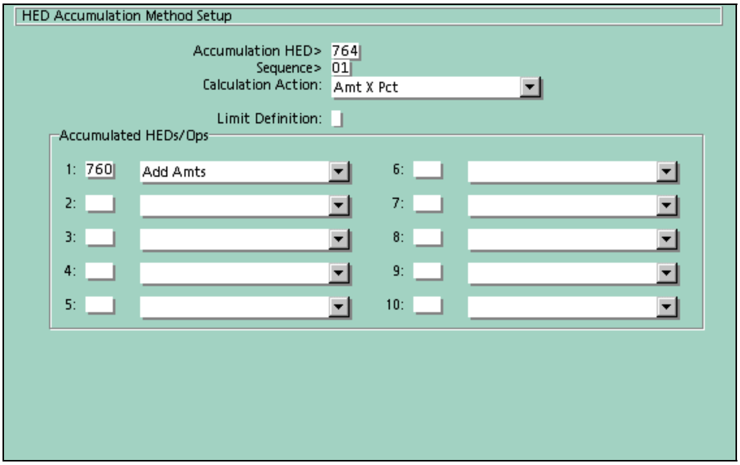
As with any 401(k) employee contribution, HED 762 must be calculated against the 401(k) wage base set up in HED 490.



HED 763 is set up as the supplemental post tax deduction that will be used to accumulate the rollover from the two pretax deductions (HED 760 and HED 761). It is set up with a Calc Method of Accumulation Method, but you do not need to complete an HED Accumulation Method Setup form (MCASCR) for this HED. If the amounts placed into HEDS 760 and 761 exceed the $10,000.00 limit, any rollover will be accumulated into HED 763 as a posttax amount.



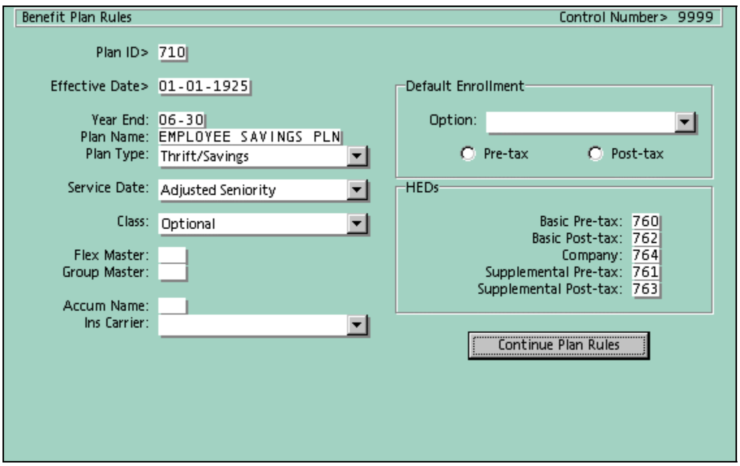
HED 764 is set up to handle the company match. Accumulation Method is selected in the Calc Method drop down box so that the employee pretax contribution from HED 760 can be used as the calculation amount.



An HED Accumulation Method Setup form (MCASCR) must be set up for HED 764 to specify the source of the amount to be accumulated. The plan rules state that the company will only match 50% of the first 6% of the employee's basic pretax deduction. So when an HED Accumulation Method Setup form (MCASCR) is set up for HED 764, it includes only HED 760, the basic pretax deduction HED.

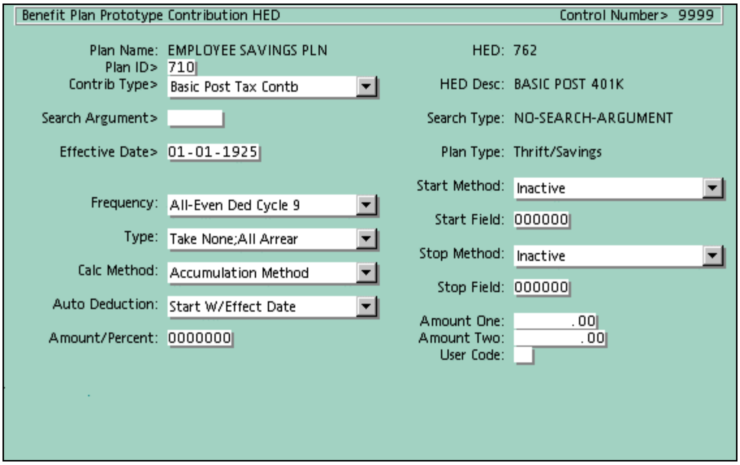
Setting up the plan

After setting up the HEDs, the plan and the contributions to it must be defined.



The Benefit Plan Rules form (TK-SCR) for plan 710 shows how each of the HEDs is defined.

Next, a Benefit Plan Prototype Contribution HED form (TS-SCR) must be completed for each HED.



Benefit Plan Prototype Contribution HED Control Number> 9999

Plan Name: EMPLOYEE SAVINGS PLN
Plan ID> 710
Contrib Type> Basic Post Tax Contb

Stop Field: 000000
Amount One: .00
Amount Two: .00
User Code:

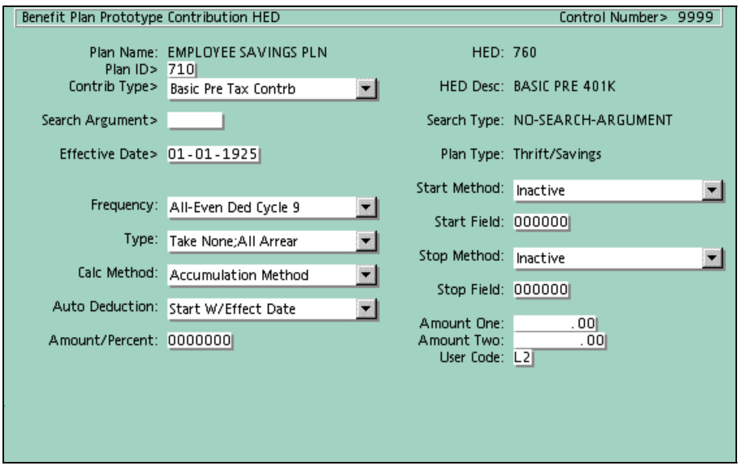
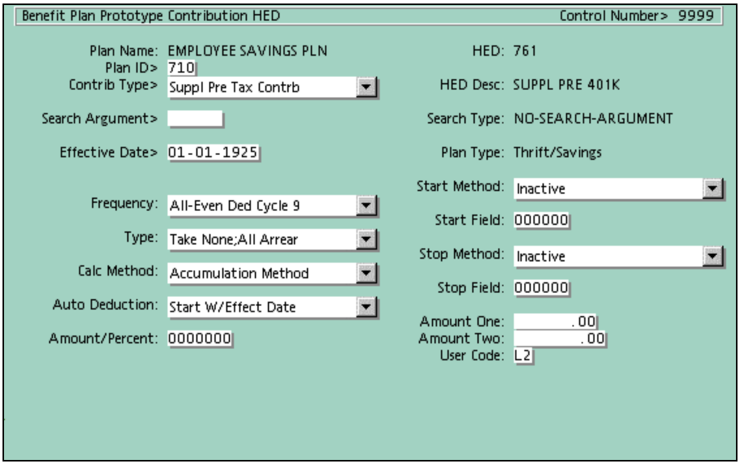
The company contribution is set up in HED 764. Accumulation Method is selected to indicate that the company match will be based on the employee's pretax deduction. The value in the Amount/Percent text box indicates that the company match will be 50%.



Benefit Plan Prototype Contribution HED Control Number> 9999
Plan Name: EMPLOYEE SAVINGS PLN
Plan ID> 710
Contrib Type> Basic Pre Tax Contrb
Search Argument>
Effective Date> 01-01-1925
Frequency: All-Even Ded Cycle 9
Type: Take None;All Arrear
Calc Method: Accumulation Method
Auto Deduction: Start W/Effect Date
Amount/Percent: 0000000
HED: 760
HED Desc: BASIC PRE 401K
Search Type: NO-SEARCH-ARGUMENT
Plan Type: Thrift/Savings
Start Method: Inactive
Start Field: 000000
Stop Method: Inactive
Stop Field: 000000
Amount One: .00
Amount Two: .00
User Code: L2

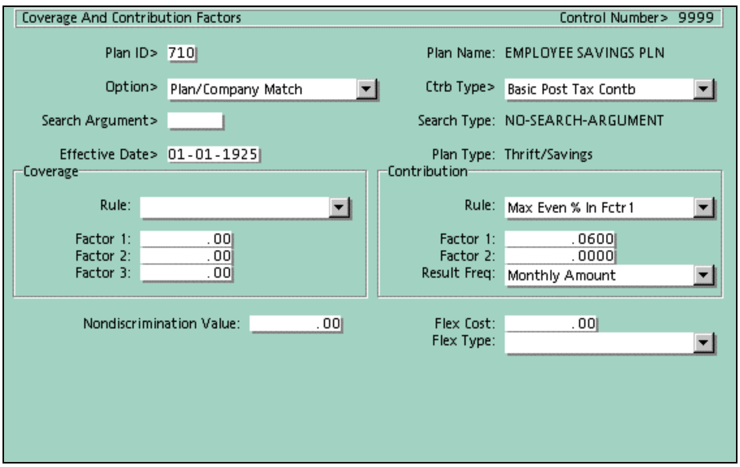
The basic pretax deduction set up in HED 760 uses the Accumulation Method to look at the 401(k) wage base value. The value of 'L2' in the User Code text box ties the HED to limit number 2, the $10,000.00 pretax deduction limit.

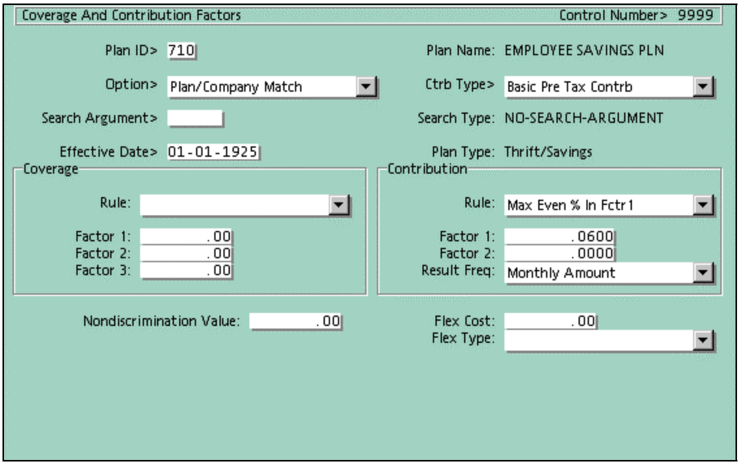


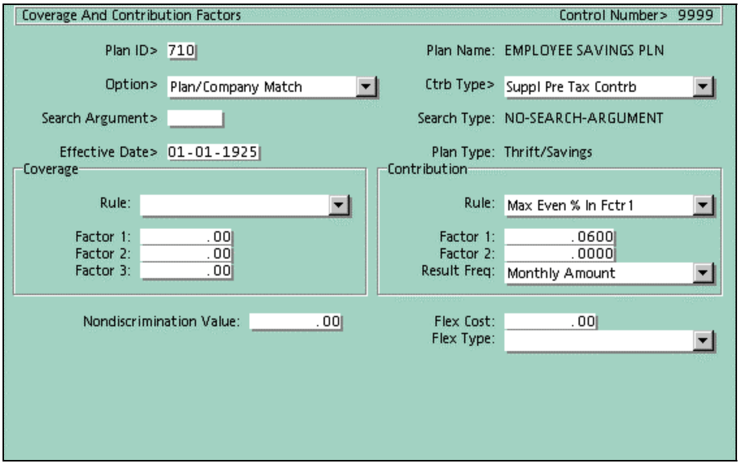
The supplemental pretax deduction set up in HED 761 also uses the Accumulation Method to look at the 401(k) wage base value. Like HED 760, the value of 'L2' in the User Code text box ties HED 761 to limit number 2, the $10,000.00 pretax deduction limit.

The combined pretax deduction taken on HEDs 760 and 761 can not exceed the $10,000.00 limit. When the limit is met, both HED 560 and HED 561 will rollover any additional amounts to HED 763, the supplemental posttax HED.

Coverage And Contribution Factors forms (TM-SCR) must be set up for the basic pretax, supplemental pretax, and basic post tax HEDs to handle employee contributions.







The entries on the Coverage And Contribution Factors forms (TM-SCR) will be used to verify the elected percentage does not exceed plan rule limits when a T/S Plan Contributions/Fund Allocation form (79-SCR) is completed for an employee.

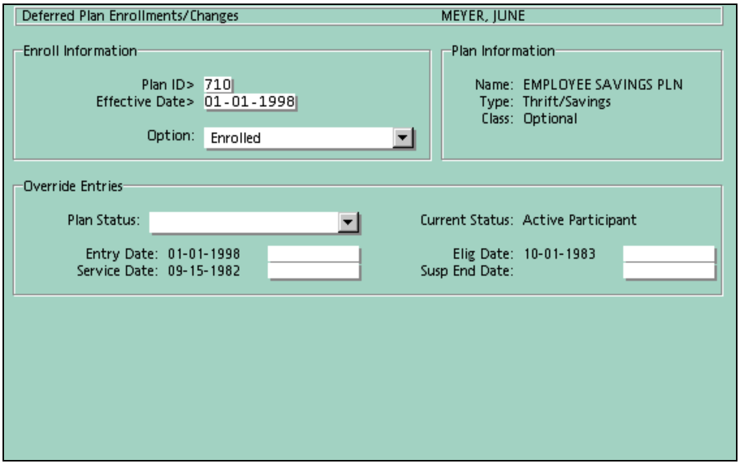
You do not need to complete a Coverage And Contribution Factors form (TM-SCR) for the supplemental posttax HED (763). HED 763 keeps track of pretax HED percentages and accumulates rollover amounts when the pre-tax limit is met.

The percentage specified for the company match HED (764) is a constant amount, so you do not need to complete a Coverage And Contribution Factors form (TM-SCR) for this HED either. If a change in the plan rules results in a change to the company match, the new amount is entered on the Benefit Plan Prototype Contribution HED form (TS-SCR).

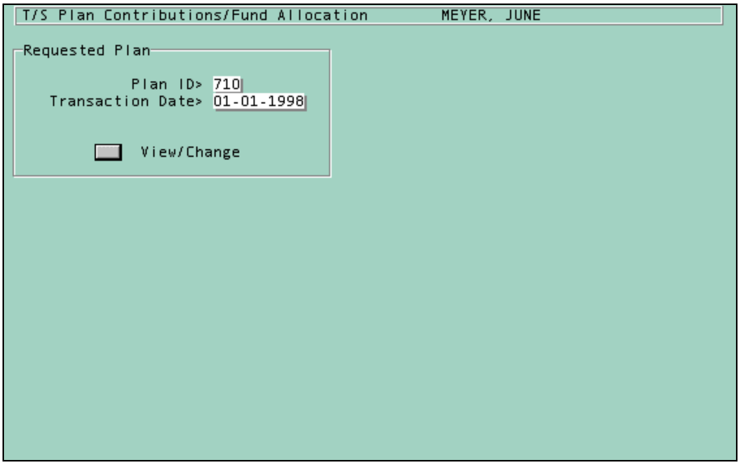
Enrolling an employee in the plan

Once the HEDs and plan rules are established, you can enroll employees in the plan. In the example that follows, employee 1001, June Meyer, will be enrolled in plan 710 as of January 1, 1998, and will contribute the full 18% allowed under plan rules.

The first step is to enroll the employee in the plan.

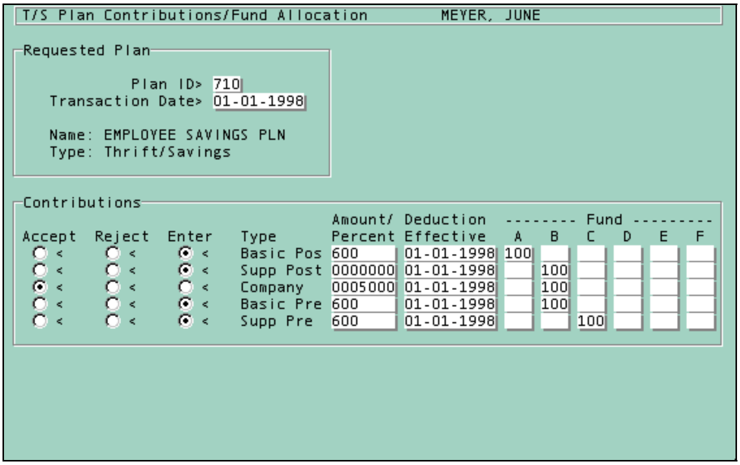


Then a T/S Plan Contributions/Fund Allocation form (79-SCR) must be completed to record both employee and company contributions. First select the plan and the date of the transaction.

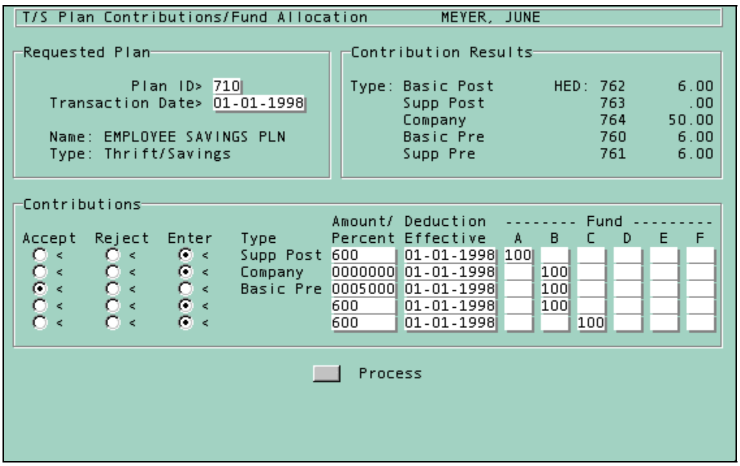


Click on the View/Change button to open the second panel of the form and make contribution allocations.

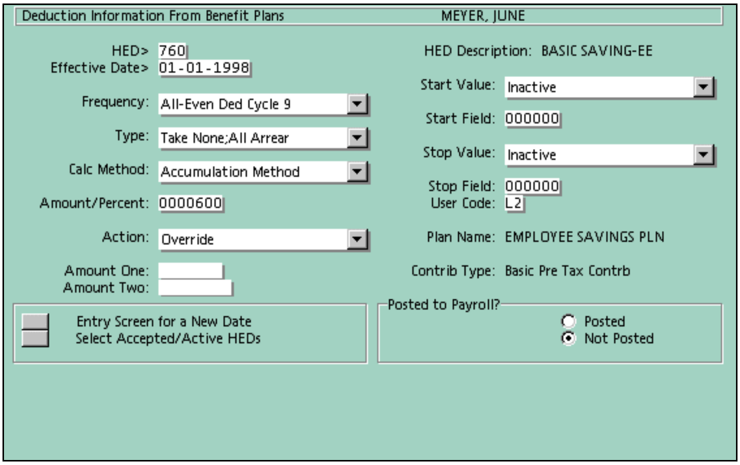
The value of '600' in the Basic Posttax, Supplemental Pretax, and Basic Pretax text boxes is the maximum allowed in the plan for each. The Supplemental Posttax value for the rollover amount is allocated to Fund B, which enables the rollover amount to be calculated from zero (0) for every pay run. The 50% Company Match value is prefilled from the Amount/Percent value entered on the Benefit Plan Prototype Contribution HED form (TS-SCR) for HED 764.

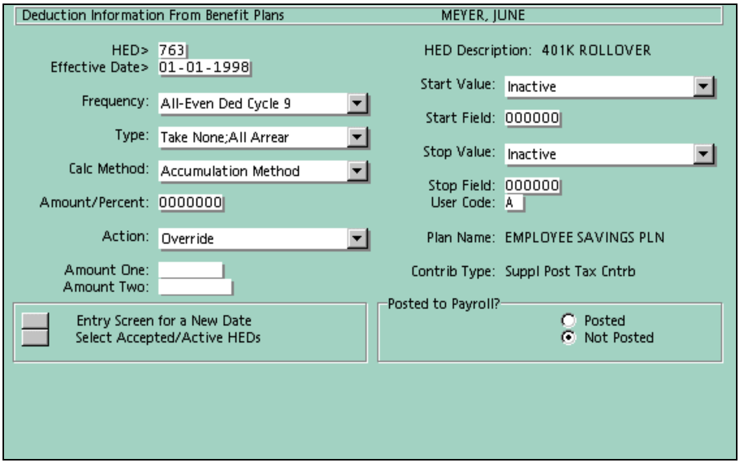


When the values entered on the T/S Plan Contributions/Fund Allocation form (79-SCR) are processed, the form shows the contribution results for each HED.



After running the HED Segment Changes Effective This Period report (8R-RPT), you can check the results of any changes made to contribution allocations on the Deduction Information From Benefit Plans form (54-SCR) for each HED. The forms for HED 760 and HED 763 are shown below.





APPENDIX J

Practice and Review Answers

In This Appendix

Implementing Benefits Administration

Review of Questions Answered

1. What expertise must the Benefits Administration implementation team possess?

   The team you assemble to implement the Benefits Administration Solution should have expertise in the following areas:

- *Human Resources—The Human Resources specialist must understand all of your Human Resources processes that could affect an employee's benefits, including hiring, transferring, and terminating employees.*
- *Benefits—The Benefits specialist must possess a thorough understanding of your benefits plans and how you intend to administer benefits in your organization. He or she must have expertise in current benefits, processes, and reporting.*
- *Payroll—The Payroll specialist will establish any company contributions and employee deductions required for benefits plans. These Hours, Earnings, and Deductions (HEDs) must be set up before you can establish and test your benefits plans.*
- *The Solution Series administration solutions—Benefits Administration is an integral component of Human Resources Administration, it is imperative that team members understand how this component affects other areas of the system. Team members must know the current organization structure (Control Numbers) and must be able to assign a Benefits Administration Control Number.*
- *Information Systems—Technical expertise is needed to implement Benefits Administration in the following areas: in writing conversion programs to batch load data, designing and modifying Benefits Administration forms and calculation option lists, and setting up job streams and environments for developing, testing, and production.*

2. How can the Benefits Administration implementation process be phased?

   Consider using the following phases in your implementation of the Benefits Administration Solution:

- *Familiarization—Review your current processes and benefits and learn the Benefits Administration component of Cyborg's administration solutions.*
- *Design—Document and then implement benefits requirements.*
- *Batch load forms—Batch load employee information into the benefits forms using Batch Layout Facility (BATCHL) transactions.*
- *Customization—Use Form Builder, Cyborg Scripting Language, and Solution View to customize the Benefits Administration Solution to fit your needs.*
- *Implementation—Complete all the tasks necessary to go live with the system, including developing support materials, conducting final test runs, and running parallel before going live.*

3. What does a benefits analysis entail?

To conduct a benefits analysis, you must have thorough knowledge of your summary plan descriptions and Benefits Administration. You must map existing plans into the Benefits Administration tables. This may include reviewing the test data and plan examples already provided.

4. How are plans identified in the system?

   Plans are identified by a unique, three-position, alphanumeric identifier called a Plan ID.

5. How can different employee groups use the same plan?

   Benefits Administration offers four search types—eligibility, participation, calculation, and HED prototype—that you can use to apply special rules to different groups of employees who use the same plan.

6. How does organization structure affect plan setup?

   This will determine whether benefits plans can be shared by Organizations or must be unique and separate for each Organization. The same Plan ID will be used if two companies use the same benefits plans. Each Plan ID can be used only once per Benefits Administration Control Number.

7. How are plans funded?

   Plans are funded through contributions—employee pretax, employee posttax, and company.

8. What are the security considerations?

   Benefits Administration contains extremely sensitive data. As with any component of the system, you must set up a security matrix to reflect user access to the system. Work with your Security Officer to implement the security matrix. The security matrix should be tested thoroughly during the implementation process.

Setting Up Welfare Plans

Apply the Concept

1. How many benefits Control Numbers will you need for your organization?

   The answer will be specific to your organization. Several or all companies may access the same set of benefits tables, or each organization may have its own set of benefits tables.

2. What benefits Control Numbers will you use?

   The answer will be specific to your organization. A benefits Control Number is a four-position, alphanumeric identifier that specifies which benefits tables are to be used by an organization.

3. Do different plan rules apply to different groups of employees within your organization? If yes, how will you use search types and search arguments to make the distinction between groups?

   The answer will be specific to your organization. If different rules apply to different groups of employees within your organization, you can use one of the four search types—eligibility, participation, calculation, or HED prototype—to apply special rules to the different groups of employees who use the same plan.

4. Describe one plan's eligibility policies for your organization.

   The answer will be specific to your organization.

5. Which form, rules, date methods, and employee statuses will you use to implement these eligibility policies?

   Plan eligibility is defined on the Benefit Plan Eligibility Rules form (TL-SCR).

6. Describe the coverage options and contribution amounts for the plan in the previous question.

   The answer will be specific to your organization.

7. Which form, rules, and factors will you use to define the plan in the previous question?

   Plan coverage options and contributions are defined on the Coverage And Contribution Factors form (TM-SCR).

8. Which separation activities change an employee's status in the plan in the previous question?

   The answer will be specific to your organization.

9. Will any of these activities have grace periods, and for how long?

The answer will be specific to your organization. Each activity can be assigned a different grace period that delays the time before plan coverage is lost.

10. How will you define these separation rules?

    Separation activities, such as leaves of absence, disability, and terminations are defined on the Activity/Resulting Plan Status Rules form (TTASCR).

Extended Practice

Set up a supplemental life insurance plan for Organization, 999999. Use the following information:

Plan ID:	210
Plan Type:	Taxable
Effective Date:	01-01-1925
Plan Year End:	12-31 (US and Canada) or 31-12 (elsewhere)
Plan Category:	Optional
Eligibility:	The plan is available to all active, full-time employees. Employees are eligible the first month coincident or following their employment date.
Enrollment Options:	Employees can elect coverage of 1, 2, or 3 times their salary up to 200,000.00. Use the Cyborg Scripting Language program BE-AGE to determine the employee monthly cost per 1000 of coverage based on the employee's age: Less than 30 .05 30–45 .07 46 and over .10 Also set up 'Waived' and 'Shutoff/Deenroll' options
HED Information:	Employee Basic Pre Tax HED 511

Separation Activities:	Voluntary termination—all values (1-month extension) Involuntary termination—all values Disability—all values (1-year extension) Retirement—all values (1-month extension) Death Layoff (2-months extension) Leave-of-absence without pay

Review of Questions Answered

1. What are welfare plans?

   Welfare plans provide immediate benefits to employees. Examples include health insurance (medical and dental), disability (short and long term), and life insurance.

2. How are benefits tables associated with organizations/companies?

   You link your organization's structure to benefits tables through a benefits Control Number. This information is recorded on the Company-To-Rules Cross-Reference For Benefits form (AY-SCR).

3. Which benefits tables are used to define welfare plans?

The following tables are used to define welfare plans:

- *Benefit Plan Rules (TK-SCR) establishes the basic rules for the plan*
- *Benefit Plan Eligibility Rules (TL-SCR) establishes requirements for plan admittance*
- *Coverage And Contribution Factors option (TM-SCR) specifies how employer and employee contributions should be calculated*
- *Benefit Plan Prototype Contribution HED (TS-SCR) describes plan contributions*
- *Option/Resulting Plan Status Rules (TTOSCR) defines the valid options for the plan and how those options affect employee plan status*
- *Activity/Resulting Plan Status Rules (TTASCR) defines the effect any separation activity may have on an employee's plan status*

4. What plan types are used for welfare plans?

   Plan types are selected from the Plan Types option list (BA16), options 01–19.

5. What are plan classes and how are they used?

   Plan classes determine plan usage or availability, such as whether the plan is mandatory, optional, or inactive.

6. What are search types and search arguments?

   Search types and search arguments are fields and values from an employee's master record used to search benefits tables to apply plan rules to specific groups of employees.

7. How are plan eligibility requirements recorded?

   Plan eligibility requirements are recorded on the Benefit Plan Eligibility Rules form (TL-SCR).

8. How are plan coverages and contributions accommodated?

   Plan coverages and contributions are recorded on the Coverage And Contribution Factors form (TM-SCR).

9. What are prototype HEDs?

   Prototype HEDs are hours, earnings, and deductions defined on a benefits form for use in recording employee and company contributions when an employee is enrolled in a plan. The HED allows the setup and maintenance of payroll deductions by Benefits Administration.

10. How is employee plan status recorded and tracked?

    Employee plan status is recorded and tracked using the Option/Resulting Plan Status Rules form (TTOSCR).

11. What kind of plan documentation is available for welfare plans?

Benefits Administration provides several key reports you can use to document your plan rules:

- *Plan Rules (9K-RPT) prints data from the Benefit Plan Rules form (TK-SCR)*
- *Plan Eligibility (9L-RPT) prints data from the Benefit Plan Eligibility Rules form (TL-SCR)*
- *Plan Factors (9M-RPT) prints data from the Coverage And Contribution Factors form (TM-SCR)*
- *Plan Prototype Contribution HEDs (9S-RPT) prints data from the Benefit Plan Prototype Contribution HED form (TS-SCR)*
- *Benefits Activity And Option Validation Table Records (9T-RPT) prints data from the Option/Resulting Plan Status Rules form (TTOSCR) and the Activity/Resulting Plan Status Rules form (TTASCR)*
- *Benefit Plan Tables (9KARPT) prints all the table records for a particular benefits plan or for a range of benefits plans*

Setting Up Deferred Plans

Apply the Concept

1. What employee and company contribution maximums apply within your organization?

   The answer will be specific to your organization.

2. How will you implement these maximums?

   Use the Benefit Plan Prototype Contribution HED form (TS-SCR) and/or the Coverage And Contribution Factors form (TM-SCR) to define employee and company contribution maximums.

3. When does participation, service, benefit accrual, and vesting begin within your organization?

   The answer will be specific to your organization.

4. How will you define these dates?

   Use the Benefits Participation Rules Table (TN-SCR) to define the rules for calculating when an employee begins participation in a plan, when benefits begin to accrue, and when vesting should begin. Each of these dates can be calculated by age, service time, and/or hours worked.

5. What breaks-in-service policies apply to your organization?

   The answer will be specific to your organization.

6. How will you implement these policies?

   Use the Benefits Plan Breaks-In-Service Rules form (TU-SCR) to record how breaks-in-service affect participation, vesting, and accrual in deferred plans.

7. What are your policies regarding retirement age rules and notifying employees of their retirement options?

   The answer will be specific to your organization.

8. How will you record these policies?

   Use the Benefits Retirement Date Rules Table form (TJ-SCR) to define the early, normal, and late retirement ages. You can also use this form to specify when employees should be sent notices regarding their eligibility for the various retirement options.

Extended Practice

Set up a savings plan using the following information:

Plan ID:	S02

Plan Type:	Thrift/Savings
Effective Date:	01-01-1925
Plan Year End:	12-31 (US and Canada) or 31-12 (elsewhere)
Plan Category:	Optional
Eligibility:	All active salaried or hourly employees age 18 with one year of service (no temporary employees). Year of service is determined using Elapsed Time. The employee is eligible to get into the plan the first of the quarter coincident or following eligibility date.
Enrollment Options:	Participant, Waived, Shutoff/Deenroll
Vesting Schedule:	7 Year Graded
Pay Period Contributions:	Employee Basic Pre Tax: Up to 6% of Salary, whole percents Employee Supplemental Pre Tax: Up to an additional 9%, whole percents Company Match: 50% up to 6% of Employee Basic Pre Tax
HED Information:	Employee Basic Pre Tax: HED 560 Employee Supplemental Pre Tax: HED 561 Company Contributions: HED 562
Service Dates:	Participation: At Eligibility Benefit Accrual: At Participation Service Date Vesting: At Participation Service Date Plan based on Adjusted Seniority
Separation Activities:	Voluntary termination—all values Involuntary termination—all values Retirement—all values Leave-of-absence with pay (1-year extension of Coverage) Death
Breaks-In-Service Rules	Create the following breaks-in-service rules for the major activity of Termination: **02–05** Activity Rule—Leave Exceeds Grace Delay Time—00-06-00 Date Method—FOM Coincidnt/follow **22–27** Activity Rule—Leave Exceeds Grace Delay Time—00-01-00 Date Method—Actual Event Date

Retirement Dates:	**Early** Rule—Age And Service Age—55-00-00 Service—10-00-00 Notices 1st—00-06-00 Notices 2nd—00-01-00 Adjustment—Actual Event Date **Normal** Rule—Age And Service Age—62-06-00 Service—10-00-00 Notices 1st—00-06-00 Notices 2nd—00-01-00 Adjustment—Actual Event Date

Review of Questions Answered

1. What are deferred plans?

   Plans that provide future benefits to employees are considered deferred plans.

2. What types of plans can be defined as deferred plans?

   In Benefits Administration, deferred plans can be defined as defined benefits, defined contribution, or thrift/savings.

3. What tables are used to define deferred plans?

   The following tables are used to define deferred plans:

   - *Benefit Plan Rules (TK-SCR) establishes the basic rules for the plan*
   - *Benefit Plan Eligibility Rules (TL-SCR) establishes requirements for plan admittance*
   - *Coverage And Contribution Factors (TM-SCR) specify how employer and employee contributions should be calculated*
   - *Benefit Plan Prototype Contribution HED (TS-SCR) describes plan contributions*
   - *Option/Resulting Plan Status Rules (TTOSCR) defines the valid options for the plan and how those options affect employee plan status*
   - *Activity/Resulting Plan Status Rules (TTASCR) defines the effect any separation activities may have on an employee's plan status*
   - *Benefits Participation Rules Table (TN-SCR) defines the rules for calculating when an employee begins participation in a plan, when benefits begin to accrue, and when vesting should begin*

   The following tables are optional:

- *Benefits Plan Breaks-In-Service Rules (TU-SCR) defines which separation activities will cause a break in service and any grace periods allowed*
- *Benefits Retirement Dates Rules Table (TJ-SCR) defines eligibility dates for disability and early and normal retirement, anticipated participant retirement dates (with rounding), and company policy for notifying employees prior to their eligibility—all by retirement option*

4. What coverage option must be used for deferred plans?

   For deferred plans, you can use only one valid coverage option on the Coverage And Contribution Factors form (TM-SCR):—Plan/Company Match (CM).

5. How are contributions limited for deferred plans?

   Employee and company per-period contributions can be limited by selecting the appropriate rule from the Contribution Rules option list (BA31) and entering values on the Coverage And Contribution Factors form (TM-SCR). Year-to-date maximum amounts are recorded using the Stop Method and Stop Field text boxes on the Benefit Plan Prototype Contribution HED form (TS-SCR).

6. What requirements must be defined for plan participation?

   For each deferred plan, you must define when participation, benefits accrual, and vesting begin. This information is recorded on the Benefits Participation Rules Table form (TN-SCR).

7. Why should breaks-in-service rules be recorded?

   Service is credited based on the notion of continuous service. Recording breaks-in-service rules defines how a separation, such as a leave of absence, affects the employee's credited service.

8. Why should retirement policies be recorded?

   Formally recording a deferred plan's retirement policies in Benefits Administration gives you the ability to track the retirement ages of your employees and to prompt the sending of retirement notices.

9. What reports are available for documenting deferred plan rules?

   You use the same reports to document deferred plans as you do for welfare plans. Following are additional reports used for documenting welfare plans:

   - *Participation Rules (9N-RPT) prints data from the Benefits Participation Rules Table form (TN-SCR)*
   - *Breaks-in-Service Rules (9U-RPT) reflects data from the Benefits Plan Breaks-In-Service Rules form (TU-SCR)*
   - *Retirement Date Rules (9J-RPT)reflects data from the Benefits Retirement Dates Rules Table form (TJ-SCR)*

Setting Up Flex Plans

Apply the Concept

1. Which component plans are part of your flex plan?

   The answer will be specific to your organization. Flex plans are made up of welfare and deferred component plans.
2. Which component plans are default plans or core plans and, within each plan, which option is the default option?

   The answer will be specific to your organization. The default option specifies which enrollment option to use if an employee does not return the enrollment election form.
3. Does your Flexible Benefits Program enable employees to allocate flex credits/currency as an additional contribution to their deferred plan? What must you do differently to address this additional contribution?

   The answer will be specific to your organization. If the Flexible Benefits Program enables employees to allocate flex credits/currency as an additional contribution to their deferred plan(s), Payroll must set up an additional HED to be used for these extra credits/currency.

   You will need to complete the Coverage And Contribution Factors form (TM-SCR) for the deferred plan with these flex entries:

   - *Ctrb Type—Select 'Flex Deferred HED' in the Ctrb Type list box.*
   - *Contribution Rule—Select 'Use Variable As Amt' to indicate that the variable amount will be entered on the employee's enrollment form. This way the employee will be able to allocate any number of credits desired.*
   - *Flex Type—This list box selection must be 'Use Enroll Variable' in order to access the Variable box on the enrollment form.*

Extended Practice

Set up a flex plan for Organization 999999 for 1998 using the following information:

Plan ID:	710
Plan Type:	Flex Benefits Master
Effective Date:	01-01-1925
Plan Year End:	12-31 (US and Canada) or 31-12 (elsewhere)
Plan Class:	Mandatory
Eligibility:	All active part and full time employees, first of the month following their first day of employment.
Service Date:	Based on 'Employment Date'

Enrollment Options:	Enrolled, Shutoff/Deenroll
Flex Credits:	Smoker ID and 2% Salary. Use the deduction by credits plan method.
Credit Method	Deduction credits by plan, total credits before enrollment
Contributions:	As specified by individual component plans
Component Plans	101 203 505 601 602 603 605
Separation Activities:	Voluntary termination—all values Involuntary termination—all values Death—all values
Processing Defaults:	'Create Waived Option' and 'Show Per-Pay-Period Amounts'
HED Information:	HED 623 for Deferred Plan 505
Box	Entries for HED 060
Contrib Type	Basic Post Tax Contb
Effective Date	01-01-1925
Frequency	All Pay Periods
Type	Skip Arrears/HED 999
Calc Method	Fixed Amount
Auto Deduction	Start W/Effect Date

You will need to set up a Coverage And Contribution Factors form (TM-SCR) and a Benefits Plan Prototype Contribution HED form (TS-SCR) similar to plan 510. Select 'Participant' for the Option on the Coverage And Contribution Factors form (TM-SCR).

Review of Questions Answered

1. What are flex plans?

   A flexible benefits plan is any plan that lets employees choose some or all of their benefits. It is a benefits program in which the organization may allocate a pool of credits or money to each employee. These credits or monies are to be spent to purchase benefits tailored to individual needs.

2. What are the prerequisites for flex plans?

   Before a flex plan can be established, the component welfare and deferred benefits plans must be established.

3. What tables are used to define flex plans?

   The following tables are used to define flex plans:

- *Benefit Plan Rules (TK-SCR) establishes the basic rules for the plan*
- *Benefit Plan Eligibility Rules (TL-SCR) establishes requirements for plan admittance*
- *Benefit Plan Prototype Contribution HED (TS-SCR) defines plan contributions with respect to frequency, calculation, and arrears handling*
- *Option/Resulting Plan Status Rules (TTOSCR) defines the valid options for the plan and how those options affect employee plan status*
- *Activity/Resulting Plan Status Rules (TTASCR) defines the effect any separation activities may have on an employee's plan status*
- *Flex Plan Credits Calculation (FCCSCR) stores calculation options to define the flex credits formula*
- *Flex Benefits Master Plan Rules (TKFSCR) records flex benefits rules at the Master Plan level and helps to customize flexible plan administration based on rules specific to the flex plan*
- *Flex Master/Group Plan Components (TP-SCR) identifies the component plans associated with Flex Master Plans and/or group plans*

4. What are group plans and how are they used?

   Group plans define any number of benefit plans together as a group. Group plans are used to define common eligibility and to cluster plans for reporting purposes.

5. In what ways can flex credits/monetary amounts be calculated and allocated?

   Flex credits/monetary amounts can be calculated based on calculation factors defined in the Credit Calculation Factors calculation option list (BA69). Four prototype options are provided that you can use in combination with other criteria, such as fields from the employee record or any Cyborg Scripting Language program calculation option, to calculate each employee's total flex credits. The Flex Plan Credits Calculation option list (BA69) is used to store the series of calculation options. The credit calculation is performed by the Flex Plan Credits Calculation form (FCCSCR).

6. There many different ways of allocating flex credits. There are two fairly common methods:

   - *Employees receive the credits up front, on their paychecks, and have individual plan deductions taken out as usual.*
   - *Employees are allocated credits separately from Payroll, not affecting the payment, with memo HEDs accumulating the individual deductions.*

Using Considered Earnings/Hours Accumulators

Apply the Concept

1. Will you set up considered earnings/hours (CE/H) accumulators to store information monthly, quarterly, or annually?

   The answer will be specific to your organization. How you set up the accumulators may depend on the type of plan.

2. Which type of accumulators will you use?

   The answer will be specific to your organization. There are two types of CE/H accumulators, plan specific and date of hire. Which you use may depend on the type of plan.

Review of Questions Answered

1. What are considered earnings/hours accumulators?

   Considered earnings/hours accumulators are fields that store monthly, quarterly, or annual hours and or earnings an employee has acquired for a deferred plan.

2. How are considered earnings/hours accumulators used?

   Typically, considered earnings/hours accumulators are used to determine an employee's eligibility for a deferred plan.

3. What types of accumulators are available?

   There are two types of accumulators:—plan-specific and date-of-hire. Plan-specific accumulators have a plan year-to-date record and a number of detail records based on whether they are monthly (12 detail records), quarterly (four detail records), or annual (one detail record) accumulators.

   Date-of-hire is a Cyborg-delivered accumulator that generates a single occurrence accumulation of all earnings from the date of hire until the number of hours worked reaches 1,000 hours.

4. What tools are available for backloading employee earnings/hours accumulations?

   Employee earnings/hours accumulations can be entered manually using the Considered Earnings/Hours Accumulators form (60-SCR). Accumulations for large groups of employees can be batch loaded using the Batch Transaction Layout report (Batch Layout Facility for the Considered Earnings/Hours Accumulators form).

Enrolling Employees in Welfare Plans

Apply the Concept

1. Will you verify the plans for which employees are eligible before enrolling them? If yes, what method will you use?

   The answer will be specific to your organization. You can use the Pending Plan Enrollment/De-Enrollment form (90-SCR), Enrollable Employees by Plan report (4E-RPT), or Enrollable Employees By Employee report (4F-RPT) to verify plans for which employees are eligible. The employee's eligibility for any welfare plan will be checked automatically when you enroll an employee using the Welfare Plan Enrollments/Changes form (55-SCR).

2. How will you collect the information needed to enroll an employee in a welfare plan?

   The answer will be specific to your organization. The information you need to collect includes the plan, effective date of the enrollment, the option the employee is choosing, and if required, a variable amount.

3. What are your rules or procedures for overriding system-generated data?

   The answer will be specific to your organization. After basic enrollment information is processed, the system displays calculated contribution figures and dates that you can accept, reject, or override. You may override the plan eligibility date for an employee as well.

4. Will you verify employee enrollment? If yes, how will you do it?

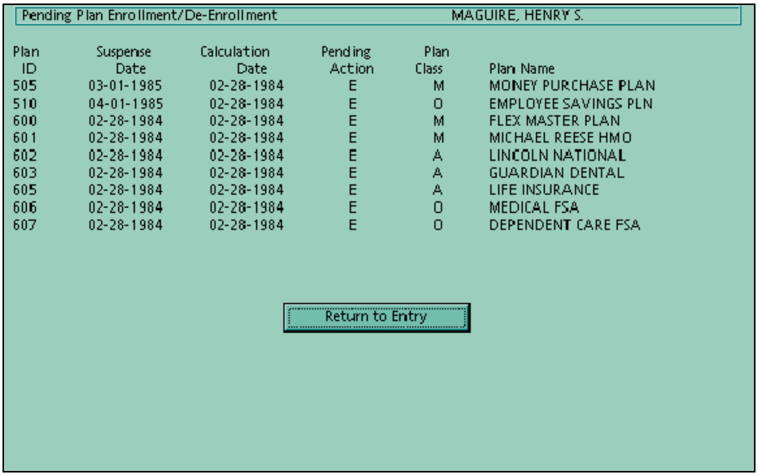
   The answer will be specific to your organization. You can view an employee's plan coverage and annual contribution online or track the information using various reports.

Extended Practice

1. Verify the plans for which employee 1578, Henry S. Maguire, is eligible.

   To verify employee eligibility for employee 1578, you must use the Employee Recheck option.

Note: *If you are attending class and not following the chapters in numerical sequence, you will see fewer plans for this employee than those listed below.*

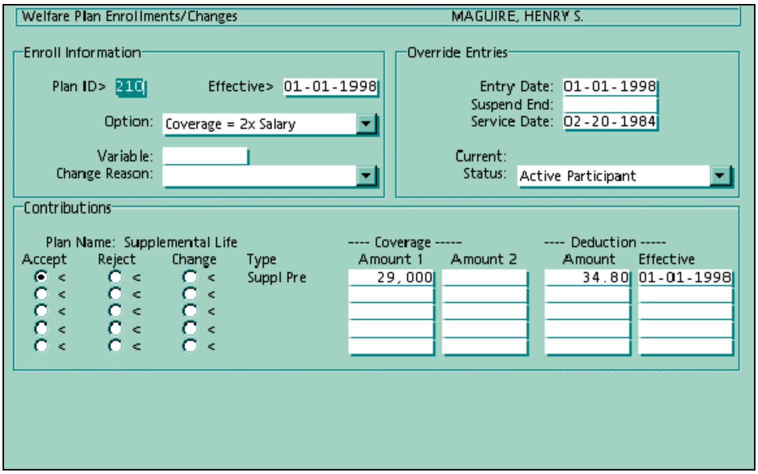


Pending Plan Enrollment/De-Enrollment MAGUIRE, HENRY S.

Plan ID	Suspense Date	Calculation Date	Pending Action	Plan Class	Plan Name
505	03-01-1985	02-28-1984	E	M	MONEY PURCHASE PLAN
510	04-01-1985	02-28-1984	E	O	EMPLOYEE SAVINGS PLN
600	02-28-1984	02-28-1984	E	M	FLEX MASTER PLAN
601	02-28-1984	02-28-1984	E	M	MICHAEL REESE HMO
602	02-28-1984	02-28-1984	E	A	LINCOLN NATIONAL
603	02-28-1984	02-28-1984	E	A	GUARDIAN DENTAL
605	02-28-1984	02-28-1984	E	A	LIFE INSURANCE
606	02-28-1984	02-28-1984	E	O	MEDICAL FSA
607	02-28-1984	02-28-1984	E	O	DEPENDENT CARE FSA

Return to Entry

2. Enroll employee 1578, Henry S. Maguire, in plan 210 at coverage two times his salary effective 01-01-1998.



Welfare Plan Enrollments/Changes MAGUIRE, HENRY S.

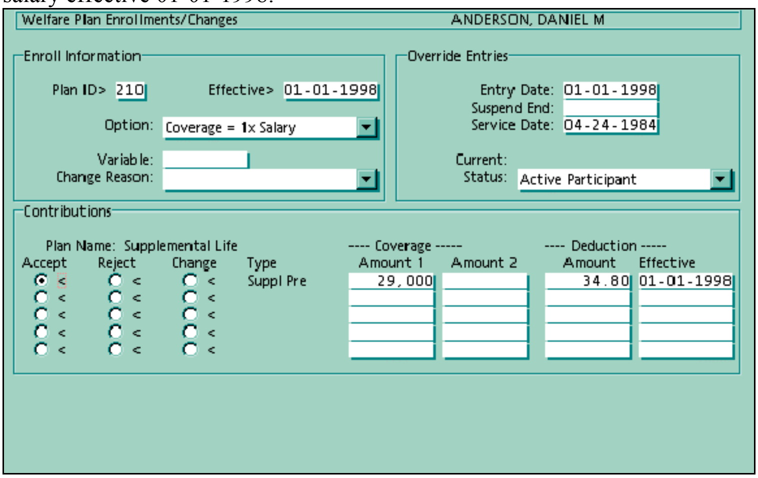
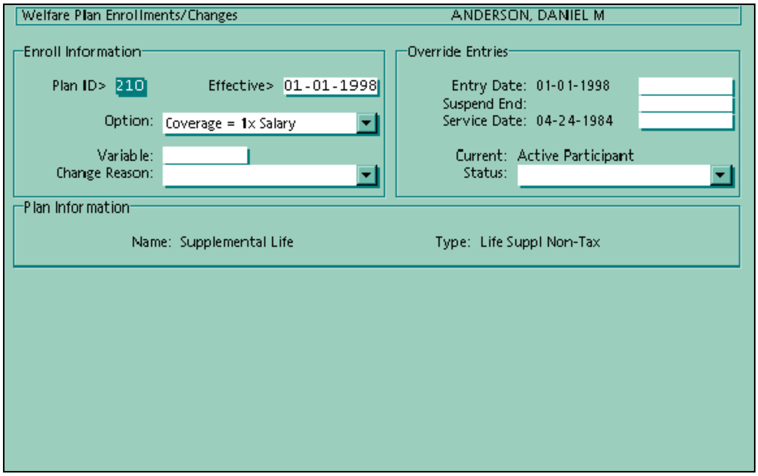
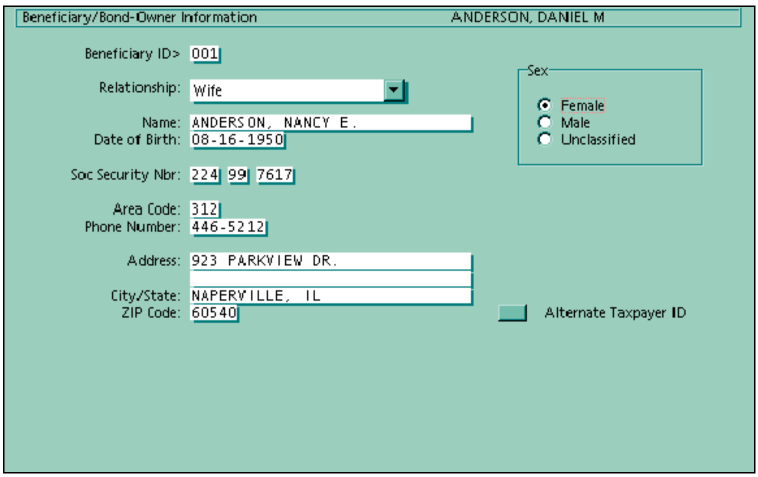
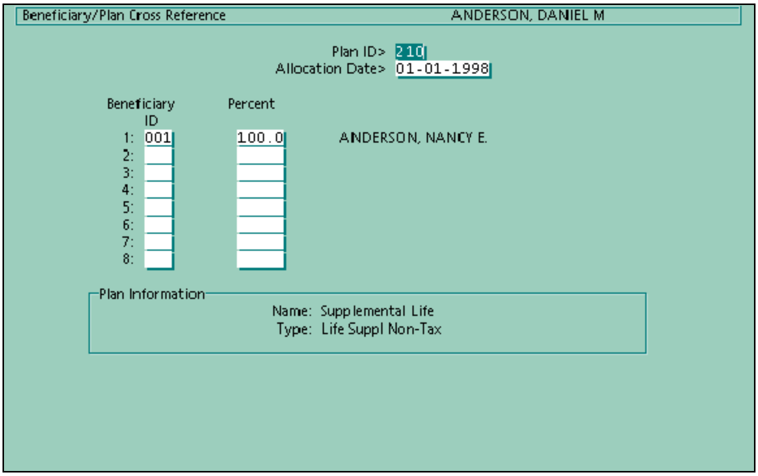
3. Enroll employee 1616, Daniel M. Anderson, in plan 210 at coverage one times his salary effective 01-01-1998.



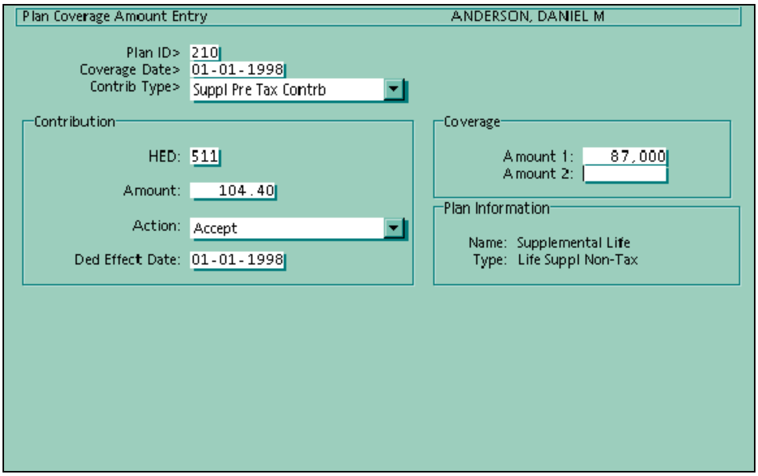


4. Use information from the Spouse/Dependent Information (10-SCR) and Employee Information forms (EF-SCR) to record beneficiary information for Nancy E. Anderson, Daniel M. Anderson's wife (employee 1616). Then, designate Nancy Anderson as 100% beneficiary for plan 210, effective 01-01-1998.

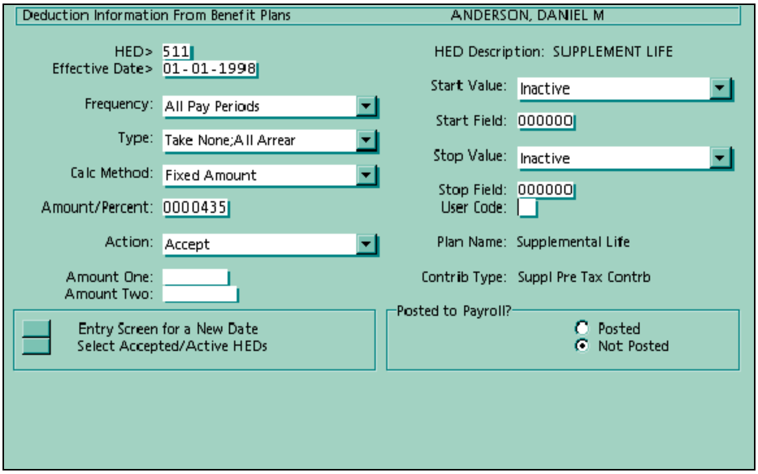




5. View the annual contribution for Daniel M. Anderson, employee 1616, for plan 210.



6. View the per-pay-period deduction amount for Daniel M. Anderson, employee 1616, for plan 210.



Review of Questions Answered

1. What two methods are provided for enrolling employees in welfare plans?

   Employees can be enrolled individually or in groups. Use the Welfare Plan Enrollments/Changes form (55-SCR) to enroll individual employees. For large groups of employees, use the Batch Loading (Batch Layout Facility) procedure.

2. What information is needed to enroll an employee in a welfare plan?

   Three pieces of information are required before you can enroll an employee in a welfare plan—the plan in which the employee wishes to enroll, the effective date of the enrollment, and the option the employee is choosing. If required by the plan, you must also enter a variable amount.

3. What facilities are provided to override system-generated data?

   After basic enrollment information is processed, the system displays the plan coverage and contribution amounts for the employee on the lower portion of the Welfare Plan Enrollments/Changes form (55-SCR) where you can accept, enter, or reject the calculated figures and dates. You may also override the plan eligibility date by populating the Entry Date and Current Status boxes.

4. What forms are created as a result of an enrollment?

   Two forms are created as a result of an employee enrollment—the Plan Coverage Amount Entry (53-SCR) and the Deduction Information From Benefits Plans (54-SCR).

5. What facilities are provided to verify enrollment information online?

   You can view an employee's plan coverage and annual contribution amounts on the Plan Coverage Amount Entry form (53-SCR) and the deduction information on the Deduction Information From Benefit Plans form (54-SCR). You may also use the

Employee Welfare Plan Summary form (55ISCR) to view various pieces of information relating to welfare plan enrollment such as annual and per-pay-period costs, HED information, and dependents tied to a plan.

6. What reports are available to track enrollments in welfare plans?

   The following reports help you track employee welfare plan enrollment data:

   - *Welfare Benefits Register (4A-RPT) lists active employees, or those on leave, participating in at least one welfare benefits plan*
   - *Plan Participation Register (4B-RPT) lists all employees who participate in at least one welfare or deferred benefits plan*
   - *Plan Beneficiary Listing 4C-RPT) lists all participants and their associated beneficiary data for a specified benefits plan*
   - *Plan Dependent Listing (4D-RPT) lists all covered dependents for each employee participating in a specified benefits plan*

Enrolling Employees in Deferred Plans

Apply the Concept

1. How will you collect the information needed to enroll an employee in a deferred plan?

   The answer will be specific to your organization. The information you need to collect includes the plan, effective date of the enrollment, the option the employee is choosing, and contribution amounts or percentages.

2. Describe how the enrollment process for deferred plans could involve two forms/steps.

   The enrollment process may involve two steps—recording basic plan information using the Deferred Plan Enrollments/Changes form (64-SCR) and defining plan contributions using the DB Contributions (68-SCR), DC Contributions (72-SCR), or T/S Plan Contributions/Fund Allocation form (79-SCR).

3. Will you verify employee enrollment? If yes, how will you do it?

   The answer will be specific to your organization. You can view an employee's plan coverage and annual contribution online or track the information using various reports.

Extended Practice

1. Enroll employee 1043, Alice A. Baldwin, in plan S02 effective 01-01-1998. Use the following contribution information:

Contribution Type	Contribution Percent	Fund Allocation
Company		100% in Fund A
Basic Pretax	6%	50% in Fund B, 50% in Fund C
Supplemental Pretax	9%	50% in Fund D, 50% in Fund E

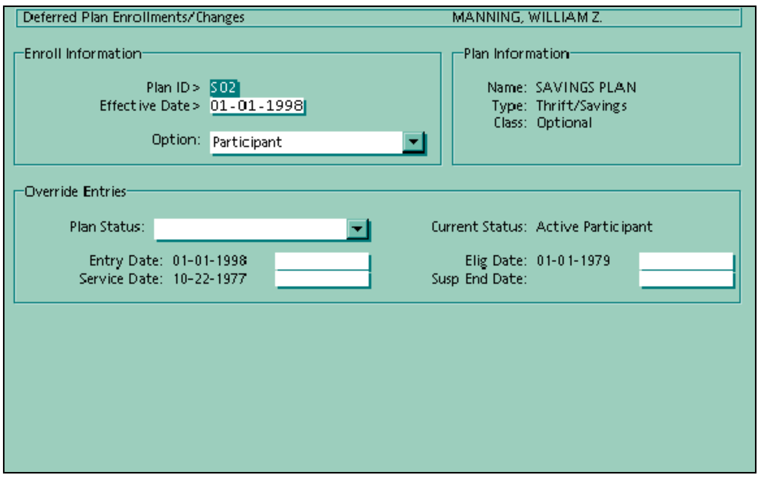
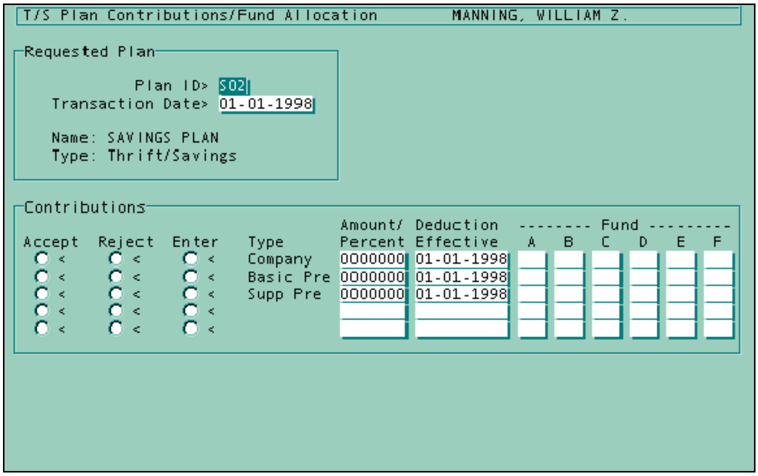
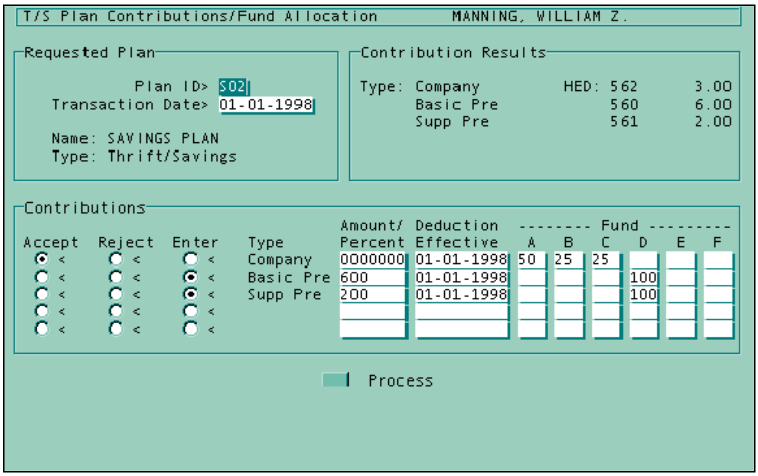
2. Enroll employee 1165, William Z. Manning, in plan S02 effective 01-01-1998. Use the following contribution information:

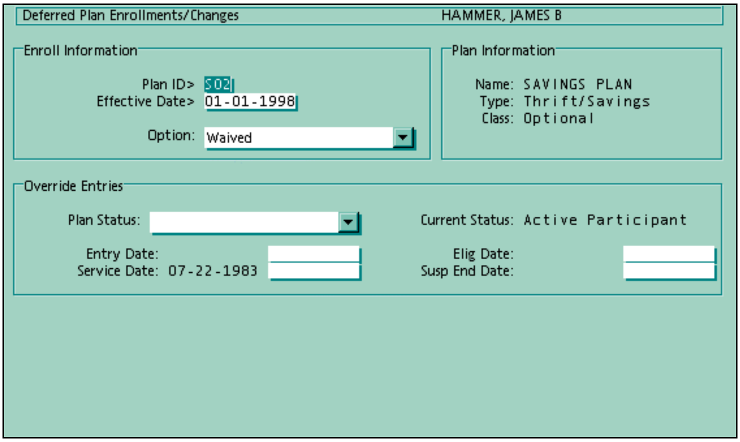
Contribution Type	Contribution Percent	Fund Allocation
Company		50% in Fund A, 25% in Fund B, 25% in Fund C
Basic Pretax	6%	100% in Fund D
Supplemental Pretax	5%	100% in Fund D







3. Waive employee 1236, James B. Hammer, from plan S02.



Review of Questions Answered

1. What two methods are provided for enrolling employees in deferred plans?

   Employees can be enrolled individually or in groups. Use the Deferred Plan Enrollments/Changes form (64-SCR) to enroll individual employees. For large groups of employees, use the Batch Loading (Batch Layout Facility) procedure.

2. What information is needed to enroll an employee in a deferred plan?

   Three pieces of information are required before you can enroll an employee in a deferred plan—the plan in which the employee is eligible to enroll, the effective date of the enrollment, and the valid enrollment option (for example, Participant or Enrolled) for the plan.

3. What facilities are provided to override system-generated data?

   Depending on the type of deferred plan, you can accept, enter, or reject system-generated data on one of the following forms—DB Plan Contributions (68-SCR) for defined benefits plans, DC Plan Contributions (72-SCR) for defined contributions plans, or T/S Plan Contributions/Fund Allocation (79-SCR) for thrift/savings contributions plans. However, you must not override company contribution information on these forms because the company match or contribution portion will not be calculated correctly. You may also override the plan eligibility date on the Deferred Plan Enrollments/Changes form (64-SCR).

4. What forms are created as a result of an enrollment into a deferred plan?

   The following forms are created as a result of an enrollment into a deferred plan: Deferred Plan Enrollments/Changes (64-SCR), Plan Service Dates (62-SCR), and Plan Retirement/Notice/Counseling Dates (65-SCR).

5. What reports are available to track enrollments in deferred plans?

The following reports help you track deferred plan enrollment information:

- *Plan Participation Register (4B-RPT) lists all employees who participate in at least one welfare or deferred benefits plan*
- *Plan Beneficiary Listing (4C-RPT) lists all participants and their associated beneficiary data for a specified benefits plan*
- *Plan Dependent Listing (4D-RPT) lists all covered dependents for each employee participating in a specified benefits plan*
- *Deferred Plan Register (4J-RPT) lists active employees, or those on leave, participating in at least one deferred benefits plan*

Processing Annual Open Enrollments for Flex Plans

Apply the Concept

1. Describe the major steps in your annual open enrollment process.

   The answer will be specific to your organization. Some of the major steps may include calculating flex credits, printing enrollment forms, recording enrollment options, reviewing enrollments, producing confirmation, and tracking unreturned enrollment forms.

2. If your flex plan uses credits, how will you calculate them?

   The answer will be specific to your organization. You can use the Flexible Benefit Plan Personal Information report (4P-RPT) or the Flex Benefit Plan Credit Calculation form (FCCSCR) to calculate flex credits. You may also manually enter credit information on the Flexible Benefit Annual Plan Credits form (55CSCR). Which method you use will most likely depend on the number of employees requiring flex credit calculations.

3. Describe how you will inform employees about the flex enrollment choices for which they qualify.

   The answer will be specific to your organization. You can use the Flexible Benefit Plan Personal Information report (4P-RPT), create your own form, or use a third-party administrator to generate enrollment forms and flex choices.

4. Describe how you will handle employees who do not return open enrollment forms by the expected return date.

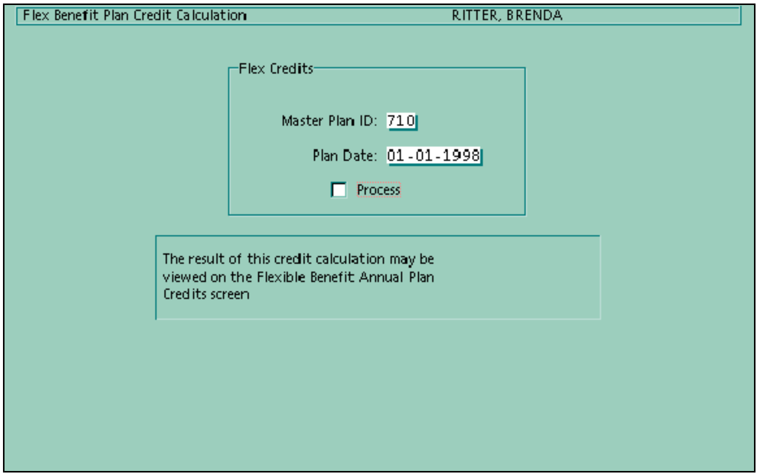
   The answer will be specific to your organization.

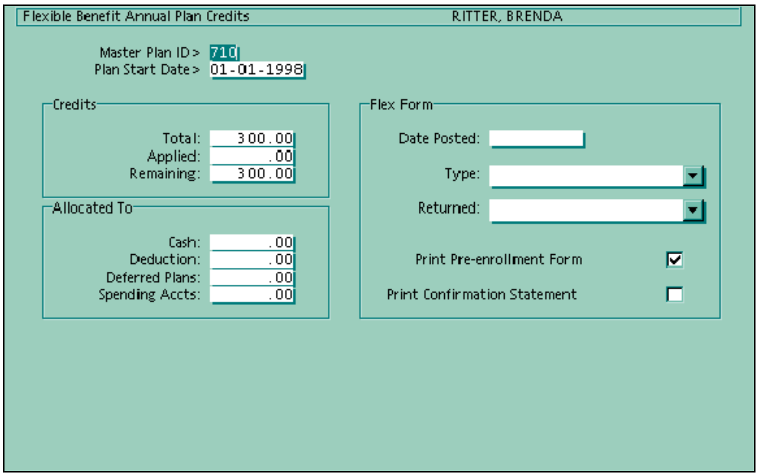
   You can track unreturned enrollment forms using the Flexible Benefit Plan Enrollment Forms Not Returned report (4Z-RPT). It lists all employees who have a Flexible Benefit Annual Plan Credits form (55CSCR) recorded with a Flex Form Returned Indicator of 'Not Yet Returned', 'Rejected Back To Emp', 'Default Enrollment', or blank.

   You can also establish a core/default plan using the Benefit Plan Rules form (TK-SCR) to automatically enroll employees in the Flex Master Plan and the component core default plans if they do not return their enrollment forms by a specified date.

Extended Practice

1. Calculate flex credits as of 01-01-1998 for employee 6010, Brenda Ritter, plan 710, and then display them.





2. Enroll employee 6010, Brenda Ritter, in plan 710 effective 01-01-1998. Use the following options:

Plan ID	**Option Elected**	**Variable**	**Method**

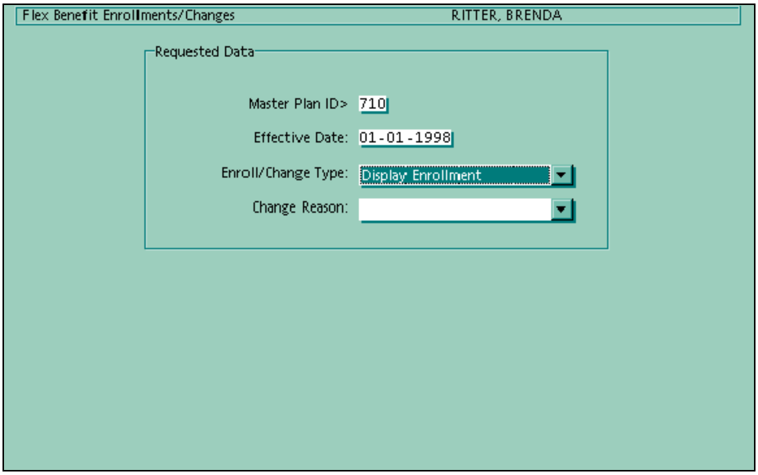
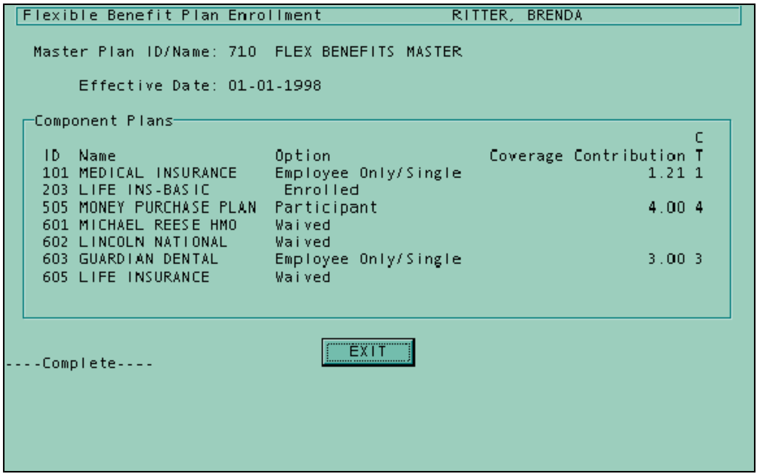
3. Display the enrollment options for employee 6010, Brenda Ritter, for plan 710.





Review of Questions Answered

1. What steps need to be taken before the employee enrollment procedure can begin?

   If your flex plan uses credits, you may calculate them for each employee prior to or during the enrollment process. As a function of the enrollment process, you must provide employees with an enrollment form that displays their plan options and costs.

2. What options are available for producing enrollment forms?

   You can use the Flexible Benefit Plan Personal Information report (4P-RPT) to produce enrollment forms or enrollment data. This report can be used in the following ways:

   - *Printed long form statement—produces a cover letter, an employee data page, and one page per benefit containing information about the plan, the various options available, and the cost*
   - *Printed short form—usually a one to three page printed statement of coverage choices for the coming flex year, including the cost of these choices and space to indicate option choices with their associated costs*
   - *Create an extract file—contains information and plan/option choices in four different 80-byte record types to be used in another application*

3. What methods are available for completing open enrollments for flex plans?

   Employees can be enrolled individually or in groups. To enroll small groups of employees, use the Flex Benefit Enrollments/Changes form (55FSCR). For large groups of employees, use the Batch Loading (Batch Layout Facility) procedure.

4. What options are available to handle enrollments for employees who fail to return their enrollment forms?

A default plan can be chosen for employees who fail to return their enrollment forms before a specified date. You may also use the Flexible Benefit Plan Forms Not Returned report (4Z-RPT) to help track those who have not returned an enrollment form.

5. What flex benefits communications are available for confirming enrollments?

   The Flexible Benefit Plan Enrollment Confirmation report (4X-RPT) provides the employee with a summary of all component plans that were selected from a flex plan and any associated costs and/or coverage amounts.

Processing Midyear Enrollments for Flex Plans

Apply the Concept

1. Will you have a special time of the week, pay period, or month for processing midyear enrollments?

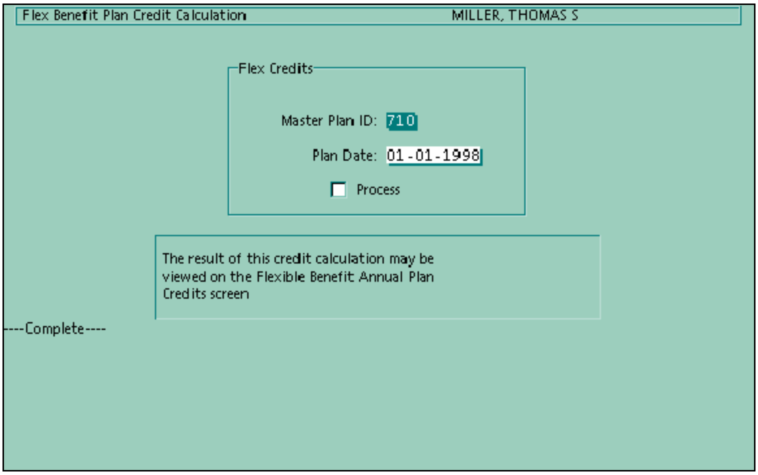
   The answer will be specific to your organization.

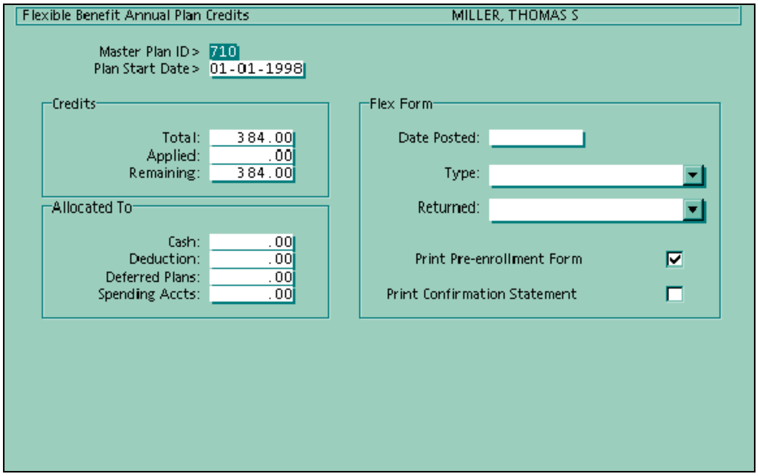
2. Describe your procedures for ensuring employees can not continue to participate in plans that are no longer available to them outside of the flex plan.

   The procedures you use to ensure employee's are de-enrolled from any component plan prior to flex enrollment are specific to your organization.

Extended Practice

1. Calculate flex credits as of 01-01-1998 for employee 6007, Thomas S. Miller, for plan 710, and then display them.





2. Enroll employee 6007, Thomas S. Miller, in plan 710 effective 06-01-98 (US and Canada) or 01-06-98 (elsewhere). Use the following options:

Plan ID	**Option Elected**	**Variable**	**Method**

Review of Questions Answered

1. What is a flex midyear enrollment?

   A midyear enrollment is an enrollment that is effective on any date other than the first day of the plan year.

2. What enrollment tasks differ when processing a flex midyear enrollment?

   If the employee is actively enrolled in any of the component plans that are included in the flex plan, you may need to create plan shutoff segments.

   On the Flex Benefit Enrollments/Changes form (55FSCR) select the 'Enroll Mid Plan Year' option in the Enroll/Change Type list box instead of 'Open Enrollment'.

Maintaining Employee Benefits Information

Apply the Concept

1. Describe the roles and responsibilities for the Human Resources, Payroll, and Benefits specialists for processing employee separations, transfers, terminations, and leaves of absence and returns.

   The answer will be specific to your organization. Roles and responsibilities should be clear so that benefits are correctly maintained and HEDs are correctly turned on and off.

2. Describe your organization's deferred plan policies regarding service interruptions and how you will implement them using Benefits Administration.

   The answer will be specific to your organization. With the Benefits Administration Solution, recording service interruptions is optional. If your organization decides to implement policies regarding service interruptions, you will use the Benefits Plan Breaks-In-Service Rules form (TU-SCR) to define those policies.

3. Describe when and how you will use the Calculation of Credited Service Granted (40-RPT) and the Calculation of Vesting Percentage Earned (41-RPT) reports.

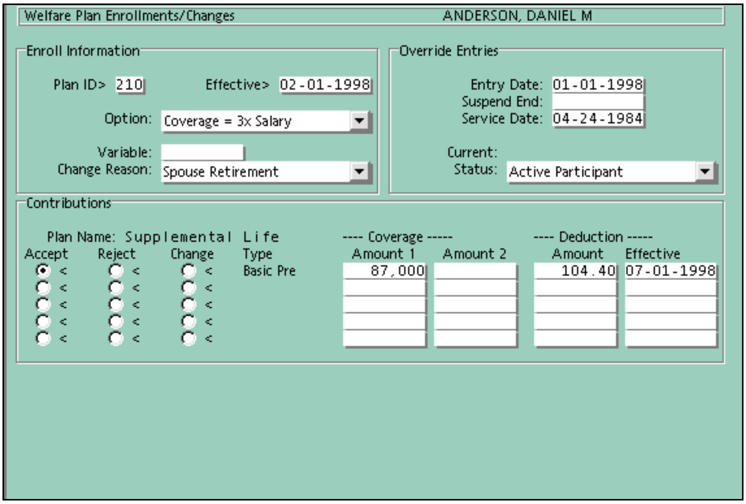
   The answer will be specific to your organization. Typically, these reports are run once a year at the end of the plan year to recalculate participation, vesting, and benefits credit dates and percentages.

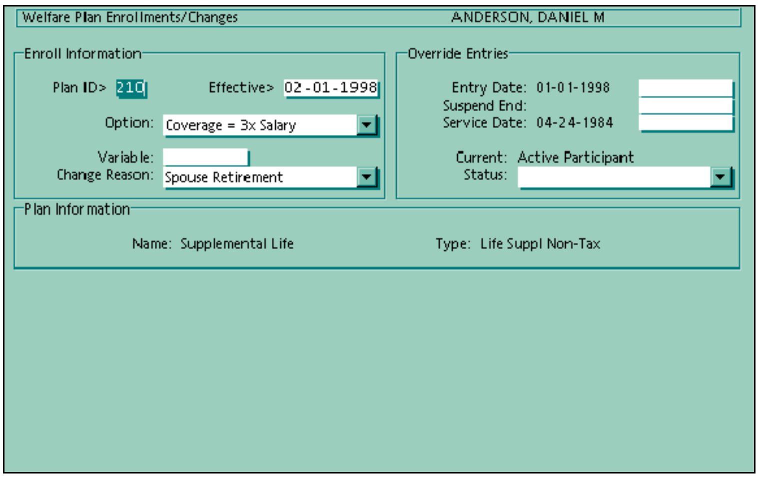
4. Where will you store benefits data when an employee is transferred to a new company within your organization?

   The answer will be specific to your organization. What you do with the employee benefits data may depend on whether the plans are the same or different. You can keep the benefits data in the old company, move it to the new, or keep it in both.

Extended Practice

1. Daniel M. Anderson's wife retired early from her job. Change Daniel M. Anderson's (employee 1616) life insurance coverage to three times salary for plan 210 effective 02-01-1998 (US and Canada) or 01-02-1998 (elsewhere).





2. Thomas S. Miller, employee 6007, is getting married. He will be covered under his wife's medical plan. Waive him from plan 101 effective 09-01-1998 (US and Canada) or 01-09-1998 (elsewhere).

Review of Questions Answered

1. What can you do with benefits data when transferring an employee between companies?

   You can do one of three things with benefits data when transferring an employee between companies:

   - *Leave it in the old company*
   - *Move it to the new company employee master record*
   - *Keep it in both companies*

2. How is de-enrollment different for an employee enrolled in a flex plan versus an employee enrolled in a non-flex plan?

   De-enrolling an employee from a flex Master plan automatically de-enrolls the employee from all component plans. If an employee is not enrolled in a flex Master plan, the employee must be de-enrolled from each welfare or deferred plan individually.

3. What is the difference between a plan shutdown and a de-enrollment?

   De-enrollment takes an employee out of one specific plan and also deactivates any applicable deductions for the plan. A plan shutdown checks all benefits plans to determine if the employee should be taken out of any plans and will perform the shutdown as appropriate. However, plan shutdown does not automatically deactivate any deductions.

4. What additional task should you consider when deleting a welfare enrollment or de-enrollment entry?

   Deleting a Welfare Plan Enrollments/Changes form (55-SCR) does not automatically delete the Deduction Information From Benefit Plans (54-SCR) and Plan Coverage

Amount Entry (53-SCR) forms created as a result of the de-enrollment. If an employee was enrolled or de-enrolled in error, all of these forms must be manually deleted in order to have a clean employee record.

5. What report recalculates participation, vesting, and benefits service credit dates and what should you do before running it?

   Use the Calculation Of Credited Service Granted report (40-RPT) to recalculate participation, vesting, and benefits service credit dates for a deferred plan. Before running this report, adjust the service dates for any employees who have had a service interruption.

6. What report recalculates vesting percentages and what should be done before running it?

   Use the Calculation of Vesting Percentage Earned report (41-RPT)to recalculate vesting percentages. Before running this report, run the Calculation Of Credited Service Granted report (40-RPT).

Counseling Employees on Benefits and Retirement

Apply the Concept

1. Describe when you would use the Employee Welfare Plan Summary form (55ISCR) instead of the Welfare Plan Enrollments/Changes form (55-SCR) when counseling employees on their benefits.

   The answer will be specific to the organization. In general, you would use the Employee Welfare Plan Summary form (55ISCR) when you want to display employee enrollment, coverage, contribution, and covered dependent information for a welfare plan on one form instead of navigating among the Welfare Plan Enrollments/Changes(55-SCR), Deduction Information From Benefits Plans (54-SCR), and Plan Coverage Amount Entry (53-SCR) forms.

2. Describe when you will use the Online Employee Profile form (PROFIL) and which options you will select.

   The answer will be specific to your organization. In general, you would use the Online Employee Profile form (PROFIL) when you want to display a wide-range of information from the employee master record. Typically, you would select the 'Benefits' option, which displays basic personal, beneficiary, dependent coverage, and benefits information.

3. List the forms and reports you expect to use most often when counseling your employees on their retirement and describe how you will use them.

   The answer will be specific to your organization. The Benefits Administration Solution gives you numerous forms and reports to use when counseling employees on their retirement. Following are just a few you might use most often:

   Forms:

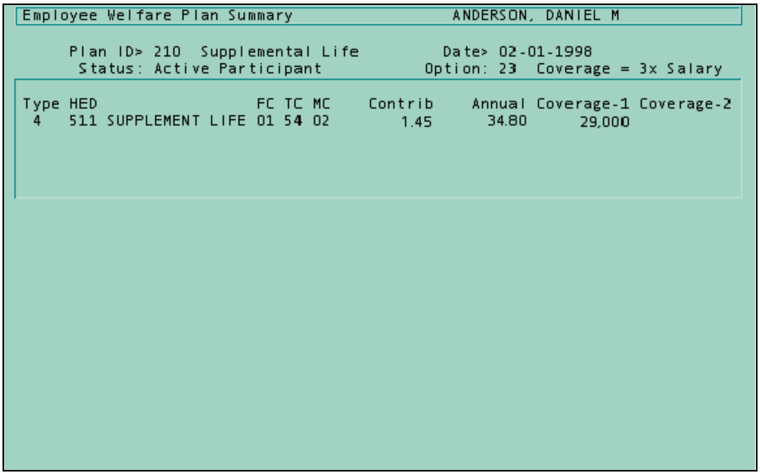
   - *Deferred Plan Contribution Amt/Pcts form (64CSCR) to view deferred plan contribution amounts and percentages*
   - *Plan Retirement/Notice/Counseling Dates form (65-SCR) to view and enter retirement and counseling dates*
   - *Plan Service Dates form (62-SCR) to view the benefit participation, accrual and vesting dates and any credited service*
   - *Plan Vesting Information form (63-SCR) to view vesting information*

   Reports:

   - *Retirement Notifications Due This Period (8L-RPT) to list employees who have a retirement notification due*
   - *Next Retirement Counseling Date This Period (8T-RPT) to list employees who should be contacted about attending a pre-retirement counseling session*

Extended Practice

1. View a summary of welfare benefits for employee 1616, Daniel M. Anderson.



```
Employee Welfare Plan Summary                       ANDERSON, DANIEL M

       Plan ID> 210  Supplemental Life           Date> 02-01-1998
        Status: Active Participant             Option: 23  Coverage = 3x Salary

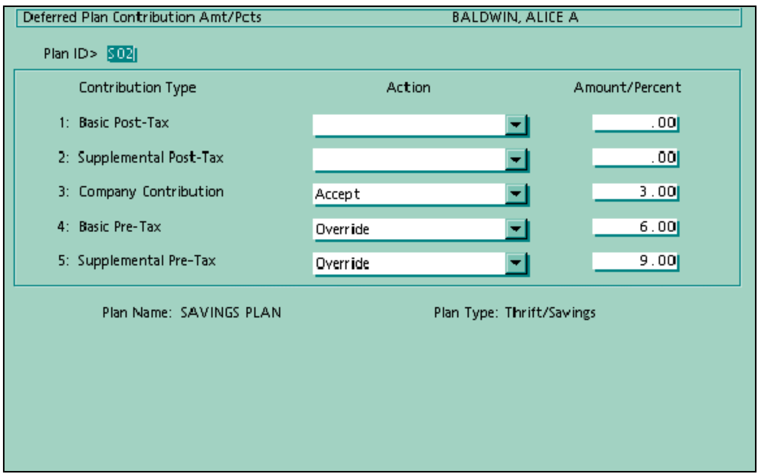
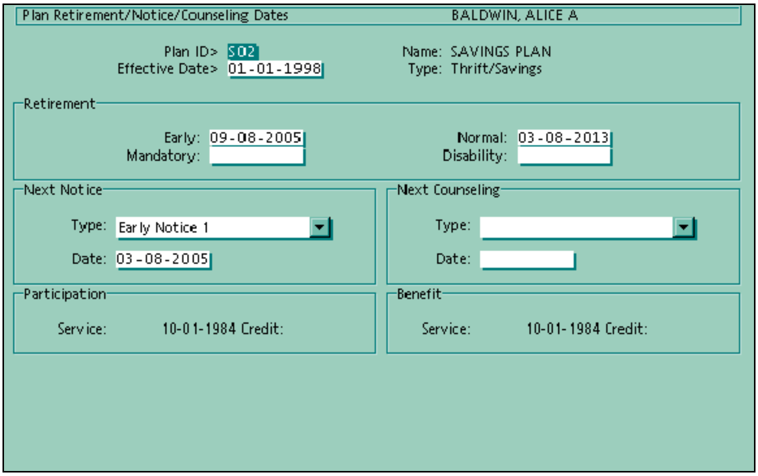
3. View the deferred plan contributions for employee 1043, Alice A. Baldwin, for plan S02.



4. View the retirement eligibility dates for employee 1043, Alice A. Baldwin, for plan S02.



Review of Questions Answered

1. What Benefits Administration tool can be used to display a profile of employee benefits information?

   Use the Online Employee Profile form (PROFIL) to display a profile of employee benefits information.

2. What form summarizes employee welfare plan information, including HED and dependent information?

   Use the Employee Welfare Plan Summary form (55ISCR) to display a summary of employee welfare plan information.

3. What two methods are available for updating employee vesting information?

   Employee vesting information is typically updated by the Calculation of Vesting Percentage Earned report (41-RPT). This report creates a Plan Vesting Information form (63-SCR). The Plan Vesting Information form (63-SCR) can also be used to manually update employee vesting information.

4. What form that can help you with retirement counseling is automatically created when you enroll an employee in a deferred plan?

   When you enroll an employee in a deferred retirement plan, retirement eligibility and notification dates are calculated and automatically recorded on the Plan Retirement/Notice/Counseling Dates form (65-SCR). You can use this form to counsel employees on their retirement.

5. What facilities are provided for notifying and counseling employees on retirement?

   The Plan Retirement/Notice/Counseling Dates form (65-SCR) and two reports work together to help you notify and counsel employees on their retirement. The Retirement

Notifications Due This Period report (8L-RPT) lists employees who have a retirement notification date that falls within a specified date range and the Next Retirement Counseling Date This Period (8T-RPT) lists employees who should be contacted about attending a pre-retirement counseling session.

6. What function is provided for extracting pension plan information for actuarial valuation?

   The Actuarial Interface Output Tape provides you with the basis of creating a tape for actuarial valuation.

Benefits/Payroll Interaction

Apply the Concept

1. Describe when you will run the Recalc Benefit Coverage/Contributions report (85-RPT) and which parameters you will use for the report.

   The answer will be specific to your organization. The Recalc Benefit Coverage/Contributions report (85-RPT) is typically run prior to a pay run. The parameters you will choose depend on whether there are changes to employee master records or benefits plan tables and whether you want to preview or implement changes.

2. Describe how you would use alternate key records.

   The answer will be specific to your organization. There are two ways to create the alternate key records, by dates or changed data in the employee's master record.

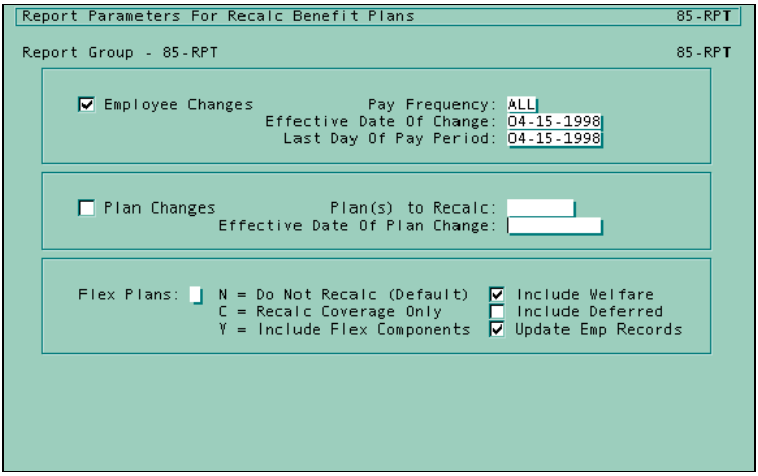
3. Describe the process you will use for updating and reviewing benefits accumulators.

   The answer will be specific to your organization. After a pay run, use the Considered Earnings/Hours Update program (CONSID) to update benefits accumulators. Employee earnings are posted to the company 991111 and can be viewed using the Considered Earnings/Hours Accumulators form (60-SCR).

Extended Practice

1. Give employee 1616, Daniel M Anderson, a merit increase. Enter a new Annual Salary of '31699.27' effective 04-01-1998 (US and Canada) or 01-04-1998 (elsewhere). Use a Separator of '1st Occurrence' and a Type Of Change of 'Increase-Merit'.

2. Run the Recalc Benefit Coverage/Contributions report (85-RPT) for employee changes. Run the report for all pay frequencies with an effective and last pay period date of 04-15-1998 (US and Canada) or 15-04-1998 (elsewhere). Select welfare plans with employee update.



Report Parameters For Recalc Benefit Plans 85-RPT

Report Group - 85-RPT 85-RPT

☑ Employee Changes
Pay Frequency: ALL
Effective Date Of Change: 04-15-1998
Last Day Of Pay Period: 04-15-1998

☐ Plan Changes
Plan(s) to Recalc:
Effective Date Of Plan Change:

Flex Plans:
N = Do Not Recalc (Default)
C = Recalc Coverage Only
Y = Include Flex Components

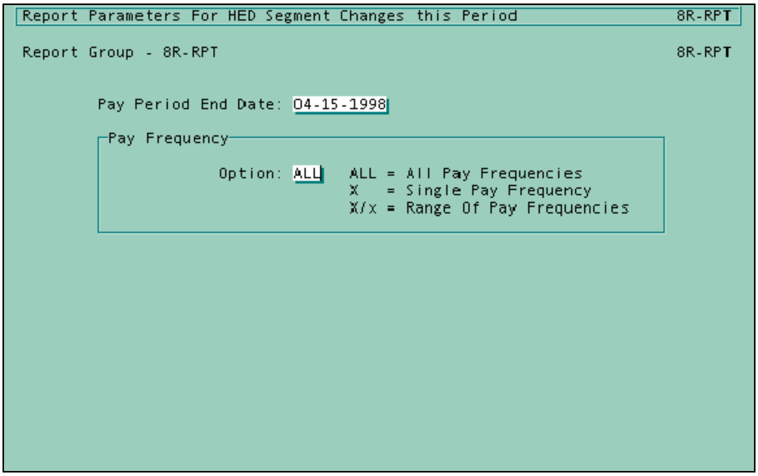
☑ Include Welfare
☐ Include Deferred
☑ Update Emp Records

3. Using the Recalc Benefit Coverage/Contributions report (85-RPT), verify that the prior and new deduction amounts are accurately reflected for employee 1616.

4. Access the Deduction Information From Benefit Plans form (54-SCR) for employee 1616, and verify that a new form has been created effective 04-15-1998 (US and Canada) or 15-04-1998 (elsewhere).

5. Access the Plan Coverage Amount Entry form (53-SCR) for employee 1616, and verify that a new form has been created effective 04-15-1998 (US and Canada) or 15-04-1998 (elsewhere).

6. Run the HED Segment Changes Effective This Period report (8R-RPT) for the pay period ending 04-15-1998 (US and Canada) or 15-04-1998 (elsewhere) for all pay frequencies.



Report Parameters For HED Segment Changes this Period 8R-RPT

Report Group - 8R-RPT 8R-RPT

Pay Period End Date: 04-15-1998

Pay Frequency

Option: ALL ALL = All Pay Frequencies
X = Single Pay Frequency
X/x = Range Of Pay Frequencies

7. Access the Deduction Information From Benefit Plans form (54-SCR) for employee 1616 and verify that the Posted to Payroll? indicator is set to 'Posted' for HED 511.

8. Verify that Employee Earnings and Deductions forms (HH-SCR) have been created for employee 1616 and HED 511.

Review of Questions Answered

1. What interactions occur between benefits and payroll processing?

   The benefits and payroll interaction involves ensuring that the correct deductions are taken during a pay run and updating benefits accumulators following a pay run.

2. What is the purpose of the Recalc Benefit Coverage/Contributions report (85-RPT) and what options are available for running it?

   The Recalc Benefit Coverage/Contributions report (85-RPT) recalculates employee coverage and employee and company contribution amounts. This report also notes changes in employee enrollment status and flags for de-enrollments. The report can be run two ways—employee recalculations and plan table recalculations.

3. What is the advantage of creating alternate key records for use with the recalculation report and what options are available to create them?

   By creating and using alternate key records, you can limit the number of employees included in the Recalc Benefit Coverage/Contributions report (85-RPT). Using alternate key records reduces processing time. You can create alternate key records based on a date range or on specific types of changed data in the employee's master record.

4. What is the purpose of the HED Segment Changes Effective This Period report (8R-RPT) and when should it be run?

   The HED Segment Changes Effective This Period report (8R-RPT) copies benefits deduction changes to payroll. It must be run after the Recalc Benefit Coverage/Contributions report (85-RPT).

5. What is the purpose of the Considered Earnings/Hours Accumulators program (CONSID) and when should it be run?

   The Considered Earnings/Hours Accumulators program (CONSID) updates established considered hours and earnings accumulators with the current pay period's earnings. It should be run as soon after the pay merge program as possible.

6. What is the purpose of the Update Benefit Plan Balance Information program (BAXACT) and when should it be run?

   The Update Benefit Plan Balance Information program (BAXACT) updates deferred plan accumulators after a pay run. It should be run as soon after the pay merge and the Considered Earnings/Hours Accumulators program (CONSID) as possible.

Maintaining and Deactivating Plans

Review of Questions Answered

1. What organizational changes could result in benefits plan changes?

   Many organizational changes could result in benefits plan changes, including the following:

   - *Change in benefits plan provider*
   - *Company acquisition/merger*
   - *Addition of a union*
   - *Changes in investment fund choices*

2. What considerations should be reviewed before you apply benefits plan changes?

   Revised policies that affect benefits plans may require that you review the same steps that you used to initially set up Benefits Administration.

3. What tasks must be completed to deactivate a benefits plan?

   Perform the following tasks to deactivate a benefits plan:

   - *Identify all employees currently enrolled in the plan*
   - *De-enroll all employees currently enrolled in the plan*
   - *Run the HED Segment Changes This Period report (8R-RPT) to copy the deduction information to payroll and prevent further plan deductions from occurring*
   - *Enter a new effective date and change the plan type to 'inactive' using the plan's Benefit Plan Rules form (TK-SCR)*

Apply the Concept

1. Describe how you can control when a minor change to a plan becomes effective and its impact on new and existing employees?

   By indicating the Effective Date of the change on the revised table, you can control when the change takes effect. New hires enrolled after the effective date of the plan change will be covered by the new plan rules and employees currently enrolled in the plan will only be affected by the change when the Recalculation Benefits Coverage/Contribution report (85-RPT) is processed for the new effective date.

2. If you have to deactivate a plan, what tool will you use to identify employees that must be de-enrolled from the plan?

   Use the Plan Premium Statements report (4I-RPT) to identify the employees who are enrolled in the obsolete plan.

3. If you have to deactivate a plan, what things will you consider when determining whether to manually de-enroll employees or submit the de-enrollments using the batch loading process?

The answer will be specific to your organization. You should consider what tasks must be completed to deactivate a benefits plan and the number of employees affected by the shutdown when determining whether to manually de-enroll employees or submit the de-enrollments using the batch loading process.

Monitoring and Costing Plans

Apply the Concept

1. What processes will you have for monitoring benefits costs and compliance?

   The answer will be specific to your organization.

2. What processes will you have for monitoring benefits costs?

   The answer will be specific to your organization.

3. How will you determine which current flex choices to offer your employees in the future?

   The answer will be specific to your organization. One method is to perform a trend analysis to analyze the popularity of the flex choices that are being offered to your employees.

Review of Questions Answered

1. What tools are available in Benefits Administration for monitoring regulatory compliance?

   Consider using the following reports for monitoring regulatory compliance:

   - *Deferred Plan Register (4J-RPT) to analyze employee deferred plan participation*
   - *Dependent Listing For Plan ID:XX (4D-RPT) to verify benefit coverage eligibility, track covered dependents by plan, and coordinate benefit payments*
   - *Flexible Benefit Plan Enrollment Confirmation (4X-RPT) to verify component plans selected by employees, along with the associated plan options and costs*
   - *Plan Beneficiary Listing (4C-RPT) to analyze plan beneficiary information and track incomplete beneficiary records*
   - *Plan Participation Register (4B-RPT) to monitor employee plan participation and verify employee plan data*
   - *Plan Premium Statements (4I-RPT) to analyze plan costs and prepare a final premium summary for insurance carriers*
   - *Welfare Benefits Register (4A-RPT) to monitor employee welfare plan participation and verify employee plan data*

2. How can the current flexible benefits plan information be used to generate a trend analysis of option selections?

   You can analyze your flexible benefits plan components by using Benefits Administration reports to collect data on the popularity of the flex choices that are being offered to your employees. You can use Solution View to select information and create an extract file that can then be imported to a spreadsheet application.

3. What method is available for determining the future cost of benefits plans?

You can copy one or more of your current benefits plans into a test environment and then run the Plan Premium Statements report (4I-RPT) before and after the cost changes have been recorded to project a monthly and annual cost estimate.

Glossary of Terms

.EXE
A binary file containing a program in machine language that is ready to be executed.

.INI
A file that contains the parameters (values) used by the .exe file (program).

360-degree appraisal
Appraisals that include evaluations from an employee's managers and supervisors, peers, subordinates, and even customers, clients, and suppliers.

Absence data
Employee-level absence information that is entered on the absences forms.

Absence point
User-defined number that may be assigned for a particular absence and that can be totaled over time to determine if an employee is within the accepted number of absences for a time period.

Absence type
A classification of an employee absence, such as 'jury duty' or 'sick'. Employee absences are recorded by date and absence type.

Account timeout
The period of time that elapses before a user's account becomes invalid because of inactivity.

Accumulator id
A three-position, alphanumeric identifier for a benefits accumulator.

Acrobat
A suite of programs developed by Adobe Systems, Inc. For creating and distributing electronic documents. Programs in the suite allow you to create a portable document format (PDF) file for a document. You can then distribute the PDF file electronically to people who view the document with their freely distributed acrobat reader. People viewing a PDF file (or document) with the Acrobat Reader see the document with the exact layout intended by the author.

Action button
An action button performs an action such as saving the information you entered or telling the system you finished reviewing a page. An action button consists of an icon (or button) accompanied by underlined text (link text). For example, at various places throughout eCyborg Interactive Workforce you may see an action button displaying a check mark accompanied by the underlined text 'save changes'. You can click either the text or the button to save your changes to the page.

Activity code
Describes the clock transaction (ring) activity, such as clock start or meal end.

Activity types
With the time and attendance solution, you can set up the system so that an employee or group of employees may clock in and out for up to eight different activities: clock-in (1), break 1 start (2), break 1 end (3), meal start (4), meal end (5), break 2 start (6), break 2 end (7), and clock end (8).

Actuarial valuation
An examination of a pension plan to determine if contributions are being accumulated at a rate sufficient to pay the promised pensions.

Administration home page
The administration page that displays when a user logs on using his or her administrator user ID and password. The administration page displays links to individual administrator pages (eCyborg Interactive Workforce, Human Resources Administration, Benefits Administration, and Payroll Administration).

Administrative User ID
User ID created by an administrator with the role of eCyborg Interactive Workforce administrator. This ID

differs from the employee user ID generated for the administrator.

Aggregate tax method
Method of calculating taxes in which year-to-date income is used to project annual wages (using prorating), on which taxes are calculated. With this method, the amount of tax withheld can vary from pay period to pay period. This method is useful in preventing a salesperson from being over withheld as the result of fluctuations in commission over various pay periods. It is activated on the payroll solution by selecting aggregate/cumula tax (9) from the Withholding Method (PR09) option list on the Employee Tax Record Maintenance form. It is also referred to as cumulative tax calculation method.

Annualization
Process of calculating the annual amount of pay based on the number of pay periods and pay period amounts. Calculated by multiplying the number of pay periods in the year by the current taxable wages in the pay period.

Annualization factor
The factor that is used to multiply current pay period wages to determine annual wages. For example, a monthly pay frequency has an annualization factor of 12. The Payroll Solution typically calculates income taxes on the basis of annual wages. The annualization factor is entered by selecting an option from the Annualization (PP33) option list on the Company Pay Frequencies form for each pay frequency.

Annuitant
Someone entitled to receive or currently receiving payments from an annuity.

Annuity
A contract providing an income for a specific period of time.

Applicant
A person who is applying for a job or position in your organization. Internal applicants come from within your organization while external applicants come from outside of your organization.

Appraisal rating
A method of ranking the performance of an employee during a given period using options ranging from 1-outstanding to 5-unsatisfactory.

ASCII
American **S**tandard **C**ode for **I**nformation **I**nterchange. The basis of character sets used in almost all present-day computers; US-ASCII uses only seven bits to convey some control codes, space, numbers, most basic punctuation, and unaccented letters a-z and A-Z.

Ask Me wizard
A natural language, full-text search facility within the online help. This allows users to type in a question, the wizard interprets the question, and displays related topics.

As-of reporting
Ability to report on data for a specified date or date range.

Audit record
A snapshot of information entered on a form. Audit records are stored on the employee database and are displayed on audit reports in an is/was reporting format. Adjustments and time entries are stored as audit records and are extracted for a payroll run in which they update the employee's record.

Audit report
A report that is available after the running of a program; it lists created records as well as error messages for records that could not be created.

Audit trail
A report of changes made to your employee database, such as the Payroll Audit Trail (0101) report.

Authorized absence
Absences that are generally considered as paid time away from regularly scheduled work.

Automatic plan
A plan that has been defined with a default option and default pre- or posttax indicator (also known as core/default plan).

Average deferral percentage
Percentage used in nondiscrimination and compliance testing mandated by US law. The calculation is defined as the contribution divided by the compensation.

Average rating
A rating used for performance appraisal systems with categories weighted by relative importance, where the average score reflects the weighted scores.

Back
Takes the user back to the previous page.

Badge
Time and Attendance Administration can be set up to use two different types of badge readers. The type of badge your organization uses, is determined by your third party badge reader software. The two types of badges are magnetic badges and bar code badges.

Badge error
Occurs when a badge is used to create a clock transaction (ring) and an employee has not been assigned to the badge.

Badge number
Up to ten-character ID stored on employee badges and clock transactions (rings) that tie clock transactions (rings) to an employee on the ***Employee Database*** (on page 1078).

Banner
Banner forms separate groupings on forms produced from the Federal, State/Local, and Employee Queues.

Batch
A group of transactions submitted to the batch payroll processing system. Also, a collection of time entries that corresponds to an employee group, such as department.

Batch control record
Precedes all transactions separated by group; used to identify the company to which the transactions in that group apply. By entering anticipated totals for dollars and hours on the batch control record, you may verify your totals against those accumulated by the system.

Batch layout facility
A program that produces a segment layout for loading forms via batch. This was formerly known as BATCHL.

Batch number
An alphanumeric field on the batch control record containing a user-defined value used to identify a unique group of time entries or transactions.

Batch processing
A processing method that runs in the background and requires limited intervention.

Benchmark job
A standard or point of reference for determining total job points.

Beneficiary
A person named by the participant in an insurance or pension plan to receive any benefit provided by the plan if the participant dies.

Benefits control number
A four-position, alphanumeric identifier that specifies which tables are accessed for an organization.

Benefits statement
Report that indicates the coverage and cost of each benefits plan in which an employee participates.

Big option list
A large option list that includes a search facility. This was formerly known as a big codeset.

Bridge loan
A loan made to assist a relocated employee in purchasing a new residence before the sale of their old residence is complete.

Browser
Software application used to locate and display web pages. Modern browsers give users access to graphics, text, and multimedia information, including sound and video.

Budget plan year
A twelve-month period over which a salary budget is effective.

Budget scenario
The result of creating one or more salary plans in order to see the effect of different increase policies on the budget.

Budget setting
The process of analyzing and selecting an organization's salary budget for the coming plan year.

Cafeteria plan
A specific type of flexible benefit plan that allows employees to select their benefits from a number of benefit plans. This term may be used interchangeably with flexible benefits plan.

Calculation option list
An option list that contains calculation formula. This was formerly known as a calculation codeset.

Candidate
A person who is applying for a job or position in your organization and is under consideration.

Career planning
Providing career incentives such as advancement and additional education and training for individual employees in order to meet projected organizational needs.

Carrier record
A carrier record supplies information from one application area to another application.

Case-sensitive
A program that distinguishes between uppercase (capital) and lowercase (small) letters. A case-sensitive program that expects you to enter all commands in uppercase will not respond correctly if you enter one or more characters in lowercase.

Catalog
A file (with the extension of .cat) that contains all the information necessary for Impromptu to access and retrieve information from a relational database. The catalog provides a business view of the data, as well as information about what database to access, where the database is stored, and how the tables in the catalog are joined in the datamart.

Category code
General term used to refer to the option selected from category (PP01 and PP02) option lists on the company earnings and company deductions forms. It is used to indicate the type of earning or deduction.

CE/H
Abbreviation for considered earnings/hours.

Change control facility
A facility for updating and comparing your system control repository. This was formerly known as MAINTI/MAINTO.

Check box
A standard windows control that displays a yes/no setting, either checked (yes) or unchecked (no).

Check digit
Unique identifier that is generated by the TBLCHK program and used by the system to check the table relationship records.

Checklist
A list of tasks to be performed in sequence. The checklist displays within the navigator area. Checklists link tasks and other checklists together to perform work flow functions. Users can display a checklist by selecting a checklist icon within the tasks in the navigator.

eCyborg Interactive Workforce specific—a list of tasks/pages generally displayed in a chart with hot spots (links) for the checklist items. The user clicks the link to access the page.

Checklist item
An item appearing within the navigator when a checklist is being displayed. Checklist items include tasks, dialogs and even other checklists.

Checklist item status
Defines the status of a checklist item. These can be:

- Available to perform
- Required
- Not available
- Already completed

Checklist margin
The area of the navigator that displays the checklist item status when a checklist is being displayed.

Checkmark
If in the done column of a eCyborg Interactive Workforce checklist, indicates that an item on a checklist is complete. Can also indicate OK, finished, submit, and so forth.

Class
A class is an occurrence of a course that is specific to a location and a date, that is being administered using Training Administration. For example, 'eCyborg: Using the Web Client′ on Thursday, December 21, in Chicago is a class of the course 'eCyborg: Using the Web Client'.

Class evaluation results
These are the results as entered on the evaluation forms filled out by the class participants upon completion of the class. These results are recorded on the class evaluation results form.

Client data file
File containing information replicated from the System Control Repository. Used by client workstations to improve response time, since editing can be performed locally. May be located on each client workstation or may be located on a server and be shared by multiple client workstations on the network. Formerly known as the Client Control File.

Clock in and out
Also referred to as swipe/swiping the clock. When an employee uses their badge to record an activity time, they must pass their badge through the badge reader. This action can be referred to as clocking in and out.

Clock transaction
Record containing the information needed to create time entries for payroll processing. Clock transaction (ring) information includes date, time, and badge number. A clock transaction (ring) is created when a badge is swiped through a clock.

Clock transaction warning
Occurs when a clock transaction (ring) time falls outside of an employee's schedule warning times.

Closing costs
The costs associated with the purchase of a new house.

CLP
Abbreviation for certificates, licenses, and permits.

Codeset
A list of valid code values and associated descriptions from which you may select an appropriate entry. This is now known as an option list.

Coefficient
Customer-defined value used in the formula to calculate a new salary grade midpoint value.

Combined register (2222) report
A report that provides a detailed printout of all earnings, hours, taxes, and deductions for all the payments and adjustments made on a payroll run. It is Report Generator 2222.

Command button
A standard windows control that initiates a command of sets an option (previously known as push button).

Common tax organization
A method of setting up taxation in an organization in which all necessary tax specification records are contained in a single organization. The common tax organization often handles tax specification records more efficiently, since it avoids duplication of the federal tax records and of any state or local records used by multiple companies.

Communication event
A letter or email that can be triggered automatically or manually within the system. Communication events are set up by the system administrator and usually include data from a form or record.

Compa ratio
The ratio of a given salary compared with the midpoint of the salary range. The formula is the salary divided by the midpoint.

Competency
A requisite capacity to perform a single or set of skills or activities.

Complement limit
A 'complement limit' is the maximum number of complement units that can be assigned to a position at any one time.

Complement position
A 'complement position' is a position that is included in complement control.

Complement unit
A 'complement unit' is the type of unit used to measure the value of a position, for example, headcount, fte or hours.

Compliance
Conformity in fulfilling legal requirements.

Component
The first level of functional organization on the navigator or menu, such as employee resourcing or employee development.

Component icon
An icon that denotes the current component. There are a number of components within the system. Each component appears as an icon on the navigator.

Component plan
Any plan included under the flex master plan or grouped together under a group master.

Condition
Predefined criteria that can be added to a report's filter.

Considered earnings
An employee's paid earnings that are to be accumulated, based on plan rules, for use in determining credited service or calculations of final benefits amounts.

Considered earnings/hours (CE/H) accumulators
Used only in benefits plans to accumulate the earnings and hours an employee has acquired toward eligibility for a deferred plan. Accumulators may be retained on a monthly, quarterly, or annual basis.

Considered hours paid
Actual number of hours for which an employee was paid and that are to be accumulated based on plan rules.

Considered hours worked
Actual number of hours an employee worked. These hours are to be accumulated based on plan rules for use in determining credited service for a plan participant (or for a non-participant if eligibility has been met).

Consolidated reporting
Option that enables packaged reports to be processed for all organizations (consolidated).

Customer-defined value used in the formula to calculate a new salary grade midpoint value.

Context-sensitive help
Information about an object and its current condition. It answers the question 'what is this?'

Contribution type
The type of contribution being made to a benefits plan. The system allows for the deduction and accumulation of up to five different contributions per plan: basic employee pretax, basic employee posttax, supplemental employee pretax, supplemental post-tax, and organization.

Control 1-2
A company or group of employees (now known as an organization).

Control levels
A hierarchy of values used to determine the breakdown of an organization for reporting purposes. The values are user-defined.

Control number
An alphanumeric designation assigned to a table to define the table records that will be used for each organization.

Conversion
A method for transferring data from either a manual or automated system into the system.

Co-ordinator
A coordinator is an instructional institution, organization or person who administers training courses.

Core plan
One of the plans that make up the minimum benefits in which all eligible employees are required to enroll—for

example, medical and life. Employees who fail to return enrollment forms with their benefit choices may be automatically enrolled in the core plans (also known as default plans).

Cost categories
Cost categories are classifications or divisions used to separate costs for training into broad groupings, for example, equipment or operating costs.

Cost types
Cost types are used to further define training costs. For example, the category of equipment could be further broken down into the cost type of overhead projector and monitor rental.

Costing
Projecting the future cost of a benefits plan contribution for budget purposes.

Course
A course is a separate unit of instruction in a subject being administered using the training administration solution. For example, 'eCyborg: Using the Web Client′ is a course. This may be applied to a training course provided internally or externally.

Course directory
A course directory is a list of all available courses.

CPI
Characters **p**er **i**nch

Credited service
The number of years of employment for which an employee is given credit for use in determining final benefits amounts.

Crew
A group of employees who rotate from one schedule assignment (shift) to another, following a rotation pattern.

Crew code
A unique, one-character, alphanumeric identifier of a crew.

Cross-reference keys
Provide direct query access to data within the system database.

CSL
Abbreviation for ***Cyborg Scripting Language*** (on page 1075).

Cumulative data
Also called 'to-date data'. includes payroll earning, deduction, net pay, taxable wage, and tax to-date figures for employees.

Cursor
A special symbol, usually a solid rectangle or a blinking underline character, that signifies where the next character will be displayed on the screen. To type in different areas of the screen, you need to move the cursor. You can use the arrow keys or a mouse to move the cursor.

Customer-defined
Values that depend on an organization-specific definition--for example, option list.

CYB88X
An English Language root program used to set the production version switch to on or off, in addition to other automatic settings.

Cyborg Scripting Language
Cyborg's fourth-generation programming language, previously called English Language.

Data extract
Method for extracting information from The Solution Series for the purpose of subsequently loading it into eCyborg Interactive Workforce databases.

Data load
The process of moving data from one system or media to another. It encompasses data mapping, data extraction and conversion, and the actual loading of the data. Also the method of loading data extracted from The Solution Series into eCyborg Interactive Workforce databases using programming scripts.

Data mapping
The process of identifying, comparing, and matching data (field to field) to be converted from one system or media to another.

Database
A collection of information organized so that a computer program can quickly search for and select

specific pieces of data. Think of a database as an electronic filing system.

Datamart
Relational tables with a defined structure that have been designed to automatically accept full datamart extract data seamlessly.

Deduct credits by plan
A method of distributing flexible benefit credits. The total monetary value for credits is prorated based on the employee's pay frequency. Credits are given to employees as earnings added to their pay; the cost of individual employee plans are collected through payroll deductions and listed on the employee's payment stub.

Deduct credits by plan method
A method of distributing flexible benefit credits. Credits are given to employees as earnings added to their pay; the individual employee plan costs are then collected through payroll deductions.

Deduction
An amount subtracted from available net pay. Deductions can be involuntary (child support or maintenance) or voluntary (pension plans).

Deduction cycle
A predetermined schedule for taking voluntary deductions, based on the defined frequency.

De-enrollment
The process of shutting off plan benefits for an employee for reasons other than a separation activity.

Deferred compensation
Any benefit that is not immediately payable to an employee, but is instead deferred to a later date. This term refers to retirement vehicles, including all defined benefit, defined contribution, stock, and thrift/savings plan.

Deferred plan
Any benefits plan in which benefits are not immediately payable to an employee, but are deferred to some later date. This term refers to retirement vehicles, including all defined benefit, defined contribution, stock, and thrift/savings plans.

Delimiter
A character that tells the system where an item of data ends and another starts.

Dependent
An individual who relies or depends on another for his or her support.

Dependent number
A unique number in the eCyborg Interactive Workforce database that identifies an employee's spouse and his or her other dependents.

Detail page
A page in eCyborg Interactive Workforce that displays detailed information. Summary pages contain links to the detail for each record.

Dialog box
A secondary window that appears on the screen to present information or request input. Dialog boxes are generally temporary—they disappear after you enter the requested information.

Disability insurance tax
A tax required by some us states to be funded by employee-paid contributions to pay all or part of the cost of disability insurance coverage. On the Payroll Solution, us state disability insurance tax records are established as Type 4 taxes.

Disciplinary action
Action taken against an employee for violation of an organization policy or procedure.

Discretionary increase
A salary increase amount or percentage determined by a manager according to the guidelines established by the organization.

Display
Make data or images display on a computer monitor.

Display box
An area on a form in which data is displayed (formally known as an inquiry field).

Disposable income
For garnishment purposes in the us, an employee's earnings minus deductions required by state or federal law.

Distributed location
A customer location where data changes are replicated and may be distributed. A DL is identified to the system by a unique 5-position alphanumeric node ID.

Distribution
The process of passing data from a source DL to one or more target DLs.

Distribution rules
A set of parameters that determine how data will be distributed from one DL to another. These are defined at each DL by the owner using the distribution rules screens. Distribution rules are stored in tables that are not replicated (thus, they cannot be distributed).

DL
Abbreviation for ***distributed location*** (on page 1077).

Double-click
Click a mouse button twice in rapid succession.

Drop-down list
A drop-down list is a view of the acceptable entry options available for a text box.

Drop-down list box
A standard windows control that displays a current setting but can be opened to display a list of choices. The user selects a choice by double clicking on the choice. The user can type into the field, and the system moves the list of choices to the last letter typed.

Dynamic SQL
Statements created by a program that must be interpreted and converted to executable sql statements at run time.

Earned income credit
A refundable amount that reduces the tax owed by certain low-income individuals in the us who meet adjusted gross income levels.

Earning
Money paid in return for work performed or services rendered. In Payroll Administration, earnings are separated by earning numbers into various categories such as regular pay, overtime pay, shift pay, bonuses, and so forth.

Earnings category
Used to categorize similar earnings. For example, all the overtime earnings can be grouped into category 01, all the shift differentials/premiums into category 06, and so forth.

EBCDIC
Extended **B**inary **C**oded **D**ecimal **I**nterchange **C**ode; binary code for alphabetic and numeric characters developed by IBM for its computers.

eCyborg Interactive Workforce Home
Button on every page that returns the user to the eCyborg Interactive Workforce Home Page.

eCyborg Interactive Workforce Home page
Home page that displays each time employees log on to eCyborg Interactive Workforce after completing the new user tasks on the New User Home page.

Effective date
Date on which an event takes place, for example, an enrollment or benefits plan change.

EIC
Abbrevation for ***earned income credit*** (on page 1077).

EL
Abbreviation for English Language, now called CSL (Cyborg Scripting Language).

Electronic Performance Support system
Online tools that help users perform their job quickly and efficiently. EPSS can include online help, computer-based training (CBT), electronic manuals, wizards, and so on.

Email
Literally 'electronic mail'. This is a message that is sent to one or more people within or outside of your organization by an automated email software package.

Employee cancellation
An employee cancellation occurs when an employee is canceled from attending a training class or training program.

Employee Database
The file that contains organization and employee records. This is File02. It was formerly known as the Master File.

Employee Database record
The complete record for an employee. It may be composed of multiple physical records.

English Language
Former name of Cyborg's fourth-generation programming language, now called Cyborg Scripting Language.

Enrollment form
A customer-defined form used by employees to record their benefits elections and any associated dependent and/or beneficiary information.

Entitlement accrual
An accumulation of hours for an employee benefit, such as sick leave or vacation time, commonly known as an accrual.

Entity
Each Organization Unit, Job, Position, and Incumbent is an entity. Together they are entities.

Entry field
An area on a screen or browser page where the user can input information.

Entry form
An entry form is a form used to enter data.

Environment
The host platform and workstations where your Cyborg system resides, and any communication protocols. Also, a work space dedicated to a specific processing type. For example: development, test, and production.

EPSS
Abbreviation for ***Electronic Performance Support system*** (on page 1077).

Establishment Reporting
Establishment Reporting occurs when an employer with several business locations chooses to file wage reports, broken down by location or unit, to the Social Security Administration. Each unit is identified by a four-character code, called an Establishment Number. The employer obtains approval from the SSA to use Establishment Reporting. Establishment Reporting does not apply to 1099s.

Event
The combination of a trigger (changes made to system data) and an action (the creation of an email or letter). Events always consist of these two component halves.

Excused absence
Absences from regularly scheduled work that can be considered as either paid or unpaid time off.

Extract file
A data file generated to be used by another system or application.

Federal Insurance Contributions Act
The United States Federal Insurance Contributions Act imposes two taxes on both employers and employees. Tax is withheld from an employee's wages to finance the Old-Age, Survivor's, and Disability Insurance (OASDI) social security program and the Hospital Insurance (HI) medicare program. Employers are then required to match the amounts withheld from employees. On the Payroll Solution, employee information for FICA-OASDI social security tax is entered on tax record 101 and FICA-HI Medicare tax on tax record 103.

FICA
Abbreviation for Federal Insurance Contributions Act.

Field
A data item on the database. This is usually displayed on a form as a text box.

eCyborg Interactive Workforce specific—A space allocated for a particular item of information. A tax form, for example, contains a number of fields: one for your name, one for your Social Security number, one for your income, and so on. Every field has a name (also called a field label).

Filter
Device used by report to select certain rows of information from the database, thus limiting the amount of data from the database to be viewed in the report.

Finished
Users click Finished when they have completed all information on a checklist or other *ESS* page.

Flat rate tax
A US local tax that is calculated as a standard percentage rate and that is calculated in the same way for all employees (that is, factors such as marital status do not enter into the calculation). For many such local taxes, Cyborg does not provide tax specification information on the Tax Authority File. Instead, you need to enter a Tax Specification Record for the tax on a Tax Specification Information form, indicating the tax rate in the Flat Rate text box.

Flex credits
Units granted to an employee in order to purchase benefits under a Flexible Benefits Program.

Flex Master Plan
Defines your Flexible Benefits Program and ties component plans together as a group. Employees are enrolled in the Master Plan and then select the benefit plans in which they wish to participate—for example, medical, dental, and life. Flex master plans are set up in Benefits Administration and used by eCyborg Interactive Benefits to display benefit plans to users for initial and open enrollment.

Flex plan
A benefit plan where, in addition to a core of basic benefits (if applicable), the organization/company allocates to each employee a credit for purchasing additional benefits tailored to their individual needs. Flexible benefit plans may include a flexible spending account.

Flexible Benefits Plan
A specific type of benefit plan that allows employees to select their benefits from a number of benefit plans. This term may be used interchangeably with cafeteria plan.

Flexible Benefits Program
A benefits program in which an organization may allocate to each employee a pool of credits or a monetary amount that is to be used to purchase benefits tailored to individual needs.

Flexible Spending Arrangement
A benefits welfare plan set up as an account in an employee's name that is used to reimburse the employee for certain personal expenses. In the United States, these accounts are provided by employers as a way for employees to pre-fund dependent care, legal services, or medical expenses with pretax currency.

Folder
Logical organization device for the content of a Cognos catalog.

Form
A window of information that appears within The Solution Series, including text boxes and other controls. This was formerly known as a screen.

Form area
An area of the window that contains a form.

Form Builder
A tool provided by Cyborg Systems for use with The Solution Series for designing forms.

Formal education
Education that is obtained from a college or university.

Forward
Displays the next page.

FSA
Abbreviation for Flexible Spending Arrangement.

FTE
Abbreviation for Full Time Equivalent.

FTP
File **T**ransfer **P**rotocol. A means of allowing a user on one computer to transfer files to and from another computer over a network

Full Time Equivalent
The ratio of total working time to the time that represents full time employment for a single employee. For example, an FTE of 0.5 means working half of the time that represents full time employment.

Funeral days
Absences from regularly scheduled work due to a funeral, which at the discretion of the organization, can

be considered as authorized or unauthorized, paid or unpaid time off.

Gap analysis
Comparison of a current state of being with a desired state of being. For example, you could perform a skill or competency gap analysis on individual employees or on the workforce as a whole, comparing the existing state of skills and competencies with the required state or level of skills and competencies.

Garnishment
A legal procedure authorizing a deduction from an employee's earnings to satisfy a legal requirement.

General ledger interface
A file that provides a balanced payroll journal for the period. This file contains journal entries for labor expenses, withheld deductions, income, disability, UI, and other withheld taxes, net pay, and company-paid taxes. The interface may also be produced on paper.

Go to details
Displays a new page with detailed information. Used on summary pages.

Graphical User Interface
The Solution Series provides integrated human resource and payroll functionality via the Microsoft Windows Graphical User Interface. These are the elements that display on your screen.

Grievance
A formal complaint made by an employee against the organization usually because of an unsatisfactory working condition or other work-related dispute.

Gross wages
The total of all earnings paid to an employee.

It is stored in the Total Pay (field 119 of the US Tax Authority File) field of the employee's US FICA tax record 101 (FICA-OASDI). This figure appears on the Combined Register (2222) report as Total Pay. It does not appear on US W-2 forms.

Group box
A standard Windows control that groups a set of controls.

Group plan
Defines any number of benefit plans tied together as a group. Group plans are used to define common eligibility and to cluster plans for reporting purposes.

GUI
Abbreviation for Graphical User Interface.

Handicap
Having a physical or mental disability that substantially limits activities especially in relation to employment or education.

Health and safety profile
Data on the employee record that includes information such as the employee's blood type, language, physician, emergency contacts, and any disabilities.

HED
Acronym for Hours, Earnings, and Deductions. Each earning or deduction must be established in The Solution Series with a unique identifying three-digit code. HEDs are used to record pay, hours worked, and deduction amounts and arrears for each employee.

Help
Hot spot on an eCyborg Interactive Workforce page that displays step-by-step directions for completing the page.

History record
Part of an employee's payment history; a snapshot of a check paid to an employee or an adjustment made to an HED or tax.

Holiday days
The time off that all employees are entitled to based on the decision of the organization or government regulation.

Home page
The main page of a Web site that generally serves as an index or table of contents to other documents stored as pages on the site.

HTML
Abbreviation for **HyperText Markup Language,** the authoring language used to create documents on the World Wide Web. HTML defines the structure and layout of a Web document by using a variety of tags and attributes.

Import facility
A tool delivered with The Solution Series that moves data from an external source to any organization or employee form.

Import record
A line in a spreadsheet or delimited file that contains employee or company data.

Inactive plan
A benefits plan that no longer allows employee enrollment.

Inactive tax record
An employee tax record that is no longer in effect for a given employee. Neither wages nor taxes are accumulated for the particular tax record. However, any wages and/or taxes already accumulated remain until clearing is performed. Such clearing is usually performed in preparing the Employee Database for a new year. The inactive records can be deleted at this time. The process of making a tax inactive is called deactivating.

Incumbent
An incumbent is an employee linked with a specific position. The linking of an employee with a Position is an incumbency. An employee may be linked to more than one position; in other words, an employee with multiple incumbencies. A position to which more than one employee is linked has multiple incumbents.

Information-level security
These records grant access to employee and table data via specific password records.

Initial Administrator
Only user whose user ID and password are created during installation. The initial administrator always has authority to all administrative functions: eCyborg Interactive Workforce, Human Resources Administration, Benefits Administration, and Payroll Administration, and can assign administrative roles to others by creating administrative user IDs and passwords.

Initial passwords
Password generated by eCyborg Interactive Workforce for each user ID extracted from The Solution Series. Users must create a user-defined password when they log on to eCyborg Interactive Workforce for the first time.

InitialAdmin
See Initial Administrator.

Inquiry form
A inquiry form is a form used to view data already entered.

Instructional text
Any paragraph(s) on the page that explain the function of the page or fields to the user.

Internal candidate
An employee of your organization who is applying for another job or position in your organization.

Internet
A global network connecting millions of computers.

Intranet
A network belonging to an organization, usually a corporation accessible only by the organization's members, employees, or others with authorization and used to share information.

Investment funds
Different options or accounts available to employees for allocating their contributions, usually applicable to thrift/savings plans.

IPEDS
Integrated Postsecondary Education Data System.

Job assignment
A job associated with a particular employee.

Job code
A designation for a job assignment.

Job streams
A generic reference, Job Control Language, for your operating system's command language.

Alternately: Jobstreams

Job type
A generic category that further defines a particular job.

Jury duty
This is compulsory service on court appointed juries. Employers are required by law to excuse jury duty

related absences. They are not, however, required by law to pay the employee during this time away from the job.

Label
Text that describes the information the user enters into the field.

Labor record
A record containing the hours, amounts, associated charge-to control levels, and function assigned on the employee's Payroll Home Location/Pay Allocations form.

Leave of absence
Occurs when an employee leaves the organization for a period of time, usually temporary, for personal reasons such as medical leave.

Log off
Logs the user off the system. When referring to the Log Off button, use initial caps.

Logical Employee Model
A collection of default employee information that is used to create a model. Logical Employee Model templates are used when hiring new employees to save time and ensure that critical information is established consistently and correctly. These were formally known as LMODELs.

LPI
Lines **p**er **i**nch

Mailing address
An address, other than your legal residence address, to which you have your mail sent.

Maintenance payroll run
A maintenance payroll run automatically updates organization and employee records, but it does not process time entries or generate payments, pay slips, or deposit advices. It is also used to create payment history records.

Major activity
Event that causes a change in an employee's employment status, such as a new hire, termination, or rehire.

Mandatory field
A field that requires the user to enter information before the user can exit the screen or page.

Map file
Stores the predefined relationships between an import file and a form.

Mass time entry creation
Creating time entries for a group of employees through one program execution, such as for a paid holiday.

Master File (0202) report
A Cyborg report that produces a formatted display of the data in an employee's current batch Employee Database record. This includes the wages and taxes accumulated for the employee, covering current, month-to-date, quarter-to-date, and year-to-date information for individual tax codes. It is report generator 0202.

Matrix ID
Unique identifier for each pay-for-performance matrix.

Menu
A list of choices; the choices are generally links that take the user to another screen or page.

Menu bar item
A menu that appears on the menu bar.

Message area
An area of the window that contains messages or selection lists relevant to the current form. The Message Area can be turned on or off.

Method code
One of many specific routines (usually delivered by Cyborg and identified by a two-character code) used to calculate earnings and deductions.

Midpoint
The middle of the span of currency from the minimum to the maximum of the employee salary grade.

Minimart
Relational tables you create so you can insert data from your Subset data extractions.

Monetary perquisites
A privilege or profit that an employee is entitled to that is incidental to regular wages or salary.

Moving expenses
The expenses incurred by an employee due to moving from one location to another for employment purposes.

Multiple master
A file compression technique that duplicates the current employee Permanent Master Record as many times as there are payments to that employee during one pay period. These multiple masters are detail records reflecting the amounts for the payment being made (current), and the adjusted MTD, QTD, and YTD totals. The system uses multiple master records to create history records showing the current payment figures only.

Navigation bar
In eCyborg Interactive Workforce the Navigation bar shows the name of the page you are using, for example, 'Mailing Address'. The top line of the Navigation bar shows the path you took from the Home page to reach the present page. Links on the Navigation bar let you return to the home page or log off the system.

Navigator
Left pane of the work area which forms the main method of moving through the forms. From the Navigator users select the component, process, and task in which they are interested.

Net credit method
A method allocating flex credits. An employee's cost of benefits is calculated as either a net cash earning or a net deduction from the employee's pay. The net amount is the difference, either plus or minus, between the credits allocated to the employee and the cost of his or her flex benefits choices.

New hire
Process of hiring a new employee for your organization.

New user
A user of eCyborg Interactive Workforce who has not yet completed reviewing and updating their personal information on the New User Home page.

New User Home page
Home page that displays for new users of eCyborg Interactive Workforce until they complete reviewing and updating their personal information.

Node
A Distributed Location.

Node ID
A unique 5-position identifier for a node. The naming convention is defined by the user.

Number registered
This is the number of employees registered for a training class. It is updated and displayed on the Class Schedule form.

Object
Each System Control Repository record type is assigned an object code. A single record type can have several object codes assigned to allow limited display.

Object key
A field that allows you to specify the System Control Repository record group you want to display. The value of this field is dependent on the type of information you want to display.

Obsolete plan
A benefits plan that will no longer be used.

Off cycle
An off-cycle payroll run is an additional payroll for the period just completed. An off-cycle payroll run is commonly used to process nonstandard payments, such as bonuses. It is sometimes referred to as an additional or bonus payroll run.

Online
Turned on and connected, for example, printers are on-line when they are ready to receive data from the computer. Users are considered on-line when they are connected to a computer service through a modem. That is, they are actually on the line.

Open enrollment
A period of time during which employees can enroll in or change their benefit choices for the upcoming year, generally in October or November.

Operator ID
A four-character code that identifies the user to the system.

Option
An item in the option list for a field. This was formerly known as a codeset item.

eCyborg Interactive Benefits and Benefits Administration specific—In Benefits, the plan coverage that an employee selects, such as single or family coverage.

Option button
A standard Windows control that allows you to select from a fixed set of mutually exclusive options (previously known as radio button).

Option list
An option list is a list of options that are available within a Text box. This was formerly known as a Codeset.

eCyborg Interactive Workforce specific—Options available in The Solution Series that the eCyborg Interactive Workforce administrator loads in to eCyborg Interactive Workforce. The options are then available in the drop-down list boxes in eCyborg Interactive Workforce.

Organization
A group of employees who are employed in a common structure, governed by the same set of rules or policies, and eligible for the same earnings and deductions For example, your organization may be structured into parts that represent employee groups such as active, union, retirees, applicants, and so forth.

Formerly known as a company or Control 1-2.

Organization Level 3
A customer-defined value used to determine the breakdown of an Organization for Human Resource reporting or selection purposes. This control level may be translated to a division, plant site, section, and so forth, as defined by you.

Organization Level 4
A customer-defined value used to determine the breakdown of an Organization for Human Resource reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Organization Level 5
A customer-defined value used to determine the breakdown of an Organization for Human Resource reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Organization Level 6
A customer-defined value used to determine the breakdown of an Organization for Human Resource reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Organization Number
A six-character user-defined code that represents an organization; the highest level of the organizational structure in Payroll Administration.

Formerly known as a Control 1-2.

Organization Unit
An organization unit ('Org Unit') is a grouping of Positions within an organization (for example, Accounts Department).

Organization Validation table
A table that validates that an organization is valid and payments can be made.

Organization-specific tax setup
A method of implementing Tax Specification Records in which each organization involved in tax processing contains all the specification records required to process taxes for its employees, as opposed to a common tax organization.

Override file
A file used to maintain COBOL or Report Generator changes to the system.

Packaged reporting
A processing mode in which a job is scheduled to be run at a certain time.

Paid absence
Employee absence that will be paid by the organization. A time entry will be created for this absence.

Parallel run
The process of executing the same programs simultaneously on two separate systems to obtain the same or similar results.

Parameter form
A form that is displayed when certain programs are called from the Navigator or menus. The form facilitates entering parameters for the program.

Password
A secret series of characters, generally user defined, that enables you to access a computer, a software application, or a file. On multi-user systems, each user must enter his or her password before the computer will respond to commands.

In eCyborg Interactive Workforce, the password ensures that unauthorized users cannot access user-specific information.

Password aging
The period of time that elapses before a user-defined password expires and the user must change his or her password.

Pay allocation
A means of allocating, on a percentage basis, employee labor hours and amounts to multiple sets of control levels 3 through 6 and function to accurately reflect employees whose labor must be charged to more than one area within an organization.

Pay document
A pay slip or deposit advice with its associated pay stub.

Pay frequency
The interval at which a group of employees is paid. Examples are weekly and semimonthly. Also referred to as a payroll period.

Pay schedule
A predetermined schedule for a calendar year, identifying period-end and payment dates for each pay frequency.

Pay stub
A preprinted form, corresponding to a check or deposit advice that lists all earning, gross pay, taxes, deduction, and net pay information for an employee.

Pay-for-performance matrix
Chart representation of the variables that result from the combination of salary increase information, how much to give and when.

Payment history record
A record documenting the detail information for a payment or adjustment. Multiple payment history records may be generated for an employee, reflecting multiple adjustments or payments. These records include all earning, deduction, and tax information included in the payment or adjustment.

Payroll home location
The location where the employee is normally assigned to work and where labor distribution information is charged. An employee's home location comprises specific Payroll Levels and is always assigned Allocation Number 01 on the Payroll Home Location/Pay Allocations form. The Function field may also be used as part of a home location, depending on your specific requirements.

Payroll Level 3
A customer-defined value used to determine the breakdown of an organization for Payroll reporting or selection purposes. This control level may be translated to a division, plant site, section, and so forth, as defined by you.

Payroll Level 4
A customer-defined value used to determine the breakdown of an organization for Payroll reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Payroll Level 5
A customer-defined value used to determine the breakdown of an organization for Payroll reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Payroll Level 6
A customer-defined value used to determine the breakdown of an organization for Payroll reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Payroll period
A defined period of time for which an employer pays wages to employees.

Payroll Process Control
A series of forms used during the Payroll Process to determine the type of run (payroll run or maintenance run). Allows you to specify the pay frequencies to be paid and which reports are to be produced.

Payroll run
Updates organization and employee records, processes time entries, calculates employee pay, generates pay documents and payroll reports, including the Combined Register. It also produces a variety of special interface outputs.

PCL
Printer **C**ontrol **L**anguage

PDF
A file format that captures formatting information from a variety of desktop publishing applications, making it possible to have formatted documents appear on the screen and be printed. To view a file in PDF format, you need Adobe Acrobat Reader, a free application distributed by Adobe Systems.

Peer-group appraisal
Appraisal that uses performance evaluations completed by an individual employee's co-workers or project team members.

Pending de-enrollment segment
Plans for which an employee is enrolled, but has lost eligibility, as listed on the Pending Plan Enrollment/De-Enrollment form.

Pending eligibility segment
Plans for which an employee is eligible but not enrolled, as listed on the Pending Plan Enrollment/De-Enrollment form.

Performance appraisal
A periodic assessment and ranking of an employee's skills and accomplishments.

Performance appraisal rating
A method of ranking the performance of an employee during a given period using options ranging from 1-Outstanding to 5-Unsatisfactory.

Performance rating
A method of ranking the performance of an employee during a given period using options ranging from 1-Outstanding to 5-Unsatisfactory.

Performance-related pay
Monetary payments made to employees based on how well an employee has fulfilled job expectations.

Perquisites
Property or privileges extended to an employee.

Personal days
Authorized absences that are generally considered as paid time away from regularly scheduled work, but can be either paid or unpaid.

Phonetic keys
The keys you use to access employee data using the phonetic spelling of an employee's last name.

Pixel
The smallest rectangular area of an image on a screen.

Plan deactivation
A process that makes a plan inactive and prevents future employee enrollment.

Plan ID
A three-position, alphanumeric identifier for a plan in the system.

Plan shutdown
The process of de-enrolling an employee from all benefits plans because of a separation activity.

Plan year
The 12-month period over which a salary budget is effective.

eCyborg Interactive Workforce specific—The calendar, policy, or fiscal year in which the records of a Benefits plan are maintained.

Policy tables
Highest level tables that are used to record the generic (or master) rules for an organization or group of employees. These included your organization's rules relating to working time procedures, such as clocking in and out, docking for lateness, and overtime. Each

policy consists of a Policy Master table and one or more Policy Activities table.

Pop-up menu

A menu that appears when you use the second mouse button within the system. This menu contains context sensitive commands and options that relate to the object you have clicked on.

Portable document format

See PDF.

Position

A specific role with an organization—for example, Accounts Manager.

Alternative definition: to place an object in a specified location.

Position Administration Control Number

Two-character alphanumeric value that tells Position Administration which tables to use for a specific company.

Position complement

A 'Position complement' is the value of a Position. The organization complement is the total value of all Positions included in the complement.

Position in range

The difference between a given salary and the minimum of the salary range, divided by the difference between the range's maximum and minimum, and expressed as a percentage.

Posttax

A contribution made after taxes have been withheld from earnings.

Premium

The amount of money an organization agrees to pay an insurance company for a policy or annuity, or the amount contributed by an employee to the employer to cover the employee's portion of the total premium.

Prenotification

Informing a bank or credit union that an employee will be using direct deposit with them in the future. Cyborg recommends that you fill out the Direct Deposit Information form two pay periods in advance of the first deposit date. This ensures that a prenotification record is provided to the bank or credit union in a timely manner.

Pretax

A contribution made before taxes have been withheld from earnings.

Primary account

The account set up in eCyborg Interactive Workforce to receive an employee's pay or reimbursement checks. After deductions and deposits to additional (secondary) accounts, the remainder of pay is deposited into the primary account.

Process

A subset of a component that logically groups tasks on the Navigator or menu. For example, the process 'Maintain Employee Details' contains tasks such as 'Basic Employee Information' and 'Personal Information'.

Alternate definition: An action that brings about a result.

Process bar

The graphical representation of a process on the navigator. Each process bar is within a Component.

Program

A program is a series of classes being administered using Training Administration. For example, 'The Cyborg Training Schedule for January-June 1996' may be a program consisting of eight different classes.

Alternative definition: a form or other program within the system, accessed directly from the Command dialog box. For example, form EF-SCR is a program.

Protected amount

The amount of disposable income protected from garnishment in the US This amount may vary from state to state.

Prototype HED

An HED defined on a benefits form for use in recording employee/organization contributions when an employee is enrolled in a benefits plan. This allows the setup and maintenance of payroll deductions using Benefits Administration.

Provider
A provider is an instructional institution, organization, or person who is available to teach training courses.

Push button
A button on the interface which appears depressed when clicked on (now known as command button).

Quartile
Points that represent the division of a salary grade range into four equal parts.

Query alternate keys
The keys you use to access the employee master record in an order other than by primary key.

Query primary keys
The keys you use to direct your QUERY program to a record type.

Quick Hire
The process of hiring an employee by entering one two-panel form with the required data elements rather than entering a series of forms.

Radio button
A button on a form that selects an option, the radio buttons that make a field are mutually exclusive (now known as an option button).

Recall
Return a laid-off employee to active status, usually with no affect to benefits.

Reciprocal taxation
Reciprocal tax withholding refers to agreements made between US states and (or) localities regarding income tax calculation and reporting for compensation paid to an employee who lives in one state or locality and works in another.

Record
A complete set of fields, such as the fields that make up a tax form or a name and address record.

Alternate definition: To set down for preservation in writing or other permanent form.

Recruitment
Process of finding and hiring new employees who meet the needs of your organization.

Recycle File
P05IN; A file that contains employee data and pay document information required for payment reconciliation. It also contains time entries to be processed and paid at a later date. This file is used to pass data to the next payroll or maintenance run.

Registration
Registration is the act of enrolling an employee in a class.

Registration number
A three-digit registration number is assigned to employees for tracking purposes when they register for a training class. This enables the order in which the employees registered to be viewed.

Rehire
The process of hiring a former employee of your organization. Typically, a break in service is incurred and benefits must start over (usually requiring a new adjusted seniority date if used in benefits tracking).

Reimbursement account
The account into which employee's travel and other expense type reimbursement checks are directly deposited.

Reinstatement
The process of returning a former employee to active status within a certain time period (such as 90 days), thus qualifying the employee to have certain benefits restored to the original hire date.

Reject time
The point at which an error condition will occur. An error condition must be manually corrected/approved and approved before a time entry can be generated by the system.

Relocation
The process of moving an employee from one organization to another geographic location, whether the move be domestic or international. This process also applies to applicants who are being relocated as part of the hire process.

Remaining net pay
The 'bucket' of money that is left after all employee deductions and taxes have been taken from the employee's gross pay. This 'bucket' of money can then be used for multiple deposits if the enterprise sets up multiple deposit HEDs.

Replication
The automatic process of writing changes made in the Employee Database and option lists and tables in the System Control Repository to the Replication Holding File (FILE08).

Replication Application
English Language program (DSAPLY) that reads records from the Replication Packet File (FILE20) produced by the Replication Reception program (DSRECV) and updates the System Control Repository and Employee Database accordingly.

Replication Distribution
Two COBOL programs that work together to distribute and receive updates. The Replication Distribution Program (DSTRIB reads either the Replication Holding File (FILE08) or a Replication Packet File (FILE20), selects data applicable to a specific DL and writes all necessary data to a new output-only Replication Packet File (FILE21). The resulting FILE21 will be processed on the remote DL via the DSRECV Replication Reception program.

Replication Holding File
FILE08. This file contains additions, changes, and deletions to the System Control and the Employee Database. Data is distributed from and written to this file, based on the data distribution rules configured for the target DL by the source DL.

Replication Packet File
(FILE21/20). This file contains data changes and is created specifically to update a target DL. This information may include Company/Employee data, tables and option lists, and time entry and adjustment records.

Report
The term report refers to a report produced on paper.

Report Generator
A program that produces the batch payroll and the batch payroll reports.

Report Group
A series of packaged reports that are created using the Report Group Activities form and are run together.

Report Group Scheduler
This is the program that allows you to schedule reports. This was formerly known as the Report Scheduler.

Report parameters
Specific guidelines for determining the information to be processed by a given report or program.

Requisition
A formal request to fill a vacancy or vacancies.

Requisition candidate
A candidate for a vacancy represented on a requisition.

Requisition limit
A total unit value of a requisition.

Requisition unit
The value of a requisition expressed as an FTE, hours, salary or headcount.

Retirement
Occurs when an employee retires from the organization.

Return
The activity of an employee returning as an employee to active status, usually following a leave of absence.

Alternative definition: key on keyboard used to perform a carriage return, can also be known as Enter.

Review process
A method used by an organization to evaluate an employee's salary or performance in a standard, timely manner.

Roll-up reporting
Option that enables packaged reports to be processed within organizations (roll-up).

Rotation pattern
A way of describing the working pattern for a group of employees (crew) who regularly work different shifts.

A crew is a group of employees who together regularly work the same schedules according to a rotation pattern.

Safety standards
Legally-mandated workplace safety standards.

Salary budget record
Defines, for each employee, the budgeted increase amount, percentage, and effective date for a specific salary plan year, and the prorated effect of this increase on the budget in terms of amounts and percentages for each employee.

Salary grade
A range of salary amounts associated with a particular job.

Salary grade range
A range of salary amounts associated with the salary grade for a particular job.

Salary plan
A set of rules or guidelines used to budget for salary increases for the coming year.

Salary plan year
A 12-month period over which a salary plan is effective.

Salary range
The span of salary amounts from the minimum to the maximum of the employee salary grade.

Salary review
A periodic evaluation of an employee's compensation.

Salary review authorization form
Hard copy format of the employee criteria necessary to review and approve proposed salary increases.

SAT file
The Solution Series form appearance table. Simple text file that reflects the form's layout.

Save Changes
Saves the page (form) the user completed. (When you click 'Save Changes', eCyborg Interactive Workforce saves the information on the page whether or not the user made changes.)

Schedule Activities table
Identifies activity types for each point in a work day where the process of clocking in and out should be dealt with. Each Schedule activity also contains time parameters that will be used to calculate whether an employee will be docked or credited time.

Schedule assignments
Also referred to as a schedule. This term refers to the details of the Schedule Master tables to which an employee is assigned. These details include the date the assignment took place, the Schedule Number and Sub-Schedule Number, and (if applicable), the crew to which the employee is assigned.

Schedule error
Occurs when a clock transaction (ring) time falls outside of an employee's schedule reject times.

Schedule Master table
Used to set up your organization's Time and attendance rules (such as HEDs and the minimum number of hours an employee must work before a meal deduction is made). A Schedule Master table is associated with a Calendar Routine, earnings Code, and Shift Premium table by entering the appropriate identifier.

Schedule number
A unique three-character alphanumeric identifier used to partially identify a schedule table.

Screen
Now known as a form.

Scroll bar
When information on a page takes up more than one screen of your monitor, the system adds scroll bars to the right side of the screen. On the scroll bar:

- Click the up arrow to move line by line to the top of the page
- Click the down arrow to move line by line to move to the bottom of the page
- Click the double arrows to move several lines up or down the page

Click and drag the bar in the scroll area to manually move up or down the page.

Search argument
The value from an employee's master record used to search benefits tables to apply plan rules to specific groups of employees.

Search type
The definition of a field from an employee's master record to use as the search argument.

Secondary account(s)
Additional account or accounts at financial institutions that employees set up in eCyborg Interactive Workforce receive a portion of their pay. A primary account must be defined before an employee can set up additional accounts.

Security Officer
The assigned employee who is responsible for the setting up and monitoring of the security your Cyborg system.

Self-adjusting taxes
Taxes for which the system automatically recalculates the tax on a cumulative year-to-date basis on each payroll run.

In the U. S. these include FICA taxes: Social Security (tax record 101) and Medicare (tax record 103). The purpose of this calculation is to avoid any differences (of pennies) in FICA tax paid versus FICA tax due at year-end due to rounding on a pay period basis. In addition, certain state disability taxes and employee-paid state unemployment insurance taxes also self-adjust.

Sequential Master File
P20IN; The batch processing version of the Employee Database. This file contains organization and employee data, tax tables, and the object code for programs.

Service interruption
A period of time during which an employee did not maintain an active working status in the organization.

Service method
A calculation option list that determines the method for calculating credited service.

Session
When users log onto a software application, they begin a session. When they log off, they end the session.

Alternate definition: The period of time during which a class is held.

Shift
An employee schedule assignment for a given day. For a rotation pattern, this is a Sub-Schedule Number.

Alternative definition: key on keyboard, typically used to describe key combinations for a shortcut key.

Shift premium
A premium (or differential) added to an employee's regular earnings, overtime earnings, or both. It is represented by a shift code or HED Number.

Shortcut menu
A menu that appears when you right-click within The Solution Series 4. This menu contains context-sensitive commands and options that relate to the object (form, Navigator, and so on) on which you have clicked.

Sick days
The time off that an employee is allowed to take due to illness as a result of an employment contract or organizational policy.

Solution View
An online utility that provides the tools for creating new forms, fields, and report programs without the direct use of Cyborg Scripting Language.

Source DL
The node that owns the data being distributed. Depending on the rules established, the same DL can alternate from source to target.

Special assessment
Extraordinary or temporary taxes, such as additional employer-paid or employee-paid contributions to state unemployment programs or to mandatory health insurance programs.

Spinbox
A control on the interface composed of a text box and increment and decrement buttons that allow you to adjust a value from a limited range of possible values.

Spreadsheet application
Software for recording ledger entries, creating worksheets, graphing data, and other accounting functions.

Standalone Time and Attendance
Customers who are using the Cyborg's Time and Attendance Administration but not the Cyborg's Payroll Administration.

Static data
Includes organization and employee information, such as name and salary.

Static SQL
Data Definition Language (DDL) and Data Manipulation Language (DML) statements embedded in application programs.

Status bar
The bar that appears at the bottom of The Solution Series window. The Status Bar displays useful information, such as your current session number, the currently displayed organization and employee, and so forth.

Statutory employee
Any of the four categories of workers who are independent contractors under common law and are treated by statute as employees. These include:
(1) a driver who distributes beverages (other than milk) or meat, vegetables, fruits, or bakery products; or who picks up or delivers laundry or dry cleaning, if the driver is your agent or is paid by commission.
(2) certain types of full-time insurance sales reps
(3) an individual who works at home on materials supplied by you that must be returned to you
(4) certain full-time traveling or city salespeople.

Social Security and Medicare (FICA) taxes may or may not be withheld. Income taxes are not withheld from a statutory employee. A statutory employee will receive a W-2 with the ‘Statutory Employee’ box checked.

Sub-schedule number
A two-digit numeric text box used to further identify a schedule table.

Succession planning
Finding and developing employees for placement into identified key positions that are expected to become vacant sometime in the future.

Summary page
To help you see information at a glance, eCyborg Interactive Workforce uses summary pages. The summary page displays a short view of detailed information. For example, all your emergency contacts appear on a summary page. You delete the contact or proceed to the detail for the contact from the summary page.

Summary plan
A customer-owned description of a benefits plan.

Supplemental wages
Wages that are separate from regular earnings may be classified as supplemental wages and taxed using the default method. The default method means using a set percentage specified by the tax authority. Examples of such earnings are bonuses and commissions.

Surplus
A 'surplus' is an exceeded complement position.

System administrator
An individual responsible for maintaining a multi-user computer system, including a local-area network (LAN). Typical duties include:

- Adding and configuring new workstations
- Setting up user accounts
- Installing system-wide software
- Performing procedures to prevent the spread of viruses
- Allocating mass storage space

System Control Repository
This is the file that contains system definitions for The Solution Series*,* (FILE01).This was formerly known as the Control File.

System Generator
A type of Report Generator that performs system functions, such as defining data elements and system messages.

Table
Contains an organization's rules and policies and controls what actions take place at the employee level.

Alternative definition: means of displaying information in columns and rows.

Table Definition Record
Table containing data about the Position Administration table records, including the location of keys to associated tables.

Target DL
The node that receives the data being distributed. Depending on the rules established, the same DL can alternate from target to source.

Task
The lowest level of organization on the Navigator or menu, generally equivalent to a form. checklist, or dialog.

Task icon
An icon denoting a task. Task icons describe the type of task, including Forms, Checklists, Dialogs and others.

Tax authority
A government agency to which an employer and employee has statutory tax obligations. The tax authorities for which you handle taxes exist at the federal, state/province, and local levels.

Tax Authority File
A Cyborg-supplied file that contains all the tax-specific information needed to calculate taxes for tax authorities. This includes wage-bracket tables for different marital statuses and information relating to allowances and standard deductions. The sources for the contents of this file are tax specifications published by the various tax authorities.

Tax code
The three-character to seven-character Cyborg-supplied reference code that identifies a tax and that serves as the link between the Tax Specification Record and the employee tax record.

Tax Maintenance File
One of the two Cyborg-supplied tax files. A Tax Maintenance File is a file issued by Cyborg in conjunction with a Tax Update Bulletin (TUB). It contains all the tax specifications that are being updated in the bulletin, in the form of tax specification transactions. These transactions are typically used as input to the batch maintenance run in which tax updates are applied.

Tax specification
Each tax authority publishes tax specification information that specifies how each tax must be administered. This information specifies how employers should calculate taxes and how taxes should be withheld from employees (if withholding applies). The tax specifications can be in the form of tax formulas and (or) tax tables.

Tax Specification record
A record on your Employee Database that contains the tax specifications for a tax. The record contains all the information, as obtained from the governmental authority, needed to calculate tax amounts for the tax. The record may contain more than one tax; for example, US state Tax Specification records contain information for both state income tax and state unemployment insurance. Once a Tax Specification record is activated, tax specification information from the Cyborg-supplied tax files can be loaded onto the record on your Employee Database.

Tax table
A set of information required to calculate a tax, for a specific set of employee parameters. Tax tables are stored and maintained in Tax Specification records. A table typically includes wage and bracket information and data relating to allowances, such as personal exemptions and to standard deductions. There can be several tables relating to marital and resident status in a given Tax Specification record.

Tax type
This term refers to various categories of taxes, for example, income, National Insurance, unemployment, disability, Social Security (FICA-OASDI), and Medicare (FICA-HI).

Taxability
The term refers to whether an hours, earnings, and deductions amount is to be included in taxable wages to be accumulated for a specific tax. If the hours, earnings, and deductions amount is excludable, then the amount is not included in taxable wages. If the hours, earnings, and deductions amount is taxable, then the amount is included in taxable wages. The term fully excludable or fully taxable implies that more than one type of tax is being referenced, for example, state income tax and state unemployment insurance in the US.

Taxable wage base
The taxable wage base represents the maximum amount of an employee's wages on which tax is levied and after which there is no liability. A wage base in the US

typically is in effect for FICA, unemployment taxes, and disability.

Tax-related Regulatory Bulletin

A TUB contains the updates to tax specifications supplied by Cyborg, consisting of a bulletin document, a tax file that contains the updated tax specifications, and a printed listing of tax specification transactions with the updates.

TDR

Table Definition Record.

Template

A basis from which to create a custom item. For example, you can use an existing Cyborg report as a template for your custom report.

Temporary password

A set of alphanumeric characters used with a user ID to limit access to a software application. The system requires that users replace their temporary password with a user-defined password within a certain number of days.

Termination

The activity of an employee no longer being employed by the organization.

Test environment

A separate organization or system partition used only for testing.

Text box

A control on the interface in which text can be entered and edited (formerly known as a field).

Text qualifier

The character surrounding an item between delimiters. All values between the qualifier are data items and are not scanned for a delimiter. This allows a delimiter character, such as a comma, to be a valid data item. Example:

"item 1","item 2","item 3, 4 and 5"

This string contains three data items:

Item 1

Item 2

Item 3, 4 and 5

Although the third item contains a comma, it is ignored as a delimiter because it is between the text qualifier of speech/quotation marks (").

Time entry

The form in which you enter the hours worked for an employee. This was formerly known as a Time Card.

Time entry extract file

A file of time entries external to the Time and Attendance Solution that is used to feed to payroll.

Time entry validation

The Time Entry Validation/Creation program identifies and assigns an activity, for example Clock In (1), to each clock transaction (ring) when performing the validation function. Each clock transaction must be assigned to an activity, in order for time entry hours to be calculated for an employee, for a particular shift. This program validates clock transactions (rings) and generates time entries.

Timeout

The period of time that elapses before a user's eCyborg Interactive Workforce account becomes invalid because of inactivity.

ToolTip

A standard Windows control that provides a small pop-up window that provides descriptive text, such as a label, for a control or graphic object.

Top-down appraisal

Appraisal made by a supervisor or manager of an employee's capabilities. Such an appraisal is generally based on the supervisor's or manager's day-to-day observation of an employee's work performance and will usually include an appraisal interview with the employee.

Trainer

Trainers are set up on the Provider Index Form. They are instructional institutions, organizations or persons who are available to teach a training class.

Trainer code

The trainer code is a four-character value that represents a trainer. This value resides in Option List TR38.

Training area
The training area is recorded on the Class Schedule Form. It is typically defined as the section of the organization to which the training applies, such as manufacturing.

Training class results
These are the class details and absence information recorded on the Process Class Results form. Details recorded include the objectives met when taking a training class.

Training class status
The status value is updated and displayed on the Class Schedule Form. It tracks whether the training class is canceled, full or available.

Training course code
The training course code is a six-character value that represents a training course. This value resides in Option List TR33 and is associated with a course title.

Training plan
A plan of training courses that an employee will attend in the future to achieve the necessary skills to perform a job.

Training reason
The reason for training is used to identify why a training request has been made. For example, the purpose of the training to act as a refresher, to acquire new skills, and so forth.

Training request
A training request is a request for an employee to attend a specific course or class. A formal request for training is not essential. This step could be omitted and the employee could be registered directly in the course of his or her choice.

Transfer
Process of moving an employee from one organization to another organization, such as moving an applicant from the applicant organization to the active employee organization.

Alternative definition: to move data or files from one computer to another

Trend analysis
Reporting or statistics that indicate the rate of change in costs and other elements of a benefits plan.

Trigger
A set of conditions that must occur for an email or letter communication event to start. This can involve the creation, deletion, or modification of forms or checklists within the system.

Tuition reimbursement
Remuneration made to employees for tuition expenses.

Type of training request
The type of training request indicated whether the employee was required to attend the training or whether he or she asked to attend the training.

Unauthorized absence
Absences that are generally not considered paid time away from regularly scheduled work.

Underlined text
In browser applications, text that provides a link to another screen or page.

Unemployment insurance tax
A tax required by some US states to be funded by employee-paid contributions to pay all or part of the cost of unemployment insurance coverage. On the Payroll Solution, state unemployment insurance tax records are established as Type 2 taxes.

Unpaid absence
Employee absence that will not be paid by the organization. A time entry will not be created for this absence.

Upward appraisal
Appraisal that calls for evaluations by those who work under the direction of the employee being evaluated.

URL
Acronym for uniform resource locator. A standard way of specifying the location of an object, typically a web page, on the Internet. URLs are the form of address used on the World-Wide Web. They are used in HTML documents to specify the target of a hyperlink which is often another HTML document (possibly stored on another computer).

User class
Cognos Impromptu assigns security according to configured user profiles. These security profiles are configured by your Impromptu administrator.

User code
A set of characters (up to eighteen alphanumeric characters) that, along with the password, identify the user to the system as a valid user user when they log on.

The user code is case-sensitive (upper case, lower case) and must be entered using the correct case.

User defined password
A set of alphanumeric characters created by users that allows them to view and update information in a software application.

User ID
A set of characters that identify you to the software application. The application contains a list of authorized users by user ID. When you attempt to log on, the system checks the list of authorized users to determine whether you have authority to use the application.

User profile
Used for security purposes to determine what you can and cannot do while you are using the system, and which parts of the system you can access. A user profile is created and maintained for you by a Security Officer. Each user of the system will have a user profile.

Vacancy
An open position that needs to be filled, or an unfilled complement position

Vacation days
The time off that an employee is entitled to as a result of an employment contract or due to length of service.

Validation
The process where the Time Entry Validation program identifies and assigns an activity to a clock transaction (ring) when performing the validation function.

Variant forms
Method of displaying country-specific variation of Cyborg-delivered forms.

Waive
The act of choosing not to enroll in an optional benefits plan.

Warning time
Used to set a period of time after which an employee will appear on the exception report for a particular activity. A Warning condition will allow the creation of a time entry. A Reject condition will not. This is part of the Time and Attendance Administration.

Welfare benefit plan group
First level of the logical organization of welfare benefit plans in eCyborg Interactive Workforce.

Welfare benefit plan subgroup
Second level of the logical organization of welfare benefit plans in eCyborg Interactive Workforce.

Welfare plan
Any insurance or other benefit plan that provides immediate benefits to a participant—for example, medical insurance.

What-if mode
Method for processing a report that allows viewing of information without updating of employee records.

Window
A standard Windows object that displays information. A window is a separately controllable area of the form that typically has a rectangular border.

Wizard
A form if user assistance that automates a task through a dialog with the user.

Work area
The Solution Series screen. It includes the menus, toolbars, Navigator, forms area, message area, and status bar.

Work instructions
Specific tasks to be completed during the migration of data and files from test to production.

Work restrictions
Restrictions that prevent an employee from participating in specific workplace functions.

Worker's compensation
Legislation in the US that provides compensation to employees who suffer work-related injuries.

Workforce competency
The capacity of the overall workforce to perform required functions and sets of activities.

XHTML
Extensible HyperText Markup Language, used by the help pages for eCyborg.

Year End Master File
P20OUT file from the final payroll run of the year

PART 1

Introduction

In This Section

CHAPTER 1

About This Manual

Welcome

This manual will guide you through the implementation of Human Resources Administration.

This manual has been designed as a reference document. It is also used in classroom training. You will find sufficient detail in this manual for self-study, both before and after classroom training.

You will be provided with information about an organization named Acme Manufacturing and will be given instructions for setting up the Midwest Division of this organization. You will be given additional instructions for establishing basic HR rules, employee activity rules, and job information. Each instructional chapter will allow you to set up a piece of this ‘big picture’. After you complete all of the practices provided, you will have set up a complete organization and its HR rules.

Who should use this manual?

This documentation is designed to be used by a number of different users. The following users will find it most useful:

- Human Resource Managers

  Human Resource Managers will find it helpful to read the entire manual. This manual provides a big picture of Human Resources Administration and covers specific steps and considerations for implementation.

- Human Resource personnel

  Because testing revisions of specific customizations is so important for a successful implementation of this product, testers (end users familiar with how your customizations ordinarily work) should use this manual to help them prepare and implement a thorough test plan for the customizations made. Pay special attention to the chapters that provide detailed directions for setting up tables and templates—sections 4–9.

- Project leaders

  Because the success of the implementation relies on thorough planning, as well as careful rollout, project leaders should pay special attention to Chapter 3: Planning the Implementation.

- System support staff (analysts, programmers, system administrators)
  Anyone who programs customizations to The Solution Series and who will be involved in the implementation will find this manual's information and guidance helpful. Pay special attention to Chapter 3: Planning the Implementation.

Prerequisite skills

All users of this manual should have at least the following skills:

- Basic understanding of Microsoft Windows
- Attended training or have experience using The Solution Series (eCyborg: Using the Web Client or Using The Solution Series: Administrative Solutions training course is recommended)

Project Managers

- Understanding of project management concepts and techniques
- Authority to assign resources

Testers (end users)

- Understanding of The Solution Series and the tasks and needs of the end users
- Skills to develop a test plan and test scripts that will thoroughly test any customizations made to the system at your location

System support staff (analysts, programmers, system administrators)

- Understanding of the job control language for your environment
- Familiarity with job streams
- Authority to compile programs
- Understanding of programs that have been customized
- Programming skills in Cyborg's programming language

Additional documentation and training courses

The following documentation and training courses are available from Cyborg Systems to help you understand the basics of The Solution Series.

Documentation

Document	Description
eCyborg: Using the Web Client or Using The Solution Series: Administrative Solutions	This prerequisite documentation covers the introductory concepts and tasks related to Cyborg's administration solutions. It describes how to navigate through the software and explains important concepts and functionality of the system.
Technical Administration	Provides descriptions of and detailed instructions for performing the technical tasks that support The Solution Series.

If you do not have a copy of these documents, you can obtain one from Customer Support.

Training courses

Related Course	Description
eCyborg: Using the Web Client or Using The Solution Series: Administrative Solutions	This prerequisite course covers the introductory concepts and tasks related to your specific implementation of Cyborg's administration solutions.
Technical Administration	Introduces important concepts and tasks for the technical user performing the technical tasks that support The Solution Series
Introduction to Cyborg Scripting Language	Introduces the basic principles and syntax of Cyborg’s programming language
Cyborg Scripting Language Customization	Provides detailed instructions for developing and running batch reports using Cyborg’s programming language
Cyborg Scripting Language Report Customization	Provides detailed instructions for developing forms using Cyborg’s scripting language and the Form Builder software
Cyborg Scripting Language Advanced Customization	Provides detailed instructions for reading, writing, and deleting records from The Solution Series files, and introduces techniques for programming special functions of query, form, and report programs

If you wish to attend any of these courses, contact Customer Support or visit our website www.Cyborg.com for details of course dates and availability.

How this manual is organized

This manual has been organized to make it as easy to use as possible. The chapters are grouped accordingly into the following parts:

Part	Chapters	Description
1. Introduction	1–2	Provides an introduction to this manual

Part	Chapters	Description
2. Implementation	3–9	Discusses the implementation process, as well as details for setting up HR rules
3. Appendices	A–E	Provides quick references for reports and tables

Following are descriptions of the chapters within the parts.

Part 1: Introduction

Part 1 describes this manual and gives an overview of Human Resources Administration.

Read this chapter		To learn about
1	About This Manual	How the manual is organized Who should use the manual Where to find what you are looking for Where to get help
2	Overview of Implementing Human Resources Administration	Reasons for implementing, along with Human Resources Administration big picture and features

Part 2: Implementation

Part 2 describes the implementation process and the tasks needed to establish the rules that form the foundation of Human Resources Administration.

Read this chapter		To learn about
3	Planning the Implementation	The implementation process and the tasks needed to complete it
4	Setting Up an Organization	Identifying an organization and establishing organization information
5	Establishing Basic HR Rules	Setting up basic HR rules in table format
6	Setting Up Rules for Employee Activities	Establishing employee activity authorization and resulting status
7	Setting Up Rules for Employee Job Information	Job information that includes salary grade ranges
8	Setting Up Employee Templates	Using employee templates to increase productivity in processing new hires
9	Setting Up Default Field Values for Forms	Creating field defaults to increase entry productivity

Part 3: Appendices

Part 3 contains quick reference material related to the implementation processes.

Read this appendix		To learn about
A	Tables Displays	A form image for each of the tables that are discussed in the chapters of this manual
B	HR Form Title to Form ID Cross-reference	A list of all of The Solution Series forms that are discussed in the chapters of this manual
C	HR Report Title to Report ID Cross-reference	A list of all of The Solution Series reports that are discussed in the chapters of this manual
D	Data Conversion Guidelines	Approaches to converting your data to a form that can be imported into The Solution Series
E	Practice and Review Answers	Answers to the review questions at the end of each instructional chapter

How to use this manual

This manual has been designed as a reference manual as well as a training manual. It has been written to facilitate self-study before and after classroom training.

Table of contents

The manual has been carefully designed for ease of use. All our manuals are written to be task oriented to help you complete your business tasks using our software.

The table of contents lists all the tasks and their respective chapters.

Glossary of Terms

A Glossary of Terms section is provided to explain terms used in the documentation.

Index

An index is provided to help you locate specific information.

This document was designed to reduce your need for an index. You should find the table of contents sufficient.

Introductory chapters

It is important that you read the introductory chapters first. Chapter 1 ensures you get the most out of the information we have provided. Chapter 2 provides a high level overview. Read it to get the big picture before reading the detailed instructional chapters.

Instructional chapters

All chapters, other than the introductory chapters, are instructional chapters. They contain detailed instructions on how to complete the business tasks. Each instructional chapter has the following distinct sections:

Key Concepts

Always read the conceptual information first. This will help you understand why you have to perform certain tasks. It will also help you make decisions about your options and help you understand the importance of performing certain tasks. Exercises to help you apply the concept to a business task are included at the end of most concepts.

Apply the Concept

To be certain that you have understood the key concepts in a chapter, complete the Apply the Concept exercises provided. The answers to these exercises can be found in the appendices.

Detailed Directions

When you are ready to perform a task, review the Detailed Directions, which provide guidance, as well as the specific steps, to complete a task.

Guided Practice

The Guided Practice within the Detailed Directions offers you an opportunity to practice a task with step-by-step instructions. It takes you through the various steps, providing detailed examples so you can gain a comfort level with the task. Guided Practice is easy to locate.

For practice, type 'ABC Solutions'.

Note: *To successfully follow the Guided Practice, you must have completed all the previous Guided Practice exercises in the manual. The Guided Practice uses the test data installed with our software. For the Guided Practice exercises to work, this test data must not have been altered.*

All users who complete the Guided Practice must either have their own copies of the test data or have the test data restored for them.

Extended Practice

To be certain that you have understood the tasks in a chapter, complete the Extended Practice provided. The Extended Practice gives you the opportunity to complete one or more tasks without step-by-step guidance. The answers to these exercises can be found in the appendices.

Note: *To be able to complete the Extended Practice exercises in the manual, you must have completed all the previous exercises. You must also be using the test data delivered with the software. This test data must not have been altered.*

Review of Questions Answered

To be certain that you have understood all of the information in a chapter, complete the review questions provided at the end of a chapter. The answers to these questions can be found in the appendices.

Conventions used in this manual

The underlying page layout and design of this manual are meant to be as intuitive as possible for you. Our intent is to make it easy to navigate through the manual and concentrate on learning and doing.

Cross-references

Wherever appropriate, we provide cross-references to help you find additional information or further discussion of a specific topic.

☞ *Refer to a cross-reference to find more detail or more discussion on a given topic.*

Notes

Whenever there is important information you should be aware of, we provide a note.

Note: You will find tips or quick techniques covered in notes.

How to get additional help

If you can not find the answers to your questions in this manual, contact Customer Support, who will be able to answer specific questions and give you general advice on training.

Please visit our web site ***www.Cyborg.com*** (see "Cyborg Home - http://www.Cyborg.com") for the latest schedule of available courses and course descriptions.

Suggestions and feedback

We value your feedback on our performance support materials. Please forward any comments on this manual to Customer Support.

CHAPTER 2

Overview of Implementing Human Resources Administration

In This Chapter

Introduction

Even as you plan your implementation process, your Human Resource department is working toward its traditional objective—the management of an organization's key asset, its human resources. This section provides an overview of Human Resources Administration and introduces the features that will be available to your organization after implementation has been completed.

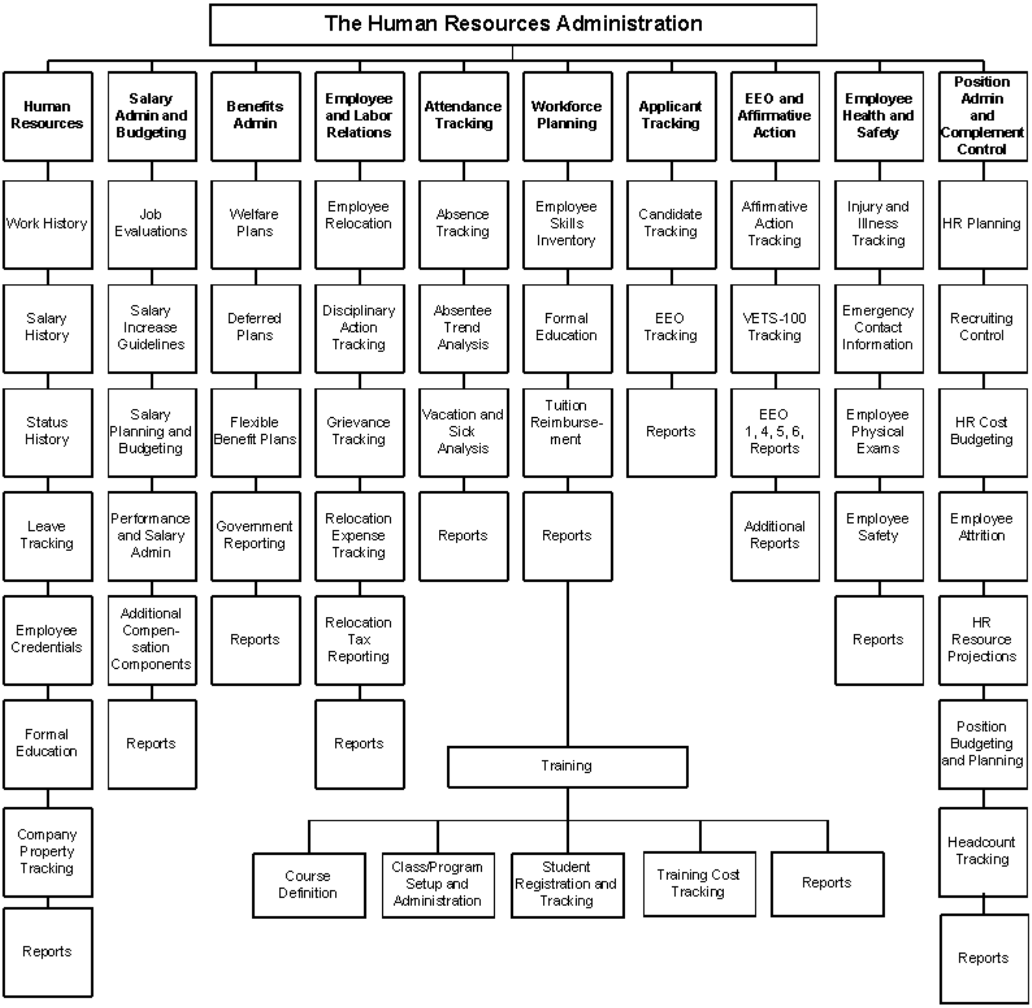
The benefits of implementing

When implemented, Human Resources Administration can provide integrated, business-led human resource management. Looking at all of the components that comprise Human Resources Administration, we see immediately that it provides the recordkeeping, tracking, forecasting, and reporting needed for the human resource daily operation and planning functions.

To get a business perspective, let us discuss the HR management features as they apply to the four main functional areas that follow:

- Employee resourcing
- Employee development
- Employee relations
- Employee compensation

Let us briefly examine each of the four areas and how Human Resources Administration supports them.



Area 1: Employee Resourcing

'Resourcing' involves recruiting, selecting, hiring, utilizing employees with the knowledge, skills and abilities that make them useful to the organization, and eventually retiring or terminating those employees. Employee resourcing ensures that an organization's demand for human assets is supplied at all times by competent workers.

The following employee resourcing processes are undertaken by most organizations:

- Recruiting and selecting employees
- Hiring, rehiring, reinstating, recalling, and transferring employees
- Managing employee attendance
- Managing employee status changes, leaves and returns, and separations
- Position administration and complement control
- Requisition administration

To support these processes, Human Resources Administration provides the following functionality:

Recruiting and selecting employees

Human Resources Administration provides a variety of facilities to assist you in recruiting and selecting employees:

- Using Applicant Administration, you can manage the applicant process from the recording of initial applicant information through the interviewing and hiring stages. This component provides facilities to:

  - Separate applicant records from employee records.
  - Record extensive information on applicants including demographics, job or position applied for, preferred work environment, work history, and contacts/references.
  - Record recaps of each interview conducted.
  - Hire an applicant and transfer all information to a production organization.

- Using Position Administration , you can match the requirements for an open position against those of active applicants.
- Using Requisition Administration , you can track applicants and new hires through the recruitment and selection process. You can ensure that no position is filled without a formal request.
- Using Complement Control, you will automatically be notified of any position vacancies. Complement Control also manages the number of vacancies for which you can recruit.

Hiring, rehiring, reinstating, recalling, and transferring employees

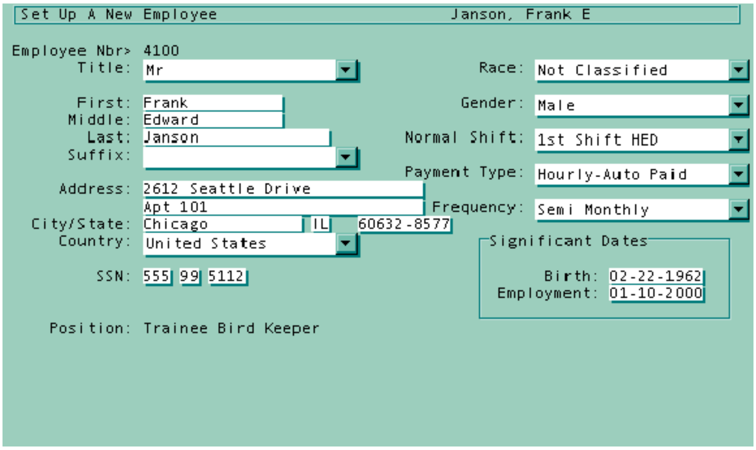
During the hiring process, you assign an Employee Number to an employee and enter demographic and work-related information.

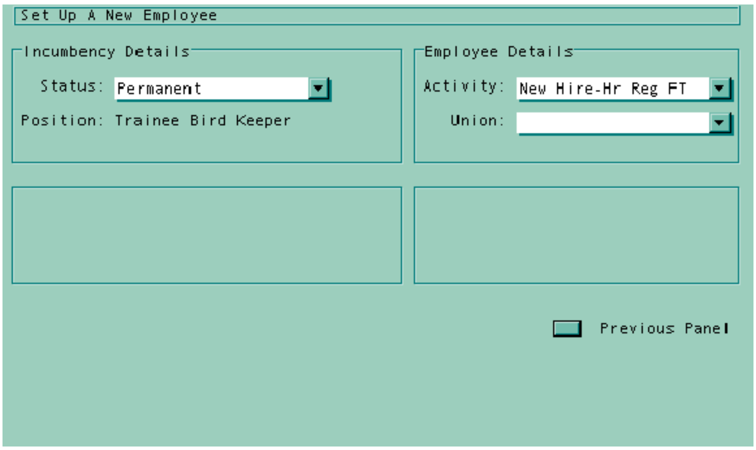
To hire an employee, you will use a pre-defined template. Templates are used to establish common information for a group of employees in one model record. For example, you might create separate templates for hourly, union employees and full-time, salaried employees. When an employee is hired using a template, the template's information is automatically copied to the employee's record. Because templates populate forms with pre-defined information, they also save data entry time and prevent data entry errors. After you have set up the employee record, you may change any of the information to match the employee's specifics.

Two methods are provided for hiring employees. Using the Employee Information form (EF-SCR) method, you complete detailed information on a series of forms. Using the Quick Hire method, you can hire an employee using a single form, Quick Hire form (NH-SCR).

This method allows you to enter just enough information to get an employee on the payroll. You can add more detailed information about the employee at a later time.

The first and second panels of the following form (with Position Administration turned on) show the result of using Quick Hire for a new employee using a template:





Optional information you can add about employees includes the following:

- Personal and identification information, including marital and citizenship status, visa information, and security clearance.
- Contact information, including the employee's e-mail address, fax number, cellular, car, and pager numbers.
- Telephone and employment information, including work and home telephone numbers, original applicant number, and employment agency used for hiring, if applicable. If you use applicant tracking, this information is automatically populated.
- Spouse and dependent information, which is helpful for tracking benefit entitlements. Data that can be recorded includes names, ages, and birth dates.

Which procedure you will follow to enter an employee's initial salary depends on whether or not you are using Position Administration .

Rehiring, reinstating, and recalling former employees is simply a matter of updating an employee's record with current information. The parity requalification date calculated by the system, along with your organization policies for leaves of absence, can be used to modify the employee's adjusted seniority date.

Transferring employees is accomplished on a single form (ET-SCR). During the transfer process, you indicate whether payroll, basic human resource, and benefits data should reside in both the old and the new organization, just the old organization, or just the new organization.

☞ *Refer to the Using Human Resources Administration documentation for more information.*

Managing employee attendance

Absence Administration provides a foundation for employee scheduling and tracking employee absences by providing running balances for different types of absences, for example, jury duty, sick day, funeral, and various medical leaves.

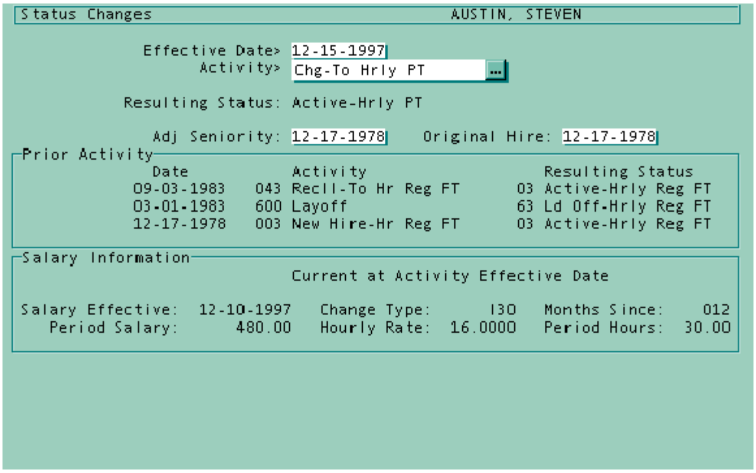
Administration both excused and unexcused absences provides a clear understanding of why and how previous absences have occurred, and how much time remains for the balance of the year. This information can be used to spot trends in employee absenteeism.

In addition, you can establish weighted absence rating schemes based on individual organization policies.

☞ *Refer to the Using Human Resources Administration documentation for more information.*

Managing employee status changes, leaves and returns, and separations

During the implementation of Human Resources Administration, you will establish a table of valid activities and their resulting employment statuses. When processing employee status changes, leaves and returns, and separations, these rules will be automatically invoked to determine resulting employee statuses. For example, the following Status Changes form (08-SCR) with Position Administration turned on shows that employee Steve Austin is being changed from a full-time employee to a part-time employee. Because the activity of 'Chg-To Hrly PT' is used, the system determines his new status to be 'Active-Hrly PT', as shown on the following form:



Status Changes AUSTIN, STEVEN

Effective Date> 12-15-1997
Activity> Chg-To Hrly PT

Resulting Status: Active-Hrly PT

Adj Seniority: 12-17-1978 Original Hire: 12-17-1978

Prior Activity

Date		Activity		Resulting Status
09-03-1983	043	Recll-To Hr Reg FT	03	Active-Hrly Reg FT
03-01-1983	600	Layoff	63	Ld Off-Hrly Reg FT
12-17-1978	003	New Hire-Hr Reg FT	03	Active-Hrly Reg FT

Salary Information

Current at Activity Effective Date

Salary Effective: 12-10-1997 Change Type: 130 Months Since: 012
Period Salary: 480.00 Hourly Rate: 16.0000 Period Hours: 30.00

☞ *Refer to the Using Human Resources Administration documentation for more information.*

Position Administration

Position Administration facilitates an integration of organizational vision and HR.

An organization's mission can be defined as 'what the organization is in business to do'. An organization's vision can be defined as 'what the organization will look like when it does this right'. A key component of achieving an organizational vision is implementing an organizational structure. Using Position Administration, you can define the structure of your organization in terms of units and roles (positions). Position Administration makes possible the strategic alignment of HR and an organization's goals.

Position Administration provides you with the ability to:

1. Identify gaps in your organization for the following critical activities:

- Recruitment—Find 'best fit' applicants by defining requirements for positions, and then match those to the external or internal applicant's data.
- Succession planning—Define requirements for key positions, and then match against information on the Employee Database.
- Employee development/career planning—Identify what skills/education is required for a position and then determine if an employee has the skills/education. The identified gap becomes the training plan for the employee.
- Project staffing—Build an organization unit for a project, define positions for each project role, and then search the Employee Database for 'best fit' candidates.

2. View your organization's resource strengths and weaknesses:

- Determine where your organization has a concentration of skills.
- Determine where your organization has vacancies.

3. Restructure your organization:

- You can easily reorganize the structure of an organization, or experiment with different scenarios and evaluate their impact, by using the dynamic reorganization facilities.

☞ *Refer to the Using the Position Administration Solution documentation for more information.*

Complement Control

Complement Control can be used with Position Administration to limit hires and transfers based on headcounts, Full Time Equivalents (FTEs), or hours budgeted for positions. The values at the organization unit level can be used for complement control purposes, or separate complement values can be set up on a position-by-position basis. This facility prevents the complement from being exceeded when new hires or internal transfers take place.

☞ *Refer to the Using the Position Administration Solution documentation for more information.*

Requisition Administration

The Requisition Administration component provides the means for controlling the recruitment process through the use of authorized requisitions. Requisition Administration is fully integrated with Position Administration. It can also be used in conjunction with Applicant Administration.

☞ *Refer to the Using Requisition Administration documentation for more information.*

Area 2: Employee Development

This function is sometimes narrowly referred to as 'training' or 'training and development'. The employee development function focuses on the abilities of your organization's employees to successfully complete the work they are assigned. It involves much more than simply providing training materials or courses to employees. It includes a wide range of such activities as identifying needed skills through competency gap analysis, providing development opportunities, tracking employee competencies, and tracking and analyzing performance appraisal results. These activities can be undertaken on both an organizational level and an individual employee level.

The following processes will help you manage employee development effectively:

- Administration employee skills, competencies, and training
- Administration performance appraisals
- Training administration

To support these processes, Human Resources Administration provides the following functionality:

Tracking employee skills, competencies, and training

Succession planning, career planning, and workforce planning are three areas of employee development that require extensive information about employees. To foster these types of planning, you can track the following types of information about employees:

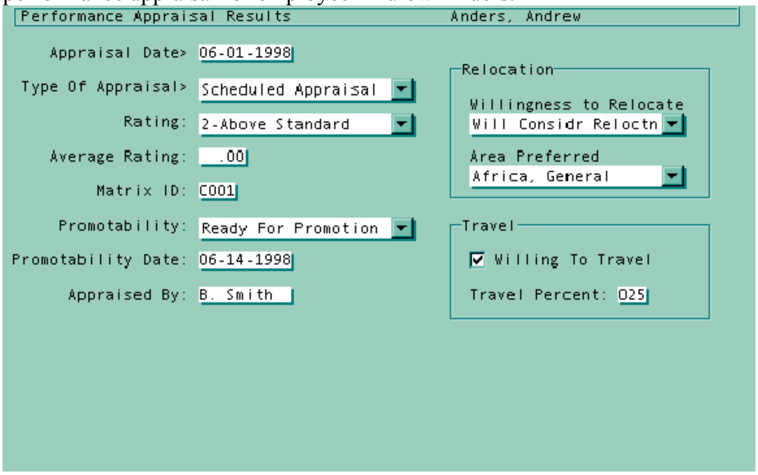
- Formal education
- Training scheduled and taken
- Tuition reimbursement
- Skills and competencies
- Certificates, licenses, permits, and their expiration dates
- Professional association memberships

☞ *Refer to the Using Human Resources Administration documentation for more information.*

Tracking performance appraisals

Human Resources Administration provides facilities for you to schedule/track performance appraisals and record their results.

Extensive information can be recorded about performance appraisals. The following form, the Performance Appraisal Results form (49-SCR) shows the results of a scheduled performance appraisal for employee Andrew Anders:



The two following reports are provided to help you track performance appraisals:

- Performance Appraisal Scheduled For Month Of: XX (1R-RPT)
- Performance Appraisals Not Returned By Expected Date (1Q-RPT)

If you are using Salary Administration, you can link performance appraisal ratings to automatically generate pay increases.

Refer to the Using Human Resources Administration documentation for more information.

Training administration

The Training Administration component allows you to define courses, schedule classes, and set up training programs. Complete registration and reporting facilities are provided, including automatic wait-listing of students for fully booked classes and class confirmation/cancellation and reminder notifications.

Cost analysis and chargebacks can be tracked using standard reports, including the following:

- Training Expenditure Charge-Back (27RRPT)
- Training Expenditure Disbursement (28RRPT)

Refer to the Using Training Administration documentation for more information.

Area 3: Employee Relations

'Employee relations' refers to aspects of the employee-organization relationship that are not already provided for under the areas of employee resourcing, employee development, and employee compensation. These are employee health and safety management and the tracking of disciplinary actions and employee grievances.

The following two processes of the human relations area are part of an integrated HR solution:

- Managing employee health and safety
- Administration disciplinary actions and grievances

To support these processes, Human Resources Administration provides the following functionality:

Managing employee health and safety

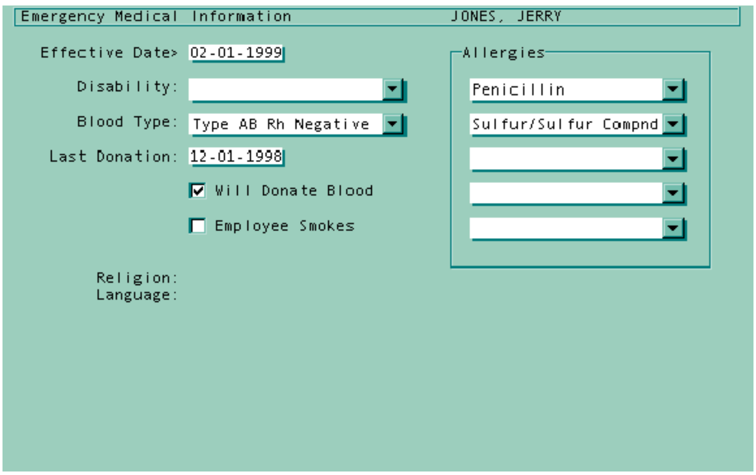
Facilities are provided for you to record, track, and report on the health and safety of employees including individual employee conditions, such as allergies, work restrictions, and workplace accidents. Standard reports are provided for reporting accidents to regulatory organizations.

Job screening and wellness plans are accommodated through physical exam scheduling and reporting.

You can record and track the following:

- Emergency medical information
- Injury, illnesses, and work restrictions
- Emergency contact and physician
- Physical exams scheduled and completed
- Physical exam test results

The following form, Emergency Medical Information form (15-SCR) shows the emergency medical information recorded for an employee:



Refer to the Using Human Resources Administration documentation for more information.

Tracking disciplinary actions and grievances

Part of employee or labor relations includes the tracking of disciplinary actions taken against employees and the tracking of grievances filed by employees.

For disciplinary actions, you can track the date and type of problem and then the specific information about the action taken. You can also indicate whether a follow up review should take place, and, if so, when.

For grievances, you can record complete information about the grievance, including occurrence date, type of grievance, and location. You can also track additional information, such as references to any contract bearing on the grievance.

The following reports are provided to help you track disciplinary actions and grievances:

- Disciplinary Actions Report (3M-RPT)—This report provides a summary of the disciplinary actions taken against employees by the organization.
- Grievance Recording And Status Report (3V-RPT)—This report provides a summary of the employee grievance information on file.

☞ *Refer to the Using Human Resources Administration documentation for more information.*

Area 4: Employee Compensation

'Employee compensation' encompasses a range of business practices aimed at securing and retaining the right employees with the right skills. It refers to all forms of both monetary and nonmonetary compensation or remuneration paid to an employee.

An important emphasis of employee compensation is total or overall compensation. It refers to more than just payroll; it includes all forms of compensation between the organization and the employee. Those forms can be divided roughly into the two following broad categories:

- **Monetary compensation**—Includes basic payroll (salary or wages), performance-based bonuses and increases, cost-of-living adjustments, special-duty or hazard pay, annual and other periodic bonuses, and any other form of monetary compensation, including benefit plans (such as retirement programs) and reimbursement of employee relocation expenses.

- **Nonmonetary compensation**—Includes all other forms of compensation or perquisites, such as use of company property (automobiles, computers, and other equipment or tools), use of company credit cards, health-club memberships, and discount buying-club memberships.

The following are the processes of managing the various forms of employee compensation:

- Managing employee compensation
- Administration employee relocation expenses
- Allocating and recovering company property
- Benefits administration
- Salary administration

To support these processes, Human Resources Administration provides the following functionality:

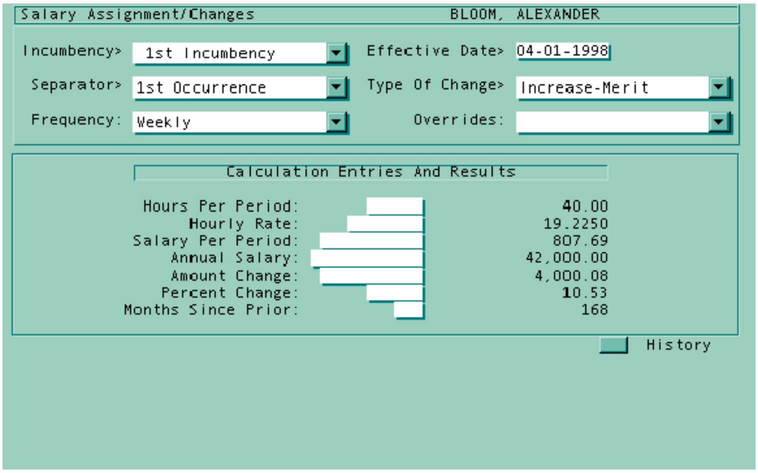
Managing employee compensation

Managing employee compensation involves the following issues:

- Salary changes
- Monetary perquisites and bonuses
- Salary reviews
- Analysis of salary data

Employee salary increases can be entered manually or generated using Salary Administration. All generated and calculated amounts can be overridden.

The following form, Salary Assignment/Changes form (40-SCR), (with Position Administration in use) shows the results of recording a salary change directly for an employee:



The system allows for the recording of both monetary perquisites, such as automobile allowances, travel subsidies, bonuses, and commissions.

Salary reviews are handled separately from performance reviews. Salary reviews can be scheduled online and tracked online or by using standard reports. The following reports are available to help manage the salary review process:

- Scheduled Salary Reviews Within Selected Months (59-RPT)
- Salary Review Forms Not Returned By Date (18-RPT)
- Salary Review Authorization Form I (5O-RPT)
- Salary Review Authorization Form II (5P-RPT)

The following reports are available for analysis of employee salary data:

- Salary Analysis By Grade (14-RPT)
- Over Maximum/Under Minimum (17-RPT)
- No Salary Adjustment On File For Last 12 Month Period (IZ-RPT)
- Salary Distribution By Performance/Time-In Job (1Y-RPT)
- Salary Increase Analysis (IV-RPT)

☞ *Refer to the Using Human Resources Administration documentation for more information.*

Tracking employee relocation expenses

Facilities are provided for you to record and analyze all important aspects of employee relocation, including such items as:

- Employee relocation moves
- Closing costs
- House-hunting expenses
- Moving expenses
- Shipping/storage costs
- Temporary living expenses
- Bridge loans

☞ *Refer to the Using the Human Resource Administration documentation for more information.*

Allocating and recovering company property

You can track the costs and allocation measures associated with nonmonetary perquisites, company property, and automobiles that are often tied to an employee's compensation package. Specifically, you can:

- Record nonmonetary perquisites
- Assign company property
- Assign company automobiles
- View company property and automobiles not yet returned
- Record the return of company property
- Record the recovery of company automobiles

☞ *Refer to the Using Human Resources Administration documentation for more information.*

Benefits Administration

The Benefits Administration component provides complete functionality for defining and administering benefits plans. It retains information about employee eligibility and participation in any or all benefits plans, and tracks benefits costs for the employee as well as for the organization. Specific features of Benefits Administration include the following:

Plan setup

All benefits plan rules are defined using standard tables. When an employee is enrolled in a plan, the plan rules are automatically invoked.

Using a benefits Control Number, each organization can have its own set of benefits tables, or several or all organizations can share the same benefits tables.

Plan administration

Benefits Administration provides complete support for the following categories of plans:

- Welfare
- Deferred (Defined Benefit, Defined Contribution, and Thrift/savings)
- Flexible Benefits

The system automatically recalculates coverage and contribution amounts based on changes to an employee's record (for example, a salary increase) or to a plan in which an employee is enrolled (for example, a change in the employee contribution amount).

Facilities are provided for spouse, dependent, and beneficiary tracking. Multiple beneficiaries and associated percentages can be identified for a plan.

Reporting

An extensive library of standard reports is provided for organizational, administrative, and regulatory reporting. Types of reports include:

- Plan rules
- Enrollment registers
- Flex benefits communication forms
- Benefits activities
- Retirement counseling notices
- Plan premium statements
- Actuarial interface tapes can be created in your desired format

☞ *Refer to the Using Benefits Administration documentation for more information.*

Salary Administration

The Salary Administration component tracks job evaluations and merit increase guidelines, performs budgeting analysis, and automates the salary review and performance appraisal process. Salary Administration allows you to do the following:

Process salary reviews and conduct salary analysis

Facilities are provided to record the dates and types of reviews to be conducted, as well as their projected completion dates. Online or packaged reports are provided to determine who is due for a performance or merit review in a specified time period. Salary authorization forms can be produced for use as turnaround documents for management signatures.

Produce salary forecasts for budgetary purposes

Multiple salary plans can be created using different increase policies, creating 'what-if' scenarios. Within the various scenarios, employees can be simultaneously assigned to a maximum of three plans (for example, a 3 percent, 5 percent, and 8 percent increase), allowing you to compare the results among the three plans.

Salary Administration accommodates a variety of methods for budgeting of salary changes. These methods can be used interchangeably and in combination:

- Manager's discretion
- Increase matrices to consider each employee's job performance rating and position in salary grade
- Across-the-board increases targeted to specific groups of employees

Update salary grades and ranges

If your organization chooses to use salary grades, each job may be tied to a salary grade and range, allowing you to access an employee's compa ratio and position in range. Once salary ranges have been established, they can be easily changed as salary grades are reevaluated.

Changes to salary grades can be calculated and applied automatically using a percentage or midpoint formula.

Report information used in the administration of salary changes/budgeting

Numerous standard reports are provided, including the following:

- Salary Increase Analysis (IV-RPT)
- Annual Budget (5C-RPT)
- Over Maximum/Under Minimum (17-RPT)
- Budget to Actual Comparison (5J-RPT)

☞ *Refer to the Using Salary Administration documentation for more information.*

Reporting options

Human Resources Administration provides a variety of reporting options.

Reporting Administration

Reporting Administration is a value-add product from Cyborg that combines the power of the business intelligence tools from Cognos Corporation, a Cyborg strategic partner, with a relational database (datamart) package from Cyborg. The result is a turnkey reporting process for customers using a relational version of The Solution Series in UNIX/Oracle or NT/SQL Server environments.

Reporting Administration includes the following:

- Functionality to schedule a data extraction from The Solution Series directly into a relational database datamart or into predefined character delimited files.
- Functionality to launch the Cognos Impromptu reporting tool directly from The Solution Series.
- Cyborg-specific Impromptu catalog for the delivered datamart, which promotes intuitive user access to the data extracted from The Solution Series and placed in the datamart.
- Cyborg-specific Impromptu reports that provide examples of the kinds of reporting that can be accomplished with data extracted from The Solution Series. These example reports can be used as templates for your custom reports.
- Cognos reporting tools (Impromptu User, Impromptu Administrator).

Standard reports

Nearly 100 packaged reports are delivered with the system. You can use these reports as delivered, or customize them to meet your needs. The reports range from simple alphabetic listings of current employees to regulatory reports.

☞ *Refer to Using Human Resources Administration for samples of the standard reports delivered with the system.*

Queries and reports

Custom online queries and reports can be developed using Solution View. Queries are developed by choosing data fields to be displayed and then specifying what mathematical operations to perform on the data (totals, averages, counts, and so forth). Selection criteria includes point-in-time reporting and literal comparisons (for example, equal to, less than, greater than, and, or, and/or). Query definitions can be saved for future use.

☞ *Refer to the Using Solution View documentation for more information on creating and running online queries and reports.*

PART 2

Implementation

In This Section

CHAPTER 3

Planning the Implementation

In This Chapter

Introduction

This section provides an outline of all the tasks that must be completed to implement Human Resources Administration components at your organization. Subsequent sections in this manual address those tasks that pertain to setting up a organization and its HR rules.

Prerequisites

Before you can implement Human Resources Administration components, The Solution Series software must be installed.

Questions answered

The following questions are answered in this section:

1. What preliminary activities must be completed prior to implementing Human Resources Administration?
2. How can Human Resources Administration implementation process be phased?

Preliminary activities

Cyborg recommends that your organization perform all of the following tasks, regardless of the specific components you are installing.

Implementation planning meeting

The first meeting with your Project Manager is called the implementation planning meeting. It is divided into three sessions:

- Presentation
- Discussion of the contents of this manual
- Brief demonstration of The Solution Series system

The presentation session provides the following information:

- An overview of Cyborg Systems
- Review of the Cyborg Project Manager's responsibilities and function during the implementation
- A description of Cyborg Systems' on-site assistance
- Training and the approach that Cyborg uses
- A general discussion of the three implementation phases

The discussion session provides an overview of this manual's format and checklists.

The Solution Series demonstration session gives project team members an introduction to the system. This allows you to start learning to navigate through the system immediately.

Note: *The software must be installed prior to the planning session for this demonstration to occur.*

Cyborg training classes

Attend these primary courses to understand and gain familiarity with the system:

- eCyborg: Using the Web Client or Using The Solution Series: Administrative Solutions
- Technical Administration (for technical staff)

Contact Cyborg Systems or visit our website www.Cyborg.com for descriptions of all Cyborg courses, prerequisites (if any) for each course, dates on which the courses are offered, and registration details.

Review documentation

Cyborg supplies documentation online and on CD-ROM for The Solution Series. You will benefit greatly from reading all of it. Begin by reading:

- eCyborg: Using the Web Client or Using The Solution Series: Administrative Solutions
- The functional overviews for the various components you intend to implement. These overviews can be found in the online documentation for each component. Additional overview information can be found in the Human Resource documentation.

Define organization levels

After you have attended The Solution Series introduction training and understand the concept of organization levels, you will be able to make some decisions about the structure of your organizations within The Solution Series. The following are some of the choices you will be making:

- Decide on the organization numbering scheme for your corporate structure. Also decide on the hierarchical names for these organization levels.

Note: *You may not use 9 or Z as the first character of your numbering scheme since these characters are reserved for Cyborg-delivered test data and audit records.*

- Decide on names and a numbering scheme for any of the other organization levels that you intend to use.

Note: *You are not required to use all six organization levels. For example, your organization may only need to use organization levels 1 through 4 to establish your company and represent its organization hierarchy on the system.*

Determine whether Payroll and Human Resource Administration components will use the same organization levels or operate independently.

☞ *Refer to eCyborg: Using the Web Client or Using The Solution Series: Administrative Solutions for more information about establishing organization levels.*

Note: *If you have eCyborg Interactive Workforce installed, the organization controls are used when selecting organizations for extracting and loading employees to the Interactive Workforce database and when selecting organizations for online enrollment in benefits. Before employees in your organization can enter information or enroll in benefits online using eCyborg Interactive Workforce, you must select organizations to extract employee information from The Solution Series. The extracted information is then loaded into Interactive Workforce.*

Delivered test organizations

Several test organizations are delivered with the installation. The following chart lists these test organizations and their potential uses:

Organization Number	Organization Name	Type of Organization	Comments
999999	Acme Manufacturing	General	This US organization is populated with employees and is used to learn the system, to test the installed system, and to hold data for some country-specific tax reporting.
995555	Acme Manufacturing	Retiree	

Organization Number	Organization Name	Type of Organization	Comments
993333	Acme Manufacturing	Applicant	
991111	Acme Manufacturing	Considered Hours/ Earnings	Required by the Benefits Administration component.

- Determine what additional test organizations are needed.
- Add your required test organizations to the database.

☞ *Refer to* **Setting Up an Organization** *(on page 51) for more information.*

Review menus and checklists

Review the menus and checklists to determine the following:

- If modifications should be made to the default menu bar, and if so, when, how, and who will make the changes (by changing menus, you also change the Navigator)
- When, how, and who will build new user menus and checklists
- If permanent records need to be created after experimentation
- How eCyborg Interactive Workforce will affect checklists set up for newly hired employees

Security considerations/requirements

Security is an important aspect of your system management and is established and maintained by your appointed security officer. It is highly recommended that you identify not only a primary security officer, but a second individual as a security backup. Contact your Cyborg Project Manager for details about registering your designated security officer and backup with Cyborg.

A security matrix must be defined. This includes determining which forms and data will be accessible to whom, and which employees will be given update versus inquiry-only rights.

Additional assistance is available in the Setting Up and Maintaining Security course or through on-site assistance offered by Cyborg.

Security requirements

Completing the following tasks will assure a firm foundation for your security setup:

- Assign a security officer at your organization to be responsible for defining, documenting, and maintaining your security requirements. Send a letter (on company letterhead) to your Cyborg Project Manager specifying the name of the security officer who is to receive the system security documentation.

Note: *Security documentation is not available online.*

Note: *It is strongly recommended that your designated security officer attend the Setting Up and Maintaining Security course.*

- Define access requirements by organization, access mode, and form.
- List all potential users and their security access needs.

Note: *If you implemented eCyborg Interactive Workforce, user IDs and user-defined passwords insure that users have access to only their data.*

Project management

It is important to develop a task list and a reasonable timetable for implementing Human Resources Administration. The Cyborg standard for project management software is Microsoft Project for Windows. Using Microsoft Project, you can customize this general plan so that it meets your organization's specific implementation needs.

All project team members must be kept up to date and know what tasks are required of them. Weekly team meetings are recommended along with the publication of status reports.

Implementation life cycle

After you have performed the preliminary activities, the remaining tasks become part of an implementation life cycle with multiple phases. Tasks are organized chronologically under the following implementation project phases:

- Familiarization—The activities of this phase help you to become comfortable with The Solution Series component you are implementing. During this phase, it is important that you become aware of the requirements and procedures of your current system so that you can refine them to best make use of the features of The Solution Series. The following activities are part of the familiarization phase:

  - Installing and using the new software
  - Reading documentation
  - Training

- Design—This phase involves configuring the system so that it accurately reflects your human resource policies and procedures. This system design can involve the following activities:

  - Reviewing Cyborg's option lists and internal tables and then adding to or modifying them if necessary
  - Setting up a security system
  - Customizing reports, forms, and text/list boxes
  - Writing custom programs
  - Defining your system requirements
  - Adding data to a test organization
  - Running a system test

- Implementation—Activities in this phase include the final steps that will result in the successful launch of Human Resources Administration. The following tasks are included in this phase:

  - Training employees to use the system
  - Developing internal procedure manuals
  - Conducting final tests of the system
  - Adding to or converting your current data to The Solution Series
  - Going live
  - Using the system for daily production and recordkeeping activities

These phases are discussed in more detail in the sections that follow.

Familiarization phase

In this phase, you will determine your current system requirements and learn the Cyborg system by working through the following areas:

- Review of organization procedures
- Documentation and training
- Interfaces
- Customization requirements

Each of these areas is discussed in more detail below.

Review of organization procedures

Review current system requirements for the following specific functions:

- Employee major activities
  - Employee hires
  - Employee type changes (such as full-time to part-time)
  - Leaves and returns
  - Separations and terminations
  - Rehires, reinstatements, and recalls

- Decide what data employees will enter and maintain using eCyborg Interactive Workforce and what employee data HR will enter and maintain

- Employee data

  - Employee education
  - Employee credentials
  - Employee personal data
  - Job and salary data
  - Performance appraisals

- Decide if Payroll and Human Resource components will share the same organization-level values and, if so, who is responsible for entering and maintaining the data.

- Review the following forms and determine whether the Human Resource component will pass data to Payroll or whether the Human Resource and Payroll components will process salary data independently:

  - (Payroll) Employee Information (EF-SCR)
  - (Payroll) Payroll Home Location/Pay Allocations (GG-SCR)
  - (Payroll) Employee Pay Rate Or Salary (H1-SCR)
  - (Human Resource) Location Assignment/Changes (05CSCR)
  - (Human Resource) Salary Assignment/Changes (40-SCR)

- Determine your need for Interactive Workforce administrator roles

Define your current HR, payroll, and benefit processes

If you are implementing eCyborg Interactive Workforce, before you can determine the impact of Interactive Workforce on your business processes, you must first document all your current HR, payroll, and benefits functionality that will be affected by your use of Interactive Workforce. This means looking at:

- Processes
- Paper flows
- Rules—both contractual, company policy, and regulatory
- Authorization flows
- Reporting structures
- Organization charts

Doing this will not only help you clearly define your processes today, but will also help you understand the impact Interactive Workforce could have and identify what functionality of eCyborg Interactive Workforce you want to implement initially.

Minimum data required in /ST to use The ESS Solution

To give employees access to eCyborg Interactive Workforce, you must set them up as an employee within Solution Series so that Interactive Workforce can extract their user ID and generate their password. Therefore, before a new employee can access eCyborg Interactive Workforce, the following information must exist in The Solution Series for the employee:

- First and last name
- Employee ID
- Employment date
- ID of organization (Control 1-2s) to which the employee belongs
- Status
- Pay frequency

If your organization uses eCyborg Interactive Benefits, you may need additional information to calculate benefits information for the employee. Also, if your organization requires other information based on your business processes, the information must exist in order to be extracted and loaded into Interactive Workforce.

Documentation and training

To familiarize yourself with the full range of features available in Human Resources Administration, read the Overview section within the Using Human Resources Administration online documentation or on The Solution Series Documentation CD.

After completing the organization procedures review, attend the following training courses:

- eCyborg: Using the Web Client or Using The Solution Series: Administrative Solutions
- Using Human Resources Administration

☞ *Contact Cyborg Systems or visit our website* **www.Cyborg.com** *(see "Cyborg Home - http://www.Cyborg.com") for course descriptions and availability.*

Interfaces

Conversion procedures may need to be written for a data conversion that may be manual or automated. Review the results of your earlier analysis of current system requirements to determine how much of your data will be converted and which method may be more suitable.

Identify responsibilities for each interface:

- Insurance carrier
- Salary surveys
- Corporate systems

☞ *Refer to* **Data Conversion Guidelines** *(on page 223) for data conversion suggestions.*

Customization requirements

Several tasks require completion before actual changes can be made to the delivered The Solution Series. Completion of the following tasks will pave the way to successful customization to fit your corporation's requirements:

- Review forms.
  - Form prompts may be changed.
  - A form may be redesigned.
  - New forms may be designed to store additional data.
  - A series of forms may be executed in a specified sequence using the Checklist functionality.

☞ *Refer to the Cyborg Scripting Language Customization and the Using The Solution Series: Administrative Solutions documentation for more information about customizing forms.*

- Determine new form and text/list box requirements.
  - Define any new text/list boxes or forms that may be required.
- Perform an internal report inventory.
  - Review all reports generated by your current system and identify those that are obsolete.
  - Identify which Cyborg reports can replace existing reports or need modification.
- Discuss and identify any specific requirements.
  - Perform a preliminary evaluation of customization requirements:
    - Interfaces with other systems
    - Reports
- Relational edits.
  - Identify required changes to standard forms:
    - New hire form
- Employee profile

Design phase

In this phase, you will configure the system to reflect your human resource policies and procedures by completing the following tasks:

- Define the new hire process.
- Define test requirements.
- Review and establish option lists.
- Review and establish tables.
- Review and establish security matrix.
- Add table data to test organization.
- Perform unit test.
- Perform system test.
- Write customer-defined programs.
- Create new reports.
- Tailor The Solution Series.
- Perform conversion test.

Each of these tasks is discussed in more detail below.

Define the new hire process

- Meet with the Payroll Administration implementation team and determine which area (payroll or human resources) performs the new hire process and what entries are required.

- Consider how new hire information will be obtained:

  - Is a turnaround document needed?
  - Is the current procedure efficient, or is it time to change it?

- Decide what data employees will enter and maintain using eCyborg Interactive Workforce and what employee data HR will enter and maintain

Define test requirements

- Determine the forms, transactions, and reports needed to complete tests on the test organization.

- Decide which test procedures to use for each of the following activities that apply to your organization:

  - Employee hires
  - Employee type changes (such as full-time to part-time)
  - Leaves and returns
  - Separations and terminations
  - Rehires, reinstatements, and recalls
  - Employee education
  - Employee credentials
  - Employee personal data
  - Job and salary data
  - Performance appraisals

Review and establish option lists

- Identify which person or group will be responsible for establishing and maintaining option lists.

- Review pre-populated option lists for needed changes. Determine whether any option lists need to be organization-specific.

- Give special thought to the Activity Codes (HR09) and Employee Status (HR10) option lists. These two option lists work in conjunction with the Activity And Resulting Employee Status Rules table (TF-SCR). They determine the major activities in the Human Resource component (new hires, layoffs, terminations, and so forth) and the resulting status after the major activity has been performed.

Note: *When setting up these option lists, be sure to work with your benefits administration department. These option lists have a significant impact on the processing within the benefits component. In addition, these option lists must be established prior to setting up the Activity And Resulting Employee Status Rules table (TF-SCR).*

- The EEO Establishment option list (EO069) must be set up prior to establishing the EEO Parent Company Definition table (TXCSCR) and the EEO Establishment Definition table (TX-SCR).

- The Human Resource organization levels may be the same for the Human Resource and Payroll components of The Solution Series, or they may be different and independent. You define the way organization levels work on the System Options table (TG-SCR).

Note: *Consider consulting with your Project Manager before proceeding with this definition.*

☞ *Refer to* **Establishing Basic HR Rules** *(on page 73) for detailed directions on setting up the System Options table (TG-SCR).*

- Establish coding structures for customer-defined option lists where needed, including the following option lists:

  - Union Job Code (HR389)
  - Org Level Three (HR439)
  - Org Level Four (HR449)
  - Org Level Five (HR459)
  - Org Level Six (HR469)
  - EEO Establishment (EO069).

- Establish and add values online for customer-defined option lists.

- Customize pre-populated option lists.

Note: *Based on the volume of option list changes, your technical staff may provide assistance.*

☞ *Refer to the eCyborg: Using the Web Client or Using The Solution Series: Administrative Solutions documentation for more information about customizing option lists.*

Reviewing option lists loaded into Interactive Workforce

If you have eCyborg Interactive Workforce installed, you load selected option lists into the Interactive Workforce database. Each time you make a change to one of the option lists, you must reload the option lists to Interactive Workforce. We recommend that you review the option lists that are used by Interactive Workforce as part of the implementation process. If they contain options that you do not want employees to use, inactivate those list. Inactive options are not loaded into Interactive Workforce.

Following is a list of the option lists that are used by Interactive Workforce.

- BA03—Options elected
- BA47—Contribution Resulting Frequency (not displayed in Interactive Workforce)
- BA64—Flex-action (not displayed in Interactive Workforce)
- BA70—TKF Deduction method (not displayed in Interactive Workforce)
- BA71—TKF Credit calculation rules (not displayed in Interactive Workforce)
- HR00—Yes-No (Used for Smoker ID)
- HR04—Marital Status Code
- HR05—Citizenship code
- HR10—EE status
- HR28—Relationship code
- HR29—Sex code
- HR30—Student status
- HR36—Name suffix code
- HR37—Name Prefix Code
- HR74—Contact type
- PP02—Deduction category
- PP08—Pay frequency code
- PP10—Deduction arrears code
- PP12—Deduction method code
- PP29—EE Pay Frequency
- PP40—Pay code description
- PR06—Bank account type
- PR07—Valid ACH Routing numbers
- PR08—Direct deposit edit
- SC43—Organization listing
- TA05 Time Away Request Type
- TA07 Time Away Request Status

Review and establish tables

- Use the tables that have been established on the Acme Manufacturing test organization as a guide when reviewing tables. The delivered test organization has example table records using a table Control Number of 9999.

- Identify the responsibility for establishing and maintaining tables.
- Review the following tables:
  - Company-To-Rules Cross-Reference For HR (AX-SCR)
    This table provides Control Numbers for tables delivered in the Human Resource components. The Control Number determines which set of tables are used

for each organization when accessing table data. Each organization must have an entry in this table.
One set of tables may be established for use by one or several organizations. The Control Number allows you to specify which organizations use which set of tables.

- Job Code (TA-SCR)
  This table contains all defined jobs used throughout the system. The table's form displays information relevant to each job that will be used within an organization.

- Salary Grade tables

- Salary Grade - Annual (TBASCR)
  This table contains salary grade ranges expressed in annual amounts.

- Salary Grade - Per Period (TBCSCR)
  This table contains salary grade ranges expressed in per period amounts.

- Salary Grade - Hourly (TBBSCR)
  This table contains salary grade ranges expressed in hourly amounts.

- Occupation Group (TE-SCR)
  This table associates each occupation group to its related job family and job categories. It is delivered fully populated but must be reviewed.

- Activity And Resulting Employee Status Rules (TF-SCR)
  This table is the validation table for the Activity Codes option list (HR09). This table determines whether—given an employee's current status—an activity is allowed and generates the resulting employee status after the activity is processed.

Note: *Your organization's policies determine which activities are valid. The Activity Codes (HR09) and Employee Status (HR010) option lists must be established prior to setting up this table. After this table has been defined, you may wish to delete all unused options from those two option lists.*

- System Options (TG-SCR)
  This table establishes system options used in the Payroll and Human Resource components. These options are used when shared data elements exist, such as organization levels, pay frequency, and salary.

- EEO Parent Company Definition form (TXCSCR) and EEO Establishment Definition form (TX-SCR)

These tables allow you to record geographic locations for EEO reporting, and also hold information for creating the Vets-100 reporting.

Note: *The EEO Establishment option list (EO069) must be set up prior to establishing these tables.*

☞ *Refer to* **Table Displays** *(on page 201) for a sample of the tables described above.*

Review and establish security matrix

This task requires the cooperation of the Security Officer for *The Solution Series*.

- Determine user access needs.
- List all online users and their security needs.
- Set up, or update, the security matrix.
- Assign user passwords and user codes.

Note: *If you need assistance, make sure that your organization's security officer attends the Security Setup course or contact Cyborg for on-site assistance.*

Add table data to test organization

Add values to the following tables:

- Company-To-Rules Cross-Reference For HR (AX-SCR)
- System Options (TG-SCR)
- Activity And Resulting Employee Status Rules (TF-SCR)
- Job Code (TA-SCR)
- Salary Grade tables:
  - Salary Grade - Annual (TBASCR)
  - Salary Grade - Per Period (TBCSCR)
  - Salary Grade - Hourly (TBBSCR)

- Occupation Group (TE-SCR)
- EEO Parent Company Definition form (TXCSCR)
- EEO Establishment Definition form (TX-SCR)

☞ *Refer to* **Table Displays** *(on page 201) for a sample of the tables described above.*

☞ *Refer to* **HR Form Title to Form ID Cross-reference** *(on page 215) to determine each form's ID cross-reference.*

Perform unit test

The following tasks may be performed to determine whether all the tables and templates are operating correctly within the Human Resource Base component:

- Add test employee data.
  - Select a group of test employees that allow for sufficient testing of all table and Human Resource activities:
    - Add employee templates for each employee group.

- Add test employees using employee templates.
- Execute test runs
  - Test the report scheduling files created for the Human Resource reports. Review and verify output reports.
  - Test all the tables and verify that they are working as desired.
  - Check forms to make sure data defaults are correct.
  - Check the following forms for the valid activities that can be performed as defined in the Activity And Resulting Employee Status Rules table (TF-SCR):
    - New Hire (01-SCR)
    - Rehire/Reinstatement/Recall (04-SCR)
    - Status Changes (08-SCR)
    - Leaves And Returns (95-SCR)

- Separations And Terminations (96-SCR)

Perform system test

These tasks may be performed with the Payroll implementation effort, and are usually performed prior to writing a conversion program:

- Test a limited sample of employees, perhaps 10–20.
- Execute test runs.
- Test the payroll interface.
- Test the security matrix.

Test the following forms that involve sharing of data elements between Payroll and Human Resource components:

Human Resource Forms	Payroll Forms
Location Assignment/Changes (05CSCR)	Payroll Home Location/Pay Allocations (GG-SCR)
Salary Assignment/Changes (40-SCR)	Employee Pay Rate Or Salary (H1-SCR)
Job Assignment/Changes (05-SCR)	Employee Information (EF-SCR)

Write customer-defined programs

- Write conversion programs for the forms identified in the familiarization phase.

☞ *Refer to* **Data Conversion Guidelines** *(on page 223) for additional information.*

- Write interfaces

  - Determine which text and list boxes in the Human Resources Administration component need to be used.

Note: *The Technical Administration course provides training in preparation for this task.*

Note: Interfaces may be written using Cyborg Scripting Language. For more information about this language, see Cyborg's programming documentation or contact Cyborg for assistance with creating new interfaces.

- Create new forms and text/list boxes.
    - Use the Solution View tool and refer to the Cyborg Scripting Language Customization documentation when creating your own new forms.

or

- - Contact Cyborg for assistance with creating new forms.

Note: Three courses provide training in preparation for this task: Introduction to Cyborg Scripting Language, Cyborg Scripting Language Customization, and Using Solution View.

Create new reports

- Create your own new inquiry reports online using the Query tool from the Solution View tools. Create new packaged reports using the Report feature from the Solution View tools. It accommodates calculations and up to 132 characters of displayed data.

or

- Contact Cyborg for assistance with creating new reports.

Tailor The Solution Series

- Tailor online forms by using the Edit Utility (EDIT).

☞ *Refer to the Cyborg Scripting Language Customization documentation when modifying delivered online forms to meet your needs.*

- Tailor delivered reports by using the Edit Utility (EDIT).
- Review option lists and make needed changes.

☞ *Refer to the Using The Solution Series: Administrative Solutions documentation for information about customizing option lists.*

- Review table data and make needed changes.

Perform conversion test

- Test your security matrix for all types of access.
- Take a sampling of 10–20 employees and test to make sure all converted data is correct. Verify by viewing forms and reports.

☞ *Refer to* **Data Conversion Guidelines** *(on page 223) for additional information.*

Implementation phase

In this phase, you will perform the tasks that will launch Human Resources Administration.

Prepare the end user

- Develop internal procedures manuals.
    - Develop a daily procedures manual for clerical personnel, identifying forms and reports required to perform daily tasks.
    - Document job streams for the data processing department.
- Train end users.
    - Develop end-user training courses and manual, and train end users.

Note: *If you implemented eCyborg Interactive Workforce, end users must be familiar with using browsers and have access to your organization's intranet.*

Perform parallel test runs

- Test a full production cycle.
- Test all forms and tables.
- Test the Report Scheduler files created for the Human Resources Administration component and verify output.
- Make adjustments as required.

Live processing

- Convert data.
- Begin using Human Resources Administration.

Your implementation of Human Resources Administration is now complete.

Review of Questions Answered

1. What preliminary activities must be completed prior to implementing Human Resources Administration?

2. How can Human Resources Administration implementation process be phased?

CHAPTER 4

Setting Up an Organization

In This Chapter

Introduction

The Solution Series provides you with an organizational structure that is used to manage your company and employee data. This section addresses the establishment of organizations on your file, using the Cyborg hierarchy.

Tasks

This section explains the following:

- Viewing existing organizations
- Setting up a new organization
- Updating organization name and address information
- Establishing pay frequencies
- Verifying pay frequencies
- Identifying non-paying organizations

Prerequisites

Before you can establish a new organization, you must have installed The Solution Series.

Questions answered

The following questions are answered in this section:

1. What Cyborg structure allows the definition of an organization hierarchy?
2. How are organization identification and address information recorded on The Solution Series?

Organization setup overview

Whether you use Human Resources Administration for human resources alone or will be meeting with Payroll to determine your shared needs, you must establish your organization within the system. When you have determined what organizations you wish to establish, you will add them to the system by selecting and completing a series of forms. Using these forms, you will identify your organization to the system, assign a corporate structure using control levels, and establish criteria at the organization level that will default to the employee level. Organization information must be in place prior to adding employees to the Employee Database (FILE02).

You may create as many organizations as required for groups of employees for whom you want to maintain personal information, payment data, and optional human resource data. For example, you may want to set up organizations for the following employee groups:

- Applicants
  Companies interview and screen many job applicants. The Applicant Administration component, part of Human Resources Administration, helps these organizations maintain applicant information. To use this feature, you must establish an applicant organization. When an applicant is hired, you can then easily transfer all basic information such as name, address, and identifying information into the appropriate pay organization.

- Retirees
  If you need to track retirees because they are receiving retirement benefits, you may retain their records by establishing an organization specifically for retirees. If annual pension forms are to be produced, retirees must be in a separate organization.

- Terminated employees
  Should you rehire terminated or laid-off employees, you can transfer their records back to a paying organization. Transferring saves the time and effort required to re-enter most of the employee data.

As part of the organization setup, you will record decisions on selected organization forms. The organization decisions that are tied to the human resource function are:

- Dividing employees into logical groups (by location or function)
- Selecting the company category (paid or non-paid)
- Defining pay frequencies (payment intervals)
- Recording the organization name and address (for legal and reporting purposes)

These setups are required for all installations regardless of whether or not you are processing pay using The Solution Series.

The Solution Series architecture

In Cyborg terms, an *organization* identifies a group of employees who are employed in a common structure and governed by the same set of rules or policies. Assigning a unique value to the first two organization levels is the first step in defining your organization.

Organization level 1 is two characters and organization level 2 is four characters. These six characters represent an organization. Each organization level value is defined by you and can represent the unique organizational structure, processing parameters, and reporting requirements that apply to your organization. These two organization levels are specifically defined as follows:

- Organization level 1: Positions 1 and 2—Indicates the highest level within your_organization's hierarchy. This usually refers to the corporate level
- Organization level 2: Positions 3 through 6—Indicates subdivisions within an organization, or indicates a second level within the hierarchy.
- Organization—Represents a combination of both parts, that is, positions 1 through 6.

Consider the following when defining your organization in The Solution Series:

- Reports—Cyborg-delivered reports sort first by organization level 1, then by organization level 2.
- Security—Security is established by organization.
- Payroll processing—Basic payroll processing, such as tax calculations and pay period tax reporting for employees, occurs at the organization level.
- Table record processing—Policy guidelines can differ by organization or can be established to apply to all organizations.

Assigning organization values

You must assign unique user-defined organization values to each organization. The organization level 1 value may not begin with 9 or Z (reserved for Cyborg-delivered test data and audit records).

Consider the following examples:

Organization identifier for the Acme Department Store (AC), US Division (USDV):

Org Level 1 value	Org Level 2 value	Organization
AC	USDV	ACUSDV

Numeric organization level 1, with an alphanumeric organization level 2, for the Acme Manufacturing organization (01), Corporate Division (CORP):

Org Level 1 value	Org Level 2 value	Organization
01	CORP	01CORP

Unrelated organizations

Three organizations that require report totals for each entity could be set up as follows. In this example, since the organization level 1 value is unique for each entity, a separate report total would be provided for each one:

Entity	Org Level 1 value	Org Level 2 value	Organization
1	AC	CORP	AC CORP
2	CC	CORP	CC CORP
3	EC	CORP	EC CORP

Note: *Consolidated reporting is available to produce reports regardless of organization values.*

Related organizations

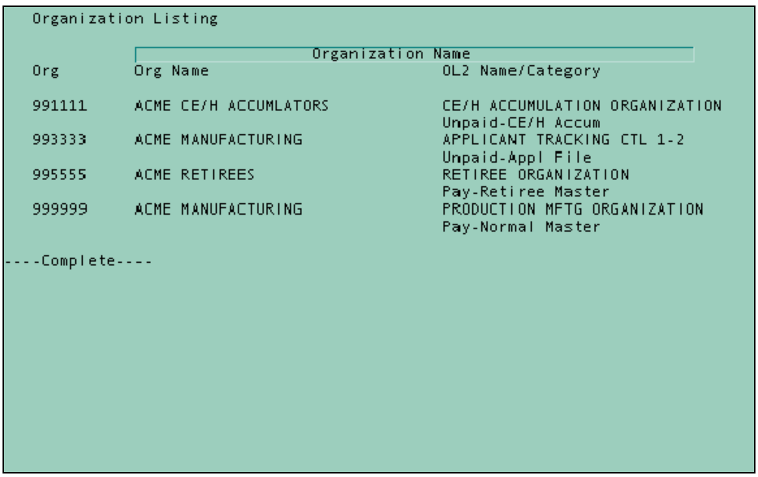
Three organizations that require one grand total, in addition to separate totals for each organization, could be set up as follows. In this example, each organization would generate its own total (because the organization level 2 value is unique) and there would also be an automatic grand total for all organizations (because the organization level 1 value is the same for all organizations):

Entity	Org Level 1 value	Org Level 2 value	Organization
1	AC	USDV	AC USDV
2	AC	CNDV	AC CNDV
3	AC	EPDV	AC EPDV

Note: *HR-only customers should work with Payroll to determine their organization requirements.*

Existing organizations

Prior to adding an organization to your file, review the contents of the Organization Listing form (COLIST) to verify the existing organization values:



```
Organization Listing

                              Organization Name
Org       Org Name                          OL2 Name/Category

991111    ACME CE/H ACCUMLATORS             CE/H ACCUMULATION ORGANIZATION
                                            Unpaid-CE/H Accum
993333    ACME MANUFACTURING                APPLICANT TRACKING CTL 1-2
                                            Unpaid-Appl File
995555    ACME RETIREES                     RETIREE ORGANIZATION
                                            Pay-Retiree Master
999999    ACME MANUFACTURING                PRODUCTION MFTG ORGANIZATION
                                            Pay-Normal Master

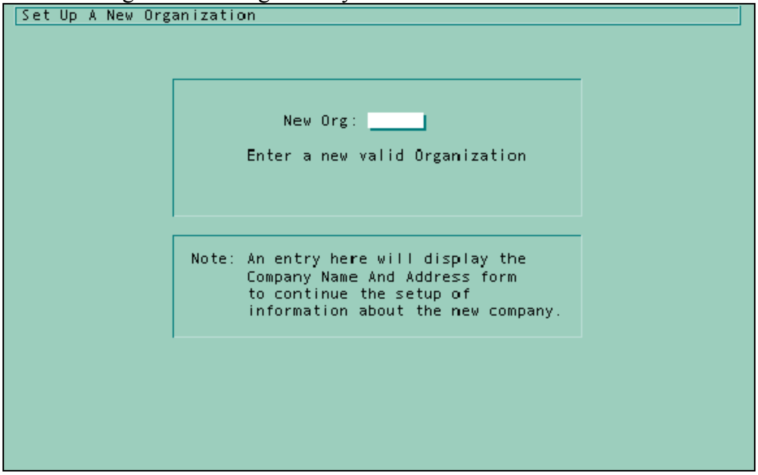
----Complete----
```

Notice that there are several organizations that are delivered with *The Solution Series* installation files. These organizations may be used for training, testing options, and running reports. Each test organization has a specific purpose and employee records are set up accordingly. The organization designated as '993333', for instance, is set up for use as an applicant tracking organization.

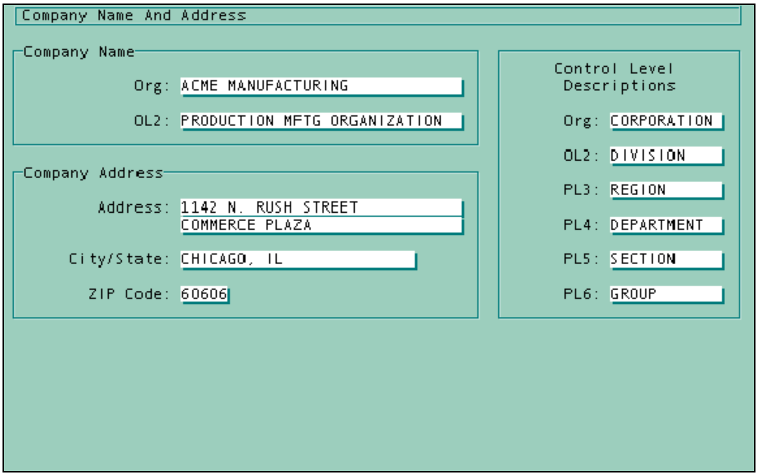
Keep these test organizations on file for future training and testing of new options.

Recording the organization identifier

You will use up to six characters to identify the organization. After it has been processed, the Set Up A New Organization form (AA-NEW) establishes the organization on the Employee Database (FILE02) with default organization information. For each organization, the new designation is assigned only once:



Another organization form allows you to record the organization's legal name and address that will appear on Cyborg-delivered reports. The optional second line can be used for supplemental information such as division or plant names. The control level description entries on the Company Name And Address form (AA-SCR) are used to record the name, or title, of each control level. The titles will be printed on reports when they total at these levels. The control level titles shown on the form for PL3–6 are reserved for Payroll purposes:



Company Name And Address

Company Name
Org: ACME MANUFACTURING
OL2: PRODUCTION MFTG ORGANIZATION

Company Address
Address: 1142 N. RUSH STREET
COMMERCE PLAZA
City/State: CHICAGO, IL
ZIP Code: 60606

Control Level Descriptions
Org: CORPORATION
OL2: DIVISION
PL3: REGION
PL4: DEPARTMENT
PL5: SECTION
PL6: GROUP

After this form is completed, default (generic) organization information is generated on various maintenance forms. For instance, you can update the name and address information on the Company Name And Address form (AA-SCR). You will use the organization's designation to access these maintenance forms.

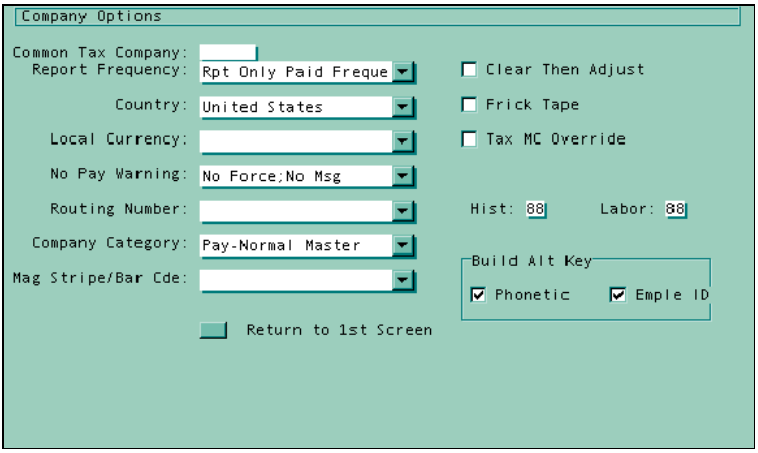
Organization options

When Human Resources Administration accepts the new organization, the system creates some basic records, default forms, and reports. The system also selects some initial entries for some of the text and list boxes on the forms. For these default entries to work properly, the two-part Company Options form (AF-SCR) must be set up. Just as your decisions result in many policies for an organization, many options are available within an organization in The Solution Series. These options serve as defaults for an organization and all its employees until you make a change to the option value.

Most of the options for an organization indicate decisions for payroll processing. Only one option—whether this is a paid or non-paid organization—needs to be recorded for a Human Resource Administration Solution implementation.

This option is displayed on the Company Options form (AF-SCR) on the second panel. The default selections that display in some of the text and list boxes are valid for this implementation. In the example that follows, the default value has been left in the Company Category list box and indicates that this organization is a paid organization:



Each selection in the Company Category option list (PP55) for this list box is associated with a value. If you modify this option list, please keep in mind the following rules:

Value range	Result
01–50	Can produce payments
51	Reserved for use with organization 991111 only
61–69	Reserved for Applicant Administration organizations
51–99	Do not produce payments

You may want to establish non-paid organizations for terminated employees or retirees for whom you want to track benefits.

See also:

- Identifying non-paying organizations ***(on page 69)***

For detailed directions on identifying non-paying organizations.

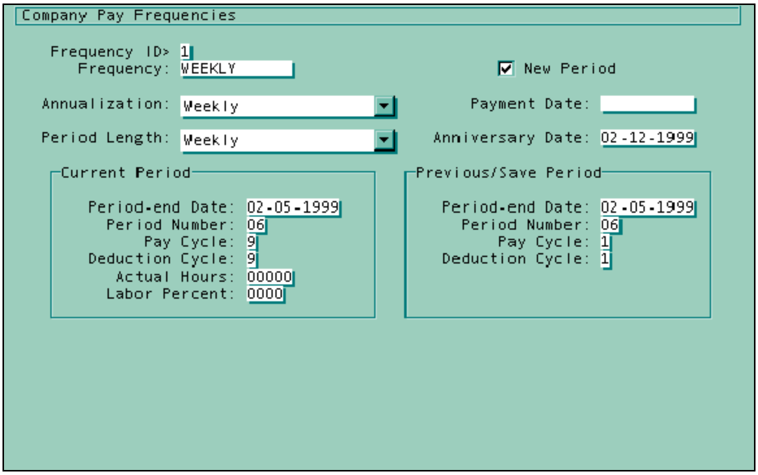
Pay frequencies

When used for payroll purposes, a pay frequency is the specific interval, such as weekly or monthly, at which employees are paid. A specific pay frequency is assigned to each employee and is used during payroll processing.

Human Resources Administration uses pay frequencies to perform certain calculations when an employee pay rate or salary change is recorded. Salary amounts can be annualized by using the pay frequency information.

For each organization, a Company Pay Frequencies form (AJ-SCR) must be completed for each frequency used by the organization. Each of your organization's valid payment intervals must be defined as a pay frequency. The most commonly used pay frequencies are weekly, bi-weekly, semi-monthly, and monthly.

Only the first four text/list boxes on the Company Pay Frequencies form (AJ-SCR) are required to define the pay frequency. You will record the number of weeks represented by this period, and the number of these periods in a calendar year. The remaining information is used for payroll purposes:



You may display a list of the recorded pay frequencies by accessing the Company Pay Frequency Inquiry form (AJISCR).

See also:

- Establishing pay frequencies ***(on page 66)***

For detailed directions on establishing pay frequencies.

Detailed Directions

This section provides detailed directions on completing a business task.

Tasks

Completing the Guided Practice

As the first step in setting up a new organization and its HR rules, the Guided Practice for this section will allow you to set up an organization named Acme Manufacturing (AB1000), record the name and address of the organization, and then define that organization's pay frequency. You will also define it as a paid organization. After the organization is set up in this section, subsequent sections will address establishing HR rules.

Viewing existing organizations

To display a listing of existing organizations using the Organization Listing form, (COLIST) follow these steps:

1. Access the Organization Listing form (COLIST)

Access this form by making the following selection from the Navigator:

Component: User Tools
Process: User Tools
Task: List All Organizations

For practice, access the Organization Listing form (COLIST).

2. Review the organizations listed

- If the organization you wish to add is not listed, access the Set Up A New Organization form (AA-NEW).

- If the desired organization ID is assigned to an existing organization in the list, it can not be used to add a new organization.

For practice, no action is required here.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:

```
Organization Listing

                        Organization Name
Org        Org Name                        OL2 Name/Category

991111     ACME CE/H ACCUMLATORS           CE/H ACCUMULATION ORGANIZATION
                                           Unpaid-CE/H Accum
993333     ACME MANUFACTURING              APPLICANT TRACKING CTL 1-2
                                           Unpaid-Appl File
995555     ACME RETIREES                   RETIREE ORGANIZATION
                                           Pay-Retiree Master
999999     ACME MANUFACTURING              PRODUCTION MFTG ORGANIZATION
                                           Pay-Normal Master

----Complete----
```

See also:

- Organization setup overview ***(on page 53)***

For more information about viewing existing organizations.

Setting up a new organization

To set up a new organization using the Set Up A New Organization form (AA-NEW) and the Company Name And Address form (AA-SCR), follow these steps:

1. Access the Set Up A New Organization form (AA-NEW)

Access this form by making the following selection from the Navigator:

Component:	Development Tools
Process:	Employee Database Utilities
Task:	Add a New Organization

For practice, access the Set Up A New Organization form (AA-NEW).

2. Type the New Org

Type the six-character organization ID.

For practice, type 'AB1000'.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:

3. Click Save or press Enter

The Company Name And Address form (AA-SCR) appears and the new organization identifier is added to those already established.

For practice, click Save or press Enter.

4. Type the Org

Type the legal name of your organization as you want it to appear on reports.

For practice, type 'Acme Manufacturing'.

5. Type the OL2

Type the name that you want to specifically identify control level 2 of your organization. It may refer to your company or trade name, a region, division or plant name, or an employee grouping. This name appears on line 2 of all reports, except government reports.

For practice, type 'Midwest Division'.

6. Type the Address

Type the supplemental address information such as building name, building number, or suite number on line 1. Then type the street number and name or post office box. This is the address where the company's mail or packages are delivered.

For practice, type '2 North Riverside Plaza' on line 1 and 'Suite 1200' on line 2.

7. Type the City/State

Type the appropriate city and state in the following format: CITY *comma space* ST (where ST is the two-character postal abbreviation for the state).

For practice, type 'Chicago, IL'.

8. Type the ZIP Code

Type the five-digit ZIP or postal code value.

FoUr practice, type '60606'.

9. Type the Org

Type the first control name description as it is to appear on reports, for example, Corporation.

For practice, type 'Corporation'.

10. Type the OL2

Type the second control name description as it is to appear on reports, for example, Division.

For practice, type 'Division'.

11. Type the PL3-6 (optional)

This is an optional step that must only be completed if this organization will produce employee payments and your payroll personnel have given you suggested entries for these text boxes.

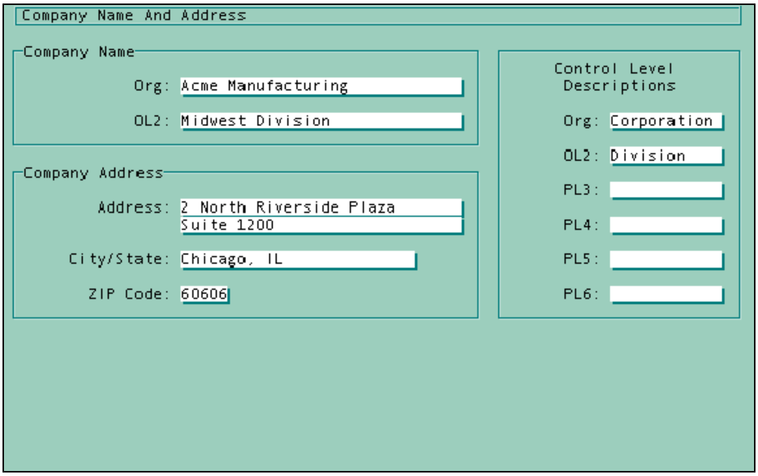
For practice, leave these text boxes blank.

12. Click Save or press Enter

Organization name and address information has been recorded.

For practice, click Save.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Organization setup overview ***(on page 53)***

For more information about setting up an organization.

Updating organization name and address information

To update organization name and address information using the Company Name And Address form (AA-SCR), follow these steps:

1. Access the Company Name And Address form (AA-SCR)

Access this form by making the following selection from the Navigator:

Component:	Development Tools
Process:	Employee Database Utilities
Task:	Maintain Organization Name

For practice, access the Company Name And Address form (AA-SCR) for organization AB1000.

2. Access the text or list box to be changed

Access the text or list box that is to be changed.

For practice, access the Address text box.

3. Change the text or list box

Make a change to the text or list box entry.

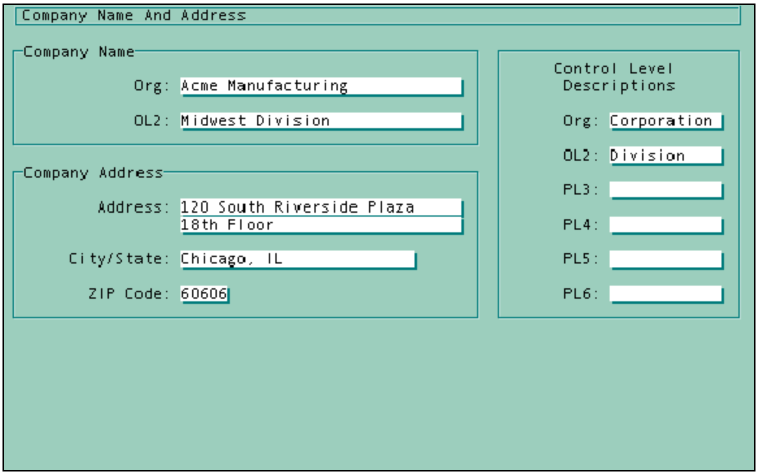
For practice, type '120 South Riverside Plaza' on address line 1 and '18th Floor' on address line 2 to replace the current entries.

4. Click Save or press Enter

The changed information has been recorded.

For practice, click Save.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Company Name And Address

Company Name

Org: Acme Manufacturing

OL2: Midwest Division

Company Address

Address: 120 South Riverside Plaza
18th Floor

City/State: Chicago, IL

ZIP Code: 60606

Control Level Descriptions

Org: Corporation

OL2: Division

PL3:

PL4:

PL5:

PL6:

See also:

- Organization setup overview ***(on page 53)***

For more information about recording organization name and address information.

Establishing pay frequencies

To set up pay frequencies using the Company Pay Frequencies form (AJ-SCR), follow these steps:

Note: *HR uses these frequencies to perform certain calculations when an employee pay rate or salary is updated.*

1. Access the Company Pay Frequencies form (AJ-SCR)

Access this form by making the following selection from the Navigator:

Component: Payroll Setup Processing
Process: Organization Setup
Task: Pay Frequencies

For practice, access the Company Pay Frequencies form (AJ-SCR) for the organization AB1000.

2. Type the Frequency ID

This text box defines a unique pay frequency. Type a one-character identifier for this frequency.

No option list is connected to this text box, so you may type any one-character value that you choose. However, the corresponding employee list box uses the Pay Frequency option list (PP29). The delivered values in the Pay Frequency option list are used by delivered demo data and should not be changed or deleted. Additional option list entries may be entered and then must be defined on the Company Pay Frequencies form (AJ-SCR).

Note: *You do not have to make changes to the option list before completing this form, but you must make the changes to be able to complete the corresponding Employee Information form.*

The Cyborg-delivered values from the Pay Frequency option list are:

- Weekly (1)
- Bi Weekly (2)
- Semi Monthly (3)
- Monthly (4)

☞ *Refer to The Solution Series User Guide for Windows for a detailed presentation of populating option lists.*

For practice, type '1'.

3. Type the Frequency

Type a description for the frequency defined by the value in the Frequency ID.

Note: *This name is only a description and does not define the frequency. The next two list boxes create the definition.*

For practice, type 'Weekly'.

4. Select the Annualization

The system needs a value in this list box in order to annualize an employee's pay period earnings. Select an option from the option list that identifies the number of pay periods in the calendar) year.

For practice, select 'Weekly'.

5. Select the Period Length

Select the option in the drop-down list that corresponds to the exact number of weeks in each pay period appropriate to this pay frequency. The option you select in this list box should be identical to the option you select in the Annualization list box.

Example: If you selected 'Weekly' in the Annualization list box, you must select 'Weekly' in the Period Length list box.

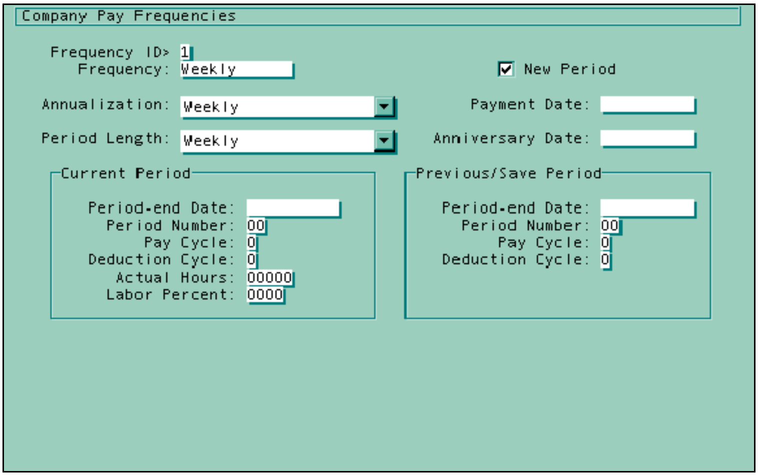
For practice, select 'Weekly'.

6. Click Save or press Enter

The pay frequency has been recorded.

For practice, click Save.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Note: *Remember that you must complete one Company Pay Frequencies form (AJ-SCR) for each pay frequency used by the organization. To set up your next frequency, clear the form and repeat these steps, starting at Step 2.*

See also:

- Pay frequencies ***(on page 60)***

For more information about displaying pay frequencies.

Verifying pay frequencies

To display pay frequencies using the Company Pay Frequency Inquiry form (AJISCR), follow this step:

Access the Company Pay Frequency Inquiry form (AJISCR)

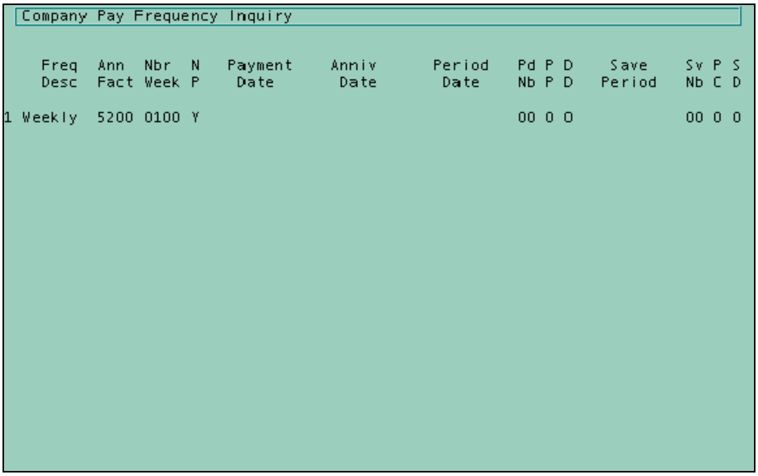
Access this form by making the following selection from the Navigator:

Component: Payroll Setup Processing
Process: Organization Setup
Task: Pay Frequencies Inquiry

The Company Pay Frequency Inquiry form (AJISCR) lists all the Company Pay Frequencies form (AJ-SCR) entries on file.

For practice, access the Company Pay Frequency Inquiry form (AJISCR) for the organization AB1000.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Company Pay Frequency Inquiry

	Freq Desc	Ann Fact	Nbr Week	N P	Payment Date	Anniv Date	Period Date	Pd Nb	P P	D D	Save Period	Sv Nb	P C	S D
1	Weekly	5200	0100	Y				00	0	0		00	0	0

See also:

- Pay frequencies ***(on page 60)***

For more information about displaying pay frequencies.

Identifying non-paying organizations

To identify a non-paying organization using the Company Options form (AF-SCR), follow these steps:

Note: *If the newly established organization is a paid organization, you need not perform this task. 'Pay-Normal Master' is the default value for the Company Category list box on this form.*

1. Access the Company Options form (AF-SCR)

Access this form by making the following selection from the Navigator:

Component: Payroll Setup Processing
Process: Organization Setup
Task: Organization Options

For practice, access the Company Options form (AF-SCR) for organization AB1000.

2. Click the More Options button

The second panel of the Company Options form (AF-SCR) is displayed. The default values for the options on the first panel are acceptable for an HR organization.

For practice, click the More Options button.

3. Select the Company Category

This list box provides details about the type of organization, such as whether or not it is a paying organization. The default option for this list box is Pay-Normal Master. You can make additions to the Cyborg-supplied options in this list box. Use options between 01 and 50 to pay employees. Options 51 through 99 are used for storing information and do not pay. Options 61 through 69 are reserved for Applicant Administration organizations.

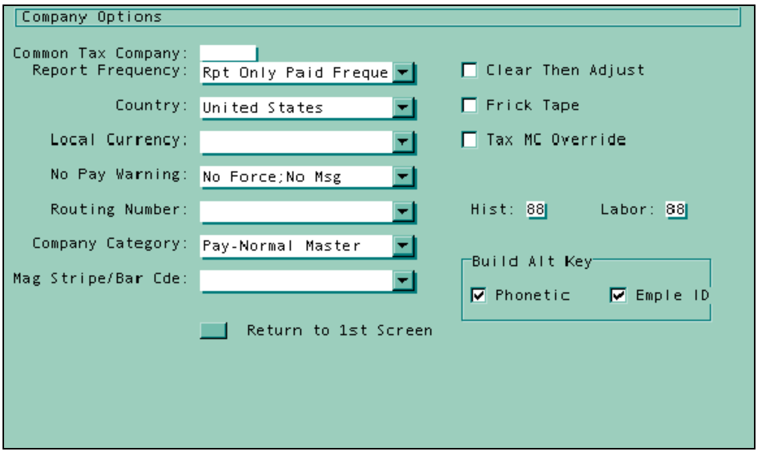
For practice, select 'Pay-Normal Master' if it is not already displayed in the list box.

4. Click Save or press Enter

The organization has been designated as a paid or non-paid organization. The remaining options on the second panel are decisions for payroll processing and the default values are acceptable for an HR organization.

For practice, click Save.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Organization options ***(on page 58)***

For more information about identifying paid and non-paid organizations.

Apply the Concept

1. Using the information provided in this section, indicate your understanding of The Solution Series organization hierarchy by creating an organization structure that meets the needs of the scenario that follows:

   The Great Pride organization is composed of a corporate headquarters and four divisions, each located in different parts of the country. For purposes of reporting and payroll processing, the corporate headquarters needs separate totaling for itself and each division to monitor productivity and costs. In addition, they require a grand total for all organizations. Create your own values for the organization level 1 and 2 entries.

   Complete the following chart with the organization values for the corporate headquarters and the four divisions:

Entity	**Org Level 1 value**	**Org Level 2 value**	**Organization**
Corporate			
Division 1			
Division 2			
Division 3			
Division 4			

2. Using the same organization information as shown above, complete the following chart to illustrate what the company might choose as organization level 1 and level 2 values if they needed separate reporting and had no need for any grand totals:

Entity	**Org Level 1 value**	**Org Level 2 value**	**Organization**
Corporate			
Division 1			
Division 2			
Division 3			
Division 4			

Review of Questions Answered

1. What Cyborg structure allows the definition of an organization hierarchy?

2. How are organization identification and address information recorded on The Solution Series?

CHAPTER 5

Establishing Basic HR Rules

In This Chapter

Introduction

After you have set up an organization, you can set up its associated business rules. You do so by completing a series of table forms.

Tasks

This section explains the following:

- Linking rules to organizations
- Establishing common data elements
- Viewing the common data element settings

Prerequisites

Before you can establish the basic HR rules, you must set up the following in The Solution Series:

- Install The Solution Series
- Establish one or more organizations

☞ *Refer to* **Setting Up an Organization** *(on page 51) for organization setup information, and* **Establishing Basic HR Rules** *(on page 73) for Control Number and system option information.*

Questions answered

The following questions are answered in this section:

1. What are Control Numbers and what purpose do they serve?
2. How does an organization record the link to its specific HR rules?
3. How can common data elements be shared between Payroll and Human Resources?

Working with tables

The rules for administering the HR function are stored in tables. Tables are accessed online using forms. As you work with the system, you will find it necessary to add, update, and delete tables. Of course, you must have the proper security to perform these tasks. The next two topics cover the considerations and information you will need to work with tables.

Note: *The considerations covered here apply to tables in all components of The Solution Series.*

Control Numbers

Tables reside on the System Control Repository (FILE01), and organizations reside on the Employee Database. Control Numbers act as a mechanism, or link, for identifying tables that can be accessed by an organization.

A Control Number:

- Is customer-defined.
- Is four characters in length, alphanumeric (except for Training Administration and Position Administration, which are two characters).
- Gives the system direction as to what tables to access for a particular organization.

Because Control Numbers can be used to distinguish different versions or sets of a particular type of table, they allow organizations to use tables in the following ways:

- Use the same set of tables (share)
- Use their own set of tables (organization-specific)
- Share some sets of tables, and have their own unique sets of other tables (mix and match)

Note: *'Mix and match' is applicable to the HR component only: it does not apply to Benefits Administration.*

If you determine that you will only have one shared set of each of the tables—for example, one set of Job Code tables, one set of Activity tables—then decide what single Control Number you would like to assign to your tables. The Control Number 9999 is used for Cyborg-delivered data.

If you determine that you must have multiple sets of any of the tables, you will need to set up multiple sets of the tables. For example, if you have an organization that must have its own set of Job Codes, and the other organizations will use another set, you will establish two sets of tables for the Job Codes. Assign a different Control Number to each of the two table sets.

The following examples demonstrate the different options available when determining Control Number usage.

Shared Control Numbers

Assume that two or more organizations share the same set of jobs. For example, each organization has nurses and pilots.

Because your organizations are sharing jobs, you will:

- Set up the cross-reference for each organization on the Company-To-Rules Cross-Reference For HR form (AX-SCR) to point to that common Control Number.

- Set up each job on the Job Code Table form (TA-SCR).

Organization-specific Control Numbers

Assume that your organization has more than one organization, each with its own set of jobs. For example, organization 01HOSP has only nursing jobs, and those jobs do not apply to organization 01UFLY, which has only pilots. Because each organization has specific jobs, you will (in this example):

- Set up the cross-reference for each organization on the Company-To-Rules Cross-Reference For HR form (AX-SCR) to point to the organization-specific Control Number.
- In 01HOSP, set up jobs on the Job Code Table form (TA-SCR) for Nurses and Doctors.
- In 01UFLY, set up jobs on the Job Code Table form (TA-SCR) for Pilots and Mechanics.

Mix-and-match Control Numbers

Assume that even though organization 01HOSP and organization 01UFLY have organization-specific Job tables, they decide to share Activity tables. Instead of setting up two different sets of Activity tables, the system can be set up to allow both organizations to use the same activities.

Because your organizations want to share one kind of table, and have another table that is organization-specific, you will (in this example):

- Set up the Job tables (TA-SCR) as organization-specific, with the cross-reference for each organization pointing to the organization-specific Control Number.
- Set up the Activity tables as shared, with the cross-reference for each organization pointing to that shared Control Number.

Table dates

The table date reflects the effective date of the table. The following date options are available:

- Initially, you may wish to use the founding date of your company to ensure that all employees are covered by the table.
- For changes to the table, it is recommended that you create a new table record with a new effective date.
- You may create future-date tables, in which case the table data is ignored until that time.

If you make an entry for which there is a table value older than the current table, the system will access and use the older table entry for calculations, definitions, and validations. This allows for both 'point-in-time' or 'as of' reporting.

The Job Code Table (TA-SCR) form's entries are date-sensitive so that history may be retained on a job code. This is especially useful when the salary grade of a job changes due to job evaluations.

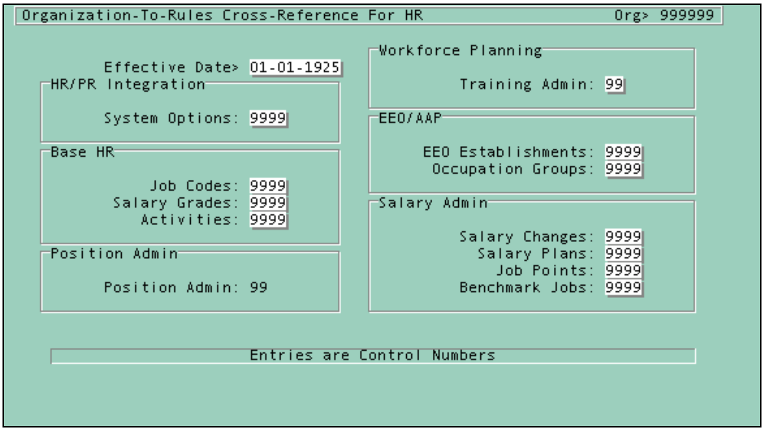
When looking at the history of an employee who has been with your company for some time, notice that the salary grade from an earlier point in time is different from today's salary grade.

In the test data supplied with the system, the date of January 1, 1925 is used as the effective date. This is the earliest acceptable date in the system for the twentieth century.

Rules and organizations—the link

You specify which tables will be used by an organization using the Company-To-Rules Cross-Reference For HR form (AX-SCR). You must establish one Company-To-Rules Cross-Reference For HR form (AX-SCR) for each organization, even if all organizations will use the same set of tables.

The Control Numbers assigned to each text box identify the set of tables that can be accessed by an organization. This feature allows you to assign the same set of tables to multiple organizations, or to assign unique tables to a specific organization:



Organization-To-Rules Cross-Reference For HR Org> 999999

Effective Date> 01-01-1925

HR/PR Integration
System Options: 9999

Base HR
Job Codes: 9999
Salary Grades: 9999
Activities: 9999

Position Admin
Position Admin: 99

Workforce Planning
Training Admin: 99

EEO/AAP
EEO Establishments: 9999
Occupation Groups: 9999

Salary Admin
Salary Changes: 9999
Salary Plans: 9999
Job Points: 9999
Benchmark Jobs: 9999

Entries are Control Numbers

This must be the first HR table established for an organization, because it grants access to all other tables.

Note: *Establish this table for your applicant tracking organizations also. Applicant tracking organizations need a link to the Systems Options table (TG-SCR) and to the Activity And Resulting Employee Status Rules table (TF-SCR) for some of their functions.*

Considerations

The Title Bar contains the identifier of the organization for which you are establishing this table. You may also confirm the organization identifier by viewing the Status Bar at the bottom of the form.

The Effective Date is the first day that the rules will be used. You may wish to set up this table by using the founding date of your organization. The earliest acceptable date in the system for the twentieth century is January 1, 1925.

The remaining groups of text boxes (HR/PR Integration, Base HR, Workforce Planning, EEO/AAP/VETS-100, and Salary Admin) relate directly to the table(s) within a component. For each table that will be used by this organization, the corresponding text box must be filled with your customer-defined Control Number.

Your Control Numbers probably will not begin with '9'.

Note: The only exception to this rule is the Occupation Group Table form (TE-SCR). Cyborg delivers this table fully populated and ready for your use. For this table, use 9999 as the table Control Number.

Field to table reference

The following text boxes from the Company-To-Rules Cross-Reference For HR form (AX-SCR) relate directly to the corresponding tables:

HR/PR Integration	
Text Box	**Table**
System Options	System Options (TG-SCR)

Base HR	
Text Box	**Table**
Job Codes	Job Code Table (TA-SCR)
Salary Grades	Salary Grade Tables (TBASCR, TBBSCR, TBCSCR)
Activities	Activity And Resulting Employee Status Rules (TF-SCR)

Note: The Position Administration display box is automatically populated with the first two positions of the Base HR Control Number. This dual role is necessary in order to allow the Job Code Table form (TA-SCR) functionality to be fed from Position Administration.

Workforce Planning		
Text Box	**Tables**

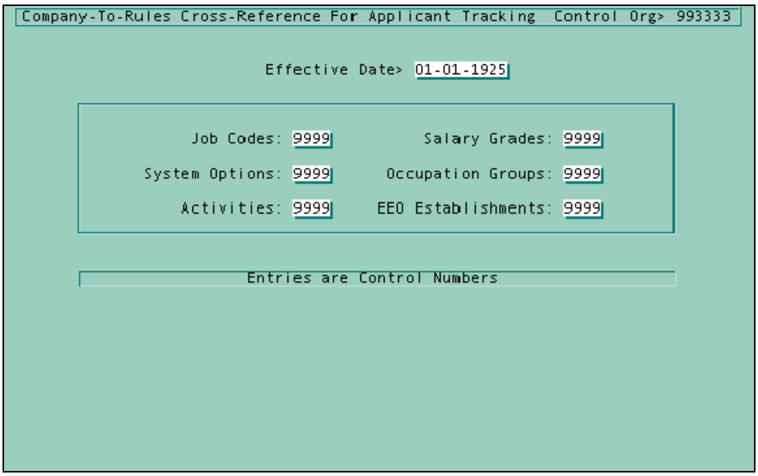
* These tables are only used in Salary Administration.

Specifying tables for applicant organizations

You will use the Company-To-Rules Cross-Reference For Applicant Administration form (AT-SCR) to define which Control Number is to be used for each applicant organization.

Each applicant organization must have an entry for this table. Every applicant form that uses a table will reject with an error message if this table has not been set up for each applicant organization. The Control Numbers you enter on this table should be the same as the ones assigned on the equivalent active employee organization:



The text boxes on this table contain links to some of the same tables as the Company-To-Rules Cross-Reference For HR form (AX-SCR):

- Job Codes
- Salary Grades
- Occupation Groups
- EEO Establishments (US-specific)

Control Numbers assigned to tables should begin with a value other than 9.

Note: *The only exception to this rule is the Occupation Group Table form (TE-SCR). Cyborg delivers this table fully populated and ready for your use. For this table, use '9999' as the table Control Number.*

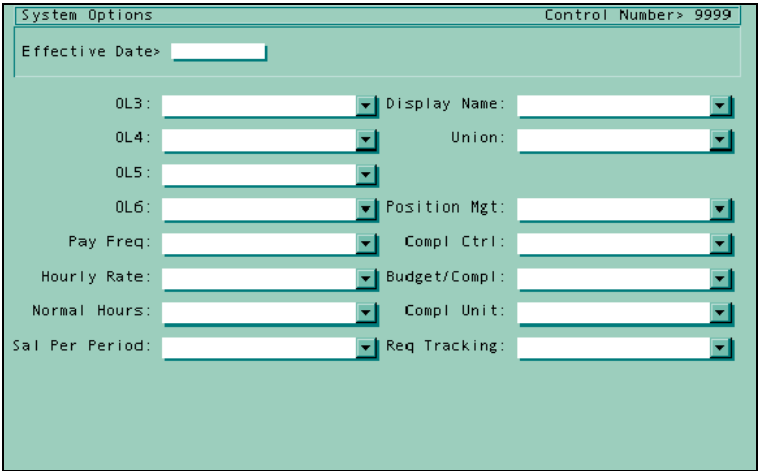
For detailed directions on viewing the common data element settings.

Payroll and Human Resources---sharing common data elements

To allow common data elements to be shared between Payroll and Human Resources and establish which department has control, you will record ownership of these elements for each organization on the System Options form (TG-SCR) by setting 'switches'.

Shared elements include several types of switches:

- Organization levels
- Pay Frequency
- Hourly Rate
- Normal Hours
- Salary Per Period
- Union



Refer to the Using Position Administration documentation or the online help for detailed information on completing the five switches in the lower right area of this form.

Organization-level switches

You can have up to four organization-level shared elements between Payroll and Human Resources. These organization levels represent the breakdown of your organization; for example, by division, by department, and by sub-department.

The organization-level shared elements are identified on the System Options form (TG-SCR) as OL3, OL4, OL5, and OL6 switches. The Payroll and Human Resource forms linked by the organization-level switches are:

Component	Form Title
Payroll	Payroll Home Location/Pay Allocations (GG-SCR)
HR	Location Assignment/Changes (05CSCR)

Note: *Sharing can occur only when one or more control list boxes are defined the same for Payroll and HR, and the option list values are the same.*

Valid options for the OL3, OL4, OL5, and OL6 switches are:

Option	Ownership
Payroll Controls Fld	If Payroll processes a Home Location/Pay Allocations form (GG-SCR) for an employee, a new Location Assignment/Changes form (05CSCR) is created with the current date and the new values from the a Home Location/Pay Allocations form (GG-SCR).
Each Controls Own (default)	Payroll and HR maintain individual structures. Payroll processes a Payroll Home Location/Pay Allocations form (GG-SCR); Human Resources processes a Location Assignment/Changes form (05CSCR).
HR Controls Field	If HR processes a Location Assignment/Changes form (05CSCR) for an employee, the Control 3 through Control 6 values are changed on the employee's Home Location/Pay Allocations form (GG-SCR), Allocation 01, when the entry is made.

Display name

This option is currently not available. The employee name automatically displays at the top of each employee form.

Salary switches

The salary switches handle the updating of salary information. Salary switches include the Pay Freq, Hourly Rate, Normal Hours, and Sal Per Period list boxes.

The Payroll and Human Resource forms linked by the salary switches are:

Component	Form Title
Payroll	Employee Pay Rate Or Salary (H1-SCR)
HR	Salary Assignment/Changes (40-SCR)

Valid options for the Salary switches are limited to two choices because, unlike Payroll, HR salary data is dated. Payroll does not contain sufficient information to update HR. These values are:

Option	Ownership
HR Controls Field	Human Resources controls the value. If HR processes a future-dated increase for an employee on the Salary Assignment/Changes form (40-SCR), a Salary Information form (PH-SCR) is created. This is used during a pay run to update the HED 001 record on the Employee Pay Rate Or Salary form (H1-SCR).
Each Controls Own (default)	Both Payroll and HR maintain individual structures.

Note: *The option you select for the Salary switches must be the same in all four Salary list boxes.*

☞ *Refer to the Using Human Resources Administration documentation for more information on the interaction of the Salary Assignment/Changes form (40-SCR), Salary Information form (PH-SCR), and the Employee Pay Rate Or Salary form (H1-SCR).*

Union switch

The Union switch handles the updating of the union designation for the employee. The Payroll and Human Resource forms linked by the Union switch are:

Component	Form Title
Payroll	Employee Information (EF-SCR)
HR	Job Assignment/Changes (05-SCR)

Valid entries for the Union switch are:

Option	Ownership
HR Controls Field	Human Resources controls the value. If HR enters the Union list box on the Job Assignment/Changes form (05-SCR), the Union list box is automatically updated on the Payroll Employee Information form (EF-SCR).
Each Controls Own (default)	Both Payroll and HR maintain individual structures.

Additional component functionality

Choose an option to indicate whether additional components (Position Administration, Complement Control, and Requisition Administration) are in use or not.

If you intend to use Complement Control, you must also specify the type of complement units to use, the complement limit option, and the type of validation messages to use.

☞ *Refer to the Using Position Administration documentation or the online help for detailed information on completing these list boxes.*

Viewing the common data element settings

The System Options Inquiry form (TGISCR) displays the System Options form table (TG-SCR) records for the value entered in the Control Number text box on the form's first panel.

Up to 16 records are displayed on each form.

You may also view the option switches by processing the TG Table Records Batch Format Report (9G-RPT).

Detailed Directions

This section provides detailed directions on completing a business task.

Tasks

Completing the Guided Practice

In the Guided Practice for this chapter, you will provide a link between the organization you set up in the previous chapter and its rules. To complete the setup, you will identify the shared data elements between Payroll and Human Resources. In the next chapter, you will add the employee activity rules.

You must have completed the Guided Practices in the prior chapter to guarantee the successful completion of the Guided Practice that follows.

Linking rules to organizations

To link rules to organizations using the Company-To-Rules Cross-Reference For HR form (AX-SCR), follow these steps:

1. Access the Company-To-Rules Cross-Reference For HR form (AX-SCR)

Access this form by making the following selection from the Navigator:

Component: HR Setup
Process: Setup HR Rules
Task: Organization to Rules Cross-Reference

For practice, access the Company-To-Rules Cross-Reference For HR form (AX-SCR) for organization AB1000.

2. Enter the Effective Date

Enter the date that reflects the effective date of the data on the table record. You may wish to set up this table by using the founding date of your company.

Dates are entered in MM-DD-CCYY format (US and Canada) or DD-MM-CCYY (elsewhere).

For practice, type '01-01-1925'.

3. Enter the Control Numbers

In each applicable text box, type the Control Number that will indicate which table(s) should be used by the current organization.

Note: *The first two positions of the Job Code text box are used as the Control Number for Position Administration.*

For practice, type '2500' in all Control Number text boxes, except for Occupation Groups. For that text box, type '9999'. Leave the Workforce Planning and Salary Admin group box text boxes blank.

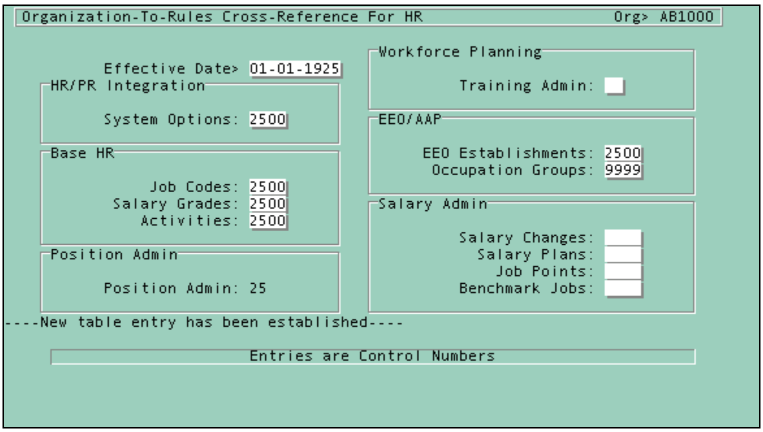
4. Click Save or press Enter

The table record is created and the following message is displayed:

'—New table entry has been established—'

For practice, click Save.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Organization-To-Rules Cross-Reference For HR Org> AB1000
Effective Date> 01-01-1925
HR/PR Integration
System Options: 2500
Base HR
Job Codes: 2500
Salary Grades: 2500
Activities: 2500
Position Admin
Position Admin: 25
Workforce Planning
Training Admin:
EEO/AAP
EEO Establishments: 2500
Occupation Groups: 9999
Salary Admin
Salary Changes:
Salary Plans:
Job Points:
Benchmark Jobs:
----New table entry has been established----
Entries are Control Numbers

See also:

- Rules and organizations—the link ***(on page 79)***

For more information about linking rules to organizations.

Establishing common data elements

To set up the rules for common data elements using the System Options form (TG-SCR), follow these steps:

1. Access the System Options form (TG-SCR)

Access this form by making the following selection from the Navigator:

Component: HR Setup
Process: Setup HR Rules
Task: System Options

For practice, access the System Options form (TG-SCR) for organization AB1000.

2. Enter the Effective Date

Type the date that reflects the effective date of the data on the table record. You may wish to set up this table by using the founding date of your company.

Dates are entered in MM-DD-CCYY format (US and Canada) or DD-MM-CCYY (elsewhere).

For practice, type '01-01-1925'.

3. Select the organization level switches

For the list boxes OL3 through OL6, indicate whether Payroll controls the value, HR controls the value, or whether both should retain their own control structures.

For practice, select 'Each Controls Own' for these list boxes.

4. Specify salary switches options

For the list boxes Pay Freq, Hourly Rate, Normal Hours, and Sal Per Period, indicate whether HR should control the value (and send information to Payroll), or whether HR and Payroll should maintain individual structures.

Note: *The same entry must be made in all four list boxes.*

For practice, select 'HR Controls Field' for these four list boxes.

5. Bypass the Display Name option

This list box is not currently available. The employee name automatically displays on the top of each employee form.

For practice, bypass this list box.

6. Specify Union option

Choose a value to indicate whether HR and Payroll should maintain individual structures or whether HR should control the value.

For practice, select 'Each Controls Own'.

7. Specify additional component functionality

Choose a value to indicate whether additional components (Position Administration, Complement Control, and Requisition Administration) are in use or not.

If you intend to use Complement Control, you must also specify the type of complement units to use, the complement limit option, and the type of validation messages to use.

Refer to the Using Position Administration documentation or the online help for detailed information on completing these list boxes.

For practice, select 'In Use' in the Position Administration list box.

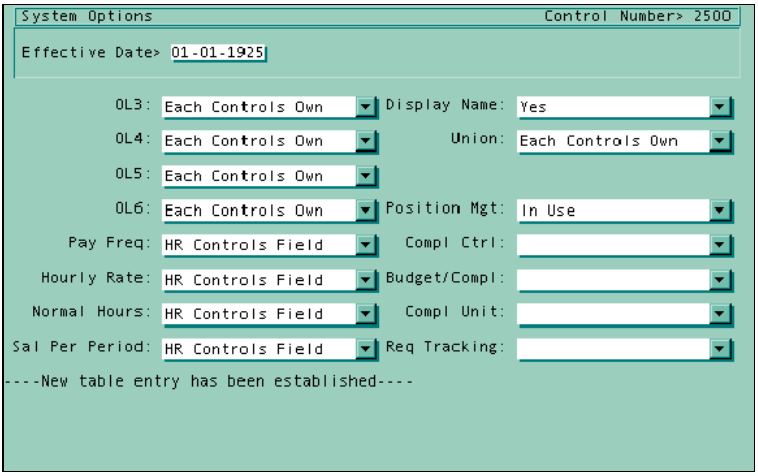
8. Click Save or press Enter

The table record is created and the following message is displayed:

'—New table entry has been established—'

For practice, click Save.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



System Options Control Number> 2500

Effective Date> 01-01-1925

OL3:	Each Controls Own	Display Name:	Yes
OL4:	Each Controls Own	Union:	Each Controls Own
OL5:	Each Controls Own		
OL6:	Each Controls Own	Position Mgt:	In Use
Pay Freq:	HR Controls Field	Compl Ctrl:	
Hourly Rate:	HR Controls Field	Budget/Compl:	
Normal Hours:	HR Controls Field	Compl Unit:	
Sal Per Period:	HR Controls Field	Req Tracking:	

----New table entry has been established----

See also:

- Payroll and Human Resources—sharing common data elements ***(see "Payroll and Human Resources---sharing common data elements" on page 83)***

For more information about setting up common data element switches.

Viewing the common data element settings

To display the common data element switches using the System Options Inquiry form (TGISCR), follow these steps:

1. Access the System Options Inquiry form (TGISCR)

Access this form by making the following selection from the Navigator:

Component: HR Setup
Process: Setup HR Rules
Task: View System Options

For practice, access the System Options Inquiry form (TGISCR) for organization AB1000.

2. Enter the Control Number

Type the Control Number that represents the table entries to be viewed.

For practice, type '2500'.

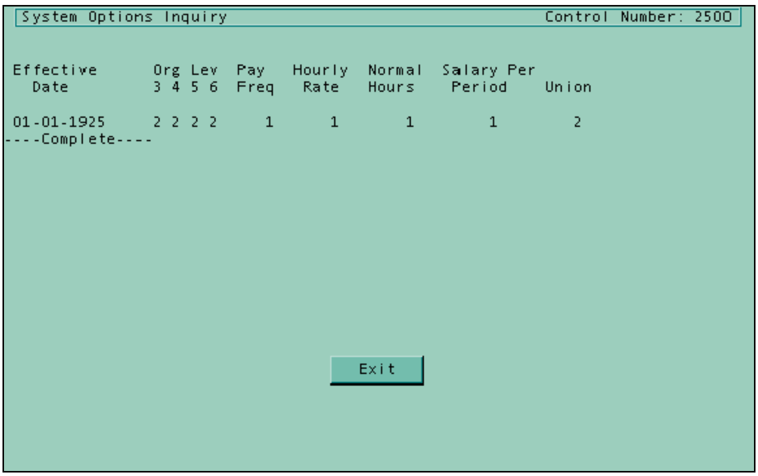
3. Click Save or press Enter

The common data element switches are displayed. Click Save or press Enter to view the next display of records. At any time, the Exit button may be selected to return to the first panel.

A '----COMPLETE----' message appears when all of the records on file have been displayed.

For practice, click Save.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



System Options Inquiry   Control Number: 2500

Effective Date	Org Lev 3 4 5 6	Pay Freq	Hourly Rate	Normal Hours	Salary Per Period	Union
01-01-1925	2 2 2 2	1	1	1	1	2

----Complete----

Exit

See also:

- Payroll and Human Resources—sharing common data elements ***(see "Payroll and Human Resources---sharing common data elements" on page 83)***

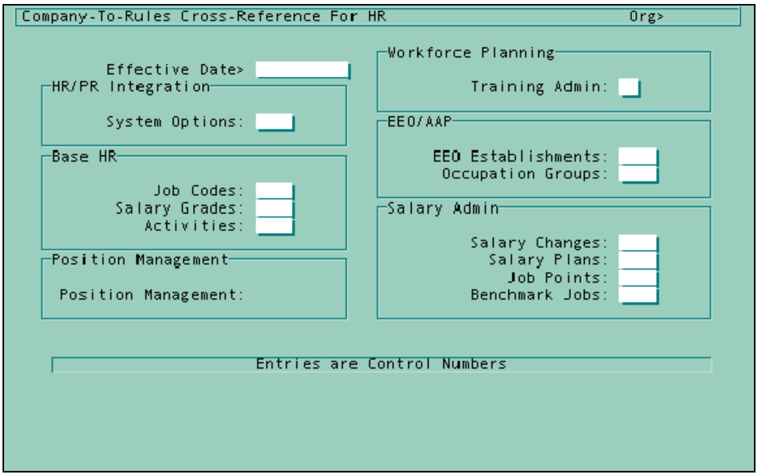
For more information about viewing common data element switches.

Apply the Concept

1. Using the information provided in this chapter, make entries in the form print that follows to indicate the choices that might be made by the organization in the following scenario.

   Great Pride (GP0001) wants to share table values with Acme Manufacturing (AB1000), with one exception - they want their own set of jobs because their industry is very different. If Acme Manufacturing has chosen a Control Number of 2500 for its tables, write in the entries that belong in Great Pride's Company-To-Rules Cross-Reference For HR form (AX-SCR) that follows:

   Create your own Control Number value for the Great Pride Company.



2. In your own organization, consider the relationship between the Payroll and Human Resource functions. Which area will be responsible for making the following entries in The Solution Series?

   Location assignment
   Salary information
   Union information

Review of Questions Answered

1. What are Control Numbers and what purpose do they serve?

2. How does an organization record the link to its specific HR rules?

3. How can common data elements be shared between Payroll and Human Resources?

CHAPTER 6

Setting Up Rules for Employee Activities

In This Chapter

Introduction

Administration employee activities requires a validation process that allows your organization to specify the conditions under which you may post an activity for an employee—for example, when an employee changes from terminated to rehired. Once an activity has been processed for an employee, tracking the resulting employee status is important for the human resource recordkeeping and other HR-related functions, such as benefits eligibility.

Tasks

This section explains the following:

- Setting up activity and resulting employee status rules
- Viewing activity and resulting employee status rules

Prerequisites

Before you can set up employee activity rules, you must set up the following in The Solution Series:

- Install The Solution Series
- Establish one or more organizations
- Define Control Numbers and system options

☞ *Refer to* **Setting Up an Organization** *(on page 51) for organization setup information, and* **Establishing Basic HR Rules** *(on page 73) for Control Number and system option information.*

Questions answered

The following questions are answered in this section:

1. What is the relationship between an employee activity and the resulting employee status?
2. What is the importance of tracking employee activities and status?

Validation of employee activities

The Activity Codes (option list HR09) and the resulting Employee Status (option list HR10) are important pieces of data for Human Resources Administration and other HR related functions. By design, The Solution Series chooses one or both of these criteria to determine:

- Employee selection for report purposes
- Whether an employee's current status allows the next activity
- Benefits Plan eligibility

These options must be present for a new organization prior to setting up the table rules that will govern their use.

Note: *If you have eCyborg Interactive Workforce installed, employment status is one of the selection criteria that determines whether an employee can use Interactive Workforce.*

Activities and employee status

Every employee major activity affects that employee's employee status. When hired (activity), an employee becomes active (employee status). If terminated (activity), an employee changes to inactive (employee status).

Activities and the employee status are used as selection criteria by all Cyborg-delivered HR reports. A report that displays the employees hired between January and February searches for new hire activities within that time frame.

Prior to creating an Activity And Resulting Employee Status Rules form (TF-SCR), you will need to analyze both the Activity options and the Employee Status options for use by your organization.

Both options lists are included in this manual just prior to the Detailed Directions.

Activities

The Activity Codes (option list HR09) contains all activities that can happen to the employee.

Each activity is assigned a three-position value. The first two positions are Cyborg-defined because activity forms and Cyborg-delivered reports are coded to use the first two positions in a consistent manner. You can add and delete activity values, but you may not change the meaning of the first two positions:

```
Code Set Display

 Codeset: HR09    Activity Codes
     00*              New Hire-All Values
     001              New Hire-Sal Reg FT
     002              New Hire-Sal Temp
     003              New Hire-Hr Reg FT
     004              New Hire-Hr Temp FT
     005              New Hire-Hr PT
     006              New Hire-<6mo Per Yr
     008              New Hire-Student Emp
     01*              Return-All Values
     011              Return-Salrd Reg FT
     012              Return-Salrd Temp
     013              Return-Hrly Reg FT
     014              Return-Hrly Temp FT
     015              Return-Hrly PT
     016              Return-<6mos Per Yr
     018              Return-Student Emp
     01F              End intermit FML per
     02*              Rehire-All Values
     021              Rehire-Salrd Reg FT
```

Each position of the option value has a specific meaning, for example:

Position 1: Major Activity	**Position 2: Further Defines Position 1**	**Position 3: Further Defines an Activity**
(0) Becoming an Active Employee	(0) New Hire	User-defined. You can
(1) Termination	(1) Return	define up to 35 different
(2) Disability	(2) Rehire	definitions (0–9, A–Z)
(3) Retirement	(3) Reinstatement	for every major activity.
(4) Death	(4) Recall	For example, 'temporary'
(5) Leave of Absence	(5) Return from non-HRIS location	or 'seasonal'.
(6) Layoff	(6) Return from labor dispute	
(7) Transfer	(7) Return from disability	
(8) Labor Walkout	(the above examples only valid with 0 in position 1)	
(9) Employee type change		

For example, if you want an activity option for anyone who is hired as a salaried, full-time employee. You could define the activity option as follows:

Position 1:	Position 2:	Position 3:
(0) Becoming an Active Employee	(0) New Hire	(1) Salaried, full-time

Anyone who is hired as a salaried, full-time employee would be assigned activity option 001.

Employee status

Every employee in the system has an employee status. This option represents the employee's current standing based on the activities processed for that employee.

For example, if an applicant is hired, his or her status would change from no prior status to an active status. Or, if an employee is terminated, his or her current status would change from active to terminated based on the termination activity entered.

The Employee Status codes (option list HR10) contains the results of an employee activity, expressed as an employee status.

Each employee status is assigned a two-position value. The first position is Cyborg-defined because activity forms and Cyborg-delivered reports are coded to use the first position in a consistent manner. You can add and delete values, but you may not change the meaning of the first position:

```
Code Set Display

  Codeset: HR10    Employee Status
      #                (None)
      **             Reserved Value
      0*             Active-Reserved
      00             No Prior Status
      01             Active-Salrd Reg FT
      02             Active-Salrd Temp
      03             Active-Hrly Reg FT
      04             Active-Hrly Temp FT
      05             Active-Hrly PT
      06             Active-<6 Mos Year
      08             Active-Student Emp
      1*             Term-Reserved
      11             Term-Salaried Reg FT
      12             Term-Salaried Temp
      13             Term-Hourly Reg FT
      14             Term-Hourly Temp FT
      15             Term-Hourly PT
      16             Term-<6mos Year
      18             Term-Student Emp
```

You will need to modify the Employee Status codes (option list HR10) to define the valid employee statuses for your organization. The values are two positions in length, for example:

Position 1: Employee Status	Position 2: Employee Type
(0) Active	Customer-defined. You can define up
(1) Terminated	to 35 employee types (0–9, A–Z) for
(2) Disabled	each employee status.
(3) Leave of absence with pay	
(4) Leave of absence without pay	
(5) Deceased	
(6) Laid off	
(7) Not on HRIS system	
(8) Labor Walkout	
(9) Retired	

For example, suppose Position 1 equals (0) - Active, and Position 2 equals (1) - Full Time Salaried. Any applicant hired to a full-time, salaried position would have a resulting employee status of '01', meaning Active, Full-time Salaried.

See also:

■ Setting up activity and resulting employee status rules ***(on page 110)***
For detailed directions on setting up activity and resulting employee status rules.

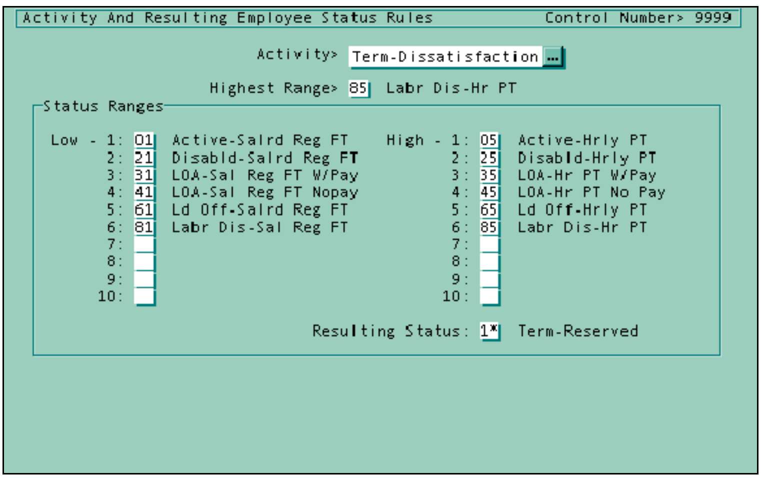
Activity and resulting employee status rules

After the activities and statuses have been set up, you will use a table to create a link between activities and statuses for each organization. The Activity And Resulting Employee Status Rules form (TF-SCR) contains the employee status code from the Employee Status (option list HR10) that results from the entry of an activity code from the Activity Code (option list HR09). This is done so the new status is automatically generated by the entry of the activity code.

You must establish one Activity And Resulting Employee Status Rules table (TF-SCR) record for each activity that will be used by your organization.

You can use the Activity And Resulting Employee Status Rules (TF-SCR) to:

- Tell the system which activities are valid for an organization (Activity).
- Indicate the highest current status an employee may have to be eligible for the activity and ensures that ranges will not exceed this value (Highest Range).
- Indicate, by current status code, which employees are eligible to participate in the activity. For example, terminated employees can not be laid off (Status Ranges).
- Indicate what status the employee will be after the activity (Resulting Status).
  Use of a wild card character (*) allows the employee's current employee type to be used on the new resulting status. For example, suppose an employee's current status is '34' (LOA-Hr Temp FT W/Pay). The Activity And Resulting Employee Status Rules form (TF-SCR) has a Resulting Status of '1*' for that activity. Therefore, when the employee is terminated, the employee's Resulting Status is '14' (Term-Hourly Temp FT).



For example, if employees have no prior employee status, they can be hired. Or, if employees are currently active, they can be terminated.

Remember that your company rules are stored on the tables, so you will determine what entries to make on this table. You will have a table record for each activity that your organization uses.

The following employee forms will use these rules:

Form Name
Employee Status History (09-SCR)
Leaves And Returns (95-SCR)
New Hire (01-SCR)
Rehire, Reinstatement, Recall (04-SCR)
Separations And Terminations (96-SCR)
Status Changes (08-SCR)

Viewing activities and resulting employee status rules

The Activity And Resulting Employee Status Rules Inquiry form (TFISCR) displays the Activity And Resulting Employee Status Rules form (TF-SCR) table records for the value entered in the Control Number text box on the form's first panel.

Up to 16 records are displayed on each form. You may not use this form to perform maintenance; it is for viewing records only.

See also:

- ***Setting up activity and resulting employee status rules*** (on page 110)
For detailed directions on setting up activity and resulting employee status rules.

- ***Viewing activity and resulting employee status rules*** (on page 112)
For detailed directions on viewing activity and resulting employee status rules.

Useful reports

You may review the activity and status rules on the TF Table Records Batch Format Report (9F-RPT).

Detailed Directions

This section provides detailed directions on completing a business task.

Completing the Guided Practice

You will continue to add HR rules to the Acme Manufacturing Company that you set up in Section 4: Setting Up an Organization. In this Guided Practice, you will be establishing employee activity rules for this new organization. In the next section, you will record job information for this organization.

Before you can complete this Guided Practice, you will need to add the following values to the Activity Codes (option list HR09). Use the Codeset Edit utility (CSUPDT) to add these option list values.

Access this utility from the menus by choosing:

Component: Development Tools
Process: Option Lists
Task: Edit

You will then establish a table entry for each of the activities in the following list:

Chg-FT to PT (99A)	Return from LOA (01A)
LOA with pay (50A)	Term-too much travel (10A)
Rehire-Sal FT (02A)	Trans to active comp (79A)

You must have completed the Guided Practices in the prior sections to guarantee the successful completion of the Guided Practice that follows.

Setting up activity and resulting employee status rules

One Activity And Resulting Employee Status Rules form (TF-SCR) entry must be established for each Activity Code (option list HR09) you want to use.

1. Access the Activity And Resulting Employee Status Rules form (TF-SCR)

Access this form by making the following selection from the Navigator:

Component: HR Setup
Process: Setup HR Rules
Task: Activities and Resulting Statuses

For practice, access the Activity And Resulting Employee Status Rules table (TF-SCR) for organization AB1000.

2. Select the Activity

Select the appropriate activity from the Activity Codes (option list HR09).

For practice, select 'Chg-FT to PT'.

3. Enter the Highest Range

This is the highest current status an employee may have to be eligible for the activity. Status ranges on this form may not exceed this value.

For practice, make an entry using the Employee Status (option list HR10) values.

4. Enter the Status Ranges, Low and High

Determine what current statuses allow the employee to be eligible for this activity. One or more, or a range of statuses may be eligible as current statuses; for example, '01-01' or '01-08'.

For practice, make an entry using the Employee Status (option list HR10) values.

5. Enter the Resulting Status

The first position of the code indicates the type of status. For example, '1' indicates 'Terminated'.

For the second position, type one of the following:

- Fill in the position to specify a specific employee type.
- Type an asterisk (*) to allow the system to fill in the employee type. For example, suppose an employee's current status is '34' (LOA-Hr Temp FT W/Pay). The Activity And Resulting Employee Status Rules form (TF-SCR) has a Resulting Status of '1*' for that activity. Therefore, when the employee is terminated, the employee's Resulting Status is '14' (Term-Hourly Temp FT).

For practice, make an entry using the Employee Status (option list HR10) values.

6. Click Save or press Enter

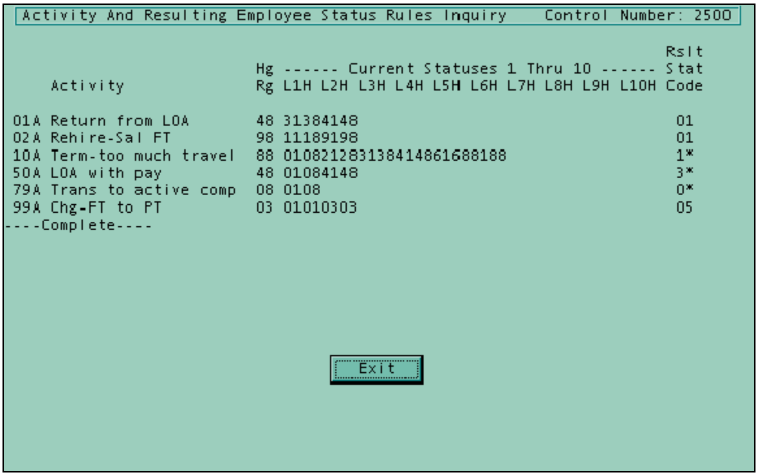
The table record is created and the following message is displayed:

'—New table entry has been established—'

For practice, click Save.

To complete the practice, repeat these steps for the remaining activities in the list that precedes this task.

If you completed the Guided Practice, the resulting inquiry form for all of the activities should look similar to the example that follows:



```
Activity And Resulting Employee Status Rules Inquiry    Control Number: 2500

                                                                    Rslt
                          Hg ------ Current Statuses 1 Thru 10 ------ Stat
    Activity              Rg L1H L2H L3H L4H L5H L6H L7H L8H L9H L10H Code

 01A Return from LOA      48 31384148                                  01
 02A Rehire-Sal FT        98 11189198                                  01
 10A Term-too much travel 88 010821283138414861688188                  1*
 50A LOA with pay         48 01084148                                  3*
 79A Trans to active comp 08 0108                                      0*
 99A Chg-FT to PT         03 01010303                                  05
----Complete----

                                  Exit
```

Note: *The next task provides instructions for accessing this inquiry form.*

Note: *Results may differ based on the company policy used to make the decisions.*

Viewing activity and resulting employee status rules

To display an activities and status list using the Activity And Resulting Employee Status Rules Inquiry form (TFISCR), follow these steps:

1. Access the Activity And Resulting Employee Status Rules Inquiry form (TFISCR)

Access this form by making the following selection from the Navigator:

Component:	HR Setup
Process:	Setup HR Rules
Task:	View Activities and Statuses

For practice, access the Activity And Resulting Employee Status Rules Inquiry form (TFISCR) for organization AB1000.

2. Enter the Control Number

Type the Control Number that represents the table entries to be viewed.

For practice, type '2500'.

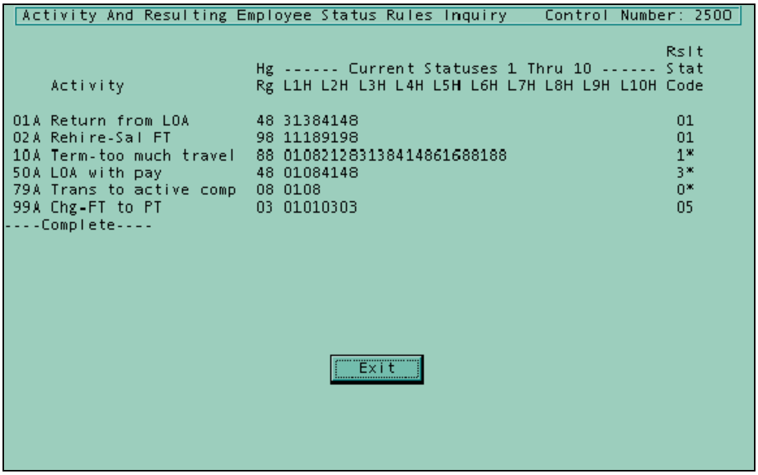
3. Click Save or press Enter

Click Save or press Enter to view the next display of records. At any time, the Exit button may be selected to return to the first panel.

A '----COMPLETE----' message appears when all of the records on file have been displayed.

For practice, click Save.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



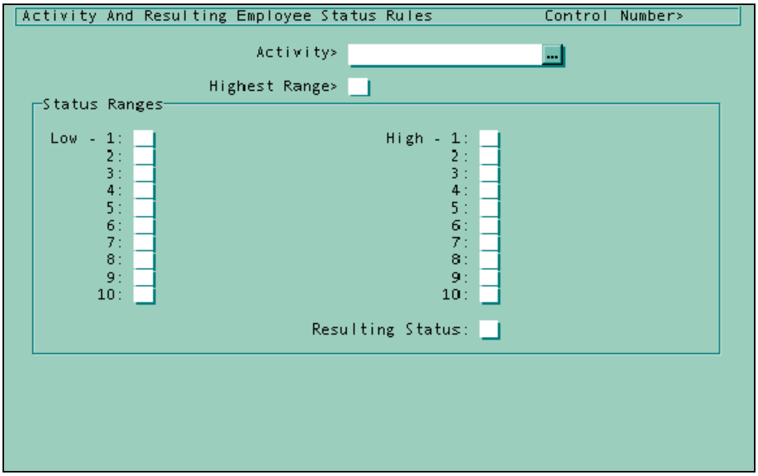
See also:

- Activity and resulting employee status rules ***(on page 101)***

For more information about viewing employee activities and status.

Apply the Concept

1. Using the information provided in this section, how would you record the rules for an activity that would allow an employee to terminate in order to become a full-time student (personal reasons). Use The Solution Series and the Activity Codes (option list HR09) and Employee Status (option list HR10) in this section to research your entries and then write them on the form that follows:



2. What employee activities are currently being tracked in your organization and how will automated activity tracking in The Solution Series improve that function?

Review of Questions Answered

1. What is the relationship between an employee activity and the resulting employee status?

2. What is the importance of tracking employee activities and status?

CHAPTER 7

Setting Up Rules for Employee Job Information

In This Chapter

Introduction

Administration job assignments and the changes that will occur in an employment life cycle can easily be accomplished if an accurate job information base is established and maintained. This section provides the information needed to complete the setup of job information.

Tasks

This section explains the following:

- Setting up salary grades and ranges
- Viewing salary grades and ranges
- Setting up job information
- Viewing job information
- Entering parent company headquarters information for EEO reporting
- Entering establishment information for EEO reporting
- Associating Occupation Group Tables to related Job Family and EEO Job Category

Prerequisites

Before you can establish job information, you must set up the following in The Solution Series:

- Install The Solution Series
- Establish one or more organizations
- Define Control Numbers and system options
- Establish employee activity rules

☞ *Refer to* **Setting Up an Organization** *(on page 51),* **Establishing Basic HR Rules** *(on page 73), and* **Setting Up Rules for Employee Activities** *(on page 95) for more information.*

Questions answered

The following questions are answered in this section:

1. What elements of a job function can be recorded in The Solution Series?
2. In what formats can salary grade ranges be expressed?
3. What feature allows your organization to use salary grade ranges that differ by location?

Considerations

If your organization is using Position Administration, setting up job tables is not required. Instead, you may establish position information.

☞ *Refer to the Using Position Administration for information on setting up position tables.*

This section describes the job information that can be used in Human Resources Administration. The information in this section is covered in a sequence that allows you to build a fully integrated Job Code Table form (TA-SCR).

The following tables are recommended for use in HR, but are not mandatory:

- EEO Parent Company Definition (TXCSCR) (US only)
- EEO Establishment Definition (TX-SCR) (US only)
- VETS-100 Headquarters Location Definition (VTCSCR) (US only)
- VETS-100 Hiring Location Definition (VT-SCR) (US only)
- Occupation Group Table (TE-SCR) (US only)
- Salary Grade - Annual (TBASCR)
- Salary Grade - Per Pay Period (TBBSCR)
- Salary Grade - Hourly (TBCSCR)
- Job Code Table (TA-SCR)
- Job Points Table (TC-SCR)

These tables are explained in this sequence so that all the information required by the Job Code Table form (TA-SCR) will be available when it is established.

Fully integrated job information

These tables work together to complete the full spectrum of the Job Code Table form (TA-SCR) requirements. Some of these tables add attributes to the Job Code Table form (TA-SCR). In this way, you can build each of these supporting tables prior to adding job codes to the file.

You have the flexibility to tie the entries on the Occupation Group Table form (TE-SCR) to the job displayed on the Job Code Table form (TA-SCR). Once a job is tied to an occupation group, you can access the job's category.

You can assign a salary grade to each job, allowing you to compare each employee's compensation to the job's salary range.

You need to establish one Job Code Table record for each job that will be used for your organization.

After the Job Code Table form (TA-SCR) has been established, you then have all the required information to analyze and report on:

- Job categories
- Salary grade
- Compa ratio
- Position in range
- Basic data needed by Salary Administration

Selective job information

Should your organization decide that full-spectrum job information is not required, the Job Code Table (TA-SCR) can be implemented with only the basic job information. No additional tables would be required.

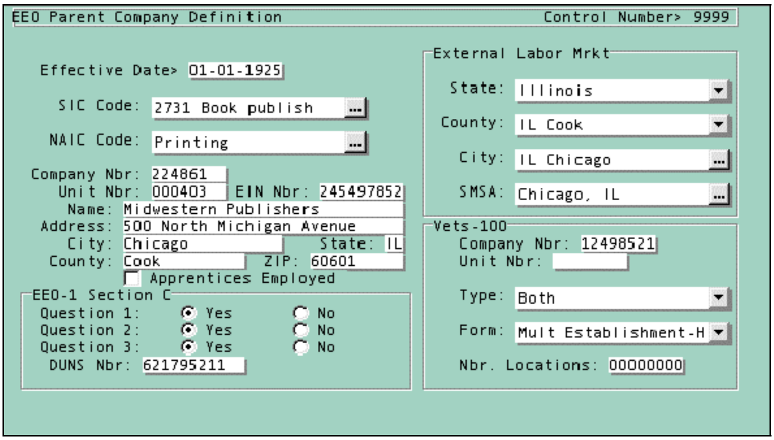
Establishing Equal Employment Opportunity information---US-specific

The Solution Series provides two forms for recording the company level information that will allow the collection and reporting of government compliance information—specifically, EEO reporting. This function is US-specific.

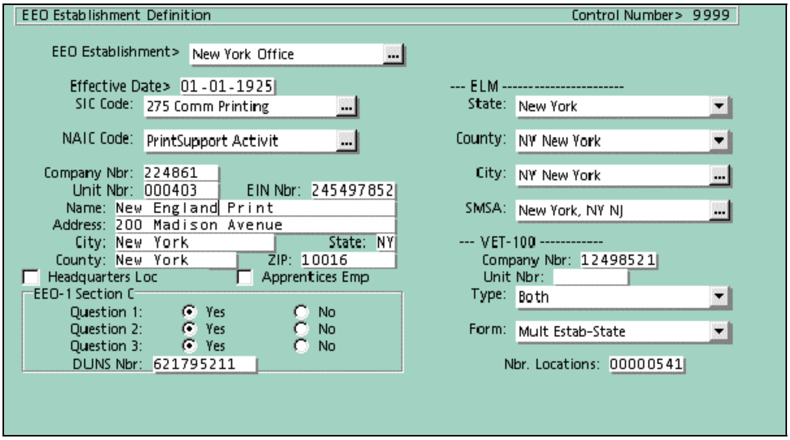
Equal Employment Opportunity locations

You may use the EEO Parent Company Definition form (TXCSCR) and the EEO Establishment Definition form (TX-SCR) to record your different geographic EEO locations. It is only necessary if you need to do EEO reporting by geographic locations.

You may define the rules for the entire organization on the EEO Parent Company Definition form (TXCSCR). You must establish one table for each Employer Identification Number. The information supplied on this table is required to correctly format the Consolidated portion of the EEO-1 Single Establishment Report in Computerized Format (70SRPT) and EEO-1 Multiple Establishment Report in Computerized Format (70MRPT) reports.



Next, you must define your different geographic locations in option list EO069, then establish one table record for each location using the EEO Establishment Definition form (TX-SCR). The EEO Establishment associated with where the employee works is assigned on the Location Assignment/Changes form (05CSCR).

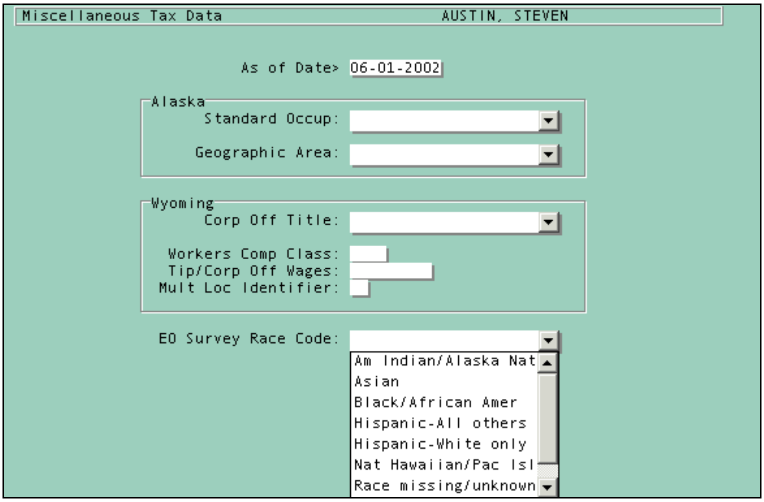


After the ELM (External Labor Market) information has been recorded, you may complete the remaining optional information as it was assigned to your company by the Joint Reporting Committee the first time that you filed a report for your company or new unit.

Equal Opportunity (EO) Survey racial codes

Use the Miscellaneous Data Tax form (MT-SCR) to record employee racial codes necessary for completing the Equal Opportunity (EO) Survey. This form is also used to record information necessary for quarterly processing.

The last entry—EO Survey Race Code—applies specifically to the EO Survey.



Viewing geographic location tables

The EEO Establishment Definition Inquiry form (TXISCR) displays the EEO Establishment Definition form (TX-SCR) table records for the value entered in the Control Number text box on the form's first panel.

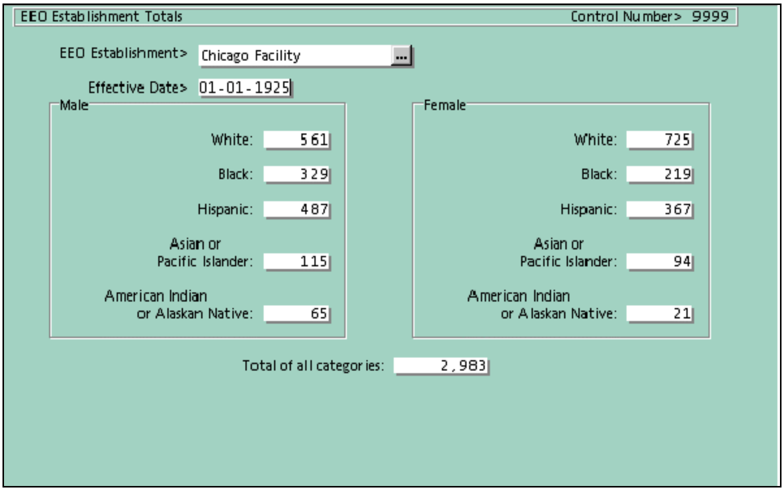
A maximum of 16 records is displayed on each form. Click Save or press Enter to view the next records. At any time, the Exit button may be selected to return to the first panel.

A '----COMPLETE----' message appears when all of the records on file have been displayed. You may not use this form to perform maintenance; it is for viewing records only.

You may also view the EEO Establishment Definition form (TX-SCR) table records on the EEO Location Table batch report (9X-RPT).

Viewing establishment totals

The EEO Parent Corporation Totals (TWCSCR) and EEO Establishment Totals forms (TW-SCR) display the EEO totals for the prior year. The EEO Parent Corporation Totals form (TWCSCR) displays EEO totals for the entire organization, while the EEO Establishment Totals form (TW-SCR) displays the information by EEO establishment.

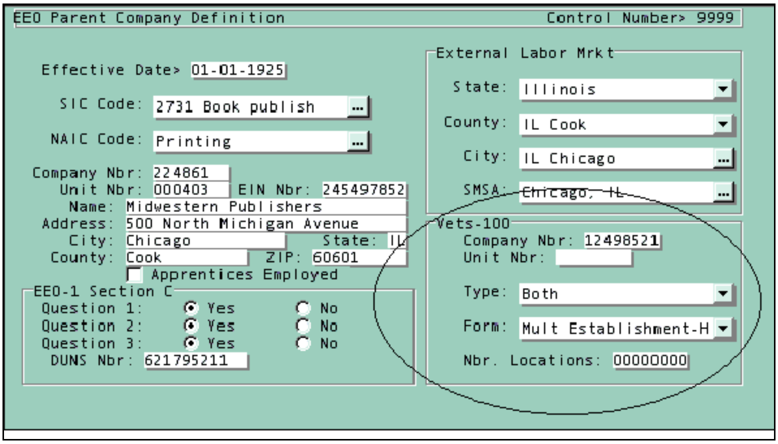


Typically, you will not complete these forms because they will be automatically updated with the current year totals when the EEO-1 Single Establishment Report in Computerized Format (70SRPT) or the EEO-1 Multiple Establishment Report in Computerized Format (70MRPT) reports are run. If the reports are run multiple times in one year, the totals are updated each time.

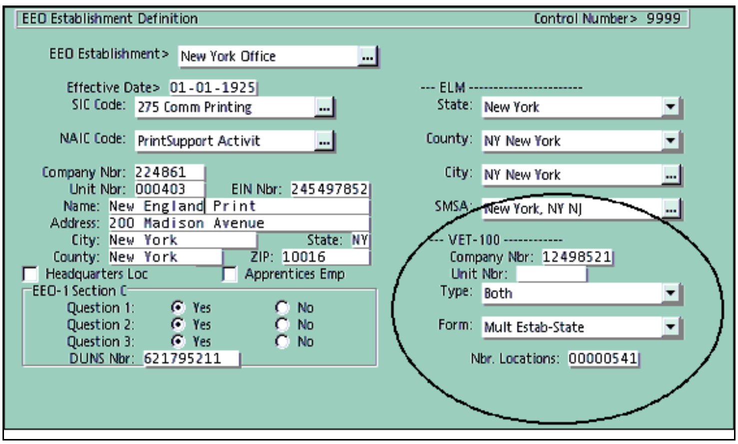
Reporting of military veterans---US-specific

Use the VETS-100 Headquarters Definition (VTCSCR) and the VETS-100 Hiring Location Definition (VT-SCR) forms to record the organization information necessary for reporting the number of employees in your organization who are military veterans. The information on these forms is reported on the Vets 100 (73-RPT) and the Vets 100 Detail (73DRPT) reports.

Following is an example of the VETS-100 Headquarters Definition (VTCSCR). Information on this form relates to your parent company headquarters.



Following is an example of the VETS-100 Hiring Location Definition (VT-SCR). You must complete one form for each hiring location.



In order to determine the manner in which these forms should be completed, you must answer the following questions:

What are your Company and Unit Numbers?

You must record your Company Number in the Vets-100 Company Number text box. This number is used only for Vets-100 reporting and is provided to you by the Department of Labor.

The Unit Number is no longer required for Vets-100 reporting; however, the entry is present to retain this information from historical records.

What is your contractual relationship with the government?

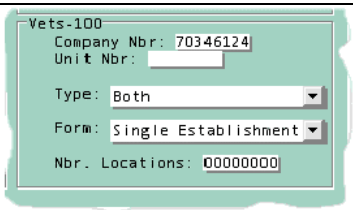
You must select the type of contractual relationship that your organization has with the Federal Government in the Vets-100 Organization Type option list (EO25). Indicate whether your organization is a Prime Contractor, Subcontractor, or both.

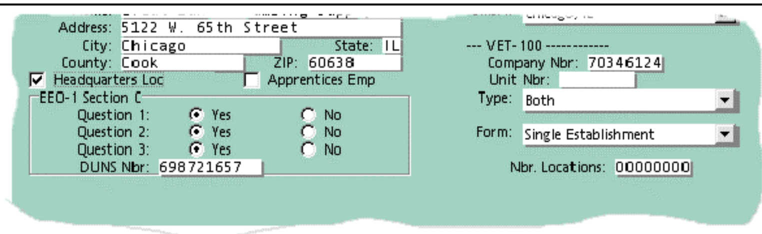
Are you reporting a single location or multiple locations?

You must select the type of form you are submitting for your organization in the Vets-100 Form option list (EO26). This option will be different depending on your organization structure. Refer to the scenarios below to help you decide how to complete these forms.

Reporting a single location

You must complete the EEO Parent Company Definition (TXCSCR) and EEO Establishment Definition (TX-SCR) forms for your establishment.

EEO Parent Company Definition (TXCSCR)	EEO Establishment Definition form (TX-SCR)
Select 'Single Establishment' in the Form list box.	Select 'Single Establishment' in the Form list box and select the Headquarters Loc check box. When this is selected, the address will print on the reports only once under the Parent Headquarters label.
	




Reporting multiple locations

You must complete the EEO Parent Company Definition (TXCSCR) and EEO Establishment Definition (TX-SCR) forms for your parent company headquarters, and the EEO Establishment Definition form (TX-SCR) for each of your hiring locations.

Parent company headquarters

You must complete the EEO Parent Company Definition (TXCSCR) and EEO Establishment Definition (TX-SCR) forms for your parent company headquarters.

<table>
<tr><td>EEO Parent Company Definition (TXCSCR)</td><td>EEO Establishment Definition form (TX-SCR)</td></tr>
<tr><td>Select 'Mult Establishment-H' in the Form list box to indicate that this location is a headquarters location for multiple establishments.</td><td>Select the type of form appropriate for this hiring location in the Form list box and select the Headquarters Loc check box. When this is selected, the address of the parent company headquarters will be included on the reports.</td></tr>
<tr><td></td><td></td></tr>
</table>

Hiring locations

You must complete the EEO Establishment Definition form (TX-SCR) for each of your hiring locations. You have two options for reporting your hiring locations:

- Multiple Establishment - Hiring—an individual hiring location with less than 50 employees.
- Multiple Establishment - State consolidated—many hiring locations within one state employing less than 50 employees. With this option, you must enter the number of hiring locations that you are reporting.

<table>
<tr><td>Multiple Establishment—Hiring Location</td><td>Multiple Establishment—State Consolidated</td></tr>
<tr><td>Select 'Mult Estab-Hiring' in the Form list box.</td><td>Select 'Mult-Estab State' in the Form list box and enter the number of hiring locations for that state in the Nbr. Locations text box.</td></tr>
<tr><td></td><td></td></tr>
</table>

- Entering parent company headquarters information for EEO reporting ***(on page 147)***
- **Entering establishment information for EEO reporting *(on page 151)***

For detailed directions on defining external Labor Market (ELM) Codes, Establishment codes, and Vets-100 reporting information.

OSHA establishment requirements for reporting

To meet your organization's different OSHA reporting needs, you must first define each of your OSHA Establishments. An establishment is defined as a single physical location where business is conducted, or where services or industrial operations are performed. The examples provided include a factory, mill, store, hotel, restaurant, movie theater, farm, ranch, sales office, warehouse, or central administrative office. Distinctly separate activities performed at a single physical location shall each be treated as a separate establishment for record keeping purposes.

OSHA Establishments

The OSHA Establishment Information form (OE-SCR) must used to record your OSHA reporting establishments. The information stored on this form will be used to produce the OSHA Form 300 Log of Work-Related Injuries and Illnesses (20-RPT), the OSHA Form 300A Summary of Work-Related Injuries and Illnesses (21-RPT), and the OSHA Form 301 Injury and Illness Incident Report (22-RPT).

This table has two key entries—OSHA Establishment and Effective Date—to allow the system to keep separate information for the same establishment. One form must be completed for each establishment to be defined on an OSHA report.

The OSHA Establishment option list (HS52) is used to store your OSHA Establishment codes and descriptions. To further define your OSHA Establishments, this form is delivered with the SIC Classification (option list EO20) and the NAICS Code (option list EO23), which already appear on the EEO Establishment Definition form (TX-SCR).

One OSHA Establishment Information form (OE-SCR) must be completed for each establishment to be defined on an OSHA report.

Injury and illness report information sources

To generate accurate data on the required OSHA reports, the following forms, if applicable to the OSHA injury or illness, must be completed:

- Location Assignment/Changes (05CSCR)
- Injury Information (PR-SCR)
- Additional Injury Information (PROSCR)
- Physical Exam Scheduled/Completed (18-SCR)

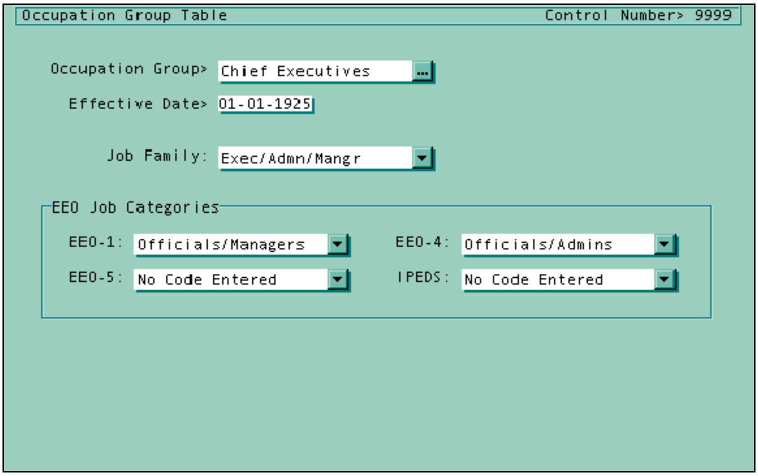
See also:

- Entering establishment information for OSHA reporting ***(on page 155)***

For detailed directions for defining an OSHA Establishment.

Occupation groups---US-specific

The Occupation Group Table form (TE-SCR) serves as a link between the employee's job and the EEO Job Categories for reporting purposes. The Solution Series contains a complete table of Occupation Group codes that may be changed to meet your organizational needs. This table is fully populated by Cyborg and is in compliance with the EEOC Job Classification Guide. Valid codes are stored in the Occupation Group option list (EO08).



If you plan to use the Cyborg delivered Occupation Group Tables (TE-SCR), you must have a Control Number of 9999 on the Company-To-Rules Cross-Reference For HR form (AX-SCR) for the Occupation Groups text box.

You have the flexibility to tie the entries on the Occupation Group Table form (TE-SCR) to the job displayed on the Job Code Table form (TA-SCR). Once a job is tied to an EEO Occupation Group, you can access the job's EEO job category for reporting purposes.

You may delete entries on this table that will not be used by organization, or you can modify the system and create your own tables.

Note: *You cannot generate EEO reports without an Occupation Group table (TE-SCR).*

Viewing occupation group tables

The Occupation Group Table Inquiry form (TEISCR) displays the Occupation Group Table form (TE-SCR) table records for the value entered in the Control Number text box on the form's first panel.

Up to 16 records are displayed on each form. Click Save or press Enter to view the next records. At any time, the Exit button may be selected to return to the first panel.

A '----COMPLETE----' message appears when all of the records on file have been displayed. You may not use this form to perform maintenance; it is for viewing records only.

You may also view the Occupation Group Table form (TE-SCR) records on the Occupation Group Table batch report (9E-RPT).

See also:

- **Associating Occupation Group Tables to related Job Family and EEO Job Category** ***(on page 156)***

For detailed directions on associating Occupation Group Tables to related Job and Family EEO Job Category.

Salary grades and ranges

If you wish to connect a salary grade to your job code, or use salary grades for Salary Administration and Budgeting, you must establish salary grade tables.

Once salary grade tables are in place and the employee has been assigned a job and salary, you can view an employee's compa ratio and/or position in range information on the Salary Information form (41-SCR).

Three comparison formats available

Three different salary grade comparison formats are available. You do not need to use all three. You may choose just one, or a combination of two or three. In any case, you make the decision on how you wish to track salary grade information. Cyborg offers the following table entries:

- Salary Grade - Annual (TBASCR)—Whole amounts
- Salary Grade - Per Pay Period (TBBSCR)—Amounts with two decimal places
- Salary Grade - Hourly (TBCSCR)—Amounts with four decimal places

Annual, per pay period, and hourly define how salary amounts are expressed in the salary grade table and can be used for all employees, regardless of frequency or payment type.

Rules that apply to all comparison formats

You have the option of entering all increment amounts or taking advantage of the following system calculations:

- Enter minimum, midpoint, and maximum amounts only
- Enter variance percent and midpoint amounts only
- Enter minimum and maximum amounts only

The system will then calculate the amounts that were left blank. If the Variance Percent is calculated, the formula is (Maximum - Minimum) divided by Minimum.

You may wish to make use of a Geographical Range Indicator, available on all salary grade tables. This allows you to specify different salary grade ranges for the same job based on its location.

If your organization has only one geographic location, the Geographic Index value will be the same for every table. The Geographic Range option list (HR66) contains only a value of 'All Locations' as delivered. Customer-defined codes need to be added if job salary grades differ by location. Each salary grade may then have multiple tables with different Geographic Index values and associated ranges. Locations are assigned to the employee on the Location Assignment/Changes form (05CSCR).

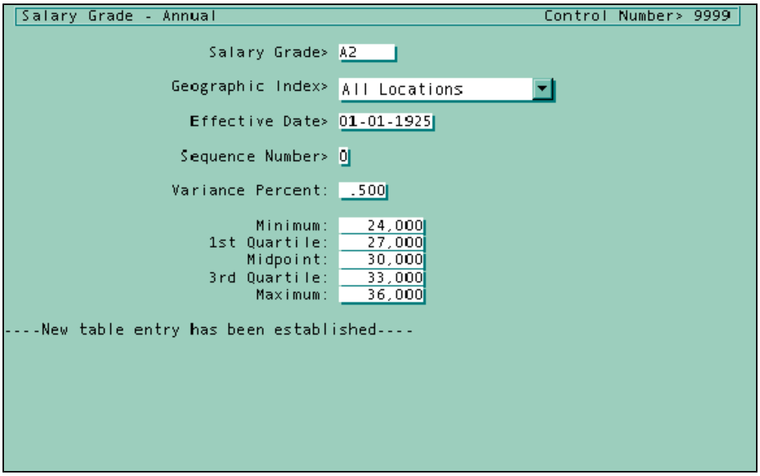
Only the Sequence Number entry of zero (0) is used for the calculation of compa ratio, position in range, and red/green (under minimum/over maximum) indicator. The default is 0 (zero).

You also have the ability to override the calculated values on the form after the table has been established.

Salary grade designations across the three forms (Salary Grade - Annual, Salary Grade - Per Pay Period, and Salary Grade - Hourly) can not be the same.

Annual salary grade format

This format compares an employee's annualized salary to an annual range, and increments of the range are expressed in whole amounts:

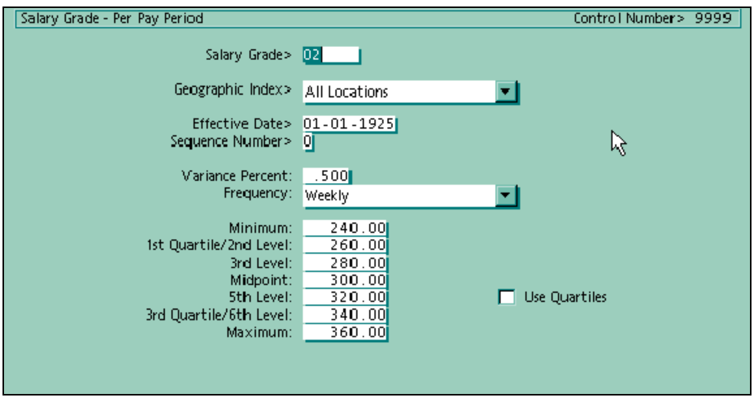


- All amounts are expressed in whole numbers without decimal places.
- Increments are expressed as minimum, first quartile, midpoint, third quartile, and maximum. These are only points on the scale, not steps.

Note: *Salary grade designations across the three forms (Salary Grade - Annual, Salary Grade - Per Pay Period, and Salary Grade - Hourly) can not be the same.*

Per pay period salary grade format

This format compares an employee's compensation to a per-period range:



- All amounts are expressed with two decimal places.
- Increments are expressed as minimum, two, three, midpoint, five, six, and maximum.

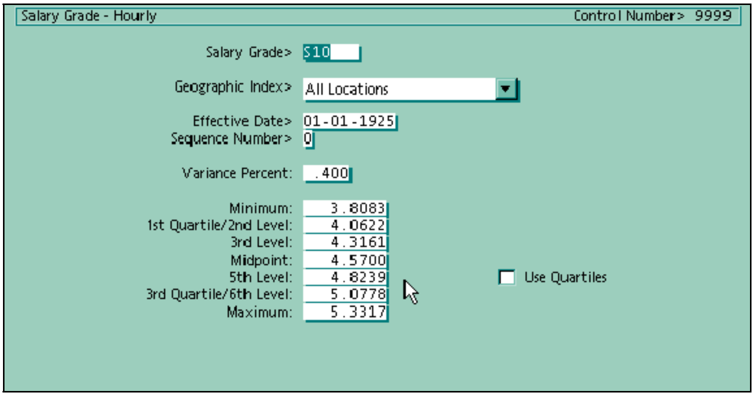
The Frequency option denotes the salary range amount's frequency. However, the table frequency need not agree with the employee's actual pay frequency. The programs using this table compare the table frequency against the pay frequency on the employee's record, then convert (for performing compa ratio and so forth) the employee's salary for comparison to the table's salary range amounts.

You may want the increments on the form to be expressed as quartiles rather than the delivered seven level values. To do this, select the Use Quartiles check box. The system then places quartile values in levels 2 and 6, and zero fills levels 3 and 5.

Note: *Salary grade designations across the three forms (Salary Grade - Annual, Salary Grade - Per Pay Period, and Salary Grade - Hourly) can not be the same.*

Hourly salary grade format

This format compares an employee's compensation to an hourly range:



- All amounts are expressed as hourly with four decimal places.
- Increments are expressed as minimum, two, three, midpoint, five, six, and maximum.

Like the Salary Grade - Per Pay Period (TBBSCR), you may want the increments on the form to be expressed as quartiles rather than the delivered seven level values. To do this, select the Use Quartiles check box. The system then places quartile values in levels 2 and 6, and zero fills levels 3 and 5.

Note: *Salary grade designations across the three forms (Salary Grade - Annual, Salary Grade - Per Pay Period, and Salary Grade - Hourly) can not be the same.*

Viewing salary grade information

Three separate Inquiry forms allow you to view, in display mode, the entries that were recorded on the annual, per pay period, and hourly salary grade tables:

- Salary Grade Inquiry - Annual form (TBAISC)
- Salary Grade Inquiry - Per Pay Period form (TBBISC)
- Salary Grade Inquiry - Hourly form (TBCISC)

Each of these inquiry forms displays the tables for the value entered in the Control Number text box on the form's first panel.

Up to 16 records are displayed on each form. You must click Save or press Enter to view the next records. At any time, the Exit button may be selected to return to the first panel.

A '----COMPLETE----' message appears when all of the records on file have been displayed. You may not use this form to perform maintenance; it is for viewing records only.

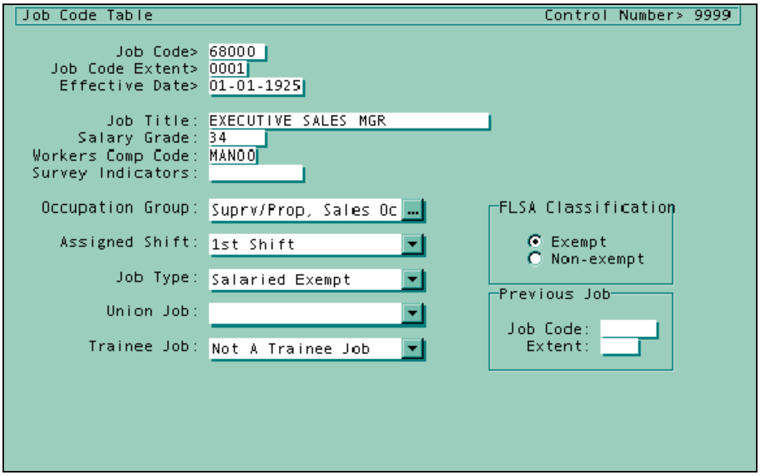
Job/position common information

If your organization is using Position Administration, you have a choice of setting up jobs or positions.

Jobs

The Job Code Table form (TA-SCR) is used to set up a table containing all possible jobs found within an organization and some generic job-related information associated with the jobs. After the job code is assigned to an employee, the characteristics of the job are displayed at the employee level:



When defining a job, you use both a job code and a job code extent. The six-position job code is used to define a job. The four-position job code extent is used to establish similar jobs with different attributes, such as job type or salary grade. For example, using Position Administration, you might define the following two jobs:

Job Code	Extent	Description
10500	0001	Maintenance Engineer, Senior, Salary Grade S25
10500	0002	Maintenance Engineer, Apprentice, Salary Grade S18

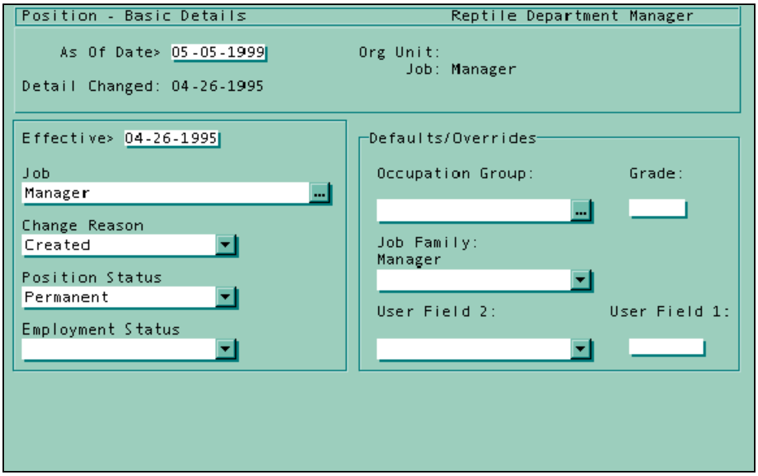
The occupation group that you select for this job is important because it identifies the job category in which the employee is counted for reporting.

The job type further defines a particular job. It is often used by Salary Administration to select employees for across-the-board increases, or by Benefits Administration for eligibility.

Survey indicators are provided so that you may indicate the salary surveys in which this job takes part. You may use these ten positions as five 2-position indicators. Trainee job information identifies whether the job is a white collar or production job code.

Positions

Positions are stored in the Position - Basic Details table (M20SCR) that is available in Position Administration. Multiple details can be stored on this table. The following is an example of a position table form for the position of Manager:



☞ *Refer to the Using Position Administration documentation for detailed information about setting up positions.*

View job information

The Job Code Table Inquiry form (TAISCR) displays, in display mode, the Job Code Table form (TA-SCR) table records for the value entered in the Control Number text box on the form's first panel.

Up to 16 records are displayed on each form. Click Save or press Enter to view the next records. At any time, the Exit button may be selected to return to the first panel.

A '----COMPLETE----' message appears when all of the records on file have been displayed. You may not use this form to perform maintenance; it is for viewing records only.

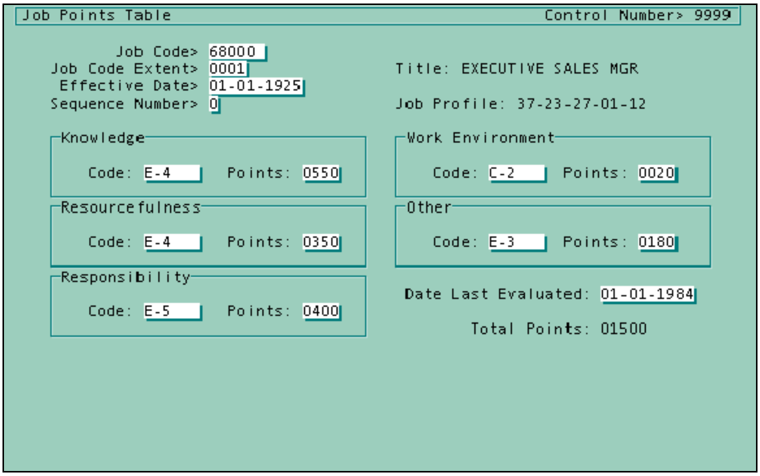
For detailed directions on viewing job information.

Relative worth of a job

Most companies use some form of system to evaluate the relative worth of jobs within their organization. The Job Points Table form (TC-SCR) retains this data by associating the resulting codes and points from the evaluation process to the Job Code and Extent combinations previously established on the Job Code Table form (TA-SCR).

☞ *Refer to the Using Position Administration documentation for information on how job points can be used with positions.*



Job Points Table Control Number> 9999

Job Code> 68000
Job Code Extent> 0001 Title: EXECUTIVE SALES MGR
Effective Date> 01-01-1925
Sequence Number> 0 Job Profile: 37-23-27-01-12

Knowledge
Code: E-4 Points: 0550

Work Environment
Code: C-2 Points: 0020

Resourcefulness
Code: E-4 Points: 0350

Other
Code: E-3 Points: 0180

Responsibility
Code: E-5 Points: 0400

Date Last Evaluated: 01-01-1984
Total Points: 01500

The five evaluation code categories provided on the Job Points Table (TC-SCR) are Knowledge, Resourcefulness, Responsibility, Work Environment, and Other. If your evaluation system uses category labels with names other than these, and you want to have your names reflected on this form, you may make these adjustments using the Form Builder facility.

The Job Profile and Total Points values are system-calculated as a result of the point values entered and can not be overridden.

If you use the Sequence Number to combine multiple Job Points Table records for one Job Code/Extent (to expand the number of code and points available), the Job Profile and Total Points will calculate one form at a time.

Viewing job points information

The Job Points Table Inquiry form (TCSSCR) displays the Job Points Table form (TC-SCR) table records for the value entered in the Control Number text box on the form's first panel.

Up to 16 records are displayed on each form. You must click Save or press Enter to view the next records. At any time, the Exit button may be selected to return to the first panel.

A '----COMPLETE----' message appears when all of the records on file have been displayed. You may not use this form to perform maintenance; it is for viewing records only.

Useful reports

Use the following reports to list all of the salary grade table entries:

- TA Table Records Batch Report (9A-RPT)
- TB A, B & C Table Records Batch Format Report (9B-RPT)
- TC Table Records Batch Format Report (9C-RPT)

Detailed Directions

This section provides detailed directions on completing a business task.

Tasks

Completing the Guided Practice

Now that the organization and its HR rules have been set up, establishing job information is the final setup task. In the Guided Practice for this section, you will set up annual salary grade information and then establish information for a welding supervisor job. The tables for the per pay period and hourly salary grade ranges will follow the same entry rules as this table, so only this table is being used for the Guided Practice.

You must have completed the Guided Practices in the prior sections to guarantee the successful completion of the Guided Practice that follows.

Setting up salary grades (annual amounts) and ranges

To complete this task using the Salary Grade - Annual form (TBASCR), follow these steps:

1. Access the Salary Grade - Annual form (TBASCR)

Access this form by making the following selection from the Navigator:

Component: HR Setup
Process: Setup HR Rules
Task: Salary Ranges - Annual Amounts

For practice, access the Salary Grade - Annual form (TBASCR) for organization AB1000.

2. Enter the Salary Grade

Enter a unique customer-defined value of up-to-six characters to identify each salary grade.

Note: *Salary grade designations across the three forms (Salary Grade - Annual, Salary Grade - Per Pay Period, and Salary Grade - Hourly) can not be the same.*

For practice, type 'A2'.

3. Select a Geographic Index

Select, from Geographic Range option list (HR66), the geographic region to which this salary grade applies.

For practice, select 'All Locations'.

4. Enter the Effective Date

Type the date on which the salary grade should become effective. Dates are entered in MM-DD-CCYY format (US and Canada) or DD-MM-CCYY (elsewhere).

For practice, type '01-01-1925'.

5. Enter a Sequence Number

Only the Sequence Number entry of zero (0) is used for the calculation of compa ratio, position in range, and red/green (under minimum/over maximum) indicator. The default is 0 (zero).

For practice, bypass this text box.

6. Enter one of the following options in the amounts

Enter one of the following:

- All increment values
- Minimum, midpoint, and maximum only
- Variance percent and midpoint only
- Minimum and maximum only

For practice, type '12,000' in Minimum and '23,000' in Maximum.

7. Click Save or press Enter

The table record is created and the following message is displayed:

'—New table entry has been established—'

For practice, click Save.

To complete the Guided Practice, add a second Salary Grade of 'A3'. Use the following information to complete the definition:

Geographic Index: All Locations

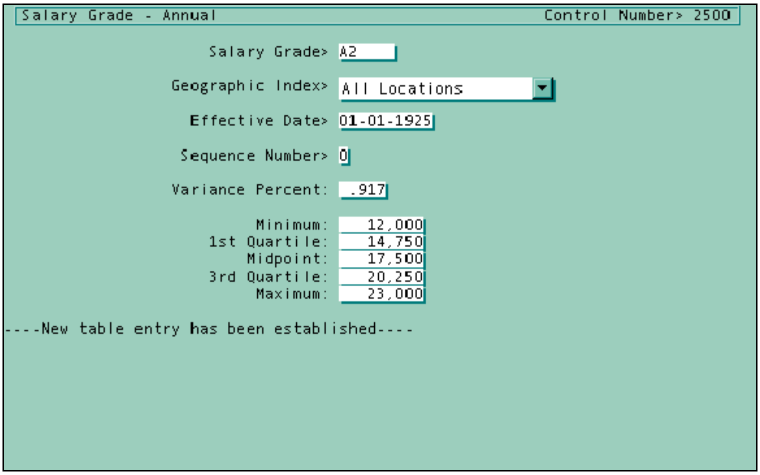
Effective Date: '01-01-1925'

Sequence Number: '0'

Minimum: '16,500'

Maximum: '27,000'

If you completed the Guided Practice, the resulting forms should look similar to the examples that follow:



Salary Grade - Annual Control Number> 2500

Salary Grade> A2

Geographic Index> All Locations

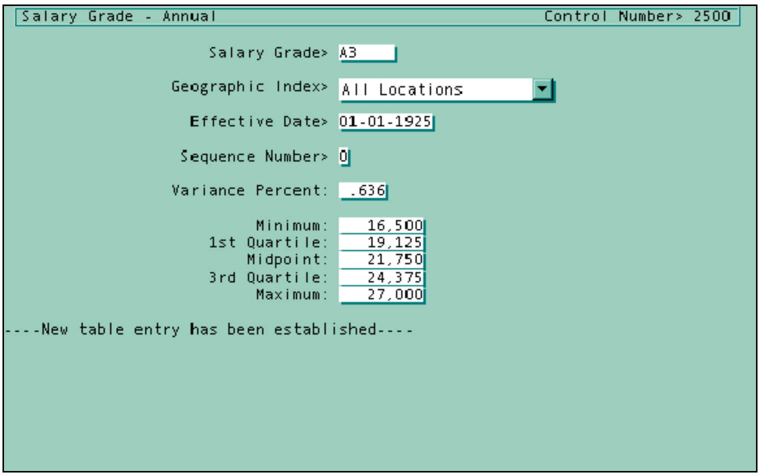
Effective Date> 01-01-1925

Sequence Number> 0

Variance Percent: .917

Minimum:	12,000
1st Quartile:	14,750
Midpoint:	17,500
3rd Quartile:	20,250
Maximum:	23,000

----New table entry has been established----



Salary Grade - Annual Control Number> 2500

Salary Grade> A3

Geographic Index> All Locations

Effective Date> 01-01-1925

Sequence Number> 0

Variance Percent: .636

Minimum:	16,500
1st Quartile:	19,125
Midpoint:	21,750
3rd Quartile:	24,375
Maximum:	27,000

----New table entry has been established----

See also:

- Salary grades and ranges ***(on page 131)***

For more information about setting up salary grades and ranges.

Viewing salary grades and ranges

To display the salary grades and ranges using the Salary Grade Inquiry - Annual form (TBAISC), follow these steps:

1. Access the Salary Grade Inquiry - Annual form (TBAISC)

Access this form by making the following selection from the Navigator:

Component: HR Setup
Process: Setup HR Rules
Task: View Salary Ranges - Annual Amounts

For practice, access the Salary Grade Inquiry - Annual form (TBAISC) for organization AB1000.

2. Enter the Control Number

Type the Control Number that represents the table entries to be viewed.

For practice, type '2500'.

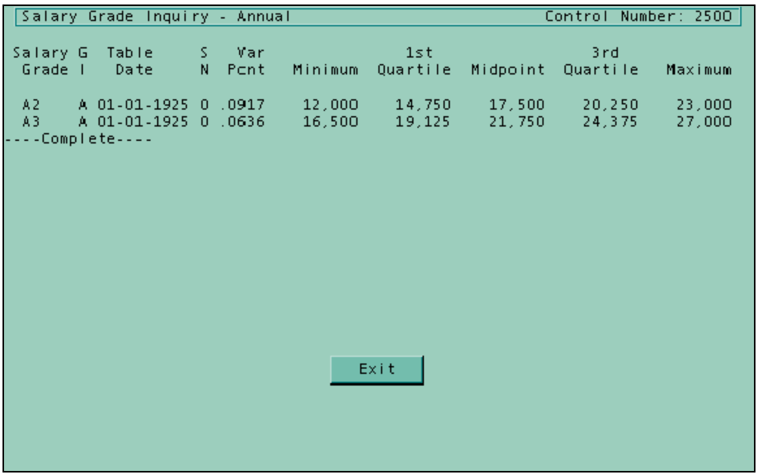
3. Click Save or press Enter

Click Save or press Enter to view the next display of records. At any time, the Exit button may be selected to return to the first panel.

A '----COMPLETE----' message appears when all of the records on file have been displayed.

For practice, click Save.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Salary Grade Inquiry - Annual Control Number: 2500

Salary Grade	G I	Table Date	S N	Var Pcnt	Minimum	1st Quartile	Midpoint	3rd Quartile	Maximum
A2	A	01-01-1925	0	.0917	12,000	14,750	17,500	20,250	23,000
A3	A	01-01-1925	0	.0636	16,500	19,125	21,750	24,375	27,000

----Complete----

Exit

For more information about viewing salary grades and ranges.

Setting up job information

To set up job information using the Job Codes Table form (TA-SCR), follow these steps:

Note: *If Position Administration is not in use, set up job code tables (TA-SCR) using this method.*

1. Access the Job Code Table form (TA-SCR)

Access this form by making the following selection from the Navigator:

Component: HR Setup
Process: Setup HR Rules
Task: Jobs

For practice, access the Job Code Table form (TA-SCR) for organization AB1000.

2. Enter the Job Code

Enter the customer-defined code to identify the job.

For practice, type 'M29600'.

3. Enter the Job Code Extent

Type an extension code to allow the same job code to be used to define a job that is the same except for a few attributes. Type '0001' if there is only one job extent. '0000' is not a valid entry.

For practice, type '0001'.

4. Enter the Effective Date

Type the date on which the table entry should be effective. Dates are entered in MM-DD-CCYY format (US and Canada) or DD-MM-CCYY (elsewhere).

For practice, type '01-01-1925'.

5. Enter a Job Title

Type a descriptive title of up to 30 characters.

For practice, type 'Welding Supervisor'.

6. Enter a Salary Grade

Type a Salary Grade designation to link one of the salary grade tables to the job. Select from any established Salary Grade - Annual (TBASCR), Salary Grade - Per Pay Period (TBBSCR), or Salary Grade - Hourly (TBCSCR) tables.

For practice, type 'A2'.

7. Enter a Workers Comp Code (optional)

Type a code of up to five positions that identifies which Worker's Compensation policy relates to each Job Code/Job-Code-Extent defined for your organization.

For practice, leave this text box blank.

8. Enter the Survey Indicators (optional)

This text box stores customer-defined codes indicating if, and in which survey, this Job Code/Job Code Extent has been used as a Benchmark position. The text box, defined as ten positions, is intended to be used as five two-position text boxes.

For practice, leave this text box blank.

9. Select an Occupation Group (optional) (US only)

This is a US only list box. These are government-assigned categories of generically titled job groupings that further classify the Job Code. The Occupation Group Table form (TE-SCR) defines the EEO 1, 4, 5, or 6 Job Categories for the value that you select.

For practice, leave this list box blank.

10. Select an Assigned Shift

Select a value from the Assigned Shift option list (HR18) that identifies the usual work shift associated with this job code.

For practice, select '2nd Shift'.

11. Select a Job Type

The Job Type is a generic category that further defines a particular Job Code/Job Code Extent. It may be used for Salary Administration to select employees for across-the-board increases, or for Benefits Administration eligibility. Options for this list box are provided by the Job Type option list (HR12).

For practice, select 'Hourly Non Union'.

12. Select a Union Job (optional) (US only)

The Union Job contains the union job code for the job known in your union's environment when it differs from the Job Code used within your organization. Options for this list box are provided by Union Job Code option list (HR389).

For practice, leave this list box blank.

13. Select a Trainee Job designation (optional)

If you have a formal on-the-job training program, you may want to identify the number of trainees who are participating in either a white collar or production training program. Select an option from the Trainee Job Indicator option list (EO14).

For practice, select 'Not A Trainee Job'.

14. Choose an FLSA Classification (optional) (US only)

This is US only. The FLSA Classification indicates whether the job is exempt or non-exempt from the FLSA (Fair Labor Standards Act). This option has no effect on the calculation of the premium portion of overtime for the employee.

For practice, select 'Exempt'.

15. Enter Previous Job information (optional)

The Previous Job displays the Job Code and the Extent for the employee's previous position with the organization.

For practice, leave these text boxes blank.

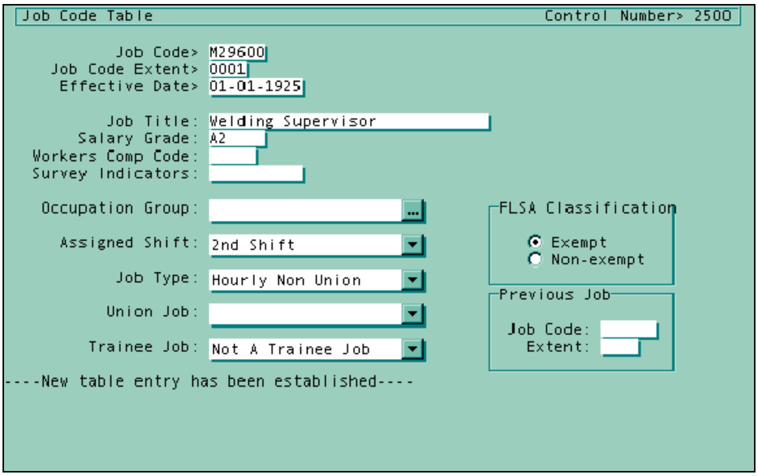
16. Click Save or press Enter

The table record is created and the following message is displayed:

'—New table entry has been established—'.

For practice, click Save.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Job Code Table   Control Number> 2500

Job Code> M29600
Job Code Extent> 0001
Effective Date> 01-01-1925

Job Title: Welding Supervisor
Salary Grade: A2

For more information about setting up job and position information.

Viewing job information

To display job information using the Job Code Table Inquiry form (TAISCR), follow these steps:

1. Access the Job Code Table Inquiry form (TAISCR)

Access this form by performing the following steps:

- Access the Command Entry dialog box by pressing Ctrl+O.
- Type the organization identifier in the Organization text box.
- Type the form ID (TAISCR) in the Program text box.
- Click OK.

For practice, access the Job Code Table Inquiry form (TAISCR) for organization AB1000.

2. Enter the Control Number

Type the Control Number that represents the table entries to be viewed.

For practice, type '2500'.

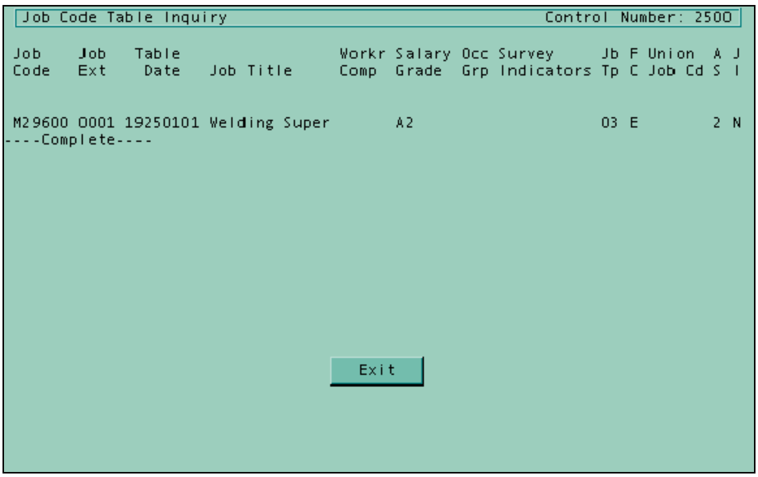
3. Click Save or press Enter

Click Save or press Enter to view the next records. At any time, the Exit button may be selected to return to the first panel.

A '----COMPLETE----' message appears when all of the records on file have been displayed.

For practice, click Save.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Job Code Table Inquiry — Control Number: 2500

Job Code	Job Ext	Table Date	Job Title	Workr Comp	Salary Grade	Occ Grp	Survey Indicators	Jb Tp	F C	Union Job Cd	A S	J I

Entering parent company headquarters information for EEO reporting

To enter the parent company headquarters information necessary for EEO reporting, follow these steps:

1. Access the EEO Parent Company Definition form (TXCSCR)

Access this form by making the following selection from the Navigator:

Component: HR Setup
Process: Setup EEO Rules
Task: EEO Parent Company Definition

For practice, access the EEO Parent Company Definition form (TXCSCR).

2. Select the EEO Establishment

Select the establishment for which you are reporting from option list EO069. This option list must be modified to include your company's establishments.

For practice, select 'New York Office'.

3. Enter the effective date

Enter the date on which the establishment definition is effective. Dates are entered in MM-DD-CCYY or CCYYMMDD format (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

For practice, type '01-01-1925'.

4. Select the NAICS

Select the NAICS option that classifies the product or service produced by the company.

For practice, select 'PlumbFixFitTrim Mfg'.

5. Select the Standard Indst Cd

Select the appropriate Standard Industrial Classification for the parent company. While it is no longer required for EEO reporting, the entry is present to retain this information from historical records.

For practice, leave this entry blank.

6. Enter the Name

Type the name of the organization. This should be the name of the parent company that is to appear on the EEO-1 Multi-Establishment report.

For practice, type 'Great Lakes Manufacturing, Inc'.

7. Enter the Address

Type the street address of the organization. This should be the address of the parent company that is to appear on the EEO-1 report.

For practice, type '100 State Street'.

8. Enter the City

Type the city in which the organization is located. This address information relates to the parent company.

For practice, type 'Albany'.

9. Enter the State

Type the state in which the organization is located. This address information relates to the parent company.

For practice, type 'NY'.

10. Enter the County

Type the county in which the organization is located. This address information relates to the parent company.

For practice, type 'Albany'.

11. Enter the Zip Code

Type the zip code in which the organization is located. This address information relates to the parent company.

For practice, type '12207'.

12. Enter the Company Number

Type the company identification number. This number is assigned for EEO-1 reporting by the Joint Reporting Committee the first time you file a report for a company or a new unit.

For practice, type '157892'.

13. Enter the Unit Number

Type the identification number for the organization. This number is assigned for EEO-1 reporting by the Joint Reporting Committee the first time you file a report for a company or a new unit.

For practice, type'000119'.

14. Enter the EIN Number

Type the Employer Identification (Tax Identification) Number assigned by the IRS for the parent company.

For practice, type '712358761'.

15. Click the Apprentices Employed check box

Select this check box if the organization employs apprentices.

For practice, leave this entry blank.

16. Select EEO-1 Section C Question 1

Select your answer to Question 1 in Section C of the EEO-1 report that is provided by the Department of Labor.

For practice, click 'Yes'.

25. Select EEO-1 Section C Question 2

Select your answer to Question 2 in Section C of the EEO-1 report that is provided by the Department of Labor.

For practice, click 'Yes'.

17. Select EEO-1 Section C Question 3

Select your answer to Question 3 in Section C of the EEO-1 report that is provided by the Department of Labor.

For practice, click 'Yes'.

18. Enter EEO-1 Section C DUNS Number

Enter the Dun and Bradstreet Identification Number for the parent company.

For practice, enter '053145921'.

19. Select the External Labor Market State

Select the appropriate State for the external labor market information for your company, as defined by the Department of Labor.

For practice, select 'New York'.

20. Select the External Labor Market County

Select the appropriate County for the external labor market information for your company, as defined by the Department of Labor.

For practice, select 'NY Albany'.

21. Select the External Labor Market City

Select the appropriate City for the external labor market information for your company, as defined by the Department of Labor.

For practice, select 'NY Albany'.

22. Select the External Labor Market SMSA

Select the appropriate Standard Metropolitan Statistical Area location for the external labor market information for your company, as defined by the Department of Labor.

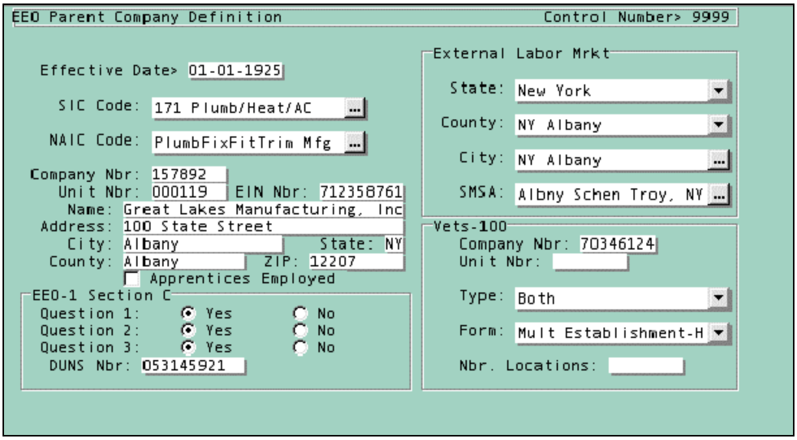
For practice, select 'Albany Schen Troy, NY'.

23. Click Save or press Enter

The table is saved.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



EEO Parent Company Definition Control Number> 9999

For more information about using this form for setting up parent company information.

Entering establishment information for EEO reporting

To enter the establishment information necessary for EEO reporting, follow these steps:

1. Access the EEO Establishment Definition form (TX-SCR)

Access this form by making the following selection from the Navigator:

Component:	HR Setup
Process:	Setup EEO Rules
Task:	EEO Establishment Definition

For practice, access the EEO Establishment Definition form (TX-SCR).

2. Select the EEO Establishment

Select the establishment for which you are reporting from option list EO069. This option list must be modified to include your company's establishments.

For practice, select 'Chicago Facility'.

3. **Enter the effective date**

Enter the date on which the establishment definition is effective. Dates are entered in MM-DD-CCYY or CCYYMMDD format (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

For practice, type '01-01-1925'.

4. **Select the Standard Indst Cd**

Select the appropriate Standard Industrial Classification Code for the establishment. If there is not an appropriate SIC Code for the establishment, enter the SIC Code for the parent company. While it is no longer required for EEO reporting, the entry is present to retain this information from historical records.

For practice, leave this entry blank.

5. **Select the External Labor Market State**

Select the appropriate State for the external labor market information for the establishment, as defined by the Department of Labor.

For practice, select 'Illinois'.

6. **Select the NAICS**

Select the NAICS option that classifies the product or service produced at this establishment.

For practice, select 'PlumbHeatEquipSuppWh'.

7. **Select the External Labor Market County**

Select the appropriate County for the external labor market information for the establishment, as defined by the Department of Labor.

For practice, select 'IL Cook'.

8. **Enter the Company Number**

Type the company identification number. This number is assigned for EEO-1 reporting by the Joint Reporting Committee the first time you file a report for a company or a new unit.

For practice, type '157892''.

9. **Select the External Labor Market City**

Select the appropriate City for the external labor market information for the establishment, as defined by the Department of Labor.

For practice, select 'IL Chicago'.

10. Enter the Unit Number

Type the identification number for the establishment. This number is assigned for EEO-1 reporting by the Joint Reporting Committee the first time you file a report for a company or a new unit.

For practice, type '121354'.

11. Enter the EIN Number

Type the Employer Identification (Tax Identification) Number assigned by the IRS for the establishment. If there is not a specific EIN for the establishment, enter the EIN for the parent company.

For practice, type '549687213'.

12. Enter the Name

Type the name of the establishment.

For practice, type 'Great Lakes Plumbing Supply'.

13. Select the External Labor Market SMSA

Select the appropriate Standard Metropolitan Statistical Area location for the external labor market information for the establishment, as defined by the Department of Labor.

For practice, select 'Chicago, IL'.

14. Enter the Address

Type the street address of the establishment.

For practice, type '5122 W. 65th Street'.

15. Enter the City

Type the city in which the establishment is located.

For practice, type 'Chicago'.

16. Enter the State

Type the state in which the establishment is located.

For practice, type 'IL'.

17. Enter the County

Type the county in which the establishment is located.

For practice, type 'Cook'.

18. Enter the Zip Code

Type the zip code in which the establishment is located.

For practice, type '60638'.

19. Click the Headquarters Local check box

Select this check box if the establishment is considered Headquarters (parent company) for the organization.

For practice, leave this check box blank.

20. Click the Apprentices Employed check box

Select this check box if the establishment employs apprentices.

For practice, leave this check box blank.

21. Select EEO-1 Section C Question 1

Select your answer to Question 1 in Section C of the EEO-1 report that is provided by the Department of Labor.

For practice, click 'Yes'.

22. Select EEO-1 Section C Question 2

Select your answer to Question 2 in Section C of the EEO-1 report that is provided by the Department of Labor.

For practice, click 'Yes'.

23. Select EEO-1 Section C Question 3

Select your answer to Question 3 in Section C of the EEO-1 report that is provided by the Department of Labor.

For practice, click 'Yes'.

24. Enter EEO-1 Section C DUNS Number

Enter the Dun and Bradstreet Identification Number for the establishment. If there is a not a specific DUNS Number for this establishment, enter the DUNS Number for the parent company.

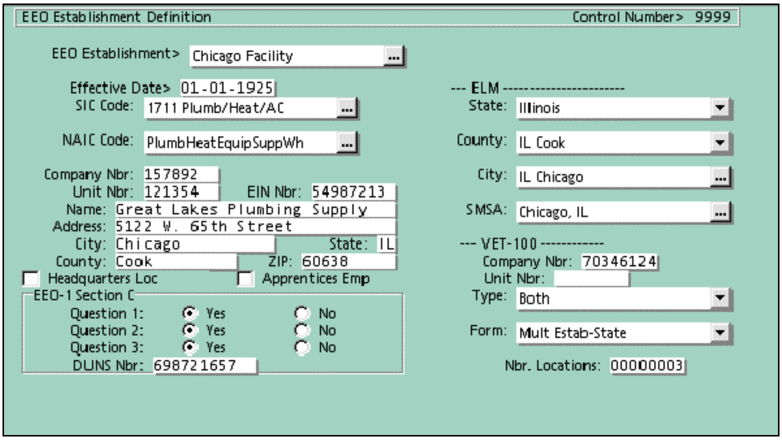
For practice, type '698721657'.

25. Click Save or press Enter

The message '---New table entry has been established---' is displayed.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- **Establishing Equal Employment Opportunity information---US-specific** *(on page 121)*

For more information about using this form for setting up parent company information.

Entering establishment information for OSHA reporting

To specify OSHA establishment information, use the OSHA Establishment Information form (OE-SCR). This form must be completed for each establishment to be defined on an OSHA report.

1. Access the OSHA Establishment Information form (OE-SCR)

Access this form by making the following selection from the Navigator:

Component: HR Setup
Process: Setup OSHA Rules
Task: OSHA Establishment Information

2. Select an OSHA Establishment

Select the value from the OSHA Establishment option list (HS52) that represents the physical location subject to OSHA reporting.

Note: *Modify this option list to include your OSHA Establishment locations.*

3. Enter an Effective Date

Enter the date on which the data on this form becomes effective. Enter the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

4. Enter the Address

Enter the street address of the OSHA Establishment.

5. **Enter the City/State**
   Enter the city and state in which the OSHA Establishment is located.

6. **Enter the ZIP**
   Enter the postal code in which the OSHA Establishment is located.

7. **Select a SIC Code**
   Select the Standard Industrial Code (option list EO20) by which the OSHA Establishment is classified.

8. **Select a NAICS Code**
   Select the North American Industry Classification Code (option list EO23) that describes the business in which the OSHA Establishment is engaged.

9. **Click Save or press Enter**
   The OSHA Establishment Information form (OE-SCR) is created, and the following message is displayed:

   '—New table entry has been established—'

   See also:

   ■ OSHA establishment requirements for reporting ***(on page 128)***
   For the information required to define an OSHA Establishment.

Associating Occupation Group Tables to related Job Family and EEO Job Category

To associate each Occupation Group code (assigned to each of your Job Code entries on the TA Table) to their related Job Family and EEO Job Category (1, 4, 5, or 6), complete the following steps:

1. **Access the Occupation Group Table form (TE-SCR)**
   Access this form by making the following selection from the Navigator:

   Component: HR Setup
   Process: Setup EEO Rules
   Task: Occupation Group/EEO Category

   The Occupation Group Table form (TE-SCR) is displayed for the selected employee.

   For practice, access the Occupation Group Table form (TE-SCR) for the 999999 organization.

2. **Select the Occupation Group**
   This code entered in the TE Table is used to relate the occupation group codes your company recognizes for each of your Job Families and their EEO-1, EEO-4, EEO-5, or EEO-6 Job Category. There are 514 government-defined Occupation Group codes.

Occupation Group codes are taken from the list published by the US Department of Commerce, Bureau of the Census 1980: Equal Employment Opportunity Special File. The Cyborg-delivered Occupation Group Table (TE-SCR) contains all 514 codes for use during the roll-up process in preparing demographic data. It is your responsibility to delete occupation group table entries not applicable to your organization.

Select the Occupation Group from the big option list or click the Show selection list in the message area button to display all of the options at the bottom of the form.

For practice, select 'Legislators'.

3. Enter the effective date

Type the first effective date of the table entry in this text box. Enter the date in MM-DD-CCYY or CCYYMMDD format (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

For practice, type '01-01-1999'.

4. Select the Job Family

This is the Job Family code assigned to the Occupation Group code. These codes are government assigned categories of generically titled job groupings that further classify the Job code.

For practice, select 'Exec/Admn/Mangr'.

5. Select the EEO-1 Job Category

The EEO-1 Job Category is the generic job group used by private employers for EEO reporting purposes.

For practice, select 'Officials/Managers'.

6. Select the EEO-4 Job Category

The EEO-4 Job Category is the generic job group used by state and local government agencies for EEO reporting purposes.

For practice, select 'Officials/Admins'.

7. Select the EEO-5 Job Category

The EEO-5 Job Category is the generic job group used by elementary and secondary schools for EEO reporting purposes.

For practice, leave this blank.

8. Select the IPEDS Job Category

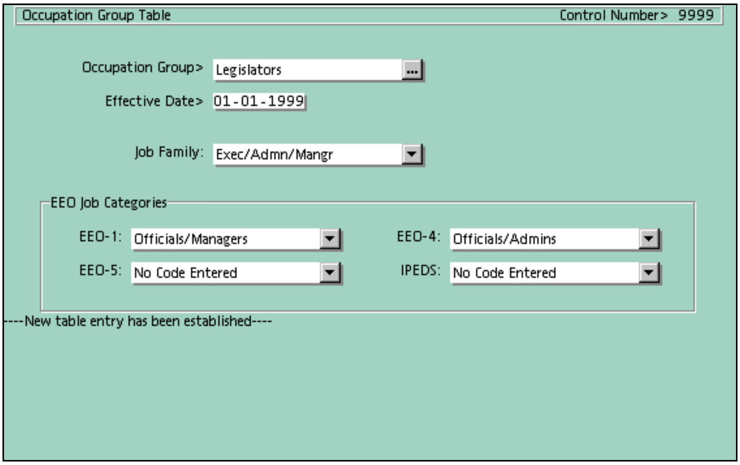
The IPEDS Job Category is the generic job group used by higher educational institutions for EEO reporting purposes.

For practice, leave this blank.

9. Click Save or press Enter

The message '---New table entry has been established---' confirms the changes.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Occupation groups---US-specific ***(on page 129)***

For more information about Occupation Group Tables and EEO Job Categories.

Apply the Concept

1. Based on your understanding of the Geographic Range Indicator as explained in this section, how would your organization use this feature to handle job salary grades that differ by location?

2. What coding structure does your organization currently use for jobs/positions and will the values require modification for use in The Solution Series?

Review of Questions Answered

1. What elements of a job function can be recorded in The Solution Series?

2. In what formats can salary grade ranges be expressed?

3. What feature allows your organization to use salary grade ranges that differ by location?

CHAPTER 8

Setting Up Employee Templates

In This Chapter

Introduction

When you hire a new employee, you will use an employee template to make the hiring process more efficient. You will then fill in any unique information for the employee, such as address and birth date.

Tasks

This section explains the following:

- Setting up an employee template
- Modifying an employee template
- Copying an employee template to another organization
- Deleting an employee template
- Viewing a list of employee templates

Prerequisites

Before you can create employee templates, you must set up the following in The Solution Series:

- Install The Solution Series
- Establish one or more organizations

☞ *Refer to* **Setting Up an Organization** *(on page 51) for more information on establishing organizations.*

Questions answered

The following questions are answered in this section:

1. How does the use of an employee template increase productivity in setting up new hire employees?
2. What feature allows a template to be copied to other organizations?
3. If Position Administration is 'In Use' in an organization, what must be done prior to setting up employee templates?

Purpose of employee templates

To reduce the time and effort required to add a new hire to the system, you use a model employee record called a Logical Employee Model template. A Logical Employee Model holds default entries for employee forms. These entries are used as a starting point for completing each of the employee forms for a new employee. It is the only method available for adding new employees to the system outside of the batch payroll process.

A Logical Employee Model is a template for all new employee records. It is a model employee record that is copied to create new employee records. It is copied with a new employee number as part of the setup process for a new employee record.

Creating employee templates ensures that critical information is established consistently and correctly for all employees who conform to the template. In addition, creating the template will save time in key entry, since many of the employee forms contain common information that will not need to be changed when hiring an employee. Only unique information will need to be entered to complete the employee record, such as name, address, employment date, and so forth.

Note: *Logical Employee Models must be established before selecting Position Administration 'In Use' on the Systems Options form (TG-SCR).*

Delivered templates

An LMODEL 00 is delivered with organization 999999. This LMODEL 00 may be used to create other Logical Employee Models that can be modified and used to create employee records.

At least one Logical Employee Model must exist for each organization. When additional organizations are created, Logical Employee Models must be set up for them. New templates can be created at any time if your company adds new employee records that do not fit a current template.

Using templates

To give an employee access to Interactive Workforce, you must have the following information in The Solution Series for the employee.

- First and last name
- Employee ID
- Employment date
- ID of organization (Control 1-2s) to which the employee belongs
- Status
- Pay frequency

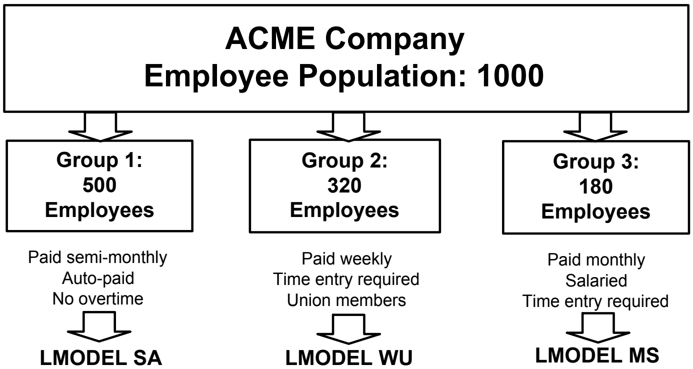
If your organization uses eCyborg Interactive Benefits, you may need additional information in The Solution Series to calculate benefits information for the employee. Also, if your organization requires other information based on your business processes, the information must exist in The Solution Series in order to be extracted and loaded into Interactive Workforce.

When using templates you must decide what data employees will enter and maintain using eCyborg Interactive Workforce and what employee data HR will enter. Information entered by employees does not need to be part of the template.

Template names

You can establish as many templates as you need. Analyzing your employee population will allow you to determine the number and type of templates that need to be set up. For example, you might set up a template for monthly, salaried, exempt staff, and another Logical Employee Model template for the weekly, union, hourly staff.

Note: *Union templates are usually used only in the US.*



Template naming convention

Although the template is a model employee record and employee identifiers can be ten characters in length, the convention for Logical Employee Model templates is as follows:

- LMODEL in the first six positions
- A space in position 7
- Followed by any two characters (XX)

Notice that the employee identifier for the Logical Employee Model template begins with the letter L. An employee identifier beginning with L is recognized as a labor-only employee and is never paid or shown on any reports.

A labor-only employee is one of the following:

- An employee for whom you wish to track hours worked, but is never paid
- An employee template

The convention for the last two characters of the template identifier is customer-defined. You may want to use two characters that indicate the primary defaults within a template. For example, LMODEL SM for salaried, monthly compensated employees.

Default information in a template

A Logical Employee Model template contains multiple forms with non-dated information such as:

- Common employee information
- Payroll tax records
- Home location assignments

Note: *Dated segments are addressed through the LDEFAULTS process.*

☞ *Refer to* **Setting Up Default Field Values for Forms** *(on page 183) for more information on text or list box defaults for dated segments.*

The Logical Employee Model establishes a skeleton employee record with a name of VOID VOID VOID VOID VOID and a Social Security Number of 999-99-9999 for US companies or a Social Insurance Number of 999-999-999 for Canadian companies. Using VOID in the employee name prevents the inadvertent cashing of payments produced for a new hire for whom no name has been recorded. When you are setting up your new templates, you may want to retain the VOID and then make an entry in the name text boxes that is more representative of the model's purpose, such as VOID VOID Salaried/Full-time. This may help office personnel in selecting the correct template when processing new hires.

You may want to consider defaulting address information such as the city or state, if there is a high percentage of your employee population that resides in a common area. Any data that can be entered in the template reduces the amount of entry work when setting up a new hire record. You may make a replacement entry for any exceptions to the default as you process the new hire.

If your company's human resource function is integrated with payroll, you may work together to establish default information on the following employee forms:

- Employee Information form (EF-SCR)
- Payroll Home Location/Pay Allocations form (GG-SCR)
- Employee Pay Rate Or Salary form (H1-SCR)
- Employee Tax Record Maintenance (JJ-SCR)

Note: *After using a Logical Employee Model template to set up a new hire, any of the default information may be changed during the new hire process to reflect the specific data for an employee.*

Template additions, changes, deletions, and duplication

You will use the Create A Logical Employee Model form (LM-NEW) to enter the name of the new template. After it has been processed, the Employee Information form (EF-SCR) will display, allowing you to record the defaults.

Add defaults

After the Logical Employee Model is set up, other forms may be added by accessing the desired form using the specific Logical Employee Model employee identifier, such as LMODEL 55. Data is then entered just as you would for any employee.

Change defaults

Existing Logical Employee Model information may only be updated by using the specific form on which the default information resides. Access and review the Logical Employee Model template forms and make any changes to the data that applies to the majority of the employees in the group.

Delete templates

When a Logical Employee Model is no longer in use by your organization, you may delete it. You can view a list of templates to determine which ones are no longer being used by accessing the Display Application File form (DSP02).

It is recommended that you verify that the employee template is the correct one by displaying the Employee Information form (EF-SCR) before starting the deletion procedure.

The Employee Record Maintenance form (DELETE) may be used to remove all of a template's information permanently.

Note: *A high level of security is recommended for the Employee Record Maintenance form (DELETE).*

Copying an employee template to another organization

If you have multiple organizations that could use the same template(s), you need not repeat the setup process in each organization. After you have completed the setup of a template in the first organization, you may transfer it to as many other organizations as required by your organization.

Use the Employee Transfer form (ET-SCR) to process the transfer activity. You have the ability to change the Logical Employee Model designation in the transfer process if you need to give it a unique identifier in another organization.

For detailed directions on viewing a list of employee templates.

Additional features

Within the source code for the Employee Information form (EF-SCR), you will find instructions for the following functions:

- Locking a template to prevent accidental changes
- Allowing the employee identifier to populate the Social Security Number/Social Insurance Number text box during the new hire procinteractive workforce (if your company uses SSN/SIN for the employee identifier)

Contact your technical staff to perform the program change procedure that is documented in the Employee Information form (EF-SCR) program source code.

Applicant Tracking considerations

If your organization plans to use the Applicant Administration component of The Solution Series, Logical Employee Model templates must be created in each applicant tracking organization. One applicant tracking template—LMODEL AT—is delivered with The Solution Series in the 993333 organization. It may only be accessed in an organization that is designated as an applicant tracking organization in the Company Category list box on the Company Options form (AF-SCR).

The following forms are included in an applicant tracking organization template:

- Applicant Information (001SCR)—Used to add a new applicant to one of your applicant organizations. Also records basic applicant information such as applicant number, application date, and status.
- Applicant Name and Address (002SCR)—Used to record a job applicant's name and address information.

☞ *Refer to* **Setting Up an Organization** *(on page 51) for more information on defining an applicant tracking organization.*

Detailed Directions

This section provides detailed directions on completing a business task.

Tasks

Completing the Guided Practice

The setup of the Acme Manufacturing Company and its HR rules is now complete. However, to process new hire employees in The Solution Series, you will need to establish one or more employee templates in your new organization.

In the Guided Practice for this section, you will set up a new template, then change it and copy it to another organization. You will then delete the employee template and view a list of the remaining templates.

You must have completed the Guided Practices in the prior sections to guarantee the successful completion of the Guided Practice that follows.

Note: *Before establishing a new employee template, Position Administration must be set to 'Not In Use' on the System Options form (TG-SCR).*

Setting up an employee template

To set up an employee template using the Create A Logical Employee Model form (LM-NEW), follow these steps:

1. Access the Create A Logical Employee Model form (LM-NEW)

Access this form by making the following selection from the Navigator:

Component: Administrator Tools
Process: Administrator Tools
Task: Add a New Employee Model

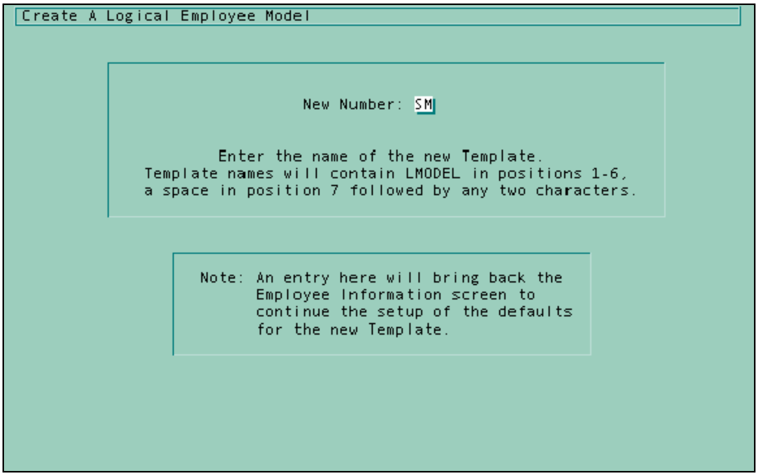
For practice, access the Create A Logical Employee Model form (LM-NEW) in organization AB1000.

2. Type a New Number

Type a two-character template identifier, for example, ES for Exempt, Salaried.

For practice, type 'SM' to represent Salaried, Monthly employees.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



3. Click Save or press Enter

The employee template has been set up and the Employee Information form (EF-SCR) is displayed to continue the setup of the defaults for the template.

For practice, click Save.

4. Leave Employee Nbr blank

While establishing the Logical Employee Model template, leave this text box blank.

For practice, leave this text box blank.

5. Type the Name

Since this is the name of the template, the words 'VOID VOID VOID VOID VOID' are displayed in these text boxes to reduce the chance of a payment check being cashed if the new hire's name is not recorded. You may type an entry that defines your template and keeps some of the 'Void' text, such as 'Void Void FT Hourly Void'. Steps 5 through 9 contain name instructions:

6. Select the Title

For a new hire, this list box selection identifies the employee's name prefix or title. This entry is not used for a Logical Employee Model because no one title is suitable for all new hires.

For practice, make no selection in this list box.

7. Enter the First (name)

Type the Logical Employee Model's first name. You may use this text box to display the 'Void' entries for the Logical Employee Model.

For practice, type 'VOID VOID VOID'.

8. Enter the Middle (name)

Optionally, type a middle name for the Logical Employee Model. The first character of this text box will display as the last position on the title line of each form. For a Logical Employee Model, we suggest that you leave this text box blank.

For practice, make no entry in this text box.

9. Enter the Last (name)

Type the Logical Employee Model's surname. You may use this text box to identify the type of model, for example, 'Union' or 'Salaried'. If space permits, you may begin the text box entry with another 'Void'.

For practice, type 'VOID SALARY MONTHLY'.

10. Select the Suffix

For a new hire, this list box selection identifies the employee's name suffix, such as Jr. or Sr. This entry is not used for a Logical Employee Model because no one suffix is suitable for all new hires.

For practice, make no selection in this list box.

11. Type/select other entries

Continue to fill the remaining text/list boxes with default information that represents the group of employees that will be hired using this template. For example, if the majority of new hires that are recorded with this template reside in the same city, state, and country of residence, make an entry in these fields. If the frequency and payment type for the majority of new hires are the same, select an entry in these fields.

Remember that you can replace any default template information with specific new hire information during the hiring process.

Note: *Leave dates blank, since these will be specific to the new hire.*

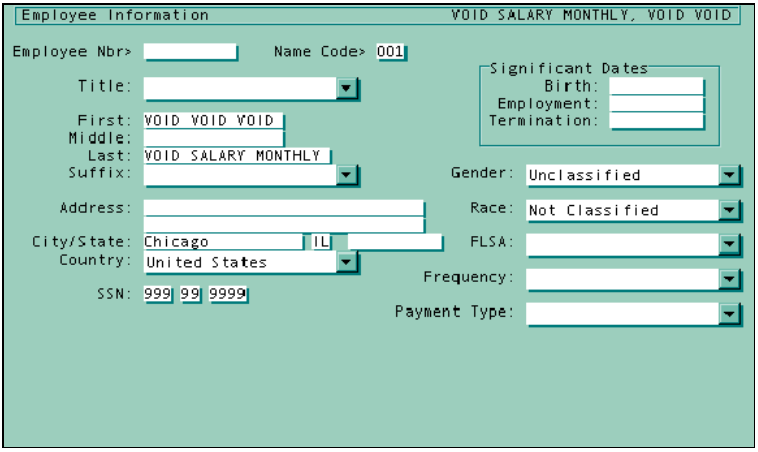
For practice, type 'Chicago' as the city, 'IL' as the State, and 'United States' as the country of residence. Select 'Monthly' in the Frequency list box and 'Salary-Auto Paid' in the Payment Type list box.

12. Click Save or press Enter

Default entries for the Employee Information form (EF-SCR) have been recorded.

For practice, click Save.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Employee Information VOID SALARY MONTHLY, VOID VOID

Employee Nbr> Name Code> 001

Significant Dates
Birth:
Employment:
Termination:

Title:

First: VOID VOID VOID
Middle:
Last: VOID SALARY MONTHLY
Suffix:

Gender: Unclassified

Address:

Race: Not Classified

City/State: Chicago IL
Country: United States

FLSA:

Frequency:

SSN: 999 99 9999

Payment Type:

See also:

- Template additions, changes, deletions, and duplication ***(on page 167)***

For more information about changing an employee template.

Modifying an employee template

To change an employee template using the Employee Information form (EF-SCR), follow these steps:

1. Access the Employee Information form (EF-SCR)

Access this form by making the following selection from the Navigator:

Component: Employee Resourcing
Process: Hire, Rehire, Reinstate an Employee
Task: Add Basic Employee Information

For practice, access the Employee Information form (EF-SCR) for LMODEL SM in organization AB1000.

2. Leave Employee Nbr blank

While modifying the Logical Employee Model template, leave this text box blank.

For practice, leave this text box blank.

3. Type/select other entries

Change any of the existing entries to represent the group of employees that will be hired using this template.

Remember that you can replace any default template information with specific new hire information during the hiring process.

Note: Leave dates blank, since these will be specific to the new hire.

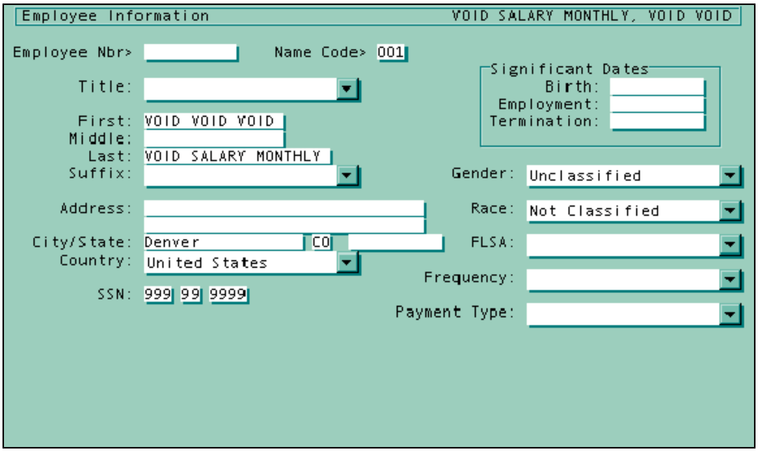
For practice, type 'Denver' as the city and 'CO' as the state.

4. Click Save or press Enter

Changes to the default entries for the Employee Information form (EF-SCR) have been recorded.

For practice, click Save.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Template additions, changes, deletions, and duplication ***(on page 167)***

For more information about changing an employee template.

Copying an employee template to another organization

To copy an employee template to another organization using the Employee Transfer form (ET-SCR), follow these steps:

1. Access the Employee Transfer form (ET-SCR)

Access this form by making the following selection from the Navigator:

Component: Employee Resourcing
Process: Hire, Rehire, Reinstate an Employee
Task: Transfer Emp to New Organization

For practice, access the Employee Transfer form (ET-SCR) for LMODEL 00 in organization 999999.

2. **Enter the New Employee Number**
If you want the template to have a different employee number in the new organization, type it here. Otherwise, type the template's current number here.

For practice, type 'LMODEL 00' to keep the same template number in the new organization.

3. **Enter the New Organization**
Enter the template's new organization identifier.

For practice, type 'AB1000'.

4. **Enter the Transfer Date**
Type the effective date of the transfer. Dates are entered in MM-DD-CCYY format (US and Canada) or DD-MM-CCYY (elsewhere).

For practice, type the current date.

5. **Select the Payroll Data**
Select one of the payroll data/amount options. For copying a template, you will always select the option that allows the data to remain in the old organization while being copied to the new organization.

For practice, select the first Data Amounts option.

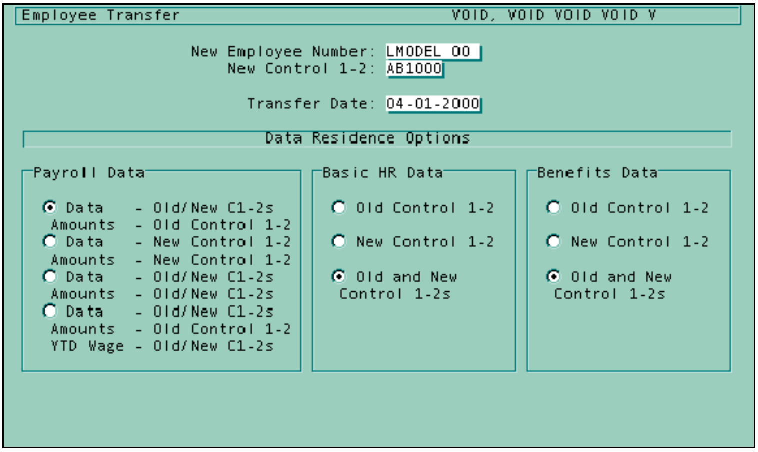
6. **Select the Basic HR Data**
Select the basic human resource data that designates whether information is to move to the new organization, stay with the old organization, or reside on the Employee Database records in both organizations.

For practice, select 'Old and New Control 1-2s'.

7. **Select the Benefits Data**
Select the benefits data that designates whether information is to move to the new organization, stay with the old organization, or reside on the Employee Database records in both organizations.

For practice, select 'Old and New Control 1-2s'.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



8. Click Save or press Enter

The template transfer information is now recorded. A 'Transfer successfully completed' message is displayed.

Note: *Override any warning messages that appear after you click Save.*

For practice, click Save.

See also:

- Template additions, changes, deletions, and duplication ***(on page 167)***

For more information about changing an employee template.

Deleting an employee template

To delete an employee template using the Employee Record Maintenance form (DELETE), follow these steps:

1. Access the Employee Record Maintenance form (DELETE)

Access this form by making the following selection from the Navigator:

Component: Development Tools
Process: Employee Database Utilities
Task: Delete Employee Records

The Employee Selection dialog box is displayed.

For practice, access the Employee Record Maintenance form (DELETE) in organization AB1000.

2. Type the Number

Type the employee template identifier in this text box, for example, 'LMODEL ES'.

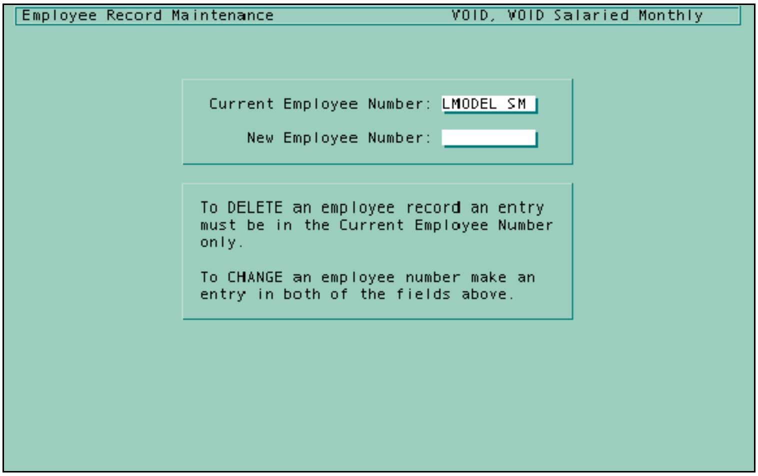
For practice, type 'LMODEL SM'.

3. Click Save or press Enter

The employee template number is displayed in the Current Employee Number text box on the Employee Record Maintenance form (DELETE).

For practice, click Save.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



4. Verify the template number

Verify that the correct employee template number is displayed in the Current Employee Number text box.

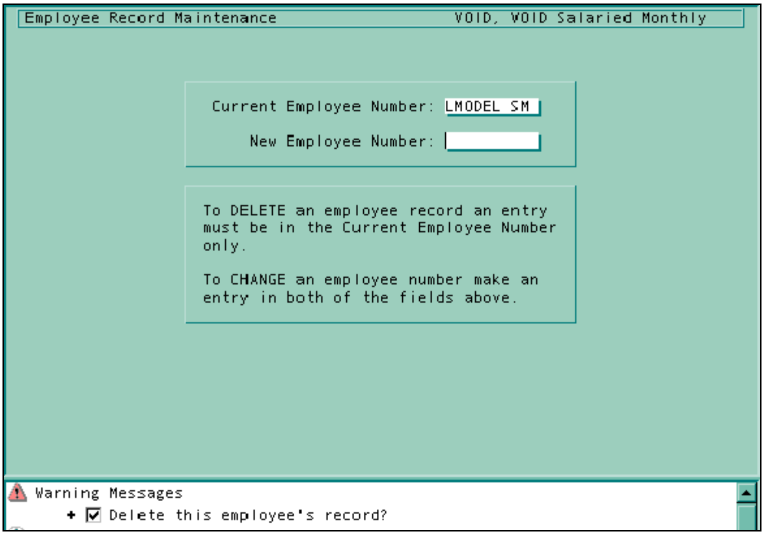
For practice, look and see that the template number is 'LMODEL SM'.

5. Click the Warning Message check box

The Warning Messages dialog box is displayed in the message area, asking the question, 'Delete this employee's record?' An entry in the check box permits the deletion to continue.

For practice, click the check box.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



6. Click Save or press Enter

The employee template has been deleted from the file. The message '—Record for employee xxxxxxxxxx has been deleted—' is displayed on the form.

For practice, click Save.

See also:

- **Template additions, changes, deletions, and duplication** ***(on page 167)***

For more information about changing an employee template.

Viewing a list of employee templates

To display a list of employee templates using the Display Application File form (DSP02), follow these steps:

1. Access the Display Application File form (DSP02)

Access this form by making the following selection from the Navigator:

Component:	Development Tools
Process:	Employee Database Utilities
Task:	List Employee Database Records

For practice, access the Display Application File form (DSP02).

2. Type a Starting Key

This entry allows the display of the records in the Employee Database to start at the point where the Logical Employee Model templates are stored. The first six positions are the organization identifier, the seventh position is 'M' (record type for employee records), and the last two positions are 'LM' (starting characters for LMODEL).

For practice, type 'AB1000MLM'.

3. Click Save or press Enter

The employee templates are displayed.

For practice, click Save.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:

```
LNGTH 3.+....1....+....2....+....3....+....4....+....5....+....6....+....7....+

```

Note: *Because LMODEL SM was deleted in an earlier practice, only LMODEL 00 is listed for the AB1000 organization.*

See also:

- Template additions, changes, deletions, and duplication ***(on page 167)***

For more information about changing an employee template.

Apply the Concept

Based on your understanding of an employee template as explained in this section, consider the groups of employees in your organization that may require separate Logical Employee Models for use in the hiring process. List up to three of them and their common characteristics in the space below:

Group	Common characteristics

Review of Questions Answered

1. How does the use of an employee template increase productivity in setting up new hire employees?

2. What feature allows a template to be copied to other organizations?

3. If Position Administration is 'In Use' in an organization, what must be done prior to setting up employee templates?

CHAPTER 9

Setting Up Default Field Values for Forms

In This Chapter

Introduction

Because daily HR operations require accurate and timely recordkeeping, a feature that would increase productivity and accuracy has been incorporated into The Solution Series. Using default values saves time and unnecessary key strokes when entering a text/list box that usually contains the same data for all employees (for example, Country Code).

Tasks

This section explains the following:

- Setting up an LDEFAULTS model
- Modifying an LDEFAULTS model
- Activating an LDEFAULTS model
- Viewing the active LDEFAULTS values

Prerequisites

Before you can create employee templates, you must set up the following in The Solution Series:

- Install The Solution Series
- Establish one or more organizations

☞ *Refer to* **Setting Up an Organization** *(on page 51) for more information on establishing organizations.*

Questions answered

The following questions are answered in this section:

1. What is the purpose of an LDEFAULTS template?
2. How does the LDEFAULTS template differ from the Logical Employee Model (LMODEL) template?
3. How is productivity improved by using an LDEFAULTS template?

Purpose of a default template

Human Resources Administration has a default utility called LDEFAULTS. LDEFAULTS defines data for text/list boxes on a Human Resource form to be used if a new segment is created and the default text/list boxes are left blank. This operation saves time and unnecessary keystrokes for entering a text/list box that usually contains the same data for all employees, for example, Citizenship.

Default values may be set up for almost every form in the Human Resource Administration component. Some forms may not be suitable for text/list box defaults because of form calculations or the employee-specific nature of the text/list boxes.

The default data is effective only the first time the segment is created and can be overridden by selecting or typing a different entry in the default text/list box.

How a default template differs from an employee template

LDEFAULTS uses a model employee that is similar to, but not the same as, a Logical Employee Model employee.

The purpose of a Logical Employee Model employee is to provide a series of non-dated forms that contain entries common to a group of employees. The forms in a Logical Employee Model are copied to a new employee's record during the new hire process.

☞ *Refer to* **Setting Up Employee Templates** *(on page 161) to learn how to add a Logical Employee Model template.*

The purpose of an LDEFAULTS model employee is to provide text/list box entries on a form when the form is used for the first time for an existing employee. A default template is to be used with Human Resource forms only, since the Logical Employee Model provides the text/list box defaults for the payroll non-dated forms.

Establishing the LDEFAULTS model

An employee with an employee number of LDEFAULTS must be added to the file using a Logical Employee Model and the Employee Information form (EF-SCR). The name should be changed to Ldefaults, Model. Then the default model can be modified.

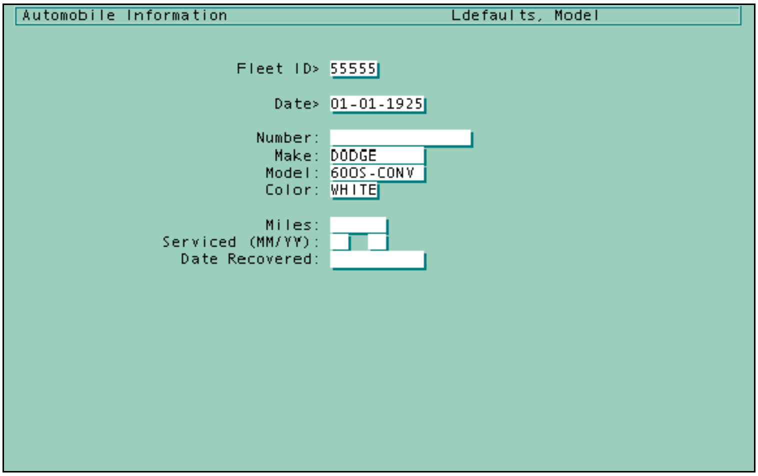
Note: *Only one LDEFAULTS template may be established for an organization.*

After the LDEFAULTS employee has been added to the file, defaults are established by displaying each form with an employee number of LDEFAULTS. Enter whatever key text box information is required by the form and then enter the default values.

Key text box rules are:

- If the key text box is a date, enter the effective date for the default. Use a date older than the earliest employee hire date.
- If the key text box is not a date, the system is looking for an exact match or greater value in the key text box. This allows for ranges.

Several LDEFAULTS models may be set up for a form using ranges of valid key values. Look at the example in the 999999 organization for the Automobile Information form (24-SCR). An employee who has a Fleet ID of 00000–55555 (entry of 55555 in the model) would have defaults of DODGE, 600s-CONV, and WHITE.



LDEFAULTS data is established by organization, so different data may exist for the same form in two different organizations.

After all LDEFAULTS model forms are established, the Create LDEFAULTS D Record program (SETUPS) must be executed to apply the default data to the System Control Repository. If additions or changes are made to the LDEFAULTS template, you must then run the Create LDEFAULTS D Record program (SETUPS) to activate the changes.

For detailed directions on viewing the active LDEFAULTS model.

How and when the defaults work

After default text/list boxes are set up for a form, only the key text box and variable data must be entered to establish a new segment for an employee. All default text/list boxes can be left bank and generated by the default records. If one piece of the default data is incorrect for an employee, an entry can be made in the text/list box to override the default value.

Sample LDEFAULTS data

Sample LDEFAULTS data has been established in the 999999 test organization for the following forms:

- Additional Personal And ID Information form (02-SCR)
  Citizenship entry of United States

- Phone Numbers And Employment Information form (03-SCR)
  Work area code of 312, and Work Phone of 454-1865

- Automobile Information form (24-SCR)

  - If Fleet ID is 00000 - 55555 (entry of 55555 in model):
    Automobile Make is DODGE,
    Automobile Model is 600s-CONV,
    Color is WHITE.

  - If Fleet ID is 55555 - 99999 (entry of 99999 in model):
    Automobile Make is MERCEDES,
    Automobile Model is 450SL,
    Color is BLACK.

These defaults will not exist in your organizations unless you add them as part of your LDEFAULTS employee forms.

Detailed Directions

This section provides detailed directions on completing a business task.

Tasks

Completing the Guided Practice

To increase productivity as you record employee information, you may consider the use of an employee template that provides default entries on forms.

In the Guided Practice for this section, you will establish an LDEFAULTS model employee in organization AB1000, enter default values, and then activate the defaults.

You must have completed the Guided Practices in the prior sections to guarantee the successful completion of the Guided Practice that follows.

Note: *Before establishing a new LDEFAULTS model employee, set the Position Administration switch to 'Not In Use' on the System Options form (TG-SCR).*

Setting up an LDEFAULTS model

The Employee Information form (EF-SCR) is used to add new employees to an active organization using an employee template (LMODEL). To set up an LDEFAULTS model employee using the Employee Information form (EF-SCR), follow these steps:

1. Access the Employee Information form (EF-SCR)

Access this form in the organization in which you want to set up the LDEFAULTS employee.

Access this form by making the following selection from the Navigator:

Component: Employee Resourcing
Process: Hire, Rehire, Reinstate an Employee
Task: Add Basic Employee Information

For practice, access the Employee Information form (EF-SCR) for LMODEL 00 in organization AB1000.

2. Type the Employee Nbr

Type the employee number - 'LDEFAULTS'.

For practice, type 'LDEFAULTS'.

3. Type the Name

Type the name, exactly as shown—First: Model, Last: Ldefaults. Accept the defaults for all other text/list boxes.

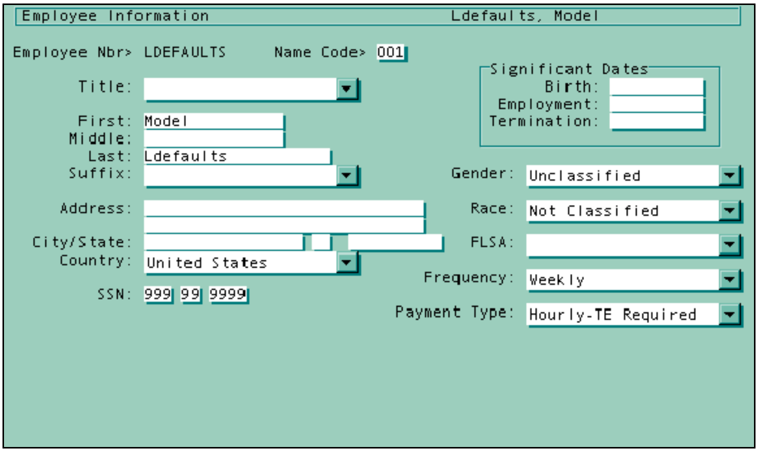
For practice, type 'Model' in the First text box; then type 'Ldefaults' in the Last text box. Type a hash sign (#) in the Middle text box and blank out the remainder of its entry.

4. Click Save or press Enter

The LDEFAULTS model employee setup is now complete.

For practice, click Save.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Establishing the LDEFAULTS model ***(on page 187)***

For more information about setting up LDEFAULTS information.

Modifying an LDEFAULTS model

LDEFAULTS text/list box defaults can be set up for almost every HR form in the system. To update the default values for an LDEFAULTS model employee, follow these steps:

1. Access the form on which changes are to be entered

For example, access the Phone Numbers And Employment Information form (03-SCR) by making the following selection from the Navigator:

Component: Employee Resourcing
Process: Maintain Basic Employee Details
Task: Telephone/Previous Applicant Info

For practice, access the Phone Numbers And Employment Information form (03-SCR) for the LDEFAULTS employee in organization AB1000.

2. Enter the Date

Type a date that reflects the effective date of the data on the record. You may wish to set up this record by using the founding date of your organization.

Dates are entered in MM-DD-CCYY format (US and Canada) or DD-MM-CCYY (elsewhere).

For practice, type '01-01-1925'.

3. Make an entry in the text/list box to be changed

Change one or more text/list boxes to values that would be the common entry for the majority of employees in your organization.

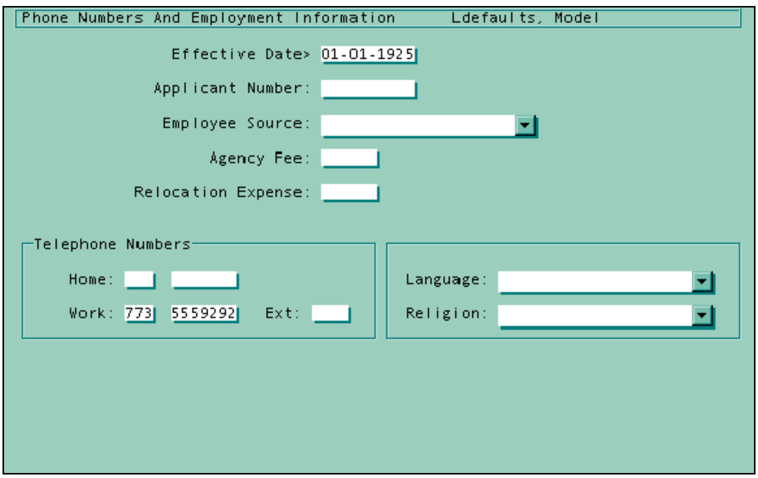
For practice, type '773' in the Work area code text box and '5559292' in the Work phone number text box.

4. Click Save or press Enter

The default values have been recorded for the LDEFAULTS employee.

For practice, click Save.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Note: *Repeat these steps for each form on which default values are required.*

See also:

- Establishing the LDEFAULTS model ***(on page 187)***

For more information about modifying LDEFAULTS information.

Activating an LDEFAULTS model

To activate an LDEFAULTS model, using the Create LDEFAULTS D Record program (SETUPS), follow this step:

Access the Create LDEFAULTS D Record program (SETUPS)

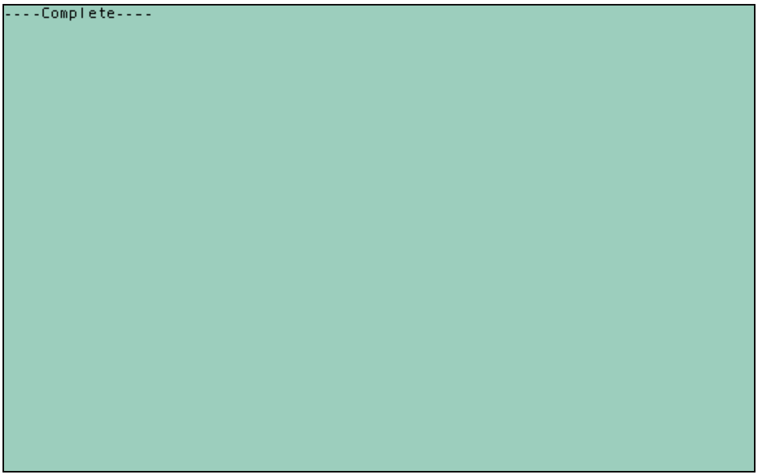
Access this form by making the following selection from the Navigator:

Component:	Administrator Tools
Process:	Administrator Tools
Task:	Build a New Record Default

The default settings are now active. A confirmation form displays the message '—Complete—'.

For practice, access the Create LDEFAULTS D Record program (SETUPS).

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Establishing the LDEFAULTS model ***(on page 187)***

For more information about activating the LDEFAULTS default information.

Viewing the active LDEFAULTS values

In addition to viewing the individual forms on which the default values appear for the LDEFAULTS model, you may verify which default values are currently active by following these steps:

1. Access the Edit Utility form (EDIT)

Access this form by making the following selection from the Navigator:

Component: Development Tools
Process: System Control Repository Utilities
Task: Edit Control Repository Object

For practice, access the Edit Utility form (EDIT).

2. Select an object of HRMS L Defaults

Choose 'HRMS L Defaults' from the Object option list (SC03).

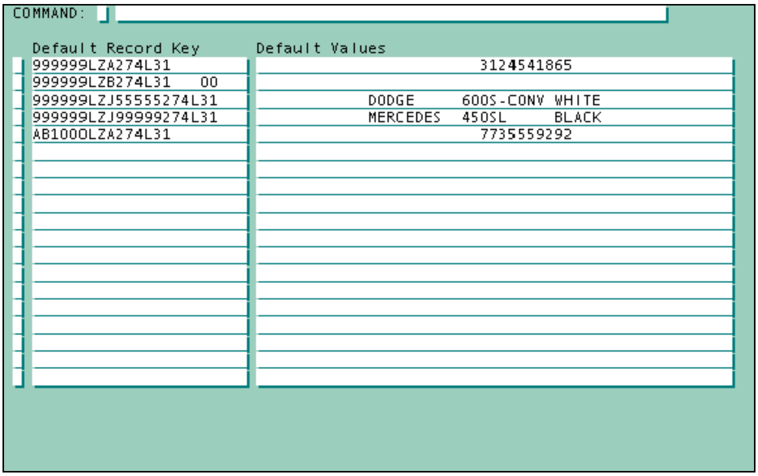
For practice, select 'HRMS L Defaults'.

3. Click Save or press Enter

The default entries are displayed for all organizations. The Default Record Key for each value is also displayed.

For practice, click Save.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Establishing the LDEFAULTS model ***(on page 187)***

For more information about viewing the active LDEFAULTS values.

Apply the Concept

Based on your understanding of Logical Employee Models (LMODELs) and LDEFAULTS text/list box default entries, indicate which kind of template might be used to store the following information:

Information	**LMODEL or LDEFAULTS**	
Most new hire clerical employees are hourly, non-union		
Majority of recorded citizenship is US		
Most employees have the same work phone number		
Most new hires live in the same city and state		
Most company-assigned automobiles are Ford Mustangs		

Review of Questions Answered

1. What is the purpose of an LDEFAULTS template?

2. How does the LDEFAULTS template differ from the Logical Employee Model (LMODEL) template?

3. How is productivity improved by using an LDEFAULTS template?

APPENDIX D

Data Conversion Guidelines

In This Appendix

About this appendix

This appendix is composed from material in the Payroll Administration documentation and is intended for Human Resource clients who did not get the Payroll Administration documentation.

This appendix is an overview of the various ways you can convert your data to a form that can be imported into The Solution Series. There are many approaches to the conversion of data. The methods presented here are recommended because they are the safest and most accurate, and they produce the best results.

This overview is not meant to be a detailed treatment of data conversion. It discusses automated methods only and assumes that you have an understanding of basic data processing functions. If you are unfamiliar with batch processes, please contact your data processing personnel or Cyborg's Professional Services for assistance.

Note: *File references are to the standard assignments (such as JCL, CL, and DCL) for The Solution Series programs, for example, FILE04.*

Determining your conversion method

Before you begin writing a conversion program, first determine which type of conversion method is best for you.

Manual conversion

A manual conversion is practical if you have an aggressive production date (four months or less), 500 or fewer employees, or an adequate data entry staff available to input the data.

The amount of time it takes to enter data manually by a dedicated staff is dependent on the total number of employees, the amount of information to be added, and the number of staff devoted to the task.

For smaller companies, manual data entry may be faster than writing and testing a conversion program.

Automated conversion

If you determine that your conversion is to be automated, you must decide whether your data processing personnel or Cyborg's Professional Services will be responsible for writing the conversion program and applying the converted data to The Solution Series.

Training

Persons responsible for writing the conversion program specifications should attend the Technical Administration course before beginning the conversion. This course covers basic technical issues such as file structures and record types.

Payroll Administration classes help you define which forms and fields are to be converted. They also show you how to determine which conversion method should be used for each type of data that must be converted.

Conversion Data Categories

Within The Solution Series, data that may be converted is divided into two distinct categories. Each data type must be converted using a specific conversion method.

These methods are as follows:

- Batch layout method for static data

  Static data includes company and employee information, such as name, address, pay rate, salary, control-level assignments, and so on. You may convert both payroll and basic human resource data.

  Cyborg recommends that you convert static data using the batch layout method. This method involves a batch process that applies the static information directly to your database, using transaction formats derived from layouts provided for all application forms.

  The conversion data, in the form of transactions, is input as FILE04 and processed by an execution of The Solution Series batch processing program (CBSVB).

  The batch layout conversion method validates, or checks for errors, the field content against the option lists. In other words, the transactions are processed in the same manner as if you were entering data directly, using The Solution Series forms.

Note: *For converting payroll earnings, deductions, and tax-to-date accumulation data, Cyborg recommends the batch transaction method described next. This alternate method is more efficient for converting these types of information.*

- Batch transaction method for to-date accumulation data

  To-date accumulations include payroll earning, deduction, net pay, taxable wage, and tax to-date figures for employees. While this method may be used to convert static data as well as to-date information, Cyborg recommends that you convert static data using the batch layout method because that method validates the list box content against the option lists.

  The batch transaction method involves a batch process that applies information to the Employee Database using batch transactions. Transactions are placed in a batch input file, which is read as P05T80 or P05T81 to an additional/bonus payroll run to update the Employee Database. This includes making entries on the Payroll Run Process Control form (AE-SCR) to specify that an additional/bonus payroll run is to be performed.

☞ *Refer to the Payroll Administration documentation for information about performing this type of payroll run.*

The resulting file from the additional/bonus payroll run is then merged with your database by executing PAYMRG, the payroll merge process.

☞ *Refer to the Payroll Administration documentation for information about PAYMRG.*

Batch layout conversion method

The BATCHL program allows you to produce the Batch Layout report, which lists the text/list boxes found on each form in Payroll Administration. You must execute BATCHL using The Solution Series batch processing program (CBSVB) only. See the online documentation for BATCHL for more information.

The Batch Layout report provides form-image records, field lengths, and any comments associated with each text/list box for each selected form.

Before you begin

Before running your conversion program and applying data from your conversion file, create a standard system backup copy of your database. If it is necessary to correct the conversion program and reconvert the data, you can restore the database to its original state and repeat the process as necessary.

☞ *Refer to the Payroll Administration documentation for more information about making backup copies.*

Control records for the batch layout method

You may request reports for one, several, or all forms. This designation is made in the Key field of the control record (positions 31–40). The following transaction layouts are examples of the three request formats.

Requesting one form

```
         1         2         3         4         5         6         7…
1...5....0....5....0....5....0....5....0....5....0....5....0....5....0…
P BATCHLJ00100  999999BATCHL  AA-SCR

                      requesting one form
```

Requesting several forms

```
         1         2         3         4         5         6         7…
1...5....0....5....0....5....0....5....0....5....0....5....0....5....0…
P BATCHLJ00100  999999BATCHL  AA-SCR
P BATCHLJ00100  999999BATCHL  EF-SCR
P BATCHLJ00100  999999BATCHL  01-SCR

                  requesting selected forms
```

Requesting all forms

```
         1         2         3         4         5         6         7…
1...5....0....5....0....5....0....5....0....5....0....5....0....5....0…
P BATCHLJ00100  999999BATCHL  ALL

                   requesting all forms
```

Using the Alternate Key positions 41–50

You may include specific instructions using positions 41–50. Read the explanation after the following example:

```
         1         2         3         4         5         6         7…
1...5....0....5....0....5....0....5....0....5....0....5....0....5....0…
P BATCHLJ00100  999999BATCHL  ALL       WXYYYYYYYZ

                   requesting all forms
```

W = (A)dd or (C)hange (default) Mode.
X = (R)egular (default) or (S)pecial display.
Y..Y= Specific Sections(s). Please non-blank value corresponding to the Section(s) to be printed. For example, to print only Sections 1 and 3, type '1y3yyyy', where y = a space.
Z = (P)rimary (default) or (A)lternate Language Code.

Printing the Batch Layout Report

The BATCHL program writes all layout reports to the BATCHL03 file. To obtain a printout of the report, print the contents of BATCHL03.

Formatting your conversion program

Your conversion program must create records for each form in Cyborg's batch layout format. Records created from your conversion program are placed in FILE04 and read into an execution of the CBSVB program. This updates the database directly.

Converting the Employee Information form (EF-SCR)

The Employee Information form (EF-SCR) is required to add an employee to the system. Its BATCHL content differs slightly from other transactions. The Key field (positions 31–40) contains the employee template, LMODEL xx (where xx is your template designation). The Additional Key field (positions 41–55) contains a unique employee number.

The next example shows what your records would look like for the Employee Information form (EF-SCR) when adding a new employee:

```
         1         2         3         4         5         6         7         8
1...5....0....5....0....5....0....5....0....5....0....5....0....5....0....5....0
P CONTRLT00010  999999EF-SCR  LMODEL 00 1234      1234           00100307-*
P CONTRLT00020 15-193912-17-1998STEVEN                      THOMAS         AU*
P CONTRLT00030 STIN              002M2314 W MILWAUKEE AV          01APT 8*
P CONTRLT00040 07                       CHICAGO           IL60614      0112*
P CONTRLT00050 34567891
         1         2         3         4         5         6         7         8
1...5....0....5....0....5....0....5....0....5....0....5....0....5....0....5....0
```

Special BATCHL considerations if using Position Administration and/or Requisition Administration

If you plan to use the Batch Layout Facility and you are using Position Administration and/or Requisition Administration, refer to the special instructions that are available on the CUBBS FAQ pages. You may also use the MENU program to view format details of the batch layout for these forms.

Converting other employee forms

After the Employee Information form (EF-SCR) has been populated with your conversion data, the employee number is placed in the Key field for all other employee forms. In other words, the employee number is placed in the Additional Key field for the Employee Information form (EF-SCR) only during the initial establishment of the employee in the database.

Applying converted data

Run a small test conversion initially, 20 to 50 employees, to establish the integrity of the program and data being converted. Make sure that the employee sample is large enough to test all aspects of the conversion. Review all converted forms for several employees to be sure that the data was correctly applied.

Review and verify the edit patterns of dates and amounts, and the placement of data on the forms to be used in the conversion.

Data verification

After each run of CBSVB, check FILE03 for any records that are in error. Correct and reprocess any errors that you find.

Run the following reports to validate the accuracy of the data:

- Master File (0202)—This report lists all payroll data for each employee on the file. Select the report on the Report Requests form (DD-SCR) and process it during a test payroll run.

- Master File Status (9E9E)—This report lists possible setup errors and out-of-balance conditions for each employee on file. Select the report on the Report Requests form (DD-SCR) and process it during a test payroll run.

Batch transaction conversion method

To use the batch transaction method, all existing data that you wish to apply to Payroll Administration must be converted to Cyborg transactions.

Before you begin

Before applying any transactions generated from your conversion program, create a standard system backup copy of your database and Employee Database. If it is necessary to correct the conversion program or to reapply the converted data, you can restore the files and repeat the process as necessary.

Converting data to transactions

When you convert your existing data to Cyborg transactions, group employee transactions by company. Each company must be separated by a BATCH transaction before it is entered into the Employee Database.

A minimum of four transactions per employee is required to convert payroll hour (unit) and amount to-date figures. These transactions are:

- KB transactions for all to-date HED amounts, including HED 999, net pay
- KD transactions for all federal, state, and local taxable wages and taxes withheld only
- One KF transaction for FICA-OASDI taxable wages and taxes withheld only
- One KH transaction for FICA-HI taxable wages and taxes withheld only

If your present system does not provide this information, you must calculate and enter all figures to ensure that accurate amounts are converted.

When applying values to the to-date fields, the values you enter must specify which to-date figures are to be updated by each adjustment. The valid to-date values are:

- Month-to-date only
- Quarter-to-date and year-to-date
- Month-to-date, quarter-to-date, and year-to-date
- Quarter-to-date only
- Year-to-date only

Transaction method example

Here is an example that illustrates the batch transaction method. Assume that you are going to be converting The Payroll Solution as of the second pay period in August. Your quarters end in March, June, September, and December.

1. Create KB transactions for each earning or deduction (HED). Each KB transaction may contain a maximum of three HED entries. Create one set of three KB transactions for each HED you are converting.
   For the following three substeps, enter 2 in the Plug Code (PC). This prevents taxable wages from being updated by the to-date earning figures.
   A. The first KB transaction must contain the year-to-date figure through the last pay period in June.

- Enter $ in the Action Code. This indicates a plus adjustment and does not create Payment History or Labor records.
- Enter 5 in the To-date Code. This updates year-to-date figures only.

B. The second KB transaction must contain the quarter-to-date and year-to-date figures from July 1 through the first pay period in August.

- Enter $ in the Action Code.
- Enter 2 in the To-date Code. This updates quarter- and year-to-date figures.

C. The third KB transaction must contain the month-, quarter-, and year-to-date figures for the month of August.

- Enter $ in the Action Code.
- Enter 3 in the To-date Code. This updates month-, quarter-, and year-to-date figures.

2. Create KD transactions for federal withholding, state, county, and local tax records. FICA-OASDI and FICA-HI tax and taxable wages must be input using KF and KH transactions.

The KD transaction is used to convert taxes withheld for tax records other than FICA-OASDI and FICA-HI. Several KD transactions are needed for each tax record.

A. The first KD transaction must contain the year-to-date figure through the last pay period in June.

- Enter $ in the Action Code.
- Enter 5 in the To-date Code.

B. The second KD transaction must contain the quarter- and year-to-date figures from July 1 through the first pay period in August.

- Enter $ in the Action Code.
- Enter 2 in the To-date Code.

C. The third KD transaction must contain the month-, quarter-, and year-to-date figures for the month of August.

- Enter $ in the Action Code.
- Enter 3 in the To-date Code.

3. Create a KF transaction for FICA-OASDI. This transaction is used to convert FICA-OASDI taxable wages and taxes. You may ignore the prior quarter entries, but you must make entries in the employee tax entries on each transaction. Three KF transaction are needed.

A. The first KF transaction must contain the year-to-date figure through the last pay period in June.

- Enter $ in the Action Code.
- Enter 5 in the To-date Code.

B. The second KF transaction must contain the quarter- and year-to-date figures from July 1 through the first pay period in August.

- Enter $ in the Action Code.
- Enter 2 in the To-date Code.

C. The third KF transaction must contain the month-, quarter-, and year-to-date figures for the month of August.

- Enter $ in the Action Code.
- Enter 3 in the To-date Code.

4. Create a KH transaction for FICA-HI. This transaction is used to convert FICA-HI taxable wages and taxes. You may ignore the prior quarter entries, but you must make entries in the employee tax entries on each transaction. Three KH transaction are needed.

A. The first KH transaction must contain the year-to-date figure through the last pay period in June.
- Enter $ in the Action Code.
- Enter 5 in the To-date Code.

B. The second KH transaction must contain the quarter- and year-to-date figures from July 1 through the first pay period in August.
- Enter $ in the Action Code.
- Enter 2 in the To-date Code.

C. The third KH transaction must contain the month-, quarter-, and year-to-date figures for the month of August.
- Enter $ in the Action Code.
- Enter 3 in the To-date Code.

Applying converted data

The file containing the properly formatted transactions should be used as one of the optional input files and processed in an additional/bonus payroll run of the system. Complete a Payroll Run Process Control form (AE-SCR) with the necessary values to indicate that you are processing an additional/bonus payroll run.

☞ *Refer to the Payroll Administration documentation for information about this form.*

To complete the conversion process, you must merge the updated Employee Database. This is done by PAYMRG, the payroll merge process.

☞ *Refer to the Payroll Administration documentation for information about PAYMRG.*

Data verification

If you perform separate executions of P2EDIT, check the Transaction Load report for data that was not accepted. Make corrections and rerun P2EDIT as many times as required until all data is accepted.

After each additional/bonus payroll run, check the Payroll Audit Trail report for errors. Correct and resubmit any erroneous transactions that you find.

Run the following reports to validate the accuracy of the converted data:

- Master File (0202)—This report lists all payroll data for each employee on the file.
- Master File Status (9E9E)—This report lists possible setup errors and out-of-balance conditions for each employee on file.
- Combined Register (2222)—This report reflects totals for all HEDs and wage fields, and will show all of the to-date figures that you entered.

- Tax Filing (2T2T)—This report prints month-, quarter-, and year-to-date totals of taxable wages and taxes withheld or paid, for all tax authorities. You may use this report to verify and balance these figures to your former system at the time of conversion.

Select these reports on the Report Requests form (DD-SCR) and process them in a payroll run.

Form verification

You may use these two forms to validate employee wage and to-date figures:

- HEDs To-Date Inquiry form (HT-SCR)—This form displays the current, month-, quarter-, and year-to-date amounts and hours for all earnings and deductions, including net pay.

- Taxes To-Date Inquiry form (JT-SCR)—This form displays the current, month-to-date, quarter-to-date, and year-to-date figures for all employee tax records.

APPENDIX E

Practice and Review Answers

In This Appendix

About this appendix

This appendix provides answers for the Apply the Concept practices and Review of Questions Answered included at the end of each instructional chapter.

Planning the Implementation

Review of Questions Answered

1. What preliminary activities must be completed prior to implementing Human Resources Administration?

   - Attend an implementation planning meeting.

   - Attend Cyborg training classes.

   - Review documentation.

   - Define organization control levels.

   - Review and test organizations.

   - Review menus and quicklists.

   - Define a security matrix.

   - Develop a task list and timetable for implementing.

2. How can Human Resources Administration implementation process be phased?

   It can be staged using the following phases:

   - Familiarization

   - Design

   - Implementation

Setting Up an Organization

Apply the Concept

1. Using the information provided in this chapter, indicate your understanding of The Solution Series organization hierarchy by creating an organization structure that meets the needs of the scenario that follows:
   The Great Pride organization is composed of a corporate headquarters and four divisions, each located in different parts of the country. For purposes of reporting and payroll processing, the corporate headquarters needs separate totaling for itself and each division to monitor productivity and costs. In addition, they require a grand total for all organizations. Create your own values for the organization level 1 and 2 entries. Complete the following chart with the organization values for the corporate headquarters and the four divisions:

   Five organizations that require one grand total, in addition to separate totals for each organization, could be set up as follows. In this example, each organization would generate its own total (because the organization level 2 value is unique) and there would also be an automatic grand total for all organizations (because the organization level 1 value is the same for all organizations).

   (Your values may be different than the answers shown, but should match the structure that is used.)

Entity	Org Level 1 value	Org Level 2 value	Organization
Corporate	GP	CORP	GP CORP
Division 1	GP	NDIV	GP NDIV
Division 2	GP	SDIV	GP SDIV
Division 3	GP	EDIV	GP EDIV
Division 4	GP	WDIV	GP WDIV

2. Using the same organization information as shown above, complete the following chart to illustrate what the company might choose as organization level 1 and level 2 values if they needed separate reporting and had no need for any grand totals:

   Five organizations that require totals for each entity could be set up as follows. In this example, since the organization level 1 value is unique for each entity, a separate total would be provided for each one. This method provides no automatic ability to combine the five organization totals into a grand total.

   (Your values may be different than the answers shown, but should match the structure that is used.)

Entity	Org Level 1 value	Org Level 2 value	Organization
Corporate	GP	0001	GP 0001

Entity	Org Level 1 value	Org Level 2 value	Organization
Division 1	ND	0001	ND 0001
Division 2	SD	0001	SD 0001
Division 3	ED	0001	ED 0001
Division 4	WD	0001	WD 0001

Review of Questions Answered

1. What Cyborg structure allows the definition of an organization hierarchy?

   In Cyborg terms, an organization identifies a group of employees who are employed in a common structure and governed by the same set of rules or policies. Assigning a unique value to the first two organization control levels is the first step in defining your organization. Organization level 1 is a two-character entry and organization level 2 is a four-character entry. These two entries are commonly referred to as an organization.

2. How are organization identification and address information recorded on The Solution Series?

   This information can be recorded on the Set Up A New Organization form (AA-NEW) and Company Name And Address form (AA-SCR).

Establishing Basic HR Rules

Apply the Concept

1. Using the information provided in this chapter, make entries in the form print that follows to indicate the choices that might be made by the company in the following scenario.

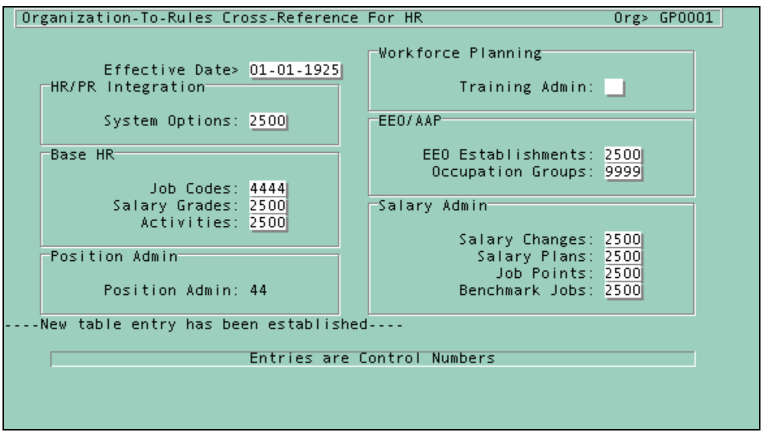
   Great Pride (GP0001) wants to share table values with Acme Manufacturing (AB1000), with one exception - they want their own set of jobs because their industry is very different. If Acme Manufacturing has chosen a Control Number of 2500 for their tables, write in the entries that belong in Great Pride's Company-To-Rules Cross-Reference For HR form (AX-SCR) that follows:
   Create your own Control Number value for the Great Pride Company.

   Because your organizations want to share most tables, but have one table that is organization-specific, you will (in this example):

   Use a table date that precedes your earliest employee hire date (such as 01-01-1925).

   Set up the Company-To-Rules Cross-Reference For HR form (AX-SCR) for Great Pride with Acme Manufacturing's Control Number for each of the entries except the Job Codes. Fill that entry with your own Control Number value.

   Make an entry of '9999' in the Occupation Group in the EEO/AAP group box. Cyborg delivers this fully populated table. However, to access this table in an organization, you must use 9999 as the table Control Number.



Organization-To-Rules Cross-Reference For HR Org> GP0001

Effective Date> 01-01-1925

HR/PR Integration
System Options: 2500

Base HR
Job Codes: 4444
Salary Grades: 2500
Activities: 2500

Position Admin
Position Admin: 44

Workforce Planning
Training Admin:

EEO/AAP
EEO Establishments: 2500
Occupation Groups: 9999

Salary Admin
Salary Changes: 2500
Salary Plans: 2500
Job Points: 2500
Benchmark Jobs: 2500

----New table entry has been established----

Entries are Control Numbers

2. In your own organization, consider the relationship between the Payroll and Human Resource functions. Which area will be responsible for making the following entries in The Solution Series?

   Location assignment

Salary information
Union information

Your answer will be specific to your organization.

To allow common data elements to be shared between Payroll and Human Resources and establish which department has control, you will record ownership of these elements on the System Options form (TG-SCR) by setting 'switches'.

Review of Questions Answered

1. What are Control Numbers and what purpose do they serve?

   Control Numbers are customer-defined, four characters in length and alphanumeric, and give the system direction as to what tables to access for a particular organization.

2. How does an organization record the link to its specific HR rules?

   You specify which tables should by used by an organization by establishing the Company-To-Rules Cross-Reference For HR form (AX-SCR) for each organization.

3. How can common data elements be shared between Payroll and Human Resources?

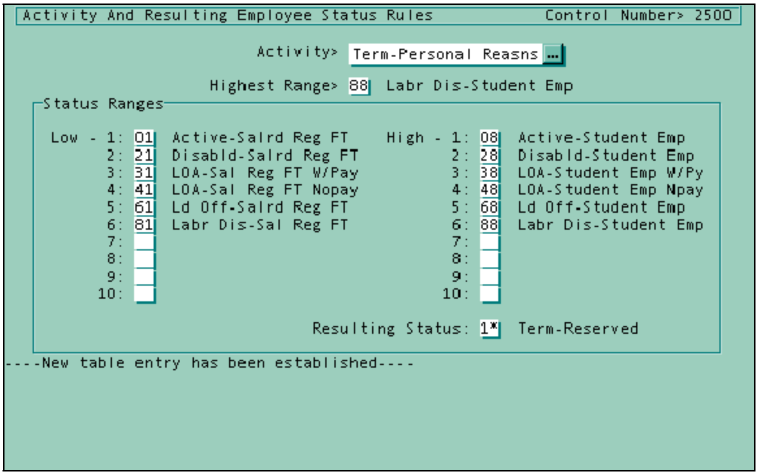
   Your organization can record the shared data elements by using the System Options form (TG-SCR) and setting switches to indicate the ownership of each element.

Setting Up Rules for Employee Activities

Apply the Concept

1. Using the information provided in this chapter, how would you record the rules for an activity that would allow an employee to terminate in order to become a full-time student (personal reasons). Use The Solution Series and the Activity Codes (HR09) and Employee Status (HR10) option lists in this chapter to research your entries and then write them on the form that follows:

   (Your answer may differ from the suggested answer based on your company policies.)



Activity And Resulting Employee Status Rules   Control Number> 2500

Activity> Term-Personal Reasns

Highest Range> 88 Labr Dis-Student Emp

Status Ranges

Low			High		
1:	01	Active-Salrd Reg FT	1:	08	Active-Student Emp
2:	21	Disabld-Salrd Reg FT	2:	28	Disabld-Student Emp
3:	31	LOA-Sal Reg FT W/Pay	3:	38	LOA-Student Emp W/Py
4:	41	LOA-Sal Reg FT Nopay	4:	48	LOA-Student Emp Npay
5:	61	Ld Off-Salrd Reg FT	5:	68	Ld Off-Student Emp
6:	81	Labr Dis-Sal Reg FT	6:	88	Labr Dis-Student Emp
7:			7:		
8:			8:		
9:			9:		
10:			10:		

Resulting Status: 1* Term-Reserved

----New table entry has been established----

2. What employee activities are currently being tracked in your organization and how will automated activity tracking in The Solution Series improve that function?

   Your answer will be specific to your organization.

   Automated activity tracking will allow your organization to easily select employees by employee status for reports. For example, reports can be selected for active, terminated, or on-leave employees. Activity tracking within The Solution Series will also allow you to record valid activities based on current status. Later, as you consider implementing Benefits Administration, automated activity tracking can simplify plan eligibility rules by allowing you to include or exclude groups of employees based on current status.

Review of Questions Answered

1. What is the relationship between an employee activity and the resulting employee status?

Every employee major activity affects that employee's employment status. When hired (activity), an employee becomes active (employment status). If terminated (activity), an employee changes to inactive (employment status).

2. What is the importance of tracking employee activities and status?

   Activities and the employment status are important pieces of data for Human Resources Administration and other HR related functions. By design, The Solution Series chooses one or both of these fields to determine:

   - Employee selection for report purposes
   - Whether an employee's current status allows the next activity
   - Benefits Plan eligibility

Setting Up Rules for Employee Job Information

Apply the Concept

1. Based on your understanding of the Geographic Range Indicator as explained in this chapter, how would your organization use this feature to handle job salary grades that differ by location?

   Your answer will be specific to your organization.

   If your organization has only one geographic location, the Geographic Index value will be the same for every table. The Geographic Range option list (HR66) contains only a value of 'All Locations' as delivered. Customer-defined codes need to be added if job salary grades differ by location. Each salary grade may then have multiple tables with different Geographic Index values and associated ranges. Locations are assigned to the employee on the Location Assignment/Changes form (05CSCR).

2. What coding structure does your organization currently use for jobs/positions and will the values require modification for use in The Solution Series?

   This answer will be specific to your organization.

   When defining a job in The Solution Series, you use both a job code and a job code extent. The six-position job code is used to define a job. The four-position job code extent is used to establish similar jobs with different attributes, such as job type or salary grade. For example, you might define the following two jobs:

Code 10500	Extent 0001	Maintenance Engineer, Senior, Salary Grade S25
Code 10500	Extent 0002	Maintenance Engineer, Apprentice, Salary Grade S18

Review of Questions Answered

1. What elements of a job function can be recorded in The Solution Series?

   EEO job categories, salary grade, compa ratio, position-in-range, basic data needed by Salary Administration.

2. In what formats can salary grade ranges be expressed?

   Three different salary grade comparison formats are available—annual, per pay period, and hourly. You do not need to use all three. You may choose just one, or a combination of two or three. These tables work with all employee compensation, regardless of how often they are paid—weekly, bi-weekly, monthly, and so forth—or the employee's payment type—hourly or salaried.

3. What feature allows your organization to use salary grade ranges that differ by location?

   You may use the Geographical Range Indicator, available on all salary grade tables. This allows you to specify different salary grade ranges for the same job based on its location. The associated location assignment for each employee is recorded on the Location Assignment/Changes form (05CSCR).

Setting Up Employee Templates

Apply the Concept

Based on your understanding of an employee template as explained in this chapter, consider the groups of employees in your organization that may require separate Logical Employee Models for use in the hiring process. List up to three of them and their common characteristics in the space below:

Your answer will be specific to your organization.

As an example of the criteria that might be used to create separate Logical Employee Models, consider the following:

Group	Common characteristics
Clerical employees	Paid weekly, non-union, hourly pay rate, time entry required, day shift only
Production employees	Paid bi-weekly, union-affiliated, hourly pay rate, time entry required
Corporate executives	Paid monthly, non-union, salaried, day shift only, no time entry required

Review of Questions Answered

1. How does the use of an employee template increase productivity in setting up new hire employees?

   Creating employee templates ensures that critical information is established consistently and correctly for all employees who conform to the template. In addition, creating the template will save time in key entry, since many of the employee forms contain common information that will not need to be changed when hiring an employee. Only unique information will need to be entered to complete the employee record, such as name, address, employment date, and so forth.

2. What feature allows a template to be copied to other organizations?

   After you have completed the setup of the template in the first organization, you can treat the template as if it were an employee, and transfer it to as many other organizations as required by your organization. Use the Employee Transfer form (ET-SCR) to process the transfer activity. You have the ability to change the Logical Employee Model designation in the transfer process if you need to give it a unique identifier in another organization.

3. If Position Administration is 'In Use' in an organization, what must be done prior to setting up employee templates?

Logical Employee Models must be established before selecting Position Administration 'In Use' on the Systems Options form (TG-SCR). That is, Position Administration must be set to 'Not In Use' prior to establishing templates.

Setting Up Default Field Values for Forms

Apply the Concept

Based on your understanding of Logical Employee Models (LMODELs) and LDEFAULTS text/list box default entries, indicate which kind of template might be used to store the following information:

A Logical Employee Model employee provides a series of non-dated forms that contain entries common to a group of employees. The forms in a Logical Employee Model are copied to a new employee's record during the new hire process.

An LDEFAULTS model employee provides field entries on a form when the form is used for the first time for an existing employee. It is meant to be used with Human Resource forms only, since the Logical Employee Model provides the field defaults for the payroll non-dated forms.

Remember that you can override any of the template defaults as you complete a form for an employee.

Information	**LMODEL or LDEFAULTS**	
Most new hire clerical employees are hourly, non-union		
Majority of recorded citizenship is US		
Most employees have the same work phone number		
Most new hires live in the same city and state		
Most company-assigned automobiles are Ford Mustangs		

Review of Questions Answered

1. What is the purpose of an LDEFAULTS template?
   The purpose of an LDEFAULTS model employee is to provide field entries on a form when the form is used for the first time for an existing employee.
2. How does the LDEFAULTS template differ from the Logical Employee Model (LMODEL) template?
   A Logical Employee Model template provides a series of non-dated forms that contain entries common to a group of employees. The forms in a Logical Employee Model template are copied to a new employee's record during the new hire process.

   An LDEFAULTS model employee provides field entries on a form when the form is used for the first time for an existing employee. It is meant to be used with Human Resource forms only, since the Logical Employee Model template provides the field defaults for the payroll non-dated forms.

3. How is productivity improved by using an LDEFAULTS template?
   This operation saves time and unnecessary key strokes for entering a field that usually contains the same data for all employees, for example, Citizenship.

Glossary of Terms

.EXE
A binary file containing a program in machine language that is ready to be executed.

.INI
A file that contains the parameters (values) used by the .exe file (program).

360-degree appraisal
Appraisals that include evaluations from an employee's managers and supervisors, peers, subordinates, and even customers, clients, and suppliers.

Absence data
Employee-level absence information that is entered on the absences forms.

Absence point
User-defined number that may be assigned for a particular absence and that can be totaled over time to determine if an employee is within the accepted number of absences for a time period.

Absence type
A classification of an employee absence, such as 'jury duty' or 'sick'. Employee absences are recorded by date and absence type.

Account timeout
The period of time that elapses before a user's account becomes invalid because of inactivity.

Accumulator id
A three-position, alphanumeric identifier for a benefits accumulator.

Acrobat
A suite of programs developed by Adobe Systems, Inc. For creating and distributing electronic documents. Programs in the suite allow you to create a portable document format (PDF) file for a document. You can then distribute the PDF file electronically to people who view the document with their freely distributed acrobat reader. People viewing a PDF file (or document) with the Acrobat Reader see the document with the exact layout intended by the author.

Action button
An action button performs an action such as saving the information you entered or telling the system you finished reviewing a page. An action button consists of an icon (or button) accompanied by underlined text (link text). For example, at various places throughout eCyborg Interactive Workforce you may see an action button displaying a check mark accompanied by the underlined text 'save changes'. You can click either the text or the button to save your changes to the page.

Activity code
Describes the clock transaction (ring) activity, such as clock start or meal end.

Activity types
With the time and attendance solution, you can set up the system so that an employee or group of employees may clock in and out for up to eight different activities: clock-in (1), break 1 start (2), break 1 end (3), meal start (4), meal end (5), break 2 start (6), break 2 end (7), and clock end (8).

Actuarial valuation
An examination of a pension plan to determine if contributions are being accumulated at a rate sufficient to pay the promised pensions.

Administration home page
The administration page that displays when a user logs on using his or her administrator user ID and password. The administration page displays links to individual administrator pages (eCyborg Interactive Workforce, Human Resources Administration, Benefits Administration, and Payroll Administration).

Administrative User ID
User ID created by an administrator with the role of eCyborg Interactive Workforce administrator. This ID

differs from the employee user ID generated for the administrator.

Aggregate tax method
Method of calculating taxes in which year-to-date income is used to project annual wages (using prorating), on which taxes are calculated. With this method, the amount of tax withheld can vary from pay period to pay period. This method is useful in preventing a salesperson from being over withheld as the result of fluctuations in commission over various pay periods. It is activated on the payroll solution by selecting aggregate/cumula tax (9) from the Withholding Method (PR09) option list on the Employee Tax Record Maintenance form. It is also referred to as cumulative tax calculation method.

Annualization
Process of calculating the annual amount of pay based on the number of pay periods and pay period amounts. Calculated by multiplying the number of pay periods in the year by the current taxable wages in the pay period.

Annualization factor
The factor that is used to multiply current pay period wages to determine annual wages. For example, a monthly pay frequency has an annualization factor of 12. The Payroll Solution typically calculates income taxes on the basis of annual wages. The annualization factor is entered by selecting an option from the Annualization (PP33) option list on the Company Pay Frequencies form for each pay frequency.

Annuitant
Someone entitled to receive or currently receiving payments from an annuity.

Annuity
A contract providing an income for a specific period of time.

Applicant
A person who is applying for a job or position in your organization. Internal applicants come from within your organization while external applicants come from outside of your organization.

Appraisal rating
A method of ranking the performance of an employee during a given period using options ranging from 1-outstanding to 5-unsatisfactory.

ASCII
American **S**tandard **C**ode for **I**nformation **I**nterchange. The basis of character sets used in almost all present-day computers; US-ASCII uses only seven bits to convey some control codes, space, numbers, most basic punctuation, and unaccented letters a-z and A-Z.

Ask Me wizard
A natural language, full-text search facility within the online help. This allows users to type in a question, the wizard interprets the question, and displays related topics.

As-of reporting
Ability to report on data for a specified date or date range.

Audit record
A snapshot of information entered on a form. Audit records are stored on the employee database and are displayed on audit reports in an is/was reporting format. Adjustments and time entries are stored as audit records and are extracted for a payroll run in which they update the employee's record.

Audit report
A report that is available after the running of a program; it lists created records as well as error messages for records that could not be created.

Audit trail
A report of changes made to your employee database, such as the Payroll Audit Trail (0101) report.

Authorized absence
Absences that are generally considered as paid time away from regularly scheduled work.

Automatic plan
A plan that has been defined with a default option and default pre- or posttax indicator (also known as core/default plan).

Average deferral percentage
Percentage used in nondiscrimination and compliance testing mandated by US law. The calculation is defined as the contribution divided by the compensation.

Average rating
A rating used for performance appraisal systems with categories weighted by relative importance, where the average score reflects the weighted scores.

Back
Takes the user back to the previous page.

Badge
Time and Attendance Administration can be set up to use two different types of badge readers. The type of badge your organization uses, is determined by your third party badge reader software. The two types of badges are magnetic badges and bar code badges.

Badge error
Occurs when a badge is used to create a clock transaction (ring) and an employee has not been assigned to the badge.

Badge number
Up to ten-character ID stored on employee badges and clock transactions (rings) that tie clock transactions (rings) to an employee on the ***Employee Database*** (on page 260).

Banner
Banner forms separate groupings on forms produced from the Federal, State/Local, and Employee Queues.

Batch
A group of transactions submitted to the batch payroll processing system. Also, a collection of time entries that corresponds to an employee group, such as department.

Batch control record
Precedes all transactions separated by group; used to identify the company to which the transactions in that group apply. By entering anticipated totals for dollars and hours on the batch control record, you may verify your totals against those accumulated by the system.

Batch layout facility
A program that produces a segment layout for loading forms via batch. This was formerly known as BATCHL.

Batch number
An alphanumeric field on the batch control record containing a user-defined value used to identify a unique group of time entries or transactions.

Batch processing
A processing method that runs in the background and requires limited intervention.

Benchmark job
A standard or point of reference for determining total job points.

Beneficiary
A person named by the participant in an insurance or pension plan to receive any benefit provided by the plan if the participant dies.

Benefits control number
A four-position, alphanumeric identifier that specifies which tables are accessed for an organization.

Benefits statement
Report that indicates the coverage and cost of each benefits plan in which an employee participates.

Big option list
A large option list that includes a search facility. This was formerly known as a big codeset.

Bridge loan
A loan made to assist a relocated employee in purchasing a new residence before the sale of their old residence is complete.

Browser
Software application used to locate and display web pages. Modern browsers give users access to graphics, text, and multimedia information, including sound and video.

Budget plan year
A twelve-month period over which a salary budget is effective.

Budget scenario
The result of creating one or more salary plans in order to see the effect of different increase policies on the budget.

Budget setting
The process of analyzing and selecting an organization's salary budget for the coming plan year.

Cafeteria plan
A specific type of flexible benefit plan that allows employees to select their benefits from a number of benefit plans. This term may be used interchangeably with flexible benefits plan.

Calculation option list
An option list that contains calculation formula. This was formerly known as a calculation codeset.

Candidate
A person who is applying for a job or position in your organization and is under consideration.

Career planning
Providing career incentives such as advancement and additional education and training for individual employees in order to meet projected organizational needs.

Carrier record
A carrier record supplies information from one application area to another application.

Case-sensitive
A program that distinguishes between uppercase (capital) and lowercase (small) letters. A case-sensitive program that expects you to enter all commands in uppercase will not respond correctly if you enter one or more characters in lowercase.

Catalog
A file (with the extension of .cat) that contains all the information necessary for Impromptu to access and retrieve information from a relational database. The catalog provides a business view of the data, as well as information about what database to access, where the database is stored, and how the tables in the catalog are joined in the datamart.

Category code
General term used to refer to the option selected from category (PP01 and PP02) option lists on the company earnings and company deductions forms. It is used to indicate the type of earning or deduction.

CE/H
Abbreviation for considered earnings/hours.

Change control facility
A facility for updating and comparing your system control repository. This was formerly known as MAINTI/MAINTO.

Check box
A standard windows control that displays a yes/no setting, either checked (yes) or unchecked (no).

Check digit
Unique identifier that is generated by the TBLCHK program and used by the system to check the table relationship records.

Checklist
A list of tasks to be performed in sequence. The checklist displays within the navigator area. Checklists link tasks and other checklists together to perform work flow functions. Users can display a checklist by selecting a checklist icon within the tasks in the navigator.

eCyborg Interactive Workforce specific—a list of tasks/pages generally displayed in a chart with hot spots (links) for the checklist items. The user clicks the link to access the page.

Checklist item
An item appearing within the navigator when a checklist is being displayed. Checklist items include tasks, dialogs and even other checklists.

Checklist item status
Defines the status of a checklist item. These can be:

- Available to perform
- Required
- Not available
- Already completed

Checklist margin
The area of the navigator that displays the checklist item status when a checklist is being displayed.

Checkmark
If in the done column of a eCyborg Interactive Workforce checklist, indicates that an item on a checklist is complete. Can also indicate OK, finished, submit, and so forth.

Class
A class is an occurrence of a course that is specific to a location and a date, that is being administered using Training Administration. For example, 'eCyborg: Using the Web Client′ on Thursday, December 21, in Chicago is a class of the course 'eCyborg: Using the Web Client'.

Class evaluation results
These are the results as entered on the evaluation forms filled out by the class participants upon completion of the class. These results are recorded on the class evaluation results form.

Client data file
File containing information replicated from the System Control Repository. Used by client workstations to improve response time, since editing can be performed locally. May be located on each client workstation or may be located on a server and be shared by multiple client workstations on the network. Formerly known as the Client Control File.

Clock in and out
Also referred to as swipe/swiping the clock. When an employee uses their badge to record an activity time, they must pass their badge through the badge reader. This action can be referred to as clocking in and out.

Clock transaction
Record containing the information needed to create time entries for payroll processing. Clock transaction (ring) information includes date, time, and badge number. A clock transaction (ring) is created when a badge is swiped through a clock.

Clock transaction warning
Occurs when a clock transaction (ring) time falls outside of an employee's schedule warning times.

Closing costs
The costs associated with the purchase of a new house.

CLP
Abbreviation for certificates, licenses, and permits.

Codeset
A list of valid code values and associated descriptions from which you may select an appropriate entry. This is now known as an option list.

Coefficient
Customer-defined value used in the formula to calculate a new salary grade midpoint value.

Combined register (2222) report
A report that provides a detailed printout of all earnings, hours, taxes, and deductions for all the payments and adjustments made on a payroll run. It is Report Generator 2222.

Command button
A standard windows control that initiates a command of sets an option (previously known as push button).

Common tax organization
A method of setting up taxation in an organization in which all necessary tax specification records are contained in a single organization. The common tax organization often handles tax specification records more efficiently, since it avoids duplication of the federal tax records and of any state or local records used by multiple companies.

Communication event
A letter or email that can be triggered automatically or manually within the system. Communication events are set up by the system administrator and usually include data from a form or record.

Compa ratio
The ratio of a given salary compared with the midpoint of the salary range. The formula is the salary divided by the midpoint.

Competency
A requisite capacity to perform a single or set of skills or activities.

Complement limit
A 'complement limit' is the maximum number of complement units that can be assigned to a position at any one time.

Complement position
A 'complement position' is a position that is included in complement control.

Complement unit
A 'complement unit' is the type of unit used to measure the value of a position, for example, headcount, fte or hours.

Compliance
Conformity in fulfilling legal requirements.

Component
The first level of functional organization on the navigator or menu, such as employee resourcing or employee development.

Component icon
An icon that denotes the current component. There are a number of components within the system. Each component appears as an icon on the navigator.

Component plan
Any plan included under the flex master plan or grouped together under a group master.

Condition
Predefined criteria that can be added to a report's filter.

Considered earnings
An employee's paid earnings that are to be accumulated, based on plan rules, for use in determining credited service or calculations of final benefits amounts.

Considered earnings/hours (CE/H) accumulators
Used only in benefits plans to accumulate the earnings and hours an employee has acquired toward eligibility for a deferred plan. Accumulators may be retained on a monthly, quarterly, or annual basis.

Considered hours paid
Actual number of hours for which an employee was paid and that are to be accumulated based on plan rules.

Considered hours worked
Actual number of hours an employee worked. These hours are to be accumulated based on plan rules for use in determining credited service for a plan participant (or for a non-participant if eligibility has been met).

Consolidated reporting
Option that enables packaged reports to be processed for all organizations (consolidated).

Customer-defined value used in the formula to calculate a new salary grade midpoint value.

Context-sensitive help
Information about an object and its current condition. It answers the question 'what is this?'

Contribution type
The type of contribution being made to a benefits plan. The system allows for the deduction and accumulation of up to five different contributions per plan: basic employee pretax, basic employee posttax, supplemental employee pretax, supplemental post-tax, and organization.

Control 1-2
A company or group of employees (now known as an organization).

Control levels
A hierarchy of values used to determine the breakdown of an organization for reporting purposes. The values are user-defined.

Control number
An alphanumeric designation assigned to a table to define the table records that will be used for each organization.

Conversion
A method for transferring data from either a manual or automated system into the system.

Co-ordinator
A coordinator is an instructional institution, organization or person who administers training courses.

Core plan
One of the plans that make up the minimum benefits in which all eligible employees are required to enroll—for

example, medical and life. Employees who fail to return enrollment forms with their benefit choices may be automatically enrolled in the core plans (also known as default plans).

Cost categories
Cost categories are classifications or divisions used to separate costs for training into broad groupings, for example, equipment or operating costs.

Cost types
Cost types are used to further define training costs. For example, the category of equipment could be further broken down into the cost type of overhead projector and monitor rental.

Costing
Projecting the future cost of a benefits plan contribution for budget purposes.

Course
A course is a separate unit of instruction in a subject being administered using the training administration solution. For example, 'eCyborg: Using the Web Client′ is a course. This may be applied to a training course provided internally or externally.

Course directory
A course directory is a list of all available courses.

CPI
Characters **p**er **i**nch

Credited service
The number of years of employment for which an employee is given credit for use in determining final benefits amounts.

Crew
A group of employees who rotate from one schedule assignment (shift) to another, following a rotation pattern.

Crew code
A unique, one-character, alphanumeric identifier of a crew.

Cross-reference keys
Provide direct query access to data within the system database.

CSL
Abbreviation for ***Cyborg Scripting Language*** (on page 257).

Cumulative data
Also called 'to-date data'. includes payroll earning, deduction, net pay, taxable wage, and tax to-date figures for employees.

Cursor
A special symbol, usually a solid rectangle or a blinking underline character, that signifies where the next character will be displayed on the screen. To type in different areas of the screen, you need to move the cursor. You can use the arrow keys or a mouse to move the cursor.

Customer-defined
Values that depend on an organization-specific definition--for example, option list.

CYB88X
An English Language root program used to set the production version switch to on or off, in addition to other automatic settings.

Cyborg Scripting Language
Cyborg's fourth-generation programming language, previously called English Language.

Data extract
Method for extracting information from The Solution Series for the purpose of subsequently loading it into eCyborg Interactive Workforce databases.

Data load
The process of moving data from one system or media to another. It encompasses data mapping, data extraction and conversion, and the actual loading of the data. Also the method of loading data extracted from The Solution Series into eCyborg Interactive Workforce databases using programming scripts.

Data mapping
The process of identifying, comparing, and matching data (field to field) to be converted from one system or media to another.

Database
A collection of information organized so that a computer program can quickly search for and select

specific pieces of data. Think of a database as an electronic filing system.

Datamart
Relational tables with a defined structure that have been designed to automatically accept full datamart extract data seamlessly.

Deduct credits by plan
A method of distributing flexible benefit credits. The total monetary value for credits is prorated based on the employee's pay frequency. Credits are given to employees as earnings added to their pay; the cost of individual employee plans are collected through payroll deductions and listed on the employee's payment stub.

Deduct credits by plan method
A method of distributing flexible benefit credits. Credits are given to employees as earnings added to their pay; the individual employee plan costs are then collected through payroll deductions.

Deduction
An amount subtracted from available net pay. Deductions can be involuntary (child support or maintenance) or voluntary (pension plans).

Deduction cycle
A predetermined schedule for taking voluntary deductions, based on the defined frequency.

De-enrollment
The process of shutting off plan benefits for an employee for reasons other than a separation activity.

Deferred compensation
Any benefit that is not immediately payable to an employee, but is instead deferred to a later date. This term refers to retirement vehicles, including all defined benefit, defined contribution, stock, and thrift/savings plan.

Deferred plan
Any benefits plan in which benefits are not immediately payable to an employee, but are deferred to some later date. This term refers to retirement vehicles, including all defined benefit, defined contribution, stock, and thrift/savings plans.

Delimiter
A character that tells the system where an item of data ends and another starts.

Dependent
An individual who relies or depends on another for his or her support.

Dependent number
A unique number in the eCyborg Interactive Workforce database that identifies an employee's spouse and his or her other dependents.

Detail page
A page in eCyborg Interactive Workforce that displays detailed information. Summary pages contain links to the detail for each record.

Dialog box
A secondary window that appears on the screen to present information or request input. Dialog boxes are generally temporary—they disappear after you enter the requested information.

Disability insurance tax
A tax required by some us states to be funded by employee-paid contributions to pay all or part of the cost of disability insurance coverage. On the Payroll Solution, us state disability insurance tax records are established as Type 4 taxes.

Disciplinary action
Action taken against an employee for violation of an organization policy or procedure.

Discretionary increase
A salary increase amount or percentage determined by a manager according to the guidelines established by the organization.

Display
Make data or images display on a computer monitor.

Display box
An area on a form in which data is displayed (formally known as an inquiry field).

Disposable income
For garnishment purposes in the us, an employee's earnings minus deductions required by state or federal law.

Distributed location
A customer location where data changes are replicated and may be distributed. A DL is identified to the system by a unique 5-position alphanumeric node ID.

Distribution
The process of passing data from a source DL to one or more target DLs.

Distribution rules
A set of parameters that determine how data will be distributed from one DL to another. These are defined at each DL by the owner using the distribution rules screens. Distribution rules are stored in tables that are not replicated (thus, they cannot be distributed).

DL
Abbreviation for ***distributed location*** (on page 259).

Double-click
Click a mouse button twice in rapid succession.

Drop-down list
A drop-down list is a view of the acceptable entry options available for a text box.

Drop-down list box
A standard windows control that displays a current setting but can be opened to display a list of choices. The user selects a choice by double clicking on the choice. The user can type into the field, and the system moves the list of choices to the last letter typed.

Dynamic SQL
Statements created by a program that must be interpreted and converted to executable sql statements at run time.

Earned income credit
A refundable amount that reduces the tax owed by certain low-income individuals in the us who meet adjusted gross income levels.

Earning
Money paid in return for work performed or services rendered. In Payroll Administration, earnings are separated by earning numbers into various categories such as regular pay, overtime pay, shift pay, bonuses, and so forth.

Earnings category
Used to categorize similar earnings. For example, all the overtime earnings can be grouped into category 01, all the shift differentials/premiums into category 06, and so forth.

EBCDIC
Extended **B**inary **C**oded **D**ecimal **I**nterchange **C**ode; binary code for alphabetic and numeric characters developed by IBM for its computers.

eCyborg Interactive Workforce Home
Button on every page that returns the user to the eCyborg Interactive Workforce Home Page.

eCyborg Interactive Workforce Home page
Home page that displays each time employees log on to eCyborg Interactive Workforce after completing the new user tasks on the New User Home page.

Effective date
Date on which an event takes place, for example, an enrollment or benefits plan change.

EIC
Abbrevation for ***earned income credit*** (on page 259).

EL
Abbreviation for English Language, now called CSL (Cyborg Scripting Language).

Electronic Performance Support system
Online tools that help users perform their job quickly and efficiently. EPSS can include online help, computer-based training (CBT), electronic manuals, wizards, and so on.

Email
Literally 'electronic mail'. This is a message that is sent to one or more people within or outside of your organization by an automated email software package.

Employee cancellation
An employee cancellation occurs when an employee is canceled from attending a training class or training program.

Employee Database
The file that contains organization and employee records. This is File02. It was formerly known as the Master File.

Employee Database record
The complete record for an employee. It may be composed of multiple physical records.

English Language
Former name of Cyborg's fourth-generation programming language, now called Cyborg Scripting Language.

Enrollment form
A customer-defined form used by employees to record their benefits elections and any associated dependent and/or beneficiary information.

Entitlement accrual
An accumulation of hours for an employee benefit, such as sick leave or vacation time, commonly known as an accrual.

Entity
Each Organization Unit, Job, Position, and Incumbent is an entity. Together they are entities.

Entry field
An area on a screen or browser page where the user can input information.

Entry form
An entry form is a form used to enter data.

Environment
The host platform and workstations where your Cyborg system resides, and any communication protocols. Also, a work space dedicated to a specific processing type. For example: development, test, and production.

EPSS
Abbreviation for ***Electronic Performance Support system*** (on page 259).

Establishment Reporting
Establishment Reporting occurs when an employer with several business locations chooses to file wage reports, broken down by location or unit, to the Social Security Administration. Each unit is identified by a four-character code, called an Establishment Number. The employer obtains approval from the SSA to use Establishment Reporting. Establishment Reporting does not apply to 1099s.

Event
The combination of a trigger (changes made to system data) and an action (the creation of an email or letter). Events always consist of these two component halves.

Excused absence
Absences from regularly scheduled work that can be considered as either paid or unpaid time off.

Extract file
A data file generated to be used by another system or application.

Federal Insurance Contributions Act
The United States Federal Insurance Contributions Act imposes two taxes on both employers and employees. Tax is withheld from an employee's wages to finance the Old-Age, Survivor's, and Disability Insurance (OASDI) social security program and the Hospital Insurance (HI) medicare program. Employers are then required to match the amounts withheld from employees. On the Payroll Solution, employee information for FICA-OASDI social security tax is entered on tax record 101 and FICA-HI Medicare tax on tax record 103.

FICA
Abbreviation for Federal Insurance Contributions Act.

Field
A data item on the database. This is usually displayed on a form as a text box.

eCyborg Interactive Workforce specific—A space allocated for a particular item of information. A tax form, for example, contains a number of fields: one for your name, one for your Social Security number, one for your income, and so on. Every field has a name (also called a field label).

Filter
Device used by report to select certain rows of information from the database, thus limiting the amount of data from the database to be viewed in the report.

Finished
Users click Finished when they have completed all information on a checklist or other *ESS* page.

Flat rate tax
A US local tax that is calculated as a standard percentage rate and that is calculated in the same way for all employees (that is, factors such as marital status do not enter into the calculation). For many such local taxes, Cyborg does not provide tax specification information on the Tax Authority File. Instead, you need to enter a Tax Specification Record for the tax on a Tax Specification Information form, indicating the tax rate in the Flat Rate text box.

Flex credits
Units granted to an employee in order to purchase benefits under a Flexible Benefits Program.

Flex Master Plan
Defines your Flexible Benefits Program and ties component plans together as a group. Employees are enrolled in the Master Plan and then select the benefit plans in which they wish to participate—for example, medical, dental, and life. Flex master plans are set up in Benefits Administration and used by eCyborg Interactive Benefits to display benefit plans to users for initial and open enrollment.

Flex plan
A benefit plan where, in addition to a core of basic benefits (if applicable), the organization/company allocates to each employee a credit for purchasing additional benefits tailored to their individual needs. Flexible benefit plans may include a flexible spending account.

Flexible Benefits Plan
A specific type of benefit plan that allows employees to select their benefits from a number of benefit plans. This term may be used interchangeably with cafeteria plan.

Flexible Benefits Program
A benefits program in which an organization may allocate to each employee a pool of credits or a monetary amount that is to be used to purchase benefits tailored to individual needs.

Flexible Spending Arrangement
A benefits welfare plan set up as an account in an employee's name that is used to reimburse the employee for certain personal expenses. In the United States, these accounts are provided by employers as a way for employees to pre-fund dependent care, legal services, or medical expenses with pretax currency.

Folder
Logical organization device for the content of a Cognos catalog.

Form
A window of information that appears within The Solution Series, including text boxes and other controls. This was formerly known as a screen.

Form area
An area of the window that contains a form.

Form Builder
A tool provided by Cyborg Systems for use with The Solution Series for designing forms.

Formal education
Education that is obtained from a college or university.

Forward
Displays the next page.

FSA
Abbreviation for Flexible Spending Arrangement.

FTE
Abbreviation for Full Time Equivalent.

FTP
File **T**ransfer **P**rotocol. A means of allowing a user on one computer to transfer files to and from another computer over a network

Full Time Equivalent
The ratio of total working time to the time that represents full time employment for a single employee. For example, an FTE of 0.5 means working half of the time that represents full time employment.

Funeral days
Absences from regularly scheduled work due to a funeral, which at the discretion of the organization, can

be considered as authorized or unauthorized, paid or unpaid time off.

Gap analysis
Comparison of a current state of being with a desired state of being. For example, you could perform a skill or competency gap analysis on individual employees or on the workforce as a whole, comparing the existing state of skills and competencies with the required state or level of skills and competencies.

Garnishment
A legal procedure authorizing a deduction from an employee's earnings to satisfy a legal requirement.

General ledger interface
A file that provides a balanced payroll journal for the period. This file contains journal entries for labor expenses, withheld deductions, income, disability, UI, and other withheld taxes, net pay, and company-paid taxes. The interface may also be produced on paper.

Go to details
Displays a new page with detailed information. Used on summary pages.

Graphical User Interface
The Solution Series provides integrated human resource and payroll functionality via the Microsoft Windows Graphical User Interface. These are the elements that display on your screen.

Grievance
A formal complaint made by an employee against the organization usually because of an unsatisfactory working condition or other work-related dispute.

Gross wages
The total of all earnings paid to an employee.

It is stored in the Total Pay (field 119 of the US Tax Authority File) field of the employee's US FICA tax record 101 (FICA-OASDI). This figure appears on the Combined Register (2222) report as Total Pay. It does not appear on US W-2 forms.

Group box
A standard Windows control that groups a set of controls.

Group plan
Defines any number of benefit plans tied together as a group. Group plans are used to define common eligibility and to cluster plans for reporting purposes.

GUI
Abbreviation for Graphical User Interface.

Handicap
Having a physical or mental disability that substantially limits activities especially in relation to employment or education.

Health and safety profile
Data on the employee record that includes information such as the employee's blood type, language, physician, emergency contacts, and any disabilities.

HED
Acronym for Hours, Earnings, and Deductions. Each earning or deduction must be established in The Solution Series with a unique identifying three-digit code. HEDs are used to record pay, hours worked, and deduction amounts and arrears for each employee.

Help
Hot spot on an eCyborg Interactive Workforce page that displays step-by-step directions for completing the page.

History record
Part of an employee's payment history; a snapshot of a check paid to an employee or an adjustment made to an HED or tax.

Holiday days
The time off that all employees are entitled to based on the decision of the organization or government regulation.

Home page
The main page of a Web site that generally serves as an index or table of contents to other documents stored as pages on the site.

HTML
Abbreviation for **HyperText Markup Language,** the authoring language used to create documents on the World Wide Web. HTML defines the structure and layout of a Web document by using a variety of tags and attributes.

Import facility
A tool delivered with The Solution Series that moves data from an external source to any organization or employee form.

Import record
A line in a spreadsheet or delimited file that contains employee or company data.

Inactive plan
A benefits plan that no longer allows employee enrollment.

Inactive tax record
An employee tax record that is no longer in effect for a given employee. Neither wages nor taxes are accumulated for the particular tax record. However, any wages and/or taxes already accumulated remain until clearing is performed. Such clearing is usually performed in preparing the Employee Database for a new year. The inactive records can be deleted at this time. The process of making a tax inactive is called deactivating.

Incumbent
An incumbent is an employee linked with a specific position. The linking of an employee with a Position is an incumbency. An employee may be linked to more than one position; in other words, an employee with multiple incumbencies. A position to which more than one employee is linked has multiple incumbents.

Information-level security
These records grant access to employee and table data via specific password records.

Initial Administrator
Only user whose user ID and password are created during installation. The initial administrator always has authority to all administrative functions: eCyborg Interactive Workforce, Human Resources Administration, Benefits Administration, and Payroll Administration, and can assign administrative roles to others by creating administrative user IDs and passwords.

Initial passwords
Password generated by eCyborg Interactive Workforce for each user ID extracted from The Solution Series. Users must create a user-defined password when they log on to eCyborg Interactive Workforce for the first time.

InitialAdmin
See Initial Administrator.

Inquiry form
A inquiry form is a form used to view data already entered.

Instructional text
Any paragraph(s) on the page that explain the function of the page or fields to the user.

Internal candidate
An employee of your organization who is applying for another job or position in your organization.

Internet
A global network connecting millions of computers.

Intranet
A network belonging to an organization, usually a corporation accessible only by the organization's members, employees, or others with authorization and used to share information.

Investment funds
Different options or accounts available to employees for allocating their contributions, usually applicable to thrift/savings plans.

IPEDS
Integrated Postsecondary Education Data System.

Job assignment
A job associated with a particular employee.

Job code
A designation for a job assignment.

Job streams
A generic reference, Job Control Language, for your operating system's command language.

Alternately: Jobstreams

Job type
A generic category that further defines a particular job.

Jury duty
This is compulsory service on court appointed juries. Employers are required by law to excuse jury duty

related absences. They are not, however, required by law to pay the employee during this time away from the job.

Label
Text that describes the information the user enters into the field.

Labor record
A record containing the hours, amounts, associated charge-to control levels, and function assigned on the employee's Payroll Home Location/Pay Allocations form.

Leave of absence
Occurs when an employee leaves the organization for a period of time, usually temporary, for personal reasons such as medical leave.

Log off
Logs the user off the system. When referring to the Log Off button, use initial caps.

Logical Employee Model
A collection of default employee information that is used to create a model. Logical Employee Model templates are used when hiring new employees to save time and ensure that critical information is established consistently and correctly. These were formally known as LMODELs.

LPI
Lines **p**er **i**nch

Mailing address
An address, other than your legal residence address, to which you have your mail sent.

Maintenance payroll run
A maintenance payroll run automatically updates organization and employee records, but it does not process time entries or generate payments, pay slips, or deposit advices. It is also used to create payment history records.

Major activity
Event that causes a change in an employee's employment status, such as a new hire, termination, or rehire.

Mandatory field
A field that requires the user to enter information before the user can exit the screen or page.

Map file
Stores the predefined relationships between an import file and a form.

Mass time entry creation
Creating time entries for a group of employees through one program execution, such as for a paid holiday.

Master File (0202) report
A Cyborg report that produces a formatted display of the data in an employee's current batch Employee Database record. This includes the wages and taxes accumulated for the employee, covering current, month-to-date, quarter-to-date, and year-to-date information for individual tax codes. It is report generator 0202.

Matrix ID
Unique identifier for each pay-for-performance matrix.

Menu
A list of choices; the choices are generally links that take the user to another screen or page.

Menu bar item
A menu that appears on the menu bar.

Message area
An area of the window that contains messages or selection lists relevant to the current form. The Message Area can be turned on or off.

Method code
One of many specific routines (usually delivered by Cyborg and identified by a two-character code) used to calculate earnings and deductions.

Midpoint
The middle of the span of currency from the minimum to the maximum of the employee salary grade.

Minimart
Relational tables you create so you can insert data from your Subset data extractions.

Monetary perquisites
A privilege or profit that an employee is entitled to that is incidental to regular wages or salary.

Moving expenses
The expenses incurred by an employee due to moving from one location to another for employment purposes.

Multiple master
A file compression technique that duplicates the current employee Permanent Master Record as many times as there are payments to that employee during one pay period. These multiple masters are detail records reflecting the amounts for the payment being made (current), and the adjusted MTD, QTD, and YTD totals. The system uses multiple master records to create history records showing the current payment figures only.

Navigation bar
In eCyborg Interactive Workforce the Navigation bar shows the name of the page you are using, for example, 'Mailing Address'. The top line of the Navigation bar shows the path you took from the Home page to reach the present page. Links on the Navigation bar let you return to the home page or log off the system.

Navigator
Left pane of the work area which forms the main method of moving through the forms. From the Navigator users select the component, process, and task in which they are interested.

Net credit method
A method allocating flex credits. An employee's cost of benefits is calculated as either a net cash earning or a net deduction from the employee's pay. The net amount is the difference, either plus or minus, between the credits allocated to the employee and the cost of his or her flex benefits choices.

New hire
Process of hiring a new employee for your organization.

New user
A user of eCyborg Interactive Workforce who has not yet completed reviewing and updating their personal information on the New User Home page.

New User Home page
Home page that displays for new users of eCyborg Interactive Workforce until they complete reviewing and updating their personal information.

Node
A Distributed Location.

Node ID
A unique 5-position identifier for a node. The naming convention is defined by the user.

Number registered
This is the number of employees registered for a training class. It is updated and displayed on the Class Schedule form.

Object
Each System Control Repository record type is assigned an object code. A single record type can have several object codes assigned to allow limited display.

Object key
A field that allows you to specify the System Control Repository record group you want to display. The value of this field is dependent on the type of information you want to display.

Obsolete plan
A benefits plan that will no longer be used.

Off cycle
An off-cycle payroll run is an additional payroll for the period just completed. An off-cycle payroll run is commonly used to process nonstandard payments, such as bonuses. It is sometimes referred to as an additional or bonus payroll run.

Online
Turned on and connected, for example, printers are on-line when they are ready to receive data from the computer. Users are considered on-line when they are connected to a computer service through a modem. That is, they are actually on the line.

Open enrollment
A period of time during which employees can enroll in or change their benefit choices for the upcoming year, generally in October or November.

Operator ID
A four-character code that identifies the user to the system.

Option
An item in the option list for a field. This was formerly known as a codeset item.

eCyborg Interactive Benefits and Benefits Administration specific—In Benefits, the plan coverage that an employee selects, such as single or family coverage.

Option button
A standard Windows control that allows you to select from a fixed set of mutually exclusive options (previously known as radio button).

Option list
An option list is a list of options that are available within a Text box. This was formerly known as a Codeset.

eCyborg Interactive Workforce specific—Options available in The Solution Series that the eCyborg Interactive Workforce administrator loads in to eCyborg Interactive Workforce. The options are then available in the drop-down list boxes in eCyborg Interactive Workforce.

Organization
A group of employees who are employed in a common structure, governed by the same set of rules or policies, and eligible for the same earnings and deductions For example, your organization may be structured into parts that represent employee groups such as active, union, retirees, applicants, and so forth.

Formerly known as a company or Control 1-2.

Organization Level 3
A customer-defined value used to determine the breakdown of an Organization for Human Resource reporting or selection purposes. This control level may be translated to a division, plant site, section, and so forth, as defined by you.

Organization Level 4
A customer-defined value used to determine the breakdown of an Organization for Human Resource reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Organization Level 5
A customer-defined value used to determine the breakdown of an Organization for Human Resource reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Organization Level 6
A customer-defined value used to determine the breakdown of an Organization for Human Resource reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Organization Number
A six-character user-defined code that represents an organization; the highest level of the organizational structure in Payroll Administration.

Formerly known as a Control 1-2.

Organization Unit
An organization unit ('Org Unit') is a grouping of Positions within an organization (for example, Accounts Department).

Organization Validation table
A table that validates that an organization is valid and payments can be made.

Organization-specific tax setup
A method of implementing Tax Specification Records in which each organization involved in tax processing contains all the specification records required to process taxes for its employees, as opposed to a common tax organization.

Override file
A file used to maintain COBOL or Report Generator changes to the system.

Packaged reporting
A processing mode in which a job is scheduled to be run at a certain time.

Paid absence
Employee absence that will be paid by the organization. A time entry will be created for this absence.

Parallel run
The process of executing the same programs simultaneously on two separate systems to obtain the same or similar results.

Parameter form
A form that is displayed when certain programs are called from the Navigator or menus. The form facilitates entering parameters for the program.

Password
A secret series of characters, generally user defined, that enables you to access a computer, a software application, or a file. On multi-user systems, each user must enter his or her password before the computer will respond to commands.

In eCyborg Interactive Workforce, the password ensures that unauthorized users cannot access user-specific information.

Password aging
The period of time that elapses before a user-defined password expires and the user must change his or her password.

Pay allocation
A means of allocating, on a percentage basis, employee labor hours and amounts to multiple sets of control levels 3 through 6 and function to accurately reflect employees whose labor must be charged to more than one area within an organization.

Pay document
A pay slip or deposit advice with its associated pay stub.

Pay frequency
The interval at which a group of employees is paid. Examples are weekly and semimonthly. Also referred to as a payroll period.

Pay schedule
A predetermined schedule for a calendar year, identifying period-end and payment dates for each pay frequency.

Pay stub
A preprinted form, corresponding to a check or deposit advice that lists all earning, gross pay, taxes, deduction, and net pay information for an employee.

Pay-for-performance matrix
Chart representation of the variables that result from the combination of salary increase information, how much to give and when.

Payment history record
A record documenting the detail information for a payment or adjustment. Multiple payment history records may be generated for an employee, reflecting multiple adjustments or payments. These records include all earning, deduction, and tax information included in the payment or adjustment.

Payroll home location
The location where the employee is normally assigned to work and where labor distribution information is charged. An employee's home location comprises specific Payroll Levels and is always assigned Allocation Number 01 on the Payroll Home Location/Pay Allocations form. The Function field may also be used as part of a home location, depending on your specific requirements.

Payroll Level 3
A customer-defined value used to determine the breakdown of an organization for Payroll reporting or selection purposes. This control level may be translated to a division, plant site, section, and so forth, as defined by you.

Payroll Level 4
A customer-defined value used to determine the breakdown of an organization for Payroll reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Payroll Level 5
A customer-defined value used to determine the breakdown of an organization for Payroll reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Payroll Level 6
A customer-defined value used to determine the breakdown of an organization for Payroll reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Payroll period
A defined period of time for which an employer pays wages to employees.

Payroll Process Control
A series of forms used during the Payroll Process to determine the type of run (payroll run or maintenance run). Allows you to specify the pay frequencies to be paid and which reports are to be produced.

Payroll run
Updates organization and employee records, processes time entries, calculates employee pay, generates pay documents and payroll reports, including the Combined Register. It also produces a variety of special interface outputs.

PCL
Printer **C**ontrol **L**anguage

PDF
A file format that captures formatting information from a variety of desktop publishing applications, making it possible to have formatted documents appear on the screen and be printed. To view a file in PDF format, you need Adobe Acrobat Reader, a free application distributed by Adobe Systems.

Peer-group appraisal
Appraisal that uses performance evaluations completed by an individual employee's co-workers or project team members.

Pending de-enrollment segment
Plans for which an employee is enrolled, but has lost eligibility, as listed on the Pending Plan Enrollment/De-Enrollment form.

Pending eligibility segment
Plans for which an employee is eligible but not enrolled, as listed on the Pending Plan Enrollment/De-Enrollment form.

Performance appraisal
A periodic assessment and ranking of an employee's skills and accomplishments.

Performance appraisal rating
A method of ranking the performance of an employee during a given period using options ranging from 1-Outstanding to 5-Unsatisfactory.

Performance rating
A method of ranking the performance of an employee during a given period using options ranging from 1-Outstanding to 5-Unsatisfactory.

Performance-related pay
Monetary payments made to employees based on how well an employee has fulfilled job expectations.

Perquisites
Property or privileges extended to an employee.

Personal days
Authorized absences that are generally considered as paid time away from regularly scheduled work, but can be either paid or unpaid.

Phonetic keys
The keys you use to access employee data using the phonetic spelling of an employee's last name.

Pixel
The smallest rectangular area of an image on a screen.

Plan deactivation
A process that makes a plan inactive and prevents future employee enrollment.

Plan ID
A three-position, alphanumeric identifier for a plan in the system.

Plan shutdown
The process of de-enrolling an employee from all benefits plans because of a separation activity.

Plan year
The 12-month period over which a salary budget is effective.

eCyborg Interactive Workforce specific—The calendar, policy, or fiscal year in which the records of a Benefits plan are maintained.

Policy tables
Highest level tables that are used to record the generic (or master) rules for an organization or group of employees. These included your organization's rules relating to working time procedures, such as clocking in and out, docking for lateness, and overtime. Each

policy consists of a Policy Master table and one or more Policy Activities table.

Pop-up menu

A menu that appears when you use the second mouse button within the system. This menu contains context sensitive commands and options that relate to the object you have clicked on.

Portable document format

See PDF.

Position

A specific role with an organization—for example, Accounts Manager.

Alternative definition: to place an object in a specified location.

Position Administration Control Number

Two-character alphanumeric value that tells Position Administration which tables to use for a specific company.

Position complement

A 'Position complement' is the value of a Position. The organization complement is the total value of all Positions included in the complement.

Position in range

The difference between a given salary and the minimum of the salary range, divided by the difference between the range's maximum and minimum, and expressed as a percentage.

Posttax

A contribution made after taxes have been withheld from earnings.

Premium

The amount of money an organization agrees to pay an insurance company for a policy or annuity, or the amount contributed by an employee to the employer to cover the employee's portion of the total premium.

Prenotification

Informing a bank or credit union that an employee will be using direct deposit with them in the future. Cyborg recommends that you fill out the Direct Deposit Information form two pay periods in advance of the first deposit date. This ensures that a prenotification record is provided to the bank or credit union in a timely manner.

Pretax

A contribution made before taxes have been withheld from earnings.

Primary account

The account set up in eCyborg Interactive Workforce to receive an employee's pay or reimbursement checks. After deductions and deposits to additional (secondary) accounts, the remainder of pay is deposited into the primary account.

Process

A subset of a component that logically groups tasks on the Navigator or menu. For example, the process 'Maintain Employee Details' contains tasks such as 'Basic Employee Information' and 'Personal Information'.

Alternate definition: An action that brings about a result.

Process bar

The graphical representation of a process on the navigator. Each process bar is within a Component.

Program

A program is a series of classes being administered using Training Administration. For example, 'The Cyborg Training Schedule for January-June 1996' may be a program consisting of eight different classes.

Alternative definition: a form or other program within the system, accessed directly from the Command dialog box. For example, form EF-SCR is a program.

Protected amount

The amount of disposable income protected from garnishment in the US This amount may vary from state to state.

Prototype HED

An HED defined on a benefits form for use in recording employee/organization contributions when an employee is enrolled in a benefits plan. This allows the setup and maintenance of payroll deductions using Benefits Administration.

Provider
A provider is an instructional institution, organization, or person who is available to teach training courses.

Push button
A button on the interface which appears depressed when clicked on (now known as command button).

Quartile
Points that represent the division of a salary grade range into four equal parts.

Query alternate keys
The keys you use to access the employee master record in an order other than by primary key.

Query primary keys
The keys you use to direct your QUERY program to a record type.

Quick Hire
The process of hiring an employee by entering one two-panel form with the required data elements rather than entering a series of forms.

Radio button
A button on a form that selects an option, the radio buttons that make a field are mutually exclusive (now known as an option button).

Recall
Return a laid-off employee to active status, usually with no affect to benefits.

Reciprocal taxation
Reciprocal tax withholding refers to agreements made between US states and (or) localities regarding income tax calculation and reporting for compensation paid to an employee who lives in one state or locality and works in another.

Record
A complete set of fields, such as the fields that make up a tax form or a name and address record.

Alternate definition: To set down for preservation in writing or other permanent form.

Recruitment
Process of finding and hiring new employees who meet the needs of your organization.

Recycle File
P05IN; A file that contains employee data and pay document information required for payment reconciliation. It also contains time entries to be processed and paid at a later date. This file is used to pass data to the next payroll or maintenance run.

Registration
Registration is the act of enrolling an employee in a class.

Registration number
A three-digit registration number is assigned to employees for tracking purposes when they register for a training class. This enables the order in which the employees registered to be viewed.

Rehire
The process of hiring a former employee of your organization. Typically, a break in service is incurred and benefits must start over (usually requiring a new adjusted seniority date if used in benefits tracking).

Reimbursement account
The account into which employee's travel and other expense type reimbursement checks are directly deposited.

Reinstatement
The process of returning a former employee to active status within a certain time period (such as 90 days), thus qualifying the employee to have certain benefits restored to the original hire date.

Reject time
The point at which an error condition will occur. An error condition must be manually corrected/approved and approved before a time entry can be generated by the system.

Relocation
The process of moving an employee from one organization to another geographic location, whether the move be domestic or international. This process also applies to applicants who are being relocated as part of the hire process.

Remaining net pay
The 'bucket' of money that is left after all employee deductions and taxes have been taken from the employee's gross pay. This 'bucket' of money can then be used for multiple deposits if the enterprise sets up multiple deposit HEDs.

Replication
The automatic process of writing changes made in the Employee Database and option lists and tables in the System Control Repository to the Replication Holding File (FILE08).

Replication Application
English Language program (DSAPLY) that reads records from the Replication Packet File (FILE20) produced by the Replication Reception program (DSRECV) and updates the System Control Repository and Employee Database accordingly.

Replication Distribution
Two COBOL programs that work together to distribute and receive updates. The Replication Distribution Program (DSTRIB reads either the Replication Holding File (FILE08) or a Replication Packet File (FILE20), selects data applicable to a specific DL and writes all necessary data to a new output-only Replication Packet File (FILE21). The resulting FILE21 will be processed on the remote DL via the DSRECV Replication Reception program.

Replication Holding File
FILE08. This file contains additions, changes, and deletions to the System Control and the Employee Database. Data is distributed from and written to this file, based on the data distribution rules configured for the target DL by the source DL.

Replication Packet File
(FILE21/20). This file contains data changes and is created specifically to update a target DL. This information may include Company/Employee data, tables and option lists, and time entry and adjustment records.

Report
The term report refers to a report produced on paper.

Report Generator
A program that produces the batch payroll and the batch payroll reports.

Report Group
A series of packaged reports that are created using the Report Group Activities form and are run together.

Report Group Scheduler
This is the program that allows you to schedule reports. This was formerly known as the Report Scheduler.

Report parameters
Specific guidelines for determining the information to be processed by a given report or program.

Requisition
A formal request to fill a vacancy or vacancies.

Requisition candidate
A candidate for a vacancy represented on a requisition.

Requisition limit
A total unit value of a requisition.

Requisition unit
The value of a requisition expressed as an FTE, hours, salary or headcount.

Retirement
Occurs when an employee retires from the organization.

Return
The activity of an employee returning as an employee to active status, usually following a leave of absence.

Alternative definition: key on keyboard used to perform a carriage return, can also be known as Enter.

Review process
A method used by an organization to evaluate an employee's salary or performance in a standard, timely manner.

Roll-up reporting
Option that enables packaged reports to be processed within organizations (roll-up).

Rotation pattern
A way of describing the working pattern for a group of employees (crew) who regularly work different shifts.

A crew is a group of employees who together regularly work the same schedules according to a rotation pattern.

Safety standards
Legally-mandated workplace safety standards.

Salary budget record
Defines, for each employee, the budgeted increase amount, percentage, and effective date for a specific salary plan year, and the prorated effect of this increase on the budget in terms of amounts and percentages for each employee.

Salary grade
A range of salary amounts associated with a particular job.

Salary grade range
A range of salary amounts associated with the salary grade for a particular job.

Salary plan
A set of rules or guidelines used to budget for salary increases for the coming year.

Salary plan year
A 12-month period over which a salary plan is effective.

Salary range
The span of salary amounts from the minimum to the maximum of the employee salary grade.

Salary review
A periodic evaluation of an employee's compensation.

Salary review authorization form
Hard copy format of the employee criteria necessary to review and approve proposed salary increases.

SAT file
The Solution Series form appearance table. Simple text file that reflects the form's layout.

Save Changes
Saves the page (form) the user completed. (When you click 'Save Changes', eCyborg Interactive Workforce saves the information on the page whether or not the user made changes.)

Schedule Activities table
Identifies activity types for each point in a work day where the process of clocking in and out should be dealt with. Each Schedule activity also contains time parameters that will be used to calculate whether an employee will be docked or credited time.

Schedule assignments
Also referred to as a schedule. This term refers to the details of the Schedule Master tables to which an employee is assigned. These details include the date the assignment took place, the Schedule Number and Sub-Schedule Number, and (if applicable), the crew to which the employee is assigned.

Schedule error
Occurs when a clock transaction (ring) time falls outside of an employee's schedule reject times.

Schedule Master table
Used to set up your organization's Time and attendance rules (such as HEDs and the minimum number of hours an employee must work before a meal deduction is made). A Schedule Master table is associated with a Calendar Routine, earnings Code, and Shift Premium table by entering the appropriate identifier.

Schedule number
A unique three-character alphanumeric identifier used to partially identify a schedule table.

Screen
Now known as a form.

Scroll bar
When information on a page takes up more than one screen of your monitor, the system adds scroll bars to the right side of the screen. On the scroll bar:

- Click the up arrow to move line by line to the top of the page
- Click the down arrow to move line by line to move to the bottom of the page
- Click the double arrows to move several lines up or down the page

Click and drag the bar in the scroll area to manually move up or down the page.

Search argument
The value from an employee's master record used to search benefits tables to apply plan rules to specific groups of employees.

Search type
The definition of a field from an employee's master record to use as the search argument.

Secondary account(s)
Additional account or accounts at financial institutions that employees set up in eCyborg Interactive Workforce receive a portion of their pay. A primary account must be defined before an employee can set up additional accounts.

Security Officer
The assigned employee who is responsible for the setting up and monitoring of the security your Cyborg system.

Self-adjusting taxes
Taxes for which the system automatically recalculates the tax on a cumulative year-to-date basis on each payroll run.

In the U. S. these include FICA taxes: Social Security (tax record 101) and Medicare (tax record 103). The purpose of this calculation is to avoid any differences (of pennies) in FICA tax paid versus FICA tax due at year-end due to rounding on a pay period basis. In addition, certain state disability taxes and employee-paid state unemployment insurance taxes also self-adjust.

Sequential Master File
P20IN; The batch processing version of the Employee Database. This file contains organization and employee data, tax tables, and the object code for programs.

Service interruption
A period of time during which an employee did not maintain an active working status in the organization.

Service method
A calculation option list that determines the method for calculating credited service.

Session
When users log onto a software application, they begin a session. When they log off, they end the session.

Alternate definition: The period of time during which a class is held.

Shift
An employee schedule assignment for a given day. For a rotation pattern, this is a Sub-Schedule Number.

Alternative definition: key on keyboard, typically used to describe key combinations for a shortcut key.

Shift premium
A premium (or differential) added to an employee's regular earnings, overtime earnings, or both. It is represented by a shift code or HED Number.

Shortcut menu
A menu that appears when you right-click within The Solution Series 4. This menu contains context-sensitive commands and options that relate to the object (form, Navigator, and so on) on which you have clicked.

Sick days
The time off that an employee is allowed to take due to illness as a result of an employment contract or organizational policy.

Solution View
An online utility that provides the tools for creating new forms, fields, and report programs without the direct use of Cyborg Scripting Language.

Source DL
The node that owns the data being distributed. Depending on the rules established, the same DL can alternate from source to target.

Special assessment
Extraordinary or temporary taxes, such as additional employer-paid or employee-paid contributions to state unemployment programs or to mandatory health insurance programs.

Spinbox
A control on the interface composed of a text box and increment and decrement buttons that allow you to adjust a value from a limited range of possible values.

Spreadsheet application
Software for recording ledger entries, creating worksheets, graphing data, and other accounting functions.

Standalone Time and Attendance
Customers who are using the Cyborg's Time and Attendance Administration but not the Cyborg's Payroll Administration.

Static data
Includes organization and employee information, such as name and salary.

Static SQL
Data Definition Language (DDL) and Data Manipulation Language (DML) statements embedded in application programs.

Status bar
The bar that appears at the bottom of The Solution Series window. The Status Bar displays useful information, such as your current session number, the currently displayed organization and employee, and so forth.

Statutory employee
Any of the four categories of workers who are independent contractors under common law and are treated by statute as employees. These include:
(1) a driver who distributes beverages (other than milk) or meat, vegetables, fruits, or bakery products; or who picks up or delivers laundry or dry cleaning, if the driver is your agent or is paid by commission.
(2) certain types of full-time insurance sales reps
(3) an individual who works at home on materials supplied by you that must be returned to you
(4) certain full-time traveling or city salespeople.

Social Security and Medicare (FICA) taxes may or may not be withheld. Income taxes are not withheld from a statutory employee. A statutory employee will receive a W-2 with the ‘Statutory Employee’ box checked.

Sub-schedule number
A two-digit numeric text box used to further identify a schedule table.

Succession planning
Finding and developing employees for placement into identified key positions that are expected to become vacant sometime in the future.

Summary page
To help you see information at a glance, eCyborg Interactive Workforce uses summary pages. The summary page displays a short view of detailed information. For example, all your emergency contacts appear on a summary page. You delete the contact or proceed to the detail for the contact from the summary page.

Summary plan
A customer-owned description of a benefits plan.

Supplemental wages
Wages that are separate from regular earnings may be classified as supplemental wages and taxed using the default method. The default method means using a set percentage specified by the tax authority. Examples of such earnings are bonuses and commissions.

Surplus
A 'surplus' is an exceeded complement position.

System administrator
An individual responsible for maintaining a multi-user computer system, including a local-area network (LAN). Typical duties include:

- Adding and configuring new workstations
- Setting up user accounts
- Installing system-wide software
- Performing procedures to prevent the spread of viruses
- Allocating mass storage space

System Control Repository
This is the file that contains system definitions for The Solution Series*,* (FILE01).This was formerly known as the Control File.

System Generator
A type of Report Generator that performs system functions, such as defining data elements and system messages.

Table
Contains an organization's rules and policies and controls what actions take place at the employee level.

Alternative definition: means of displaying information in columns and rows.

Table Definition Record
Table containing data about the Position Administration table records, including the location of keys to associated tables.

Target DL
The node that receives the data being distributed. Depending on the rules established, the same DL can alternate from target to source.

Task
The lowest level of organization on the Navigator or menu, generally equivalent to a form. checklist, or dialog.

Task icon
An icon denoting a task. Task icons describe the type of task, including Forms, Checklists, Dialogs and others.

Tax authority
A government agency to which an employer and employee has statutory tax obligations. The tax authorities for which you handle taxes exist at the federal, state/province, and local levels.

Tax Authority File
A Cyborg-supplied file that contains all the tax-specific information needed to calculate taxes for tax authorities. This includes wage-bracket tables for different marital statuses and information relating to allowances and standard deductions. The sources for the contents of this file are tax specifications published by the various tax authorities.

Tax code
The three-character to seven-character Cyborg-supplied reference code that identifies a tax and that serves as the link between the Tax Specification Record and the employee tax record.

Tax Maintenance File
One of the two Cyborg-supplied tax files. A Tax Maintenance File is a file issued by Cyborg in conjunction with a Tax Update Bulletin (TUB). It contains all the tax specifications that are being updated in the bulletin, in the form of tax specification transactions. These transactions are typically used as input to the batch maintenance run in which tax updates are applied.

Tax specification
Each tax authority publishes tax specification information that specifies how each tax must be administered. This information specifies how employers should calculate taxes and how taxes should be withheld from employees (if withholding applies). The tax specifications can be in the form of tax formulas and (or) tax tables.

Tax Specification record
A record on your Employee Database that contains the tax specifications for a tax. The record contains all the information, as obtained from the governmental authority, needed to calculate tax amounts for the tax. The record may contain more than one tax; for example, US state Tax Specification records contain information for both state income tax and state unemployment insurance. Once a Tax Specification record is activated, tax specification information from the Cyborg-supplied tax files can be loaded onto the record on your Employee Database.

Tax table
A set of information required to calculate a tax, for a specific set of employee parameters. Tax tables are stored and maintained in Tax Specification records. A table typically includes wage and bracket information and data relating to allowances, such as personal exemptions and to standard deductions. There can be several tables relating to marital and resident status in a given Tax Specification record.

Tax type
This term refers to various categories of taxes, for example, income, National Insurance, unemployment, disability, Social Security (FICA-OASDI), and Medicare (FICA-HI).

Taxability
The term refers to whether an hours, earnings, and deductions amount is to be included in taxable wages to be accumulated for a specific tax. If the hours, earnings, and deductions amount is excludable, then the amount is not included in taxable wages. If the hours, earnings, and deductions amount is taxable, then the amount is included in taxable wages. The term fully excludable or fully taxable implies that more than one type of tax is being referenced, for example, state income tax and state unemployment insurance in the US.

Taxable wage base
The taxable wage base represents the maximum amount of an employee's wages on which tax is levied and after which there is no liability. A wage base in the US

typically is in effect for FICA, unemployment taxes, and disability.

Tax-related Regulatory Bulletin

A TUB contains the updates to tax specifications supplied by Cyborg, consisting of a bulletin document, a tax file that contains the updated tax specifications, and a printed listing of tax specification transactions with the updates.

TDR

Table Definition Record.

Template

A basis from which to create a custom item. For example, you can use an existing Cyborg report as a template for your custom report.

Temporary password

A set of alphanumeric characters used with a user ID to limit access to a software application. The system requires that users replace their temporary password with a user-defined password within a certain number of days.

Termination

The activity of an employee no longer being employed by the organization.

Test environment

A separate organization or system partition used only for testing.

Text box

A control on the interface in which text can be entered and edited (formerly known as a field).

Text qualifier

The character surrounding an item between delimiters. All values between the qualifier are data items and are not scanned for a delimiter. This allows a delimiter character, such as a comma, to be a valid data item. Example:

"item 1","item 2","item 3, 4 and 5"

This string contains three data items:

Item 1

Item 2

Item 3, 4 and 5

Although the third item contains a comma, it is ignored as a delimiter because it is between the text qualifier of speech/quotation marks (").

Time entry

The form in which you enter the hours worked for an employee. This was formerly known as a Time Card.

Time entry extract file

A file of time entries external to the Time and Attendance Solution that is used to feed to payroll.

Time entry validation

The Time Entry Validation/Creation program identifies and assigns an activity, for example Clock In (1), to each clock transaction (ring) when performing the validation function. Each clock transaction must be assigned to an activity, in order for time entry hours to be calculated for an employee, for a particular shift. This program validates clock transactions (rings) and generates time entries.

Timeout

The period of time that elapses before a user's eCyborg Interactive Workforce account becomes invalid because of inactivity.

ToolTip

A standard Windows control that provides a small pop-up window that provides descriptive text, such as a label, for a control or graphic object.

Top-down appraisal

Appraisal made by a supervisor or manager of an employee's capabilities. Such an appraisal is generally based on the supervisor's or manager's day-to-day observation of an employee's work performance and will usually include an appraisal interview with the employee.

Trainer

Trainers are set up on the Provider Index Form. They are instructional institutions, organizations or persons who are available to teach a training class.

Trainer code

The trainer code is a four-character value that represents a trainer. This value resides in Option List TR38.

Training area
The training area is recorded on the Class Schedule Form. It is typically defined as the section of the organization to which the training applies, such as manufacturing.

Training class results
These are the class details and absence information recorded on the Process Class Results form. Details recorded include the objectives met when taking a training class.

Training class status
The status value is updated and displayed on the Class Schedule Form. It tracks whether the training class is canceled, full or available.

Training course code
The training course code is a six-character value that represents a training course. This value resides in Option List TR33 and is associated with a course title.

Training plan
A plan of training courses that an employee will attend in the future to achieve the necessary skills to perform a job.

Training reason
The reason for training is used to identify why a training request has been made. For example, the purpose of the training to act as a refresher, to acquire new skills, and so forth.

Training request
A training request is a request for an employee to attend a specific course or class. A formal request for training is not essential. This step could be omitted and the employee could be registered directly in the course of his or her choice.

Transfer
Process of moving an employee from one organization to another organization, such as moving an applicant from the applicant organization to the active employee organization.

Alternative definition: to move data or files from one computer to another

Trend analysis
Reporting or statistics that indicate the rate of change in costs and other elements of a benefits plan.

Trigger
A set of conditions that must occur for an email or letter communication event to start. This can involve the creation, deletion, or modification of forms or checklists within the system.

Tuition reimbursement
Remuneration made to employees for tuition expenses.

Type of training request
The type of training request indicated whether the employee was required to attend the training or whether he or she asked to attend the training.

Unauthorized absence
Absences that are generally not considered paid time away from regularly scheduled work.

Underlined text
In browser applications, text that provides a link to another screen or page.

Unemployment insurance tax
A tax required by some US states to be funded by employee-paid contributions to pay all or part of the cost of unemployment insurance coverage. On the Payroll Solution, state unemployment insurance tax records are established as Type 2 taxes.

Unpaid absence
Employee absence that will not be paid by the organization. A time entry will not be created for this absence.

Upward appraisal
Appraisal that calls for evaluations by those who work under the direction of the employee being evaluated.

URL
Acronym for uniform resource locator. A standard way of specifying the location of an object, typically a web page, on the Internet. URLs are the form of address used on the World-Wide Web. They are used in HTML documents to specify the target of a hyperlink which is often another HTML document (possibly stored on another computer).

User class
Cognos Impromptu assigns security according to configured user profiles. These security profiles are configured by your Impromptu administrator.

User code
A set of characters (up to eighteen alphanumeric characters) that, along with the password, identify the user to the system as a valid user user when they log on.

The user code is case-sensitive (upper case, lower case) and must be entered using the correct case.

User defined password
A set of alphanumeric characters created by users that allows them to view and update information in a software application.

User ID
A set of characters that identify you to the software application. The application contains a list of authorized users by user ID. When you attempt to log on, the system checks the list of authorized users to determine whether you have authority to use the application.

User profile
Used for security purposes to determine what you can and cannot do while you are using the system, and which parts of the system you can access. A user profile is created and maintained for you by a Security Officer. Each user of the system will have a user profile.

Vacancy
An open position that needs to be filled, or an unfilled complement position

Vacation days
The time off that an employee is entitled to as a result of an employment contract or due to length of service.

Validation
The process where the Time Entry Validation program identifies and assigns an activity to a clock transaction (ring) when performing the validation function.

Variant forms
Method of displaying country-specific variation of Cyborg-delivered forms.

Waive
The act of choosing not to enroll in an optional benefits plan.

Warning time
Used to set a period of time after which an employee will appear on the exception report for a particular activity. A Warning condition will allow the creation of a time entry. A Reject condition will not. This is part of the Time and Attendance Administration.

Welfare benefit plan group
First level of the logical organization of welfare benefit plans in eCyborg Interactive Workforce.

Welfare benefit plan subgroup
Second level of the logical organization of welfare benefit plans in eCyborg Interactive Workforce.

Welfare plan
Any insurance or other benefit plan that provides immediate benefits to a participant—for example, medical insurance.

What-if mode
Method for processing a report that allows viewing of information without updating of employee records.

Window
A standard Windows object that displays information. A window is a separately controllable area of the form that typically has a rectangular border.

Wizard
A form if user assistance that automates a task through a dialog with the user.

Work area
The Solution Series screen. It includes the menus, toolbars, Navigator, forms area, message area, and status bar.

Work instructions
Specific tasks to be completed during the migration of data and files from test to production.

Work restrictions
Restrictions that prevent an employee from participating in specific workplace functions.

Worker's compensation
Legislation in the US that provides compensation to employees who suffer work-related injuries.

Workforce competency
The capacity of the overall workforce to perform required functions and sets of activities.

XHTML
Extensible HyperText Markup Language, used by the help pages for eCyborg.

Year End Master File
P20OUT file from the final payroll run of the year

CHAPTER 1

About This Manual

Welcome

This manual has been designed to guide you through the use of the Position Administration component of the HR application. It covers setting up and using Position Administration and its associated Complement Control functionality.

This manual has been designed as a reference document. It is also used in classroom training. You will find sufficient detail for self-study, before and after classroom training.

Who should use this manual?

This documentation is designed to be used by a number of different users. The following users will find it most useful:

- Data Managers
  Data managers will find it helpful to read Part 1 of this manual to obtain an overview of Position Administration and the steps that are necessary to implement the system. Part 2 will also be of interest because it explains the additional concepts and tasks necessary to set up and maintain the essential Position Administration elements. Part 3 provides information needed to analyze Position Administration data effectively. Those data managers interested in Complement Control should review Part 4 for information about this feature.

- End users
  End users and data entry personnel will find detailed directions throughout the manual outlining the specific steps necessary to input the required Position Administration and related Complement Control data.

Prerequisite skills

Users of this documentation should possess a variety of technical skills, depending on the roles they will play. At a minimum, all users should have:

- Basic understanding of Microsoft Windows
- Attended training or have experience using The Solution Series (the eCyborg: Using the Web Client or Using The Solution Series: Administrative Solutions training course is recommended)

Additional documentation and training courses

The following documentation and training courses are available from Cyborg Systems to help you understand and administer Position Administration.

Documentation

Document	Description
eCyborg: Using the Web Client or Using The Solution Series: Administrative Solutions	This prerequisite documentation covers the introductory concepts and tasks related to Cyborg's administration solutions. It describes how to navigate through the software and explains important concepts and functionality of the system.

If you do not have a copy of this document, you can obtain one from Customer Support.

Training Courses

Related Course	Description
eCyborg: Using the Web Client or Using The Solution Series: Administrative Solutions	This prerequisite course covers the introductory concepts and tasks related to your specific implementation of Cyborg's administration solutions.
Using Human Resources Administration	This course covers using Human Resources both tactically and strategically.

If you wish to attend any of these courses, contact Customer Support or visit our website www.Cyborg.com for details of course dates and availability.

How this manual is organized

This manual has been organized to make it as easy to use as possible. The chapters are grouped accordingly into the following parts:

Part	Chapters	Description
1. Introduction	1–4	Provides an overview to Position Administration, explains the navigational features, and covers the implementation of Position Administration and Complement Control.
2. Setting Up and Maintaining Position Administration Data	5–10	Explains the concepts and provides detailed directions for setting up and maintaining the essential Position Administration data elements, including a chapter on how to restructure your organization.

Part	Chapters	Description
3. Analyzing Data	11–12	Provides methods used to analyze Position Administration data, including reports, forms, and online queries.
4. Complement Control	13–15	Provides an explanation of Complement Control, including the changed existing HR procedures and searching for vacancies and surpluses.
5. Appendices	A–C	Appendices provide additional information about Position Administration such as quick report references.

Following are descriptions of the chapters within the parts:

Part 1: Introduction

The chapters in Part 1 describe this manual and provide an overview of Position Administration and Complement Control:

Read this chapter		To learn about
1	About This Manual	How this manual is organized and how to make the most of using it.
2	Overview of Position Administration and Complement Control	A high-level overview of Position Administration and Complement Control, including the important features.
3	Overview of Position Administration Solution Navigation	The Position Administration navigation features, including shortcut menus and toolbar buttons.
4	Implementing Position Administration	Key concepts and tasks necessary to implement Position Administration.

Part 2: Setting up and maintaining Position Administration

The chapters in Part 2 describe the Position Administration implementation and setup tasks:

Read this chapter		To learn about
5	Establishing Organization Units	Key concepts and tasks necessary to set up Organization Units.
6	Entering Job and Position data	Key concepts and tasks necessary to enter Job and Position data.
7	Entering Position-Specific Data	Key concepts and tasks necessary to enter data specific to Positions.
8	Setting Up and Maintaining Incumbents in Positions	Key concepts and tasks necessary to set up and maintain Incumbents in Positions.
9	Maintaining Position Administration Data	Key concepts and tasks necessary to maintain Position Administration data.

Read this chapter		To learn about
10	Restructuring Your Organization	Key concepts and tasks necessary to restructure your organization.

Part 3: Analyzing data

The chapters in Part 3 describe how to analyze data:

Read this chapter		To learn about
11	Using Position Administration Packaged Reports	How to run Position Administration reports, including the feature that feeds the organization-charting software.
12	Viewing Position Administration Data	The forms and online queries used to view and analyze Position Administration data.

Part 4: Using Complement Control

The chapters in Part 4 describe the Complement Control feature:

Read this chapter		To learn about
13	Implementing Complement Control	The Complement Control feature and how it relates to Position Administration.
14	Searching for Vacancies and Surpluses	Key concepts and tasks necessary to search for vacancies and surpluses when using the Complement Control feature.
15	Changed Procedures When Using Position Administration and Complement Control	The changed HR procedures when using Position Administration and Complement Control.

Part 5: Appendices

The appendices in Part 5 contain quick reference information and practice and review answers:

Use this appendix		To learn about
A	Report Quick Reference	The Position Administration packaged reports and their business uses.
B	Technical Notes	Handy technical tips about Position Administration and Complement Control.
C	Practice and Review Answers	Answers to the Position Administration and Complement Control practice exercises.

How to use this manual

This manual has been designed as a reference manual as well as a training manual. It has been written to facilitate self-study before and after classroom training.

Table of contents

The manual has been carefully designed for ease of use. All our manuals are written to be task oriented to help you complete your business tasks using our software.

The table of contents lists all the tasks and their respective chapters.

Glossary of Terms

A Glossary of Terms section is provided to explain terms used in the documentation.

Index

An index is provided to help you locate specific information.

This document was designed to reduce your need for an index. You should find the table of contents sufficient.

Introductory chapters

It is important that you read the introductory chapters first. Chapter 1 ensures you get the most out of the information we have provided. Chapter 2 provides a high level overview. Read it to get the big picture before reading the detailed instructional chapters.

Instructional chapters

All chapters, other than the introductory chapters, are instructional chapters. They contain detailed instructions on how to complete the business tasks. Each instructional chapter has the following distinct sections:

Key Concepts

Always read the conceptual information first. This will help you understand why you have to perform certain tasks. It will also help you make decisions about your options and help you understand the importance of performing certain tasks. Exercises to help you apply the concept to a business task are included at the end of most concepts.

Apply the Concept

To be certain that you have understood the key concepts in a chapter, complete the Apply the Concept exercises provided. The answers to these exercises can be found in the appendices.

Detailed Directions

When you are ready to perform a task, review the Detailed Directions, which provide guidance, as well as the specific steps, to complete a task.

Guided Practice

The Guided Practice within the Detailed Directions offers you an opportunity to practice a task with step-by-step instructions. It takes you through the various steps, providing detailed examples so you can gain a comfort level with the task. Guided Practice is easy to locate.

For practice, type 'ABC Solutions'.

Note: *To successfully follow the Guided Practice, you must have completed all the previous Guided Practice exercises in the manual. The Guided Practice uses the test data installed with our software. For the Guided Practice exercises to work, this test data must not have been altered.*

All users who complete the Guided Practice must either have their own copies of the test data or have the test data restored for them.

Extended Practice

To be certain that you have understood the tasks in a chapter, complete the Extended Practice provided. The Extended Practice gives you the opportunity to complete one or more tasks without step-by-step guidance. The answers to these exercises can be found in the appendices.

Note: *To be able to complete the Extended Practice exercises in the manual, you must have completed all the previous exercises. You must also be using the test data delivered with the software. This test data must not have been altered.*

Review of Questions Answered

To be certain that you have understood all of the information in a chapter, complete the review questions provided at the end of a chapter. The answers to these questions can be found in the appendices.

Conventions used in this manual

The underlying page layout and design of this manual are meant to be as intuitive as possible for you. Our intent is to make it easy to navigate through the manual and concentrate on learning and doing.

Cross-references

Wherever appropriate, we provide cross-references to help you find additional information or further discussion of a specific topic.

☞ *Refer to a cross-reference to find more detail or more discussion on a given topic.*

Notes

Whenever there is important information you should be aware of, we provide a note.

Note: *You will find tips or quick techniques covered in notes.*

How to get additional help

If you can not find the answers to your questions in this manual, contact Customer Support, who will be able to answer specific questions and give you general advice on training.

Please visit our web site ***www.Cyborg.com*** (see "Cyborg Home - http://www.Cyborg.com") for the latest schedule of available courses and course descriptions.

Suggestions and feedback

We value your feedback on our performance support materials. Please forward any comments on this manual to Customer Support.

CHAPTER 2

Overview of Position Administration and Complement Control

In This Chapter

What is Position Administration?

Position Administration is a powerful tool that helps you manage tactical HR data as well as strategically manage your organization's human resources to meet your organization's design and development objectives and values.

The key to the Position Administration functionality is the recording of requirements at a position level, as well as 'actuals' at an employee level. For example, you may, at an employee level, hold details on qualifications and experience. At the Position level you would hold details of required qualifications and certifications for that position. This facilitates:

- Better selection of candidates
- Identifications of skills gaps
- Training plan development
- Career planning
- Succession planning
- Reorganization strategic planning
- Short-term replacement planning for sickness, leave
- Internal team selection

and so on. The possibilities are endless.

The use of Position Administration, combined with the tactical functionality of other components of The Solution Series, gives your organization a truly integrated strategic management information system, that allows the HR function to play an important role in the strategic decision making process of your organization.

Apply the Concept
Define Position Administration.

Why and when to use Position Administration

Position Administration gives an organization a more strategic perspective of all aspects of Human Resource management. It facilitates an integration of organizational vision and HRM.

An organization's mission can be defined as 'what the organization is in business to do'. An organization's vision can be defined as 'what the organization will look like when it does this right'. A key component of achieving an organizational vision is implementing an organizational structure. Using Position Administration, you can define the structure of your organization, in terms of units and roles (positions). Position Administration makes possible the strategic alignment of HRM and an organization's goals.

Position Administration provides you with the ability to:

1. Identify gaps in your organization for the following critical activities:
   - Recruitment: find 'best fit' applicants by defining requirements for positions, and then match those to the external or internal applicant's data.
   - Succession planning: define requirements for key positions, and then match against information on the Employee Database.
   - Employee development/career planning: Identify what skills/education is required for a position and then determine if an employee has the skills/education. The identified gap becomes the training plan for the employee.
   - Project staffing: build an organization unit for a project, define positions for each project role, and then search the Employee Database for 'best fit' candidates.
2. View your organization's resource strengths and weaknesses;
   - Determine where your organization has a concentration of skills.
   - Determine where your organization has vacancies.
3. Restructure your organization.
   You can easily reorganize the structure of an organization, or experiment with different scenarios and evaluate their impact, simply by using the dynamic reorganization facilities.

Apply the Concept
Consider how you currently or will use Position Administration in your organization.

Position Administration features

The following are key features of Position Administration:

- Optional setup and maintenance of your organization structure
- Optional setup and storage of unlimited Job, Position, and Incumbent details
- Strategic planning
- Employee and Position comparisons
- Easy-to-use navigation
- Dynamic, online reorganization capabilities
- History maintenance

Organization structure

You can optionally set up your organization structure in Position Administration (for example, divisions, departments). Direct reporting is used to view information about the organization structure.

Job, Position, and Incumbent details

Unlimited Job, Position, and Incumbent details can be set up.

Strategic planning

Position Administration can be used as a strategic planning tool. It has a unique 'as of' date capability that allows very simple access to a historic snapshot of the organization in full detail to help with comparison analysis. For those interested in future planning, the 'as of' date allows the creation of future-dated organization structures.

Employee and Position comparisons

One of the most beneficial features is the ability to record unlimited amounts of information about a Job or Position as well as employees. This capability allows you to hold consistent data on jobs and employees so that the two can be compared to highlight the shortfall between, for example, the requirements of a particular job in terms of skills and competencies and the skills and requirements of a candidate for promotion. This can also be used to support a number of other areas, such as career and succession planning and training needs analysis.

Easy navigation

Position Administration can be a complex area by nature, so considerable effort has been put into the usability of the component. Because navigation is an important element, specific toolbar icons have been developed especially for Position Administration that allow the user to easily drill down into and step up through the different levels of the organization hierarchy. Another new feature is shortcut menus that guide the user to the next logical form.

Reorganization

To cope with the rapid pace of change that organizations frequently face, the system has a simple, dynamic online method to achieve reorganization.

History maintenance/future planning

A comprehensive Position Administration history is kept.

Apply the Concept

True or False. Explain any false answers.

a) Setting up your organization's structure allows for only direct reporting capabilities.

b) You can set up unlimited Jobs, Positions, and Incumbent details using Position Administration.

c) The 'as of' date is a feature that allows one to access a historic snapshot of the organization but does not allow for future-dated organization structures.

d) Recording unlimited data about an employee's Job or Position can be used to support other areas, such as succession planning.

What is Complement Control?

Complement Control is used in association with Position Administration and allows you to limit hires and transfers based on either Headcount, Full Time Equivalents (FTEs), or Hours budgeted for your Positions. You can use Complement Control with all of your Positions, just a few, or none at all. This decision is yours.

Complement Control is an optional feature of Position Administration that you can use as part of your Position Administration strategy. You cannot use the Complement Control functionality independent of Position Administration.

Apply the Concept
Define Complement Control.

Why use Complement Control?

Complement Control can be used with Position Administration to limit hires and transfers based on headcounts, Full Time Equivalents (FTEs), or hours budgeted for positions. The values at the organization unit level can be used for complement control purposes, or separate complement values can be set up on a position-by-position basis. This facility prevent complement being exceeded when new hires or internal transfers take place.

Complement Control features

The following are key features of Complement Control:

- Customization of Complement Control options, including:
  - Complement unit selection
  - Control options by budget or complement amounts
  - Validation message option
- Inclusion of Positions to Complement Control
- Detection of Position vacancies and surpluses
- Changed HR procedures when using Position Administration and Complement Control, including:
  - Hiring new employees
  - Transferring existing employees
  - Transferring employees to new Positions

Customization of Complement Control options

Three Complement Control options can be customized:

- Complement unit selection
- Budget or complement option
- Validation message option

Complement unit selection

One of three types of complement units can be selected to validate that the complement limits for your Positions have not been exceeded: Headcount, FTEs, and Hours.

Budget or complement option

The complement limit for a Position (Headcount, FTEs or Hours) can be the same as or different from the budget amount for a Position.

Validation message option

When processing a new hire, employee transfer, or Position incumbency, the system checks that the complement limit will not be exceeded by assigning this employee to the Position.

If the complement limit will be exceeded, a Warning or Reject message is generated. You decide if you want to generate either a Warning message (which can be overridden) or a Reject message (which cannot).

Inclusion of Positions in Complement Control

Not all of your Positions have to be set up under Complement Control. You may want to designate all of your Positions as complement positions or possibly just a few. This decision is yours.

Detection of Position vacancies and surpluses

Online facilities are provided to search for Positions that have vacancies (unfilled complement) or surpluses (exceeded complement).

Changed HR procedures when using Complement Control

Various HR procedures are changed when using Complement Control, including:

- Hiring new employees
- Transferring existing employees
- Assigning employees to new Positions

Review of Questions Answered

1. List the Position Administration features.

2. Who would use Position Administration?

3. List the Complement Control features.

CHAPTER 3

Overview of Position Administration Navigation

In This Chapter

Introduction

Position Administration has several navigational features that make accessing the different forms and data entities easy. The navigational features explained in this section include the following:

- Methods (Drill Down, Step Up, and Select)
- Buttons (Job, Organization Unit, Position, Incumbent, and Data Selection)
- 'As of' date
- Select dialog box

Review these features now, and then return to this section section later when you are starting to use Position Administration.

Methods of navigation through the data structure

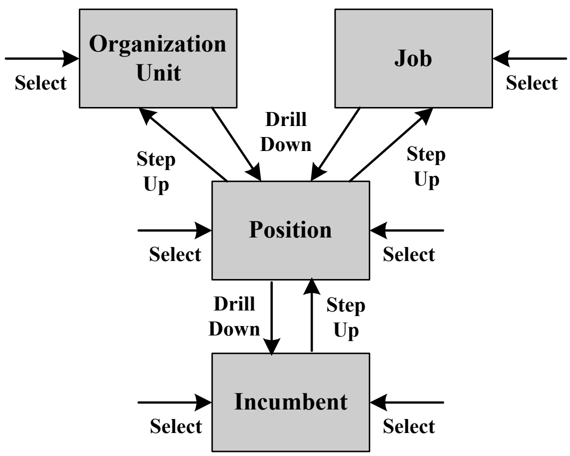
Position Administration consists of a data structure made up of these four basic entities:

- Organization Units
- Jobs
- Positions
- Incumbents

Navigation through this data structure is performed using three different methods:

- Drill Down
- Step Up
- Select

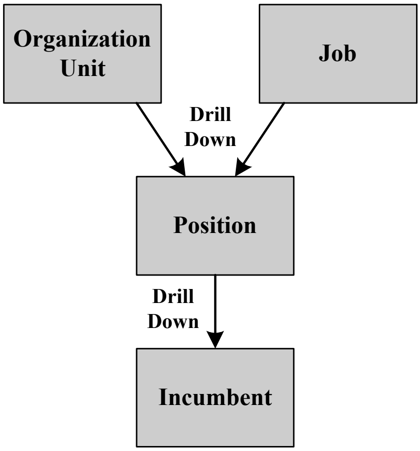
The data structure is represented by the diagram below:



The three methods of navigation provide maximum flexibility when accessing Position Administration data. The navigation is accomplished using Position Administration navigational buttons on a Position Administration toolbar and a shortcut menu.

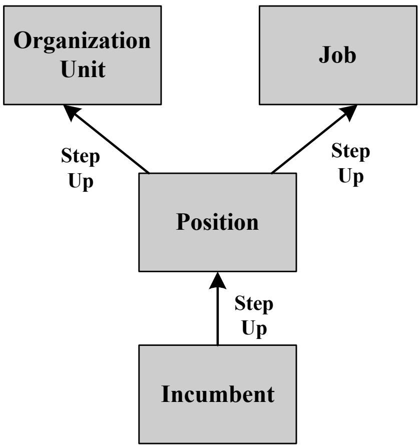
Drill Down

This method of navigation is used to 'Drill Down' through the data structure from Organization Unit to Position, Job to Position, and Position to Incumbent level.



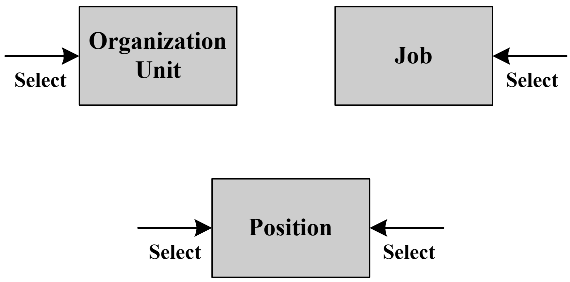
Step Up

This method of navigation is used to 'Step Up' from Position to Organization Unit, Position to Job, and Incumbent to Position. The system accesses the corresponding form of another connected entity (for example, Position Budget form to Job Budget form). If a corresponding form is not on file, the basic details for that entity are displayed.



Select

This method of navigation is used to initially 'Select' an entity or to 'Select' another of the same entity type - to move from an Organization Unit to another Organization Unit, a Job to another Job, and a Position to another Position.



Apply the Concept
Briefly describe how your current organization is structured.

Position Administration toolbar buttons

Four additional buttons have been added for Position Administration navigation. These buttons are active on the toolbar only when a Position Administration form is being viewed. Position the pointer over a button (without clicking on it) and a ToolTip displays the function of the button.

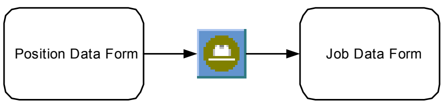
Not all of these buttons are used with all of the Position Administration forms. If a button is not available to be used from a form, the button is grayed (inactive).

Job button

The Job button will 'Step Up' or 'Select,' depending on the entity you are viewing.

Access my Job (Step Up from Position level forms)

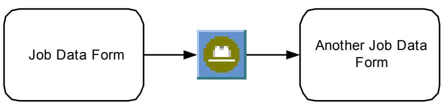
The Job button accesses the corresponding Job data form when you are viewing a Position data form. For example, if you are viewing the Position - Evaluations form (M22SCR) and click the Job button, the Job Evaluations form is displayed. If no corresponding form is available, the Job - Basic Details form (M10SCR) is displayed.



Access My Job

Choose a Job (Select from Job level forms)

The Job button can also be used to select another Job when you are viewing a Job level form.



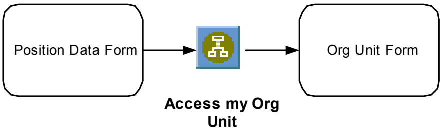
Choose a Job

Organization Unit button

The Organization Unit button will 'Step Up' or 'Select,' depending on the entity you are viewing.

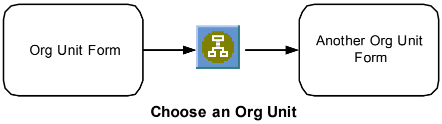
Access my Org Unit (Step Up from Position level forms)

The Organization Unit button accesses the Organization Unit for the Position you are viewing.



Choose an Org Unit (Select from Organization Unit level forms)

The Organization Unit button is used to access another Organization Unit when you are viewing an Organization Unit level form.

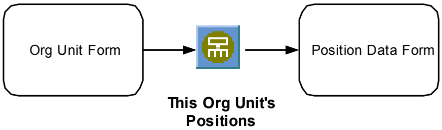


Position button

The Position button will 'Drill Down,' 'Step Up,' or 'Select' depending on the entity you are viewing.

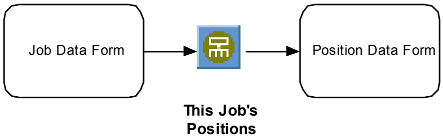
This Org Unit's Positions (Drill Down from Org Unit forms)

The Position button is used to access the Positions that are set up for an Organization Unit.



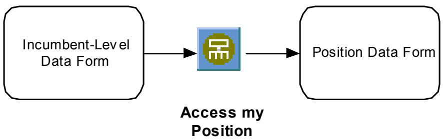
This Job's Positions (Drill Down from Job level forms)

The Position button is used to access the corresponding Position data form when you are viewing a Job data form. For example, if you are viewing the Job - Evaluations form (M12SCR) and click the Position button, the Position - Evaluations form (M22SCR) is returned. If no corresponding form is available, the Position - Basic Details form (M20SCR) is displayed.



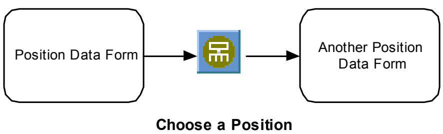
Access my Position (Step Up from Incumbent level forms)

The Position button is used to Step Up to the related Position data form when you are viewing an Incumbent level form.



Choose a Position (Select from Position level forms)

The Position button is used to Select another Position when you are viewing a Position level form.



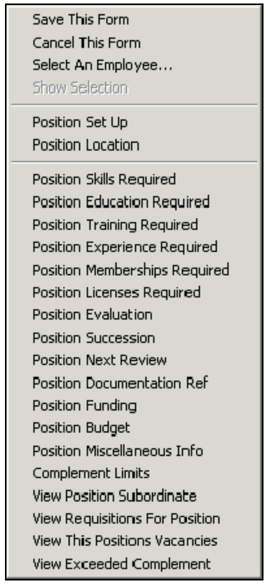
Incumbent button

The Incumbent button can 'Drill Down' from Position level forms.

Shortcut menu

A shortcut menu is available when using Position Administration. The menu is accessed with a right-click on the form area when a Position Administration form is being viewed.

The menu displays a list of Position Administration forms that are related to the form you are viewing.



Any key data being used to view the current record are kept in place and used to view the related record on the next form accessed.

For example, if you are viewing a Job on a Job level form and use the shortcut menu to switch to another Job level form, the appropriate details for the Job you were originally viewing are displayed. There is no need to select that Job again. As a specific example, if you were viewing the evaluation details for the Job of Manager and selected 'Job Skills Required' from the shortcut menu, the Job skills for Manager would be displayed automatically.

The shortcut menu feature of remembering key data is also available at the Organization Unit, Job, and Incumbent form levels. However, the feature is only available when using the shortcut menu. For this reason, most of the Position Administration forms are only accessed from the shortcut menus. The Position Administration setup and detail forms are the only forms listed on the Event menus.

Note: *You are often asked to use the shortcut menu when entering practice data when following detailed directions. To use this menu, you must already be accessing a Position Administration form of the appropriate type of entity (Position, Job, and so on).*

Apply the Concept

Match each of the following navigational features to its corresponding description:

Feature	**Answers**
1. Position button	_______
2. Job button	_______
3. Organization Unit button	_______ .
4. Incumbent button	_______

Descriptions

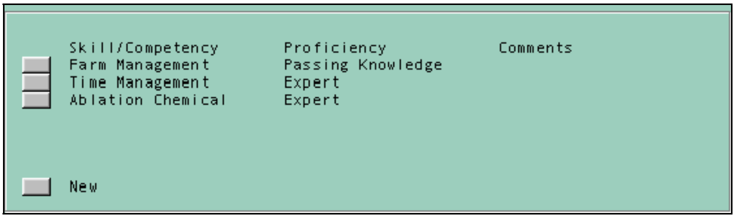
a) Accesses Organization Unit data for a Position or selects another Organization Unit.
b) Accesses Position for an organization Unit or selects another Position.
c) View Incumbents linked to a position.
d) Contains a feature that remembers key data.

Data selection buttons

Many Position Administration forms are made up of two panels. The first form panel is primarily used to view the data on file. Data-selection buttons are also included on the first form panel. These buttons navigate to a second form panel where you can add or change data elements. The functions and actions performed by these buttons are listed below.

Function	Action
Select a record that has already been entered.	Click one of the selection buttons on the left side of the form display.
Display a form panel for data entry.	Click the New button at the bottom of the form display.

See the partial sample form panel below for examples of these buttons.



'As of Date'

Most Position Administration forms have an 'As Of Date' text box at the top of the form. When a form is first displayed, the 'As Of Date' is the current date. This means that the data viewed on this form are valid 'as of' this date.

A Detail Changed date is displayed in Inquiry Mode. This date shows when the data on this form were last changed.

You can change the date in the 'As Of Date' text box to view data 'as of' another date. You may want to change the 'As Of Date' to a date prior to the Detail Changed date to view data 'as of' that date. Future dates can also be entered in this text box to view data 'as of' a future date.

Selecting a form from the shortcut menu maintains the 'As Of Date' text box value.

To return to the current date at any time, simply clear the text box with spaces and press Enter.

Apply the Concept
Explain the importance of having an 'As of Date' feature.

Extended Practice

1. Identify the Position Administration navigational features (Job button, Position button, Incumbent button, Organization Unit button) located on the Position Administration toolbar:

   a) Access the Organization Unit - Set Up/Maintenance form (M48SCR). Position your pointer over the navigational button(s) highlighted. What description appears below the button(s)?

   b) Access the Job - Set Up/Maintenance form M18SCR). Position your pointer over the navigational button(s) highlighted. What description appears below the button(s)?

   c) Access the Position - Set Up/Maintenance form (M28SCR). Position your pointer over the navigational button(s) highlighted. What description appears below the button(s)?

   d) Access the Incumbency - Basic Details form (M40SCR) for employee number 1234. Position your pointer over the navigational button(s) highlighted. What description appears below the button(s)?

   e) Will these buttons always be active? Why or why not?

2. Access the shortcut menu for a Position Administration form. What does it display?

Review of Questions Answered

1. Describe the following Position Administration navigational features:

   a) Four basic entities:

   b) Three different methods that provide flexibility when accessing data:

   c) Additional navigational buttons:

   d) Other navigational features:

2. List and describe the three options when using the Select dialog box.

CHAPTER 4

Implementing Position Administration

In This Chapter

Introduction

Before using the many features of Position Administration, you must make a number of decisions about how you are going to implement Position Administration. The tasks and the concepts you need to understand to implement Position Administration are discussed in this section.

Tasks

The following tasks are covered in this section:

- Analyzing your organization structure needs
- Analyzing your Job and Position data requirements
- Setting up Control Numbers
- Setting up production option lists
- Setting up Position Administration
- Customizing User fields

Prerequisites

Before you begin to implement Position Administration, ensure that your organization details have been set up on The Solution Series.

Questions answered

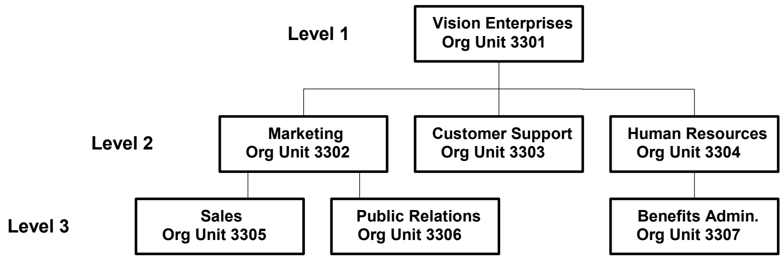
The following questions are answered in this section:

1. What are the advantages of using Organization Units?
2. What are the advantages of using Jobs and Positions?
3. What levels of data can be held by Position Administration?
4. Which Position Administration option lists need editing?
5. What is the relationship between Organization Units and Organization Levels 1 to 6?
6. How does the information in Position Administration interact with the Job Assignment/Changes form (05-SCR)?
7. What is the function of the Position Administration Control Number?
8. What entries are available for customization?
9. What extra security might be needed for Position Administration?
10. What menus may need to be customized for Position Administration?

Organization Units

Organization Units are an optional feature in Position Administration; they are used to group Positions in a hierarchical manner for budgeting and reporting purposes. Organization Units can be used to build organization structures, reflecting the way your organization is set up. For example, your divisions, departments and so forth, can be reflected by establishing various Organization Units.

The diagram below illustrates how Organization Units can be related to form an organization structure.



Organization Units usually have a 'belongs to' relationship with an Organization Unit higher up the organization structure. This means that you can relate Organization Units to each other in a hierarchical manner. The top Organization Unit in the hierarchy must always belong to itself. This will automatically be assigned to level 1 in the organization structure. Up to 999 levels of Organization Units are permitted in an organization structure.

Once an organization structure has been established, it can be changed at any time because of a reorganization, and so on. A history of past organization structures is easily kept and maintained.

Organization Units are assigned a description and a unique, up to six-character, alphanumeric code. This code can be part of a logical Organization Unit numbering system, but keep in mind that if you restructure your organization, these options may no longer be meaningful.

See also:

- Analyzing your organization structure needs ***(on page 49)***
To analyze how your organization structure should be set up.

- Interaction of Organization Units with Organization Levels 3-6 ***(on page 43)***
For an explanation of how Organization Unit Codes can feed Organization Levels 3-6 for package reporting.

☞ *Refer to* **Establishing Organization Units** *(on page 61) to learn how to set up and maintain Organization Units.*

Apply the Concept

Draw a diagram of the organization described below.

Facts: Signal Industries Inc. has four divisions: Development, Marketing, Support, and Manufacturing.

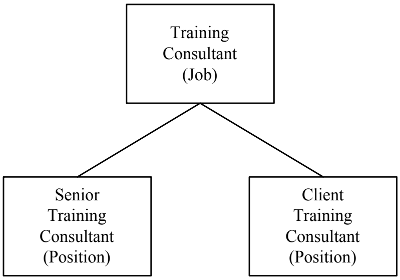
Each of these divisions contains an Office Services, Human Resources, and Core group.

Jobs and Positions

The generic details of each occupation within your organization can be recorded as a Job. For example, you may have the following Jobs within your organization:

- Training Consultant
- Administration Officer
- Manager

The Positions that relate to each generic Job description are then set up. For example, the following Positions relate to the Job of Training Consultant:



In a large international organization, your Jobs and Positions could be set up a little differently. The Job could be Sales Director and the Positions could be:

- Sales Director - USA
- Sales Director - UK
- Sales Director - France

Information that applies to all of these Positions would be entered once at the Job level. Any country-specific variations would then be added for each Position.

It is not essential that you set up Jobs to use Position Administration. However, any data entered at the Job level will be inherited by all Positions associated with the Job. Using Jobs and Positions in this way will reduce data-entry efforts.

Position Administration allows flexibility in how you set up your Jobs and Positions:

- You can set up both Jobs and Positions, relating each Position to a Job. Jobs will hold generic details that apply to many different Positions. Using Jobs and Positions in this way will reduce your data-entry time.
- You can set up Positions only. If you have a smaller organization, or if there is mostly a one-to-one relationship between Jobs and Positions, you may find it easier to ignore the Job facilities.
- You can place one or more employees in a single Position. You can place fewer than one full-time employee in a Position (for example, if the Position is part time). You can place one employee in more than one Position.
- You can set up Organization Units if your organization finds it useful to group Positions for budgeting and reporting purposes. However, this is an optional feature of Position Administration.

See also:

- Analyzing your Job and Position data requirements ***(on page 49)***

To analyze how your Jobs and Positions should be set up.

☞ *Refer to* **Establishing Organization Units** *(on page 61) to learn how to set up and maintain Jobs and Positions.*

Apply the Concept

Determine how you will set up the Jobs and Positions for the Support division's Core group.

Facts: The Core group of the Support division contains the following positions: Admin 1, Admin 2, Call Support Tech 1, Call Support Tech 2, Tech Specialist 1, Tech Specialist 2, Tech Specialist 3m Support Engineer, Group Leader, Manager, and Vice President.

Types of data held

In addition to deciding if you want to set up Organization Units and Jobs along with Positions, you should also decide what levels of data you want to hold in Position Administration.

The types of data that can be recorded include:

Location data	Organization Unit to which a Position reports, Positions to which a Position directly and indirectly reports, physical location
Budget data	Headcount, FTE, Hours,, and Salary data for a Position or Organization Unit
Skills/competencies required	Skill/competency and proficiency required for a Position or Job
Memberships required	Memberships required for a Position or Job
Education required	Level of education and subject for a Position or Job
Training required	Training courses that must be completed for a Position or Job
Licenses required	Licenses required for a Position or Job
Experience required	Any specific experience required for a Position or Job
Evaluations	Job and Position evaluation data
Succession	Possible next succeeding Jobs
Document references	Information about documents relating to Jobs, Positions, and Organization Units
Funding data	Source of funding for a Position
Next review data	Job and Position next review data
Miscellaneous Position data	Used to hold information currently held on the Job Code table (TA-SCR)

See also:

- Analyzing your Job and Position data requirements ***(on page 49)***

To analyze what level of data you want to hold.

Position Administration option lists

Each of the option list listed below contains sample options. These option lists should be reviewed and production option lists should be set up to meet your organization's requirements.

Position Administration option lists	**ID**

Geographic Range	HR66
Derived Employee Status	HR73
Union Job Option	HR389
Trainee Job Indicator	EO14
Skill Option	MP01

Position Administration option lists	**ID**
Skill Proficiency	MP08
Union Option	PP429
Training Course Options	TR33

The options in the following option lists should not be edited or deleted. Position Administration needs these options to function properly.

Reason for Change (PM00)

Abolished (AB)

Created (CR)

Reason for Change (PM01)

Abolished (AB)

Created (CR)

Reason Option (PM15)

Unassigned (AB)

Evaluation Criteria Type (PM19)

These options should be set up in numerical order so they are displayed sequentially on the Job and Position evaluation forms. Examples of options:

001 Knowledge

002 Accountability

003 Judgment

Incumbency Values (PM27)

Primary History (H)

Other Incumbency (O)

Primary Incumbency (P)

Note: *Some Position Administration option lists have options of None (#) and Removed (##). These options should not be changed or removed.*

See also:

- Setting up production option lists ***(on page 51)***
For an explanation of how to set up your production option lists.

Apply the Concept

Identify the forms and text boxes that would be selected and updated to set up Control Numbers.

Form	Text Boxes	Options

Interaction of Organization Units with Organization Levels 3-6

You can assign each of your Organization Units a code that is up to six alphanumeric characters in length. This code is used to distinguish between different Organization Units. Organization Units are set up on the Organization Unit - Set Up/Maintenance form (M48SCR).

☞ *Refer to* **Establishing Organization Units** *(on page 61) for an explanation of Organization Units and how they are used and set up.*

The Organization Level text boxes are only four alphanumeric characters in length, so you may want to consider this when establishing the lengths of your Organization Unit codes. You may want to use characters 5 and 6 for a subgrouping that you would not want reported.

Note: *There is no relationship between Position Administration Organization Units and Organization values. This is because Organization Units will typically span multiple Organizations and Cyborg packaged reports sort by Organization. Position Administration organization structures and package reports ignore this traditional Organization sort.*

Apply the Concept

Identify the forms and text boxes that would be selected and updated to set up Organization Numbers.

Form	Text Boxes	Options

Interaction with the Job Assignment/Changes form

Position Administration has been designed so that any primary Incumbent level data you enter will update the information held on the employee's base HR records on the Job Assignment/Changes form (05-SCR).

This allows the basic HR components of the Human Resources Administration to function using the Job level information entered in Position Administration.

Updating the Job Assignment/Changes form

When creating, changing, or unassigning a primary Incumbency, a Job Assignment/Changes form (05-SCR) is created or updated with the following text boxes:

Effective Date	Effective date of the Incumbency (for example, 08-01-2002)
Key Separator	'Tenth Occurrence' only
Type of Change	'Created by PM' or 'Unassigned by PM'
Job Option	Six-character, alphanumeric Position option (for example, POS001)
Job Option extent	'9999' only
Union	Position's union (for example, AFL-CIO)

Note: *Any Job Assignment/Changes form (05-SCR) entry that is created or updated by Position Administration cannot be changed or deleted using the Job Assignment/Changes form (05-SCR). Changes or deletions should be performed on the Position Administration Incumbency - Basic Details form (M40SCR).*

The system is delivered to automatically create the Job Assignment/Changes form with primary Incumbency data. However, you can disable this feature by removing the commented lines in the M40RTN program.

Job Information Inquiry text boxes

The Job Information Inquiry text boxes on the Job Assignment/Changes form (05-SCR) are also updated by Position Administration. The table below shows from what level in Position Administration the data comes.

Salary Grade	Employee, Position or Job
Occupation Group	Position or Job
Job Type	Position
Assigned Shift	Position
FLSA Class	Position

☞ *Refer to* **Setting Up and Maintaining Incumbents in Positions** *(on page 139) for information on the Job Assignment/Changes form and disabling its automatic creation.*

Position Administration Control Numbers

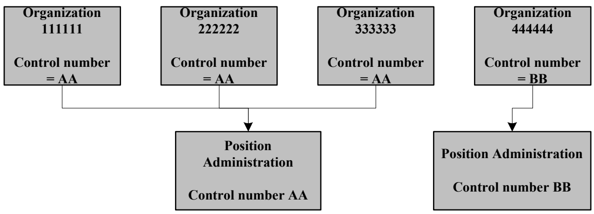
Position Administration Control Numbers are used to identify which version of a table is applicable to an Organization. The same Control Number can be used for multiple Organizations, or each of your Organizations can use a different Control Number.

Position Administration uses the first two characters of the Job Options Control Number as the Control Number value for an Organization. This text box is entered on the Company-To-Rules Cross-Reference For HR form (AX-SCR). The Position Administration Control Number is then displayed in Inquiry Mode for easy reference.

For example, in the delivered Position Administration test data, Control Number '99' is used for Organization '999999.'

You can set up as many different Position Administration systems as you want by using different Control Numbers. You may want to use different Position Administration systems with different Control Numbers if, for example, you have a parent company that owns multiple unrelated businesses. There would be no reason for these companies to be linked using the same Control Number.

Following is an example of two different Position Administration systems and their Control Numbers:



See also:

- Analyzing your organization structure needs ***(on page 49)***

For an explanation of how Control Numbers are set up.

Custom text boxes

Two User entries are provided with Position Administration. These entries can be customized to meet your specific needs.

The Job - Basic Details form (M10SCR) and Position - Basic Details form (M20SCR) both have these two User text boxes. These text boxes are User Field 1 (8-character entry) and User Field 2 (option list).

Customizations can be made by adding your own options and values to the option list and/or defining the text box as you require.

See also:

- Customizing User fields ***(on page 56)***

For an explanation of how User fields are customized.

Date considerations

The initial table As-of and Effective Date entries reflect the creation date of the table, but need to take into consideration the employees who will become incumbents for the positions. The following date options are available:

- Initially, you may wish to use an effective date that is earlier than the initial assignment of any employee to the position, to ensure that all employees assigned to positions are covered by the table.

  For example, you must make sure that the Position of Payroll Manager has an effective date that is at least equal to or prior to the date that employee 3008 is assigned to the Position.

- For changes to the table, it is recommended that you create a new table record with a new effective date.

- You may create future-date tables, in which case the table data is ignored until that time.

If you make an entry for which there is a table value older than the current table, the system will access and use the older table entry for calculations, definitions, and validations. This allows for both 'point-in-time' or 'as of' reporting.

For example, when looking at the history of an employee who has been with your company for some time, you may notice that the salary grade from an earlier point in time is different from today's salary grade.

Security considerations

Position Administration includes setup forms that are used to set up three important entities: Organization Units, Jobs, and Positions.

The setup functions performed by these forms are typically performed by your data management staff, rather than data-entry or end user personnel. Because of this, you may want to increase the security level for the following forms:

- Organization Unit - Set Up/Maintenance (M48SCR)
- Job - Set Up/Maintenance (M18SCR)
- Position - Set Up/Maintenance (M28SCR)

Increasing the security level for these forms will ensure that Organization Units, Jobs, and Positions are not set up in error or incorrectly. Your organization's Security Officer will be able to apply this additional security to your system.

☞ *Refer to the Position Administration Hierarchical Security documentation for more information on security for Position Administration.*

Detailed Directions

This section provides detailed directions on completing a business task.

Tasks

Analyzing your organization structure needs

Analyze your organization structure needs

Analyze how you want to set up your organization structure based on your current structure and possible future needs. It may be helpful to draw a diagram to represent your organization structure.

See also:

- Organization Units ***(on page 35)***

For an explanation of the options available when setting up your organization structure.

Analyzing your Job and Position data requirements

Analyze how your Jobs and Positions will be set up

Analyze how your Jobs and Positions will be set up, including the level of data you want to hold.

See also:

- Jobs and Positions ***(on page 37)***

For an explanation of the uses of Jobs and Positions.

- Types of data held ***(on page 39)***

For an explanation of what types of data can be held in Position Administration.

Setting up Control Numbers

To set up the Position Administration Control Numbers for your Organizations, follow these steps:

1. Determine what Organization/Control Number combinations you want to use

Determine your Organization/Control Number strategy.

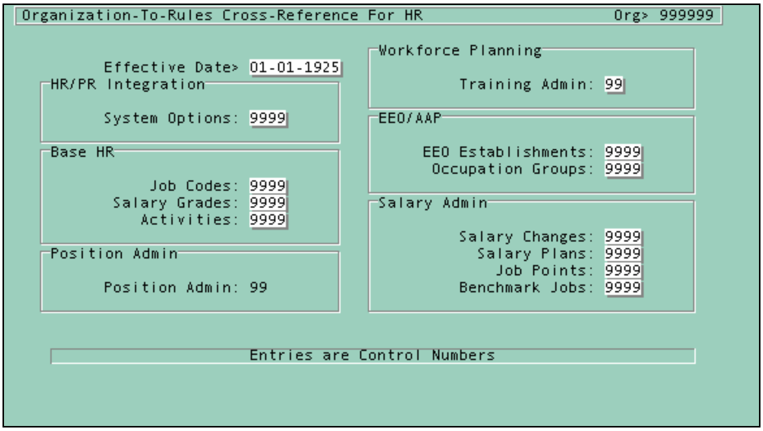
2. Access the Company-To-Rules Cross-Reference For HR form (AX-SCR)

Make sure the appropriate Organization is displayed in the Status bar. This is the Organization for which the Control Number is set up.

Access this form by making the following selection from the Navigator:

Component:	HR Setup
Process:	Setup HR Rules
Task:	Organization to Rules Cross-Reference

For practice, access the Company-To-Rules Cross-Reference For HR form (AX-SCR).



3. Enter the Position Administration Control Number in Job Options

Position Administration uses the first two characters of the Job Options text box as the Control Number value for an Organization.

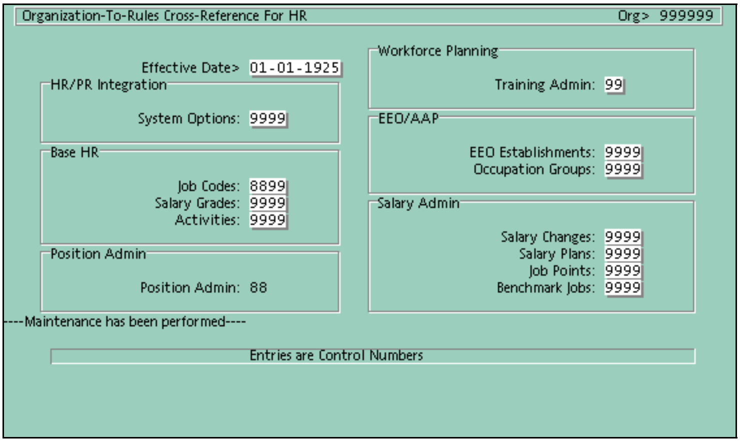
Leave the current value in this text box or enter a new value.

For practice, enter '88' in the first two characters of the Job Options text box.

4. Click Save or press Enter

The Position Administration Control Number is set up for the Organization displayed in the Status Bar and a 'Maintenance has been performed' message is displayed.

For practice, click Save or press Enter.



Organization-To-Rules Cross-Reference For HR Org> 999999

Effective Date> 01-01-1925

HR/PR Integration
System Options: 9999

Base HR
Job Codes: 8899
Salary Grades: 9999
Activities: 9999

Position Admin
Position Admin: 88

Workforce Planning
Training Admin: 99

EEO/AAP
EEO Establishments: 9999
Occupation Groups: 9999

Salary Admin
Salary Changes: 9999
Salary Plans: 9999
Job Points: 9999
Benchmark Jobs: 9999

----Maintenance has been performed----

Entries are Control Numbers

5. Continue entering Control Numbers for all Organizations

Be sure to perform these steps for all of your Organizations that will be using Position Administration. Use the 'Enter a Valid Organization/Employee' button and dialog box to change Organizations.

6. Restore test data

To ensure that subsequent tasks can be completed successfully, you must restore the original values to the test data. Access the Company-To-Rules Cross-Reference For HR form (AX-SCR) and enter '99' in the first two characters of the Job Options text box. Click Save or press Enter, and then repeat this step for each Organization that you changed in steps 3 through 5.

See also:

- Position Administration Control Numbers ***(on page 45)***

For an explanation of the options available when setting up Control Numbers.

Setting up production option lists

1. Determine options and descriptions for option lists

Determine the options and descriptions for your production option lists, listed below.

Position Administration Option lists	
Reason for Change	PM00
Reason for Change	PM01
Occupational Category	PM02
Family	PM03
Education Type	PM06
Status Option	PM08
Location	PM09

Position Administration Option lists	
Funding Source	PM11

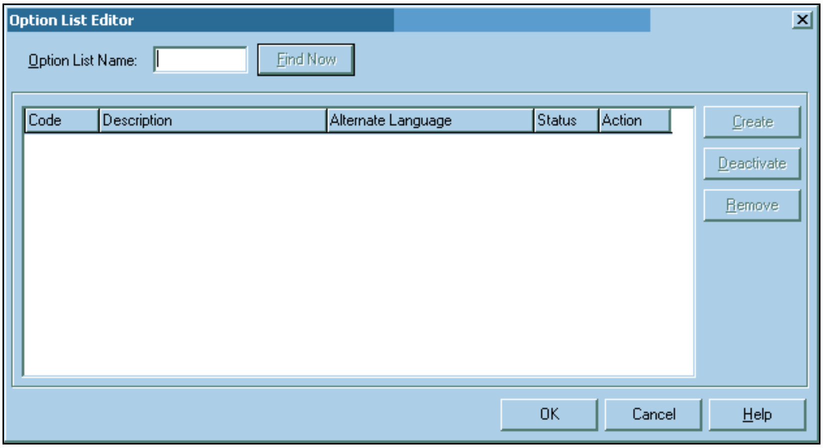
Review Reason Option	PM14
Reason Option	PM15
Until Reason	PM16
Status	PM17
Evaluation Type Option	PM18
Evaluation Criteria Type	PM19
Evaluation Criteria Rate	PM20
Employee Group	PM21
Type of File	PM22
File Format	PM23
Experience Type	PM24
Experience Duration	PM25
Employee Incumbency	PM26
Incumbency Values	PM27
User-Defined Field 2	PM99
Education Subject	HR27
Geographic Range	HR66
Derived Employee Status	HR73
Union Job Option	HR389
Skill Option	MP01
Skill Proficiency	MP08
Training Course Options	TR33

2. Access the Option List Editor (CSUPDT)

Access this form by making the following selection from the Navigator:

Component: Development Tools
Process: Option Lists
Task: Edit

For practice, access the Option List Editor (CSUPDT).



3. Enter the Option List Name

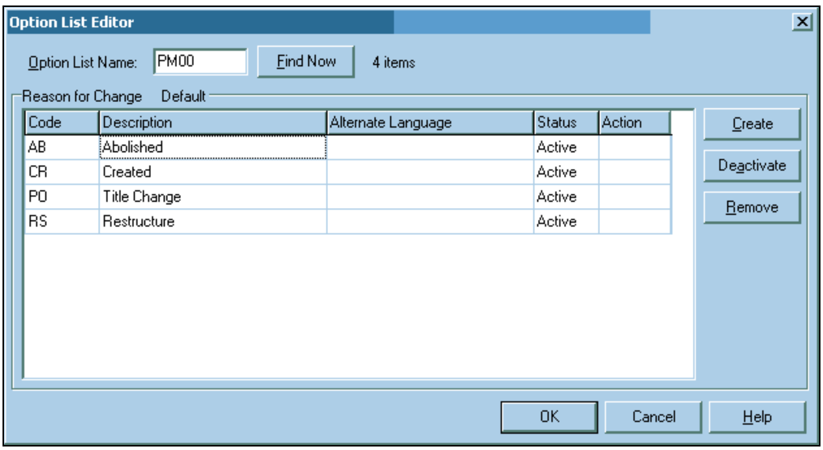
Enter the name of the Position Administration option list.

For practice, enter 'PM00'.

4. Click Find Now

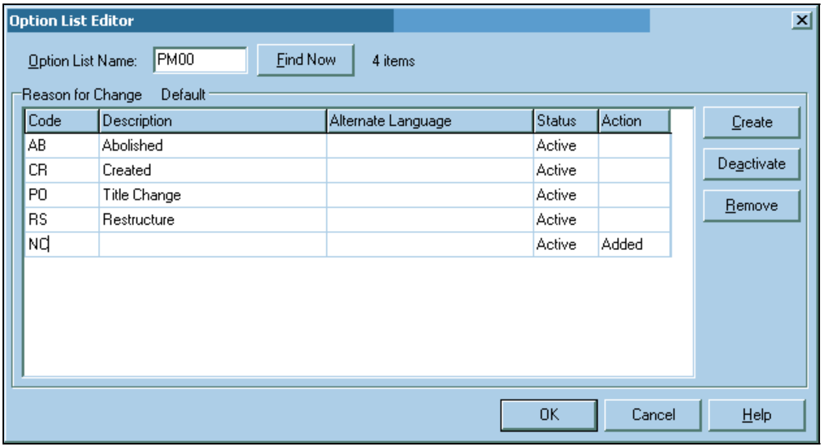
The options in the selected option list are displayed.

For practice, click Find Now.



5. Click Create

For practice, click Create.



6. Enter an Option

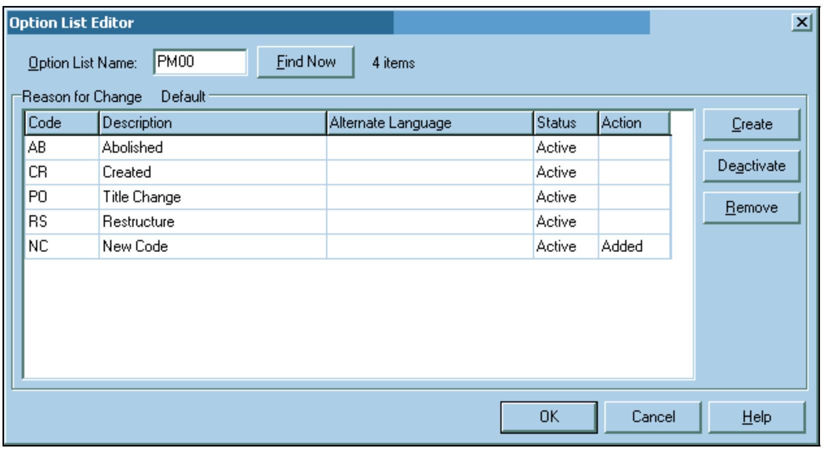
Type in the new Code value with a maximum length of 14 characters.

For practice, enter 'NC'.

7. Enter a Description

Type in an up-to-20-character Description of the new code.

For practice, enter 'New Code'.



8. Click the OK button or press Enter

The new option is added to the Option List and the Option List Editor (CSUPDT) displays with all text boxes cleared.

For practice, click Save on the OK button.

See also:

- Position Administration option lists ***(on page 40)***

For an explanation of the Position Administration option list editing options.

Setting up Position Management

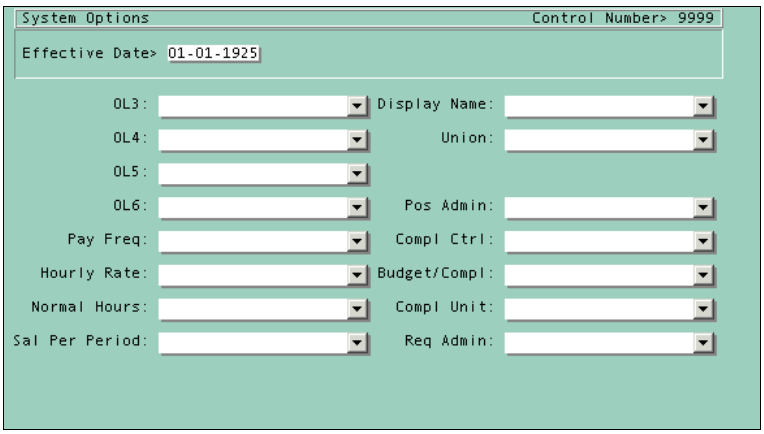
To set up Position Administration, follow these steps:

1. Access the System Options form (TG-SCR)

Access this form by making the following selection from the Navigator:

Component: HR Setup
Process: Setup HR Rules
Task: System Options

For practice, access the System Options form (TG-SCR).



2. Select Position Mgt In Use

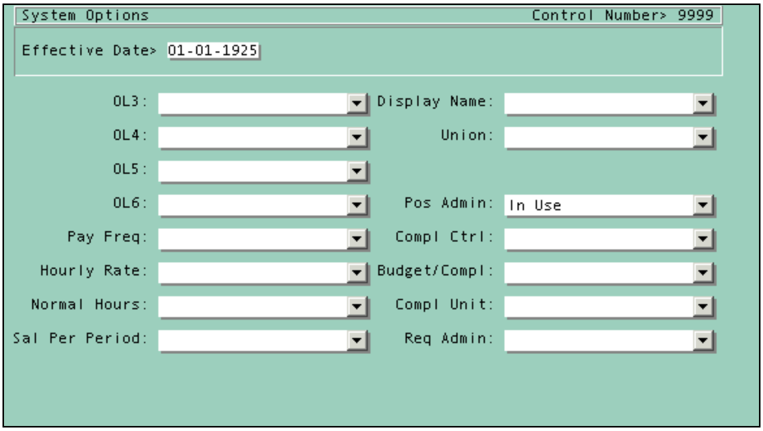
Select 'In Use' from the Position Admin option list.

For practice, select 'In Use'.

3. Click SAVE or press Enter

Position Administration is now in use.

For practice, click Save or press Enter.



Note: *Once Position Administration is in use, no new Logical Employee Models can be created. Before adding new Logical Employee Models, the option in the Position Admin text box must be changed to 'Not In Use'.*

Refer to **Implementing Complement Control** *(on page 223) for information on how to use the System Options form (TG-SCR) to set up Complement Control.*

Customizing User fields

To customize the Position Administration User fields, follow these steps:

1. Determine how you want these User fields to be handled

Determine how you want the two User fields to be labeled as well as the information with which they should be populated.

2. Use Form Builder to change the text box labels

Use Form Builder to change the text box labels for User Field 1 and User Field 2.

3. Set up production Option list PM99 for User Field 2

Add the appropriate option list entries to PM99 using the Option List Editor (CSUPDT).

See also:

- Custom text boxes ***(on page 46)***

For an explanation of the Position Administration User field options.

- Setting up production option lists ***(on page 51)***

For an explanation of how to add entries for option list PM99.

Review of Questions Answered

1. What are the advantages of using Organization Units?

2. What are the advantages of using Jobs and Positions?

3. What levels of data can be held by Position Administration?

4. Which Position Administration option lists are mandatory?

5. What is the relationship between Organization Units and Organization Levels 1 to 6?

6. How does the information in Position Administration interact with the Job Assignment/Changes form (05-SCR)?

7. What is the function of Position Administration Control Numbers?

8. What entries are available for customization?

9. What extra security might be needed for Position Administration?

10. What menus might need to be customized for Position Administration?

PART 2

Setting Up and Maintaining Position Administration Data

In This Section

CHAPTER 5

Establishing Organization Units

In This Chapter

Introduction

Position Administration facilitates the setup of Organization Units. This section explains Organization Units and how it they are set up.

Organization Units

Organization Units are defined as groups of Positions (for example, Accounts Department). They can be set up to reflect the structure of your organization. It is not essential that you set up Organization Units to use Position Administration. However, there are some advantages to setting up Organization Units:

- Many of the delivered reports and queries will group data by Organization Unit. This will allow managers to see data such as Headcount, budget details, and other analysis reporting by logical groupings.

- If you do not implement Organization Units, you will not be able to reorganize the organization when the divisions, departments, and so forth of your organization change.

- Position Administration Hierarchical Security needs Organization Units to function.

Tasks

The following tasks are covered in this section:

- Entering default level names for Organization Units
- Setting up Organization Units
- Entering basic details for Organization Units
- Viewing the existing organization structure
- Entering budget data for Organization Units
- Entering document references for Organization Units

Prerequisites

Before you can begin to set up Organization Units, you must ensure that Position Administration implementation tasks have been completed.

☞ *Refer to* **Implementing Position Administration** *(on page 33) for details about the implementation tasks.*

Questions answered

The following questions are answered in this section:

1. How can Organization Units be used to imply relationships?
2. Why are Organization Unit default level names used?
3. How may Organization Unit budget data be used?

Organization Unit default level names and their uses

Level names can be applied to your Organization Units. These level names provide a description of the level at which the Organization Unit resides in the organization structure (for example, division, department). You can apply default level names so that each time you access information about an Organization Unit (or about a Position that belongs to an Organization Unit), the system determines at what level the Unit sits in the organization structure, and it applies the default level name to the Unit.

As an example, you may decide that for your Organization Unit structure, the following default level names should apply:

- Level 1 - Organization
- Level 2 - Division
- Level 3 - Department

You can override the default level name for a particular Organization Unit by entering an override name in the Level Name text box on the Organization Unit - Basic Details form. The original default level name will be displayed above the text box for your information.

Taking the above example a step further, if you had four Organization Units at level 3, but one of them was known as a 'team' rather than a 'department,' you could override the default level name for that Organization Unit and change it to 'team'. The default level name of 'department' would still apply to the other three level 3 Organization Units.

Default level names are entered using the Organization Unit - Default Level Names form (M44SCR).

You do not have to set up any default level names (other than the top level) if your organization does not conform to this type of setup.

See also:

- Entering default level names for Organization Units ***(on page 71)***

For directions on how to enter default level names for Organization Units.

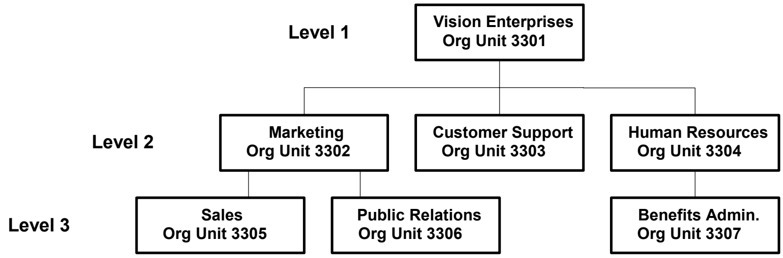
- Entering basic details for Organization Units ***(on page 73)***

For directions on how to override the default level names.

Organization Units

Organization Units are an optional feature in Position Administration; they are used to group Positions in a hierarchical manner for budgeting and reporting purposes. Organization Units can be used to build organization structures, reflecting the way your organization is set up. For example, your divisions, departments and so forth, can be reflected by establishing various Organization Units.

The diagram below illustrates how Organization Units can be related to form an organization structure.



Organization Units usually have a 'belongs to' relationship with an Organization Unit higher up the organization structure. This means that you can relate Organization Units to each other in a hierarchical manner. The top Organization Unit in the hierarchy must always belong to itself. This will automatically be assigned to level 1 in the organization structure. Up to 999 levels of Organization Units are permitted in an organization structure.

Once an organization structure has been established, it can be changed at any time because of a reorganization, and so on. A history of past organization structures is easily kept and maintained.

Organization Units are assigned a description and a unique, up to six-character, alphanumeric code. This code can be part of a logical Organization Unit numbering system, but keep in mind that if you restructure your organization, these options may no longer be meaningful.

Organization Units are set up on the Organization Unit - Set Up/Maintenance form (M48SCR). Data elements recorded on this form include the following:

- Organization Unit code
- Effective Date
- Description of Organization Unit

Once you have set up your Organization Units, additional basic details about each Organization Unit can be entered on the Organization Unit - Basic Details form (M46SCR). This form is where the 'belongs to' relationship is defined. Other data elements recorded on this form include:

- Geographic Range—Used to allow each location to have its own range for one salary grade. This value is inherited at the Incumbent level where it can be overridden.
- Physical Location—Actual site of the Organization Unit (for example, Building A).

Your organization structure can be viewed on the Organization Structure form (M45SCR). The Organization Unit - Basic Details form (M46SCR) can be accessed from this form for each Organization Unit. This is where the organization structure can be changed by entering a new Effective Date.

See also:

- Setting up Organization Units ***(on page 72)***

For detailed directions on how to set up and enter the basic details for Organization Units.

- Viewing the existing organization structure ***(on page 208)***

For detailed instructions on how to display an organization structure.

Apply the Concept

List the advantages of setting up Organization Units within Position Administration.

Apply the Concept

Fill in the missing word(s):

An organization structure can have up to ___________ Organization unit levels.

Apply the Concept

Fill in the missing word(s):

When defining the top Organization Unit, you must assign the 'belongs to' relationship for the Organization Unit to ________________.

Apply the Concept

Fill in the missing word(s):

Organization Units group Positions in a _________________manner.

Apply the Concept

Consider that Organization Unit default levels apply to your current organization. Describe how you would set up each Organization Unit level. What is the major advantage to setting up these levels?

Uses of Organization Unit budget data

You can enter a budget against each Organization Unit in one or more of the following ways:

- By Headcount - the number of individual Incumbents budgeted for the Organization Unit (for example, 25)
- By Full Time Equivalent (FTE) Units (for example, 1.00)
- By Hours (for example, 40.00)
- By Salary cost of the Organization Unit, or by total salaries within the Organization Unit (for example, 100,000.00)

Budget numbers can be set up to reflect a pay period, week, month, and so forth. The system can use these budgets to compare actuals with budgets so you can manage employee numbers and expenditures.

Organization Unit budget data is entered on the Organization Unit - Budget form (M47SCR).

See also:

- Entering budget data for Organization Units ***(on page 76)***

For directions on how to enter budget data for Organization Units.

Apply the Concept

Identify the ways in which you can enter Organization Unit budget information.

Organization Unit document reference options

Often there are many different computer files or physical file folders containing documents related to each Organization Unit in an organization. An example of a document is an organization chart. Position Administration provides a way for you to track where to go to find these important documents.

Document references can be recorded in one or more of the following ways:

- File reference (for example, path and file on a personal computer or a filing cabinet)
- Format of document (for example, WordPerfect, Microsoft Word)
- Type of file (for example, Job Description)

Document references for Organization Units are entered on the Organization Unit - Document Reference form (M49SCR).

See also:

- Entering document references for Organization Units ***(on page 78)***

For directions on how to enter document references for Organization Units.

Detailed Directions

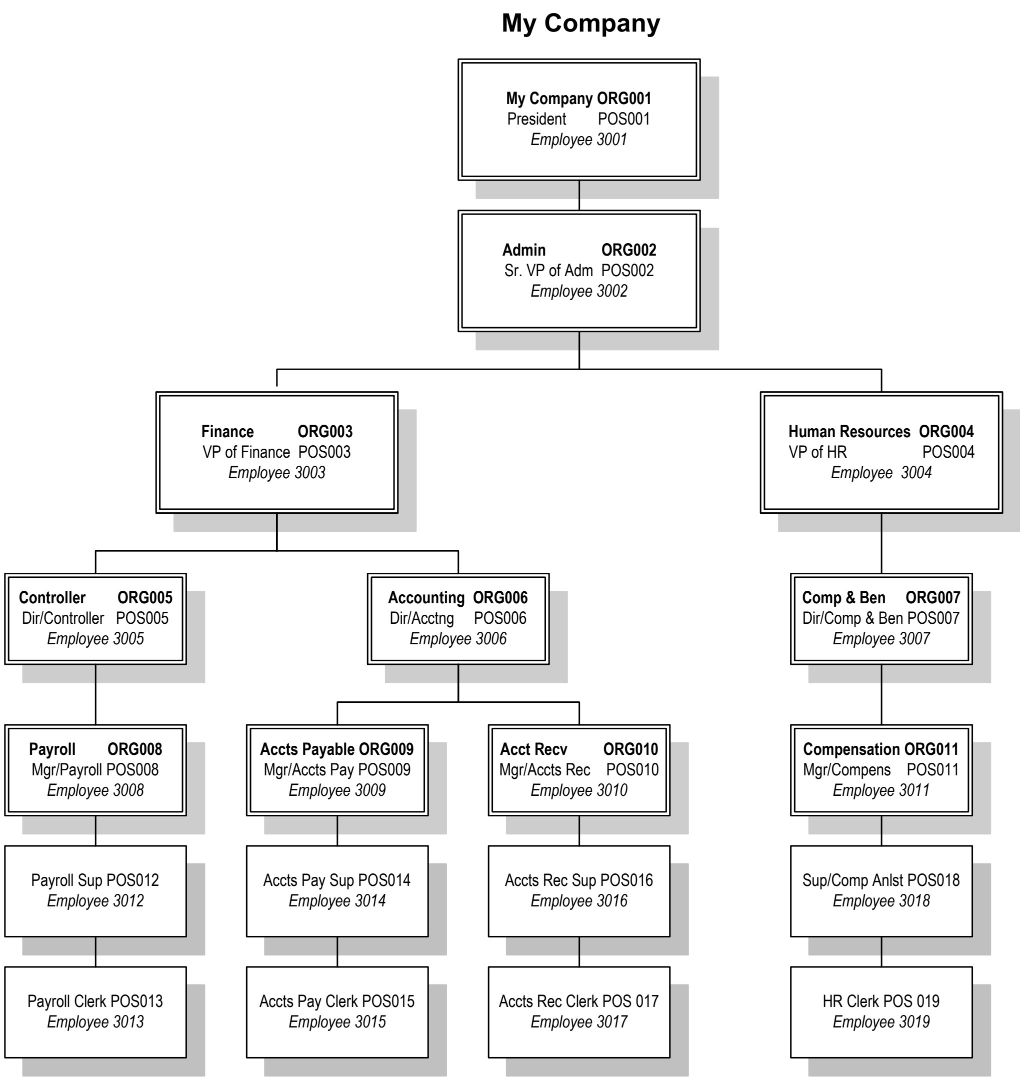
This section provides detailed directions on completing a business task.

Prior to completing these tasks, you must verify that the Company-To-Rules Cross-Reference for HR (AX-SCR) has the correct entry for Position Administration, and that Position Administration is 'In Use' as defined on the Systems Options form (TG-SCR).

Tasks

Completing the Guided Practice

Use this organization chart to complete the tasks that follow:



Entering default level names for Organization Units

Before entering any default level names for your Organization Units, one Organization Unit must be designated as the top Organization Unit. This means this Organization Unit will have a 'belongs to' relationship to itself.

1. Access the Organization Unit - Default Level Names form (M44SCR)

Access this form by making the following selection from the Navigator:

Component:	Position Administration
Process:	Organization Unit Details
Task:	Setup Org Level Default Names

For practice, access the Organization Unit - Default Level Names form (M44SCR).

2. Click New

Click the New button at the bottom of the form to enter a default level name for an Organization Unit. An entry panel is displayed.

For practice, click New.

3. Enter the Effective Date

Enter the Effective Date of this entry in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere) or leave the current date in the text box as the Effective Date.

For practice, type '06-01-2002' (US and Canada) or '01-06-2002' (elsewhere).

4. Enter the Level (optional)

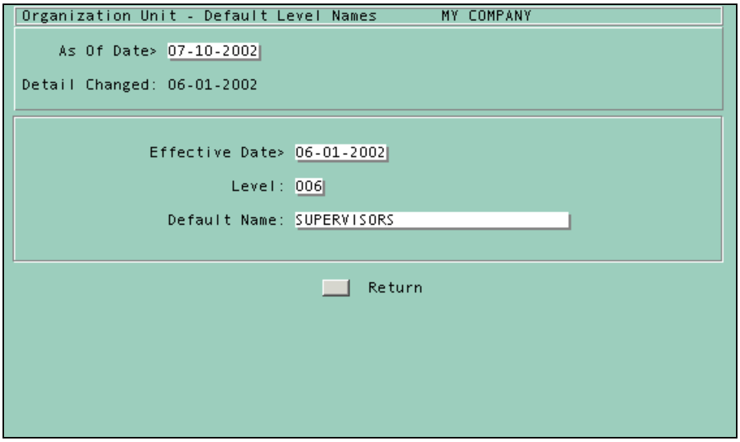
Change the Level number or leave the system-assigned value (for example, level 001, 002, 003).

For practice, type '006'.

5. Enter the level name

Enter the default level name.

For practice, type 'Supervisors'.



6. Click Return or press Enter

The default level name is established and displayed with the level number for verification.

For practice, click Return.

For practice, repeat these steps (starting at Step 2) to set up the following default level name:
007—Clerks

See also:

- Organization Unit default level names and their uses ***(on page 63)***

For an explanation of how Organization Unit level names and default level names are used.

Setting up Organization Units

1. Access the Organization Unit - Set Up/Maintenance form (M48SCR)

Access this form by making the following selection from the Navigator:

Component:	Position Administration
Process:	Organization Unit Details
Task:	Setup a New Organization Unit

For practice, access the Organization Unit - Set Up/Maintenance form (M48SCR).

2. Enter the Org Unit value

Enter a unique, alphanumeric Organization Unit value, up to six characters in length.

For practice, type 'ORG009'.

3. Enter the Effective Date

Enter the Effective Date for the Organization Unit setup. Dates are entered in MM-DD-CCYY format (US and Canada) or DD-MM-CCYY (elsewhere).

For practice, type '06-01-2002' (US and Canada) or '01-06-2002' (elsewhere).

4. Enter the Description

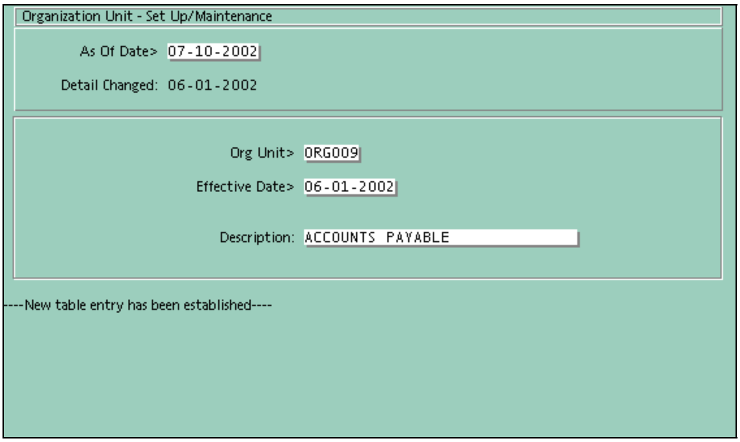
Enter an up-to-30-character Description of the Organization Unit.

For practice, type 'Accounts Payable'.

5. Click Save or press Enter

The Organization Unit is set up.

For practice, click Save.



For practice, repeat these steps for these Org Units:
ORG010—Accounts Receivable
ORG011—Compensation

See also:

- Organization Units ***(on page 35)***

For an explanation of how organization relationships are established.

Entering basic details for Organization Units

Use the following 'Belong To' information for the Guided Practice in this task:

Title Bar	Belongs To	Title

Accounts Payable	Accounting	Manager
Accounts Receivable	Accounting	Manager
Compensation	Comp and Benefits	Manager

1. Access the Organization Unit - Basic Details form (M46SCR)

Access this form by making the following selection from the Navigator:

Component: Position Administration
Process: Organization Unit Details
Task: Basic Details

For practice, access the Organization Unit - Basic Details form (M46SCR) for the Accounts Payable Organization Unit (ORG009).

2. Enter the Effective Date

Enter the Effective Date of this entry in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere), or leave the Effective Date as entered on the Organization Unit - Set Up/Maintenance form (M48SCR).

For practice, type '06-01-2002' (US and Canada) or '01-06-2002' (elsewhere).

3. Select a Reason

Select a Reason from the Option list.

For practice, leave the Reason as 'Created'.

4. Select a Belongs To Organization Unit name

Select the Belongs To Organization Unit name from the list that is generated from the entries made on the Organization Unit - Set Up/Maintenance form (M48SCR).

For practice, select 'Accounting'.

5. Select a Geographic Range (optional)

Select a Geographic Range from the option list. This is an optional text box you may use if you want to categorize your Organization Units by Geographic Range. You will need to edit the option list to include the Geographic Ranges you want.

For practice, select 'All Locations'.

6. Select a Physical Location (optional)

Select a Physical Location from the option list. This is an optional text box you may use if you want to categorize your Organization Units by Physical Location. You will need to edit the option list to include the locations you want.

For practice, select 'Building A'.

7. Enter the level name (optional)

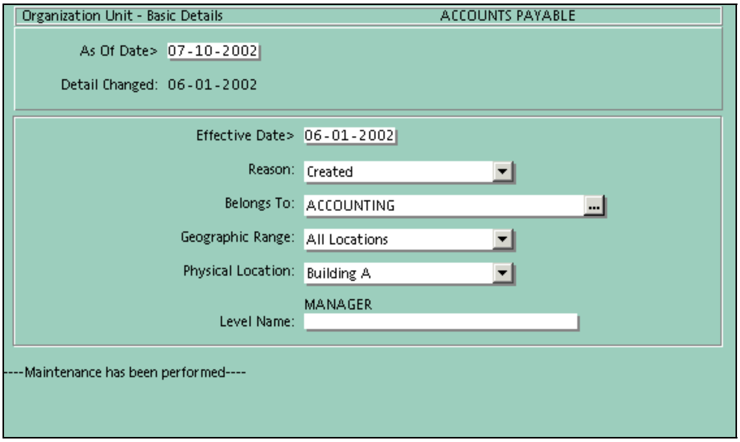
Enter the name for this Organization Unit level if you do not want the default level name to apply. Do not enter a name here if you want to use the default level name displayed above the entry box. Default level names are entered on the Organization Unit - Default Level Names form (M44SCR).

For practice, leave this text box blank to accept the default Level Name.

8. Click Save or press Enter

The basic details for the Organization Unit are established.

For practice, click Save.



Organization Unit - Basic Details ACCOUNTS PAYABLE
As Of Date> 07-10-2002
Detail Changed: 06-01-2002
Effective Date> 06-01-2002
Reason: Created
Belongs To: ACCOUNTING
Geographic Range: All Locations
Physical Location: Building A
MANAGER
Level Name:
----Maintenance has been performed----

For practice, repeat these steps for these Org Units:
ORG010—Accounts Receivable
ORG011—Compensation

See also:

- Organization Units ***(on page 35)***
For an explanation of Organization Unit basic detail data.

- Organization Unit default level names and their uses ***(on page 63)***
For an explanation of how Organization Unit level names and default level names are used.

Viewing the existing organization structure

1. Access the Organization Structure form (M45SCR)

Access this form by making the following selection from the Navigator:

Component: Position Administration
Process: Organization Unit Details
Task: Organization Structure

For practice, access the Organization Structure form (M45SCR).

2. View the organization structure

- A minus symbol (-) displayed to the left of an Organization Unit means the Organization Units belonging to it are being displayed. Click the -/+ button to view the Organization Unit to which it belongs (if any).
- The plus symbol (+) displayed to the left of an Organization Unit means there are Organization Units belonging to that Organization Unit. Click the -/+ button to view these.
- When viewing an Organization Unit, only those Organization Units to which it belongs are displayed.
- The lowest level name and number in the structure that you are currently viewing are shown at the top of the form along with the Organization Unit to which this level belongs.
- The level number indicates how far down in the organization structure the Organization Unit resides.

Note: *The Top button at the bottom of the form returns you to the top of the organization structure.*

For practice, click the button for 'ORG002 Administration' that has the plus symbol (+) displayed to the left.

Entering budget data for Organization Units

To enter budget data for an Organization Unit, follow these steps:

1. Access the Organization Unit - Budget form (M47SCR)

Access the Organization Unit - Budget form (M47SCR) by making the following selection from the Navigator:

Component:	Position Administration
Process:	Organization Unit Details
Task:	Budget

For practice, access the Organization Unit - Budget form (M47SCR) for the Administration Org Unit (ORG002) .

If the Organization Unit - Basic Details form (M46SCR) for the Organization set up in the task 'Setting up Organization Units' does not display, use the Choose an Org Unit button to display the form for the ***Administration*** (ORG002) organization.

2. Enter the Effective Date

Enter the Effective Date of this entry in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere) or leave the current date in the text box as the Effective Date.

For practice, type '06-01-2002' (US and Canada) or '01-06-2002' (elsewhere).

3. Enter the Headcount (optional)

Enter the number of individual Incumbents budgeted for the Organization Unit (for example, 25).

For practice, leave this text box blank.

4. Enter the FTE (optional)

Enter the number of FTE units budgeted for the Organization Unit.

For practice, type '1.0'.

5. Enter the Hours (optional)

Enter the number of Hours budgeted for the Organization Unit.

For practice, leave this text box blank.

6. Enter the Salary (optional)

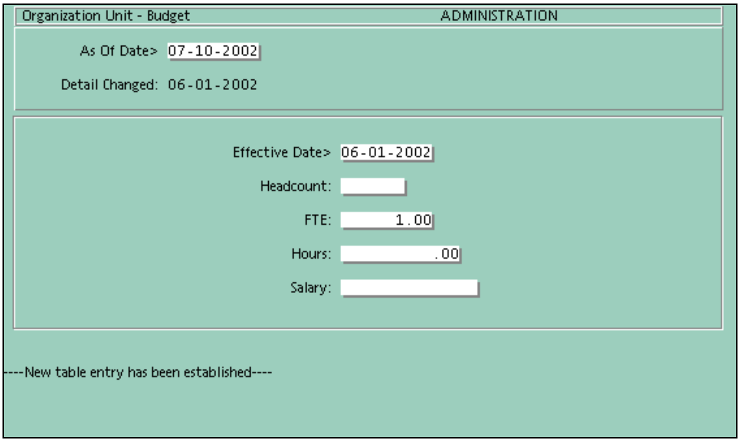
Enter the total Salaries for all Positions within the Organization Unit (for example, 100,000.00).

For practice, leave this text box blank.

7. Click Save or press Enter

The budget data for the Organization Unit is established.

For practice, click Save or press Enter.



For practice, repeat these steps for ORG003 (Finance).

See also:

- Uses of Organization Unit budget data ***(on page 67)***

For an explanation of the options when setting up budget data.

Entering document references for Organization Units

1. Access the Organization Unit - Documentation Reference form (M49SCR)

Access this form by making the following selection from the Navigator:

Component:	Position Administration
Process:	Organization Unit Details
Task:	Documentation Reference

For practice, access the Organization Unit - Documentation Reference form (M49SCR) for ORG002 - Administration.

If the Organization Unit - Basic Details form (M46SCR) for the Organization set up in the task 'Setting up Organization Units' does not display, use the Choose an Org Unit button to display the form for the ***Administration*** (ORG002) organization.

2. Click New

Click the New button in the bottom left corner of the form to display the Document Reference entry form panel.

For practice, click New.

3. Enter the Effective Date

Enter the Effective Date in the format MM-DD-CCYY (US and Canada) or MM-DD-CCYY (elsewhere) or leave the current date in the text box as the Effective Date.

For practice, type '06-01-2002' (US and Canada) or '01-06-2002' (elsewhere).

4. Select the Type Of File

Select the Type Of File from the option list (for example, Org Description). This option list should be edited to include all the document Types you want.

For practice, select 'Organization Chart'.

5. Select the Format

Select the Format of the document from the option list (for example, Microsoft Word). This option list should be edited to include all of the Formats you want.

For practice, select 'Org Plus'.

6. Enter the File Reference (optional)

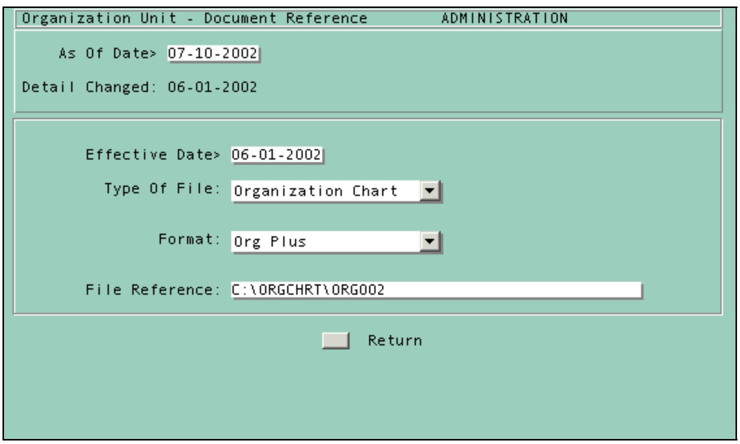
Enter an up-to-30-character File Reference. This should be the directory path of the file.

For practice, type 'C:\ORGCHRT\ORG002'.

7. Click Save or press Enter

The document reference is now entered.

For practice, click Save.



For practice, repeat these steps for ORG003 - Finance with a file reference of 'C:\ORGCHRT\ORG003'.

See also:

- Organization Unit document reference options ***(on page 68)***

For an explanation of document references.

Review of Questions Answered

1. How can Organization Units be used to imply relationships?

2. How are Organization Unit default level names used?

5. How may Organization Unit budget data be used?

CHAPTER 6

Entering Job and Position Data

In This Chapter

Introduction

Position Administration provides the capability to enter data about Jobs and Positions. These data elements include:

- Skills/competencies required
- Memberships required
- Education required
- Training required
- Licenses required
- Experience required
- Evaluations
- Succession
- Document references

The entry of these data elements is optional and is not required. This section explains these data elements and how each is entered into the system.

Jobs

A Job is defined as a generic description of a role within the organization (for example, Manager). It is not essential that you set up Jobs to use Position Administration.

However, there is an advantage to setting up Jobs:

- Most Job level data are inherited by Position level forms—you will not have to enter data twice to view and report on these data at both the Job and Position levels.

Positions

A Position is defined as a specific role in an organization for someone performing a particular Job (for example, Sales Manager). Positions are likely to be related to each other hierarchically, each Position reporting to another higher up in the organization.

In order to use Position Administration, Positions are required.

Tasks

The following tasks are covered in this section:

- Setting up Jobs
- Entering basic details for Jobs
- Setting up Positions
- Entering basic details for Positions
- Entering location data for Positions
- Entering budget data for Positions
- Entering skills/competencies required for Jobs and Positions
- Entering memberships required for Jobs and Positions
- Entering education required for Jobs and Positions
- Entering training required for Jobs and Positions
- Entering licenses required for Jobs and Positions
- Entering experience required for Jobs and Positions
- Entering evaluations for Jobs and Positions
- Entering succession data for Jobs and Positions
- Entering document references for Jobs and Positions

Prerequisites

Before you can enter the data described in this section, you must ensure that your Organization Units have been set up.

☞ *Refer to* **Establishing Organization Units** *(on page 61) for more information.*

Questions answered

The following questions are answered in this section:

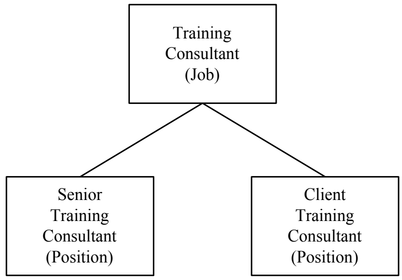
1. What are the Job and Position requirement options?
2. What are the uses of Jobs and Positions?
3. What can Position location data tell you?
4. How are Job evaluations used to determine the relative worth of Jobs?
5. What are the uses of Job succession data?
6. What types of document references can be entered?

Uses of Jobs and Positions

The generic details of each occupation within your organization can be recorded as a Job. For example, you may have the following Jobs within your organization:

- Training Consultant
- Administration Officer
- Manager

The Positions that relate to each generic Job description are then set up. For example, the following positions relate to the Job of Training Consultant:



It is not essential that you set up Jobs to use Position Administration. However, any data entered at the Job level will be inherited by all Positions associated with that Job. Using Jobs and Positions in this way will reduce data-entry efforts.

Jobs are set up on the Job - Set Up/Maintenance form (M18SCR). Data elements recorded on this form include:

- Job option
- Effective Date
- Description of Job

Once you have set up your Jobs, additional basic details about each Job can optionally be entered. These basic details include the following:

Basic details	Description
Change Reason	Reason the job was created or changed (for example, Decreased Budget).
Grade	Grade for the Job (inherited by Position level).
Occupation Group	Job's Occupation Group (for example, Trainer). Set this up to meet your needs.
Job Family	Job's Family (for example, Technician). Set this up to meet your needs.

The basic details for a Job can be set up on the Job - Basic Details form (M10SCR).

You can enter the details of each Position in your organization's structure under a Position title. Typical examples of Positions are as follows:

- Training Consultant - Client
- Administration Officer - North West
- Sales Manager

Positions are set up on the Position - Set Up/Maintenance form(M28SCR). Once you have set up your Positions, you can attach them to Jobs using the Position - Basic Details form (M20SCR). The Position - Basic Details form (M20SCR) will also display the inherited Job level data above the entry text boxes for your information.

See also:

For directions on how to set up Positions.

- Entering basic details for Positions ***(on page 101)***

For directions on how to enter basic Position details.

Apply the Concept

List the advantages of setting up Jobs within Position Administration.

Apply the Concept

Fill in the missing word(s):

Organization and Job information are ___________________ to setting up Position Administration.

Apply the Concept

Fill in the missing word(s):

Setting up Positions is ___________________when implementing Position Administration.

Uses of Position location data

Position location data indicates where a Position fits in the reporting structure of the organization, including the following:

- Organization Unit the Position belongs to
- Positions the currently displayed Position reports to, directly and indirectly
- Physical Location of the Position

Position location data is entered on the Position - Location form (M30SCR).

See also:

- Entering location data for Positions ***(on page 104)***

For directions on how to enter location data for Positions.

Apply the Concept
Explain how Position location data can fit in the reporting structure of the organization.

Uses of Position budget data

You can enter a budget against each Position in one or more of the following ways:

- By Headcount—the number of individual Incumbents budgeted for the Position (for example, 25)
- By Full Time Equivalent (FTE) Units (for example, 1.00)
- By Hours (for example, 40.00)
- By Salary cost of the Position, or by total salaries for all Positions within the Organization Unit (for example, 100,000.00)

Budget numbers can be set up to reflect a pay period, week, month, and so forth. The system can use these budgets to compare actuals with budgets so you can manage employee numbers and expenditures.

Position Budget data is entered on the Position - Budget form (M34SCR).

See also:

- Entering budget data for Positions ***(on page 105)***

For directions on how to enter budget data for Positions.

Job and Position requirement options

Jobs and Positions can have some specific requirements that can be entered on optional Position Administration forms. The types of Job and Position requirements that can be entered include:

- Skills/competencies—Any skills needed for the Job or Position
- Memberships—Any memberships required for the Job or Position
- Education—Any educational requirements needed for the Job or Position
- Training—Any training courses needed for the Job or Position
- Licenses—Any licenses required for the Job or Position
- Experience—Any prior experience required for the Job or Position

Any requirements entered for a Job are inherited by all Positions associated with the Job.

Position Administration provides several forms to record Job requirement information and Position requirement information. These forms are optional.

Job Form	Position Form
Job - Skills/Competencies Required (M13SCR)	Position - Skills/Competencies Required (M23SCR)
Job - Memberships Required (M14SCR)	Position - Memberships Required (M24SCR)
Job - Education Required (M15SCR)	Position - Education Required (M25SCR)
Job - Training Required (M1TSCR)	Position - Training Required (M2TSCR)
Job - Licenses Required (M16SCR)	Position - Licenses Required (M26SCR)
Job - Experience Required (M1ESCR)	Position - Experience Required (M2ESCR)

See also:

- Entering skills/competencies required for Jobs and Positions ***(on page 107)***
For directions on how to enter the skills/competencies required for Jobs and Positions.

- Entering memberships required for Jobs and Positions ***(on page 109)***
For directions on how to enter the memberships required for Jobs and Positions.

- Entering education required for Jobs and Positions ***(on page 111)***
For directions on how to enter the education required for Jobs and Positions.

- Entering training required for Jobs and Positions ***(on page 112)***
For directions on how to enter the training required for Jobs and Positions.

- Entering licenses required for Jobs and Positions ***(on page 114)***
For directions on how to enter the licenses required for Jobs and Positions.

- Entering experience required for Jobs and Positions ***(on page 116)***
For directions on how to enter the experience required for Jobs and Positions.

Apply the Concept

Describe the information you would like to maintain or are currently maintaining for the Jobs and Positions within your organization.

Job and Position evaluations and their uses

If you use a points-based Job evaluation system to evaluate the relative worth of the Jobs and Positions within the organization, you can track the results by entering point values for various criteria that you define for each Job and Position. The point values for each of the criteria are added together to produce the total number of points.

A rating can also be assigned to each criterion/point value. This rating can be a description relating to the points assigned to each criterion. Also, if your organization has more than one Job or Position evaluation scheme, different types of evaluations can be entered. An effective date of the evaluation and any other comments can also be entered.

A sample Position evaluation is shown below.

Position: Payroll Manager	**Effective Date: 06-01-2002**	**Type: Internal**	**Total Points: 750**
Criterion	**Points**	**Rating**	**Comments**
Knowledge	250	Rating A	
Accountability	350	Rating B	
Judgment	150	Rating C	

The Job - Evaluation form (M12SCR) is used to enter and maintain evaluation details for a Job. This form is optional. Any evaluations for a Job are inherited by all Positions associated with the Job.

The Position - Evaluation form (M22SCR)is used to enter and maintain evaluation details for a Position. This form is optional.

Note: *There is no connection between this evaluation process and the Job ratings that can be entered on the Job Points form (TC-SCR) in Human Resources Administration.*

See also:

- Entering evaluations for Jobs and Positions ***(on page 117)***
For directions on how to enter Job and Position evaluations.

Apply the Concept
Describe the Job evaluation system your organization is currently using.

Uses of Job and Position succession data

The Jobs and Positions within an organization may be filled by employees in a particular sequence. For example, an employee's first Job might be Mail Room Trainee, followed by Mail Room Clerk, followed by Mail Room Supervisor.

Possible succeeding Jobs can be entered using the Job - Succession form (M17SCR) and Position - Succession form (M27SCR). The succession information can then be used to identify possible next Jobs and Positions when promoting employees. Any entered Job successions are inherited by all Positions associated with the Job.

See also:

- Entering succession data for Jobs and Positions ***(on page 121)***

For directions on how to enter Job and Position succession data.

Job and Position document reference options

Often there are many different computer files or physical file folders containing documents related to each Job and Position in an organization. Examples of these documents are Job and Position descriptions. Position Administration provides a way for you to track where to go to find these important documents.

Document references can be recorded in one or more of the following ways:

- File reference (for example, path and file on a personal computer or a filing cabinet)
- Format of document (for example, WordPerfect, Microsoft Word)
- Type of file (for example, Job Description)

Document references for Jobs are entered on the Job - Document Reference form (M19SCR). These document references are not inherited by the Positions associated with the Job.

Document references for Positions are entered on the Position - Document Reference form (M29SCR).

See also:

- Entering document references for Jobs and Positions ***(on page 122)***

For directions on how to enter document references for Jobs and Positions.

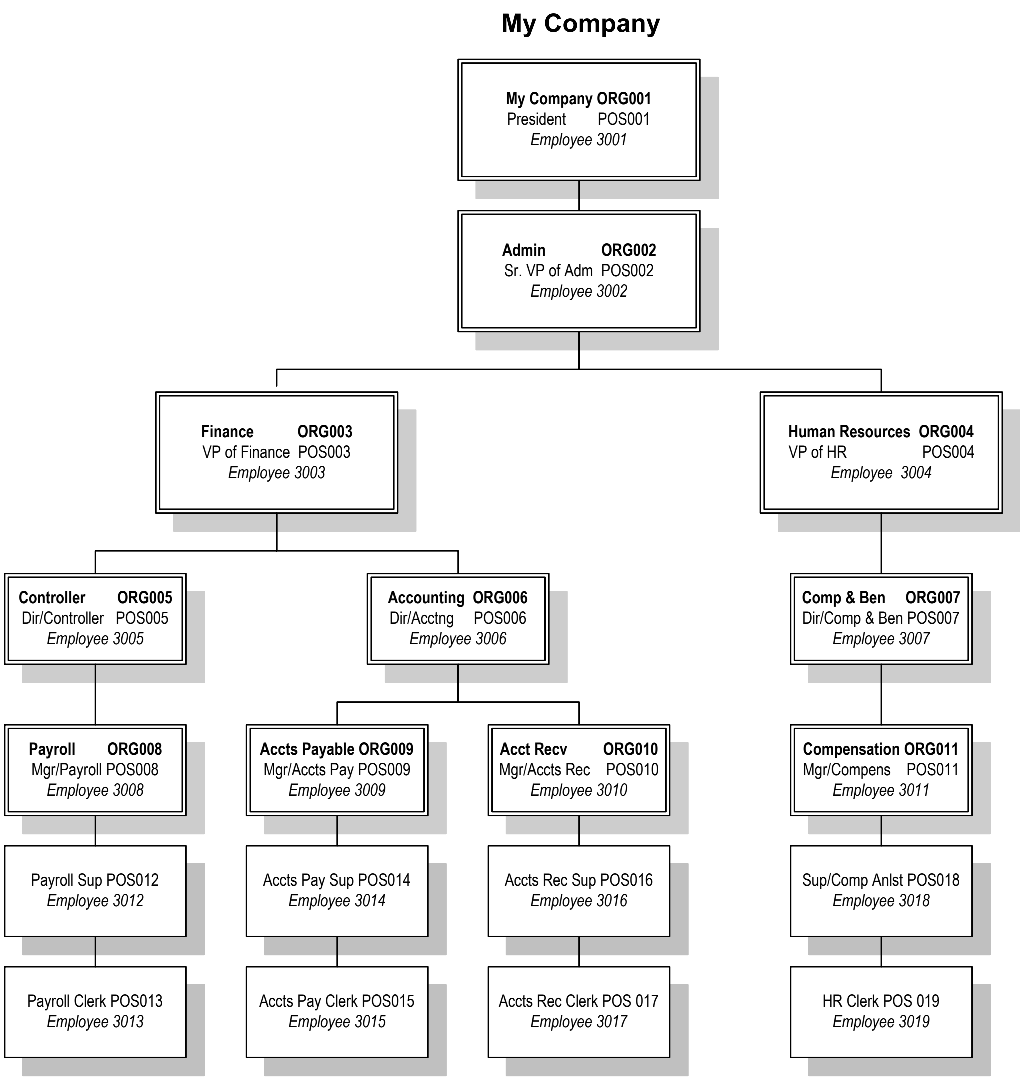
Detailed Directions

This section provides detailed directions on completing a business task.

Tasks

Completing the Guided Practice

Use this organization chart to complete the tasks that follow:



Setting up Jobs

1. Access the Job - Set Up/Maintenance form (M18SCR)

Access this form by making the following selection from the Navigator:

Component:	Position Administration
Process:	Job Details
Task:	Setup a New Job

For practice, access the Job - Set Up/Maintenance form (M18SCR).

Note: *Clear the form to delete any prefilled text box values*

2. Enter the Job

Enter a unique, six-character, alphanumeric Job value.

For practice, type 'JOB006'.

3. Enter the Effective Date

Enter the Effective Date for the Job in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere) or leave the current date in the text box as the Effective Date.

For practice, type '06-01-2002' (US and Canada) or '01-06-2002' (elsewhere).

4. Enter the Description

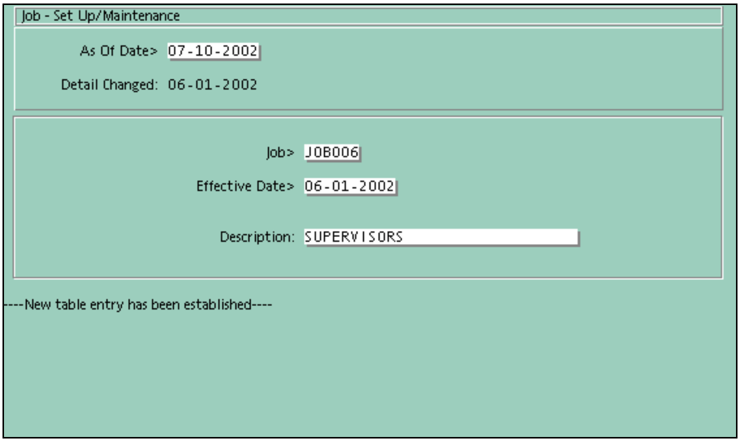
Enter an up-to-30-character Description of the Job.

For practice, type 'Supervisors'.

5. Click Save or press Enter

The Job is set up.

For practice, click Save or press Enter.



For practice, repeat these steps for Job 007 'Clerks'.

See also:

- Uses of Jobs and Positions ***(on page 86)***

For an explanation of using Jobs in Position Administration.

Entering basic details for Jobs

1. Access the Job - Basic Details form (M10SCR)

Access this form by making the following selection from the Navigator:

Component: Position Administration
Process: Job Details
Task: Basic Details

For practice, access the Job - Basic Details form (M10SCR) for Supervisors (JOB006).

If the Job - Basic Details form (M10SCR) for the Job set up in the task 'Setting up Jobs' does not display, use the Choose a Job button to search for the ***Supervisors*** Job.

2. **Enter the Effective Date**
Enter the Effective Date for the Job in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere) or leave the current date in the text box as the Effective Date.

For practice, type '06-01-2002' (US and Canada) or '01-06-2002' (elsewhere).

3. **Select the Change Reason (optional)**
Select a Change Reason from the option list or leave the value that was carried over from the Job - Set Up/Maintenance form (M18SCR).

For practice, select 'Created'.

4. **Enter the Grade (optional)**
Enter the salary grade for the Job, using up-to-six alphanumeric characters.

For practice, enter 'A12'.

5. **Select the Occupation Group (optional)**
Select the Occupation Group for this Job from the option list. This option list should be edited to include all of the Occupation Groups you want.

For practice, make a selection of your choice.

6. **Select the Job Family (optional)**
Select the Job Family for this Job from the Option list. This option list should be edited to include all of the Job Families you want.

For practice, make a selection of your choice.

7. **Enter User Field 1 (optional)**
If you have defined User Field 1, enter it here.

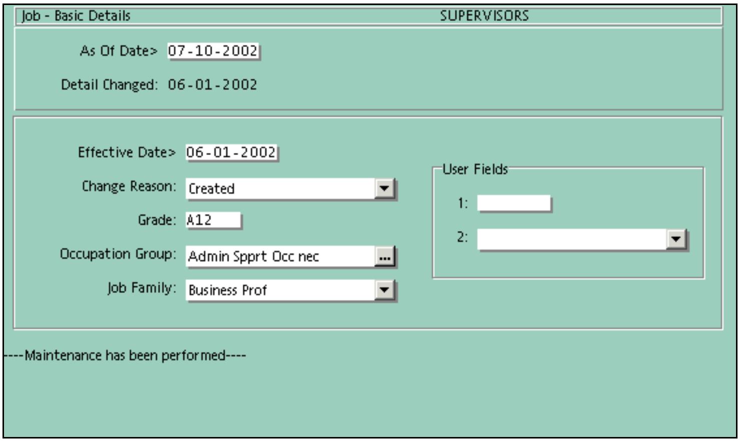
For practice, leave this text box blank.

8. **Select User Field 2 (optional)**
If you have defined User Field 2, select a value here.

For practice, leave this text box blank.

9. **Click Save or press Enter**
The basic details for the Job are set up.

For practice, click Save or press Enter.



Job - Basic Details SUPERVISORS
As Of Date> 07-10-2002
Detail Changed: 06-01-2002
Effective Date> 06-01-2002
Change Reason: Created
Grade: A12
Occupation Group: Admin Spprt Occ nec
Job Family: Business Prof
User Fields
1:
2:
----Maintenance has been performed----

For practice, repeat these steps for Job 007 'Clerks', Grade 'A10'.

See also:

- Uses of Jobs and Positions ***(on page 86)***

For an explanation of using Jobs in Position Administration.

Setting up Positions

1. Access the Position - Set Up/Maintenance form (M28SCR)

Access this form by making the following selection from the Navigator:

Component: Position Administration
Process: Position Details
Task: Setup a New Position

For practice, access the Position - Set Up/Maintenance form (M28SCR).

2. Enter the Position

Enter a unique, six-character, alphanumeric Position option.

For practice, type 'POS009'.

3. Enter the Effective Date

Enter the Effective Date for the Position in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere) or leave the current date in the text box as the Effective Date.

For practice, type '06-01-2002' (US and Canada) or '01-06-2002' (elsewhere).

4. **Enter the Description (optional)**

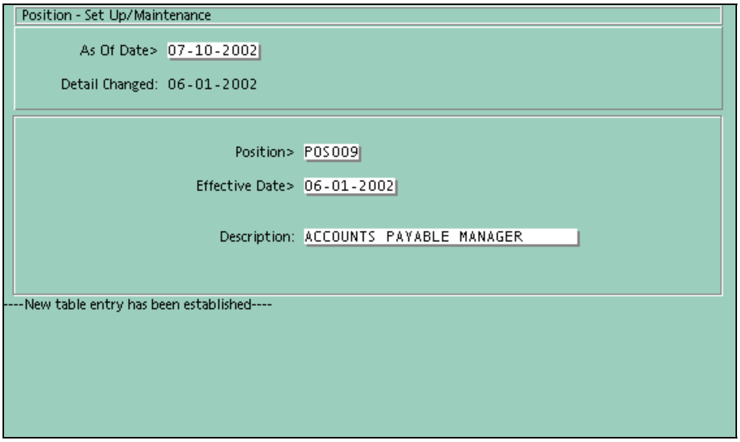
Enter an up-to-30-character Description of the Position.

For practice, type 'Accounts Payable Mgr'.

5. **Click Save or press Enter**

The Position is set up.

For practice, click Save or press Enter.



For practice, repeat these steps for the following positions:
POS010—Accounts Receivable Mgr
POS011—Compensation Manager
POS014—Accounts Payable Supervisor
POS015—Accounts Payable Clerk
POS016—Accounts Receivable Supervisr
POS017—Accounts Receivable Clerk
POS018—Compensation Analyst
POS019—HRIS Clerk

See also:

- Uses of Jobs and Positions ***(on page 86)***

For an explanation of how Positions are used.

Entering basic details for Positions

1. **Access the Position - Basic Details form (M20SCR)**

Access this form by making the following selection from the Navigator:

Component: Position Administration
Process: Position Details
Task: Basic Details

For practice, access the Position - Basic Details form (M20SCR) for Accounts Payable Mgr (POS009).

2. Enter the Effective Date of the Position

Enter the Effective Date for the Position in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere) or leave the current date in the text box as the Effective Date.

For practice, type '06-01-2002' (US and Canada) or '01-06-2002' (elsewhere).

3. Select the Job

Select the related Job. Jobs are set up on the Job - Basic Details form (M10SCR). If you have not created a Job to which this Position is related, leave this text box blank.

For practice, select 'Manager'.

4. Select the Change Reason

Select a Change Reason from the option list or leave the value that was carried over from the Position - Set Up/Maintenance form (M28SCR).

For practice, select 'Created'.

5. Select the Position Status (optional)

Select a Position Status for this Position from the option list (for example, Regular). This option list should be edited to include all of the Position Statuses you want.

For practice, select 'Regular Not Compl'.

6. Select the Employment Status (optional)

Select an Employment Status for this Position from the option list (for example, Full Time). This option list should be edited to include all of the Employment Statuses you want.

For practice, select 'Full Time'.

7. Select the Occupation Group

Select the Occupation Group for this Position from the option list (for example, Accountants). This option list should be edited to include all of the Occupation Groups you want. If no entry is made, the Position inherits the Job details.

For practice, leave this text box blank.

8. Enter the Grade (optional)

Enter the Grade for the Position, up to five alphanumeric characters (for example, A12). If no entry is made, the Position inherits the Job details.

For practice, leave this text box blank.

9. Select the Job Family (optional)

Select the Job Family for this Position from the option list (for example, Manager). This option list should be edited to include all of the Job Families you want. If no entry is made, the Position inherits the Job details.

For practice, leave this text box blank.

10. Select User Field 2 (optional)

If you have defined User Field 2, select an entry here.

For practice, leave this text box blank.

11. Enter User Field 1 (optional)

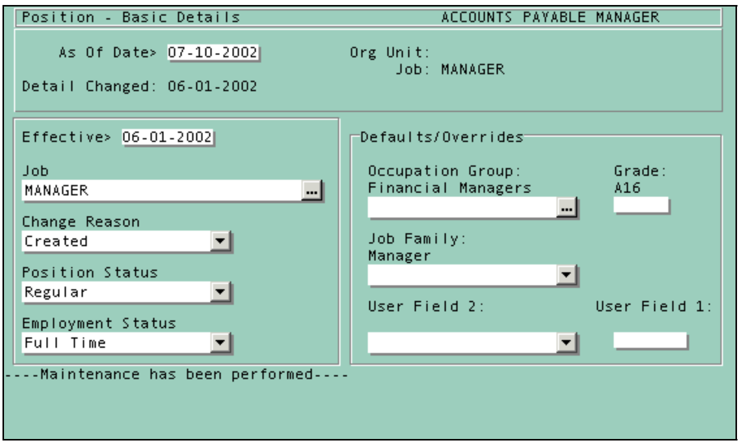
If you have defined User Field 1, enter it here.

For practice, leave this text box blank.

12. Click Save or press Enter

The basic details for the Position are set up.

For practice, click Save or press Enter.



For practice, repeat these steps for the following positions:
POS010—Accounts Receivable Mgr (Job = Manager)
POS011—Compensation Manager (Job = Manager)
POS012—Payroll Supervisor (Job = Supervisors)
POS013—Payroll Clerk (Job = Clerks)
POS014—Accounts Payable Supervisor (Job = Supervisors)
POS015—Accounts Payable Clerk (Job = Clerks)

POS016—Accounts Receivable Supervisor (Job = Supervisors)
POS017—Accounts Receivable Clerk (Job = Clerks)
POS018—Compensation Analyst (Job = Supervisors)
POS019—HRIS Clerk (Job = Clerks)

See also:

- Uses of Jobs and Positions ***(on page 86)***

For an explanation of how Positions are used.

Entering location data for Positions

Note: *Refer to the organization chart for 'My Company' at the beginning of this chapter to find the Organization Unit and the Position to which each Position reports.*

1. Access the Position - Location form (M30SCR)

Access this form by making the following selection from the Navigator:

Component:	Position Administration
Process:	Position Details
Task:	Location

For practice, access the Position - Location form (M30SCR) for the Accounts Payable Manager position (POS009).

2. Enter the Effective Date of the Position

Enter the Effective Date of the Position in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere) or leave the current date in the text box as the Effective Date.

For practice, type '06-01-2002' (US and Canada) or '01-06-2002' (elsewhere).

3. Select the Organization Unit

Select the Organization Unit for this Position. Organization Units are set up on the Organization Unit - Set Up/Maintenance form (M48SCR). If you have not set up Organization Units, leave this text box blank.

For practice, select 'Accounts Payable' (ORG009).

4. Select the Direct Reports To

Select the Position to which this Position directly reports. Positions are set up on the Position Set Up/Maintenance form (M28SCR). All Positions set up will be included in this drop-down list.

For practice, select 'Director of Accounting' (POS006).

5. Select the Indirect Reports To

Select the Position to which this Position indirectly reports. Positions are set up on the Position Set Up/Maintenance form (M28SCR). All Positions set up will be included in this drop-down list.

For practice, select 'Vice President of Finance'.

6. Select the Physical Location

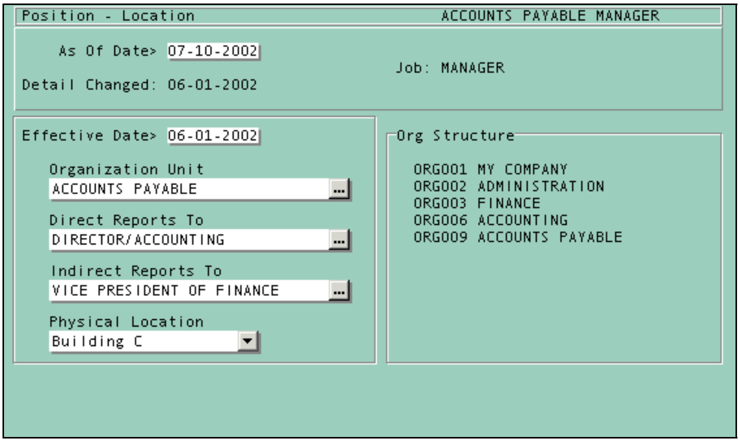
Select the Physical Location of this Position. This option list should be edited to include all of the Physical Locations you want.

For practice, select 'Building C'.

7. Click Save or press Enter

The Position location is now entered.

For practice, click Save or press Enter.



For practice, use the organization chart at the beginning of the Detailed Directions and repeat these steps for the following positions:
POS010—Accounts Receivable Mgr
POS011—Compensation Manager
POS014—Accounts Payable Supervisor
POS015—Accounts Payable Clerk
POS016—Accounts Receivable Supervisor
POS017—Accounts Receivable Clerk
POS018—Compensation Analyst
POS019—HRIS Clerk

See also:

- Uses of Position location data ***(on page 88)***

For an explanation of the uses of location data for Positions.

Entering budget data for Positions

To enter budget data for Positions, follow these steps:

1. Access the Position - Budget form (M34SCR)

Access the Position - Budget form (M34SCR) by making the following selection from the Navigator:

Component:	Position Administration
Process:	Position Details
Task:	Budget

For practice, access the Position - Budget form (M34SCR) for the Accounts Payable Manager position (POS009).

2. Enter the Effective Date

Enter the Effective Date of this entry in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere) or leave the current date in the text box as the Effective Date.

For practice, type '06-01-2002' (US and Canada) or '01-06-2002' (elsewhere).

3. Enter the Headcount (optional)

Enter the number of individual Incumbents budgeted for the Position (for example, 25).

For practice, leave this text box blank.

4. Enter the FTE (optional)

Enter the number of FTE units budgeted for the Position.

For practice, type '1.0'.

5. Enter the Hours (optional)

Enter the number of Hours budgeted for the Position.

For practice, type '40.00'.

6. Enter the Salary (optional)

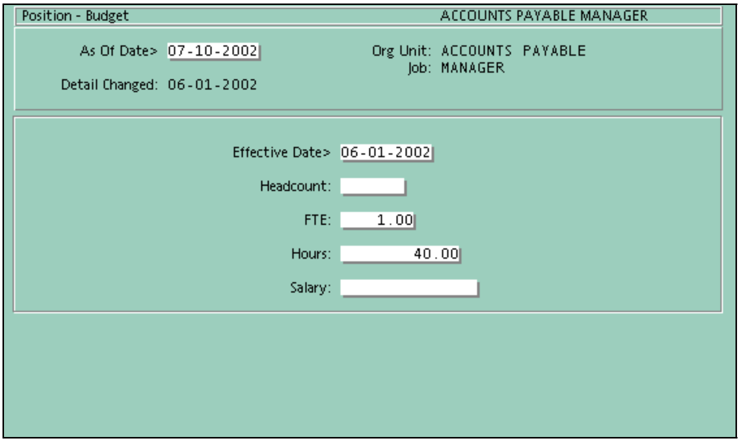
Enter the salary amount budgeted for the Position.

For practice, leave this text box blank.

7. Click Save or press Enter

The budget data for the Position is established.

For practice, click Save or press Enter.



For practice, repeat these steps for the following positions:
POS010—Accounts Receivable Mgr
POS011—Compensation Manager
POS014—Accounts Payable Supervisor
POS015—Accounts Payable Clerk
POS016—Accounts Receivable Supervisor
POS017—Accounts Receivable Clerk
POS018—Comp Analyst
POS019—HRIS Clerk

See also:

- Uses of Position budget data ***(on page 89)***

For an explanation of the options when setting up budget data.

Entering skills/competencies required for Jobs and Positions

1. **Access the Job - Skills/Competencies Required form (M13SCR) or Position - Skills/Competencies Required form (M23SCR)**

   These forms are accessed by making the following selection from the Navigator:

   Component: Position Administration
   Process: Job Details
   Task: Skills Required

or

Component: Position Administration
Process: Position Details
Task: Skills Required

For practice, access the Job - Skills/Competencies Required form (M13SCR) for the Job of Manager (JOB005).

2. Click New

Click the New button in the bottom left corner of the form to display the Skills/Competencies Required entry form panel.

For practice, click New.

3. Enter the Effective Date

Enter the Effective Date in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere) or leave the current date in the text box as the Effective Date.

For practice, type '06-01-2002' (US and Canada) or '01-06-2002' (elsewhere).

4. Select the Skill/Competency

Select the Skill/Competency required from the option list. This option list should be edited to include all the skills/competencies you want.

For practice, select 'Account Management'.

5. Select the Proficiency

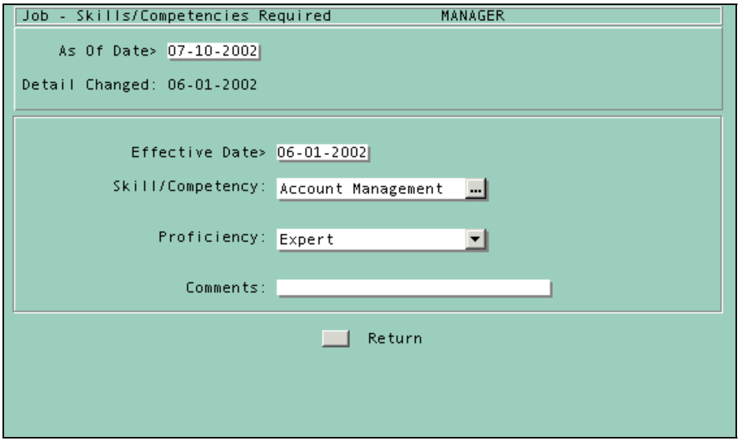
Select a Proficiency level from the option list. This option list should be edited to include all the proficiencies you want.

For practice, select 'Expert'.

6. Enter a Comment (optional)

Enter an up-to-30-character Comment describing the Skill/Competency required.

For practice, leave this text box blank.



7. Click Save or press Enter

The skill/competency is now entered.

For practice, click Save or press Enter.

For practice, repeat these steps for the Job of Supervisors (JOB006). Then use the Position - Skills/Competencies Required form (M23SCR) to enter skills for the Positions of Payroll Supervisor (POS012) and Payroll Clerk (POS013).

See also:

- Job and Position requirement options ***(on page 90)***

For an explanation of skills and competencies required.

Entering memberships required for Jobs and Positions

1. Access the Job - Memberships Required form (M14SCR) or Position - Memberships Required form (M24SCR)

Access these forms by making the following selection from the Navigator:

Component: Position Administration
Process: Job Details
Task: Memberships Required

or

Component: Position Administration
Process: Position Details
Task: Memberships Required

For practice, access the Job - Memberships Required form (M14SCR) for the job of Manager (JOB005).

2. Click New

Click the New button in the bottom left corner of the form to display the Memberships Required entry form panel.

For practice, click New.

3. Enter the Effective Date

Enter the Effective Date in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere) or leave the current date in the text box as the Effective Date.

For practice, type '06-01-2002' (US and Canada) or '01-06-2002' (elsewhere).

4. Select the Membership

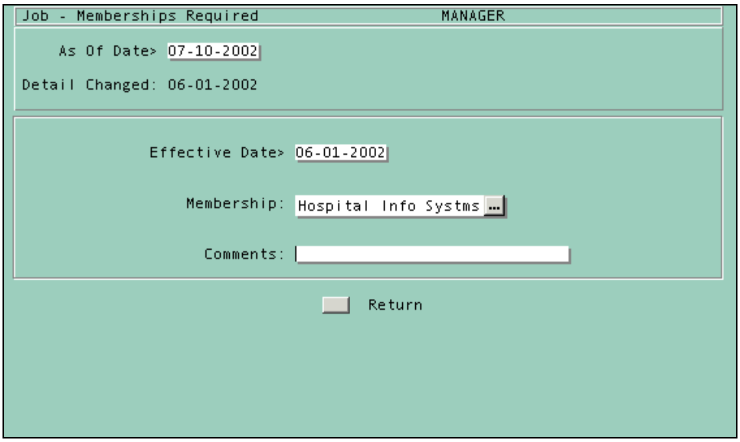
Select the Membership required from the option list. This option list should be edited to include all the memberships you want.

For practice, select 'Hospital Info Systms'.

5. Enter a Comment (optional)

Enter an up-to-30-character Comment describing the membership required.

For practice, leave this text box blank.



6. Click Save or press Enter

The membership required is now entered.

For practice, click Save or press Enter.

For practice, repeat these steps for the Job of Supervisors (JOB006). Then use the Position - Memberships Required form (M24SCR) to enter memberships for the Positions of Payroll Supervisor (POS012) and Payroll Clerk (POS013).

See also:

- Job and Position requirement options ***(on page 90)***

For an explanation of memberships required.

Entering education required for Jobs and Positions

1. Access the Job - Education Required form (M15SCR) or Position - Education Required form (M25SCR)

Access these forms by making the following selection from the Navigator:

Component: Position Administration
Process: Job Details
Task: Education Required

or

Component: Position Administration
Process: Position Details
Task: Education Required

For practice, access the Job - Education Required form (M15SCR) for the Job of Manager (JOB005).

2. Click New

Click the New button in the bottom left corner of the form to display the Education Required entry form panel.

For practice, click New.

3. Enter the Effective Date

Enter the Effective Date in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere) or leave the current date in the text box as the Effective Date.

For practice, type '06-01-2002' (US and Canada) or '01-06-2002' (elsewhere).

4. Select the Level

Select the education level required from the option list. This option list should be edited to include all the levels you want.

For practice, select 'Degree'.

5. Select the Subject

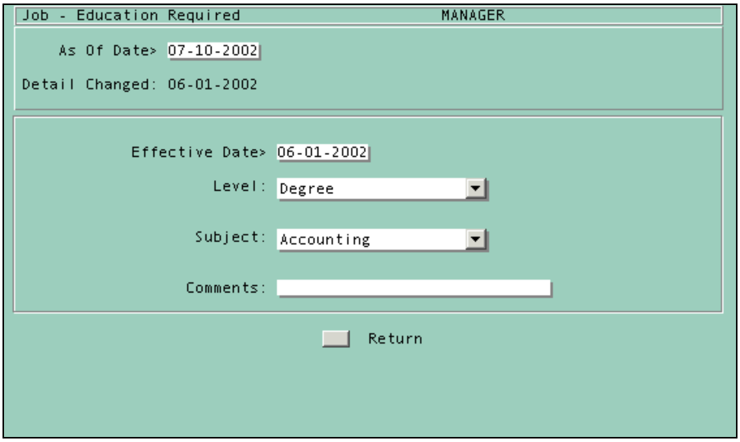
Select the education Subject from the option list. This option list should be edited to include all the Subjects you want.

For practice, select 'Accounting'.

6. Enter a Comment (optional)

Enter an up-to-30-character Comment describing the Education required.

For practice, leave this text box blank.



7. Click Save or press Enter

The Job education required is now entered.

For practice, click Save or press Enter.

For practice, repeat these steps for the Job of Supervisors (JOB006). Then use the Position - Education Required form (M25SCR) to enter two education requirements for the Positions of Payroll Supervisor (POS012) and Payroll Clerk (POS013). For the first requirement, select a level of 'Certificate' and a subject of 'Business Admin Other'. For the second requirement, select a level of 'Degree' and a subject of 'Accounting'.

See also:

- Job and Position requirement options ***(on page 90)***

For an explanation of education required.

Entering training required for Jobs and Positions

1. Access the Job - Training Required form (M1TSCR) or Position - Training Required form (M2TSCR)

Access these forms by making the following selection from the Navigator:

Component: Position Administration
Process: Job Details
Task: Training Required

or

Component: Position Administration
Process: Position Details
Task: Training Required

For practice, access the Job - Training Required form (M1TSCR) for the Job of Manager (JOB005).

2. Click New

Click the New button in the bottom left corner of the form to display the Training Required entry form panel.

For practice, click New.

3. Enter the Effective Date

Enter the Effective Date in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere) or leave the current date in the text box as the Effective Date.

For practice, type '06-01-2002' (US and Canada) or '01-06-2002' (elsewhere).

4. Select the Course

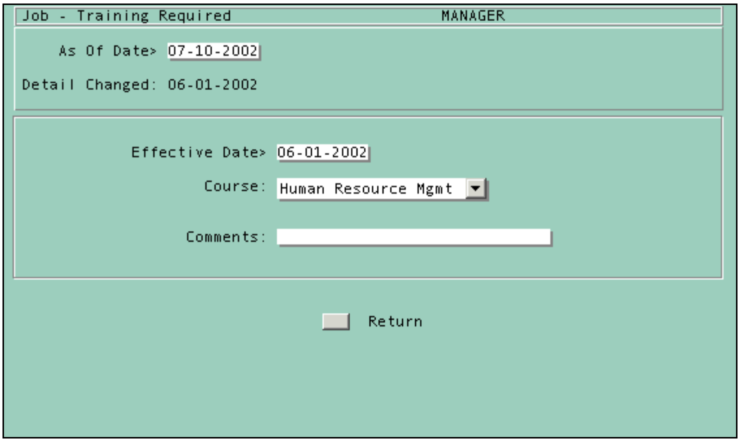
Select the training course from the option list. This option list should be edited to include all the training courses you want.

For practice, select 'Human Resource Mgmt'.

5. Enter a Comment (optional)

Enter an up-to-30-character Comment describing the training required.

For practice, leave this text box blank.



6. Click Save or press Enter

The Job training required is now entered.

For practice, click Save.

For practice, repeat these steps for the Job of Supervisors (JOB006). Then use the Position - Training Required form (M2TSCR) to enter training requirements for the Positions of Payroll Supervisor (POS012) and Payroll Clerk (POS013).

See also:

- Job and Position requirement options ***(on page 90)***

For an explanation of training required.

Entering licenses required for Jobs and Positions

1. Access the Job - Licenses Required form (M16SCR) or Position - Licenses Required form (M26SCR)

Access these forms by making the following selection from the Navigator:

Component: Position Administration
Process: Job Details
Task: Licenses Required

or

Component: Position Administration
Process: Position Details
Task: Licenses Required

For practice, access the Job - Licenses Required form (M16SCR) for the Job of Manager (JOB005).

2. Click New

Click the New button in the bottom left corner of the form to display the Licenses Required entry form panel.

For practice, click New.

3. Enter the Effective Date

Enter the Effective Date in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere) or leave the current date in the text box as the Effective Date.

For practice, type '06-01-2002' (US and Canada) or '01-06-2002' (elsewhere).

4. Select the License

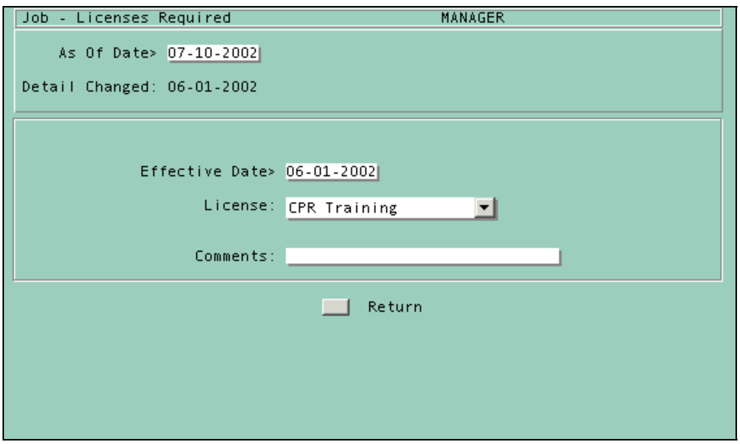
Select the License required from the option list. This option list should be edited to include all the License types you want.

For practice, select 'CPR Training'.

5. Enter a Comment (optional)

Enter an up-to-30-character Comment describing the License required.

For practice, leave this text box blank.



6. Click Save or press Enter

The Job license required is now entered.

For practice, click Save.

For practice, repeat these steps for the Job of Supervisors (JOB006). Then use the Position - Licenses Required form (M26SCR) to enter license requirements for the Positions of Payroll Supervisor (POS012) and Payroll Clerk (POS013).

See also:

- Job and Position requirement options ***(on page 90)***

For an explanation of licenses required.

Entering experience required for Jobs and Positions

1. Access the Job - Experience Required form (M1ESCR) or Position - Experience Required form (M2ESCR)

Access these forms by making the following selection from the Navigator:

Component: Position Administration
Process: Job Details
Task: Experience Required

or

Component: Position Administration
Process: Position Details
Task: Experience Required

For practice, access the Job - Experience Required form (M1ESCR) for the Job of Manager (JOB005).

2. Click New

Click the New button in the bottom left corner of the form to display the Experience Required entry form panel.

For practice, click New.

3. Enter the Effective Date

Enter the Effective Date in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere) or leave the current date in the text box as the Effective Date.

For practice, type '06-01-2002' (US and Canada) or '01-06-2002' (elsewhere).

4. Select the Experience

Select the experience required from the option list. This option list should be edited to include all the experience required types you want.

For practice, select 'Consulting'.

5. Select the Duration

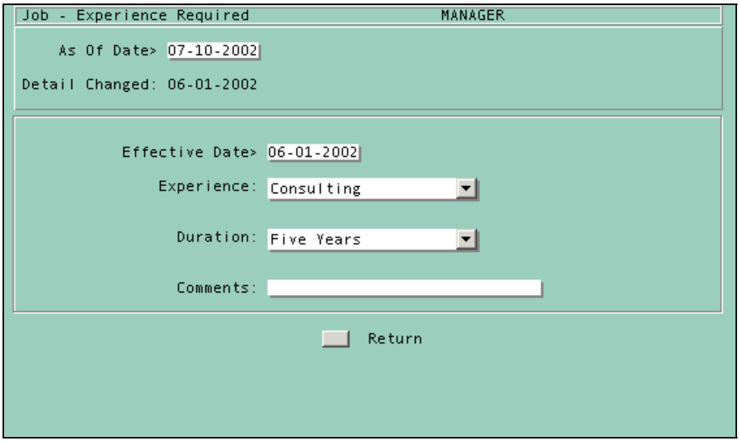
Select the Duration required from the option list. This option list should be edited to include all the Duration types you want.

For practice, select 'Five Years'.

6. Enter a Comment (optional)

Enter an up-to-30-character Comment describing the experience required.

For practice, leave this text box blank.



7. Click Save or press Enter

The Job experience required is now entered.

For practice, click Save.

For practice, repeat these steps for the Job of Supervisors (JOB006). Then use the Position - Experience Required form (M2ESCR) to enter experience requirements for the Positions of Payroll Supervisor (POS012) and Payroll Clerk (POS013).

See also:

- Job and Position requirement options ***(on page 90)***

For an explanation of experience required.

Entering evaluations for Jobs and Positions

1. Access the Job - Evaluation form (M12SCR) or Position - Evaluation form (M22SCR)

Access these forms by making the following selection from the Navigator:

Component: Position Administration
Process: Job Details
Task: Job Evaluation

or

Component: Position Administration
Process: Position Details
Task: Position Evaluation

For practice, access the Job - Evaluation form (M12SCR) for the Job of Director (JOB004).

2. Enter the Effective date

Enter the Effective date in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere) or leave the current date in the text box as the Effective date.

For practice, type '06-01-2002' (US and Canada) or '01-06-2002' (elsewhere).

3. Select the Type

Select a Type of evaluation from the option list. This option list should be edited to include all the Types of evaluations you want.

For practice, select 'Internal'.

4. Enter a Comment (optional)

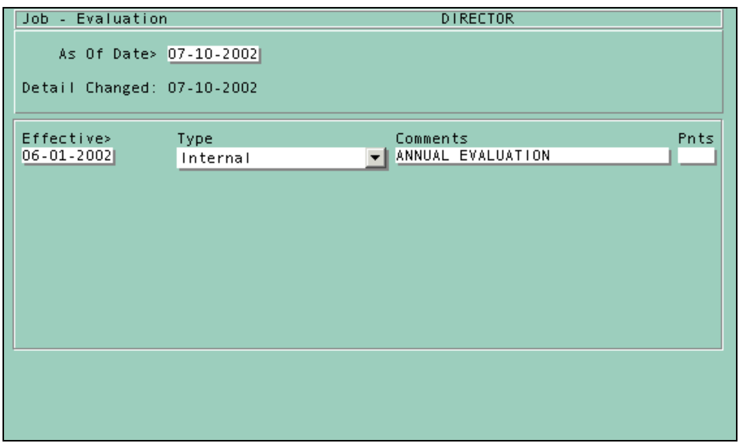
Enter an up-to- 30-character Comment describing the evaluation.

For practice, type 'Annual Evaluation'.

5. Enter the number of Points (optional)

You should only enter the number of evaluation Points if you are not going to enter evaluation criteria.

For practice, leave this text box blank.



6. Click Save or press Enter

A 'New table entry has been established' message is displayed. You can now continue by entering evaluation criteria.

For practice, click Save or press Enter.

7. Click New

Click the New button at the bottom of the form to enter evaluation criteria. The Evaluation Criteria form panel is displayed.

For practice, click New.

8. Enter the Effective Date

Enter the Effective Date in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere) or leave the current date in the text box as the Effective Date.

For practice, type '06-01-2002' (US and Canada) or '01-06-2002' (elsewhere).

9. Select the Criteria

The criteria selections will be displayed automatically in option list code sequence. However, you can make another selection here if you want to use a different criterion.

For practice, leave the 'Knowledge' selection as is.

10. Enter the number of Points

Enter the number of Points you want to assign to this criterion. This entry must be numeric, up to three characters with no decimals.

For practice, enter '250'.

11. Select the Rating (optional)

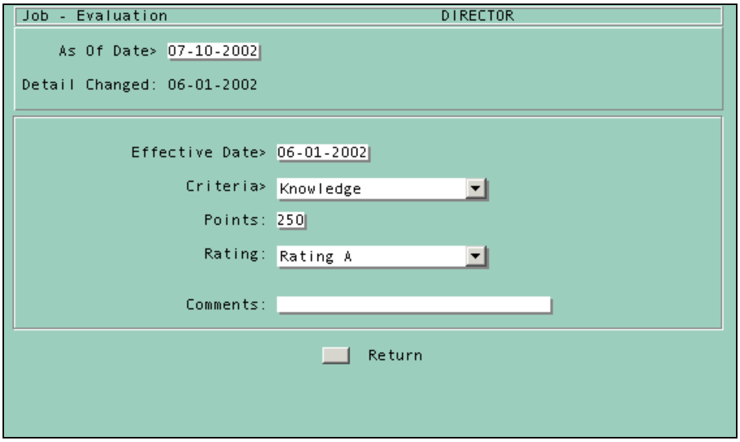
Select an evaluation Rating from option list. This option list should be edited to include all of the evaluation Rating types you want.

For practice, select 'Rating A'.

12. Enter a Comment

Enter an up-to-30-character Comment describing the evaluation criteria.

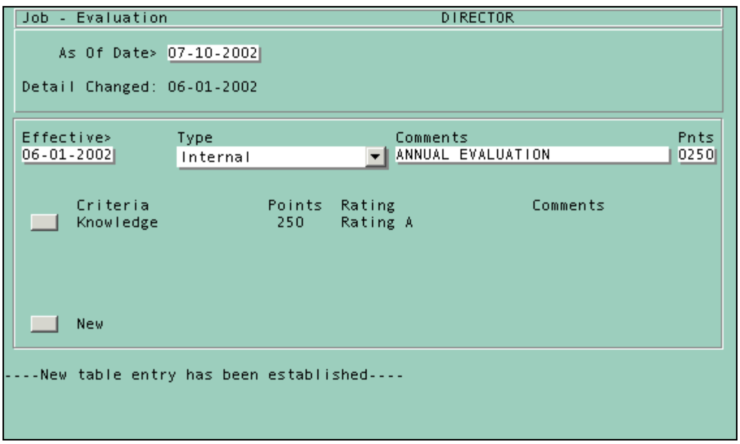
For practice, leave this text box blank.



13. Click Save or press Enter

The first form panel is displayed and a 'New table entry has been established' message is displayed. The Points text box contains '0250'.

For practice, click Save.



For practice, repeat these steps for the Job of Supervisors (JOB006).
Then use the Position - Evaluation form (M22SCR) to enter evaluations for the Positions of Payroll Supervisor (POS012) and Payroll Clerk (POS013).

See also:

- Job and Position evaluations and their uses ***(on page 92)***

For an explanation of evaluations.

Entering succession data for Jobs and Positions

1. Access the Job - Succession form (M17SCR) or Position - Succession form (M27SCR)

Access these forms by making the following selection from the Navigator:

Component: Position Administration
Process: Job Details
Task: Succession

or

Component: Position Administration
Process: Position Details
Task: Succession

For practice, access the Job - Succession form (M17SCR) for the Job of Director (JOB004).

2. Click New

Click the New button in the bottom left corner of the form to display the Succession entry form panel.

For practice, click New.

3. Enter the Effective Date

Enter the Effective Date in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere) or leave the current date in the text box as the Effective Date.

For practice, type '06-01-2002' (US and Canada) or '01-06-2002' (elsewhere).

4. Select the Possible Next Job

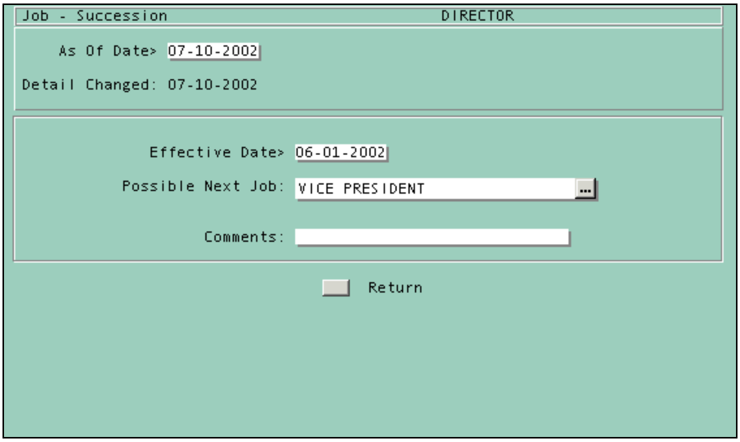
Select the Possible Next Job from the option list. This list will automatically contain the names of all the Jobs currently set up on the system.

For practice, select 'Vice President'.

5. Enter a Comment (optional)

Enter an up-to-30-character Comment describing the possible succeeding Job.

For practice, leave this text box blank.



6. Click Save or press Enter

The succeeding Job is now entered.

For practice, click Save.

For practice, repeat these steps using the Position - Succession form (M27SCR) to enter succession data for the Position of Payroll Supervisor (POS012).

See also:

- Uses of Job and Position succession data ***(on page 93)***

For an explanation of succession data.

Entering document references for Jobs and Positions

1. Access the Job - Documentation Reference form (M19SCR) or Position - Documentation Reference form (M29SCR)

Access these forms by making the following selection from the Navigator:

Component: Position Administration
Process: Job Details
Task: Documentation Reference

or

Component: Position Administration
Process: Position Details
Task: Documentation Reference

For practice, access the Job - Documentation Reference form (M19SCR) for the Job of Director (JOB004).

2. Click New

Click the New button in the bottom left corner of the form to display the Document Reference entry form panel.

For practice, click New.

3. Enter the Effective Date

Enter the Effective Date in the format MM-DD-CCYY (US and Canada) or MM-DD-CCYY (elsewhere) or leave the current date in the text box as the Effective Date.

For practice, type '06-01-2002' (US and Canada) or '01-06-2002' (elsewhere).

4. Select the Type Of File

Select the Type Of File from the option list (for example, Job Description). This option list should be edited to include all the document Types you want.

For practice, select 'Job Description'.

5. Select the Format

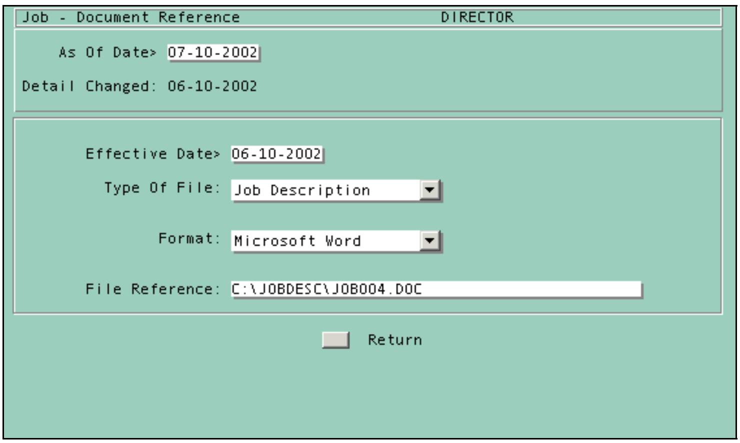
Select the Format of the document from the option list (for example, Microsoft Word). This option list should be edited to include all of the Formats you want.

For practice, select 'Microsoft Word'.

6. Enter the File Reference (optional)

Enter an up-to-30-character File Reference. This should be the directory path of the file.

For practice, type 'C:\JOBDESC\JOB004.DOC'.



Job - Document Reference DIRECTOR

As Of Date> 07-10-2002

Detail Changed: 06-10-2002

Effective Date> 06-10-2002

Type Of File: Job Description

Format: Microsoft Word

File Reference: C:\JOBDESC\JOB004.DOC

Return

7. Click Save or press Enter

The document reference is now entered.

For practice, click Save.

For practice, repeat these steps for the Job of Supervisors (JOB006).
Then use the Position - Documentation Reference form (M29SCR) to enter a document reference for the Positions of Payroll Supervisor (POS012) and Payroll Clerk (POS013).

See also:

- Job and Position document reference options ***(on page 94)***

For an explanation of document references.

Review of Questions Answered

1. What are the Job and Position requirement options?

2. What are the uses of Jobs and Positions?

3. What can Position location data tell you?

5. What are the uses of Job succession data?

6. What types of document references can be entered?

CHAPTER 7

Entering Position-Specific Data

In This Chapter

Introduction

Position Administration facilitates the entry of data that is only set up at the Position level. This data includes Position funding information, next review information, and some miscellaneous Position data.

This section explains what this data is and how this data is entered. The information covered in this section is not required in order to use Position Administration.

Tasks

The following tasks are covered in this section:

- Entering funding data for Positions
- Entering next review data for Positions
- Entering miscellaneous data for Positions

Prerequisites

Before you can begin to enter the Position information, all the following tasks must have been completed.

- Verify that the implementation tasks have been performed.

☞ *Refer to* **Implementing Position Administration** *(on page 33) for more information about the implementation.*

- Verify that your Positions have been set up.

☞ *Refer to* **Entering Job and Position Data** *(on page 83) for more information about setting up Positions.*

Questions answered

The following questions are answered in this section:

1. What types of Position funding data can be maintained?
2. What types of Position next review data can be maintained?
3. What types of Position miscellaneous data can be maintained?

Position funding data

Position funding data indicates the source for any of the funding for the Position. Funding data that can be entered for a Position includes:

- Funding source
- Funding program name
- Percentage of the Position's cost being funded
- Ending Date for the funding

Funding data for Positions are entered on the Position - Funding form (M31SCR).

See also:

- Entering funding data for Positions ***(on page 132)***

For directions on how to enter optional funding data for Positions.

Apply the Concept
How could your organization use the entry of Position-specific funding and next review date?

Position next review data

This indicates the next review data for a Position, including the reason for the review. Next review data for Positions is entered on the Position - Next Review form (M33SCR).

See also:

- Entering next review data for Positions ***(on page 133)***

For directions on how to enter optional next review data for Positions.

Position miscellaneous data

Position miscellaneous data elements include:

- Surveys—Indicates which Job survey this Position is associated with.
- Trainee Job—Indicates if this is a trainee Position, and if so, production or white collar.
- Workers Compensation—Identifies the workers compensation policy for the Position.
- Job Type—Identifies the generic category of the Position (for example, Hourly Union).
- Assigned Shift—Identifies the work shift.
- Union Job—Identifies the union's Position ID if different from the one you use.
- FLSA Class—Identifies exempt or nonexempt status for the Position.

These miscellaneous data elements are entered on the Position - Miscellaneous Information form (M2MSCR).

See also:

- Entering miscellaneous data for Positions ***(on page 135)***

For detailed directions on entering miscellaneous Position information.

Detailed Directions

This section provides detailed directions on completing a business task.

Tasks

Entering funding data for Positions

1. Access the Position - Funding form (M31SCR)

Access this form by making the following selection from the Navigator:

Component:	Position Administration
Process:	Position Details
Task:	Funding

For practice, access the Position - Funding form (M31SCR) for the Position of HRIS Clerk.

2. Click New

Click the New button in the bottom left corner of the form to display the Funding entry form panel.

For practice, click New.

3. Enter the Effective Date of the Position

Enter the Effective Date in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere) or leave the current date in the text box as the Effective Date.

For practice, type '06-01-2002' (US and Canada) or '01-06-2002' (elsewhere).

4. Select the Source

Select the funding Source from the option list. This option list should be edited to include all the funding sources you want.

For practice, select 'ABC Department'.

5. Select the Program

Select the funding Program from the option list. This option list should be edited to include all the program types you want.

For practice, select 'Program 1'.

6. Enter the Percent

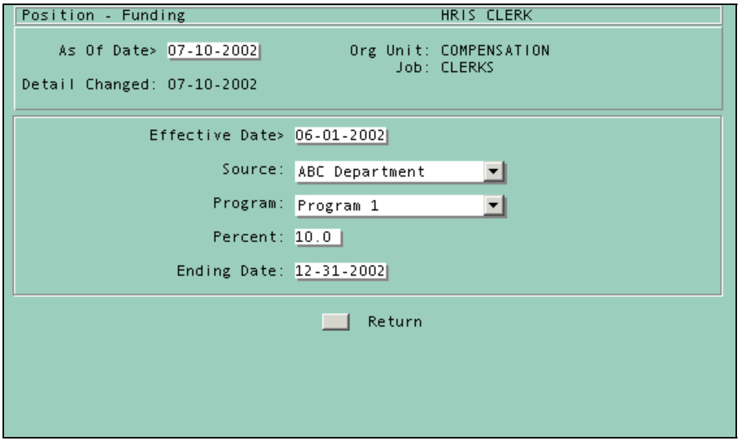
Enter the percentage of the total funding with one decimal place (for example, 15.0).

For practice, enter '10.0'.

7. Enter the Ending Date

Enter the Ending Date for the funding in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere).

For practice, enter the last date of the current year, for example, '12-31-2002' (US and Canada) or '31-12-2002' (elsewhere).



8. Click Return or press Enter

The Position funding is now entered.

For practice, click Return.

See also:

- Position funding data ***(on page 129)***

For an explanation of the uses of Position funding data.

Entering next review data for Positions

1. Access the Position - Next Review form (M33SCR)

Access this form by making the following selection from the Navigator:

Component: Position Administration
Process: Position Details
Task: Next Review

For practice, access the Position - Next Review form (M33SCR) for the Accounts Payable Clerk.

2. Enter the Effective Date of the Position

Enter the Effective Date in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere) or leave the current date in the text box as the Effective Date.

For practice, type '06-01-2002' (US and Canada) or '01-06-2002' (elsewhere).

3. Enter the Review Date

Enter the Review Date for the Position in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere).

For practice, enter '08-10-2002' (US and Canada) or'10-08-2002' (elsewhere).

4. Select a Review Reason

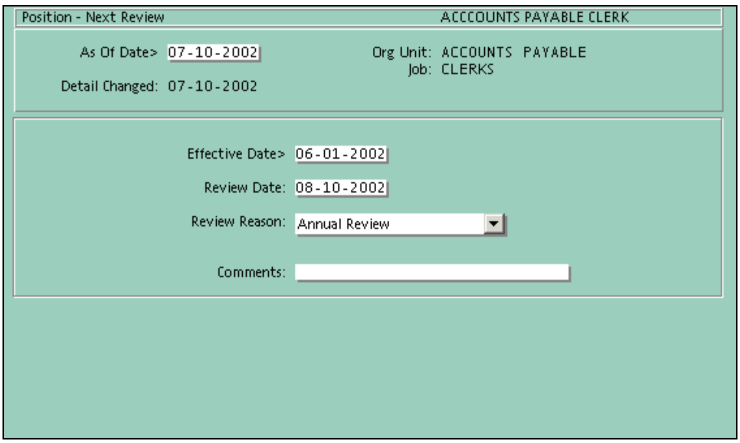
Select the reason for the review from the option list. This option list should be edited to include all the Review Reasons you want.

For practice, select 'Annual Review'.

5. Enter Comments (optional)

Enter any comments that pertain to the review.

For practice, leave this text box blank.



6. Click Save or press Enter

The next review data for the Position is now entered.

For practice, click Save or press Enter.

See also:

- Position funding data ***(on page 129)***

For an explanation of the uses of Position next review data.

Entering miscellaneous data for Positions

1. Access the Position - Miscellaneous Information form (M2MSCR)

Access this form by making the following selection from the Navigator:

Component: Position Administration
Process: Position Details
Task: Miscellaneous Information

For practice, access the Position - Miscellaneous Information form (M2MSCR) for the Position of Accounts Payable Supervisor.

2. Enter the Effective date of the Position

Enter the Effective date in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere) or leave the current date in the text box as the Effective date.

For practice, type '06-01-2002' (US and Canada) or '01-06-2002' (elsewhere).

3. Enter Surveys (optional)

Enter survey data in this 10-character, user-defined text box.

For practice, leave this text box blank.

4. Select a Trainee Job (optional)

Select a Trainee Job from the option list (for example, Production Trainee, White Collar Trainee). This option list should be edited to include all the Trainee Job selections you want.

For practice, select 'Not A Trainee Job'.

5. Enter Workers Comp (optional)

Enter the Workers Compensation option in five-character, alphanumeric format.

For practice, enter 'SUP50'.

6. Select a Job Type (optional)

Select a Job Type from the option list. This option list should be edited to include all the generic Job Types you want.

For practice, select 'Hourly Non Union'.

7. Select an Assigned Shift (optional)

Select the Assigned Shift from the option list. This option list should be edited to include all your shifts.

For practice, select '1st Shift'.

8. Select a Union Job (optional)

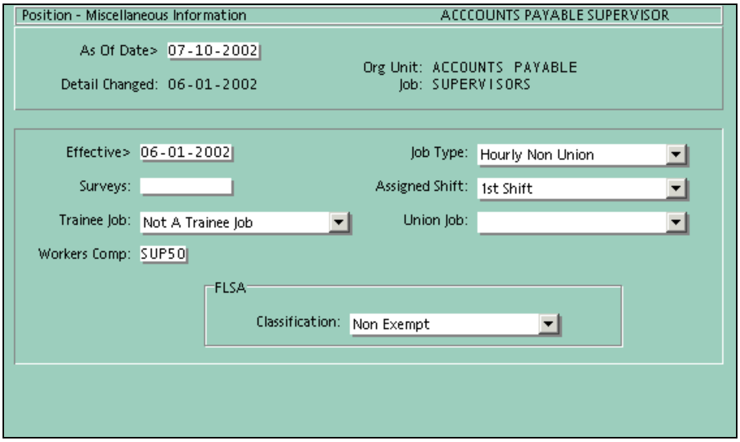
Select the Union Job from the option list. This option list should be edited to include all your Union Jobs.

For practice, leave this text box blank.

9. Select an FLSA Classification (optional)

Select Exempt or Non-exempt.

For practice, select 'Non-exempt'.



10. Click Save or press Enter

The miscellaneous data for the Position is now entered.

For practice, click Save or press Enter.

See also:

- Position miscellaneous data ***(on page 131)***

For details on how Position miscellaneous data are used.

Review of Questions Answered

1. What types of Position funding data can be maintained?

2. What types of Position next review data can be maintained?

3. What types of Position miscellaneous data can be maintained?

CHAPTER 8

Setting Up and Maintaining Incumbents in Positions

In This Chapter

Introduction

Position Administration facilitates attaching employees to Positions. An employee can be attached to multiple Positions at the same time. Each Position to which an employee is attached is known as an incumbency.

Details relating to each incumbency can then be entered and maintained.

Tasks

The following tasks are covered in this section:

- Setting up Incumbents in Positions
- Viewing an Incumbent's current Positions
- Unassigning Incumbents from Positions
- Viewing the Incumbents for a specific Position

Prerequisites

Before you can begin to enter Incumbent information, verify that your Positions have been set up in Position Administration.

☞ *Refer to* **Entering Job and Position Data** *(on page 83) for more information.*

Questions answered

The following questions are answered in this section:

1. What is the relationship between employees and Positions?
2. How are multiple incumbency salaries and hours tracked?

Employee and Position relationship

Employees can be assigned to one or more Positions. Once an employee is assigned to a Position, he or she is known as an Incumbent for that Position. Employees can have an unlimited number of incumbencies to various Positions, or multiple incumbencies.

One of the employee incumbencies should be designated as the 'primary' incumbency. Each employee can have only one primary incumbency at a time. Any additional incumbencies should be 'primary history' or 'other' incumbencies. When you attempt to assign a primary incumbency to an employee who already has a primary assigned, the original primary incumbency becomes a primary history incumbency. The primary history incumbency could be used for Benefits Administration processing for a prior plan year or a similar use.

'Other' incumbencies should be used for any additional employee incumbencies.

Employees can also be 'unassigned' from a Position when the relationship is no longer in effect. When an employee is unassigned, a Salary Assignment/Changes form (40-SCR) entry is created with the new salary and hours for this incumbency equal to zero. The effective date of this entry will be one day after the employee is unassigned from the Position, and the Type of Change value will be 'Unassigned from Incumbency'.

When establishing an incumbency, the reason the incumbency is being entered must also be recorded (for example, promotion). The status of the incumbency can be indicated as regular or acting. For example, if an employee is on leave, you can place another employee in the Position in an acting capacity.

You can also indicate whether an incumbency is full or part time. FTE text boxes similar to the text boxes you used to establish budgets for Positions are included for entry.

☞ *Refer to* **Entering Job and Position Data** *(on page 83) for details on establishing budgets for Positions.*

Various other details about the employee incumbency can be entered. Many of these details can be inherited from the Job, Position, and Organization Unit data that you may have already entered. Incumbency details that can be inherited are listed here:

Incumbency detail	**Inherited from**
Grade	Position or Job level
Geographic Range	Organization Unit level
Physical Location	Position level

You can also override any of this inherited data. The inherited data values are displayed above the text boxes on the form for your information.

Employees are assigned to Positions using the Incumbency - Basic Details form (M40SCR). When an employee is assigned to a Position with a Primary incumbency on this form, a Job Assignment/Changes form (05-SCR) is automatically created. The Job Assignment/Changes form (05-SCR) is then synchronized with the Incumbency - Basic Details form (M40CR) and can be used to view the employee's current Job data.

The Job Assignment/Changes form (05-SCR) will have a Type of Change value of 'Created by PM' along with the Position as the Job Code and a Job Code Extent of 9999. When a primary incumbency is unassigned, the Type of Change value on this form is changed automatically to 'Unassigned by PM'.

You are prevented by the system from changing or deleting any Job Assignment/ Changes form (05-SCR) entries automatically created by Position Administration.

To turn off the automatic creation of the Job Assignment/Changes form (05-SCR), remove the comments from the code in paragraph P140 of the M40RTN Cyborg Scripting Language code. Be sure to RELOAD the M40RTN.

After you have established your employee/Position incumbencies, they can be selected and viewed using the Incumbent - Current Positions form (M41SCR).

Also, the Incumbents attached to a specific Position can be viewed using the Position - Incumbents form (M21SCR).

See also:

- Setting up Incumbents in Positions ***(on page 147)***
For directions on how to set up an incumbency.

- Viewing an Incumbent's current Positions ***(on page 150)***
For directions on how to view incumbencies.

- Unassigning Incumbents from Positions ***(on page 153)***
For directions on how to unassign Incumbents.

- Viewing the Incumbents for a specific Position ***(on page 151)***
For directions on how to view a Position's Incumbents.

☞ *Refer to* **Implementing Position Administration** *(on page 33) for more information on the Job Assignment Changes form (05-SCR).*

Apply the Concept

Describe the process of assigning an employee to a Position.

Apply the Concept
Fill in the missing word(s)

a) Once an employee is attached to a Position, the employee is known as an ________________________________.

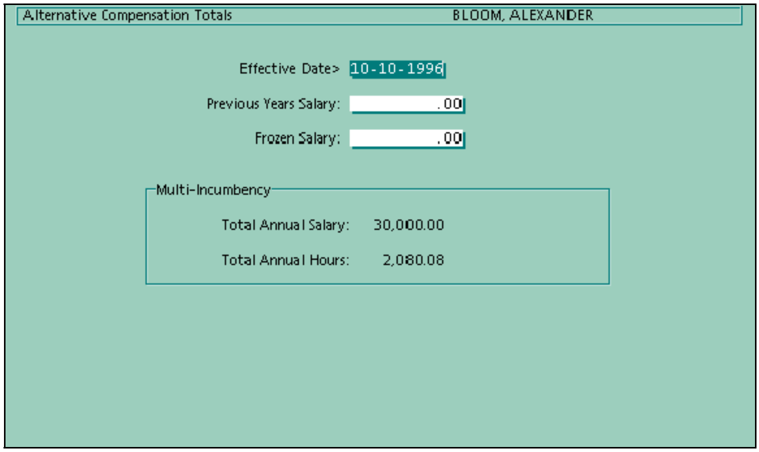
b) Employees can occupy ________________________within Position Administration.

c) Some incumbency details such as Grade, Geographic Range, and Physical Location can be ________________________ from Position, Job, and Organization Unit level data and ____________________________ as needed.

d) An incumbency can be either _________________________________ or ______________________________.

Alternative compensation totals

Whenever you assign an employee to multiple incumbencies and salaries, the employee's Total Annual Salary and Total Annual Hours are calculated by the system and stored on the Alternative Compensation Totals form (BACSCR). These calculations are based on the Salary Assignment/Changes form (40-SCR) salary and hour entries for each incumbency. They are recalculated by the system whenever a change occurs on the Salary Assignment/Changes form (40-SCR).



The Previous Years Salary and Frozen Salary text boxes may be entered manually if keeping this data is important to you.

All data kept on this form can be accessed for benefits calculations or any other use that applies to your organization.

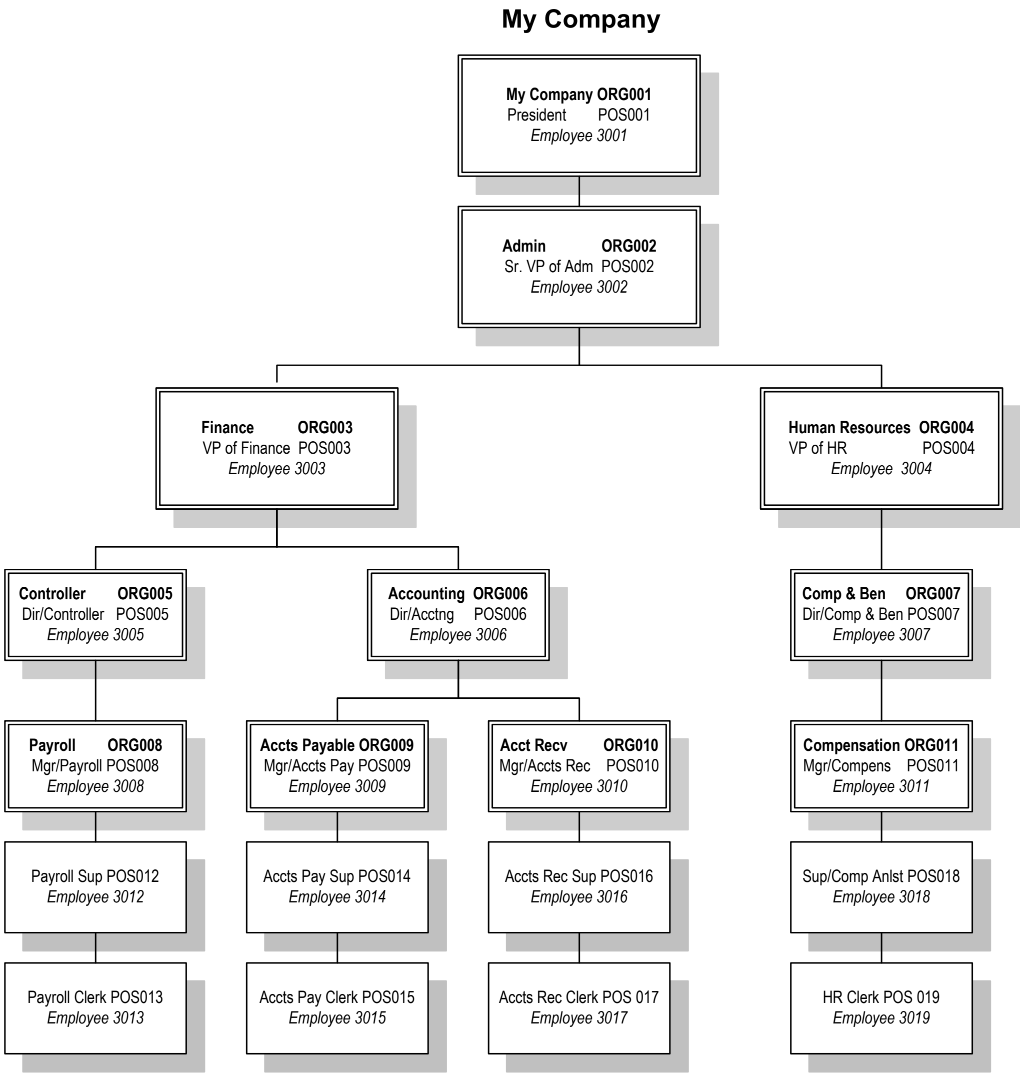
Detailed Directions

This section provides detailed directions on completing a business task.

Tasks

Completing the Guided Practice

Use this organization chart to complete the tasks that follow:



Setting up Incumbents in Positions

To set up Incumbents in Positions, follow these steps:

1. Access the Incumbency - Basic Details form (M40SCR)

Access this form by making the following selection from the Navigator:

Component: Position Administration
Process: Incumbent Details
Task: Incumbent Basic Details

For practice, access the Incumbency - Basic Details form (M40SCR) for employee 3009.

2. Select Incumbency

Select a unique Incumbency number from the option list. This option list should be edited to include all the incumbency numbers you want.

For practice, select the '1st Incumbency'.

3. Enter the Effective Date

Enter the Effective Date for the incumbency in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere) .

For practice, type '06-01-2002' (US and Canada) or '01-06-2002' (elsewhere).

4. Enter the Time

Enter the Time of day in the format HH:MM or leave the default time of 09:00. The time of day can be used to separate different incumbencies entered on the same day.

For practice, leave the default time of '09:00'.

5. Select the Position

Select a Position to which you will attach the employee. These Positions are set up on the Position - Set Up/Maintenance form (M28SCR).

For practice, select 'Accounts Payable Manager'.

6. Select the Type

Select the Type of incumbency from the option list. This option list should be edited to include all the incumbency types you want.

For practice, select 'Primary Incumbency'.

7. Select the Reason

Select a Reason for the Position assignment from the option list. This option list should be edited to include all the Position assignment reasons you want.

For practice, select 'Restructure'.

8. Select the Status (optional)

Select an incumbency Status from option list, usually Regular or Acting. For example, if an employee is on extended leave, you could place another employee in the Position in an acting capacity. This option list should be edited to include all the incumbency Statuses you want.

For practice, select 'Regular'.

9. Select the Union (optional)

Select a Union value from the option list. This option list should be edited to include all the Unions you want.

For practice, leave this entry blank.

10. Enter the FTE Hours (optional)

Enter the FTE Hours. If you are using hours as the measure of FTE employees, enter the full-time hours or a fraction of these hours here (for example, 40.00).

For practice, leave this text box blank.

11. Enter the FTE Units (optional)

Enter the FTE Units. If the employee is a full-time occupant of a Position, enter '1.0' here. If the employee is a part-time occupant of a Position, enter a fraction of full-time occupancy here (for example, '0.5').

For practice, enter '1.0'.

12. Enter the Until Date (optional)

Enter the date until which the employee will hold the Position in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere).

For practice, leave this text box blank.

13. Select the Until Reason (optional)

Select the reason that the employee will hold the Position only until a certain date from the option list. This option list should be edited to include all the reason types you want.

For practice, leave this text box blank.

14. Enter the Grade (optional)

This entry is inherited from the Job.

For practice, leave this entry blank.

15. Select the Geographic Range (optional)

Select the Geographic Range from the option list or leave the default value from the Organization Unit level. This option list should be edited to include all the Geographic Ranges you want.

For practice, select 'All Locations'.

16. Select the Physical Location (optional)

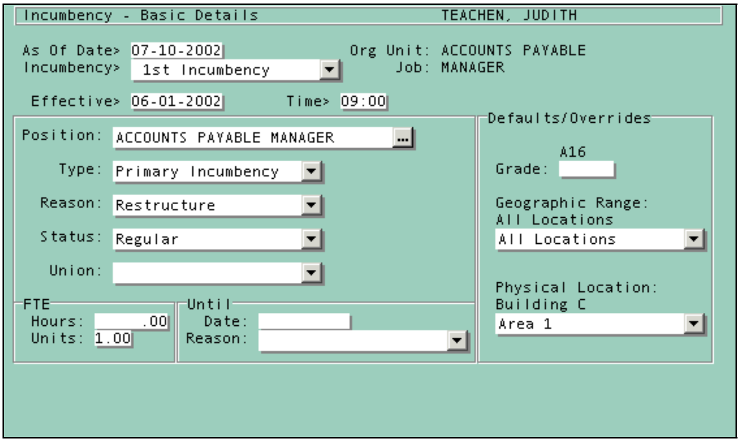
Select the Physical Location from the option list or leave the default value from the Organization Unit level. This option list should be edited to include all the physical locations you want.

For practice, select 'Area 1'.

17. Click Save or press Enter

The employee is attached to the Position.

For practice, click Save or press Enter.



For practice, repeat these steps for the following employees and use the organization chart for the information you will need:
3010
3011
3014
3015
3016
3017 (For this employee only, in addition to the first incumbency assignment of Accounts Receivable Clerk at .5 FTE Unit, assign a second incumbency for Accounts Payable Clerk at .5 FTE Unit that will be used in a future practice. When you assign the second incumbency, accept the warning message.)
3018
At this time, do not assign employee 3019.

See also:

- Employee and Position relationship ***(on page 141)***

For an explanation of the relationship between employees and Positions.

Viewing an Incumbent's current Positions

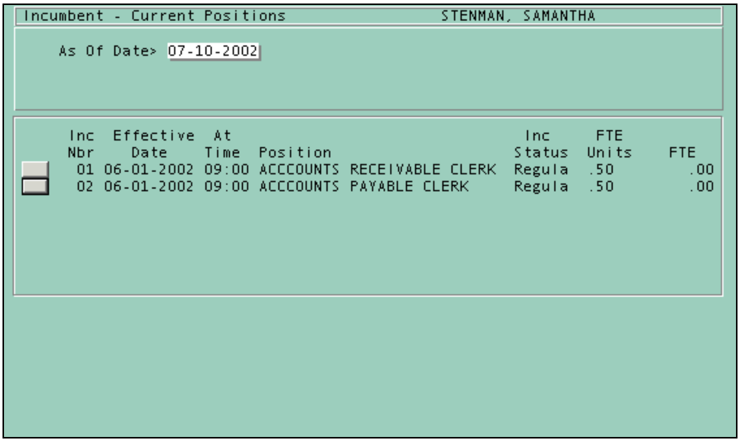
To view the Positions to which an employee is currently attached, follow these steps:

1. Access the Incumbent - Current Positions form (M41SCR)

Access this form by making the following selection from the Navigator:

Component: Position Administration
Process: Incumbent Details
Task: Incumbent Current Positions

For practice, access the Incumbent - Current Positions form (M41SCR) for employee 3017.

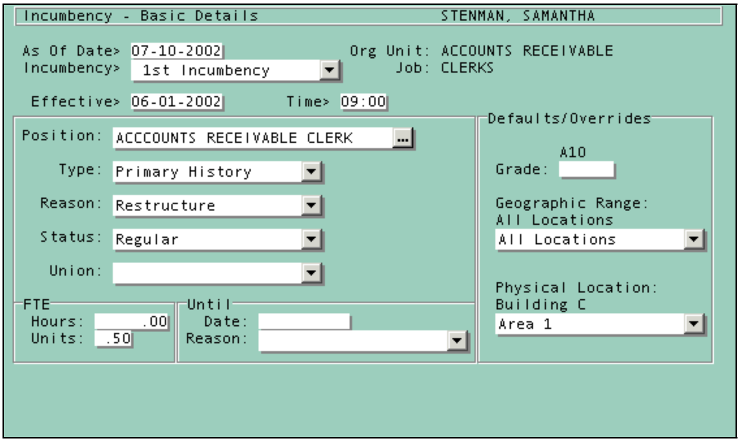


2. Select the Position incumbency to view

Click the button to the left of the incumbency you want to view.

The Incumbency - Basic Details form (M40SCR) for the Position incumbency is displayed.

For practice, select the '1st Incumbency'.



See also:

- Employee and Position relationship ***(on page 141)***

For an explanation of the relationship between employees and Positions.

Viewing the Incumbents for a specific Position

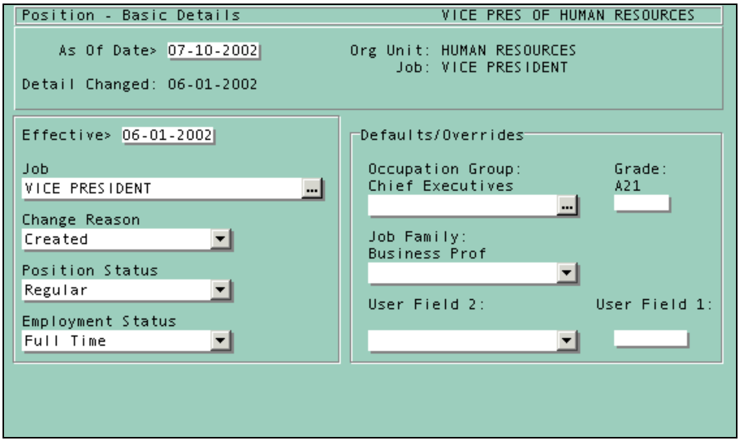
To view the Incumbents for a specific Position:

1. Access the Position - Incumbents form (M20SCR)

Access this form by making the following selection from the Navigator:

Component:	Position Administration
Process:	Position Details
Task:	Basic Details

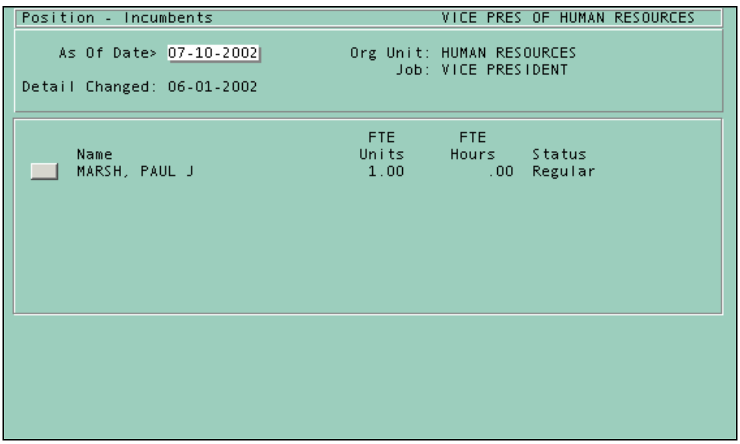
For practice, access the Position - Basic Details form (M20SCR) for the Position of Vice President of Humna Resources.



2. **Click the Incumbents for this Position button on the Position Administration toolbar.**

The Incumbency - Basic Details form (M40SCR) for each Incumbent can be accessed by clicking on the button directly to the left of the employee name.

For practice, access the Position - Incumbents form (M21SCR).



See also:

- Employee and Position relationship ***(on page 141)***

For an explanation of the relationship between employees and Positions.

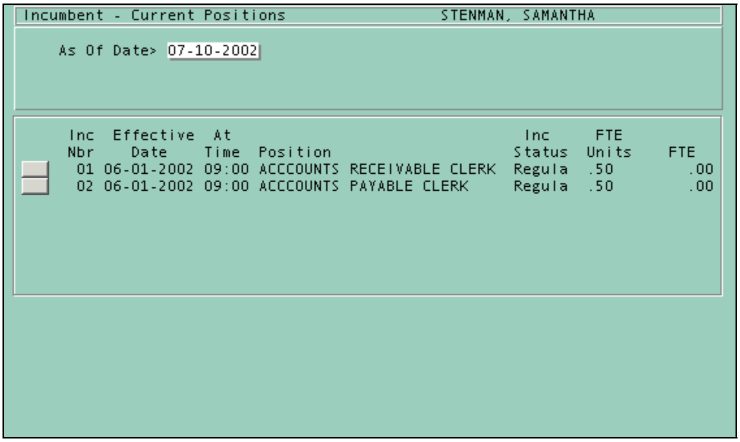
Unassigning Incumbents from Positions

1. Access the Incumbent - Current Positions form (M41SCR)

Access this form by making the following selection from the Navigator:

Component: Position Administration
Process: Incumbent Details
Task: Incumbent Current Positions

For practice, access the Incumbent - Current Positions form (M41SCR) for employee 3017.



Incumbent - Current Positions STENMAN, SAMANTHA

As Of Date> 07-10-2002

Inc Nbr	Effective Date	At Time	Position	Inc Status	FTE Units	FTE
01	06-01-2002	09:00	ACCCOUNTS RECEIVABLE CLERK	Regula	.50	.00
02	06-01-2002	09:00	ACCCOUNTS PAYABLE CLERK	Regula	.50	.00

2. Select the Position incumbency to unassign

Click the button to the left of the incumbency you want to unassign.

The Incumbency - Basic Details form (M40SCR) for the Position incumbency is displayed.

For practice, select the '2nd Incumbency'.

3. Enter the Effective Date

Enter the Effective Date in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere).

For practice, enter a date one month from the As Of Date, for example '07-01-2002' (US and Canada) or '01-07-2002' (elsewhere).

4. Enter the Time

Enter the Time in the format HH:MM if it is different from the default time of 09:00.

For practice, leave this text box as is.

5. Select a Reason of Un-assigned

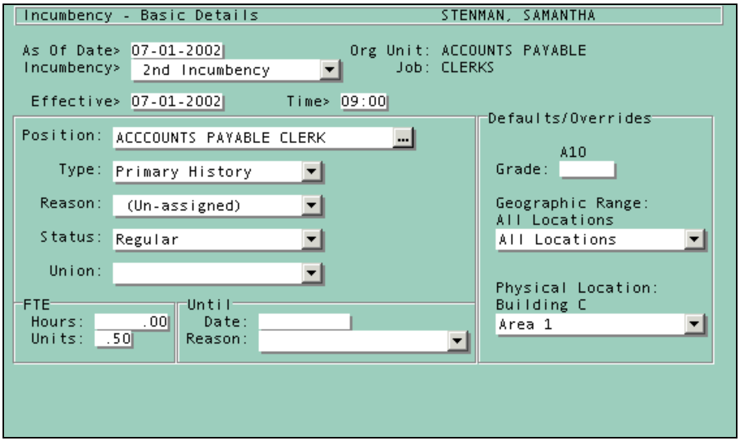
Select a Reason of Un-assigned from the option list to unassign the employee from the Position. This option list should be edited to include all the reasons you want.

For practice, select '(Un-assigned)'.

6. Click Save or press Enter

The employee is unassigned from the Position.

For practice, click Save or press Enter.



Note: You may verify the reduction in incumbencies by accessing the Position - Incumbencies form (M20SCR).

See also:

- Employee and Position relationship ***(on page 141)***

For an explanation of the relationship between employees and Positions.

Review of Questions Answered

1. What is the relationship between employees and Positions?

2. How are multiple incumbency salaries and hours tracked?

CHAPTER 9

Maintaining Position Administration Data

In This Chapter

Introduction

Once your Position Administration data has been set up, it can be maintained in a variety of ways, including:

- Abolishing entities while keeping history
- Deleting entities set up in error
- Removing data entries while keeping history

This section explains these maintenance options and how to perform maintenance on Position Administration data.

Tasks

The following tasks are covered in this section:

- Abolishing Organization Units, Jobs, and Positions while keeping history
- Removing data entries while keeping history
- Deleting Organization Units, Jobs, and Positions set up in error

Prerequisites

Before using the Position Administration maintenance options, the following tasks must be completed:

- Set up your Organization Units, Jobs, and Positions.

☞ *Refer to* **Establishing Organization Units** *(on page 61) and* **Entering Job and Position Data** *(on page 83) for more information.*

- Any additional data needed for these entities must be entered.

☞ *Refer to* **Entering Position-Specific Data** *(on page 127) for more information.*

Questions answered

The following question is answered in this section:

What are the Position Administration data maintenance options?

Data maintenance options

Several data maintenance options are available when using Position Administration. Data can be abolished, removed, or deleted. An explanation of these maintenance options is provided in this section.

Abolishment of entities while keeping history

When an Organization Unit, Job, or Position becomes obsolete and is no longer needed, it must be abolished. A history of the abolished entity is kept on file.

An Organization Unit, Job, or Position that has another entity belonging to or reporting to it cannot be abolished. The other entity must first be linked to a different entity or it must be abolished as well.

Abolishing Organization Units is performed on the Organization Unit - Basic Details form (M46SCR). Abolishing Jobs is performed on the Job - Basic Details form (M10SCR). Abolishing Positions is performed on the Position - Basic Details form (M20SCR).

See also:

- Abolishing Organization Units, Jobs, and Positions while keeping history ***(on page 162)***

For directions on how to abolish Organization Units, Jobs, and Positions.

Removal of data entries while keeping history

When a data entry is no longer wanted, it should be removed. A history of the removed data entry is kept on file. For example, if a certificate is no longer a requirement for a Position and you want to show that the requirement was removed as of a particular date, you should remove it in this manner.

See also:

- Removing data entries while keeping history ***(on page 164)***

For directions on how to remove data entries.

Deletion of entities set up in error

When an Organization Unit, Job, or Position is set up in error, it should be deleted. No history of the deleted entity is kept on file.

An Organization Unit, Job, or Position that has another entity belonging to or reporting to it cannot be deleted. The other entity must first be linked to a different entity or deleted as well.

Deleting Organization Units is performed on the Organization Unit - Set Up/Maintenance form (M48SCR). Deleting Jobs is performed on the Job - Set Up/Maintenance form (M18SCR). Deleting Positions is performed on the Position - Set Up/Maintenance form (M28SCR).

Note: *All data related to the deleted entity is also deleted.*

See also:

- Deleting Organization Units, Jobs, and Positions set up in error ***(on page 166)***

For directions on how to delete Organization Units, Jobs, and Positions.

Apply the Concept
List some examples of when you would use the three data maintenance options.

Apply the Concept
Identify the forms used to:
a) Abolish Organization Units, Jobs, Positions
b) Delete Organization Units, Jobs, Positions
c) Remove data entries

Apply the Concept
Circle the correct answer:
a) When an Organization Unit, Job, or Position is abolished, the history ____________ kept on file.
is is not
b) Deleting an Organization Unit, Job, or Position _________________ delete the information and history permanently.
will not will
c) An Organization Unit, Job, or Position that has another entity belonging or reporting to it _________________ be abolished.
can cannot
d) The other entity to which an Organization Unit, Job, or Position belongs or reports _______________ linked to another entity or abolished.
does not have to be must be
e) When a previous data entry is still needed, the data entry ________________ removed.
should be should not be

Staff members setup for Interactive Manager

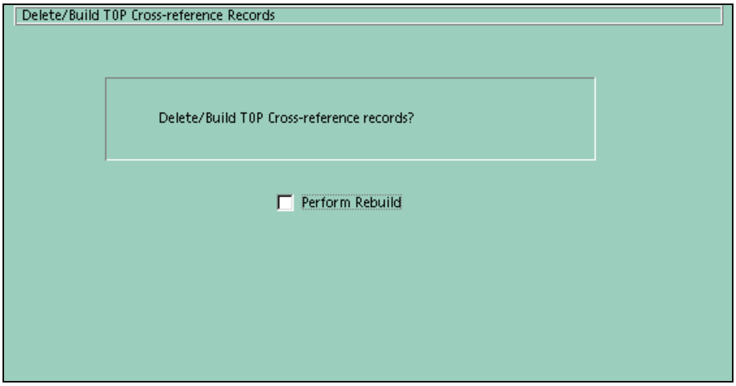
Interactive Manager uses Position Administration forms to update System Control Repository (FILE01) records and create position cross-reference records to retrieve direct reports for a manager. The following forms are used:

- Delete/Build T0P Position Cross-reference Records form (ME5SCR)
- System Options (TG-SCR)

To use Interactive Manager, you must select 'In Use' from the drop down list for the Pos Admin entry on the System Options form (TG-SCR).

Cross-Reference records

The Staff Members feature of Interactive Manager allows a manager to view the names of his direct report staff members as well as their key details including contact, organization, and personal information. You may use the Delete/Build T0P Position Cross-reference Records form (ME5SCR) to create the cross-reference records for managers and their staff members used by Interactive Manager.



During implementation of Interactive Manager and every time your organization enters information in Position Administration that affects a manager's or employee's reporting structure, you must rerun this form to generate the appropriate cross-reference records. When you run the program, the system will purge all existing records before recreating them.

Detailed Directions

This section provides detailed directions on completing a business task.

Tasks

Abolishing Organization Units, Jobs, and Positions while keeping history

Note: *For the first task, no Guided Practice has been provided because there are no existing entities without belong-to or report-to relationships.*

1. Access the Organization Unit - Basic Details form (M46SCR), Job - Basic Details form (M10SCR), or Position - Basic Details form (M20SCR)

Access these forms by making the following selection from the Navigator:

Organization Unit Basic Details:

Component: Position Administration
Process: Organization Unit Details
Task: Basic Details

or

Job Basic Details:

Component: Position Administration
Process: Job Details
Task: Basic Details

or

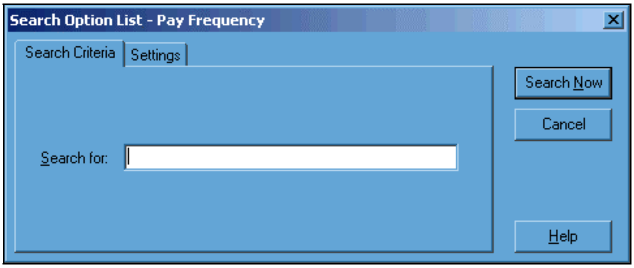
Position Basic Details:

Component: Position Administration
Process: Position Details
Task: Basic Details

2. Click the entity button on the Position Administration toolbar

Click the Organization Unit, Job, or Position level button of the entity you want to abolish. The Select dialog box is displayed.

☞ *Refer to* **Overview of Position Administration Navigation** *(on page 19) for the examples and locations of these buttons.*



3. Type a Search for value (optional)

Type a partial or complete Search for value for the entity, for example, 'Accounting'.

4. Select an Option (optional)

Select the 'Starts with' or 'Contains' option in the Settings tab, depending on your Search for value entry.

☞ *Refer to* **Overview of Position Administration Navigation** *(on page 19) for more information on using the Select function.*

5. Click Search Now or press Enter

If multiple matches are found, a dialog box is displayed with the available selections. If only one match is found, the entity is displayed on the form and you should go to Step 8.

6. Select an entity

Select the entity you want.

7. Click Select or press Enter

The entity you selected is displayed on the basic details form for that entity.

8. Enter the Effective Date

Enter the Effective Date of the abolishment in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere).

9. Change the Reason list box to 'Abolished'

Change the reason.

10. Click Save or press Enter

Click OK or press Enter to abolish the entity entry.

Note: *An Organization Unit, Job, or Position that has another entity belonging to or reporting to it cannot be deleted.*

See also:

- Data maintenance options ***(on page 159)***

For an explanation of what occurs when abolishing Organization Units, Jobs, and Positions.

Removing data entries while keeping history

Follow these steps to remove data entries while keeping history.

1. Access the form that contains the data you want to remove

Access this form by making the following selection from the Navigator:

Component:	Position Administration
Process:	Position Details
Task:	Education Required

For practice, access the Position - Education Required form (M25SCR).

2. Click the entity button on the Position Administration toolbar

Click the Organization Unit, Job, or Position level button of the entity for which you want to remove data. The Select dialog box is displayed.

For practice, click the Position button.

Refer to **Overview of Position Administration Navigation** *(on page 19) for the examples and locations of these buttons.*

3. Type a Search for value (optional)

Type a partial or complete Search for value for the entity (for example, 'Supervisor').

For practice, leave this text box blank.

4. Select an Option (optional)

Select the 'Starts with' or 'Contains' option in the Settings tab, depending on your Search for value entry.

For practice, accept the default settings.

Refer to **Overview of Position Administration Navigation** *(on page 19) for more information on using the Select function.*

5. Click Search Now or press Enter

If multiple matches are found, a dialog box is displayed with the available selections. If only one match is found, the entity is displayed on the form and you should go to step 8.

For practice, click Search Now or press Enter.

6. Select the entity

Select the entity from which you want to remove a data entry.

For practice, select 'Payroll Clerk'.

7. Click Select or press Enter

The entity you selected is displayed on the form with the data entries listed.

For practice, click Select or press Enter.

8. Enter an Effective Date

Enter the Effective Date for the removal in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere) .

For practice, type the current date..

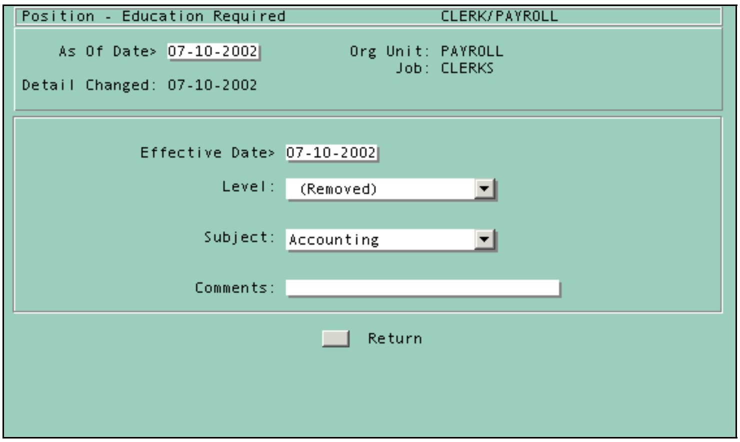
8. Access the data entry you want to remove

Use the buttons on the left side of the form to select the data entry you want to remove. The data entry is displayed on the form.

For practice, click the Accounting Degree button on the left side of the form.

9. Select 'Removed' in the Level list box

For practice, select 'Removed' in the Level list box.



Position - Education Required CLERK/PAYROLL

As Of Date> 07-10-2002 Org Unit: PAYROLL
Job: CLERKS

Detail Changed: 07-10-2002

Effective Date> 07-10-2002

Level: (Removed)

Subject: Accounting

Comments:

Return

10. Click Return or press Enter

The data is marked as removed from Position Administration.

For practice, click Return or press Enter.

See also:

- Data maintenance options ***(on page 159)***

For an explanation of what occurs when removing Position Administration data.

Deleting Organization Units, Jobs, and Positions set up in error

Warning: Performing this task will delete the information permanently. No history of the entity will be kept.

1. Access the Organization Unit - Set Up/Maintenance form (M48SCR), Job Set Up/Maintenance form (M18SCR), or Position - Set Up/Maintenance form (M28SCR)

Access these forms by making the following selection from the Navigator:

Component:	Position Administration
Process:	Organization Unit Details
Task:	Setup a New Organization Unit

or

Component:	Position Administration
Process:	Job Details
Task:	Setup a New Job

or

Component:	Position Administration
Process:	Position Details
Task:	Setup a New Position

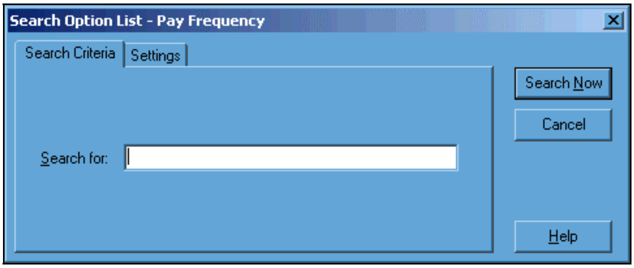
For practice, access the Position - Setup/Maintenance form (M28SCR).

2. Click the entity button on the Position Administration toolbar

Click the Organization Unit, Job, or Position level button of the entity you want to delete. The Select dialog box is displayed.

For practice, click the Position button.

Refer to **Overview of Position Administration Navigation** *(on page 19) for the examples and locations of these buttons.*



3. Type a Search for value (optional)

Type a partial or complete Search for value for the entity (for example, Payroll Clerk).

For practice, leave this text box blank.

4. Select an Option (optional)

Select the 'Starts with' or 'Contains' option in the setting tab, depending on your Search for value entry.

For practice, accept the default options.

Refer to **Overview of Position Administration Navigation** *(on page 19) for more information on using the Select function.*

5. Click Search Now or press Enter

If multiple matches are found, a dialog box is displayed with the available selections. If only one match is found, the entity is displayed on the form and you should go to Step 8.

For practice, click Search Now or press Enter.

6. Select an entity

Select the entity you want to delete.

For practice, select 'HRIS Clerk'.

7. Click Select or press Enter

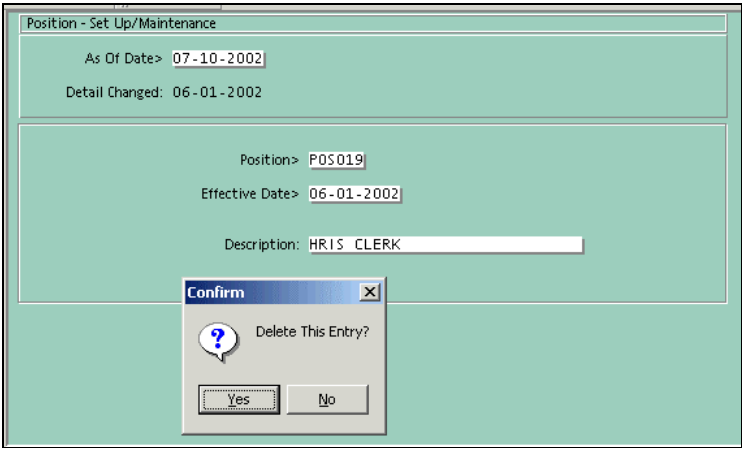
The entity you selected is displayed on the form.

For practice, click Select or press Enter.

8. Click Delete from the toolbar

The Confirm dialog box is displayed.

For practice, click Delete.

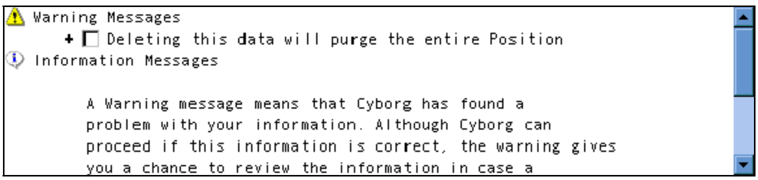


9. Click Yes or press Enter

Click Yes or press Enter to delete the Position.

A warning is displayed, warning you that continuing this process will purge the entire Position.

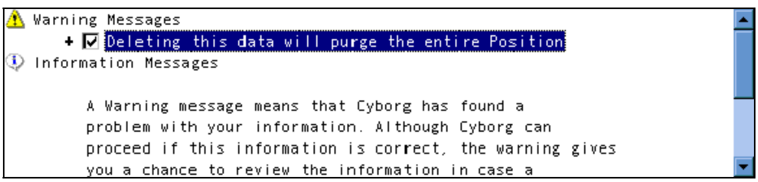
For practice, click Yes.



10. Click the check box

Click the check box in the message window.

For practice, click the check box.



11. Click the Save or press Enter

Click Save or press Enter to process the entry.

The entity entry is deleted and a 'Table record has been deleted' message is displayed.

For practice, click Save or press Enter.

See also:

- Data maintenance options ***(on page 159)***

For an explanation of what occurs when deleting Organization Units, Jobs, and Positions.

Review of Questions Answered

What are the Position Administration data maintenance options?

CHAPTER 10

Restructuring Your Organization

In This Chapter

Introduction

At some point after you have set up all of your Organization Units, Jobs, and Positions, and have linked your employees to these Positions, restructuring the organization may be necessary. You must have set up Organization Units to perform the reorganization function.

Position Administration is equipped with dynamic, online reorganization capabilities. This means that Organization Units, Positions, and Incumbents are dynamically updated by the system when reorganizing.

This makes restructuring your organization remarkably easy, because most of the work is done by the system.

Tasks

The following tasks are covered in this section:

- Changing the existing organization structure
- Changing the Organization Unit to which a Position reports

Prerequisites

Before you can restructure any Position Administration data you must do the following:

- Ensure that Position Administration implementation tasks have been completed.

☞ *Refer to* **Implementing Position Administration** *(on page 33) for more information.*

- Ensure that your Organization Units have been set up in Position Administration.
- Ensure that your Positions have been set up in Position Administration.

☞ *Refer to* **Setting Up Organization Units** *(on page 72) and* **Entering Job and Position Data** *(on page 83) for more information.*

Questions answered

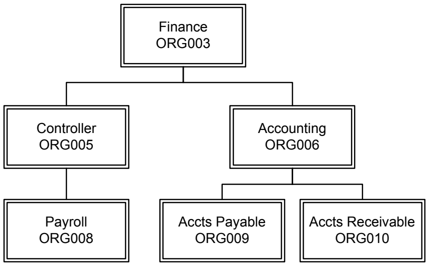
The following questions are answered in this section:

1. What occurs when the organization structure is changed?
2. What happens when Positions are linked to a different Organization Unit?
3. What happens when Positions are assigned to report to a different Position?

Organization structure changes

To restructure your organization, you must change the way your Organization Units are grouped. In other words, you are changing the relationships between the Organization Units.

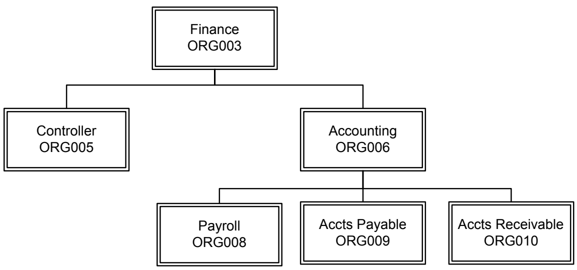
For example, the following diagram illustrates how Organization Units can be related to form an organization structure.



Notice the 'belongs to' relationship that most of these Organization Units have to other Organization Units. The top Organization Unit in the hierarchy must always belong to itself. This forms an organization structure.

Once an organization structure has been established, it can be changed at any time due to a reorganization or other factor. A history of past organization structures is easily kept and maintained by the use of 'as of' dates.

Assume you wanted to change the organization structure represented by the previous diagram to the structure shown next:



Notice how the organization structure has changed and the Payroll Organization Unit has a different 'belongs to' relationship. When the organization structure is changed, all Organization Units, Positions, and Incumbents are dynamically updated by Position Administration.

For example, all Positions and Incumbents stay with the Organization Unit with which they are associated unless the Position's Organization Unit is changed. Jobs are not affected because they are generic and not Organization Unit-specific.

See also:

- Changing the existing organization structure ***(on page 177)***

For detailed directions on how to change the existing organization structure.

Apply the Concept

How is your organization currently structured?

Apply the Concept

List the different tasks involved when considering restructuring your organization.

Apply the Concept

What are the prerequisites before you restructure your organization using Position Administration?

Apply the Concept

True or False. Explain any false answers.

a) Before you implement the restructure feature of Position Administration you must ensure that implementation tasks, Organization Units, and Positions have been set up and completed.

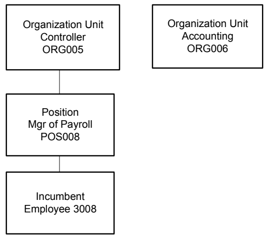
b) Jobs are affected when a change in organization structure occurs.

c) Once an organization's structure has been changed, history is not.

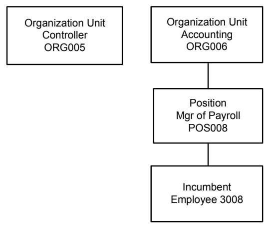
Position/Organization Unit changes

Another way to restructure your organization is to change the Organization Unit to which a Position reports. When doing this, the Organization Units, Positions, and Incumbents are dynamically updated. An Incumbent who was linked to a reassigned Position automatically reports under the new Organization Unit. See the example that follows:

Original Position assignment



After assigning Position to another Organization Unit



The Organization Unit to which a Position reports can be changed using the Position - Location form (M30SCR).

See also:

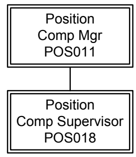
- Changing the Organization Unit to which a Position reports ***(on page 179)***

For detailed directions on how to change a Position's Organization Unit.

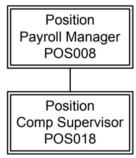
Position reporting changes

Another way to restructure your organization is to change the Position to which another Position reports. See the example below.

Original Position assignment



After assigning Position to another Position



The Position to which a Position reports can be changed using the Position - Location form M30SCR).

See also:

- ***Changing the Position to which a Position reports***

For detailed directions on how to change a Position's Organization Unit.

Apply the Concept

How would you use the restructure feature to change the Position to which a Position reports?

Detailed Directions

This section provides detailed directions on completing a business task.

Tasks

Changing the existing organization structure

This task is used to change the existing organization structure by assigning an Organization Unit to a different Organization Unit.

1. Access the Organization Structure form (M45SCR)

Access this form by making the following selection from the Navigator:

Component: Position Administration
Process: Organization Unit Details
Task: Organization Structure

For practice, access the Organization Structure form and click down to the ORG005 Controller Organization Unit.

2. Select the Organization Unit to reassign

Select the Organization Unit to reassign to another Organization Unit by clicking the -/+ button until the specific Organization Unit to be restructured displays.

For practice, click ORG002 - Administration, then ORG003 - Finance, and finally ORG005 - Controller.

3. Edit the Organization Unit to be restructured

Click the Edit button adjacent to the Organization Unit on the right side of the form.

The Organization Unit - Basic Details form (M46SCR) is displayed for the selected Organization Unit.

For practice, click the Edit button for the ORG008 Payroll Organization Unit.

3. Enter the As Of Date

Enter the As Of Date of this entry in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere).

For practice, type the current date.

3. Enter the Effective Date

Enter the Effective Date of this entry in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere).

For practice, type the current date.

4. Select a Reason for the change

Select a Reason for the change from the Option list.

For practice, select 'Restructure'.

5. Change the Belongs To list box

Select a different Organization Unit in the Belongs To list box.

For practice, select 'Accounting'.

6. Change any other basic details (optional)

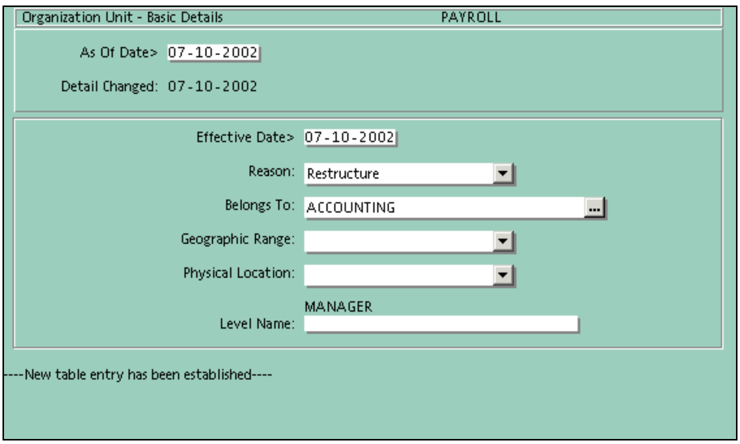
You can change the Geographic Range, Physical Location, and Level Name text boxes if desired.

For practice, leave the other text boxes as they are.

7. Click Save or press Enter

The Organization Unit now 'belongs to' the newly selected Organization Unit.

For practice, click Save or press Enter.



See also:

- Organization Structure changes ***(on page 173)***

For an explanation of what occurs when changing the organization structure.

Changing the Organization Unit to which a Position reports

To change the Organization Unit to which a Position reports, follow these steps.

1. Access the Position - Location form (M30SCR)

Access this form by making the following selection from the Navigator:

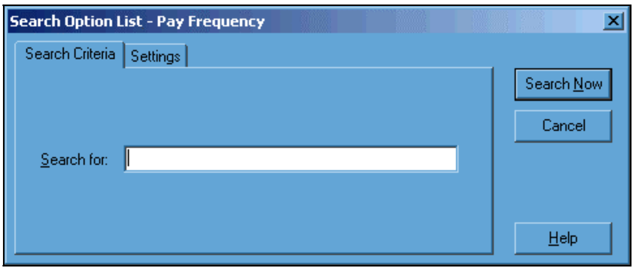
Component: Position Administration
Process: Position Details
Task: Location

For practice, access the Position - Location form (M30SCR).

2. Click the Position button on the Position Administration toolbar

The Select dialog box is displayed.

For practice, click the Position button.



3. Type a Search for value (optional)

Type a partial or complete Search for value for the entity, for example, Controller.

For practice, leave this text box blank.

4. Select an Option

Select the 'Starts with' or 'Contains' option in the Settings tab, depending on your Search for value entry.

For practice, accept the default settings.

Refer to **Overview of Position Administration Navigation** *(on page 19) for more information on using the Select function.*

5. Click Search Now or press Enter

If multiple matches are found, the Choose a Position dialog box is displayed with the available selections. If only one match is found, the Position location details are displayed on the Position - Location form and you should go to Step 8.

For practice, click Search Now or press Enter.

6. Select a Position

Select the Position you want.

For practice, select 'Compensation Analyst'.

7. Click Select or press Enter

The Position you selected is displayed on the Position - Location form (M30SCR).

For practice, click Select or press Enter.

8. Change the Effective Date

Enter the Effective Date of this entry in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere) or use the current date in the text box as the Effective Date.

For practice, use the current date as the Effective Date.

9. Select the new Organization Unit

Select the new Orgnaizaiton Unit to which you want this Position to point.

For practice, select 'Payroll'.

10. Select the new Direct Reports To

Select the new Direct Report to which you want this Position to point.

For practice, select 'Supervisor/Payroll'.

11. Select the new Indirect Reports To

Select the new Indirect Report to which you want this Position to point.

For practice, select 'Manager/Payroll'.

12. Select the Physical Location

Select the physical location to which you want this Position to point.

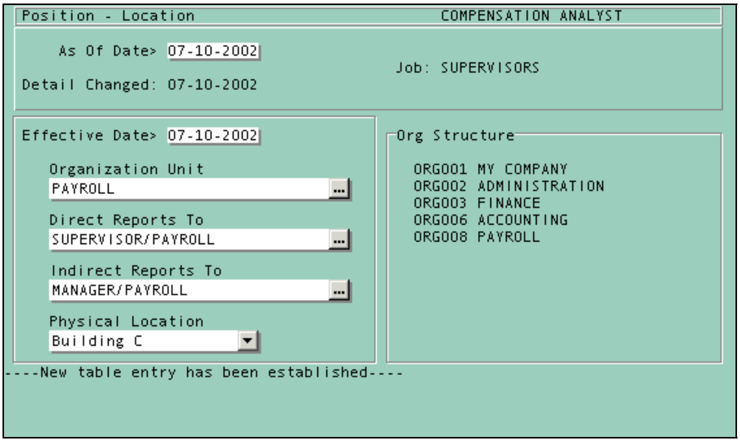
For practice, select 'Building C'.

13. Click Save or press Enter

Click Save or press Enter to assign the new Organization Unit.

Note: Notice that the Org Structure has not changed because you have reassigned a Position within the Organization.

For practice, click Save or press Enter.



See also:

- Position/Organization Unit changes ***(on page 175)***

For an explanation of what occurs when changing the Organization Unit to which a Position points.

Review of Questions Answered

1. What occurs when the organization structure is changed?

2. What happens when a Position is linked to a different Organization Unit?

3. What happens when a Position is assigned to report to a different Position?

PART 3

Analyzing Data

In This Section

C H A P T E R 1 1

Using Position Administration Packaged Reports

In This Chapter

Introduction

Position Administration includes a series of packaged reports that let you view and analyze a variety of key data elements, including:

- Budgeted vs. actual Headcount, FTE, Salary, or Hours data
- Position Status data
- Employees linked to Positions, including all incumbencies or just primary incumbencies

Parameters can be entered for some of these packaged reports. These parameters let you set up an 'as of' date, starting Organization Unit, and Position Administration Control Number for all packaged reports included in the report schedule.

Extract Utility

An Extract Utility is included that lets you convert Position Administration data to a format that can be imported into other applications, such as Org Plus, Microsoft Word, and Microsoft Excel. The types of information that can be extracted include:

- Organization structure
- Organization structure and Positions
- Position-to-Position structure (both direct and indirect reports)

Tasks

The following tasks are covered in this section:

- Creating a report group
- Adding reports to the report group
- Configuring report parameters
- Running Position Administration packaged reports
- Extracting Position Administration data

Prerequisites

Before you can perform the tasks in this section:

- Ensure that Position Administration implementation tasks have been completed.

☞ *Refer to* **Implementing Position Administration** *(on page 33) for more information.*

- Ensure that your Organization Units and Positions have been set up.

☞ *Refer to* **Setting Up Organization Units** *(on page 72) and* **Entering Job and Position Data** *(on page 83) for more information.*

Questions answered

The following questions are answered in this section:

1. What are the Position Administration packaged reporting options?

2. How is the Position Administration Extract Utility used?

Packaged reporting options

The following packaged reports are delivered with Position Administration:

- Budget vs. Actual report (M01RPT)
- Position Status report (M02RPT)
- Employee Details By Position report (M03RPT)

Budget vs. Actual report (M01RPT)

This report lets you view, by Organization Unit, the actual and budgeted amounts for Headcount, FTE, salary, or hours. The variance between the actual and budgeted amounts is also reported.

A data selection parameter option lets you select whether you want all data reported, only data reflecting a variance, or only data over budget. Totals are also reported for each Organization Unit based on this data selection parameter. Only those records printed (based on the data selection parameter) are included in the totals.

Position Status report (M02RPT)

This report lets you view, by Organization Unit, details about Positions, including the following:

- Position Status
- Employment Status
- Grade
- FTE
- Headcount

Employee Details By Position report (M03RPT)

This report lets you view, by Organization Unit, details about the employees linked to your Positions, including the following:

- Organization
- Employee Number
- Employee Name
- Age
- Hire Date
- Employment Status
- Incumbency Status

A data selection parameter option lets you select whether you want all incumbencies reported or only primary incumbencies.

Position Administration reports are run separately from other types of reports because they process data based on a defined Organization Unit rather than Organization. This Organization Unit value, Position Administration Control Number, and reporting As Of Date for a report group are entered on the Position Administration Report Group Parameters form (RUN-PM).

Note: On IBM mainframes, Position Administration reports can not be run using 'I' in the code 1 entry of the control record, which would allow users to be online when running reports.

- Creating a report group ***(on page 191)***

For detailed directions on how to create report groups.

- Adding reports to the report group ***(on page 194)***

For detailed directions on how to add reports to the report group.

- Configuring report parameters ***(on page 196)***

For detailed directions on how to configure report parameters.

Data extraction options

The Position Administration Extract Utility allows you to extract Position Administration data to a delimited text file that can be imported into other applications, such as Org Plus, Microsoft Word, and Microsoft Excel. This utility resides outside The Solution Serie*s* but does extract Solution Series data. You must sign off from The Solution Series before using this utility.

The types of Position Administration data that can be extracted include:

- Organization structure
- Organization structure and Positions
- Position-to-Position structure (both direct and indirect reports)

You decide which type of data to extract.

The extract record can be delimited by a comma (,), semicolon (;), Tab, or space. Every extracted field is contained within single or double quotes.

An example of an extract file is shown below.

```
"","My Company","000001"
"000001","Admin","000002"
"000002","Finance","000003"
"000002","Human Resources","000004"
"000003","President","POS001"
"000003","Sr VP of Admin","POS002"
"000004","VP of Finance","POS003"
"000004","VP of HR","POS004"
```

For detailed directions on how to extract Position Administration data.

Detailed Directions

This section provides detailed directions on completing a business task.

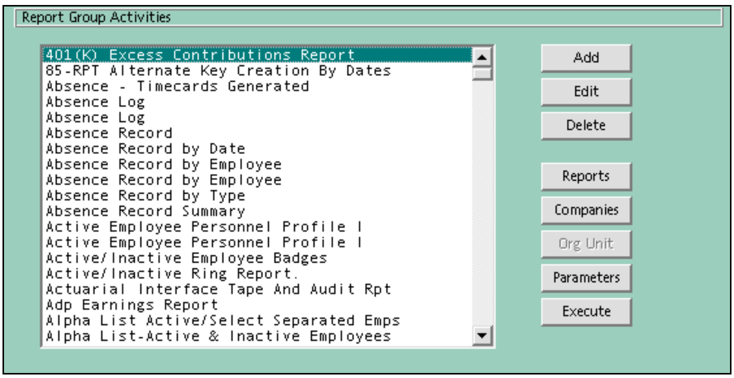
Tasks

Creating a report group

1. Access the Report Group Activities form

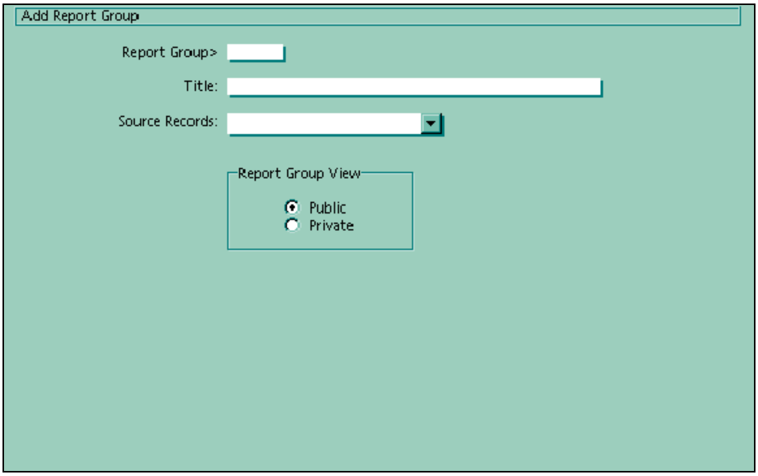
Access this form by making the following selection from the Navigator:

Component: Reporting
Process: Report Scheduling
Task: Schedule Report Groups



2. Click Add

The Add Report Group panel is displayed.



3. Enter the name of the report group you are adding

You can enter up to six alphanumeric characters. This will be the report group identifier you will use to initiate the report run or to view reports in the report group online.

For practice, type 'PA001'.

4. Enter the Title of the report group you are adding

You can enter up to 40 alphanumeric characters, so be descriptive. This will be the report group's title, which will be used to identify the report group whenever you are using the Report Group Activities form.

For practice, type 'Position Administration Reports'.

5. Select the type of information you want to process from the Source Records list box

This list box is used to identify the type of information this group of reports will provide.

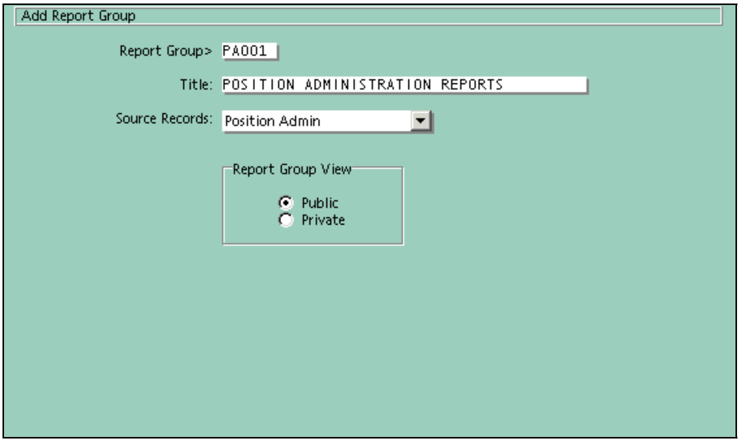
Note: *Position Administration reports are run separately from other types of reports because they process data based on a defined Organization Unit rather than on Organization. If you want to set up a report group that contains Position Administration reports, you must identify the Source Records as 'Position Administration'; otherwise, the Position Administration reports will not be an option when you move to the next form.*

For practice, select 'Position Admin.

6. Select your Report Group View

This text box defaults to a 'Public' setting, which means the report group you are setting up may be shared with others using the system. Select the 'Private' option button if you do not want to share the new report group with anyone using a User Code different from your own.

For practice, keep the default, 'Public'.



7. Click Save or press Enter

The report group is added and the Position Administration Report Group Parameters form is displayed.

For practice, click Save or press Enter.

Note: The Position Administration Report Group Parameters form can also be accessed from the Report Group Activities form (RGMSTR).

8. Enter P.M. Control Number

Enter the Position Administration Control Number as it is identified on the Company-To-Rules Cross-Reference For HR form. The form displays with this entry already in place.

For practice, keep the default entry or enter '99'.

9. Enter the As of Date (optional)

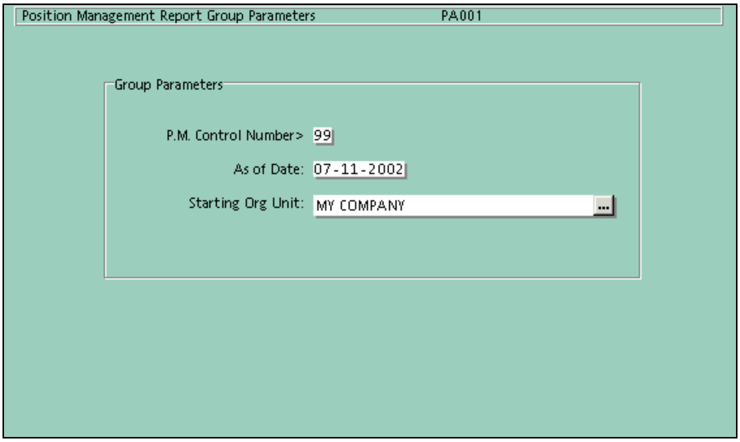
In the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere), enter the As of Date for which you want to start reporting. Leave this text box blank if you want to use the current date.

For practice, allow the form to default to the current date.

10. Select the Starting Org Unit

Select the Organization Unit code with which you want to start reporting. All Organization Units below this selection will be reported.

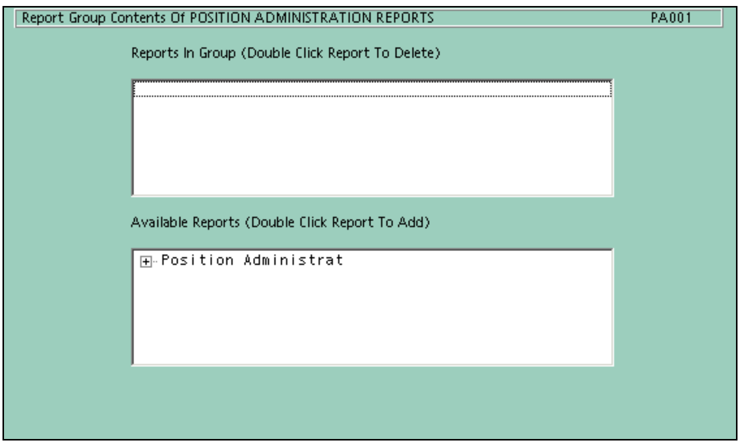
For practice, select 'My Company'.



11. Click Save or press Enter

The report group parameters are set up and the Report Group Contents form (RPTGRP) for the report group is displayed.

For practice, click Save.

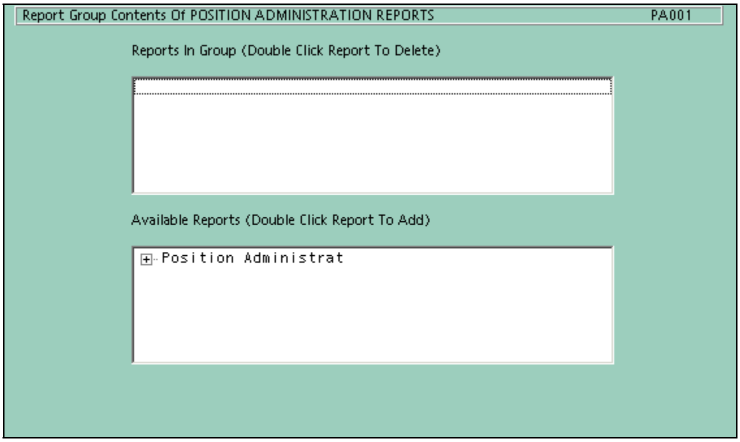


Adding reports to the report group

To add Position Administration reports to the report group you just set up, follow these steps.

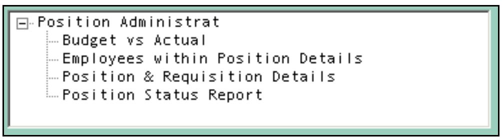
1. Access the Report Group Contents form

If you are not already at this form after following the steps in the prior task, access the Report Group Activities form (RGMSTR), select the report group, and click the Reports button.



2. Select the Position Administration report category

Double-click the Position Administration report category displayed in the bottom list box on the form. The category expands to list all the Position Administration reports. Requisition Administration reports will also display if Req Admin is shown as 'In Use' on the Systems Option form (TG-SCR).

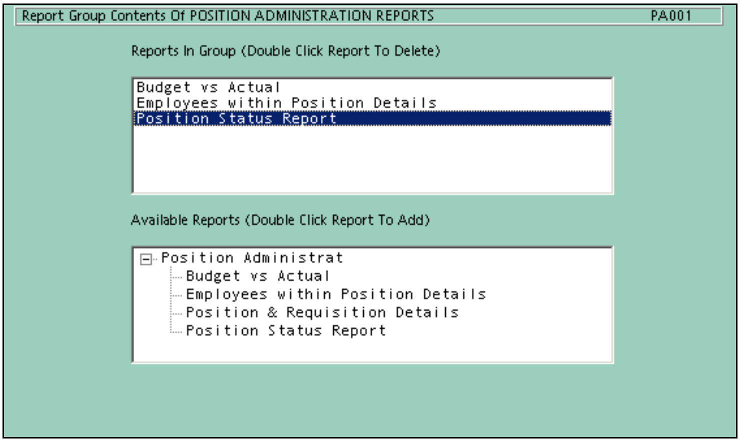


For practice, double-click 'Position Administration'.

3. Select the Position Administration reports

Double-click each Position Administration report you want to add to the report group. The reports will be displayed in the top list box on the form.

For practice, double-click the first, second, and fourth reports.



4. **Click Save or press Enter**

   The Report Group Activities form (RGMSTR) is displayed.

Configuring report parameters

1. **Access the Report Group Activities form**

   Access this form by making following selection from the Navigator:

   Component: Reporting
   Process: Report Scheduling
   Task: Schedule Report Groups

2. **Select a report group**

   Select the report group from the scrollable list box.

   For practice, select 'Position Administration Reports'.

3. **Click the Parameters button**

   The Parameter Selection form is displayed, listing all the reports included in the report group. A Set Parameters button is displayed next to those reports for which you may set parameters.

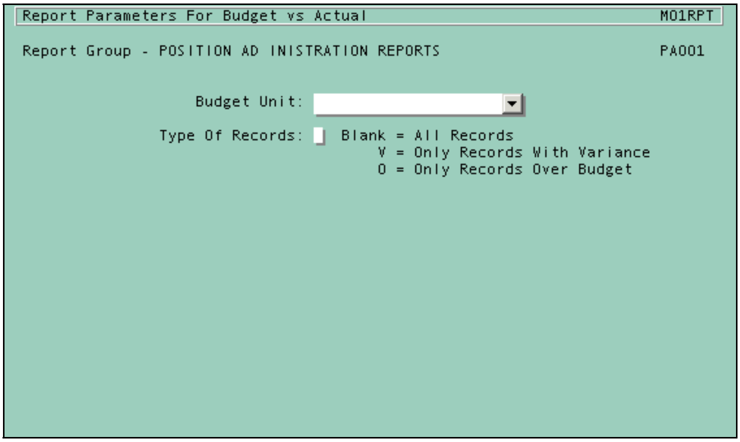
   For practice, click the Parameters button.

4. **Click the Set Parameters button next to the title of the report you want to configure**

   A Report Parameters form is displayed for the report you are configuring.

Note: *The Report Parameters form that displays is dependent on which report you are configuring.*

For practice, click the Set Parameters button for the Budget vs. Actual report.



Report Parameters For Budget vs Actual M01RPT

Report Group - POSITION AD INISTRATION REPORTS PA001

Budget Unit:

Type Of Records: Blank = All Records
V = Only Records With Variance
O = Only Records Over Budget

5. Complete the text boxes on the form

Click the form-level Help button on the toolbar to get text box-by-text box entry instructions for the form.

6. Click Save or press Enter

The Parameter Selection form is displayed. You may continue to configure parameters for any other reports included in your report group.

For practice, click Save or press Enter.

7. Click Save or press Enter

The Report Group Activities form (RGMSTR) is displayed. When a packaged report job set up to run this report group is initiated online or through offline batch operations, the reports will run as configured.

For practice, click Save or press Enter.

Running the Position Administration packaged reports

After you have created the Position Administration report group and configured the report parameters, you are now ready to run the report group. This will produce batch output for all of the reports in the report group.

Also, review the online documentation for the following topics:

- SUBMIT - Requesting Reports and Queries Online
- VIEW - Viewing Reports and Queries Online
- REPORT - Creating Extract Records

See also

- Packaged reporting options ***(on page 188)***
For information on Position Administration packaged reports.

Refer to Running Reporting Solutions in the Technical Administration documentation for information on running Solution Series packaged reports.

Extracting Position Administration data

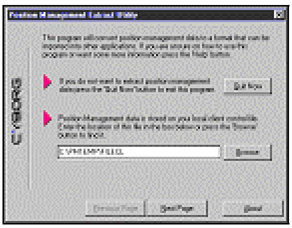
1. Access the Position Administration Extract Utility

The Position Administration Extract Utility is accessed by selecting the Extract Utility icon.

The Extract Utility icon accesses the PMUTIL.EXE file. If you need to create the icon, PMUTIL.EXE normally can be found in the same directory as your Solution Series executable (for example, CBSVPCNW.EXE).

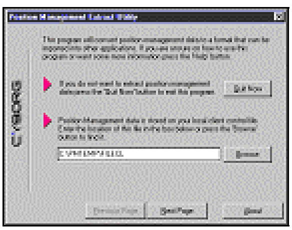
For practice, access the Position Administration Extract Utility.

Note: The practice entries for this task show the Client Data File (FILECL) location to be in the C:\PMTEMP directory. If your path to the Client Data File is different, use this path in your practice entries.



2. Select the Client Data File location

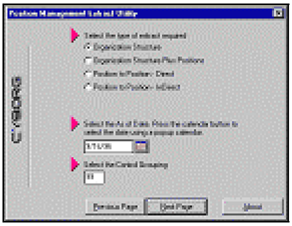
Position Administration data is stored on your local Client Data File. Enter the location of this file in the entry box. If you do not know the location of this file, click the Browse button to display a dialog box that can be used to search for the file.



For practice, enter 'C:\PMTEMP\FILECL'.

3. Click the Next Page button

Click the Next Page button to continue the extract file selection process.

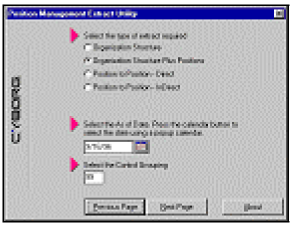


For practice, click the Next Page button.

4. Select the Extract Type

From the list on the form, select the type of extract required.

For practice, select 'Organization Structure Plus Positions'.



5. Select the As Of Date

Select the As Of Date you want to use to limit your extract selection. You can click the Calendar button directly to the right of the entry box to display a pop-up calendar that can be used to select the As Of Date.

The arrows in the top right corner of the Calendar can be used to select the month and year. Then click the date you want.

For practice, enter '6/01/02'.

6. Select the Control Grouping

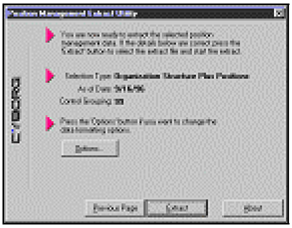
Enter the two-character Control Number for which you want to limit the extract data.

For practice, select '99'.

7. Click the Next Page button

Click the Next Page button to continue the extract file selection process.

For practice, click the Next Page button.



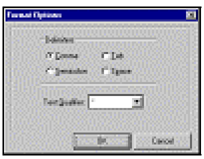
8. Review extract details

The Selection Type, As Of Date, and Control Grouping you selected are displayed. Review these extract details now for accuracy. If you want to change them, the Previous Page button can be used to back up through the process and change your previous entries.

For practice, review the extract details.

9. Press the Options button (optional)

If you want to change the data-formatting options, press the Options button. The Format Options dialog box is displayed.



For practice, click the Options button.

10. Select a Delimiter (optional)

Select the Delimiter to be used for your extract file from the following options:

- Comma (default)
- Semicolon
- Tab
- Space

For practice, leave the default delimiter selected.

11. **Select a Text Qualifier (optional)**

Select a Text Qualifier to be used for your extract file:

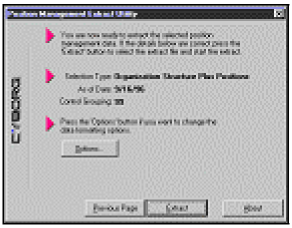
- Double-quote (" - default)
- Single-quote (')
- <None>

For practice, leave the default Text Qualifier selected.

12. **Click OK or press Enter**

Click OK to return to the form shown below.

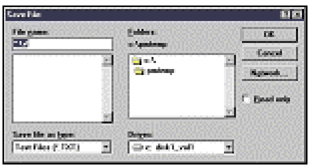
For practice, click OK.



13. **Click the Extract button**

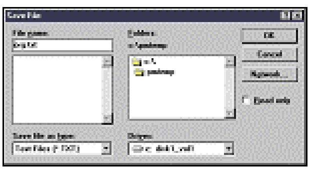
The Save File dialog box is displayed.

For practice, click the Extract button.



14. **Enter file information**

Enter the extract file folder and file name in the text boxes.



For practice, enter the 'org.txt' file in the 'C:\PMTEMP' folder.

15. **Click OK or press Enter**

The Confirm dialog box is displayed. This dialog box tells you how many records were written to the output file.

For practice, click OK.

16. Click Yes to exit

For practice, click Yes.

17. Review output file

Use your text editor to review the output file. A sample output file is shown below:

```
"","My Company","000001"
"000001","Administration","000002"
"000002","Finance","000003"
"000002","Human Resources","000004"
"000003","Controller","POS001"
"000003","Accounting","POS002"
"000004","Payroll","POS003"
"000004","Compensation","POS004"
```

Review of Questions Answered

1. What are the Position Administration packaged reporting options?

2. How is the Position Administration Extract Utility used?

CHAPTER 12

Viewing Position Administration Data

In This Chapter

Introduction

Position Administration facilitates online viewing of the various Position Administration data entities. Once you have set up your organization structure you can easily move around in it to view data on Organization Units, Jobs, Positions, and/or Incumbents.

You may want to move up or down the organization structure (for example, from Organization Unit to Positions to Incumbents) or you may want to stay at one particular level, such as Positions, and view data for many different Positions one after another. This is accomplished using the delivered Position Administration forms along with the navigational menus and buttons.

This section includes some sample tasks you may want to perform using many of the concepts explained in Overview of Position Administration Navigation.

Tasks

The following tasks are covered in this section:

- Viewing the existing organization structure
- Viewing a Job's associated Positions and Organization Units
- Viewing an Incumbent's current Positions
- Viewing the Incumbents for a specific Position
- Viewing a Position's subordinates
- Selecting another of the same data entity
- Drilling down through the data structure
- Stepping up through the data structure

Prerequisites

Before you can begin to view any of the Position Administration data, set up your Positions, Organization Units, and Jobs.

☞ *Refer to* **Establishing Organization Units** *(on page 61) for more information.*

Questions answered

The following question is answered in this chapter:

What types of views are available for viewing Position Administration data?

Position Administration navigation

Understanding the principles of Position Administration navigation is important to the successful viewing of Position Administration data.

☞ *Refer to* **Overview of Position Administration Navigation** *(on page 19) for details on how to navigate within Position Administration.*

Apply the Concept

Match each Position Administration form to its corresponding description.

Form	Answer
1) Organization Structure form	_______
2) Job - Associated Positions And Org Units form	_______
3) Incumbent - Current Positions form	_______
4) Position - Subordinates form	_______
5) Position - Incumbents form	_______

Description

a) Shows subordinates of a particular Position.
b) Shows the Positions associated with a particular Job.
c) View and access the hierarchy of Organization Units.
d) Displays selected details of all Incumbents for a particular Position.
e) Shows current Position information.

Detailed Directions

This section provides detailed directions on completing a business task.

Tasks

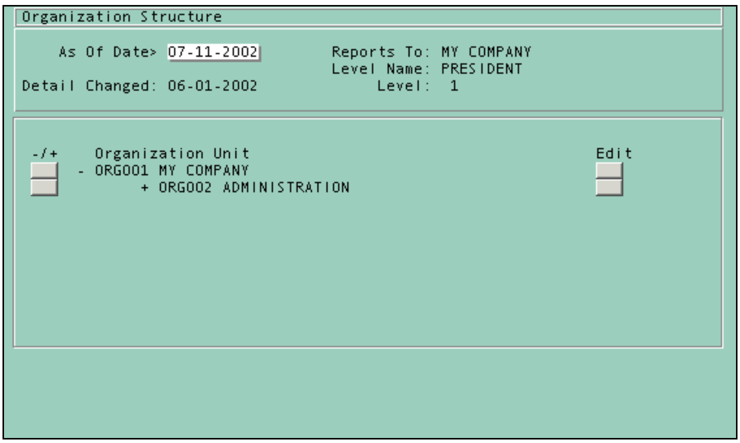
Viewing the existing organization structure

1. Access the Organization Structure form (M30SCR)

Access this form by making the following selection from the Navigator:

Component: Position Administration
Process: Organization Unit Details
Task: Organization Structure

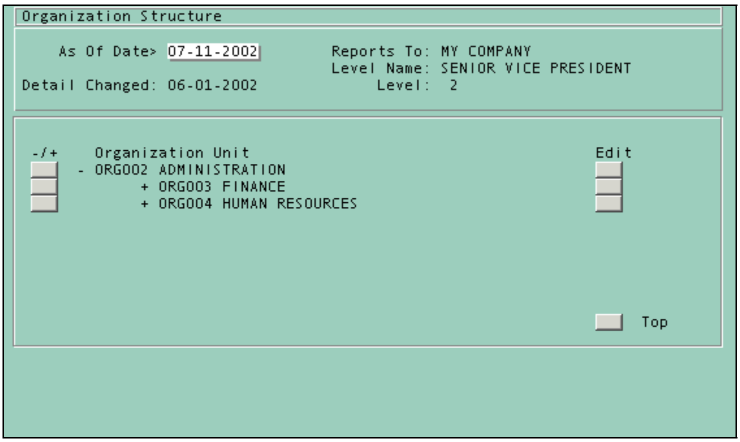
For practice, access the Organization Structure form (M30SCR).



2. View the organization structure

- A minus symbol (-) displayed to the left of an Organization Units means the Organization Units belonging to it are being displayed. Click the -/+ button to view the Organization Unit to which it belongs (if any).
- The plus symbol (+) displayed to the left of an Organization Unit means there are Organization Units belonging to that Organization Unit. Click the -/+ button to view these.
- When viewing an Organization Unit, only those Organization Units to which it belongs are displayed.
- The lowest level name and number in the structure that you are currently viewing are shown at the top of the form along with the Organization Unit to which this level belongs.
- The level number indicates how far down in the organization structure the Organization Unit resides.

For practice, click the button for an Organization Unit with the plus symbol (+) displayed to the left.



Note: *The Top button at the bottom of the form returns you to the top of the organization structure.*

Refer to Restructuring Your Organization *(on page 171)* for an explanation of organization structures.

Viewing a Job's associated Positions and Organization Units

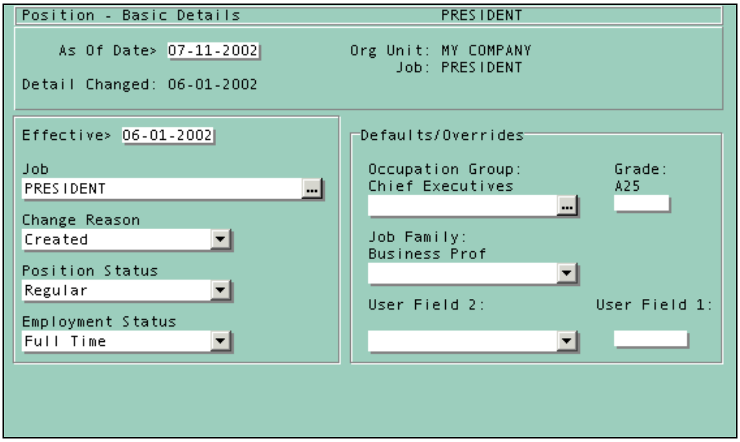
1. Access the Job - Associated Positions And Org Units form (M11SCR)

Access this form by making the following selection from the Navigator:

Component: Position Administration
Process: Job Details
Task: Associated Positions

The Positions and Organization Units associated with the Job are displayed on the form. If only one position exists, then the Position - Basic Details form (M20SCR) for that Position displays.

For practice, access the Job - Associated Positions And Org Units form (M11SCR).



2. **Access the appropriate basic details form**

If more than one position displays, clicking the button to the left of a Position will display the Position - Basic Details form (M20SCR) for that Position.

For practice, click one of the buttons to the left of a Position.

Viewing an Incumbent's current Positions

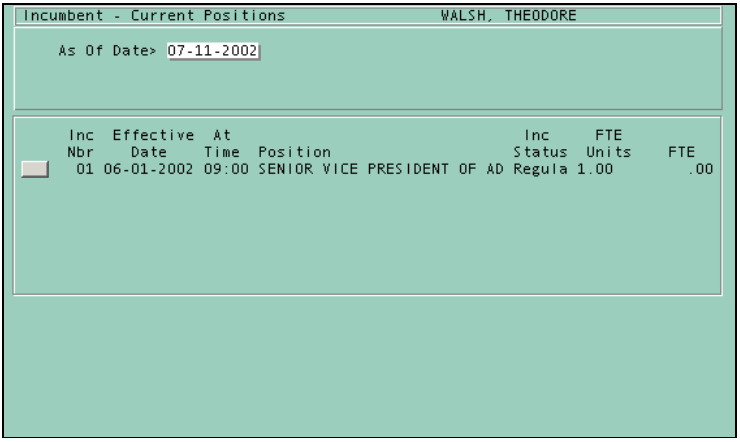
To view the Positions to which an employee is currently linked, follow these steps:

1. **Access the Incumbent - Current Positions form (M41SCR)**

Access this form by making the following selection from the Navigator:

Component: Position Administration
Process: Incumbent Details
Task: Incumbent Current Positions

For practice, access the Incumbent - Current Positions form (M41SCR) for employee 3002.

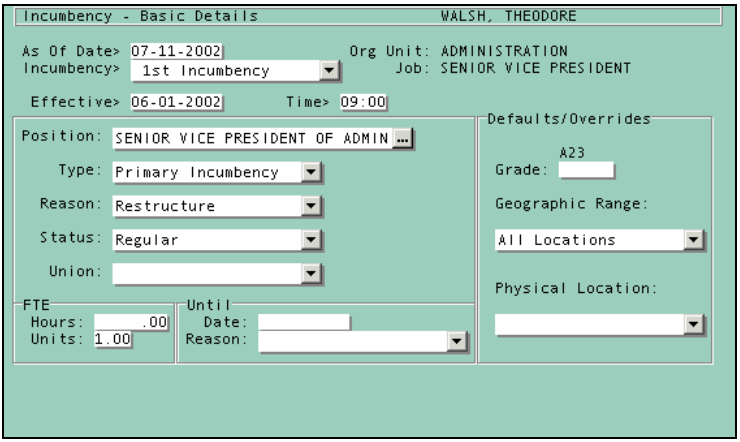


2. Select the incumbency to view

Click the button to the left of the Position incumbency you want to view.

The Incumbency - Basic Details form (M40SCR) for the incumbency is displayed.

For practice, click a button to the left of a Position incumbency.



Viewing a Position's subordinates

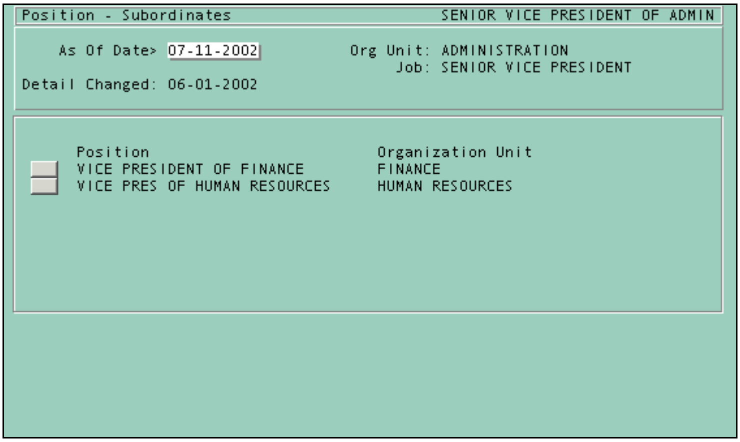
To view Position subordinates (or sub-Positions), follow these steps:

1. Access the Position - Subordinates form (M35SCR)

Access this form by making the following selection from the Navigator:

Component: Position Administration
Process: Position Details
Task: View Position Subordinate

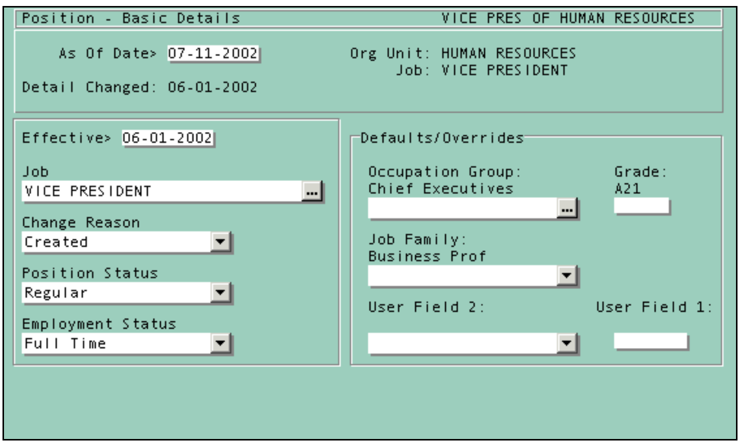
For practice, access the Position - Subordinates form (M35SCR).



2. Click a Position/Organization Unit button

Click the button to the left of the Position and Organization Unit to access the Position - Basic Details form (M20SCR) for the Position.

For practice, click a button to the left of the Position/Organization Unit.



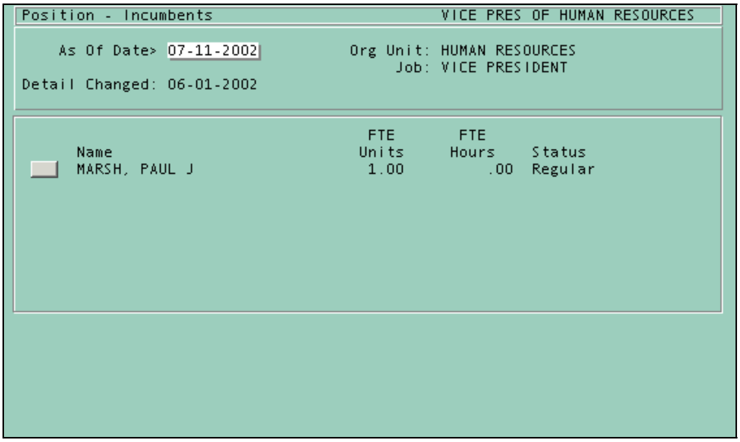
Viewing the Incumbents for a specific Position

1. Access the Position - Incumbents form (M21SCR)

Accessed this form by choosing the Incumbents for This Position button on the Position Administration toolbar.

For practice, access the Position - Incumbents form (M21SCR).

The Incumbents for the Position are listed.



Position - Incumbents VICE PRES OF HUMAN RESOURCES

As Of Date> 07-11-2002 Org Unit: HUMAN RESOURCES
Job: VICE PRESIDENT

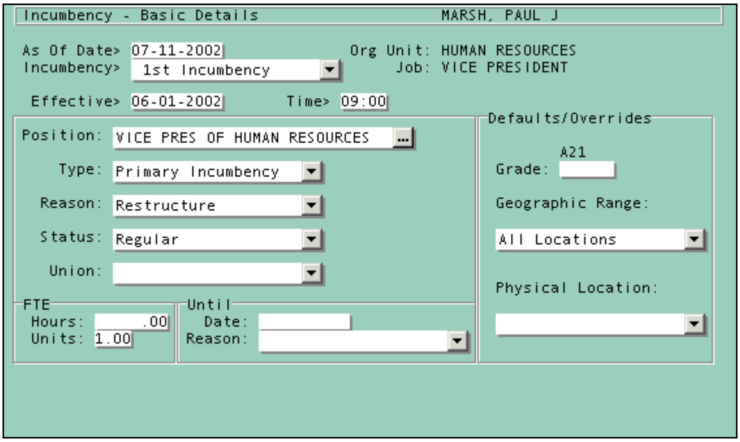
Detail Changed: 06-01-2002

Name	FTE Units	FTE Hours	Status
MARSH, PAUL J	1.00	.00	Regular

2. Access the appropriate basic details form

Clicking the button to the left of an Incumbent Name will display the Incumbent - Basic Details form (M40SCR) for the Incumbent.

For practice, click a button to the left of an Incumbent Name.



Selecting another of the same data entity

To select another of the same entity, follow the same steps whether the entity is an Organization Unit, Job, or Position. Selecting another of the same entity can be done from any form in Position Administration.

1. Access the Organization Unit - Basic Details form (M46SCR), Job - Basic Details form (M10SCR), or Position - Basic Details form (M20SCR)

Access these forms by making the following selection from the Navigator:

Component: Position Administration
Process: Organization Unit Details
Task: Basic Details

or

Component: Position Administration
Process: Job Details
Task: Basic Details

or

Component: Position Administration
Process: Position Details
Task: Basic Details

For practice, access the Organization Unit - Basic Details form (M46SCR).

2. Click the entity button on the toolbar

Click the Organization Unit, Job, or Position level button of the entity for which you want to select another. The Select dialog box is displayed.

For practice, click the Organization Unit button.

Refer to **Overview of Position Administration Navigation** *(on page 19) for the examples and locations of these buttons.*

3. Type a Search for value (optional)

Type a partial or complete Search for value for the Organization Unit.

For practice, leave this text box blank.

4. Select an Option (optional)

Select the 'Starts with' or 'Contains' option in the Settings tab, depending on your Search for value entry.

For practice, accept the default selection.

Refer to **Overview of Position Administration Navigation** *(on page 19) for more information on using the Select function.*

5. Click Search Now or press Enter

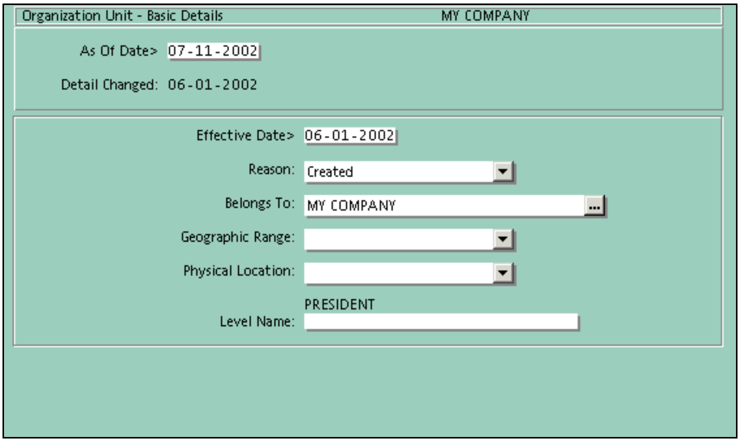
If multiple matches are found, the Choose an Org Unit dialog box is displayed with the available selections. If only one match is found, the Organization Unit is displayed on the form.

For practice, click Search Now.

6. Select an Organization Unit and click Select

Select the Organization Unit you want to access. The Organization Unit - Basic Details form (M46SCR) is displayed for the Organization Unit.

For practice, select 'My Company' and click Select.



Refer to **Overview of Position Administration Navigation** *(on page 19) for an explanation of selecting another of the same entity.*

Drilling down through the data structure

To drill down through the data structure from Organization Unit to Position to Incumbent, follow these steps:

1. Access the Organization Unit - Basic Details form (M46SCR)

Access this form by making the following selection from the Navigator:

Component: Position Administration
Process: Organization Unit Details
Task: Basic Details

For practice, access the Organization Unit - Basic Details form (M46SCR).

2. Click the Position button

Click the Position button on the Position Administration toolbar. The Select dialog box is displayed.

For practice, click the Position button.

3. Type a Search for value (optional)

Type a partial or complete Search for value for the Position.

For practice, leave this text box blank.

4. Select an Option (optional)

Select the 'Starts with' or 'Contains' option in the Settings tab, depending on your Search for value entry.

For practice, accept the default settings.

Refer to **Overview of Position Administration Navigation** *(on page 19) for more information on using the Select function.*

5. Click Search Now or press Enter

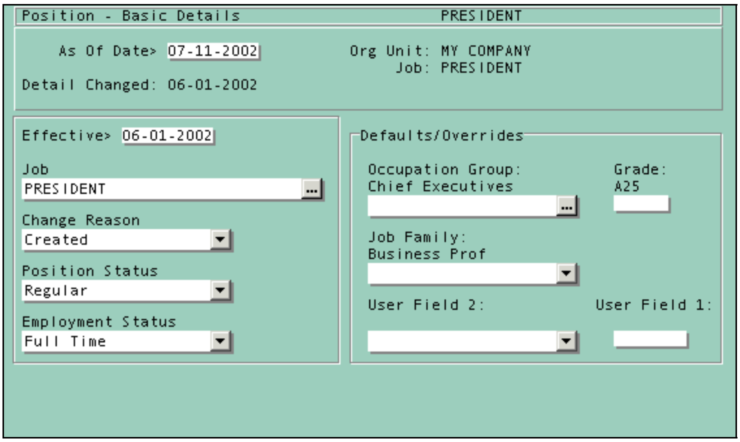
If multiple matches are found, the Choose a Position dialog box is displayed with the available selections. If only one match is found, the Position is displayed on the form and you should go to Step 7.

For practice, click Search Now.

6. Select a Position and click Select

Select the Position you want to access. The Position - Basic Details form (M20SCR) is displayed for the Position.

For practice, select 'President' and click Select.



7. Click the Incumbent button

Click the Incumbent button on the Position Administration toolbar. The Incumbents for the Position are listed on the Position - Incumbents form (M21SCR).

For practice, click the Incumbent button.

Refer to **Overview of Position Administration Navigation** *(on page 19) for an explanation of drilling down through the data structure.*

Stepping up through the data structure

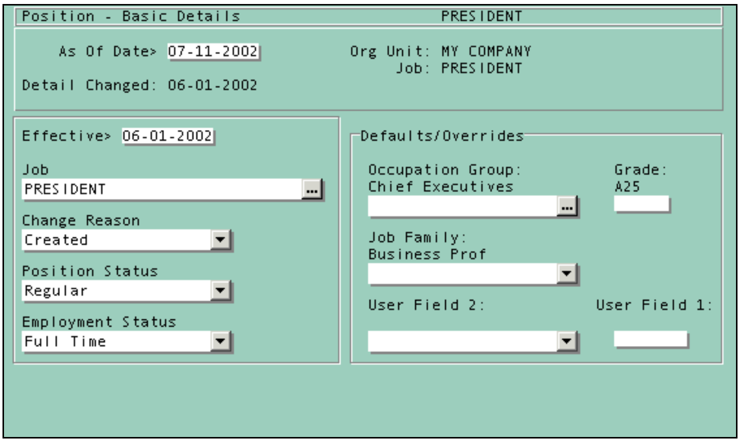
To step up through the data structure from Position to Job, follow these steps:

1. Access the Position - Basic Details form (M20SCR)

Access this form by making the following selection from the Navigator:

Component: Position Administration
Process: Position Details
Task: Basic Details

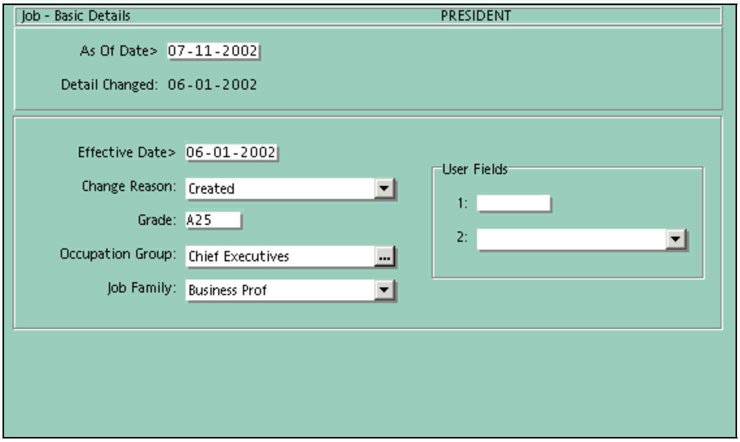
For practice, access the Position - Basic Details form (M20SCR).



2. Click the Job button

Click the Job button on the Position Administration toolbar. The Job - Basic Details form (M10SCR) is displayed with the Position's Job.

For practice, click the Job button.



Refer to **Overview of Position Administration Navigation** *(on page 19) for an explanation of drilling down through the data structure.*

Review of Questions Answered

What types of views are available for viewing Position Administration data?

PART 4

Complement Control

In This Section

CHAPTER 13

Implementing Complement Control

In This Chapter

Introduction

Complement Control is an optional feature of Position Administration that you can use as part of your Position Administration strategy. You cannot use the Complement Control functionality independent of Position Administration.

Before using the features of Complement Control, you should decide how you want to customize its functionality to meet your organization's needs.

Decisions to be made include how you want to set up Complement Control options, deciding which of your Positions will be under Complement Control, and setting complement limits.

Tasks

The following tasks are covered in this section:

- Adding Complement Control options to the Status Code option list
- Setting up Complement Control options
- Including Positions in Complement Control
- Entering a complement limit for a Position

Prerequisites

Before you can begin to implement Complement Control, you must have implemented Position Administration.

☞ *Refer to* **Implementing Position Administration** *(on page 33) for details about the Position Administration implementation tasks.*

Questions answered

The following questions are answered in this section:

1. What are the Complement Control setup options?
2. How are Positions related to Complement Control?

What is Complement Control?

Complement Control is used in association with Position Administration to limit hires and transfers based on Headcount, FTEs, or Hours budgeted for your Positions. You can use Complement Control with all your Positions, just a few, or none at all. This decision is up to you.

Complement Control is an optional feature of Position Administration that you can use as part of your position strategy. You cannot use the Complement Control functionality independent of Position Administration.

Why use Complement Control?

You should use Complement Control if limiting hires and transfers based on Headcount, FTEs, or Hours budgeted for Positions is important to you.

Complement Control features

The following are important features of Complement Control:

- Customization of Complement Control options, including:
  - Complement unit selection
  - Control options by budget or complement amounts
  - Validation message option
- Inclusion of Positions in Complement Control
- Changed HR procedures when using Complement Control, including:
  - Hiring new employees
  - Transferring existing employees
  - Transferring employees to new Positions
- Detection of Position vacancies and surpluses

Not all your Positions have to be set up under Complement Control. You may want to designate all or possibly just a few of your Positions as complement Positions. This decision is up to you.

Positions and Complement Control

By setting up your Positions under Complement Control, you may limit hires and transfers based on Headcount, FTEs, or budgeted hours. Not all of your Positions have to be set up under Complement Control. You may want to designate all of your Positions as complement Positions, (that is, controlled by Complement Control), or possibly just a few. This decision is yours.

To maintain synchronization, Complement Control uses the same Control Numbers as Position Administration.

A Position's status is used to designate a Position as a complement position. Complement Control options should be added to the Status Code option list (PM08) for those statuses for which you want to have Complement Control. See the example below:

Status Code option list PM08

Regular Not Complement	N002
Regular Complement	C002

In the example above, a Position with a status of Regular Not Complement (N002) will not be included in Complement Control. Conversely, a Position with a status of Regular Complement (C002) will be included in Complement Control. Complement Control status options must begin with the letter 'C'.

Also, in this example we have added the words 'Not Complement' and 'Complement' in the descriptions for clarity. The words in the description do not affect the meaning of the option.

Positions are included as complement Positions on the Position - Basic Details form (M20SCR) by selecting a option from the Status Code option list that is included in Complement Control.

See also:

- Adding Complement Control options to the Status Code option list ***(on page 232)***
For detailed directions on how to add the Complement Control options.

- Including Positions in Complement Control ***(on page 237)***
For detailed directions on how to include Positions in Complement Control.

Apply the Concept
Describe how your organization would use Complement Control.

Apply the Concept

Identify the forms and text boxes that would be selected and updated to:

a) Set up Complement Control options.

Form	Text boxes	Options

b) Assign a Position to Complement Control.

Form	Text boxes	Options

Complement Control setup options

Three Complement Control setup options allow you to customize the functionality to meet the requirements of your organization. For best results, these options should be set up the same for all Organizations using the same Position Administration Control Number. These setup options include:

- Complement unit
- Budget or complement
- Validation messages

You should decide how you want to set up each of these options. An explanation of each of the setup options follows.

Complement unit

One of the following three types of complement units can be selected to validate that the complement limits for your Positions have not been exceeded:

- Headcount—Number of incumbents
- FTE—Number of FTE employees
- Hours—Number of hours

The complement unit is selected in the 'Compl Unit' list box on the System Options form (TG-SCR).

Control options by budget or complement limit

The complement limit for a Position (Headcount, FTE, or Hours) can be the same as or different from the budgeted amount for a Position.

If the budget amount for the Position (Headcount, FTE, or Hours) on the Position - Budget form (M34SCR) is always the same as the complement limit on the Position - Complement form (M81SCR), then select the 'Same' option in the Budget/Compl text box on the System Options form (TG-SCR). By doing this, the Position - Budget form (M34SCR) will be the only form used to enter the budget/complement limit.

If the budget amount for the Position (Headcount, FTE, or Hours) on the Position - Budget form (M34SCR) is different from what you want for a complement limit, then select the 'Different' option in the Budget/Compl text box on the System Options form (TG-SCR). Separate complement limits for Positions can then be entered using the Position - Complement form (M81SCR).

Note: *If the budget amount and complement limit are the same, you may want to remove the Position - Complement form (M81SCR) from the menus to avoid confusion.*

Validation messages

When processing a new hire, employee transfer, or Position incumbency, the system validates that the complement limit will not be exceeded by the form entry. For example, the system might validate if entering a new Position incumbency would exceed the complement limit for Headcount.

If the complement limit will be exceeded, a Warning or Reject message is displayed.

- Warning message—Allows you to 'accept' the Warning message and enter the form even though the complement limit is being exceeded. In this case, a surplus condition is created.
- Reject message—Means that the complement limit cannot be exceeded and the form cannot be entered.

You should decide if you want a Warning message or Reject message generated when the system determines that the complement limit would be exceeded by entering the form. This choice can be changed anytime (for example, you could begin processing with Warnings and switch to Rejects later).

The Reject message or Warning message option is selected in the Compl Control list box on the System Options form (TG-SCR).

For detailed directions on how to enter complement limits for Positions.

Apply the Concept

Identify the forms and text boxes that would be selected and updated to enter a complement limit for a Position.

Form	Text boxes	Options

Detailed Directions

This section provides detailed directions on completing a business task.

Tasks

Adding Complement Control options to the Status Code option list

1. Determine which options in the Status Code option list (PM08) are to be used for Complement Control

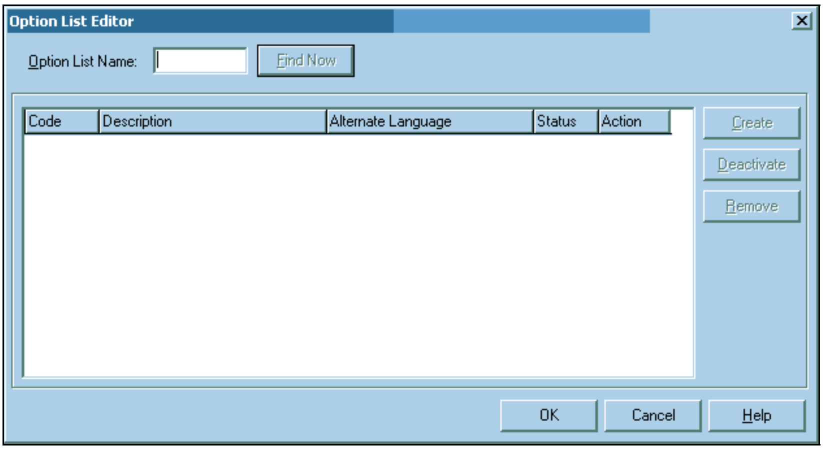
Determine which Complement Control Position Status options you want to add to PM08. Be sure the added options begin with the letter 'C'.

2. Access the Option List Editor (CSUPDT)

Access this form by making the following selection from the Navigator:

Component: Development Tools
Process: Option Lists
Task: Edit

For practice, access the Option list Editor (CSUPDT).



3. Enter the Option List Name

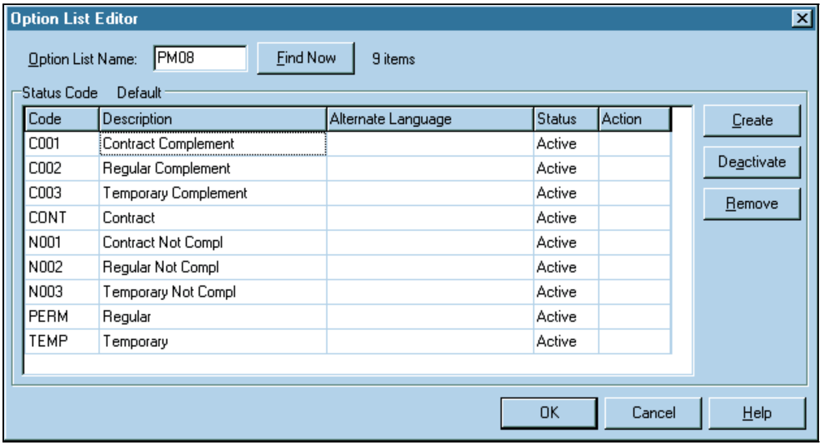
Enter the name of the Status Code option list PM08.

For practice, enter 'PM08'.

4. Click Find Now

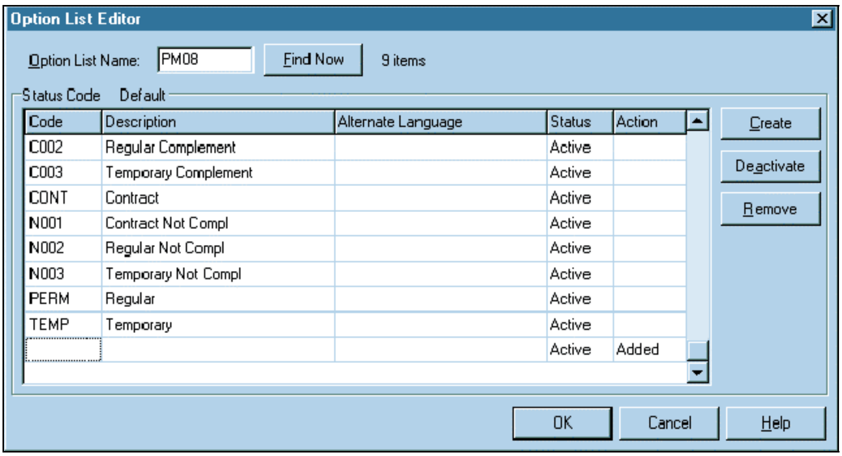
The options in the selected option list are displayed.

For practice, click Find Now.



5. Click Create

For practice, click Create.



6. Enter an Option

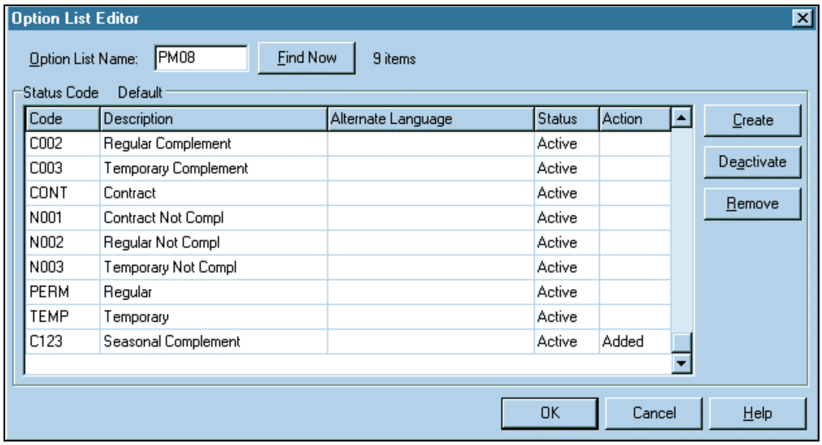
Type in the new Option value with a maximum length of 14 characters.

For practice, enter 'C123'.

7. Enter a Description

Type in an up-to-20 character Description of the new complement option.

For practice, enter 'Seasonal Complement'.



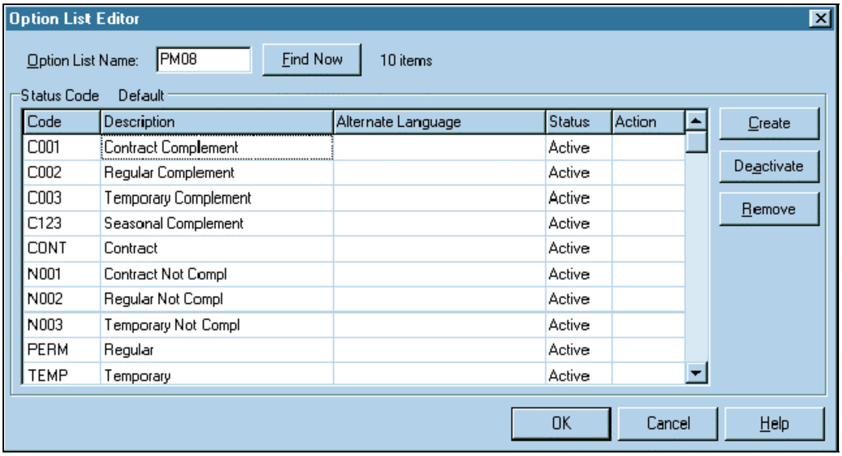
Note: *If you want to add additional statuses, repeat steps 5-7 until all of your complement statuses have been added to the Status Code option list.*

8. Click OK or press Enter

The NEW option is added to the option list. No confirmation message is displayed.

For practice, click OK or press Enter.

To view your entries, repeat steps 2-4.



See also:

- Positions and Complement Control ***(on page 228)***

For an explanation of Option list PM08.

Setting up Complement Control options

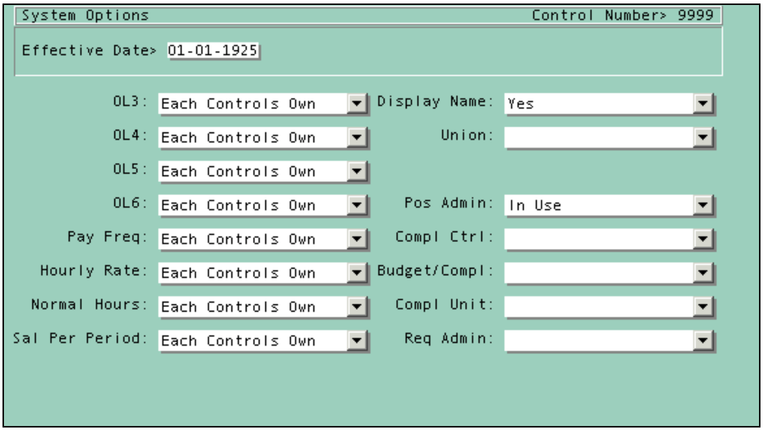
To set up the Complement Control options, follow these steps:

1. Access the System Options form (TG-SCR)

Access this form by making the following selection from the Navigator:

Component: HR Setup
Process: Setup HR Rules
Task: System Options

For practice, access the System Options form (TG-SCR).



2. Select a Compl Ctrl option

This switch indicates whether the Complement Control switch is turned on, and if so, with warnings or rejects.

For practice, select 'In Use With Warnings'.

3. Select a Budget/Compl option

This switch determines whether the Budget and Complement will be based on the same or different units.

For practice, select 'Different'.

4. Select a Compl Unit

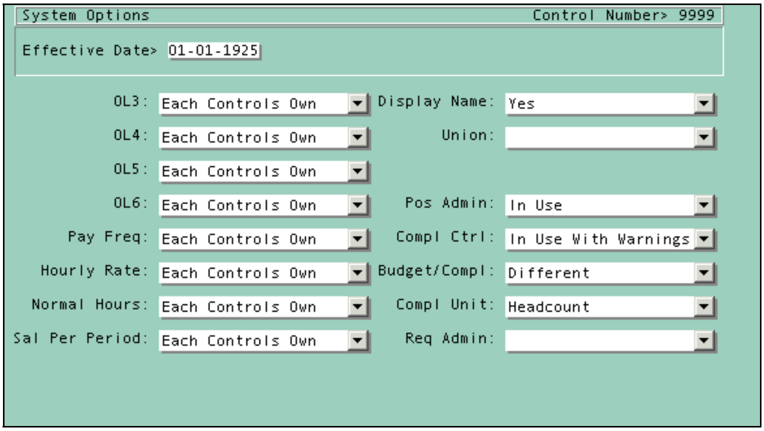
This switch determines which Complement Unit is to be used for Complement Control.

For practice, select 'Headcount'.

5. Click Save or press Enter

The Complement Control options are set up.

For practice, click Save.



See also:

■ Complement Control setup options ***(on page 230)***

For an explanation of the Complement Control setup entries.

Including Positions in Complement Control

To include Positions in Complement Control, follow these steps:

1. Access the Position - Basic Details form (M20SCR)

Access this form by making the following selection from the Navigator:

Component: Position Administration
Process: Position Details
Task: Basic Details

For practice, access the Position - Basic Details form (M20SCR) for the Position of Payroll Clerk.

2. Select a Position Status

Select a Position Status to designate a complement Position.

For practice, select 'Regular Complement'.

See also:

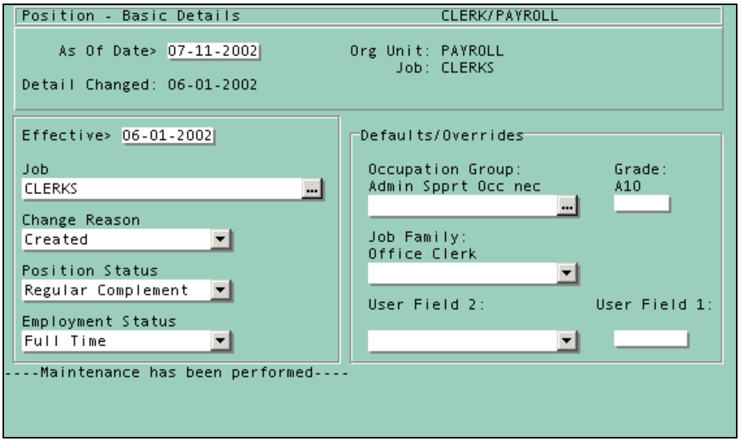
■ Adding Complement Control options to the Status Code option list ***(on page 232)***

For details on editing the Position Status option list.

3. Click Save or press Enter

The Position is designated as a complement position.

For practice, click Save or press Enter.



See also:

■ Positions and Complement Control ***(on page 228)***
For an explanation of including Positions in Complement Control.

Entering a complement limit for a Position

If you have set up the complement limit to be the same as budget on the System Options form (TG-SCR), the complement limit is entered on the Position - Budget form (M34SCR).

If you have set up the complement limit to be different from the budget on the System Options form (TG-SCR), the complement limit is entered on the Position - Complement form (M81SCR).

These forms are entered in exactly the same manner and only one of these forms is used for complement limit, depending on your setup option choices.

To set up a Complement Control limit for a Position, follow these steps:

1. Access the Position - Budget form (M34SCR) or Position - Complement form (M81SCR)

Access these forms by making the following selections from the Navigator:

Position - Budget form (M34SCR)

Component:	Position Administration
Process:	Position Details
Task:	Budget

or

Position - Complement form (M81SCR)

Component: Position Administration
Process: Position Details
Task: Complement Limits

For practice, access the Position - Complement form (M81SCR) for the Position of Payroll Clerk.

2. Enter the Effective Date

Enter the effective date in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere).

For practice, enter the current date.

3. Enter a Complement limit

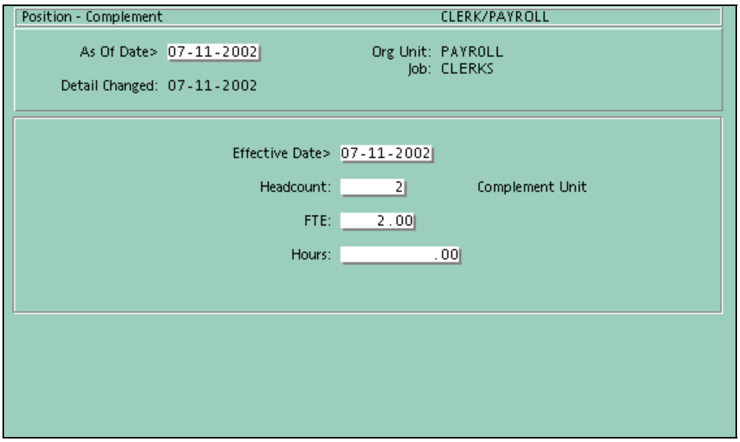
Enter a complement limit value in the text box designated as the complement unit (for example, 1.0 in the FTE text box). This means that the Position cannot exceed an FTE of 1 without generating a Warning or Reject message.

For practice, enter '2.0' in the FTE text box and '2' in Headcount.

4. Click Save or press Enter

The complement limit is entered.

For practice, click Save or press Enter.



Position - Complement CLERK/PAYROLL
As Of Date> 07-11-2002
Org Unit: PAYROLL
Job: CLERKS
Detail Changed: 07-11-2002
Effective Date> 07-11-2002
Headcount: 2
Complement Unit
FTE: 2.00
Hours: .00

Review of Questions Answered

1. What are the Complement Control setup options?

2. How are Positions related to Complement Control?

CHAPTER 14

Searching for Vacancies and Surpluses

In This Chapter

Introduction

Complement Control functionality facilitates searching for vacant and surplus Positions. Vacancies are unfilled complement positions, and surpluses are Positions that have exceeded the complement limit. Vacancies and surpluses can be identified and viewed.

Once you have identified and viewed any vacancies or surpluses, you can take action to change these conditions, if necessary.

Tasks

The following tasks are covered in this section:

- Viewing vacant Positions
- Viewing surplus Positions

Prerequisites

Before you can view any vacancies or surpluses, the Complement Control implementation tasks must be completed.

☞ *Refer to* **Implementing Complement Control** *(on page 223) for details about the implementation tasks.*

Questions answered

The following question is answered in this section:

How are vacancies and surpluses used in Complement Control?

Uses of vacancies and surpluses

Identifying vacancies and surpluses can help you manage your recruitment process. Recruiters can easily track which Positions still have vacancies and establish interview schedules accordingly. Likewise, managers can track vacancies to ensure that staffing needs are addressed in a timely manner.

If a Position has exceeded its complement limit, it may be necessary to reevaluate the complement budget for future openings.

Vacancies and surpluses can be viewed using seven different search types, listed below. Any additional required entries are noted.

- All Organization Units—No additional selection needed
- All Positions for all Jobs—No additional selection needed
- All Positions for this Job—Select a Job
- By Position—Select a Position, but if left blank will report on all Positions
- Org Unit and below—Select an Organization Unit
- This Job and Organization Unit—Select both a Job and Organization Unit
- This Organization Unit—Select an Organization Unit

An 'as of' date can be entered to limit the search to a time period.

Vacancies can be viewed using the View Vacant Positions form (M80SCR), and surpluses can be viewed using the View Surplus Positions form (M82SCR).

See also:

- Viewing vacant Positions ***(on page 245)***

For detailed directions on how to view vacancies.

- Viewing surplus Positions ***(on page 247)***

For detailed directions on how to view surplus positions.

Apply the Concept
Define the terms *vacancy* and *surplus*.

Apply the Concept
Describe how vacancies and surpluses are used within the Complement Control feature of Position Administration.

Apply the Concept
How do you view vacant Positions, and where are these vacancies displayed?

Apply the Concept
Identify some advantages of using the vacancies/surpluses search feature.

Apply the Concept
Describe the task(s) that must be completed before using the vacancies/surpluses search feature.

Detailed Directions

This section provides detailed directions on completing a business task.

Tasks

Viewing vacant Positions

1. Access the View Vacant Positions form (M80SCR)

Access this form by making the following selection from the Navigator:

Component: Position Administration
Process: Complement/Vacancy Details
Task: View Vacancies

The Selection Criteria panel of the View Vacant Positions form (M80SCR) is displayed.

For practice, access the View Vacant Positions form (M80SCR)

2. Select the Search Type

Select a Search Type from the option list (for example, 'By Position').

Note: *The Search Type entry determines which of the other text boxes on this form should be entered. For example, a Search Type entry of 'By Position' means a Position should be entered on this form.*

For practice, select 'By Position'.

3. Enter the As Of Date (optional)

Enter the As Of Date for the request in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere) . If no date is entered, the current date is used.

For practice, leave the current date as the As Of Date.

4. Enter the Org Unit (optional)

Select an Organization Unit.

For practice, leave this text box blank.

5. Enter the Job (optional)

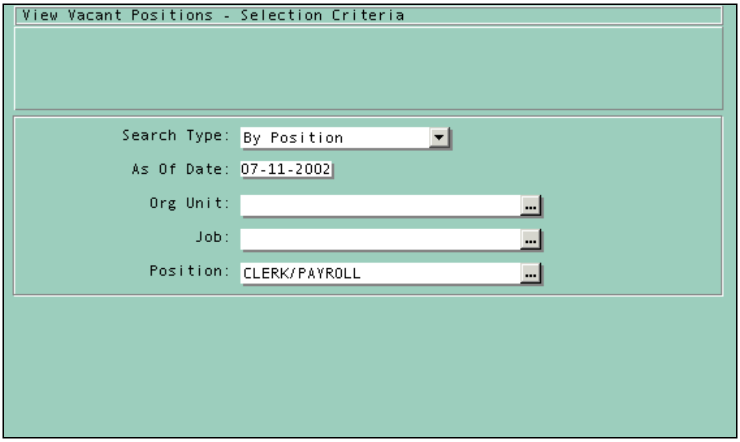
Select a Job.

For practice, leave this text box blank.

6. Enter the Position (optional)

Select a Position.

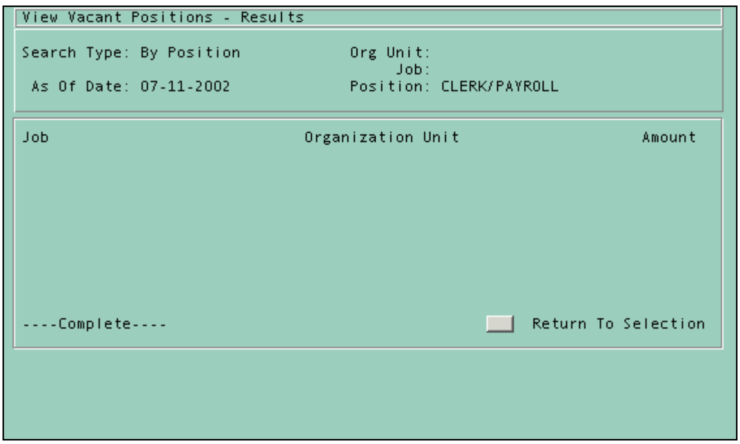
For practice, select 'Payroll Clerk'.



7. Click Save or press Enter

Any vacant Positions are displayed on the Results panel of the View Vacant Positions form. The Return To Selection button in the bottom right corner can be used to return to the Selection Criteria panel.

For practice, click Save. In this environment, there are no vacant positions.



See also:

- Uses of vacancies and surpluses ***(on page 243)***

For an explanation of vacancies.

Viewing surplus Positions

1. Access the View Surplus Positions form (M82SCR)

Access this form by making the following selection from the Navigator:

Component:	Position Administration
Process:	Complement/Vacancy Details
Task:	View Positions Over Complement

The Selection Criteria panel of the View Surplus Positions form (M82SCR) is displayed.

For practice, access the View Surplus Positions form (M82SCR).

2. Select the Search Type

Select a Search Type from the Option list (for example, 'By Position').

For practice, select 'This Org Unit'.

Note: *The Search Type entry determines which of the other text boxes on this form should be entered. For example, a Search Type entry of 'By Position' means a Position should be entered on this form.*

3. Enter the As Of Date (optional)

Enter the As Of Date for the request in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere). If no date is entered, the current date is used.

For practice, leave the current date as the As Of Date.

4. Enter the Org Unit (optional)

Select an Organization Unit.

For practice, select 'My Company'.

5. Enter the Job (optional)

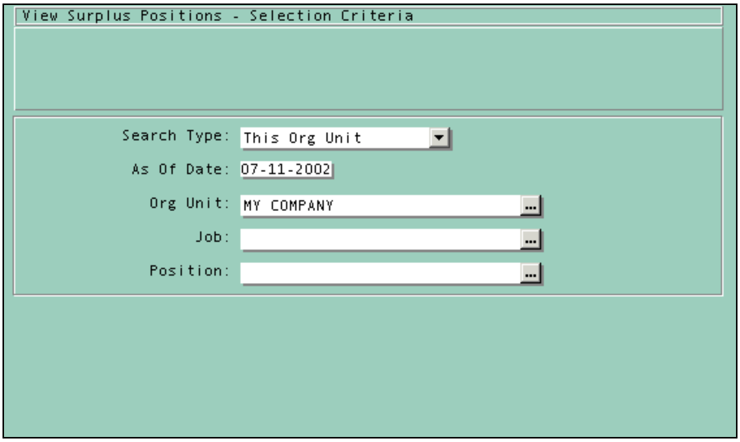
Select a Job.

For practice, leave this text box blank.

6. Enter the Position (optional)

Select a Position.

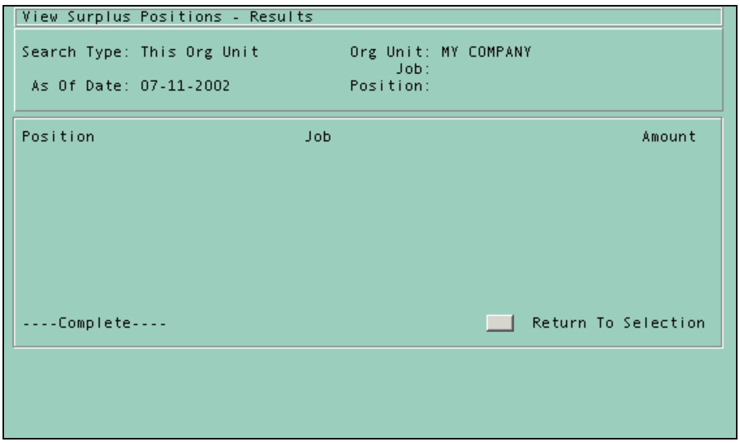
For practice, leave this entry blank.



7. Click Save or press Enter

Any surplus Positions are displayed on the Results panel of the View Surplus Positions form. The Return To Selection button in the bottom right corner can be used to return to the Selection Criteria panel.

For practice, click Save. In this environment, there are no surplus positions.



See also:

- Uses of vacancies and surpluses ***(on page 243)***

For an explanation of surpluses.

Review of Questions Answered

How are vacancies and surpluses used in Complement Control?

CHAPTER 15

Changed Procedures When Using Position Administration and Complement Control

In This Chapter

Introduction

This section explains the procedures and processes that have changed when using Position Administration and Complement Control. Some of the changes require additional form data to be entered while others affect the processing done by the system after a form has been entered.

Procedures and/or processing are affected on the following forms when using Position Administration and Complement Control.

- Set Up A New Employee (NH-SCR)—Additional data entry and validation processing
- Employee Information (EF-SCR)—Additional data entry and validation processing
- Applicant/Employee Transfer (ET-SCR)—Additional data entry and validation processing
- Separations And Terminations (96-SCR)—Additional processing
- Salary Assignment/Changes (40-SCR)—Incumbency number identifier, incumbency, and history selection panels
- Job Or Position Applied For (003SCR)—Can now be used for all companies, not just applicant companies

Tasks

The following tasks are affected when using Position Administration and Complement Control:

- Hiring new employees
- Transferring applicants to an active employee Organization
- Transferring active employees from one Organization to another
- Viewing incumbency salary data (and history)

Prerequisites

Before performing the tasks in this section ensure that the Position Administration and Complement Control implementation tasks have been completed.

☞ *Refer to* **Implementing Position Administration** *(on page 33) and* **Implementing Complement Control** *(on page 223) for details about the implementation task.*

Questions answered

The following question is answered in this section:

What are the differences in form procedures and processes when using Position Administration and Complement Control?

Differences in form processing when using Position Administration and Complement Control

Six forms are processed differently when you are using Position Administration and Complement Control. If you have used these forms previously, you will notice changes to them when you are using Position Administration and Complement Control. The changes in processing include:

- Assignment of the employee to a Position when processing a new hire or applicant/employee transfer
- Checking that the Position assignment will not cause the complement limit to be exceeded
- Removal of an employee from all assigned Positions when the employee is separated or terminated from the organization
- Viewing incumbency salary data (and history)

The forms affected by these processing changes are as follows:

- Set Up A New Employee (NH-SCR)
- Employee Information (EF-SCR)
- Applicant/Employee Transfer (ET-SCR)
- Separations And Terminations (96-SCR)
- Salary Assignment/Changes (40-SCR)
- Job Or Position Applied For (003SCR)

Set Up A New Employee form and Employee Information form

A new Position text box has been added to both forms to allow you to select the primary incumbency Position to assign the new employee.

A second form panel is now provided on the Set Up A New Employee form (NH-SCR) to record the Incumbency Status, employee Activity Status, and the Complement Amount for the Position. The complement unit you are using is displayed on the form so you always know what the format of the amount entry should be. For example, if the complement unit is Hours, you may want to enter '40.00'.

Before the form entry can be processed, the system validates that the complement limit for the Position will not be exceeded. If the complement limit will be exceeded, a Warning or Reject message is displayed. The Reject message or Warning message option is selected when you are setting up Complement Control on the System Options form (TG-SCR).

- A Warning message allows you to 'accept' the Warning message and enter the form even though the complement limit is being exceeded.
- A Reject message means that the complement limit cannot be exceeded and the form cannot be entered.

☞ *Refer to* **Implementing Complement Control** *(on page 223) for details on how to set up Complement Control with the appropriate messages.*

As a result of entering the Set Up A New Employee form (NH-SCR) or Employee Information form (EF-SCR), the Incumbency - Basic Details form (M40SCR) is automatically created or updated with the incumbency information.

See also:

- Hiring new employees ***(on page 258)***

For detailed directions on hiring new employees when using Position Administration and Complement Control.

Applicant/Employee Transfer form

The Applicant/Employee Transfer form (ET-SCR) processing is changed in the following scenarios.

Applicant to active employee Organization

When this form is used to transfer an applicant to an active employee Organization, a new Position text box has been added to allow you to select the primary incumbency Position to assign the new employee.

A second form panel is now provided to record the Incumbency Status, employee Activity Status, and the Complement Amount for the Position. The complement unit you are using is displayed on the form so you always know what the format of the amount entry should be. For example, if the complement unit is Hours, you might want to enter '40.00'.

To perform the transfer successfully, the applicant Organization must have the Organization-To-Rules Cross-Reference For HR form (AX-SCR) set up first and it must match the Organization-To Rules Cross-Reference For HR form (AX-SCR) for the active Organization.

Before the form entry can be processed, the system validates that the complement limit for the Position will not be exceeded. If the complement limit will be exceeded, a Warning or Reject message is displayed. The Reject message or Warning message option is selected when you are setting up Complement Control on the System Options form (TG-SCR).

- A Warning message allows you to 'accept' the Warning message and enter the form even though the complement limit is being exceeded.
- A Reject message means that the complement limit cannot be exceeded and the form cannot be entered.

☞ *Refer to* **Implementing Complement Control** *(on page 223) for details on how to set up Complement Control with the appropriate messages.*

As a result of entering the Applicant/Employee Transfer form (ET-SCR), the Incumbency - Basic Details form (M40SCR) is automatically created or updated with the incumbency information and the applicant is transferred to the active Organization.

See also:

- ***Transferring applicants to an active employee Organization***

For detailed directions on transferring applicants when using Position Administration and Complement Control.

Active employee from one Organization to another Organization

When this form is used to transfer an active employee from one Organization to another Organization with a different Control Number, the transfer will be rejected if the employee has any current or future-dated Positions assigned. The employee must be unassigned from the Position(s) before the transfer can be successfully completed.

If the Control Numbers for both Organizations are the same, the employee does not have to be unassigned from the Position(s).

Separations and Terminations form

When an employee is separated or terminated using the Separations and Terminations form (96-SCR), the employee is automatically unassigned from all Positions on the Incumbency - Basic Details form (M40SCR). A message is displayed on the form notifying you of this.

Salary Assignment/Changes form

The Salary Assignment/Changes form (40-SCR) includes an Incumbency Number identifier when you are using Position Administration.

Two additional panels are included on the Salary Assignment/Changes form (40-SCR):

- Incumbency selection
- Salary history selection

A brief description of each of these panels follows.

Incumbency selection

This panel lets you choose which of the employee incumbencies you want to view on the Salary Assignment/Changes form (40-SCR). This panel is returned automatically by the system when an employee has multiple salary incumbencies entered on the Salary Assignment/Changes form (40-SCR).

You can also access this panel by clicking on the Incumbency Selection button at the bottom of the Salary Assignment/Changes form (40-SCR).

Salary history selection

This panel lets you view incumbency salary data in one of these ways:

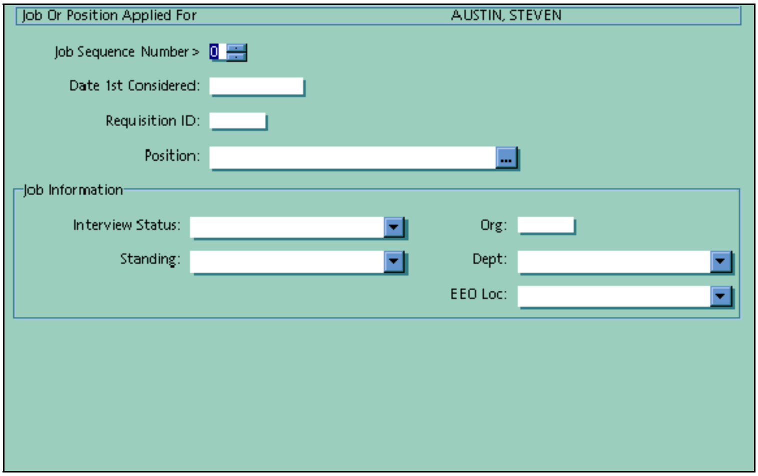
- This Incumbency Salary History—Displays salary history for only the incumbency you were viewing
- All Incumbency Salary History—Displays salary history for all incumbencies
- All Current/Active Incumbency Salaries—Displays all active incumbency salaries

Job Or Position Applied For form

The Job Or Position Applied For form (003SCR) is changed and can be used with all your Organizations, not just your applicant organizations. This means this form can now be used for your internal candidates who are not in an applicant Organization.

The Position text box has been changed to a drop-down list, and the Requisition ID text box has been reduced from eight characters to six to better interface with Requisition

Administration. You can enter either or both of these text boxes. If you enter only one, the other will be filled in automatically if Requisition Administration is in use.



Apply the Concept

Briefly describe your current Human Resources new hire, termination, and applicant transfer processes, if applicable.

Apply the Concept

True or False. Explain any false answers in detail.

a) When transferring an existing employee to a different Organization, the employee does not have to be unassigned from the Position.

b) When a primary incumbency is assigned during the processing of a new employee, the Incumbency - Basic Details form (M40SCR) is not always updated.

c) The system validates that the complement limit for the Position will not be exceeded when processing employee information, setting up a new employee, and transferring an applicant.

d) A Warning or Reject message allows you to override the complement limit when it is being exceeded.

e) The organization complement is the total value of all positions included in the complement.

Detailed Directions

This section provides detailed directions on completing a business task.

Tasks

Hiring new employees

To hire new employees when using Position Administration and Complement Control using the Set Up A New Employee form (NH-SCR), follow these steps:

1. Access the Set Up A New Employee form (NH-SCR)

The Set Up A New Employee form (NH-SCR) is used to add new employees to an active organization using a Logical Employee Model. This form allows the entry of a Position and a Complement Control Amount.

Access this form by making the following selection from the Navigator:

Component: Employee Resourcing
Process: Hire, Rehire, Reinstate an Employee
Task: Quick Hire

An Employee Selection dialog box is displayed.

For practice, access the Set Up a New Employee form (NH-SCR).

2. Enter the Logical Employee Model designation

In the Number text box, enter the employee template to be used in creating this new employee record, for example, 'LMODEL E1'.

For practice, type 'LMODEL 00'.

3. Enter an Organization

In the Organization text box, enter the designation of the organization into which the employee is to be hired.

For practice, type '999999'.

4. Click OK or press Enter

Click OK or press Enter to display the Set Up A New Employee form (NH-SCR) that contains the template's default information. Your next step is to modify this information to complete the Quick Hire process.

For practice, click OK or press Enter.

5. Enter the Employee Number

Enter the assigned employee number for the employee.

For practice, type '4545'.

Enter the name (Steps 6 through 10)

6. Select the Title

This list box selection identifies the employee's name prefix or title.

For practice, select 'Mr'.

7. Enter the First (name)

Type the employee's first name.

For practice, type 'Timothy'.

8. Enter the Middle (name)

Optionally, type the middle name of the employee. The first character of this text box will display as the last position on the title line of each form.

For practice, type '#' and delete the remaining text in this text box to remove the 'VOID' entry.

9. Enter the Last (name)

Type the employee's legal surname.

For practice, type 'Jenkins'.

10. Select the Suffix

This list box selection identifies the employee's name suffix, such as Jr. or Sr.

For practice, make no selection in this list box.

11. Enter the Address

Enter the employee's street address in the first text box. The second text box is reserved for additional address information, such as apartment number.

For practice, type '8 Calloway' and make no entry in the second text box.

12. Enter the City/State

Enter the city and state portions of the employee's address.

For practice, type 'Chicago' and 'IL'.

13. Enter the ZIP

Enter the employee's five-digit postal code. Optionally, enter the four-digit extended postal code preceded by a hyphen.

For practice, type '60606-1439'.

14. Select the Country

Select the employee's country of residence.

For practice, select 'USA'.

15. Enter the SSN (Social Security Number)

Enter the new employee's nine-digit social security number.

For practice, type '732 54 6423'.

16. Select the Position

Select the new employee's position.

For practice, select 'Payroll Clerk'.

17. Select the Race

Select the new employee's race. You may update this option list (HR22) to include all of the races needed by your organization.

For practice, select 'White-Not Hispanic'.

18. Select the Gender

Select the gender designation for the new employee.

For practice, select 'Male'.

19. Select the Normal Shift

Select the new employee's normal shift. You may update this option list (PP43) to include all of the normal shifts needed by your organization.

For practice, select 'No Shift'.

20. Select the Payment Type

Select whether the new employee is to be paid automatically or through time document entry. You may update this option list (PP40) to include all of the payment types needed by your organization.

For practice, select 'Hourly-Auto Paid'.

21. Select the Frequency

Select the new employee's pay frequency. You may update this option list (PP29) to include all of the pay frequencies needed by your organization.

For practice, select 'Weekly'.

22. Enter the Birth (date)

Enter the new employee's date of birth. Dates are entered in MM-DD-CCYY format (US and Canada) or DD-MM-CCYY (elsewhere).

For practice, type '03-02-1970' (US and Canada) or '02-03-1970' (elsewhere).

23. Enter the Employment (date)

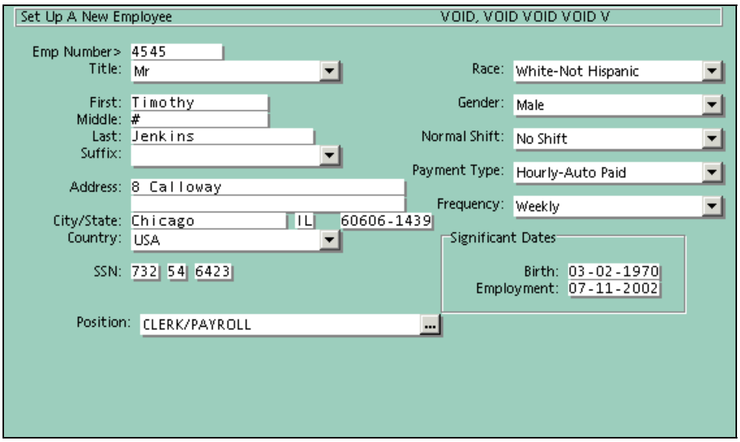
Enter the date employment becomes effective. Dates are entered in MM-DD-CCYY format (US and Canada) or DD-MM-CCYY (elsewhere).

For practice, type the current date.

24. Click Save or press Enter

The second form panel for the Set Up A New Employee form (NH-SCR) is displayed.

For practice, click Save or press Enter.



25. Select the Status

Select the Incumbency Status. This is typically 'Acting' or 'Regular' depending on the position.

For practice, select 'Regular'.

26. Select the Activity

Select the appropriate new hire activity. You may update this option list (HR09) to include all of the activities needed by your organization.

For practice, select 'New Hire-Hr Reg FT' to hire the employee for hourly full-time.

27. Select the Union

Select the union designation. You may update this option list (PP429) to include all of the unions needed by your organization.

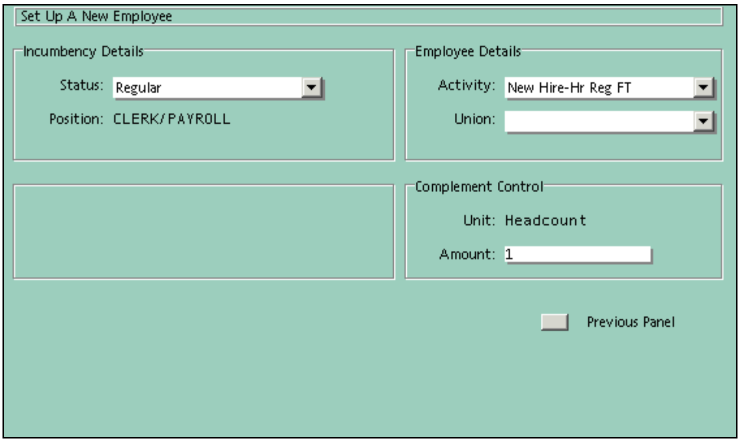
For practice, leave this list box blank.

28. Enter a Complement Control Amount

Enter the a mount to be added to the Position complement for the complement unit displayed above this text box.

Note: *If the Complement Unit is Headcount, the system automatically assumes the entry is '1'. There is no need to enter it here.*

For practice, type '1'.



29. Click Save or press Enter

The first panel is displayed and the employee has now been set up in an active organization.

For practice, click Save or press Enter.

See also:

- Differences in form processing when using Position Administration and Complement Control ***(on page 253)***

For details on hiring new employees when using Position Administration and Complement Control.

Transferring applicants to an active employee Organization

Completing the Guided Practice

To successfully complete the steps in this task, you must first access the Organization-To-Rules Cross-Reference form (AX-SCR) for Organization 993333, and enter Control number 9999 in both the Systems Options and Activities text boxes.

1. Access an applicant Organization

Access the Organization for the applicant you want to transfer to the active employee Organization.

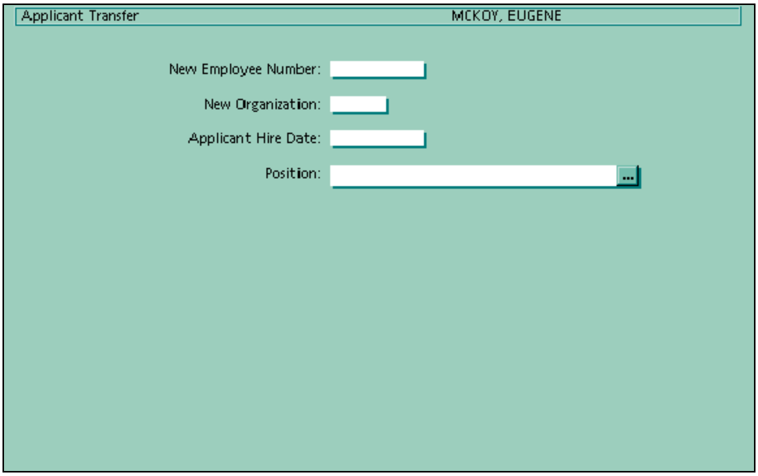
For practice, access the Organization of '993333'.

2. Access the Applicant Transfer form (ET-SCR)

Access this form by making the following selection from the Navigator:

Component: Employee Resourcing
Process: Hire, Rehire, Reinstate an Employee
Task: Transfer Emp to New Organization

For practice, access the Applicant Transfer form (ET-SCR) for applicant 'A001'.



3. Enter the New Employee Number

Enter the New Employee Number. Up to ten alphanumeric characters are allowed.

For practice, type '3456'.

4. Enter the New Organization

Enter the New Organization. Up to six alphanumeric characters are allowed.

For practice, type '999999'.

5. Enter the Applicant Hire Date

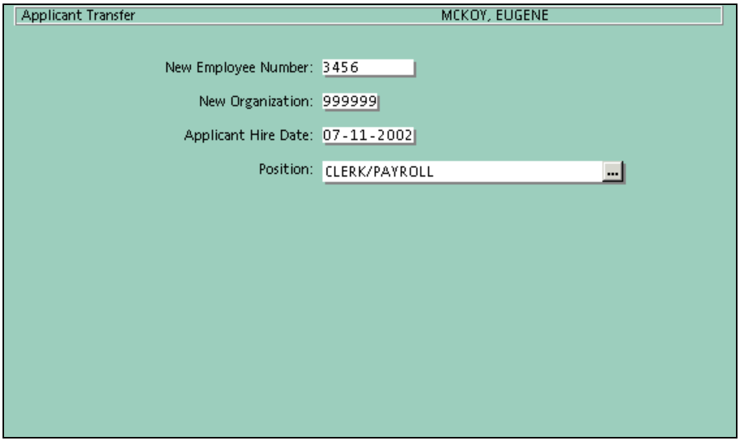
Enter the hire date for the new employee in the format DD-MM-CCYY (US and Canada) or CCYY-DD-MM (elsewhere).

For practice, enter the current date.

6. Enter the Position

Enter a Position for the new employee.

For practice, select 'Payroll Clerk'.



7. Click Save or press Enter

A second form panel is displayed.

For practice, click Save.

8. Select the Status

Select an Incumbency Status from the option list, usually Permanent or Acting. This option list should be edited to include all the Incumbency Statuses you want.

For practice, select 'Regular'.

9. Select an Activity status

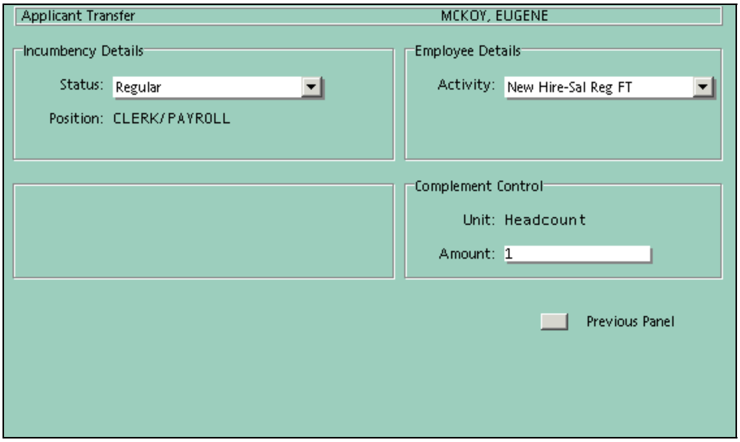
Select an employee Activity status from the option list. This option list should be edited to include all the Activity statuses you want.

For practice, select 'New Hire-Sal Reg FT'.

10. Enter a Complement Control Amount

Enter the Amount to be added to the Position complement for the complement unit displayed above this text box

For practice, type '1'.



11. Click the Previous Panel button or press Enter

The system verifies that assigning the new employee to the Position will not cause the Position complement to be exceeded. If the Position complement will be exceeded, a Warning or Reject message is displayed based on your selection on the System Options form.

If the Position complement will not be exceeded or you 'accept' a Warning message, the new employee is set up. The Incumbency - Basic Details form (M40SCR) is created, the Job/Assignment Changes form (05-SCR) is updated, and the New Hire form (01-SCR) is created for the employee.

For practice, click the Previous Panel button.

12. Click Yes or press Enter

For practice, click Yes.

- Differences in form processing when using Position Administration and Complement Control ***(on page 253)***

For details on transferring applicants to active employee Organizations when using Position Administration and Complement Control.

Unassigning an employee from a Position

Note: *Prior to transferring an active employee from one Organization to another, you must unassign the employee's Position. However, if the Control Numbers for both Organizations are the same, the employee does not have to be unassigned from the Position(s).*

To unassign an employee's Position, follow these steps:

1. **Access the Incumbent - Current Positions form (M41SCR)**
Access this form by making the following selection from the Navigator:

Component:	Position Administration
Process:	Incumbent Details
Task:	Incumbent Current Positions

For practice, access the Incumbent - Current Positions form (M41SCR) for employee 3013.

2. **Select the Position incumbency to unassign**
Click the button to the left of the incumbency you want to unassign.

The Incumbency - Basic Details form (M40SCR) for the Position incumbency is displayed.

For practice, select the '1st Incumbency'.

3. **Enter the Effective Date**
Enter the Effective Date in the format MM-DD-CCYY (US and Canada) or DD-MM-CCYY (elsewhere).

For practice, enter a date one month from the As Of Date, for example '08-11-2002' (US and Canada) or '11-08-2002' (elsewhere).

4. **Enter the Time**
Enter the Time in the format HH:MM if it is different from the default time of 09:00.

For practice, leave this text box as is.

5. **Select a Reason of Un-assigned**
Select a Reason of Un-assigned from the option list to unassign the employee from the Position. This option list should be edited to include all the reasons you want.

For practice, select '(Un-assigned)'.

6. **Click Save or press Enter**
The employee is unassigned from the Position.

For practice, click Save or press Enter.

For an explanation of the relationship between employees and Positions.

Transferring active employees from one Organization to another

To transfer active employees from one Organization to another, follow these steps:

Note: *Prior to transferring an active employee from one Organization to another, you must unassign the employee's Position. However, if the Control Numbers for both Organizations are the same, the employee does not have to be unassigned from the Position(s).*

1. Access an Organization

Access the Organization for the employee you want to transfer.

For practice, access the Organization of '999999'.

2. Access the Employee Transfer form (ET-SCR)

Access this form by making the following selection from the Navigator:

Component: Employee Resourcing
Process: Hire, Rehire, Reinstate an Employee
Task: Transfer Emp to New Organization

For practice, access the Employee Transfer form (ET-SCR) for employee '3013'.

3. Enter the New Employee Number

Enter the New Employee Number. Up to ten alphanumeric characters are allowed.

For practice, enter '3013'.

4. Enter the New Organization

Enter the New Organization. Up to six alphanumeric characters are allowed.

For practice, enter '995555'.

5. Enter the Transfer Date

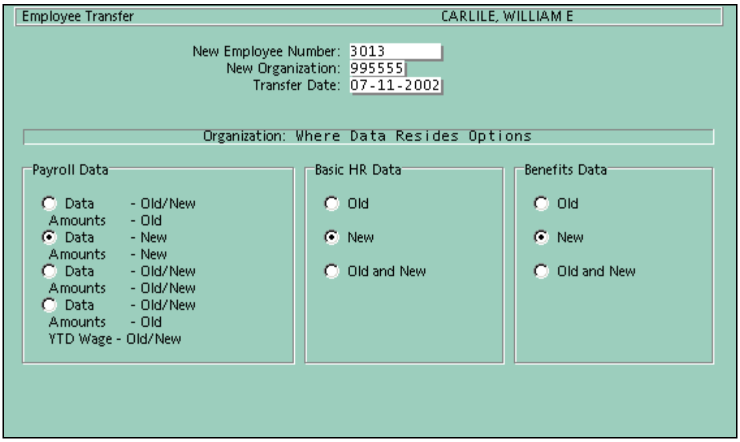
Enter the hire date for the new employee in the format DD-MM-CCYY (US and Canada) or DD-MM-CCYY (elsewhere).

For practice, enter the current date.

6. Select any other data options

Select the appropriate Payroll, Basic HR, and Benefits data options.

For practice, leave the data options as they are.



7. Click Save or press Enter

A transfer is successfully completed.

For practice, click Save.

- Differences in form processing when using Position Administration and Complement Control ***(on page 253)***

For details on transferring an active employee to another Organization.

Viewing incumbency salary data

To view incumbency salary data (including history) when using Position Administration, follow these steps:

1. Access the Salary Assignment/Changes form (40-SCR)

Access this form by making the following selection from the Navigator:

Component: Employee Resourcing
Process: Maintain Basic Employee Details
Task: Salary Change

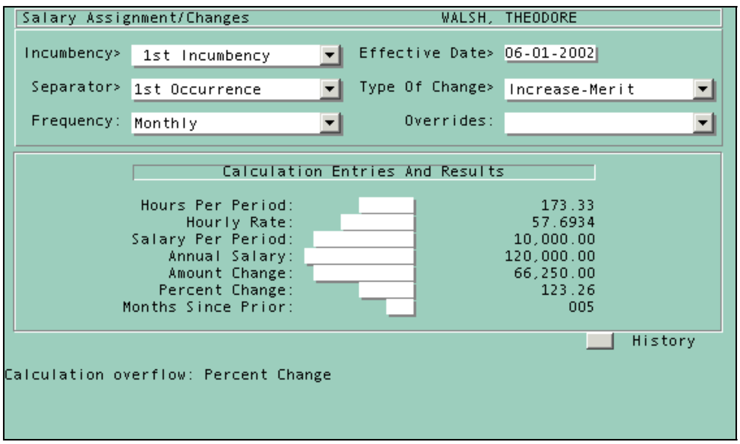
The incumbency selection panel appears. This panel lets you select the salary incumbency data you want to view.

For practice, access the Salary Assignment/Changes form (40-SCR) for employee 3002.

2. Select an incumbency

Click one of the buttons directly to the left of the Incumbency Number, Incumbency, and Positions that are listed. The selected incumbency data is displayed on the Salary Assignment/Changes form (40-SCR).

For practice, click the button for the selected Incumbency.



Click the Incumbency Selection button to return to the Incumbency selection panel to select another incumbency.

Viewing incumbency salary data history

1. Access the Salary Assignment/Changes form (40-SCR)

Access this form by making the following selection from the Navigator:

Component:	Employee Resourcing
Process:	Maintain Basic Employee Details
Task:	Salary Change

The incumbency selection panel appears. This panel lets you select the salary incumbency data you want to view.

2. Select an incumbency

Click the buttons directly to the left of the Incumbency Number, Incumbency, and Positions that are listed. The selected incumbency data is displayed on the Salary Assignment/Changes form (40-SCR).

Click the Incumbency Selection button to return to the Incumbency selection panel to select another incumbency.

3. Click the History button

Click the History button in the bottom right corner of the form. The Salary History selection panel is displayed.

4. Click the This Incumbency Salary History button

Click the This Incumbency Salary History button to view the salary history for only the incumbency you were viewing.

5. Click the History button

Click the History button in the bottom right corner of the form to return to the Salary History selection panel.

6. Click the All Incumbency Salary History button

Click the All Incumbency Salary History button to view the salary history for all incumbencies.

7. Click the History button

Click the History button in the bottom right corner of the form to return to the Salary History selection panel.

8. Click the All Current/Active Incumbency Salaries button

Click the All Current/Active Incumbency Salaries button to view all active incumbency salaries.

Review of Questions Answered

1. What are the differences in the form procedures and processes for the following Base HR Forms when using Position Administration and Complement Control?

   a) Set Up A New Employee (NH-SCR)

   b) Employee Information (EF-SCR)

   c) Applicant/Employee Transfer (ET-SCR)

   d) Separations and Terminations (96-SCR)

   e) Salary Assignment/Changes (40-SCR)

Appendices

In This Section

APPENDIX A

Report Quick Reference

In This Appendix

Introduction

This section provides a quick reference guide to all the Position Administration reports. Sample output for each Position Administration packaged report is given.

Budget vs. Actual report (M01RPT)

This report lets you view, by Organization Unit, the actual and budgeted amounts for Headcount, FTE, salary, or hours. The variance between the actual and budgeted amounts is also reported.

Parameters

A data selection parameter option lets you select whether you want all data reported, only data reflecting a variance, or only data over budget. Totals are also reported for each Organization Unit based on this data selection parameter. Only those records printed (based on the data selection parameter) are included in the totals.

Fields

Information reported includes:

- **Organization Unit**—Organization Unit ID and Organization Unit title.
- **Actual**—Actual Headcount, FTE, salary, or hours.
- **Budget**—Budgeted Headcount, FTE, salary, or hours.
- **Variance**—Variance between actual and budgeted Headcount, FTE, salary, or hours.

☞ *Refer to* **Using Position Administration Packaged Reports** *(on page 185) for more information on this program.*

Employee Details by Position report (M03RPT)

This report lets you view, by Organization Unit, details about the employees linked to your Positions, including the following:

- Organization
- Employee Number
- Employee Name
- Age
- Hire Date
- Employment Status
- Incumbency Status

Parameters

A data selection parameter option lets you select whether you want all incumbencies reported or only primary incumbencies.

Position Administration reports are run separately from other types of reports because they process data based on a defined Organization Unit rather than Organization. This Organization Unit value, Position Administration Control Number, and reporting As Of Date for a report group are entered on the Position Administration Report Group Parameters form (RUN-PM).

Fields

Information reported includes:

- **Organization Unit**—Organization Unit ID and Organization Unit title.
- **Position**—Position to which the employees are linked.
- **Employee Age**—Current status of the employee in the position.
- **Employee Hire Date**—Salary grade assigned to the position.
- **Employee Employment Status**—Full Time Equivalency of the position.
- **Employee Incumbency Status**—Incumbent's status in the position.

☞ *Refer to* **Using Position Administration Packaged Reports** *(on page 185) for more information on this program.*

Position Status report (M02RPT)

This report lets you view, by Organization Unit, details about Positions, including the following:

- Position Status
- Employment Status
- Grade
- FTE
- Headcount

Parameters

Position Administration reports are run separately from other types of reports because they process data based on a defined Organization Unit rather than Organization. This Organization Unit value, Position Administration Control Number, and reporting As Of Date for a report group are entered on the Position Administration Report Group Parameters form (RUN-PM).

Fields

Information reported includes:

- **Organization Unit**—Organization Unit ID and Organization Unit title.
- **Position**—Position to which the employees are linked.
- **Position Status**—Current status of the position.
- **Employment Status**—Current status of the position.
- **Grade**—Salary grade assigned to the position.
- **FTE**—Full Time Equivalency of the position.
- **Head Count**—Number of employees linked to the position.

☞ *Refer to* **Using Position Administration Packaged Reports** *(on page 185) for more information on this program.*

```

APPENDIX B

Technical Notes

In This Appendix

Introduction

This section provides technical notes that explain some Position Administration processing and some modifications that you may want to consider.

Changing HR reports to use Organization Units

Most of the delivered Solution Series packaged reports use the HR Organization levels 3 to 6 values as entered on the Location Assignment/Changes form (LZR segment) to sort the employee data for the report output. However, when you are using Position Administration, the location of the employee is determined by the Organization Unit to which the employee's Position is assigned (if your organization is using the Organization Unit feature). To allow the delivered packaged reports to continue to function properly without forcing you to keep the 05CSCR Organization level values in sync with the dynamic data available through the organization structure, a new verb and subroutine are now available.

To modify a packaged report to allow reporting using the organization structure instead of the Organization levels 3 to 6 (Controls 3-6) values on file as of the packaged reports 'as of' date, you must include the new verb near the beginning of the packaged report Cyborg Scripting Language code. The following example shows the new REPORT-USING-PM verb inserted into the code for the 1A-RPT packaged report.

```
00160     HEADER-4 :38 'NUMBER       THREE   FOUR    FIVE    SIX'.
00180     HEADER-4 :82 'DISTRIBUTION  DATE      STATUS'.
00200   P200-SELECT.
00210     REPORT-USING-PM.
00215     IF W8-01-750 EQUAL 'N' RETURN.
00220     FIND-ACTIVITY.
00240     IF NOT-FOUND RETURN.
00260     IF RESULTING-EMP-STATUS NOT EQUAL '0' AND '3' AND '4'
```

The REPORT-USING-PM verb calls the BLDLZR subroutine. This subroutine creates an LZR segment on the employee's record. This segment will contain (as the Organization level values) the first four positions of each of the top four Organization Units for the employee's primary incumbency.

In the example above, line 00215 is a test to determine whether the employee's primary incumbency or Position was found. If it was found, W8-01-750 will be equal to 'Y'; otherwise, it will be equal to 'N'.

HR Job Code table (TA-SCR) and verb processing

When using Position Administration, the READ-TA-TABLE verb has been changed to build a temporary virtual TA record in Pointer 40 of working storage. This record will contain data from the HR Job Code table (TA-SCR) and the appropriate Job and Position level forms, including the Position Miscellaneous form (M2MSCR). This allows the Human Resources Administration, Benefits Administration, and Salary Administration components of The Solution Series to function using Job level information entered via Position Administration.

When the READ-TA-TABLE verb is processed for a Job Code table effective date prior to the implementation of Position Administration, the Job Code table records are read in the usual way. If the Job Code table effective date is after the implementation of Position Administration, a temporary virtual TA record will be built in Pointer 40 of working storage.

All programs you have written and customized which read the Job Code table records without using the READ-TA-TABLE verb must be modified to access the Job and Position forms by using the new version of the READ-TA-TABLE verb.

Custom programs that find salary data

All references in your custom Cyborg Scripting Language code that find salary data (LZF segment) starting with a date should be modified because of the addition of the Incumbency Number as the primary key of this segment. The old and new code follows:

```
Old:    FIND ANNUAL-SALARY STARTING WITH WORK-DATE.
        IF FOUND...
New:    MOVE WORK-DATE TO SALARY-AS-OF-DATE.
        FIND-SALARY-AS-OF.
        IF FOUND....
```

Special considerations when running Position Administration reports

On an IBM mainframe, Position Administration reports cannot be run using the 'I' in the Code 1 position of the control record that would allow users to be online when running reports.

What to look for if the Position Administration Reporting Extract fails

If the extract aborts and does not produce any instructional error messages, it is most likely an issue with the chronology of the relationships within Position Administration. Some examples of those incorrect relationships follow:

- An Organizational Unit is assigned to another using a date prior to it's creation date.
  Org Unit A is created on 01-01-2002.
  Org Unit B is created on 01-01-2002.
  Org Unit B belongs to Org Unit A as of 01-01-2002.

  Org Unit C is created on 04-01-2002. The original CREATED entry for Org Unit B was modified to have it belong to Org Unit C as of 01-01-2002.

  The system edits and blocks this situation. The proper way to handle reorganization is to create a new entry on the M46SCR with a reason of Reorganization as of 04-01-2002 and then designated the belongs to as Org Unit C.

- A Position is assigned to a Job using a date prior to the Job's creation date.
  Job A is created on 01-01-2002.
  Position A is created on 01-01-2002.
  Position A belongs to Job A as of 01-01-2002.
  Job B is created on 04-01-2002.

  The original CREATED entry for Position A was modified to have it belong to Job B as of 01-01-2002.

  The system edits and blocks this situation. The proper way to handle the reorganization is to create a new entry on the M20SCR as of 04-01-2002 and then designate the Job as Job B.

- A Position is assigned to an Organizational Unit using a date prior to the Organizational Units creation date.
  Org Unit A is created on 01-01-2002.
  Position A is created on 01-01-2002.
  Position A is assigned to Org Unit A as of 01-01-2002.
  Org Unit C is created on 04-01-2002.

  The original assignment of Org Units for Position A was modified to have it belong to Org C as of 01-01-2002.

  The system edits and blocks this situation. The proper way to handle the reorganization is to create a new entry on the M30SCR as of the 04-01-2002 date and then designate the organization as Org Unit C.

- An Incumbency is assigned to a Position using a date prior to the Position creation date.
  Position A is created on 01-01-2002.
  Incumbency 1 is assigned to Position A as of 01-01-2002.
  Position B is created on 04-01-2002.

  The original incumbency assignment was modified to have it be for Position B as of 01-01-2002.

  The system edits and blocks this situation. The proper way to handle the reassignment is to create a new entry on the M40SCR as of the 04-01-2002 date. It will automatically handle the adjustment of the prior position to be history.

Ways to identify if any of these situations are the cause of the problem.

There are no delivered automated tools that will detect that such situations exist. The best way to handle this is to manually determine when some of the reorganizations have taken place and begin checking those Org Units, Positions and/or Jobs to determine their creation dates. Then review all subordinates to those items and see if any of them were created prior to that date. Ways to correct the existing situations.

The correction of the situations must be done in a specific order. Once a new entry is created on the forms, it is difficult if not impossible to perform maintenance to the historical entries. You MUST put the original entry BACK to what it was before the incorrect maintenance was performed. This MUST be done prior to any new entries, if not, the new entries will need to be deleted and this entry corrected.

Create the corresponding new entry on the form indicating the reason as Reorganization and make the assignment as of the true effective date. All cross-reference records should take care of themselves if you are performing this maintenance online. If you have chosen alternative methods of making the corrections, it may be necessary to delete and rebuild the cross-reference records per their instructions.

Rebuildling Position Administration Cross-references

There are three different sets of cross-reference records used in Position Administration.

- TOW—Track the relationships between Organizational Units.
- TOX—Track the relationships between Positions and Jobs.
- TOY—Track the relationships between Incumbents and Positions.

If you are utilizing MAINTI processes to update or load any of the relationship entries it is possible that they will become out of sync. It is also possible for the Incumbent/Position relationships to get out of sync if the Employee Database is restored without the System Control Repository or vice versa.

To rebuild the Organizational Unit Cross-reference:

Either in Batch or Online, run the BLDT0W program. It will delete all T0W records on the System Control Repository and then read all of the Org Unit records and recreate the cross-reference records. Once it is complete, there is no further action required.

If large volumes of data are involved, it would be best to run this in batch instead of online.

This program is not specific to any organization, it will run for EVERY Org Unit on file no matter the PM control number found on the AX-SCR.

To rebuild the Position to Job Cross-reference:

Delete the cross reference records for the specific PM Control number specified on the AX-SCR for the organization by running the program DELT0X.

If large volumes of data are involved, it would be best to run this in batch instead of online.

If there are multiple organizations using the same PM control number, all entries for them will be deleted as well.

Rebuild the cross-reference records for the same PM control number by executing the BLDT0X program.

If large volumes of data are involved, it would be best to run this in batch instead of online.

If there are multiple organizations using the same PM control number, all entries for them will be rebuilt as well.

To rebuild the Incumbent to Position Cross-reference:

Delete the cross reference records for the specific PM Control number specified on the AX-SCR for the organization by running the program DELT0Y.

If large volumes of data are involved, it would be best to run this in batch instead of online.

If there are multiple organizations using the same PM control number, all entries for them will be deleted as well.

Rebuild the cross-reference records for the same PM control number by executing the BLDT0Y program.

The BLDT0Y program should be run as a query for all employees.

If large volumes of data are involved, it would be best to run this in batch instead of online.

APPENDIX C

Practice and Review Answers

In This Appendix

Overview of Position Administration and Complement Control

Answers for Apply the Concept Questions

1. Define Position Administration.

   Position Administration effectively manages the Positions in your organization. Items such as Jobs, Organization Units, and Incumbents can also be recorded.

2. Consider how you currently or will use Position Administration in your organization.

   This answer will be user-specific.

3. True or False. Explain any false answers.

a) Setting up your organization's structure allows for only direct reporting capabilities.

   True.

b) You can set up unlimited Jobs, Positions, and Incumbent details using Position Administration.

   True.

c) The 'as of' date' is a feature that allows one to access a historic snapshot of the organization but does not allow for future-dated organization structures.

   False. The 'as of' date is a capability that allows for both history and future - dated organization structures.

d) Recording unlimited data about an employee's Job or Position can be used to support other areas, such as succession planning.

   True. Other areas would be career planning and training needs analysis.

4. Define Complement Control.

   Complement Control is used along with Position Administration to allow a company to limit hires and transfers based on Headcount, FTEs, or Hours budgeted for those Positions.

Answers for Review Questions

1. List the Position Administration features.

   Setup and maintenance of the organization structure

   Strategic planning

   Employee and Position comparisons

Reorganization

History maintenance/future planning

2. Who would use Position Administration?

   Database managers, HR Specialists, Administrators, etc.

3. List the Complement Control features.

   Inclusion of Positions in Complement Control

   Detection of Position vacancies and surpluses

Overview of Position Administration Navigation

Answers for Apply the Concept Questions

1. Briefly describe how your current organization is structured.

   This answer will be user-specific.

2. Match each of the following navigational features to its corresponding description:

Feature	Answers	Description
1. Position button 2. Job button 3. Organization Unit button 4. Incumbent button	b a c d	a) Accesses Organization Unit data for a Position or selects another Organization Unit. b) Accesses Position setup for an Organization Unit or selects another Position. c) View Incumbents linked to a Position. d) Accesses Job data for a Position or selects another Job.

3. Explain the importance of having an 'As of Date' feature.

   Defaults to the current system date but can be modified as needed.

Answers for Extended Practice Questions

1. Identify the Position Administration navigational features (Job button, Position button, Incumbent button, Organization Unit button) located on the Position Administration toolbar:

a) Access the Organization Unit - Set Up/Maintenance form. Position your pointer over the navigational button(s) highlighted. What description appears below the button(s)?

   Choose an Org Unit and This Org Units Positions.

b) Access the Job - Set Up/Maintenance form. Position your pointer over the navigational button(s) highlighted. What description appears below the button(s)?

   This Job's Position and Choose a Job.

c) Access the Position - Set Up/Maintenance form. Position your pointer over the navigational button(s) highlighted. What description appears below the button(s)?

   Access my Job, Access my Org Unit, Choose a Position, Incumbents for this Position.

d) Access the Incumbency Basic Details form for employee number 1234. Position your pointer over the navigational button(s) highlighted. What description appears below the button(s)?

Access My Position.

e) Will these buttons always be active? Why or why not?

The buttons are active on the toolbar only when a Position Administration form is being used.

2. Access the shortcut menu for a Position Administration form. What does it display?

It displays a menu of Position Administration forms related to the form you are viewing.

Answers for Review Questions

1. Describe the following Position Administration navigational features:

a) Four basic entities:

Organization Units, Jobs, Positions, Incumbents.

b) Three different methods that provide flexibility when accessing data:

Drill Down, Step Up, Select.

c) Additional navigational buttons:

Job button, Organization Unit button, Position button, Incumbent button, Data Selection buttons.

d) Other navigational features:

As Of Date, Date and Time selection buttons, Select dialogue box.

2. List and describe the three options when using the Select dialogue box.

The Select dialogue box allows you to obtain a list of Job, Position, etc. entities by limiting the search criteria.

a) Starts With—Limits the search to entities that start with a certain letter.

b) Contains—Limits the search to entities that contain certain letters.

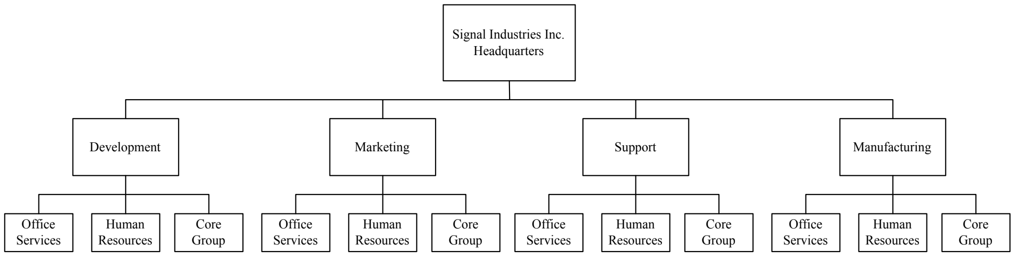
c) All—When possible, lists all entities.

Implementing Position Administration

Answers for Apply the Concept Questions

1. Draw a diagram of the organization described below.

   Facts: Signal Industries, Inc. has four divisions: Development, Marketing, Support, and Manufacturing. Each of these divisions contains an Office Services, Human Resources, and Core group.



2. Determine how you will set up the Jobs and Positions for the Support division's Core group.

   Facts: The Core group of the Support division contains the following positions: Admin 1, Admin 2, Call Support Tech 1, Call Support Tech 2, Tech Specialist 1, Tech Specialist 2, Tech Specialist 3, Support Engineer, Group Leader, Manager, and Vice President.

Job	Position
A	A1, A2
CST	CST1, CST2
TS	TS1, TS2, TS3
SE	SE
GL	GL
MGR	MGR
VP	VP

3. Identify the forms and text boxes that would be selected and updated to set up Control Numbers:

Form	Text Boxes	Options
Organization-To-Rules Cross - Reference for HR (AX-SCR)	Job Options	

4. Identify the forms and text boxes that would be selected and updated to set up Organization Numbers:

Form	Text Boxes	Options
Organization Unit - Set Up/Maintenance (M48SCR)	Org Unit	

Answers for Review Questions

1. What are the advantages of using Organization Units?

   Organization Units can facilitate packaged reporting and budgeting.

2. What are the advantages of using Jobs and Positions?

   They reduce data-entry efforts.

3. What levels of data can be held by Position Administration?

Location data	*Organization Unit to which Position reports, Positions to which a Position directly and indirectly reports, Physical Location*
Budget data	*Headcount, FTE, Hours, and salary data for a Position*
Skills/competencies required	*Skill/competency and proficiency required for a Position*
Memberships required	*Memberships required for a Position*
Education required	*Level of education and subject for a Position*
Training required	*Training courses that must be completed for a Position*
Licenses required	*Licenses required for a Position*
Experience required	*Any specific experience required for a Position*
Evaluations	*Job and Position evaluation data*
Succession	*Possible next Job*

Document References	*Information about documents relating to Jobs, Positions, and Organization Units*
Funding data	*Source of funding for a Position*
Next Review data	*Job and Position next review data*
Miscellaneous Position Data	*Used to hold information currently held on the HR Job Code table*

4. Which Position Administration option lists are mandatory?

Reason for Change (PM00)	*Abolished (AB)* *Created (CR)*
Reason for Change (PM01)	*Abolished (AB)* *Created (CR)*
Reason Code (PM15)	*Unassigned (AB)*

5. What is the relationship between Organization Units and HR Organization Levels 1 - 6?

   Organization Unit codes can be used to feed HR Organization Levels 3 - 6 for packaged reporting.

6. How does the information in Position Administration interact with the Job Assignment/Changes form (05-SCR)?

   The form is updated when the Incumbent data are updated.

7. What is the function of Position Administration Control Numbers?

   Position Administration Control Numbers are used to identify which version of a table is applicable to an Organization.

8. What entries are available for customization?

   User Field 1 (8 - character entry) and User Field 2 (option lists) on the Job - Basic Details form (M10SCR) and the Position - Basic Details form (M20SCR).

9. What extra security might be needed for Position Administration?

   Organization Unit - Set Up/Maintenance (M48SCR)

   Job - Set Up/Maintenance (M18SCR)

   Position - Set Up/Maintenance (M28SCR)

10. What menus may need to be customized for Position Administration?

    Event menus and shortcut menus.

Establishing Organization Units

Answers for Apply the Concept Questions

1. List the advantages of setting up Organization Units within Position Administration.

   Delivered reports and queries are sorted by Organization Units.

   You will not be able to use the restructure feature if Organization Units are not set up.

2. Fill in the missing word(s):

   An organization structure can have up to 999 Organization Unit levels.

   Fill in the missing word(s):

   When defining the top Organization Unit, you must assign the 'belongs to' relationship for this Organization Unit to itself.

   Fill in the missing word(s):

   Organization Units group Positions in a hierarchical manner.

3. Consider that Organization Unit default levels apply to your current organization. Describe how you would set up each Organization Unit level. What is the major advantage to setting up these levels?

   Default Organization Unit level setup would be user specific. The major advantage to setting up Organization Unit levels is that each time you access information about an Organization Unit or about a Position that belongs to the Organization Unit, the system determines the level at which the unit resides in the organization structure and applies the default level name to that unit.

4. Identify the ways in which you can enter Organization Unit and Position budget information.

   Headcount, FTE, Hours, Salary Costs.

Answers for Review Questions

1. How can Organization Units be used to imply relationships?

   Organization Units may be set up in a hierarchical manner, linking groups of Positions within your organization.

2. Why are Organization Unit default level names used?

When default level names are applied, each time you access information about an Organization Unit (or Position in one), the system determines at what level the unit resides in the organization structure and applies the default level name to the unit.

3. How may Organization Unit budget data be used?

   They allow you to compare actuals with budgets.

Entering Job and Position Data

Answers for Apply the Concept Questions

1. List the advantages of setting up Organization Units within Position Administration.

   Much of the position-related data is inherited from Job information. This saves time when setting up multiple Positions.

2. Fill in the missing word(s):

   Organization Unit and Job information are <u>not essential, although recommended</u> to setting up Position Administration.

   Fill in the missing word(s):

   Setting up Positions is <u>essential</u> when implementing Position Administration.

3. Explain how Position location data can fit in the reporting structure of the organization.

   Position location data identify the Organization Unit to which the Position belongs, to what Positions the Position displayed directly or indirectly reports, the Physical Location of the Position, and the reporting structure of the Organization Unit.

4. Describe the information that you would like to maintain or are currently maintaining for the Jobs and Positions within your organization.

   This answer will be user-specific.

5. Describe the Job evaluation system your organization is currently using.

   This answer will be user-specific.

Answers for Review Questions

1. What are the Job and Position requirement options?

   Skills/Competencies required

   Memberships required

   Education required

   Licenses required

   Experience required

2. What are the uses of Jobs and Positions?

   Any data entered at the Job level will be inherited by all Positions associated with that Job. Using Jobs and Positions in this way will reduce data entry efforts.

3. What can Position location data tell you?

Position location data indicate where a Position fits in the reporting structure of the organization.

4. How are Job evaluations used in Position Administration to determine the relative worth of Jobs?

   You can enter the point values for various criteria that you define for each Job and Position. The point values are added together to equal total points. The total points for each Job and Position are then compared to determine the relative worth of each Job and Position.

5. What are the uses of Job succession data?

   You can identify possible next jobs.

6. What types of document references can be entered?

   File references

   Document format

   Type of file

Entering Position-Specific Data

Answers for Apply the Concept Questions

How could your organization use the entry of Position-specific funding and next review data?

This answer will be user-specific.

Answers for Review Questions

1. What types of Position funding data can be maintained?

   Funding source

   Funding program name

   Percentage of the Position costs being funded

2. What types of Position next review data can be maintained?

   Review date

   Review reason

   Comments

3. What types of Position miscellaneous data can be maintained?

   Surveys

   Trainee Job

   Workers Comp

   Job Type

   Assigned Shift

   Union Job

   FLSA Classification

Setting Up and Maintaining Incumbents in Positions

Answers for Apply the Concept Questions

1. Describe the process of assigning an employee to a Position.

   a) Link the employee to the Position using the Incumbency - Basic Details form.

   b) View the Incumbent's current Position using the Incumbent - Current Positions form.

   c) Can change Incumbent information using the Incumbency - Basic Details form.

   d) View Incumbents for a specific Position using the Position Incumbents form.

2. Fill in the missing word(s):

   a) Once an employee is linked to a Position, the employee is known as an Incumbent.

   b) Employees can occupy one or more Positions within Position Administration.

   c) Some incumbency details such as Grade, Geographic Range and Physical Location can be inherited from Position, Job and Organization Unit level data and overridden as needed.

   d) An incumbency can be either Permanent or Acting.

   e) An Incumbent Number is a unique two-character entry.

Answers for Review Questions

1. What is the relationship between employees and Positions?

   Employees can occupy one or more Positions. Once linked to a Position they are called Incumbents. Employees can have an unlimited number of incumbencies to various Positions. You can enter details about those Incumbents. Some data are inherited, but can be overwritten.

2. How are multiple incumbency salaries and hours tracked?

   They are tracked using the Alternative Compensation Totals form.

Maintaining Position Administration Data

Answers for Apply the Concept Questions

1. List some examples of when you would use the three data maintenance options.

   Organization Units, Jobs, Positions become obsolete

   Organization Units, Jobs, Positions set up in error

   Data entry not needed

   You may have additional reasons.

2. Identify the forms used to:

   a) Abolish Organization Units, Jobs, Positions

      Organization Unit - Basic Details form (M46SCR)

      Job - Basic Details form (M10SCR)

      Position - Basic Details form (M20SCR)

   b) Delete Organization Units, Jobs, Positions

      Organization - Set Up/Maintenance form (M48SCR)

      Job Set Up/Maintenance form (M18SCR)

      Position Set Up/Maintenance form (M28SCR)

   c) Remove data entries

      Varies. Use the form on which the data resides.

3. Circle the correct answer:

   a) When an Organization Unit, Job or Position is abolished, the history <u>is</u> kept on file.

   b) Deleting an Organization Unit, Job, or Position <u>will</u> delete the information and history permanently.

   c) An Organization Unit, Job, or Position that has another entity belonging or reporting to it <u>cannot</u> be abolished.

   d) The other entity to which an Organization Unit, Job, or Position belongs or reports <u>must be</u> linked to another entity or abolished.

   e) When a previous data entry is still needed, the data entry <u>should not be</u> removed.

Answers for Review Questions

What are the Position Administration data maintenance options?

There are three data maintenance options available as described below:

Abolish Organization Units, Jobs, and Positions, and keep history

Delete Organization Units, Jobs, and Positions, and keep history

Remove data entries and keep history

Restructuring Your Organization

Answers for Apply the Concept Questions

1. How is your organization currently structured?

   This answer will be user-specific.

2. List the different tasks involved when considering restructuring your organization.

   Viewing the existing organization structure.

   Changing the existing organization structure.

   Changing the Organization Unit to which a Position reports.

   Changing the Position to which a Position reports.

3. What are the prerequisites before you restructure your organization using Position Administration?

   To use the restructure feature properly, you would need to complete the tasks listed below:

   Implementation of Position Administration.

   Organization Units must be set up.

   Positions must be set up.

4. True or False. Explain any false answers.

   a) Before you implement the restructure feature of Position Administration, you must ensure that implementation tasks, Organization Units, and Positions have been set up and completed.

   True. There needs to be existing information to change.

   b) Jobs are affected when a change in organization structure occurs.

   False. Jobs are not affected because they are generic and not Organization Unit specific.

   c) Once an organization's structure has been changed, history is lost.

   False. A history of past organization structures is easily kept and maintained by using the 'as of' date feature.

5. How would you use the restructure feature to change the Position to which a Position reports?

   Make a change on the Position - Location form (M30SCR).

Answers for Review Questions

1. What occurs when the organization structure is changed?

   All Organization Units, Positions, and Incumbents are dynamically updated.

2. What happens when a Position is linked to a different Organization Unit?

   All incumbents attached to that Position are now linked to the new Organization Unit.

3. What happens when a Position is assigned to report to a different Position?

   The Position reports to a different Position.

Using Position Administration Packaged Reports

Answers for Review Questions

1. What are the Position Administration packaged reporting options?

   Reports are provided that let you view and analyze a variety of key data elements, including:

   Budgeted vs. actual Headcount, FTE, Salary, or Hours data

   Position Status data

   Employees linked to Positions, including all incumbencies or just primary incumbencies

2. How is the Position Administration Extract Utility used?

   It is used to convert Position Administration data to a format that can be imported into other applications.

Viewing Position Administration Data

Answers for Apply the Concept Questions

1. Match each Position Administration form to its corresponding description.

Form		Answer
1)	Organization Structure form	*d*
2)	Job - Associated Positions And Org Units form	*b*
3)	Incumbent - Current Positions form	*a*
4)	Position - Subordinates form	*e*
5)	Position - Incumbents form	*c*

Description

a) Shows subordinates of a particular Position.
b) Shows the Positions associated with a particular Job.
c) View and access the hierarchy of Organization Units.
d) Displays selected details of all Incumbents for a particular Position.
e) Shows current Position information.

Answers for Review Questions

What types of views are available for viewing Position Administration data?

View the existing organization structure

View the Job's associated Positions and Organization Units

View an Incumbent's current Position

View an Incumbent for a specific Position

View a Position's subordinate

Select another of the same data entity

Drill down through the same data structure

Step up through the data structure

Implementing Complement Control

Answers for Apply the Concept Questions

1. Describe how your organization would use Complement Control.

   This answer will be user-specific. Your answer should reflect this concept—Maintain control over the number of Incumbents and complement units (Headcount/FTE/Hours) that are assigned to a Position at one time.

2. Identify the forms and text boxes that would be selected and updated to:

a) Set up Complement Control options.

Form	Text Boxes	Options
System Options (TG-SCR)	*Pos Admin*	*In Use*
	Compl Ctrl	*In Use with Rejects* *In Use with Warnings*
	Budget/ Compl	*Different* *Same*
	Compl unit	*FTE* *Headcount* *Hours*

b) Assign a Position to Complement Control.

Form	Text Boxes	Options
Position - Basic Details (M20SCR)	*As Of Date*	*Calendar*
	Effective Date	*Calendar*
	Job	*Select*
	Change Reason	*Option list PM01*
	Position Status	*Option list PM08*
	Employment Status (optional)	*Option list HR73*
	Occupation Group (optional)	*Option list EO08*
	Job Family (optional)	*Option list PM03*

3. Identify the forms and text boxes that would be selected and updated to enter a complement limit for a Position

Form	Text Boxes	Options
Position Budget (M34SCR)	*Effective Date*	*Calendar*
	Headcount	*Complement Unit on Systems Options form (TG - SCR)*
	FTE	*Complement Unit on Systems Options form (TG - SCR)*
	Hours	*Complement Unit on Systems Options form (TG - SCR)*
	Salary	*Enter dollar amt*

- or -

Form	Text Boxes	Options
Position Complement (M81SCR)	*Effective Date*	*Calendar*
	Headcount	*Complement Unit on Systems Options form (TG - SCR)*
	FTE	*Complement Unit on Systems Options form (TG - SCR)*
	Hours	*Complement Unit on Systems Options form (TG - SCR)*

Answers for Review Questions

1. What are the Complement Control setup options?

a) Complement unit—Validates complement limits for your Positions. There are three types: Headcount, FTE, Hours.

b) Budget or complement—The user can choose whether to tie the complement to the budget.

c) Validation messages—Provides rejects or warnings to let you know whether you have exceeded the complement limit.

2. How are Positions related to Complement Control?

   Position status is used to designate a Position as a complement position.

Searching for Vacancies and Surpluses

Answers for Apply the Concept Questions

1. Define the terms *vacancy* and *surplus*.

   A vacancy is an unfilled complement Position.

   A surplus is a Position that exceeds the complement limit.

2. Describe how vacancies and surpluses are used within the Complement Control feature of Position Administration.

   Vacancies and surpluses are used to assist companies in identifying surpluses and openings within their organization structure. Two forms are available to view this information.

3. How do you view vacant Positions, and where are these vacancies displayed?

   Vacant Positions can be viewed using the Vacant Positions form. Vacancies are displayed on the Return panel of the same form.

4. Identify some advantages of using the vacancies/surpluses search feature.

   You can search data in seven different ways.

   Once the search is complete, you can take action to change conditions.

5. Describe the task(s) that must be completed before using the vacancies/surpluses search feature.

   You must implement/set up the Complement Control feature.

Answers for Review Questions

How are vacancies and surpluses used in Complement Control?

Identifying vacancies and surpluses can help you manage your recruitment process. Recruiters can easily track which Positions still have vacancies and establish interview schedules accordingly. Likewise, managers can track vacancies to ensure that staffing needs are addressed in a timely manner.

Changed Procedures When Using Position Administration and Complement Control

Answers for Apply the Concept Questions

1. Briefly describe your current Human Resources new hire, termination, and applicant transfer process, if applicable.

   User specific.

2. True or False. Explain any false answers in detail.

   a) When transferring an existing employee to a different Organization, the employee does not have to be unassigned from the Position.

   False, unless the Control Number is the same for each Organization.

   b) When a primary incumbency is assigned during the processing of a new employee, the Incumbency - Basic Details form is not always updated.

   False.

   c) The system validates that the complement limit for the Position will not be exceeded when processing employee information, setting up a new employee and transferring an applicant.

   True.

   d) A Warning or Reject message allows you to override the complement limit when it is being exceeded.

   False, only a Warning message may be overridden.

   e) The organization complement is the total value of all Positions included in the complement.

   True.

Answers for Review Questions

What are the differences in form procedures and processes when using Position Administration and Complement Control?

Procedures and/or processing are affected on the following forms when using Position Administration and Complement Control:.

Set Up A New Employee (NH-SCR)—Additional data entry and validation processing

Employee Information (EF-SCR)—Additional data entry and validation processing

Applicant/Employee Transfer (ET-SCR)—Additional data entry and validation processing

Separations And Terminations (96-SCR)—Additional processing

Salary Assignment/Changes (40-SCR)—Incumbency number identifier, incumbency, and history selection panels

Job Or Position Applied For (003SCR)—Can now be used for all companies, not just applicant companies

Glossary of Terms

.EXE
A binary file containing a program in machine language that is ready to be executed.

.INI
A file that contains the parameters (values) used by the .exe file (program).

360-degree appraisal
Appraisals that include evaluations from an employee's managers and supervisors, peers, subordinates, and even customers, clients, and suppliers.

Absence data
Employee-level absence information that is entered on the absences forms.

Absence point
User-defined number that may be assigned for a particular absence and that can be totaled over time to determine if an employee is within the accepted number of absences for a time period.

Absence type
A classification of an employee absence, such as 'jury duty' or 'sick'. Employee absences are recorded by date and absence type.

Account timeout
The period of time that elapses before a user's account becomes invalid because of inactivity.

Accumulator id
A three-position, alphanumeric identifier for a benefits accumulator.

Acrobat
A suite of programs developed by Adobe Systems, Inc. For creating and distributing electronic documents. Programs in the suite allow you to create a portable document format (PDF) file for a document. You can then distribute the PDF file electronically to people who view the document with their freely distributed acrobat reader. People viewing a PDF file (or document) with the Acrobat Reader see the document with the exact layout intended by the author.

Action button
An action button performs an action such as saving the information you entered or telling the system you finished reviewing a page. An action button consists of an icon (or button) accompanied by underlined text (link text). For example, at various places throughout eCyborg Interactive Workforce you may see an action button displaying a check mark accompanied by the underlined text 'save changes'. You can click either the text or the button to save your changes to the page.

Activity code
Describes the clock transaction (ring) activity, such as clock start or meal end.

Activity types
With the time and attendance solution, you can set up the system so that an employee or group of employees may clock in and out for up to eight different activities: clock-in (1), break 1 start (2), break 1 end (3), meal start (4), meal end (5), break 2 start (6), break 2 end (7), and clock end (8).

Actuarial valuation
An examination of a pension plan to determine if contributions are being accumulated at a rate sufficient to pay the promised pensions.

Administration home page
The administration page that displays when a user logs on using his or her administrator user ID and password. The administration page displays links to individual administrator pages (eCyborg Interactive Workforce, Human Resources Administration, Benefits Administration, and Payroll Administration).

Administrative User ID
User ID created by an administrator with the role of eCyborg Interactive Workforce administrator. This ID

differs from the employee user ID generated for the administrator.

Aggregate tax method
Method of calculating taxes in which year-to-date income is used to project annual wages (using prorating), on which taxes are calculated. With this method, the amount of tax withheld can vary from pay period to pay period. This method is useful in preventing a salesperson from being over withheld as the result of fluctuations in commission over various pay periods. It is activated on the payroll solution by selecting aggregate/cumula tax (9) from the Withholding Method (PR09) option list on the Employee Tax Record Maintenance form. It is also referred to as cumulative tax calculation method.

Annualization
Process of calculating the annual amount of pay based on the number of pay periods and pay period amounts. Calculated by multiplying the number of pay periods in the year by the current taxable wages in the pay period.

Annualization factor
The factor that is used to multiply current pay period wages to determine annual wages. For example, a monthly pay frequency has an annualization factor of 12. The Payroll Solution typically calculates income taxes on the basis of annual wages. The annualization factor is entered by selecting an option from the Annualization (PP33) option list on the Company Pay Frequencies form for each pay frequency.

Annuitant
Someone entitled to receive or currently receiving payments from an annuity.

Annuity
A contract providing an income for a specific period of time.

Applicant
A person who is applying for a job or position in your organization. Internal applicants come from within your organization while external applicants come from outside of your organization.

Appraisal rating
A method of ranking the performance of an employee during a given period using options ranging from 1-outstanding to 5-unsatisfactory.

ASCII
American **S**tandard **C**ode for **I**nformation **I**nterchange. The basis of character sets used in almost all present-day computers; US-ASCII uses only seven bits to convey some control codes, space, numbers, most basic punctuation, and unaccented letters a-z and A-Z.

Ask Me wizard
A natural language, full-text search facility within the online help. This allows users to type in a question, the wizard interprets the question, and displays related topics.

As-of reporting
Ability to report on data for a specified date or date range.

Audit record
A snapshot of information entered on a form. Audit records are stored on the employee database and are displayed on audit reports in an is/was reporting format. Adjustments and time entries are stored as audit records and are extracted for a payroll run in which they update the employee's record.

Audit report
A report that is available after the running of a program; it lists created records as well as error messages for records that could not be created.

Audit trail
A report of changes made to your employee database, such as the Payroll Audit Trail (0101) report.

Authorized absence
Absences that are generally considered as paid time away from regularly scheduled work.

Automatic plan
A plan that has been defined with a default option and default pre- or posttax indicator (also known as core/default plan).

Average deferral percentage
Percentage used in nondiscrimination and compliance testing mandated by US law. The calculation is defined as the contribution divided by the compensation.

Average rating
A rating used for performance appraisal systems with categories weighted by relative importance, where the average score reflects the weighted scores.

Back
Takes the user back to the previous page.

Badge
Time and Attendance Administration can be set up to use two different types of badge readers. The type of badge your organization uses, is determined by your third party badge reader software. The two types of badges are magnetic badges and bar code badges.

Badge error
Occurs when a badge is used to create a clock transaction (ring) and an employee has not been assigned to the badge.

Badge number
Up to ten-character ID stored on employee badges and clock transactions (rings) that tie clock transactions (rings) to an employee on the ***Employee Database*** (on page 330).

Banner
Banner forms separate groupings on forms produced from the Federal, State/Local, and Employee Queues.

Batch
A group of transactions submitted to the batch payroll processing system. Also, a collection of time entries that corresponds to an employee group, such as department.

Batch control record
Precedes all transactions separated by group; used to identify the company to which the transactions in that group apply. By entering anticipated totals for dollars and hours on the batch control record, you may verify your totals against those accumulated by the system.

Batch layout facility
A program that produces a segment layout for loading forms via batch. This was formerly known as BATCHL.

Batch number
An alphanumeric field on the batch control record containing a user-defined value used to identify a unique group of time entries or transactions.

Batch processing
A processing method that runs in the background and requires limited intervention.

Benchmark job
A standard or point of reference for determining total job points.

Beneficiary
A person named by the participant in an insurance or pension plan to receive any benefit provided by the plan if the participant dies.

Benefits control number
A four-position, alphanumeric identifier that specifies which tables are accessed for an organization.

Benefits statement
Report that indicates the coverage and cost of each benefits plan in which an employee participates.

Big option list
A large option list that includes a search facility. This was formerly known as a big codeset.

Bridge loan
A loan made to assist a relocated employee in purchasing a new residence before the sale of their old residence is complete.

Browser
Software application used to locate and display web pages. Modern browsers give users access to graphics, text, and multimedia information, including sound and video.

Budget plan year
A twelve-month period over which a salary budget is effective.

Budget scenario
The result of creating one or more salary plans in order to see the effect of different increase policies on the budget.

Budget setting
The process of analyzing and selecting an organization's salary budget for the coming plan year.

Cafeteria plan
A specific type of flexible benefit plan that allows employees to select their benefits from a number of benefit plans. This term may be used interchangeably with flexible benefits plan.

Calculation option list
An option list that contains calculation formula. This was formerly known as a calculation codeset.

Candidate
A person who is applying for a job or position in your organization and is under consideration.

Career planning
Providing career incentives such as advancement and additional education and training for individual employees in order to meet projected organizational needs.

Carrier record
A carrier record supplies information from one application area to another application.

Case-sensitive
A program that distinguishes between uppercase (capital) and lowercase (small) letters. A case-sensitive program that expects you to enter all commands in uppercase will not respond correctly if you enter one or more characters in lowercase.

Catalog
A file (with the extension of .cat) that contains all the information necessary for Impromptu to access and retrieve information from a relational database. The catalog provides a business view of the data, as well as information about what database to access, where the database is stored, and how the tables in the catalog are joined in the datamart.

Category code
General term used to refer to the option selected from category (PP01 and PP02) option lists on the company earnings and company deductions forms. It is used to indicate the type of earning or deduction.

CE/H
Abbreviation for considered earnings/hours.

Change control facility
A facility for updating and comparing your system control repository. This was formerly known as MAINTI/MAINTO.

Check box
A standard windows control that displays a yes/no setting, either checked (yes) or unchecked (no).

Check digit
Unique identifier that is generated by the TBLCHK program and used by the system to check the table relationship records.

Checklist
A list of tasks to be performed in sequence. The checklist displays within the navigator area. Checklists link tasks and other checklists together to perform work flow functions. Users can display a checklist by selecting a checklist icon within the tasks in the navigator.

eCyborg Interactive Workforce specific—a list of tasks/pages generally displayed in a chart with hot spots (links) for the checklist items. The user clicks the link to access the page.

Checklist item
An item appearing within the navigator when a checklist is being displayed. Checklist items include tasks, dialogs and even other checklists.

Checklist item status
Defines the status of a checklist item. These can be:

- Available to perform
- Required
- Not available
- Already completed

Checklist margin
The area of the navigator that displays the checklist item status when a checklist is being displayed.

Checkmark
If in the done column of a eCyborg Interactive Workforce checklist, indicates that an item on a checklist is complete. Can also indicate OK, finished, submit, and so forth.

Class
A class is an occurrence of a course that is specific to a location and a date, that is being administered using Training Administration. For example, 'eCyborg: Using the Web Client′ on Thursday, December 21, in Chicago is a class of the course 'eCyborg: Using the Web Client'.

Class evaluation results
These are the results as entered on the evaluation forms filled out by the class participants upon completion of the class. These results are recorded on the class evaluation results form.

Client data file
File containing information replicated from the System Control Repository. Used by client workstations to improve response time, since editing can be performed locally. May be located on each client workstation or may be located on a server and be shared by multiple client workstations on the network. Formerly known as the Client Control File.

Clock in and out
Also referred to as swipe/swiping the clock. When an employee uses their badge to record an activity time, they must pass their badge through the badge reader. This action can be referred to as clocking in and out.

Clock transaction
Record containing the information needed to create time entries for payroll processing. Clock transaction (ring) information includes date, time, and badge number. A clock transaction (ring) is created when a badge is swiped through a clock.

Clock transaction warning
Occurs when a clock transaction (ring) time falls outside of an employee's schedule warning times.

Closing costs
The costs associated with the purchase of a new house.

CLP
Abbreviation for certificates, licenses, and permits.

Codeset
A list of valid code values and associated descriptions from which you may select an appropriate entry. This is now known as an option list.

Coefficient
Customer-defined value used in the formula to calculate a new salary grade midpoint value.

Combined register (2222) report
A report that provides a detailed printout of all earnings, hours, taxes, and deductions for all the payments and adjustments made on a payroll run. It is Report Generator 2222.

Command button
A standard windows control that initiates a command of sets an option (previously known as push button).

Common tax organization
A method of setting up taxation in an organization in which all necessary tax specification records are contained in a single organization. The common tax organization often handles tax specification records more efficiently, since it avoids duplication of the federal tax records and of any state or local records used by multiple companies.

Communication event
A letter or email that can be triggered automatically or manually within the system. Communication events are set up by the system administrator and usually include data from a form or record.

Compa ratio
The ratio of a given salary compared with the midpoint of the salary range. The formula is the salary divided by the midpoint.

Competency
A requisite capacity to perform a single or set of skills or activities.

Complement limit
A 'complement limit' is the maximum number of complement units that can be assigned to a position at any one time.

Complement position
A 'complement position' is a position that is included in complement control.

Complement unit
A 'complement unit' is the type of unit used to measure the value of a position, for example, headcount, fte or hours.

Compliance
Conformity in fulfilling legal requirements.

Component
The first level of functional organization on the navigator or menu, such as employee resourcing or employee development.

Component icon
An icon that denotes the current component. There are a number of components within the system. Each component appears as an icon on the navigator.

Component plan
Any plan included under the flex master plan or grouped together under a group master.

Condition
Predefined criteria that can be added to a report's filter.

Considered earnings
An employee's paid earnings that are to be accumulated, based on plan rules, for use in determining credited service or calculations of final benefits amounts.

Considered earnings/hours (CE/H) accumulators
Used only in benefits plans to accumulate the earnings and hours an employee has acquired toward eligibility for a deferred plan. Accumulators may be retained on a monthly, quarterly, or annual basis.

Considered hours paid
Actual number of hours for which an employee was paid and that are to be accumulated based on plan rules.

Considered hours worked
Actual number of hours an employee worked. These hours are to be accumulated based on plan rules for use in determining credited service for a plan participant (or for a non-participant if eligibility has been met).

Consolidated reporting
Option that enables packaged reports to be processed for all organizations (consolidated).

Customer-defined value used in the formula to calculate a new salary grade midpoint value.

Context-sensitive help
Information about an object and its current condition. It answers the question 'what is this?'

Contribution type
The type of contribution being made to a benefits plan. The system allows for the deduction and accumulation of up to five different contributions per plan: basic employee pretax, basic employee posttax, supplemental employee pretax, supplemental post-tax, and organization.

Control 1-2
A company or group of employees (now known as an organization).

Control levels
A hierarchy of values used to determine the breakdown of an organization for reporting purposes. The values are user-defined.

Control number
An alphanumeric designation assigned to a table to define the table records that will be used for each organization.

Conversion
A method for transferring data from either a manual or automated system into the system.

Co-ordinator
A coordinator is an instructional institution, organization or person who administers training courses.

Core plan
One of the plans that make up the minimum benefits in which all eligible employees are required to enroll—for

example, medical and life. Employees who fail to return enrollment forms with their benefit choices may be automatically enrolled in the core plans (also known as default plans).

Cost categories
Cost categories are classifications or divisions used to separate costs for training into broad groupings, for example, equipment or operating costs.

Cost types
Cost types are used to further define training costs. For example, the category of equipment could be further broken down into the cost type of overhead projector and monitor rental.

Costing
Projecting the future cost of a benefits plan contribution for budget purposes.

Course
A course is a separate unit of instruction in a subject being administered using the training administration solution. For example, 'eCyborg: Using the Web Client′ is a course. This may be applied to a training course provided internally or externally.

Course directory
A course directory is a list of all available courses.

CPI
Characters **p**er **i**nch

Credited service
The number of years of employment for which an employee is given credit for use in determining final benefits amounts.

Crew
A group of employees who rotate from one schedule assignment (shift) to another, following a rotation pattern.

Crew code
A unique, one-character, alphanumeric identifier of a crew.

Cross-reference keys
Provide direct query access to data within the system database.

CSL
Abbreviation for ***Cyborg Scripting Language*** (on page 327).

Cumulative data
Also called 'to-date data'. includes payroll earning, deduction, net pay, taxable wage, and tax to-date figures for employees.

Cursor
A special symbol, usually a solid rectangle or a blinking underline character, that signifies where the next character will be displayed on the screen. To type in different areas of the screen, you need to move the cursor. You can use the arrow keys or a mouse to move the cursor.

Customer-defined
Values that depend on an organization-specific definition--for example, option list.

CYB88X
An English Language root program used to set the production version switch to on or off, in addition to other automatic settings.

Cyborg Scripting Language
Cyborg's fourth-generation programming language, previously called English Language.

Data extract
Method for extracting information from The Solution Series for the purpose of subsequently loading it into eCyborg Interactive Workforce databases.

Data load
The process of moving data from one system or media to another. It encompasses data mapping, data extraction and conversion, and the actual loading of the data. Also the method of loading data extracted from The Solution Series into eCyborg Interactive Workforce databases using programming scripts.

Data mapping
The process of identifying, comparing, and matching data (field to field) to be converted from one system or media to another.

Database
A collection of information organized so that a computer program can quickly search for and select

specific pieces of data. Think of a database as an electronic filing system.

Datamart
Relational tables with a defined structure that have been designed to automatically accept full datamart extract data seamlessly.

Deduct credits by plan
A method of distributing flexible benefit credits. The total monetary value for credits is prorated based on the employee's pay frequency. Credits are given to employees as earnings added to their pay; the cost of individual employee plans are collected through payroll deductions and listed on the employee's payment stub.

Deduct credits by plan method
A method of distributing flexible benefit credits. Credits are given to employees as earnings added to their pay; the individual employee plan costs are then collected through payroll deductions.

Deduction
An amount subtracted from available net pay. Deductions can be involuntary (child support or maintenance) or voluntary (pension plans).

Deduction cycle
A predetermined schedule for taking voluntary deductions, based on the defined frequency.

De-enrollment
The process of shutting off plan benefits for an employee for reasons other than a separation activity.

Deferred compensation
Any benefit that is not immediately payable to an employee, but is instead deferred to a later date. This term refers to retirement vehicles, including all defined benefit, defined contribution, stock, and thrift/savings plan.

Deferred plan
Any benefits plan in which benefits are not immediately payable to an employee, but are deferred to some later date. This term refers to retirement vehicles, including all defined benefit, defined contribution, stock, and thrift/savings plans.

Delimiter
A character that tells the system where an item of data ends and another starts.

Dependent
An individual who relies or depends on another for his or her support.

Dependent number
A unique number in the eCyborg Interactive Workforce database that identifies an employee's spouse and his or her other dependents.

Detail page
A page in eCyborg Interactive Workforce that displays detailed information. Summary pages contain links to the detail for each record.

Dialog box
A secondary window that appears on the screen to present information or request input. Dialog boxes are generally temporary—they disappear after you enter the requested information.

Disability insurance tax
A tax required by some us states to be funded by employee-paid contributions to pay all or part of the cost of disability insurance coverage. On the Payroll Solution, us state disability insurance tax records are established as Type 4 taxes.

Disciplinary action
Action taken against an employee for violation of an organization policy or procedure.

Discretionary increase
A salary increase amount or percentage determined by a manager according to the guidelines established by the organization.

Display
Make data or images display on a computer monitor.

Display box
An area on a form in which data is displayed (formally known as an inquiry field).

Disposable income
For garnishment purposes in the us, an employee's earnings minus deductions required by state or federal law.

Distributed location
A customer location where data changes are replicated and may be distributed. A DL is identified to the system by a unique 5-position alphanumeric node ID.

Distribution
The process of passing data from a source DL to one or more target DLs.

Distribution rules
A set of parameters that determine how data will be distributed from one DL to another. These are defined at each DL by the owner using the distribution rules screens. Distribution rules are stored in tables that are not replicated (thus, they cannot be distributed).

DL
Abbreviation for ***distributed location*** (on page 329).

Double-click
Click a mouse button twice in rapid succession.

Drop-down list
A drop-down list is a view of the acceptable entry options available for a text box.

Drop-down list box
A standard windows control that displays a current setting but can be opened to display a list of choices. The user selects a choice by double clicking on the choice. The user can type into the field, and the system moves the list of choices to the last letter typed.

Dynamic SQL
Statements created by a program that must be interpreted and converted to executable sql statements at run time.

Earned income credit
A refundable amount that reduces the tax owed by certain low-income individuals in the us who meet adjusted gross income levels.

Earning
Money paid in return for work performed or services rendered. In Payroll Administration, earnings are separated by earning numbers into various categories such as regular pay, overtime pay, shift pay, bonuses, and so forth.

Earnings category
Used to categorize similar earnings. For example, all the overtime earnings can be grouped into category 01, all the shift differentials/premiums into category 06, and so forth.

EBCDIC
Extended **B**inary **C**oded **D**ecimal **I**nterchange **C**ode; binary code for alphabetic and numeric characters developed by IBM for its computers.

eCyborg Interactive Workforce Home
Button on every page that returns the user to the eCyborg Interactive Workforce Home Page.

eCyborg Interactive Workforce Home page
Home page that displays each time employees log on to eCyborg Interactive Workforce after completing the new user tasks on the New User Home page.

Effective date
Date on which an event takes place, for example, an enrollment or benefits plan change.

EIC
Abbrevation for ***earned income credit*** (on page 329).

EL
Abbreviation for English Language, now called CSL (Cyborg Scripting Language).

Electronic Performance Support system
Online tools that help users perform their job quickly and efficiently. EPSS can include online help, computer-based training (CBT), electronic manuals, wizards, and so on.

Email
Literally 'electronic mail'. This is a message that is sent to one or more people within or outside of your organization by an automated email software package.

Employee cancellation
An employee cancellation occurs when an employee is canceled from attending a training class or training program.

Employee Database
The file that contains organization and employee records. This is File02. It was formerly known as the Master File.

Employee Database record
The complete record for an employee. It may be composed of multiple physical records.

English Language
Former name of Cyborg's fourth-generation programming language, now called Cyborg Scripting Language.

Enrollment form
A customer-defined form used by employees to record their benefits elections and any associated dependent and/or beneficiary information.

Entitlement accrual
An accumulation of hours for an employee benefit, such as sick leave or vacation time, commonly known as an accrual.

Entity
Each Organization Unit, Job, Position, and Incumbent is an entity. Together they are entities.

Entry field
An area on a screen or browser page where the user can input information.

Entry form
An entry form is a form used to enter data.

Environment
The host platform and workstations where your Cyborg system resides, and any communication protocols. Also, a work space dedicated to a specific processing type. For example: development, test, and production.

EPSS
Abbreviation for ***Electronic Performance Support system*** (on page 329).

Establishment Reporting
Establishment Reporting occurs when an employer with several business locations chooses to file wage reports, broken down by location or unit, to the Social Security Administration. Each unit is identified by a four-character code, called an Establishment Number. The employer obtains approval from the SSA to use Establishment Reporting. Establishment Reporting does not apply to 1099s.

Event
The combination of a trigger (changes made to system data) and an action (the creation of an email or letter). Events always consist of these two component halves.

Excused absence
Absences from regularly scheduled work that can be considered as either paid or unpaid time off.

Extract file
A data file generated to be used by another system or application.

Federal Insurance Contributions Act
The United States Federal Insurance Contributions Act imposes two taxes on both employers and employees. Tax is withheld from an employee's wages to finance the Old-Age, Survivor's, and Disability Insurance (OASDI) social security program and the Hospital Insurance (HI) medicare program. Employers are then required to match the amounts withheld from employees. On the Payroll Solution, employee information for FICA-OASDI social security tax is entered on tax record 101 and FICA-HI Medicare tax on tax record 103.

FICA
Abbreviation for Federal Insurance Contributions Act.

Field
A data item on the database. This is usually displayed on a form as a text box.

eCyborg Interactive Workforce specific—A space allocated for a particular item of information. A tax form, for example, contains a number of fields: one for your name, one for your Social Security number, one for your income, and so on. Every field has a name (also called a field label).

Filter
Device used by report to select certain rows of information from the database, thus limiting the amount of data from the database to be viewed in the report.

Finished
Users click Finished when they have completed all information on a checklist or other *ESS* page.

Flat rate tax
A US local tax that is calculated as a standard percentage rate and that is calculated in the same way for all employees (that is, factors such as marital status do not enter into the calculation). For many such local taxes, Cyborg does not provide tax specification information on the Tax Authority File. Instead, you need to enter a Tax Specification Record for the tax on a Tax Specification Information form, indicating the tax rate in the Flat Rate text box.

Flex credits
Units granted to an employee in order to purchase benefits under a Flexible Benefits Program.

Flex Master Plan
Defines your Flexible Benefits Program and ties component plans together as a group. Employees are enrolled in the Master Plan and then select the benefit plans in which they wish to participate—for example, medical, dental, and life. Flex master plans are set up in Benefits Administration and used by eCyborg Interactive Benefits to display benefit plans to users for initial and open enrollment.

Flex plan
A benefit plan where, in addition to a core of basic benefits (if applicable), the organization/company allocates to each employee a credit for purchasing additional benefits tailored to their individual needs. Flexible benefit plans may include a flexible spending account.

Flexible Benefits Plan
A specific type of benefit plan that allows employees to select their benefits from a number of benefit plans. This term may be used interchangeably with cafeteria plan.

Flexible Benefits Program
A benefits program in which an organization may allocate to each employee a pool of credits or a monetary amount that is to be used to purchase benefits tailored to individual needs.

Flexible Spending Arrangement
A benefits welfare plan set up as an account in an employee's name that is used to reimburse the employee for certain personal expenses. In the United States, these accounts are provided by employers as a way for employees to pre-fund dependent care, legal services, or medical expenses with pretax currency.

Folder
Logical organization device for the content of a Cognos catalog.

Form
A window of information that appears within The Solution Series, including text boxes and other controls. This was formerly known as a screen.

Form area
An area of the window that contains a form.

Form Builder
A tool provided by Cyborg Systems for use with The Solution Series for designing forms.

Formal education
Education that is obtained from a college or university.

Forward
Displays the next page.

FSA
Abbreviation for Flexible Spending Arrangement.

FTE
Abbreviation for Full Time Equivalent.

FTP
File **T**ransfer **P**rotocol. A means of allowing a user on one computer to transfer files to and from another computer over a network

Full Time Equivalent
The ratio of total working time to the time that represents full time employment for a single employee. For example, an FTE of 0.5 means working half of the time that represents full time employment.

Funeral days
Absences from regularly scheduled work due to a funeral, which at the discretion of the organization, can

be considered as authorized or unauthorized, paid or unpaid time off.

Gap analysis
Comparison of a current state of being with a desired state of being. For example, you could perform a skill or competency gap analysis on individual employees or on the workforce as a whole, comparing the existing state of skills and competencies with the required state or level of skills and competencies.

Garnishment
A legal procedure authorizing a deduction from an employee's earnings to satisfy a legal requirement.

General ledger interface
A file that provides a balanced payroll journal for the period. This file contains journal entries for labor expenses, withheld deductions, income, disability, UI, and other withheld taxes, net pay, and company-paid taxes. The interface may also be produced on paper.

Go to details
Displays a new page with detailed information. Used on summary pages.

Graphical User Interface
The Solution Series provides integrated human resource and payroll functionality via the Microsoft Windows Graphical User Interface. These are the elements that display on your screen.

Grievance
A formal complaint made by an employee against the organization usually because of an unsatisfactory working condition or other work-related dispute.

Gross wages
The total of all earnings paid to an employee.

It is stored in the Total Pay (field 119 of the US Tax Authority File) field of the employee's US FICA tax record 101 (FICA-OASDI). This figure appears on the Combined Register (2222) report as Total Pay. It does not appear on US W-2 forms.

Group box
A standard Windows control that groups a set of controls.

Group plan
Defines any number of benefit plans tied together as a group. Group plans are used to define common eligibility and to cluster plans for reporting purposes.

GUI
Abbreviation for Graphical User Interface.

Handicap
Having a physical or mental disability that substantially limits activities especially in relation to employment or education.

Health and safety profile
Data on the employee record that includes information such as the employee's blood type, language, physician, emergency contacts, and any disabilities.

HED
Acronym for Hours, Earnings, and Deductions. Each earning or deduction must be established in The Solution Series with a unique identifying three-digit code. HEDs are used to record pay, hours worked, and deduction amounts and arrears for each employee.

Help
Hot spot on an eCyborg Interactive Workforce page that displays step-by-step directions for completing the page.

History record
Part of an employee's payment history; a snapshot of a check paid to an employee or an adjustment made to an HED or tax.

Holiday days
The time off that all employees are entitled to based on the decision of the organization or government regulation.

Home page
The main page of a Web site that generally serves as an index or table of contents to other documents stored as pages on the site.

HTML
Abbreviation for **HyperText Markup Language,** the authoring language used to create documents on the World Wide Web. HTML defines the structure and layout of a Web document by using a variety of tags and attributes.

Import facility
A tool delivered with The Solution Series that moves data from an external source to any organization or employee form.

Import record
A line in a spreadsheet or delimited file that contains employee or company data.

Inactive plan
A benefits plan that no longer allows employee enrollment.

Inactive tax record
An employee tax record that is no longer in effect for a given employee. Neither wages nor taxes are accumulated for the particular tax record. However, any wages and/or taxes already accumulated remain until clearing is performed. Such clearing is usually performed in preparing the Employee Database for a new year. The inactive records can be deleted at this time. The process of making a tax inactive is called deactivating.

Incumbent
An incumbent is an employee linked with a specific position. The linking of an employee with a Position is an incumbency. An employee may be linked to more than one position; in other words, an employee with multiple incumbencies. A position to which more than one employee is linked has multiple incumbents.

Information-level security
These records grant access to employee and table data via specific password records.

Initial Administrator
Only user whose user ID and password are created during installation. The initial administrator always has authority to all administrative functions: eCyborg Interactive Workforce, Human Resources Administration, Benefits Administration, and Payroll Administration, and can assign administrative roles to others by creating administrative user IDs and passwords.

Initial passwords
Password generated by eCyborg Interactive Workforce for each user ID extracted from The Solution Series. Users must create a user-defined password when they log on to eCyborg Interactive Workforce for the first time.

InitialAdmin
See Initial Administrator.

Inquiry form
A inquiry form is a form used to view data already entered.

Instructional text
Any paragraph(s) on the page that explain the function of the page or fields to the user.

Internal candidate
An employee of your organization who is applying for another job or position in your organization.

Internet
A global network connecting millions of computers.

Intranet
A network belonging to an organization, usually a corporation accessible only by the organization's members, employees, or others with authorization and used to share information.

Investment funds
Different options or accounts available to employees for allocating their contributions, usually applicable to thrift/savings plans.

IPEDS
Integrated Postsecondary Education Data System.

Job assignment
A job associated with a particular employee.

Job code
A designation for a job assignment.

Job streams
A generic reference, Job Control Language, for your operating system's command language.

Alternately: Jobstreams

Job type
A generic category that further defines a particular job.

Jury duty
This is compulsory service on court appointed juries. Employers are required by law to excuse jury duty

related absences. They are not, however, required by law to pay the employee during this time away from the job.

Label
Text that describes the information the user enters into the field.

Labor record
A record containing the hours, amounts, associated charge-to control levels, and function assigned on the employee's Payroll Home Location/Pay Allocations form.

Leave of absence
Occurs when an employee leaves the organization for a period of time, usually temporary, for personal reasons such as medical leave.

Log off
Logs the user off the system. When referring to the Log Off button, use initial caps.

Logical Employee Model
A collection of default employee information that is used to create a model. Logical Employee Model templates are used when hiring new employees to save time and ensure that critical information is established consistently and correctly. These were formally known as LMODELs.

LPI
Lines **p**er **i**nch

Mailing address
An address, other than your legal residence address, to which you have your mail sent.

Maintenance payroll run
A maintenance payroll run automatically updates organization and employee records, but it does not process time entries or generate payments, pay slips, or deposit advices. It is also used to create payment history records.

Major activity
Event that causes a change in an employee's employment status, such as a new hire, termination, or rehire.

Mandatory field
A field that requires the user to enter information before the user can exit the screen or page.

Map file
Stores the predefined relationships between an import file and a form.

Mass time entry creation
Creating time entries for a group of employees through one program execution, such as for a paid holiday.

Master File (0202) report
A Cyborg report that produces a formatted display of the data in an employee's current batch Employee Database record. This includes the wages and taxes accumulated for the employee, covering current, month-to-date, quarter-to-date, and year-to-date information for individual tax codes. It is report generator 0202.

Matrix ID
Unique identifier for each pay-for-performance matrix.

Menu
A list of choices; the choices are generally links that take the user to another screen or page.

Menu bar item
A menu that appears on the menu bar.

Message area
An area of the window that contains messages or selection lists relevant to the current form. The Message Area can be turned on or off.

Method code
One of many specific routines (usually delivered by Cyborg and identified by a two-character code) used to calculate earnings and deductions.

Midpoint
The middle of the span of currency from the minimum to the maximum of the employee salary grade.

Minimart
Relational tables you create so you can insert data from your Subset data extractions.

Monetary perquisites
A privilege or profit that an employee is entitled to that is incidental to regular wages or salary.

Moving expenses
The expenses incurred by an employee due to moving from one location to another for employment purposes.

Multiple master
A file compression technique that duplicates the current employee Permanent Master Record as many times as there are payments to that employee during one pay period. These multiple masters are detail records reflecting the amounts for the payment being made (current), and the adjusted MTD, QTD, and YTD totals. The system uses multiple master records to create history records showing the current payment figures only.

Navigation bar
In eCyborg Interactive Workforce the Navigation bar shows the name of the page you are using, for example, 'Mailing Address'. The top line of the Navigation bar shows the path you took from the Home page to reach the present page. Links on the Navigation bar let you return to the home page or log off the system.

Navigator
Left pane of the work area which forms the main method of moving through the forms. From the Navigator users select the component, process, and task in which they are interested.

Net credit method
A method allocating flex credits. An employee's cost of benefits is calculated as either a net cash earning or a net deduction from the employee's pay. The net amount is the difference, either plus or minus, between the credits allocated to the employee and the cost of his or her flex benefits choices.

New hire
Process of hiring a new employee for your organization.

New user
A user of eCyborg Interactive Workforce who has not yet completed reviewing and updating their personal information on the New User Home page.

New User Home page
Home page that displays for new users of eCyborg Interactive Workforce until they complete reviewing and updating their personal information.

Node
A Distributed Location.

Node ID
A unique 5-position identifier for a node. The naming convention is defined by the user.

Number registered
This is the number of employees registered for a training class. It is updated and displayed on the Class Schedule form.

Object
Each System Control Repository record type is assigned an object code. A single record type can have several object codes assigned to allow limited display.

Object key
A field that allows you to specify the System Control Repository record group you want to display. The value of this field is dependent on the type of information you want to display.

Obsolete plan
A benefits plan that will no longer be used.

Off cycle
An off-cycle payroll run is an additional payroll for the period just completed. An off-cycle payroll run is commonly used to process nonstandard payments, such as bonuses. It is sometimes referred to as an additional or bonus payroll run.

Online
Turned on and connected, for example, printers are on-line when they are ready to receive data from the computer. Users are considered on-line when they are connected to a computer service through a modem. That is, they are actually on the line.

Open enrollment
A period of time during which employees can enroll in or change their benefit choices for the upcoming year, generally in October or November.

Operator ID
A four-character code that identifies the user to the system.

Option
An item in the option list for a field. This was formerly known as a codeset item.

eCyborg Interactive Benefits and Benefits Administration specific—In Benefits, the plan coverage that an employee selects, such as single or family coverage.

Option button
A standard Windows control that allows you to select from a fixed set of mutually exclusive options (previously known as radio button).

Option list
An option list is a list of options that are available within a Text box. This was formerly known as a Codeset.

eCyborg Interactive Workforce specific—Options available in The Solution Series that the eCyborg Interactive Workforce administrator loads in to eCyborg Interactive Workforce. The options are then available in the drop-down list boxes in eCyborg Interactive Workforce.

Organization
A group of employees who are employed in a common structure, governed by the same set of rules or policies, and eligible for the same earnings and deductions For example, your organization may be structured into parts that represent employee groups such as active, union, retirees, applicants, and so forth.

Formerly known as a company or Control 1-2.

Organization Level 3
A customer-defined value used to determine the breakdown of an Organization for Human Resource reporting or selection purposes. This control level may be translated to a division, plant site, section, and so forth, as defined by you.

Organization Level 4
A customer-defined value used to determine the breakdown of an Organization for Human Resource reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Organization Level 5
A customer-defined value used to determine the breakdown of an Organization for Human Resource reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Organization Level 6
A customer-defined value used to determine the breakdown of an Organization for Human Resource reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Organization Number
A six-character user-defined code that represents an organization; the highest level of the organizational structure in Payroll Administration.

Formerly known as a Control 1-2.

Organization Unit
An organization unit ('Org Unit') is a grouping of Positions within an organization (for example, Accounts Department).

Organization Validation table
A table that validates that an organization is valid and payments can be made.

Organization-specific tax setup
A method of implementing Tax Specification Records in which each organization involved in tax processing contains all the specification records required to process taxes for its employees, as opposed to a common tax organization.

Override file
A file used to maintain COBOL or Report Generator changes to the system.

Packaged reporting
A processing mode in which a job is scheduled to be run at a certain time.

Paid absence
Employee absence that will be paid by the organization. A time entry will be created for this absence.

Parallel run
The process of executing the same programs simultaneously on two separate systems to obtain the same or similar results.

Parameter form
A form that is displayed when certain programs are called from the Navigator or menus. The form facilitates entering parameters for the program.

Password
A secret series of characters, generally user defined, that enables you to access a computer, a software application, or a file. On multi-user systems, each user must enter his or her password before the computer will respond to commands.

In eCyborg Interactive Workforce, the password ensures that unauthorized users cannot access user-specific information.

Password aging
The period of time that elapses before a user-defined password expires and the user must change his or her password.

Pay allocation
A means of allocating, on a percentage basis, employee labor hours and amounts to multiple sets of control levels 3 through 6 and function to accurately reflect employees whose labor must be charged to more than one area within an organization.

Pay document
A pay slip or deposit advice with its associated pay stub.

Pay frequency
The interval at which a group of employees is paid. Examples are weekly and semimonthly. Also referred to as a payroll period.

Pay schedule
A predetermined schedule for a calendar year, identifying period-end and payment dates for each pay frequency.

Pay stub
A preprinted form, corresponding to a check or deposit advice that lists all earning, gross pay, taxes, deduction, and net pay information for an employee.

Pay-for-performance matrix
Chart representation of the variables that result from the combination of salary increase information, how much to give and when.

Payment history record
A record documenting the detail information for a payment or adjustment. Multiple payment history records may be generated for an employee, reflecting multiple adjustments or payments. These records include all earning, deduction, and tax information included in the payment or adjustment.

Payroll home location
The location where the employee is normally assigned to work and where labor distribution information is charged. An employee's home location comprises specific Payroll Levels and is always assigned Allocation Number 01 on the Payroll Home Location/Pay Allocations form. The Function field may also be used as part of a home location, depending on your specific requirements.

Payroll Level 3
A customer-defined value used to determine the breakdown of an organization for Payroll reporting or selection purposes. This control level may be translated to a division, plant site, section, and so forth, as defined by you.

Payroll Level 4
A customer-defined value used to determine the breakdown of an organization for Payroll reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Payroll Level 5
A customer-defined value used to determine the breakdown of an organization for Payroll reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Payroll Level 6
A customer-defined value used to determine the breakdown of an organization for Payroll reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Payroll period
A defined period of time for which an employer pays wages to employees.

Payroll Process Control
A series of forms used during the Payroll Process to determine the type of run (payroll run or maintenance run). Allows you to specify the pay frequencies to be paid and which reports are to be produced.

Payroll run
Updates organization and employee records, processes time entries, calculates employee pay, generates pay documents and payroll reports, including the Combined Register. It also produces a variety of special interface outputs.

PCL
Printer **C**ontrol **L**anguage

PDF
A file format that captures formatting information from a variety of desktop publishing applications, making it possible to have formatted documents appear on the screen and be printed. To view a file in PDF format, you need Adobe Acrobat Reader, a free application distributed by Adobe Systems.

Peer-group appraisal
Appraisal that uses performance evaluations completed by an individual employee's co-workers or project team members.

Pending de-enrollment segment
Plans for which an employee is enrolled, but has lost eligibility, as listed on the Pending Plan Enrollment/De-Enrollment form.

Pending eligibility segment
Plans for which an employee is eligible but not enrolled, as listed on the Pending Plan Enrollment/De-Enrollment form.

Performance appraisal
A periodic assessment and ranking of an employee's skills and accomplishments.

Performance appraisal rating
A method of ranking the performance of an employee during a given period using options ranging from 1-Outstanding to 5-Unsatisfactory.

Performance rating
A method of ranking the performance of an employee during a given period using options ranging from 1-Outstanding to 5-Unsatisfactory.

Performance-related pay
Monetary payments made to employees based on how well an employee has fulfilled job expectations.

Perquisites
Property or privileges extended to an employee.

Personal days
Authorized absences that are generally considered as paid time away from regularly scheduled work, but can be either paid or unpaid.

Phonetic keys
The keys you use to access employee data using the phonetic spelling of an employee's last name.

Pixel
The smallest rectangular area of an image on a screen.

Plan deactivation
A process that makes a plan inactive and prevents future employee enrollment.

Plan ID
A three-position, alphanumeric identifier for a plan in the system.

Plan shutdown
The process of de-enrolling an employee from all benefits plans because of a separation activity.

Plan year
The 12-month period over which a salary budget is effective.

eCyborg Interactive Workforce specific—The calendar, policy, or fiscal year in which the records of a Benefits plan are maintained.

Policy tables
Highest level tables that are used to record the generic (or master) rules for an organization or group of employees. These included your organization's rules relating to working time procedures, such as clocking in and out, docking for lateness, and overtime. Each

policy consists of a Policy Master table and one or more Policy Activities table.

Pop-up menu
A menu that appears when you use the second mouse button within the system. This menu contains context sensitive commands and options that relate to the object you have clicked on.

Portable document format
See PDF.

Position
A specific role with an organization—for example, Accounts Manager.

Alternative definition: to place an object in a specified location.

Position Administration Control Number
Two-character alphanumeric value that tells Position Administration which tables to use for a specific company.

Position complement
A 'Position complement' is the value of a Position. The organization complement is the total value of all Positions included in the complement.

Position in range
The difference between a given salary and the minimum of the salary range, divided by the difference between the range's maximum and minimum, and expressed as a percentage.

Posttax
A contribution made after taxes have been withheld from earnings.

Premium
The amount of money an organization agrees to pay an insurance company for a policy or annuity, or the amount contributed by an employee to the employer to cover the employee's portion of the total premium.

Prenotification
Informing a bank or credit union that an employee will be using direct deposit with them in the future. Cyborg recommends that you fill out the Direct Deposit Information form two pay periods in advance of the first deposit date. This ensures that a prenotification record is provided to the bank or credit union in a timely manner.

Pretax
A contribution made before taxes have been withheld from earnings.

Primary account
The account set up in eCyborg Interactive Workforce to receive an employee's pay or reimbursement checks. After deductions and deposits to additional (secondary) accounts, the remainder of pay is deposited into the primary account.

Process
A subset of a component that logically groups tasks on the Navigator or menu. For example, the process 'Maintain Employee Details' contains tasks such as 'Basic Employee Information' and 'Personal Information'.

Alternate definition: An action that brings about a result.

Process bar
The graphical representation of a process on the navigator. Each process bar is within a Component.

Program
A program is a series of classes being administered using Training Administration. For example, 'The Cyborg Training Schedule for January-June 1996' may be a program consisting of eight different classes.

Alternative definition: a form or other program within the system, accessed directly from the Command dialog box. For example, form EF-SCR is a program.

Protected amount
The amount of disposable income protected from garnishment in the US This amount may vary from state to state.

Prototype HED
An HED defined on a benefits form for use in recording employee/organization contributions when an employee is enrolled in a benefits plan. This allows the setup and maintenance of payroll deductions using Benefits Administration.

Provider
A provider is an instructional institution, organization, or person who is available to teach training courses.

Push button
A button on the interface which appears depressed when clicked on (now known as command button).

Quartile
Points that represent the division of a salary grade range into four equal parts.

Query alternate keys
The keys you use to access the employee master record in an order other than by primary key.

Query primary keys
The keys you use to direct your QUERY program to a record type.

Quick Hire
The process of hiring an employee by entering one two-panel form with the required data elements rather than entering a series of forms.

Radio button
A button on a form that selects an option, the radio buttons that make a field are mutually exclusive (now known as an option button).

Recall
Return a laid-off employee to active status, usually with no affect to benefits.

Reciprocal taxation
Reciprocal tax withholding refers to agreements made between US states and (or) localities regarding income tax calculation and reporting for compensation paid to an employee who lives in one state or locality and works in another.

Record
A complete set of fields, such as the fields that make up a tax form or a name and address record.

Alternate definition: To set down for preservation in writing or other permanent form.

Recruitment
Process of finding and hiring new employees who meet the needs of your organization.

Recycle File
P05IN; A file that contains employee data and pay document information required for payment reconciliation. It also contains time entries to be processed and paid at a later date. This file is used to pass data to the next payroll or maintenance run.

Registration
Registration is the act of enrolling an employee in a class.

Registration number
A three-digit registration number is assigned to employees for tracking purposes when they register for a training class. This enables the order in which the employees registered to be viewed.

Rehire
The process of hiring a former employee of your organization. Typically, a break in service is incurred and benefits must start over (usually requiring a new adjusted seniority date if used in benefits tracking).

Reimbursement account
The account into which employee's travel and other expense type reimbursement checks are directly deposited.

Reinstatement
The process of returning a former employee to active status within a certain time period (such as 90 days), thus qualifying the employee to have certain benefits restored to the original hire date.

Reject time
The point at which an error condition will occur. An error condition must be manually corrected/approved and approved before a time entry can be generated by the system.

Relocation
The process of moving an employee from one organization to another geographic location, whether the move be domestic or international. This process also applies to applicants who are being relocated as part of the hire process.

Remaining net pay
The 'bucket' of money that is left after all employee deductions and taxes have been taken from the employee's gross pay. This 'bucket' of money can then be used for multiple deposits if the enterprise sets up multiple deposit HEDs.

Replication
The automatic process of writing changes made in the Employee Database and option lists and tables in the System Control Repository to the Replication Holding File (FILE08).

Replication Application
English Language program (DSAPLY) that reads records from the Replication Packet File (FILE20) produced by the Replication Reception program (DSRECV) and updates the System Control Repository and Employee Database accordingly.

Replication Distribution
Two COBOL programs that work together to distribute and receive updates. The Replication Distribution Program (DSTRIB reads either the Replication Holding File (FILE08) or a Replication Packet File (FILE20), selects data applicable to a specific DL and writes all necessary data to a new output-only Replication Packet File (FILE21). The resulting FILE21 will be processed on the remote DL via the DSRECV Replication Reception program.

Replication Holding File
FILE08. This file contains additions, changes, and deletions to the System Control and the Employee Database. Data is distributed from and written to this file, based on the data distribution rules configured for the target DL by the source DL.

Replication Packet File
(FILE21/20). This file contains data changes and is created specifically to update a target DL. This information may include Company/Employee data, tables and option lists, and time entry and adjustment records.

Report
The term report refers to a report produced on paper.

Report Generator
A program that produces the batch payroll and the batch payroll reports.

Report Group
A series of packaged reports that are created using the Report Group Activities form and are run together.

Report Group Scheduler
This is the program that allows you to schedule reports. This was formerly known as the Report Scheduler.

Report parameters
Specific guidelines for determining the information to be processed by a given report or program.

Requisition
A formal request to fill a vacancy or vacancies.

Requisition candidate
A candidate for a vacancy represented on a requisition.

Requisition limit
A total unit value of a requisition.

Requisition unit
The value of a requisition expressed as an FTE, hours, salary or headcount.

Retirement
Occurs when an employee retires from the organization.

Return
The activity of an employee returning as an employee to active status, usually following a leave of absence.

Alternative definition: key on keyboard used to perform a carriage return, can also be known as Enter.

Review process
A method used by an organization to evaluate an employee's salary or performance in a standard, timely manner.

Roll-up reporting
Option that enables packaged reports to be processed within organizations (roll-up).

Rotation pattern
A way of describing the working pattern for a group of employees (crew) who regularly work different shifts.

A crew is a group of employees who together regularly work the same schedules according to a rotation pattern.

Safety standards
Legally-mandated workplace safety standards.

Salary budget record
Defines, for each employee, the budgeted increase amount, percentage, and effective date for a specific salary plan year, and the prorated effect of this increase on the budget in terms of amounts and percentages for each employee.

Salary grade
A range of salary amounts associated with a particular job.

Salary grade range
A range of salary amounts associated with the salary grade for a particular job.

Salary plan
A set of rules or guidelines used to budget for salary increases for the coming year.

Salary plan year
A 12-month period over which a salary plan is effective.

Salary range
The span of salary amounts from the minimum to the maximum of the employee salary grade.

Salary review
A periodic evaluation of an employee's compensation.

Salary review authorization form
Hard copy format of the employee criteria necessary to review and approve proposed salary increases.

SAT file
The Solution Series form appearance table. Simple text file that reflects the form's layout.

Save Changes
Saves the page (form) the user completed. (When you click 'Save Changes', eCyborg Interactive Workforce saves the information on the page whether or not the user made changes.)

Schedule Activities table
Identifies activity types for each point in a work day where the process of clocking in and out should be dealt with. Each Schedule activity also contains time parameters that will be used to calculate whether an employee will be docked or credited time.

Schedule assignments
Also referred to as a schedule. This term refers to the details of the Schedule Master tables to which an employee is assigned. These details include the date the assignment took place, the Schedule Number and Sub-Schedule Number, and (if applicable), the crew to which the employee is assigned.

Schedule error
Occurs when a clock transaction (ring) time falls outside of an employee's schedule reject times.

Schedule Master table
Used to set up your organization's Time and attendance rules (such as HEDs and the minimum number of hours an employee must work before a meal deduction is made). A Schedule Master table is associated with a Calendar Routine, earnings Code, and Shift Premium table by entering the appropriate identifier.

Schedule number
A unique three-character alphanumeric identifier used to partially identify a schedule table.

Screen
Now known as a form.

Scroll bar
When information on a page takes up more than one screen of your monitor, the system adds scroll bars to the right side of the screen. On the scroll bar:

- Click the up arrow to move line by line to the top of the page
- Click the down arrow to move line by line to move to the bottom of the page
- Click the double arrows to move several lines up or down the page

Click and drag the bar in the scroll area to manually move up or down the page.

Search argument
The value from an employee's master record used to search benefits tables to apply plan rules to specific groups of employees.

Search type
The definition of a field from an employee's master record to use as the search argument.

Secondary account(s)
Additional account or accounts at financial institutions that employees set up in eCyborg Interactive Workforce receive a portion of their pay. A primary account must be defined before an employee can set up additional accounts.

Security Officer
The assigned employee who is responsible for the setting up and monitoring of the security your Cyborg system.

Self-adjusting taxes
Taxes for which the system automatically recalculates the tax on a cumulative year-to-date basis on each payroll run.

In the U. S. these include FICA taxes: Social Security (tax record 101) and Medicare (tax record 103). The purpose of this calculation is to avoid any differences (of pennies) in FICA tax paid versus FICA tax due at year-end due to rounding on a pay period basis. In addition, certain state disability taxes and employee-paid state unemployment insurance taxes also self-adjust.

Sequential Master File
P20IN; The batch processing version of the Employee Database. This file contains organization and employee data, tax tables, and the object code for programs.

Service interruption
A period of time during which an employee did not maintain an active working status in the organization.

Service method
A calculation option list that determines the method for calculating credited service.

Session
When users log onto a software application, they begin a session. When they log off, they end the session.

Alternate definition: The period of time during which a class is held.

Shift
An employee schedule assignment for a given day. For a rotation pattern, this is a Sub-Schedule Number.

Alternative definition: key on keyboard, typically used to describe key combinations for a shortcut key.

Shift premium
A premium (or differential) added to an employee's regular earnings, overtime earnings, or both. It is represented by a shift code or HED Number.

Shortcut menu
A menu that appears when you right-click within The Solution Series 4. This menu contains context-sensitive commands and options that relate to the object (form, Navigator, and so on) on which you have clicked.

Sick days
The time off that an employee is allowed to take due to illness as a result of an employment contract or organizational policy.

Solution View
An online utility that provides the tools for creating new forms, fields, and report programs without the direct use of Cyborg Scripting Language.

Source DL
The node that owns the data being distributed. Depending on the rules established, the same DL can alternate from source to target.

Special assessment
Extraordinary or temporary taxes, such as additional employer-paid or employee-paid contributions to state unemployment programs or to mandatory health insurance programs.

Spinbox
A control on the interface composed of a text box and increment and decrement buttons that allow you to adjust a value from a limited range of possible values.

Spreadsheet application
Software for recording ledger entries, creating worksheets, graphing data, and other accounting functions.

Standalone Time and Attendance
Customers who are using the Cyborg's Time and Attendance Administration but not the Cyborg's Payroll Administration.

Static data
Includes organization and employee information, such as name and salary.

Static SQL
Data Definition Language (DDL) and Data Manipulation Language (DML) statements embedded in application programs.

Status bar
The bar that appears at the bottom of The Solution Series window. The Status Bar displays useful information, such as your current session number, the currently displayed organization and employee, and so forth.

Statutory employee
Any of the four categories of workers who are independent contractors under common law and are treated by statute as employees. These include:
(1) a driver who distributes beverages (other than milk) or meat, vegetables, fruits, or bakery products; or who picks up or delivers laundry or dry cleaning, if the driver is your agent or is paid by commission.
(2) certain types of full-time insurance sales reps
(3) an individual who works at home on materials supplied by you that must be returned to you
(4) certain full-time traveling or city salespeople.

Social Security and Medicare (FICA) taxes may or may not be withheld. Income taxes are not withheld from a statutory employee. A statutory employee will receive a W-2 with the ‘Statutory Employee’ box checked.

Sub-schedule number
A two-digit numeric text box used to further identify a schedule table.

Succession planning
Finding and developing employees for placement into identified key positions that are expected to become vacant sometime in the future.

Summary page
To help you see information at a glance, eCyborg Interactive Workforce uses summary pages. The summary page displays a short view of detailed information. For example, all your emergency contacts appear on a summary page. You delete the contact or proceed to the detail for the contact from the summary page.

Summary plan
A customer-owned description of a benefits plan.

Supplemental wages
Wages that are separate from regular earnings may be classified as supplemental wages and taxed using the default method. The default method means using a set percentage specified by the tax authority. Examples of such earnings are bonuses and commissions.

Surplus
A 'surplus' is an exceeded complement position.

System administrator
An individual responsible for maintaining a multi-user computer system, including a local-area network (LAN). Typical duties include:

- Adding and configuring new workstations
- Setting up user accounts
- Installing system-wide software
- Performing procedures to prevent the spread of viruses
- Allocating mass storage space

System Control Repository
This is the file that contains system definitions for The Solution Series*,* (FILE01).This was formerly known as the Control File.

System Generator
A type of Report Generator that performs system functions, such as defining data elements and system messages.

Table
Contains an organization's rules and policies and controls what actions take place at the employee level.

Alternative definition: means of displaying information in columns and rows.

Table Definition Record
Table containing data about the Position Administration table records, including the location of keys to associated tables.

Target DL
The node that receives the data being distributed. Depending on the rules established, the same DL can alternate from target to source.

Task
The lowest level of organization on the Navigator or menu, generally equivalent to a form. checklist, or dialog.

Task icon
An icon denoting a task. Task icons describe the type of task, including Forms, Checklists, Dialogs and others.

Tax authority
A government agency to which an employer and employee has statutory tax obligations. The tax authorities for which you handle taxes exist at the federal, state/province, and local levels.

Tax Authority File
A Cyborg-supplied file that contains all the tax-specific information needed to calculate taxes for tax authorities. This includes wage-bracket tables for different marital statuses and information relating to allowances and standard deductions. The sources for the contents of this file are tax specifications published by the various tax authorities.

Tax code
The three-character to seven-character Cyborg-supplied reference code that identifies a tax and that serves as the link between the Tax Specification Record and the employee tax record.

Tax Maintenance File
One of the two Cyborg-supplied tax files. A Tax Maintenance File is a file issued by Cyborg in conjunction with a Tax Update Bulletin (TUB). It contains all the tax specifications that are being updated in the bulletin, in the form of tax specification transactions. These transactions are typically used as input to the batch maintenance run in which tax updates are applied.

Tax specification
Each tax authority publishes tax specification information that specifies how each tax must be administered. This information specifies how employers should calculate taxes and how taxes should be withheld from employees (if withholding applies). The tax specifications can be in the form of tax formulas and (or) tax tables.

Tax Specification record
A record on your Employee Database that contains the tax specifications for a tax. The record contains all the information, as obtained from the governmental authority, needed to calculate tax amounts for the tax. The record may contain more than one tax; for example, US state Tax Specification records contain information for both state income tax and state unemployment insurance. Once a Tax Specification record is activated, tax specification information from the Cyborg-supplied tax files can be loaded onto the record on your Employee Database.

Tax table
A set of information required to calculate a tax, for a specific set of employee parameters. Tax tables are stored and maintained in Tax Specification records. A table typically includes wage and bracket information and data relating to allowances, such as personal exemptions and to standard deductions. There can be several tables relating to marital and resident status in a given Tax Specification record.

Tax type
This term refers to various categories of taxes, for example, income, National Insurance, unemployment, disability, Social Security (FICA-OASDI), and Medicare (FICA-HI).

Taxability
The term refers to whether an hours, earnings, and deductions amount is to be included in taxable wages to be accumulated for a specific tax. If the hours, earnings, and deductions amount is excludable, then the amount is not included in taxable wages. If the hours, earnings, and deductions amount is taxable, then the amount is included in taxable wages. The term fully excludable or fully taxable implies that more than one type of tax is being referenced, for example, state income tax and state unemployment insurance in the US.

Taxable wage base
The taxable wage base represents the maximum amount of an employee's wages on which tax is levied and after which there is no liability. A wage base in the US

typically is in effect for FICA, unemployment taxes, and disability.

Tax-related Regulatory Bulletin
A TUB contains the updates to tax specifications supplied by Cyborg, consisting of a bulletin document, a tax file that contains the updated tax specifications, and a printed listing of tax specification transactions with the updates.

TDR
Table Definition Record.

Template
A basis from which to create a custom item. For example, you can use an existing Cyborg report as a template for your custom report.

Temporary password
A set of alphanumeric characters used with a user ID to limit access to a software application. The system requires that users replace their temporary password with a user-defined password within a certain number of days.

Termination
The activity of an employee no longer being employed by the organization.

Test environment
A separate organization or system partition used only for testing.

Text box
A control on the interface in which text can be entered and edited (formerly known as a field).

Text qualifier
The character surrounding an item between delimiters. All values between the qualifier are data items and are not scanned for a delimiter. This allows a delimiter character, such as a comma, to be a valid data item. Example:

"item 1","item 2","item 3, 4 and 5"

This string contains three data items:

Item 1

Item 2

Item 3, 4 and 5

Although the third item contains a comma, it is ignored as a delimiter because it is between the text qualifier of speech/quotation marks (").

Time entry
The form in which you enter the hours worked for an employee. This was formerly known as a Time Card.

Time entry extract file
A file of time entries external to the Time and Attendance Solution that is used to feed to payroll.

Time entry validation
The Time Entry Validation/Creation program identifies and assigns an activity, for example Clock In (1), to each clock transaction (ring) when performing the validation function. Each clock transaction must be assigned to an activity, in order for time entry hours to be calculated for an employee, for a particular shift. This program validates clock transactions (rings) and generates time entries.

Timeout
The period of time that elapses before a user's eCyborg Interactive Workforce account becomes invalid because of inactivity.

ToolTip
A standard Windows control that provides a small pop-up window that provides descriptive text, such as a label, for a control or graphic object.

Top-down appraisal
Appraisal made by a supervisor or manager of an employee's capabilities. Such an appraisal is generally based on the supervisor's or manager's day-to-day observation of an employee's work performance and will usually include an appraisal interview with the employee.

Trainer
Trainers are set up on the Provider Index Form. They are instructional institutions, organizations or persons who are available to teach a training class.

Trainer code
The trainer code is a four-character value that represents a trainer. This value resides in Option List TR38.

Training area
The training area is recorded on the Class Schedule Form. It is typically defined as the section of the organization to which the training applies, such as manufacturing.

Training class results
These are the class details and absence information recorded on the Process Class Results form. Details recorded include the objectives met when taking a training class.

Training class status
The status value is updated and displayed on the Class Schedule Form. It tracks whether the training class is canceled, full or available.

Training course code
The training course code is a six-character value that represents a training course. This value resides in Option List TR33 and is associated with a course title.

Training plan
A plan of training courses that an employee will attend in the future to achieve the necessary skills to perform a job.

Training reason
The reason for training is used to identify why a training request has been made. For example, the purpose of the training to act as a refresher, to acquire new skills, and so forth.

Training request
A training request is a request for an employee to attend a specific course or class. A formal request for training is not essential. This step could be omitted and the employee could be registered directly in the course of his or her choice.

Transfer
Process of moving an employee from one organization to another organization, such as moving an applicant from the applicant organization to the active employee organization.

Alternative definition: to move data or files from one computer to another

Trend analysis
Reporting or statistics that indicate the rate of change in costs and other elements of a benefits plan.

Trigger
A set of conditions that must occur for an email or letter communication event to start. This can involve the creation, deletion, or modification of forms or checklists within the system.

Tuition reimbursement
Remuneration made to employees for tuition expenses.

Type of training request
The type of training request indicated whether the employee was required to attend the training or whether he or she asked to attend the training.

Unauthorized absence
Absences that are generally not considered paid time away from regularly scheduled work.

Underlined text
In browser applications, text that provides a link to another screen or page.

Unemployment insurance tax
A tax required by some US states to be funded by employee-paid contributions to pay all or part of the cost of unemployment insurance coverage. On the Payroll Solution, state unemployment insurance tax records are established as Type 2 taxes.

Unpaid absence
Employee absence that will not be paid by the organization. A time entry will not be created for this absence.

Upward appraisal
Appraisal that calls for evaluations by those who work under the direction of the employee being evaluated.

URL
Acronym for uniform resource locator. A standard way of specifying the location of an object, typically a web page, on the Internet. URLs are the form of address used on the World-Wide Web. They are used in HTML documents to specify the target of a hyperlink which is often another HTML document (possibly stored on another computer).

User class
Cognos Impromptu assigns security according to configured user profiles. These security profiles are configured by your Impromptu administrator.

User code
A set of characters (up to eighteen alphanumeric characters) that, along with the password, identify the user to the system as a valid user user when they log on.

The user code is case-sensitive (upper case, lower case) and must be entered using the correct case.

User defined password
A set of alphanumeric characters created by users that allows them to view and update information in a software application.

User ID
A set of characters that identify you to the software application. The application contains a list of authorized users by user ID. When you attempt to log on, the system checks the list of authorized users to determine whether you have authority to use the application.

User profile
Used for security purposes to determine what you can and cannot do while you are using the system, and which parts of the system you can access. A user profile is created and maintained for you by a Security Officer. Each user of the system will have a user profile.

Vacancy
An open position that needs to be filled, or an unfilled complement position

Vacation days
The time off that an employee is entitled to as a result of an employment contract or due to length of service.

Validation
The process where the Time Entry Validation program identifies and assigns an activity to a clock transaction (ring) when performing the validation function.

Variant forms
Method of displaying country-specific variation of Cyborg-delivered forms.

Waive
The act of choosing not to enroll in an optional benefits plan.

Warning time
Used to set a period of time after which an employee will appear on the exception report for a particular activity. A Warning condition will allow the creation of a time entry. A Reject condition will not. This is part of the Time and Attendance Administration.

Welfare benefit plan group
First level of the logical organization of welfare benefit plans in eCyborg Interactive Workforce.

Welfare benefit plan subgroup
Second level of the logical organization of welfare benefit plans in eCyborg Interactive Workforce.

Welfare plan
Any insurance or other benefit plan that provides immediate benefits to a participant—for example, medical insurance.

What-if mode
Method for processing a report that allows viewing of information without updating of employee records.

Window
A standard Windows object that displays information. A window is a separately controllable area of the form that typically has a rectangular border.

Wizard
A form if user assistance that automates a task through a dialog with the user.

Work area
The Solution Series screen. It includes the menus, toolbars, Navigator, forms area, message area, and status bar.

Work instructions
Specific tasks to be completed during the migration of data and files from test to production.

Work restrictions
Restrictions that prevent an employee from participating in specific workplace functions.

Worker's compensation
Legislation in the US that provides compensation to employees who suffer work-related injuries.

Workforce competency
The capacity of the overall workforce to perform required functions and sets of activities.

XHTML
Extensible HyperText Markup Language, used by the help pages for eCyborg.

Year End Master File
P20OUT file from the final payroll run of the year

Introduction

In This Section

CHAPTER 1

About This Manual

Welcome

This manual has been designed to guide you through the use of the Requisition Administration component of the HR application. It covers setting up and using Requisition Administration.

This manual has been designed as a reference document. It is also used in classroom training. You will find sufficient detail for self-study, before and after classroom training.

Who should use this manual?

This manual is designed to be used by a number of different users. The following users will find it most useful:

- Data managers
  Data managers will find it helpful to read the first four sections of this manual for an overview of Requisition Administration and the steps necessary to implement it.
- End users
  End users and data-entry personnel will find detailed directions throughout the manual outlining the specific steps necessary to carry out various tasks.

Prerequisite skills

Users of this manual should possess a variety of technical skills, depending on the roles they will play. At a minimum, all users should have:

- Microsoft Windows
- The Solution Series

Additional documentation and training courses

The following documentation and training courses are available from Cyborg Systems to help you understand Using Requisition Administration.

Documentation

Document	Description
eCyborg: Using the Web Client or Using The Solution Series: Administrative Solutions	This prerequisite documentation covers the introductory concepts and tasks related to Cyborg's administration solutions. It describes how to navigate through the software and explains important concepts and functionality of the system.

If you do not have a copy of this document, you can obtain one from Customer Support.

Training Courses

Related Course	Description
eCyborg: Using the Web Client or Using The Solution Series: Administrative Solutions	This prerequisite course covers the introductory concepts and tasks related to your specific implementation of Cyborg's administration solutions.

If you wish to attend any of these courses, contact Customer Support or visit our website www.Cyborg.com for details of course dates and availability.

How this manual is organized

This manual has been organized to make it as easy to use as possible. The chapters are grouped accordingly into the following parts:

Part	Chapters	Description
1: Introducing Requisition Administration	1-3	These chapters provide an overview of Requisition Administration and explain its navigational features
2: Setting Up Requisition Administration	4	This chapter explains the key concepts and detailed directions required to implement Requisition Administration.
3: Creating and Maintaining Requisitions and Requisition Candidates	5-7	These chapters explain the key concepts and detailed directions required to use Requisition Administration
4: Appendices	A-B	Appendix A provides a quick reference to Requisition Administration reports. Appendix B provides feedback on the practices and reviews at the end of each chapter.

Following are descriptions of the chapters within the parts:

Part 1: Introduction

The chapters in Part 1 describe this manual and provide an overview of Using Requisition Administration.

Read this chapter		To learn about
1	Introduction	How the manual is organized, where to find what you are looking for, who should use the manual, and where to get help.
2	Overview of Requisition Administration	A high-level overview of Requisition Administration, including an introduction to its important features.
3	Understanding Requisitions and Requisition Candidates	The two basic entities used by Requisition Administration.

Part 2: Setting Up Requisition Administration

The chapter in Part 2 explains the implementation tasks that must be completed before you can begin using Requisition Administration.

Read this chapter		To learn about
4	Implementing Requisition Administration	The key concepts and tasks necessary to implement Requisition Administration.

Part 3: Creating and Maintaining Requisitions and Requisition Candidates

The chapters in Part 3 explain Requisitions and Requisition Candidates.

Read this chapter		To learn about
5	Creating and Maintaining Requisitions	How to create and maintain Requisitions and how to search for Requisitions.
6	Creating and Maintaining Requisition Candidates	How to create and maintain Requisition Candidates and how to search for a Requisition's associated Requisition Candidates.
7	Changed Procedures when using Requisition Administration	How existing procedures and processes change when using Requisition Administration.

Part 4: Appendices

The appendices in Part 4 contain quick reference information and practice and review answers:

Use this appendix		To learn about
A	Report Quick Reference	A quick reference to Requisition Administration reports.
B	Practice and Review Answers	Detailed answers to the practices and reviews at the end of the instructional chapters.

How to use this manual

This manual has been designed as a reference manual as well as a training manual. It has been written to facilitate self-study before and after classroom training.

Table of contents

The manual has been carefully designed for ease of use. All our manuals are written to be task oriented to help you complete your business tasks using our software.

The table of contents lists all the tasks and their respective chapters.

Glossary of Terms

A Glossary of Terms section is provided to explain terms used in the documentation.

Index

An index is provided to help you locate specific information.

This document was designed to reduce your need for an index. You should find the table of contents sufficient.

Introductory chapters

It is important that you read the introductory chapters first. Chapter 1 ensures you get the most out of the information we have provided. Chapter 2 provides a high level overview. Read it to get the big picture before reading the detailed instructional chapters.

Instructional chapters

All chapters, other than the introductory chapters, are instructional chapters. They contain detailed instructions on how to complete the business tasks. Each instructional chapter has the following distinct sections:

Key Concepts

Always read the conceptual information first. This will help you understand why you have to perform certain tasks. It will also help you make decisions about your options and help you understand the importance of performing certain tasks. Exercises to help you apply the concept to a business task are included at the end of most concepts.

Apply the Concept

To be certain that you have understood the key concepts in a chapter, complete the Apply the Concept exercises provided. The answers to these exercises can be found in the appendices.

Detailed Directions

When you are ready to perform a task, review the Detailed Directions, which provide guidance, as well as the specific steps, to complete a task.

Guided Practice

The Guided Practice within the Detailed Directions offers you an opportunity to practice a task with step-by-step instructions. It takes you through the various steps, providing detailed examples so you can gain a comfort level with the task. Guided Practice is easy to locate.

For practice, type 'ABC Solutions'.

Note: *To successfully follow the Guided Practice, you must have completed all the previous Guided Practice exercises in the manual. The Guided Practice uses the test data installed with our software. For the Guided Practice exercises to work, this test data must not have been altered.*

All users who complete the Guided Practice must either have their own copies of the test data or have the test data restored for them.

Extended Practice

To be certain that you have understood the tasks in a chapter, complete the Extended Practice provided. The Extended Practice gives you the opportunity to complete one or more tasks without step-by-step guidance. The answers to these exercises can be found in the appendices.

Note: *To be able to complete the Extended Practice exercises in the manual, you must have completed all the previous exercises. You must also be using the test data delivered with the software. This test data must not have been altered.*

Review of Questions Answered

To be certain that you have understood all of the information in a chapter, complete the review questions provided at the end of a chapter. The answers to these questions can be found in the appendices.

Conventions used in this manual

The underlying page layout and design of this manual are meant to be as intuitive as possible for you. Our intent is to make it easy to navigate through the manual and concentrate on learning and doing.

Cross-references

Wherever appropriate, we provide cross-references to help you find additional information or further discussion of a specific topic.

☞ *Refer to a cross-reference to find more detail or more discussion on a given topic.*

Notes

Whenever there is important information you should be aware of, we provide a note.

Note: *You will find tips or quick techniques covered in notes.*

How to get additional help

If you can not find the answers to your questions in this manual, contact Customer Support, who will be able to answer specific questions and give you general advice on training.

Please visit our web site ***www.Cyborg.com*** (see "Cyborg Home - http://www.Cyborg.com") for the latest schedule of available courses and course descriptions.

Suggestions and feedback

We value your feedback on our performance support materials. Please forward any comments on this manual to Customer Support.

CHAPTER 2

Overview of Requisition Administration

In This Chapter

Overview

This section provides an overview of Requisition Administration and the facilities it offers.

What is Requisition Administration?

Requisition Administration is a flexible and easy-to-use system for tracking new hires and transfers that may take place to fill vacancies.

Requisition Administration allows your organization to fill vacancies with candidates who are existing employees, applicants, or walk-ins. If you wish to record only the name and position applied for information for an applicant, you can do so in Requisition Administration without having to use Applicant Administration forms.

The system keeps a record of Requisitions (formal requests to fill vacancies). It then tracks the progress of Requisitions, alerting you when a request has been fulfilled and preventing further candidates from being hired or transferred.

Why use Requisition Administration?

Requisition Administration should be used if your organization needs to maintain greater control over hiring and transferring to fill vacancies. The system enables you to do the following:

- Ensure no hires or transfers take place without a formal request.
- Ensure no hires or transfers take place in excess of available vacancies.

Requisition Administration features

These are the main features of Requisition Administration:

- Customizable level of control
- Flexibility in how vacancies are represented
- As-of dates
- Integration with other Solution Series processes
- Dynamic online inquiries
- Maintenance of historical data
- Integrated system security

Easy navigation

Like all other components of The Solution Series software, navigating Requisition Administration forms is quick and easy.

Customizable level of control

You can choose whether you want Requisition Administration to maintain a flexible or a strict level of control. For example, you may want to be able to allow a hire to take place even though it will exceed the vacancy limit set on the corresponding Requisition. Alternatively, you may want to ensure that vacancy limits are never exceeded.

When you implement Requisition Administration you choose the level of control you want by selecting the type of validation messages that will be displayed. You can choose either Warnings (which can be overridden) or Rejects (which can not be overridden).

Flexibility in how vacancies are represented

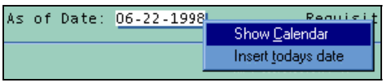
Requisition Administration can measure vacancies in four different ways—by Headcount, Full Time Equivalent, Hours, or Salary. You can use a different unit of measure for each Requisition, enabling you to match your recruiting requirements. However, once a Requisition Unit is selected, it must be used throughout the life cycle of the Requisition.

As of dates

All Requisition Administration view forms have an As of Date entry at the top of the form. When the form is displayed, the As of Date is the current date. This means that the data viewed on this form is valid as of this date.

You can change the As of Date to view data as of another date. Past dates can be entered in this text box to view data as of an earlier point in time.

To change the As of Date, position the pointer in the As of Date text box and right-click. The following shortcut menu will appear:



Select Show Calendar to display the Calendar dialog box, from which you can select the year, month, and day you want to enter in the text box.

To return to the current date at any time, simply type the date in the text box or select Insert today's date from the shortcut menu.

Integration with other Solution Series processes

The following processes that handle hiring employees and transferring applicants are undertaken on standard Solution Series forms:

- Hiring new employees—Employee Information form (EF-SCR) or the Set Up A New Employee form (NH-SCR)
- Transferring applicants—Applicant Transfer form (ET-SCR)
- Assigning employees to new Positions—Incumbency - Basic Details form (M40SCR)

Requisition Administration has been carefully integrated with these processes, ensuring Requisition Administration validation takes place and relevant Requisition Administration records are updated whenever one of these processes is undertaken.

In addition, if you are using the Applicant Administration component of The Solution Series software, the process of entering the details of the job or position for which an applicant is applying on the Job Or Position Applied For form (003SCR) automatically creates a corresponding candidate record in Requisition Administration.

To achieve this level of integration, some Solution Series forms have been modified to allow the entry of relevant Requisition Administration information directly on them or the selection of Requisition Administration records from additional form panels.

Dynamic online inquiries

The system's dynamic online inquiry facility enables you to determine the following:

- Which Requisitions are open
- Which candidates filled a Requisition
- Which candidates applied against a Requisition

If Position Administration is in use, you can also view which Requisitions are open for a particular Position. You have the ability to choose, at the Position level, which positions should be included in Requisition Administration.

Maintenance of historical data

Requisition Administration maintains a record of historical data for analysis purposes. You can view snapshots of the data as of a particular date.

This enables you to analyze a particular recruitment cycle and identify whether efficiency improvements can be made. For example, you can check how long the recruitment cycle took and whether there were any holdups in the process.

Integrated system security

As with all Solution Series components, all features of our integrated system security can be applied to the Requisition Administration component.

Review of Questions Answered

1. Define Requisition Administration.

2. Match the Requisition Administration feature to the corresponding description:

Feature	Answers	Description
1. Customizable level of control 2. Flexibility in how vacancies are represented 3. Integration with other Solution Series processes 4. Maintenance of historical data 5. Integrated system security		a) Integration with the hiring and transfer processes to update relevant Requisition Administration records. b) Controlled by selecting the type of validation message, Warning or Reject. c) Vacancies are measured in four different ways (Headcount, FTE, Hours, Salary). d) The system security feature. e) History is maintained to perform data analysis as of a particular date.

3. Identify and explain how Human Resources Administration interacts with Requisition Administration.

CHAPTER 3

Understanding Requisitions and Requisition Candidates

In This Chapter

Introduction

Requisition Administration uses two entities—Requisitions and Requisition Candidates—to track new hires, transfers, and any Position assignments that may take place to fill vacancies. This section explains what these two entities are and how they relate to each other.

☞ *See* **Creating and Maintaining Requisitions** *(on page 45) to learn how to create and maintain Requisitions.*

☞ *See* **Creating and Maintaining Requisition Candidates** *(on page 81) to learn how to create and maintain Requisition candidates.*

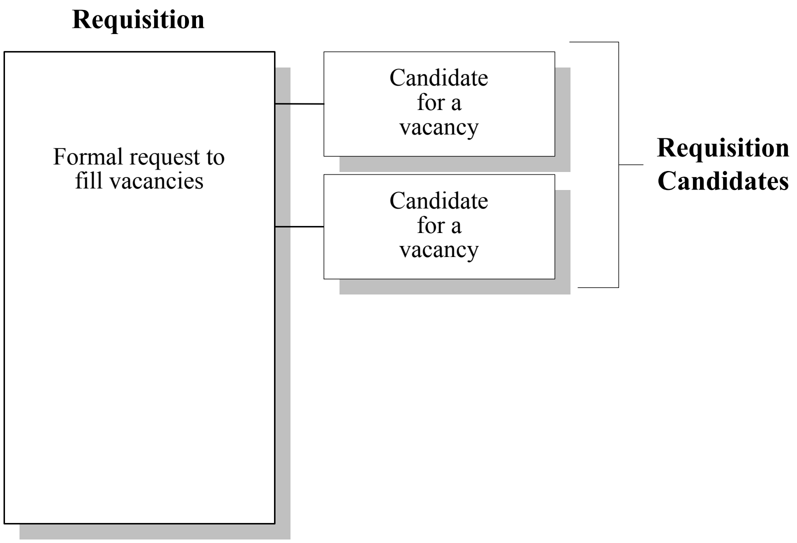
Questions answered

The following questions are answered in this section:

1. What are Requisitions and Requisition Candidates and how do they relate to each other?
2. How are Requisition vacancies measured?
3. What are the Requisition's Remaining and Threshold Amounts?

Requisitions and Requisition Candidates

A Requisition is a formal request to fill vacancies. Each candidate for a vacancy on a Requisition is assigned to the Requisition as a Requisition Candidate.



Apply the Concept
Explain how Requisitions and Requisition Candidates could relate to each other in your organization.

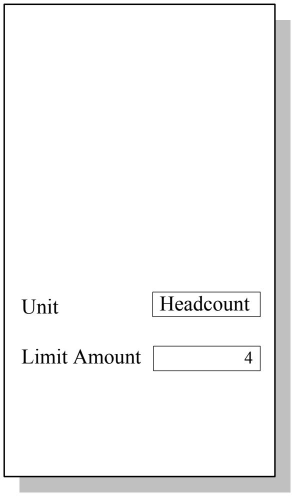
Requisition Unit and Limit Amount

Each Requisition can measure vacancies in one of the following ways:

- By FTE (Full Time Equivalent)
- By Headcount
- By Hours
- By Salary

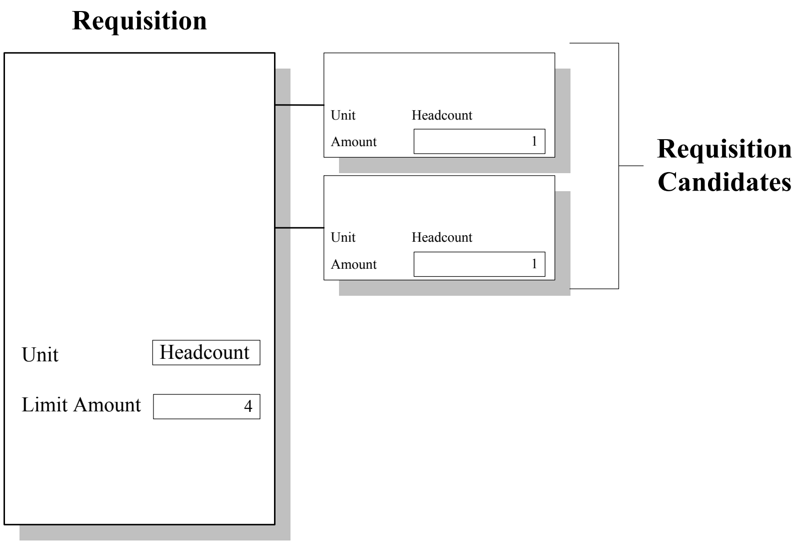
Vacancies are represented on a Requisition by selecting one of these Units and entering a Limit Amount. For example, a formal request to fill four full-time vacancies could be represented by selecting a Unit of Headcount and entering a Limit Amount of 4.

Requisition



When a Requisition Candidate is assigned to a Requisition, the candidate is given a value in terms of the Requisition's Unit of measure. In the following example, each Requisition Candidate assigned to the Requisition has a value of 1 Headcount Unit.

The same Unit must be used throughout the life of the Requisition and for each Requisition Candidate. Although different Units can be used for different Requisitions, you may find it helpful to use one Unit consistently or to have clear guidelines as to which Units are used for which types of Requisitions.



Apply the Concept
The value of a Requisition expressed as an FTE, Hours, Salary, or Headcount is called the:

Apply the Concept
What is the total value of a Requisition called?

Apply the Concept
What must be the same throughout the life of the Requisition and for Requisition Candidates?

Requisition and Requisition Candidate status options

Each Requisition has one of the following statuses:

- Open-Not Authorized
- Open-Authorized
- Pending Closure
- Closed

Each Requisition Candidate also has a status, which can be one of the following:

- Candidate—An applicant or existing employee could apply against a Requisition and become a candidate
- Selected/Not Empl'd—Used for a candidate who has been offered a Position but has not yet started work
- Selected/Employed—Once an Employee Information form (EF-SCR), New Hire form (01-SCR), or Incumbency—Basic Details form (M40SCR) is processed, the candidate's status becomes Selected/Employed
- Not Selected—Used for a candidate not selected to fill the Requisition
- Withdrawn—Used for a candidate who removes him or herself from consideration

A Requisition's status and the status of each of its associated Requisition Candidates will change when certain processes are carried out. For example, a Requisition's status changes to Closed when the vacancies it represents have been filled. No further Requisition Candidates can be assigned to a Requisition that is Closed.

The following is a guideline to Requisition and Requisition Candidate statuses and how the two work together.

Requisition Status:

Current Status	**Can Change To This Status**	**Reason**
No Status	Open-Not Authorized	To set up New Requisition
Open-Not Authorized	Open-Authorized	To Select Candidates
	Closed (manual)*	Recruitment Freeze
Open-Authorized	Pending Closure	Enough Selected Candidates
	Closed (manual)*	Recruitment Freeze
Pending Closure	Closed	Recruitment Freeze
	Closed (manual)*	Recruitment Freeze

*This can only be done if there are no Selected/Not Empl'd candidates. If there are any Selected/Not Empl'd candidates and you must still close the requisition, these candidates must first be changed to Selected/Employed or Withdrawn before the Requisition can be closed manually.

Candidate Status:

If Requisition is Open-Not Authorized	
Current Status	**New Status**
None	Candidate
Candidate	Withdrawn
Withdrawn	Candidate

If Requisition is Open-Authorized	
Current Status	**New Status**
None	Candidate
Candidate	Not Selected
	Selected/Not Empl'd
	Withdrawn
Not Selected	Candidate
Selected/Not Emply'd	Not Selected
	Withdrawn
	Selected/Employed
Withdrawn	Candidate

If Requisition is Pending Closure	
Current Status	**New Status**
None	Candidate
Candidate	Withdrawn
	Not Selected
Selected/Not Emply'd	Withdrawn
	Not Selected

If Requisition is Closed
Only Possible Statuses
Selected/Employed
Not Selected
Withdrawn

☞ *See* **Creating and Maintaining Requisitions** *(on page 45) for more detail about circumstances in which a Requisition's status can change.*

☞ *See* **Creating and Maintaining Requisition Candidates** *(on page 81) for more detail about the circumstances in which a Requisition Candidate's status can change.*

Requisition's Remaining Amount

As each candidate is selected, the status of the corresponding Requisition Candidate record is manually changed to Selected/Not Empl'd. When this happens, the system calculates how many vacancy Units are left on the Requisition, and displays the figure as the Requisition's Remaining Amount. As vacancies are filled, the Remaining Amount decrements until, finally, there are no more Units available and no further candidates can be Selected/Not Empl'd.

Requisition's Threshold Amount

Regardless of the unit you have selected to measure the vacancies on a Requisition, you can set a Threshold Amount for the Requisition in addition to a Limit Amount. By doing this, you can prevent a Requisition from remaining open when the vacancies have been filled before reaching the Requisition's Limit Amount. This could happen, for example, when a Requisition's Remaining Amount is less than the minimum salary that would be offered for a vacancy.

The Threshold Amount should, therefore, be the unit value (less than the Limit Amount) that must be met in order for the requisition to be considered filled. The Total Amount needs to be equal to, or exceed, the Threshold Amount to close the Requisition automatically. The Requisition's status changes to Pending Closure or Closed once its Total Amount is equal to or greater than its Threshold Amount.

For example, the salary Threshold Amount could be 45,000 with a 55,000 Limit Amount for a requisition. Filling the requisition for 46,000 would exceed the Threshold Amount, causing a Requisition Status change. Instead of remaining open, the Requisition status would then change to reflect that the Requisition was closed because it met the condition of the Threshold Amount.

Apply the Concept
How is the Threshold Amount feature used?

Time to Fill

Once a Requisition is Closed, the system calculates the elapsed time from the date the Requisition was created until it was filled. This figure is expressed in years, months, and days as a display on the Requisition - Basic Details form (R10SCR).

Review of Questions Answered

1. What are Requisitions and Requisition Candidates and how do they relate to each other?

2. How are Requisition vacancies measured?

3. What are a Requisition's Remaining and Threshold Amounts?

PART 2

Setting Up Requisition Administration

In This Section

CHAPTER 4

Implementing Requisition Administration

In This Chapter

Introduction

Before using the features of Requisition Administration, it is necessary to complete some basic implementation tasks and customize the options to meet the needs of your organization. This section explains the implementation tasks that must be carried out before you can begin using Requisition Administration.

Tasks

The following tasks are covered in this section

- Setting Requisition Administration options.
- Editing Requisition Administration option lists.

Note: *The second task is optional. It needs to be completed only if you want to add more options.*

Questions answered

The following questions are answered in this section:

1. What Requisition Administration considerations should you take into account when deciding on an implementation strategy?
2. Which Requisition Administration option lists contain options that should never be changed?
3. What extra security might be needed for Requisition Administration?

Requisition Administration setup options

Requisition Administration is set up on the System Options form (TG-SCR). The Req Admin list box on this form enables you to select whether or not Requisition Administration is in use, and, if it is in use, what type of validation messages will be displayed.

Before setting up Requisition Administration, you need to decide what your implementation strategy will be. You must consider the following:

- Which type of validation messages you want.
- How shared settings affect the way you implement Requisition Administration.

These concepts are described in more detail below.

Validation messages

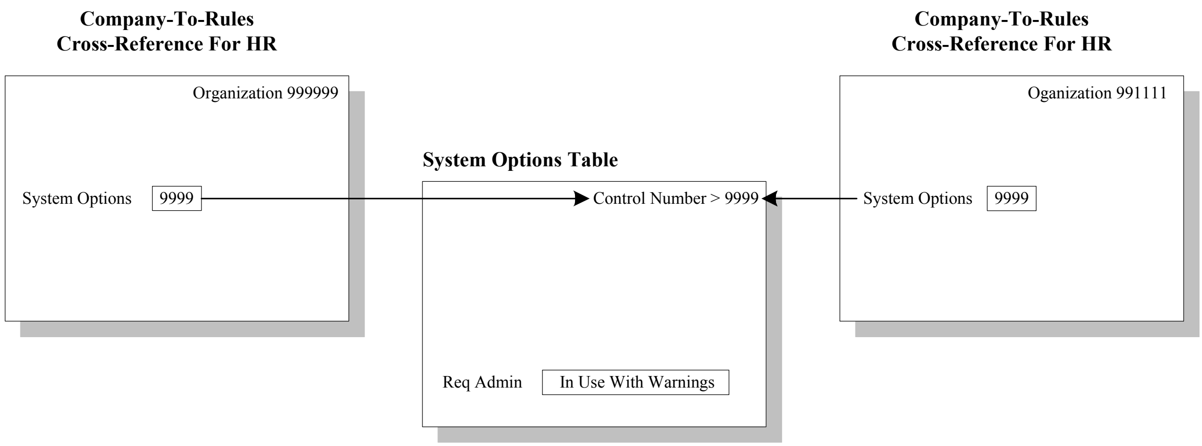
When processing a new hire, transferring an applicant from the Applicant Administration system to a live organization, or assigning an employee to a new position, Requisition Administration validates whether the vacancy limit on the corresponding Requisition will be exceeded. If the vacancy limit will be exceeded, a Warning or a Reject message is displayed.

- Warning messages—Can be overridden, so you can allow a hire to take place even if it will exceed the Requisition's vacancy limit.
- Reject messages—Cannot be overridden, so a Requisition's vacancy limit can never be exceeded.

The type of validation message the system displays is governed by the option selected on the System Options form (TG-SCR). When you implement Requisition Administration, you must decide which type of message is to be displayed and select the option you want on this form.

Shared settings

Organizations that share the same Control Number on the Organization-To-Rules Cross-Reference For HR form (AX-SCR) will share the same settings. For example:



In the example above the Control Number 9999 identifies a System Options table record on which the Requisition Administration validation option has been set to 'In Use With Warnings'. Two organizations are linked to this table record by using the Control Number 9999 on the Company-To-Rules Cross-Reference For HR form (AX-SCR). Both organizations therefore share the same Requisition Administration setting.

To implement Requisition Administration for a group of organizations that are linked in this way, you need to access the System Options form (TG-SCR) for only one organization in the group. However, each organization must have Organization-To-Rules Cross-Reference For HR form (AX-SCR) established that references the System Options form (TG-SCR) including Applicant Administration.

See also:

- Setting Requisition Administration options ***(see "Setting Requisition Tracking System options" on page 37)***

For detailed directions on setting Requisition Administration options

Apply the Concept
Consider your current requisition process. Describe the tasks and decisions your organization would make to implement Requisition Administration.

Apply the Concept

Multiple choice. Circle the appropriate choice.

a) Requisition Administration validates whether the vacancy limit on a corresponding requisition will be exceeded for:

- i) processing new hires
- ii) assigning an employee to a new Position
- iii) transferring an applicant to a live organization
- iv) all of the above
- v) i & ii only

b) In shared settings

- i) you will need to access the System Options form (TG-SCR) for each organization in the group
- ii) all organizations share the same Control Number
- iii) all of the above
- iv) none of the above

Option list editing options

Five sample option lists are delivered with Requisition Administration:

- Requisition Status (RT01)
- Approved By (RT02)
- Reason for Closure (RT03)
- Requisition Unit (RT04)
- Requisition Candidate Status (RT05)

You should review and, where necessary, edit these option lists to reflect your organization's requirements.

Option lists you can edit

You can edit the following option lists by adding your own options to reflect your organization's requirements:

Approved by (RT02)

For example, add the names or job titles of managers authorized to approve Requisitions.

Reason for closure---RT03

For example, add any additional reasons for closing a Requisition. Do not delete 'Filled', which is automatically displayed in the list box when the Requisition is filled.

Option lists that should not be changed or deleted

Do not change or delete any of the following option list options, as Requisition Administration needs them to function properly:

Requisition Status---RT01

Open—Not Authorized (A1)
Open—Authorized (A2)
Pending Closure (C1)
Closed (C2)

If your organization requires more detailed tracking of the stages a Requisition goes through, you can add additional option list options. However, these will have no effect on validation. Only the delivered options affect validation.

Requisition Unit---RT04

FTE (01)
Headcount (02)
Hours (03)
Salary (04)

If you do not want one or more of these Unit options to be used, you may delete them, but the values should not be changed. For example, an organization may never want to allow requisitions to be filled by Salary units.

Requisition Candidate Status---RT05

Selected/Not Empl'd (01)
Selected/Employed (02)
Candidate (03)
Not Selected (04)
Withdrawn (05)

If your organization requires more detailed tracking of the stages a Requisition goes through, you can add additional option list options. However, these will have no effect on validation. Only the delivered options affect validation.

See also:

- **Editing Requisition Administration option lists** ***(on page 38)***

For detailed directions on editing Requisition Administration option lists

Security considerations

As with other components of *The Solutions Series* software, it is important to consider whether additional security is needed to match your organization's internal procedures. For example, you may want to consider adding additional security to the Requisition—Basic Details form (R10SCR) so that only certain personnel are able to use it to create Requisitions. By doing this you can ensure Requisitions are not set up incorrectly or in error.

Contact your system's Security Officer if you wish to add additional security.

Apply the Concept
Identify the option lists that can be edited within Requisition Administration. Give an example of how each option list might be modified to meet your organization's requirements.

Apply the Concept
Identify the option lists whose values Cyborg recommends not be modified. Give an example of when you could delete a value in one of these option lists.

Apply the Concept
Multiple choice. Circle the appropriate choice.
All Requisition Administration delivered option lists

i) do not reflect an organization's requirements
ii) will always have an effect on validation
iii) can be added to, changed, or deleted
iv) all of the above

Detailed Directions

This section provides detailed directions on completing a business task.

Tasks

Setting Requisition Tracking System options

Complete this task for each organization that has a unique Control Number on the Organization-To-Rules Cross-Reference For HR form (AX-SCR).

Note: *If a group of organizations share the same Control Number, you need to complete this task for only one organization in the group for the Requisition Administration option to apply to all of them.*

1. Access the System Options form (TG-SCR)

Access this form by making the following selections from the Navigator:

Component: HR Setup
Process: Setup HR Rules
Task: System Options

For practice, access the System Options form (TG-SCR).

2. Select an option from the Req Admin list box

Select the option you want for the type of validation messages required. For validation messages that can be overridden, select 'In Use With Warnings'. For validation messages that cannot be overridden, select 'In Use With Rejects'.

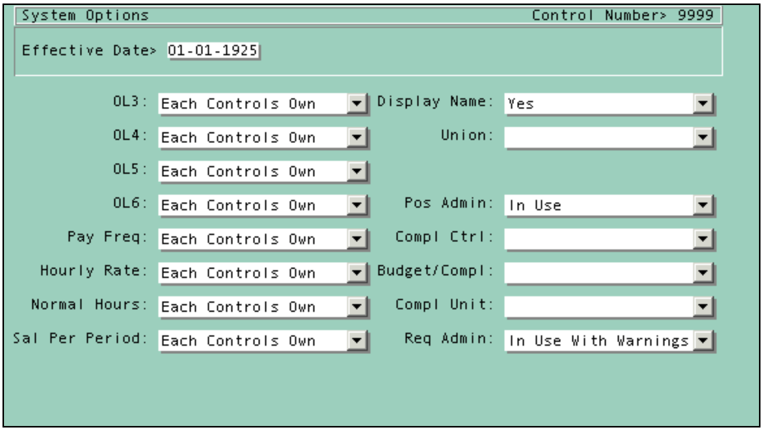
For practice, select 'In Use With Warnings'.

3. Click Save or press Enter

A 'Maintenance has been performed' message confirms that the option has been set up.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Note: *Once Requisition Administration is in use, no new Logical Employee Models can be created. To add new Logical Employee Models, the value in the Req Admin list box must first be changed to 'Not In Use'.*

See also:

- Requisition Administration setup options ***(on page 31)***

For more information on setup options used in Requisition Administration

Editing Requisition Administration option lists

To edit Requisition Administration option lists, follow these steps:

1. Determine the options and descriptions to be added

Review the option lists listed below and decide what options and descriptions you want to add:

Requisition Administration option lists	Option list identifier
Requisition Status	RT01
Approved By	RT02
Reason for Closure	RT03
Requisition Unit	RT04
Requisition Candidate Status	RT05

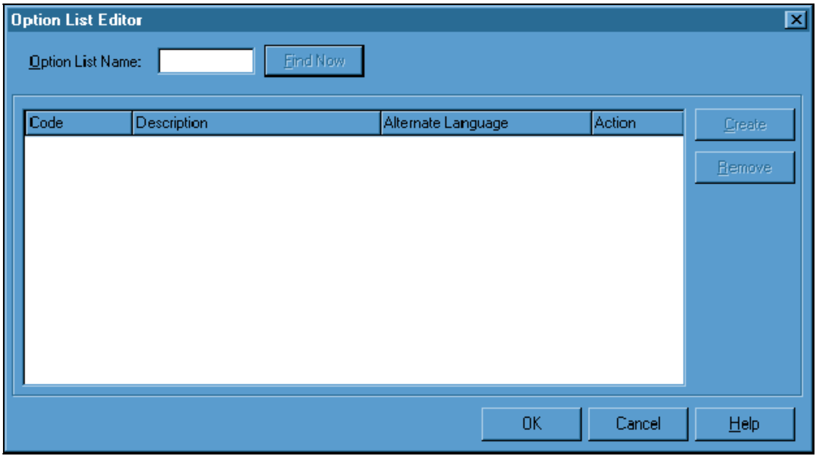
2. Access the Option List Editor (CSUPDT)

Access this dialog box by making the following selections from the Navigator:

Component: Development Tools
Process: Option Lists
Task: Edit

For practice, access the Option List Editor (CSUPDT).

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



3. Enter the Option List Name

Type the identifier of the option list you want to edit.

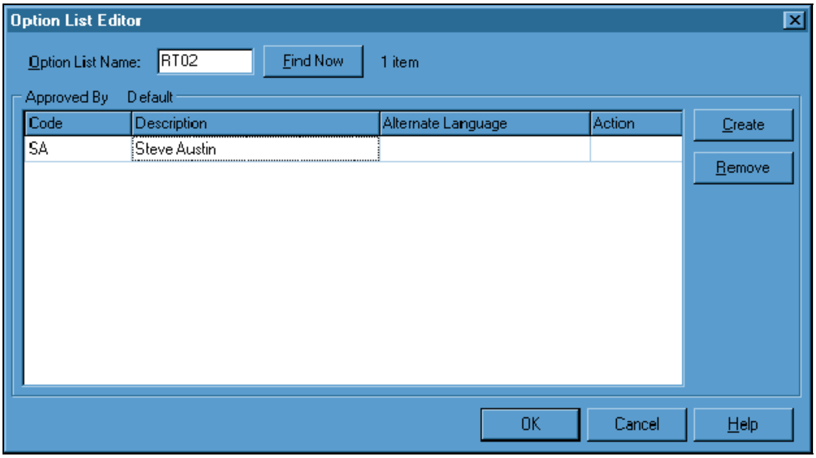
For practice, type 'RT02'.

4. Click Find Now or press Enter

The Option List Editor (CSUPDT) is displayed listing the options in the specified option list.

For practice, click Find Now or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:

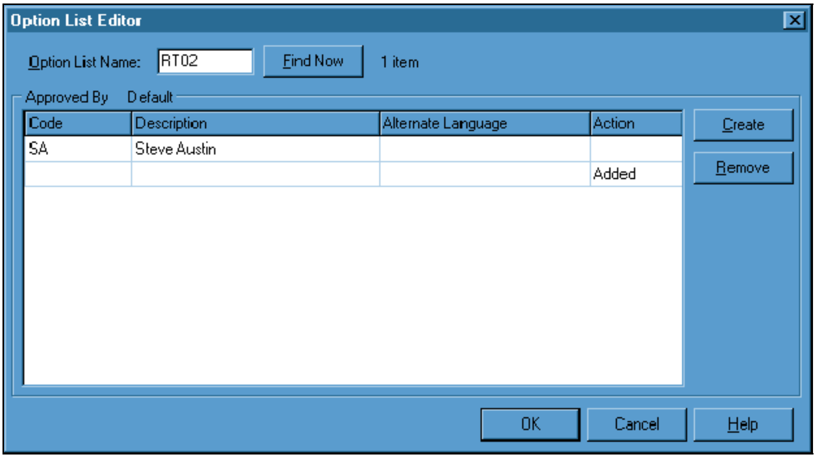


5. Click the Create button

An additional blank line is displayed in the Option List Editor (CSUPDT) dialog box.

For practice, click the Create button.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



6. Enter a Code

Type the new option value.

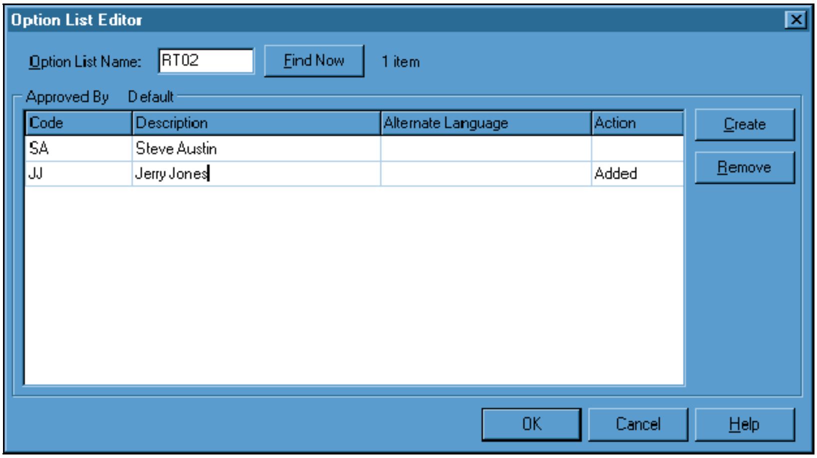
For practice, type 'JJ'.

7. Enter a Description

Type a Description of your new option, up to 20 characters in length.

For practice, type 'Jerry Jones'.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



8. Click OK or press Enter

Click OK or press Enter to process the entry.

For practice, click OK.

- Option list editing options ***(on page 34)***

To learn more about editing list options

Review of Questions Answered

1. What Requisition Administration considerations should you take into account when deciding on an implementation strategy?

2. Which Requisition Administration option lists contain options that should never be changed?

3. What extra security might be needed for Requisition Administration?

PART 3

Creating and Maintaining Requisitions and Requisition Candidates

In This Section

CHAPTER 5

Creating and Maintaining Requisitions

In This Chapter

Introduction

To use Requisition Administration, you must first set up the Requisitions that represent your vacancies. This section describes the key concepts and tasks associated with establishing Requisitions and subsequently viewing, modifying, or deleting them.

Tasks

The following tasks are covered in this section:

- Creating Requisitions
- Viewing Requisitions
- Modifying Requisitions
- Deleting modified Requisitions

Prerequisites

Before you can carry out any of the tasks described in this section, ensure that Requisition Administration implementation tasks have been completed.

☞ *Refer to* **Implementing Requisition Administration** *(on page 29) for more information about these tasks.*

Questions answered

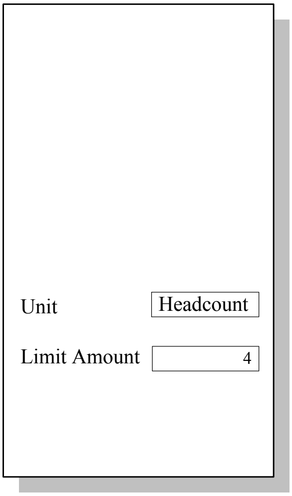
The following questions are answered in this section:

1. How and why can a Requisition status change?
2. What can you do to rectify a change made in error to a Requisition's basic details?
3. What kind of interaction is there between Requisition and Position Administration?

Single and multiple vacancies

A Requisition can represent one or more vacancies. You specify the number of vacancies by selecting a Requisition unit and entering a Limit Amount. For example, a formal request to fill four full-time vacancies could be represented by selecting a unit of Headcount and entering a Limit Amount of 4.

Requisition



The unit of measure and the Limit Amount cannot be changed once the Requisition has Requisition Candidates assigned to it. If you need to add more vacancies, a new Requisition must be created.

See also:

- Requisition Unit and Limit Amount ***(on page 17)***

Apply the Concept

True or False. Explain any false answers.

a) A Requisition can represent one or more vacancies.

b) You can change the unit of measure and Limit Amount once a Requisition has a candidate assigned to it.

Requisition approval

You can record information about who has approved a Requisition by selecting an option from the Approved By list box. For example, you may have internal controls that require Requisitions to be approved by specific individuals (John Smith) or by anyone at a specific level (Senior Manager).

The options in the Approved By list box are populated by an option list. You can edit this option list at any time to add or delete the names of approvers.

☞ *See* **Implementing Requisition Administration** *(on page 29) for details about editing this option list.*

Apply the Concept
Consider your current Requisition approval process. How would you use Requisition Administration to support this process?

Recruitment campaigns

You can identify Requisitions that are part of a particular recruitment campaign by entering a three-digit alphanumeric Campaign ID for the Requisition on the Requisition - Basic Details form (R10SCR).

Apply the Concept
Describe how your organization might use the recruitment campaign feature.

Linking a Requisition with a Position---Position Administration users only

If you are using Position Administration along with Requisition Administration, you must link each Requisition with a Position so that you can search for all Requisitions associated with a specific Position.

Apply the Concept

True or False. If false, explain.

A Requisition can be linked to a Position at any time.

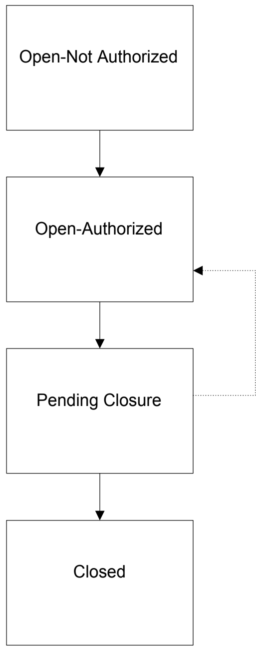
Requisition status - how and why it can change

Each Requisition has one of the following status options:

- Open - Not Authorized
- Open - Authorized
- Pending Closure
- Closed

The following chart represents the event sequence for Requisition status:

Requisition Status



A Requisition's status when it is first created must be Open - Not Authorized. This ensures that candidates are not selected for unauthorized Requisitions. This does not prevent you from interviewing candidates for a Requisition that has not yet been authorized.

A status of Pending Closure indicates that the Limit Amount for the Requisition has been fulfilled, but that some of the Requisition Candidates still have a status of Selected/Not Empl'd. The Requisition's status changes to Closed only when all the Requisition Candidates filling the vacancies it represents have a status of Selected/Employed and there are no other Selected/Not Empl'd candidates.

A Requisition's status can revert from Pending Closure back to Open - Authorized if a candidate who was Selected/Not Empl'd should withdraw.

A Requisition's status can not be changed to Closed if there are still Requisition Candidates with a status of Selected/Not Empl'd assigned to the Requisition.

You can change the status of a Requisition manually or it can be changed automatically as a result of other processes.

See also:

- Requisition and Requisition Candidate status options ***(on page 20)***
  To learn what the specific statuses are

Apply the Concept
True or False. Explain any false answers.
a) When first created, a Requisition's status must be Open - Not Authorized.

b) A Requisition's status can be changed to Closed if there are still Requisition Candidates assigned to the Requisition with a status of Selected/Not Empl'd.

What you can modify

If you change the Requisition status you will be prompted to also change either the Effective Date or the Key Separator for the Requisition. The original Effective Date of the first Requisition for this Requisition ID is stored and displayed on each succeeding Requisition occurrence.

You may change the Position list box only if the Requisition Status is Open - Not Authorized.

To effect a recruitment freeze, change the Requisition Status to Closed, thus preventing Candidates from being assigned against Requisitions. You can use the Close Reason list box to record the reason for the temporary closure of the Requisition, for example, Recruitment Freeze.

Changes may be made to the Approved By, Pos Available, Campaign ID, and Close Reason boxes as needed.

No changes are allowed to a Requisition whose Requisition Status is Closed.

If a change to a Requisition's basic details has been made in error, you will be able to delete that record only if no Requisition Candidates are associated with it. If Requisition Candidates are associated with this Requisition, then you must modify the existing record (if the error is within a non-key text box) or create a new record (if the error is within a key text box).

See also:

■ Modifying Requisitions ***(on page 74)***
To learn now to modify a Requisition by changing the basic details on an existing record

Using search criteria

After Requisitions have been created for vacancies, and you wish to view selected Requisitions, you may search by one, two, or all three of the following criteria:

- By Position
- By As of Date
- By Requisition Status

For example, you can view all Open - Authorized Requisitions for Accounts Payable Clerk as of November 1, 1996.

If you enter	The result is
As of Date only	A form display of all Requisitions and all statuses that relate to that date. If no date is entered, the current date is used.
Position and As of Date	A form display of only those Requisitions with a matching Position and As of Date.
Requisition Status and As of Date	A form display of only those Requisitions with a matching Requisition Status and As of Date.
Position, Requisition Status, and As of Date	Records that match the specified Position and As of Date are located first. Within those selected records, any records that match the Requisition Status are then selected for display.

After you enter your selection criteria and execute the form, the matching records display in list form in the body of the form. A button to the left of each matching Requisition allows you to navigate to the Requisition - Basic Details form (R10SCR) for the record selected.

If no matching Requisition records are found, you will see a 'Complete' message at the bottom of the form.

If more requisitions are found than can be displayed on the form, click the More button to continue viewing Requisition information.

Detailed Directions

This section provides detailed directions on completing a business task.

Tasks

Creating Requisitions

Note: *If Position Administration is in use, the Requisition - Basic Details form (R10SCR) used in this task will display a Position list box, where you will specify the position associated with this new requisition. If Position Administration is not in use, you do not need to specify a position on the Requisition - Basic Details form (R10SCR).*

1. Access the Requisition - Basic Details form (R10SCR)

Access this form by making the following selections from the Navigator:

Component: Requisition Administration
Process: Requisition Details
Task: Setup/Maintain a Requisition

For practice, access the Requisition - Basic Details form (R10SCR).

2. Click the Clear button on the toolbar

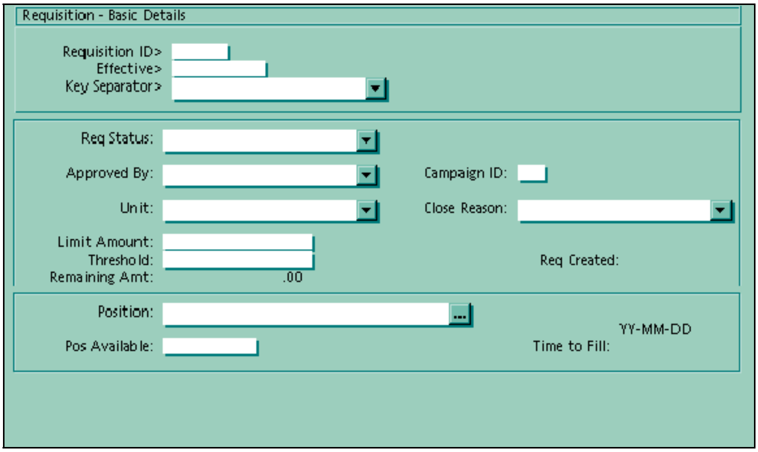
If the Requisition - Basic Details form (R10SCR) contains data, clear the form using the Clear button on the toolbar.

The Requisition - Basic Details form (R10SCR) is cleared and ready for the entry of a new Requisition.

Note: *Display text boxes are not cleared, and will be updated with the appropriate data when the form is processed.*

For practice, click the Clear button on the toolbar.

If you completed the Guided Practice, the resulting form should look similar to the example that follows (Position Administration was in use):



3. Enter the Requisition ID

Type a unique alphanumeric Requisition ID up to six characters in length.

For practice, type '000005'.

4. Enter the Effective (Date)

Type an entry into the Effective (Date) text box for the Requisition. Dates are entered in MM-DD-CCYY or CCYYMMDD format (US and Canada) or DD-MM-CCYY or CCYYDDMM format (elsewhere). As an alternative, position the pointer in the Effective text box and right click to display the calendar or insert today's date.

For practice, type '09-18-1996' (US and Canada) or '18-09-1996' (elsewhere).

5. Enter the Key Separator

Select 1st Occurrence from the Key Separator list box. This indicates the record occurrence for this date.

For practice, select '1st Occurrence'.

6. Select the Req Status

Select Open-Not Authorized from the Req Status list box.

Note: *Open-Not Authorized is the default status for a new Requisition.*

For practice, select 'Open-Not Authorized'.

7. Select the Unit

Select a unit of measure for the Requisition from the Unit list box.

For practice, select 'Headcount'.

8. Enter the Limit Amount

Enter a Limit Amount for the Requisition. The format in which you enter the amount depends on the unit of measure you are using:

Unit of measure	Format you must use
FTE or Hours	Enter an up-to-seven-digit figure with two decimal places. For example: 99,999.99
Headcount	Enter an up-to-six-digit figure. For example: 999,999
Salary	Enter an up-to-12-digit figure. For example: 999,999,999,999

For practice, type '3'.

9. Enter the Threshold limit (optional)

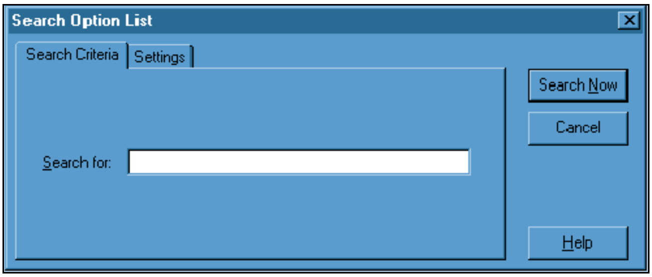
Type a Threshold limit for the Requisition. For example, if the total Requisition limit is a salary of 100,000, the threshold could be set at just below the Requisition Limit, for example, 95,000. This threshold prevents the following: (1) the Requisition from remaining open if the vacancy is filled and the Requisition limit has not yet been reached, and (2) another candidate from being selected.

For practice, leave this text box blank.

10. Select the Position (if Position Administration is in use)

Click the Position list box to display the Search Option List dialog box.

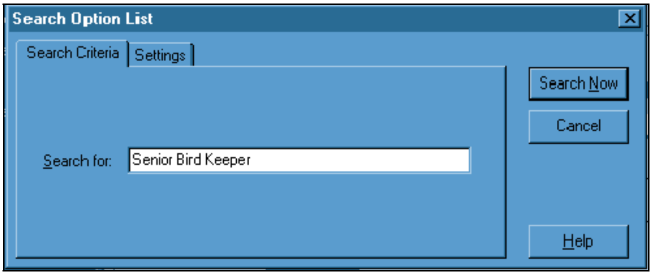
For practice, click the Position list box.



11. Enter the Search for criteria (Position Administration only)

Type the associated Position for which you want to search.

For practice, type 'Senior Bird Keeper'.

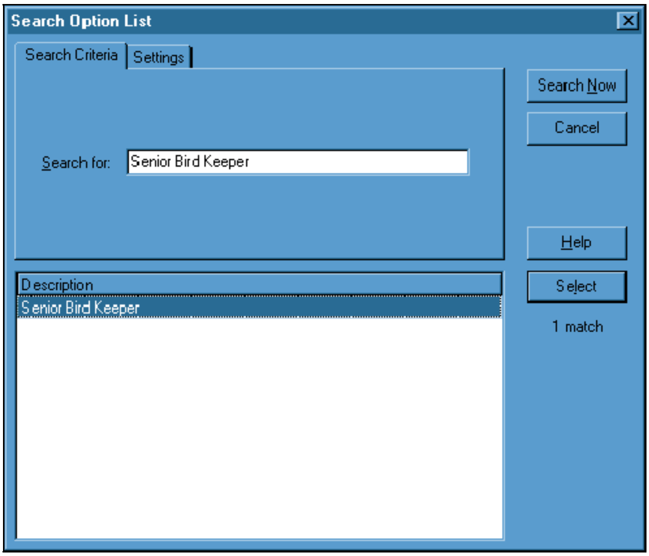


12. Click Search Now or press Enter (Position Administration only)

The results of the search are displayed.

Note: *If no matching Position records are found, you will see the message, '0 matches'.*

For practice, click Search Now or press Enter.



13. Click Select (Position Administration only)

The selected search option is now displayed in the Position list box on the Requisition - Basic Details form (R10SCR).

For practice, click Select.

14. Enter Pos Available (optional) (Position Administration only)

Type the date from which the Position is available. Dates are entered in MM-DD-CCYY or CCYYMMDD format (US and Canada) or DD-MM-CCYY or CCYYDDMM format (elsewhere). As an alternative, position the pointer in the Pos Available text box and right click to display the calendar or insert today's date.

For practice, type '09-20-1996' (US and Canada) or '20-09-1996' (elsewhere).

15. Enter the Campaign ID (optional)

Type an up-to-three-position recruitment Campaign ID.

For practice, leave this text box blank.

16. Click Save or press Enter

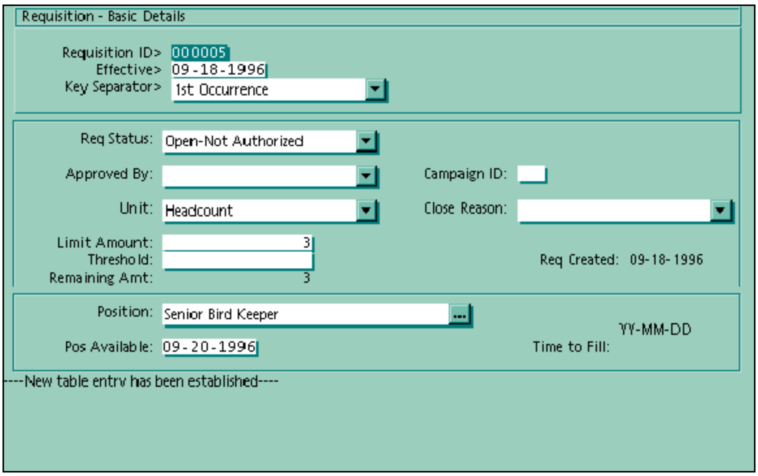
Because this is a new Requisition, the system validates whether the Requisition ID already exists. If it finds a matching Requisition ID and an error message is displayed, you need to repeat step 3, entering a different Requisition ID.

If no errors are found, the data are added, and a 'New table entry has been established' message is displayed at the bottom of the form.

Note: *The Remaining Amt text box displays the limit amount when the Requisition is first created.*

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows (Position Administration was in use):



Viewing Requisitions online

Use the Requisition - Inquiry By Status And Position form (R12SCR) to display a list of requisitions. You have several options:

- If Position Administration is in use, use the Position list box to view requisitions by position.
- Use the Requisition Status list box to view requisitions by status.
- Leave both list boxes blank to view all requisitions.

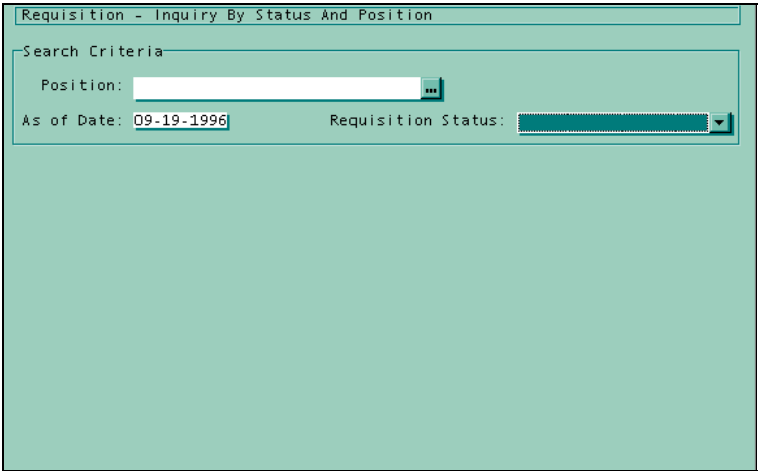
1. Access the Requisition - Inquiry By Status And Position form (R12SCR)

Access this form by making the following selections from the Navigator:

Component:	Requisition Administration
Process:	Requisition Details
Task:	View Requisitions

For practice, access the Requisition - Inquiry By Status And Position form (R12SCR).

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



2. Click the Position list box (if Position Administration is in use)

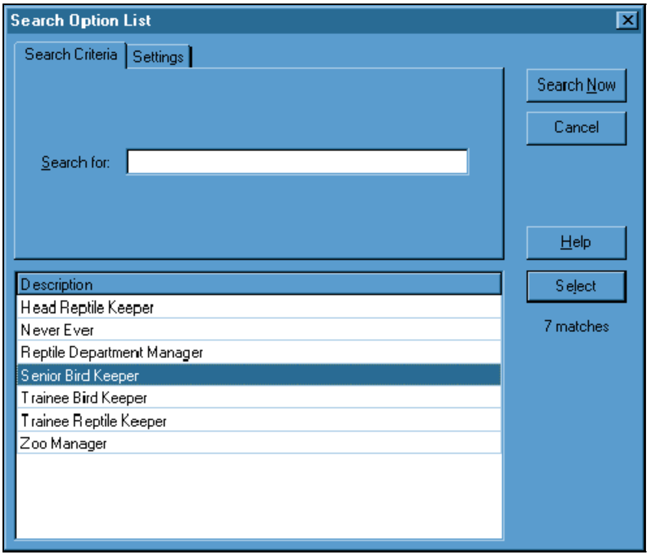
The Search Option List dialog box appears.

For practice, click the Position list box.

3. Click Search Now (Position Administration only)

The results of the search are displayed.

For practice, click Search Now.

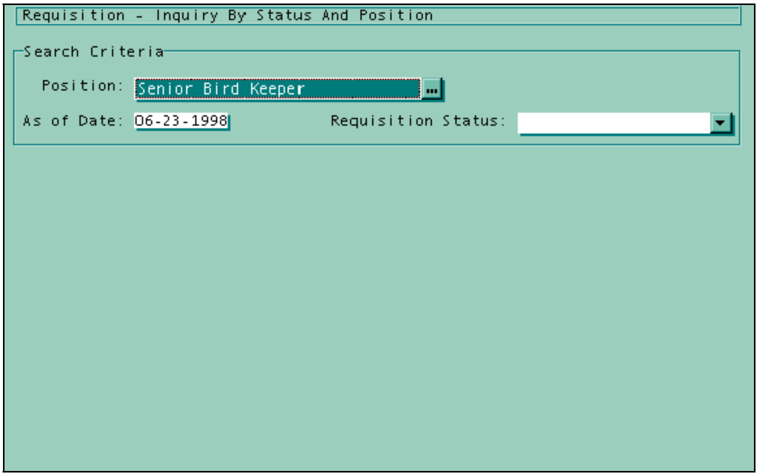


4. Highlight the Position name and click Select (Position Administration only)

You are returned to the Requisition - Inquiry by Status And Position form (R12SCR) with the Position name you selected displayed in the Position list box.

For practice, highlight Senior Bird Keeper and click Select.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



5. Enter As of Date

You can accept the default of today's date or enter another date. Dates are entered in MM-DD-CCYY or CCYYMMDD format (US and Canada) or DD-MM-CCYY or CCYYDDMM format (elsewhere).

For practice, accept the default of today's date.

6. Select Requisition Status

Select the status of the requisitions that you wish to view.

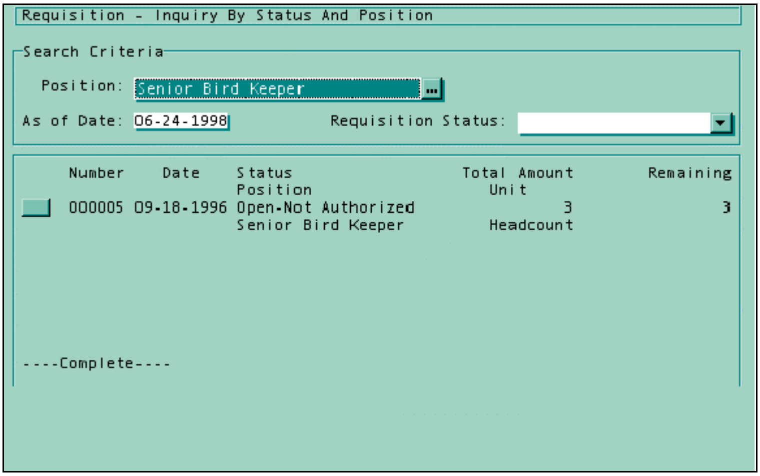
For practice, leave this list box blank.

7. Click Save or press Enter

Information about the new requisition you just created is listed at the bottom of the form.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows (Position Administration was in use):



Requisition - Inquiry By Status And Position

Search Criteria

Position: Senior Bird Keeper

As of Date: 06-24-1998 Requisition Status:

Number	Date	Status / Position	Total Amount / Unit	Remaining
000005	09-18-1996	Open-Not Authorized / Senior Bird Keeper	3 / Headcount	3

----Complete----

Viewing Requisitions on hard copy

As an alternative, if Position Administration is in use, schedule the Requisition Details by Position/Organization Unit report (M04RPT) to print a listing of all Requisitions.

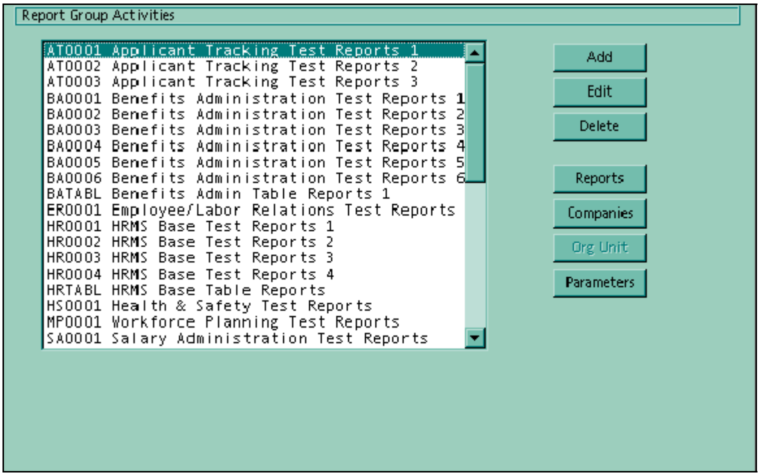
Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.

1. Access the Report Group Activities form (RGMSTR)

Access this form by making the following selections from the Navigator:

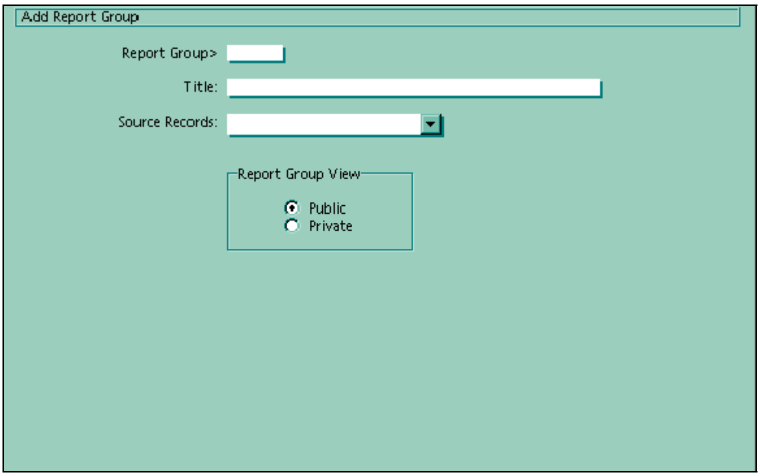
Component: Reporting
Process: Report Scheduling
Task: Schedule Report Groups

For practice, access the Report Group Activities form (RGMSTR).



2. **Click the Add command button**

The Add Report Group form is displayed.



3. **Name the Report Group you are adding**

You can enter up to six alphanumeric characters. You will use this report group identifier to initiate the report run or view reports in the report group online.

For practice, type 'RT0001'.

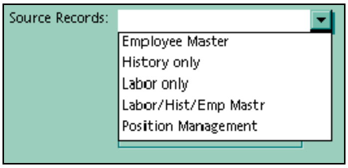
4. Enter the Title of the report group you are adding

You can enter up to 40 alphanumeric characters, so be descriptive. This report group title will be used to identify the report group whenever you are using the Report Group Activities form (RGMSTR).

For practice, type 'Requisition Administration'.

5. Select the type of information you want to process from the Source Records option list

This list box is used to identify the type of information this group of reports will provide.

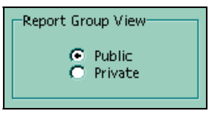


Note: *Requisition Administration and Position Administration reports are run separately from other types of reports because they process data based on a defined Organization Unit rather than Organization. If you want to set up a report group that contains Position Administration reports, you must identify the Source Records as 'Position Management'; otherwise, these reports will not be an option when you move to the next form.*

For practice, select 'Position Management'.

6. Select your Report Group View

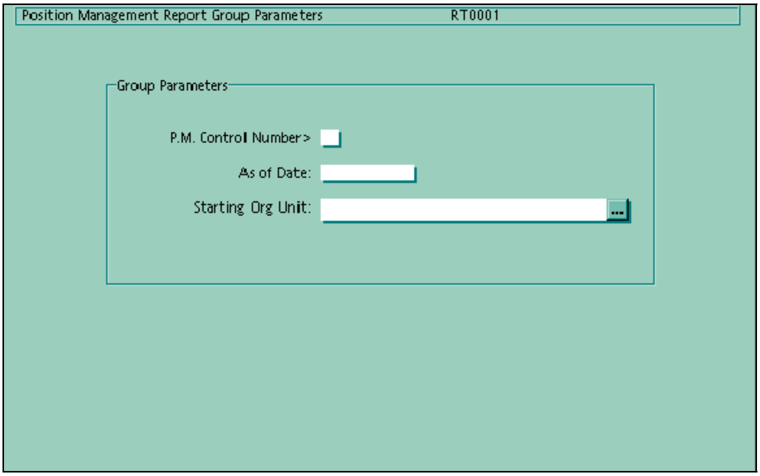
This option defaults to a 'Public' setting, which means the report group you are setting up may be shared with others using the system. Select the 'Private' option button if you do not want to share the new report group with anyone using a User Code different from your own.



For practice, keep the default, 'Public'.

7. Click Save or press Enter

The report group is added and the Position Administration Report Group Parameters form is displayed.



8. Enter P.M. Control Number

Enter the Position Administration Control Number as it is identified on the Organization-To-Rules Cross-Reference For HR form (AX-SCR).

For practice, type '99'.

9. Enter the As of Date (optional)

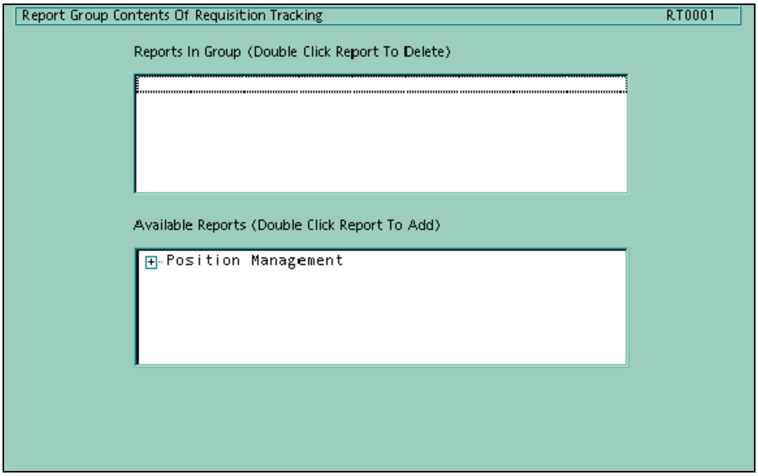
Enter the As of Date for which you want to start reporting. Dates are entered in MM-DD-CCYY or CCYYMMDD format (US and Canada) or DD-MM-CCYY or CCYYDDMM format (elsewhere). Leave this blank if you want to use the current date.

For practice, type '06-01-1996' (US and Canada) or '01-06-1996' (elsewhere).

10. Click Save or press Enter

The Report Group Contents Of Requisition Administration form is displayed.

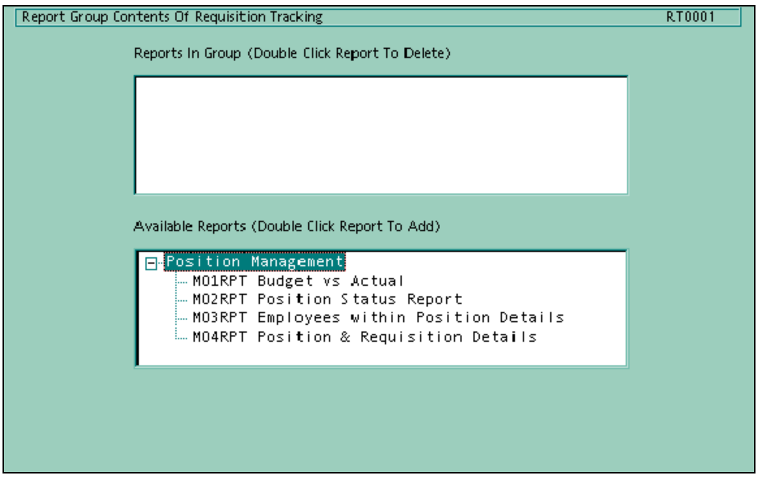
For practice, click Save or press Enter.



11. Double-click Position Management to display available reports

A list of available reports is displayed.

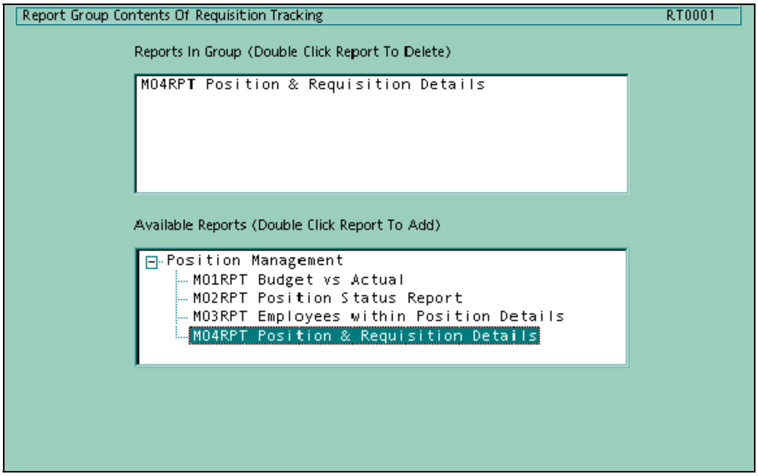
For practice, double-click Position Management.



12. Double-click the report name

Double-click the report name that you would like to add to this report group. The report name will then be displayed in the upper portion of the form.

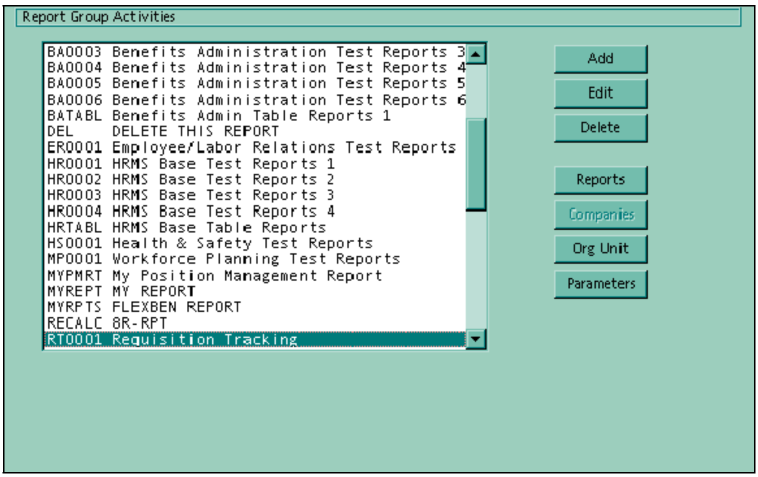
For practice, double-click M04RPT Position & Requisition Details.



13. Click Save or press Enter

The Report Group Activities form (RGMSTR) reappears, with the new report group listed.

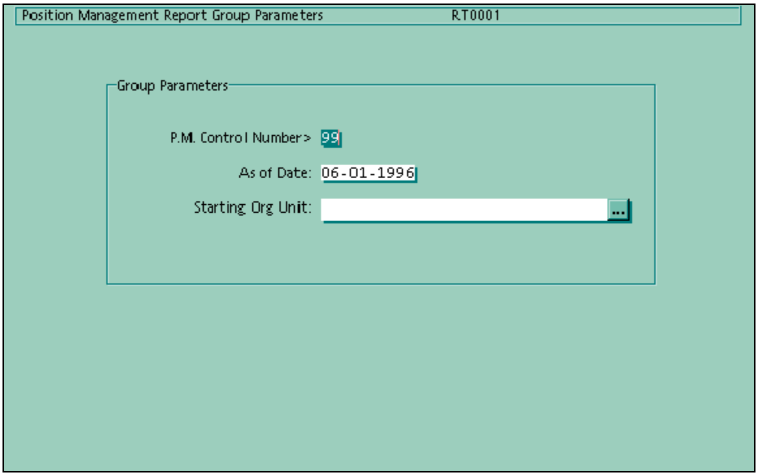
For practice, click Save or press Enter.



14. Click Org Unit

Click the Org Unit button on the Report Group Activities form (RGMSTR) to access the Position Management Report Group Parameters form.

For practice, click Org Unit.



15. Click the Starting Org Unit list box

Click the Starting Org Unit list box to display the Search Option List dialog box.

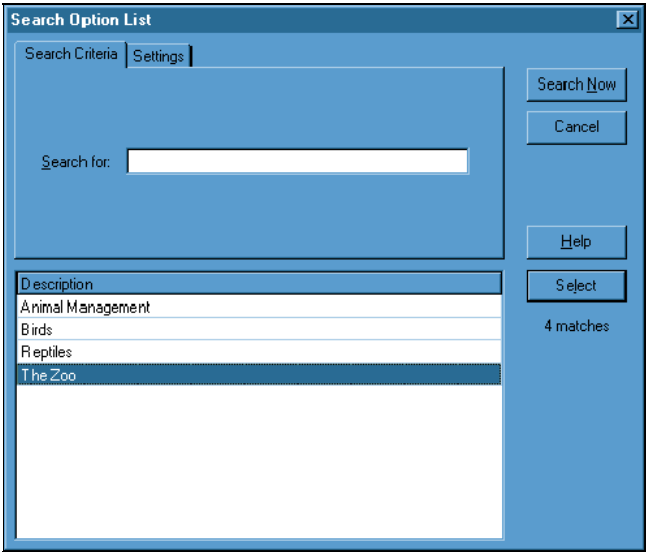
For practice, click the Starting Org Unit list box.

16. Click Search Now

The results of the search are displayed.

Note: *If no matching Requisition records are found, you will see the message, '0 matches'.*

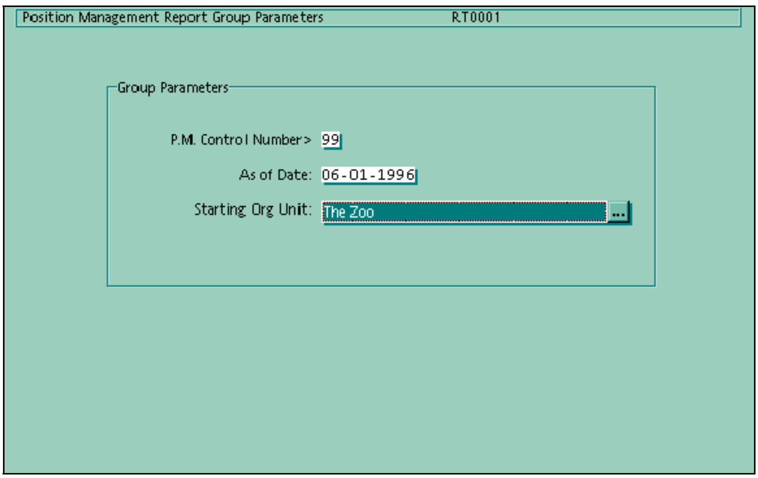
For practice, click Search Now.



17. Highlight the organization name and click Select or press Enter

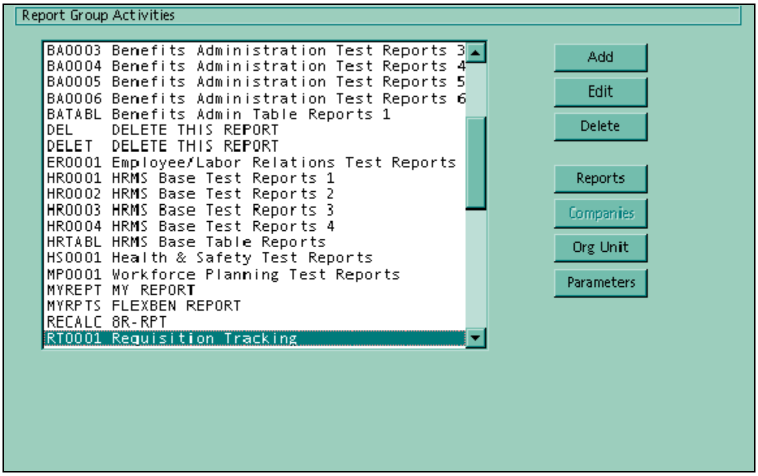
The selected organization name is now displayed in the Starting Org Unit list box.

For practice, highlight The Zoo and click Select.



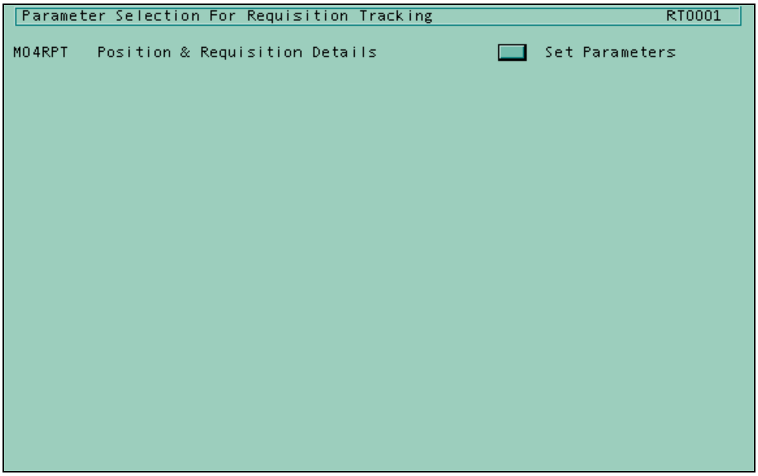
18. Click Save or press Enter

You are returned to the Report Group Activities form (RGMSTR).



19. Highlight the report group name and click Parameters

The Parameter Selection for Requisition Administration form appears.

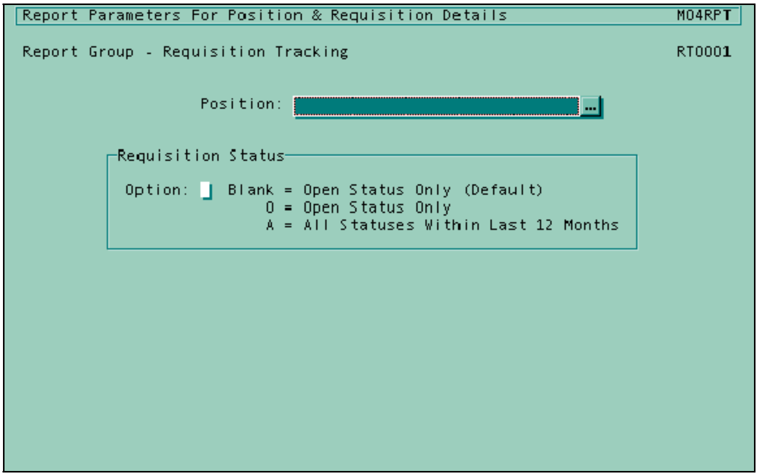


20. Click the Set Parameters command button

A Report Parameters form is displayed for the report you are configuring.

Note: *The Report Parameters form that displays is dependent on which report you are configuring.*

For practice, click the Set Parameters command button for the Position & Requisition Details report.



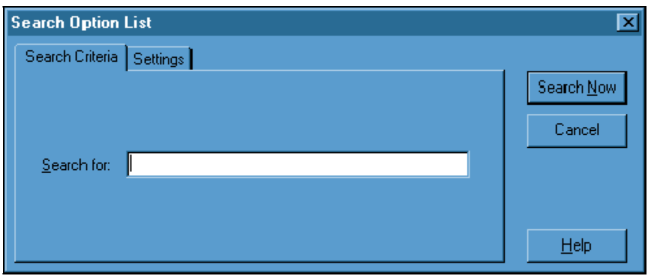
21. Enter Requisition Status

Enter a value in the Requisition Status text box to indicate whether you want a report on open status only, or all status within the last 12 months.

For practice, do not make an entry in the Requisition Status text box.

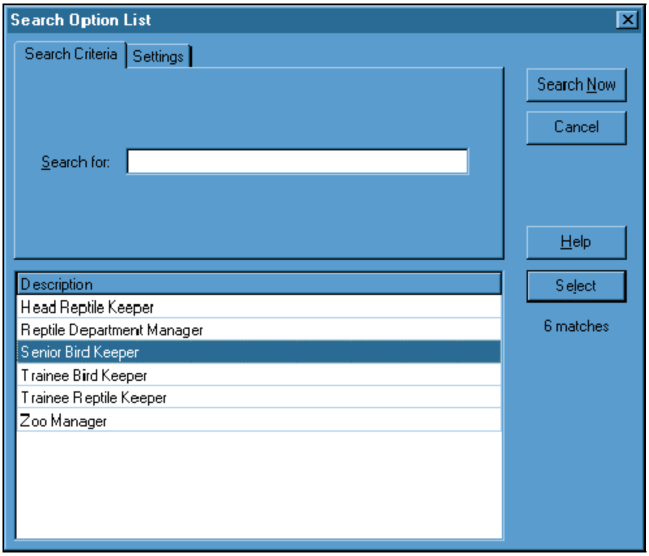
22. Click the Position list box

The Search Option List dialog box is displayed.



23. Click Search Now

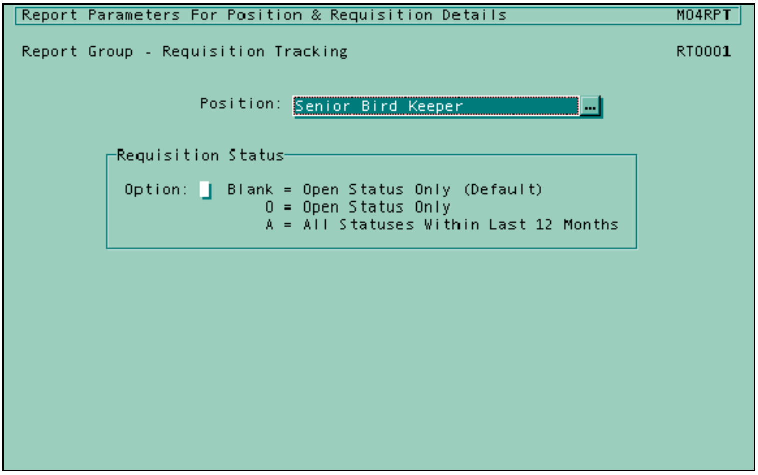
An extended Search Option List dialog box is displayed, listing all of the available positions.



24. Highlight Position name and click Select

Select the appropriate position from the list and click Select.

The Report Parameters for Position & Requisition Details is now displayed with the selected position name appearing in the Position list box.



25. Click Save or press Enter

When a packaged report job set up to run this report group is initiated online or through off-line batch operations, the reports will run as configured.

Refer to the Technical Administration documentation for information about running report groups. The sections that cover initiating a report run in batch, setting up the jobstreams for SUBMIT and VIEW, initiating a report run online, and viewing a help report online should be particularly helpful.

- Using search criteria ***(on page 54)***

To learn what search criteria you can use

Modifying Requisitions

You may modify a Requisition record by changing the basic details on an existing record or creating a new occurrence for an existing Requisition. To modify a Requisition's basic details, follow these steps:

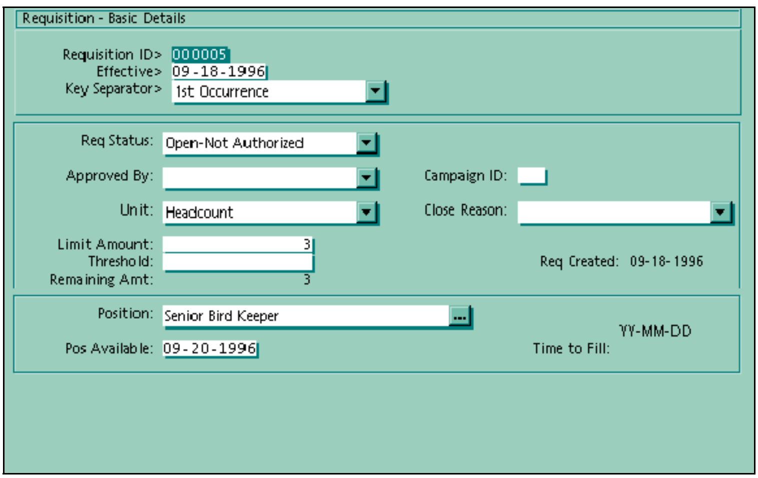
1. Access the Requisition - Basic Details form (R10SCR)

Access this form by making the following selections from the Navigator:

Component: Requisition Administration
Process: Requisition Details
Task: Setup/Maintain a Requisition

Note: *To move quickly between Requisition Administration forms, you can right click a form to access shortcut menu of associated forms.*

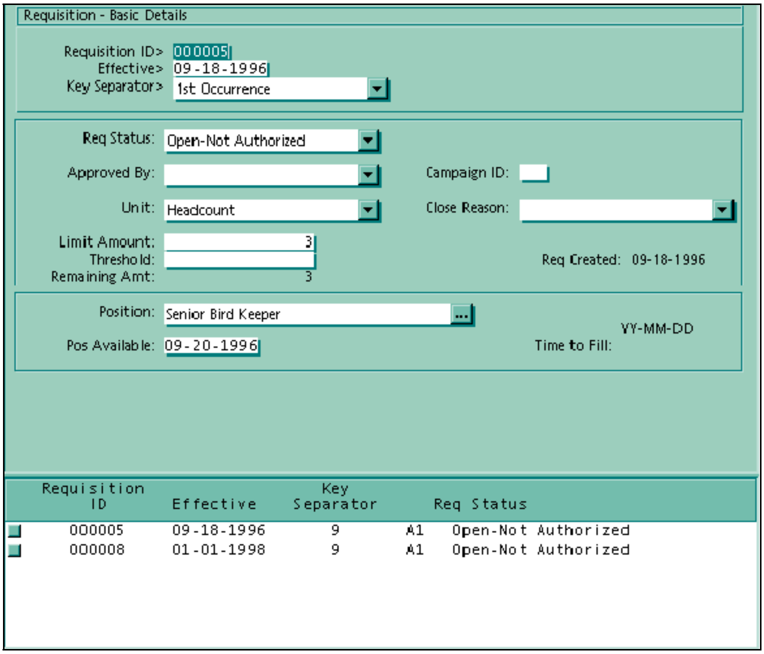
For practice, access the Requisition - Basic Details form (R10SCR).



2. Click the Selection button on the toolbar

Click the Selection button on the toolbar. A list of Requisition records is displayed, beginning with the Requisition ID that was shown on the form.

For practice, click the Selection button.



3. Select the Requisition to be modified

Double-click the Requisition record to be modified. The selected Requisition is displayed.

For practice, select '000005'.

4. Enter the necessary changes

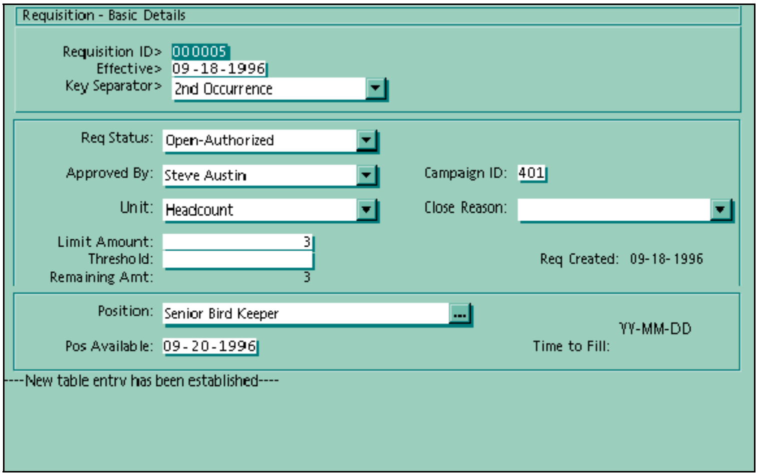
Type or select new entries for the text boxes you wish to modify. Changing the Effective text box and/or incrementing the Key Separator list box value creates a new occurrence for the Requisition ID.

For practice, select '2nd Occurrence' in the Key Separator list box; select 'Open - Authorized' in the Req Status list box; select 'Steve Austin' in the Approved By list box; type '401' in the Campaign ID text box.

5. Click Save or press Enter

The data are modified and a 'Maintenance has been performed' or 'New table entry has been established' message is displayed at the bottom of the form.

For practice, click Save or press Enter.



See also:

- Requisition status - how and why it can change ***(on page 51)***

To learn about the various status options and how they can change

- What you can modify ***(on page 53)***

To learn which entries you are allowed to modify

Deleting modified Requisitions

If a change to a Requisition's basic details has been made in error, you will be able to delete that record only if no Requisition Candidates are associated with it. If Requisition Candidates are associated with this Requisition, then you must modify the existing record (if the error is within a non-key text box) or create a new record (if the error is within a key text box).

Warning: Performing this task deletes the modified Requisition record permanently. No history of the entry is kept.

1. Access the Requisition - Basic Details form (R10SCR)

Access this form by making the following selections from the Navigator:

Component: Requisition Administration
Process: Requisition Details
Task: Setup/Maintain a Requisition

For practice, access the Requisition - Basic Details form(R10SCR).

2. Click the Selection button in the toolbar

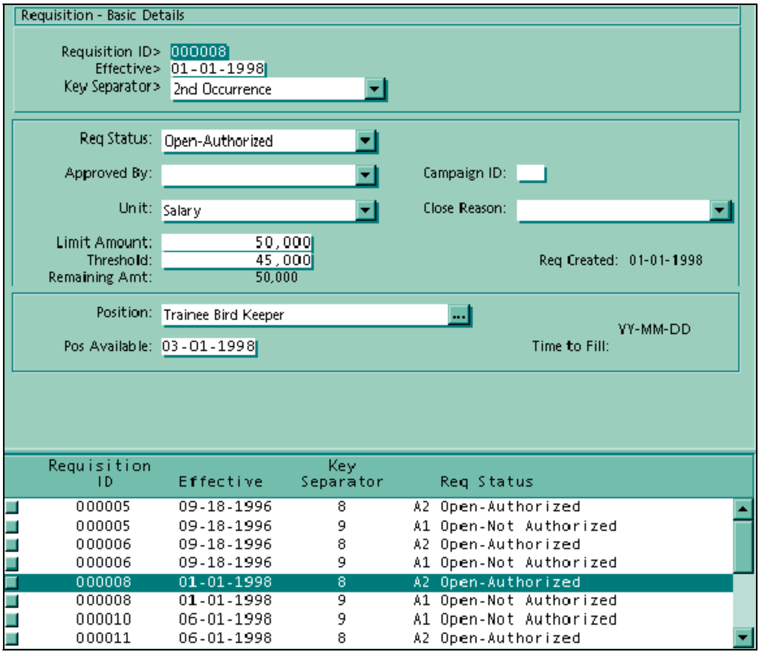
Click the Selection button in the toolbar. A list of Requisition records is displayed.

For practice, click the Selection button in the toolbar.

3. Select the Requisition record you want to delete

Double-click the Requisition to be deleted. The selected Requisition is displayed.

For practice, select '000008' with the Req Status of 'Open Authorized'.



4. Click the Del Entry button on the toolbar

Click the Del Entry button on the toolbar.

The Delete This Entry? dialog box is displayed, warning you that continuing this process will permanently delete the Requisition record.

For practice, click the Del Entry button on the toolbar.

5. Click Yes or press Enter

Click the **Y**es command button or press Enter to delete the Requisition record.

The 'Table record has been deleted' message is displayed. The record displayed is now the first Requisition record on the file.

For practice, click the Yes command button.

See also:

- **What you can modify** ***(on page 53)***

To learn which fields you are allowed to modify

Extended Practice

1. Create two Requisitions.

   Facts: Effective today, you received two new Requisitions. The first Requisition is to fill one Trainee Reptile Keeper vacancy. The maximum salary for the Trainee Reptile Keeper Requisition is $50,000, with a Threshold of $45,000.

   The second Requisition is to fill four Trainee Bird Keeper vacancies.

Note: *When setting up Requisitions for the first time, the Requisition status selected must be Open - Not Authorized.*

2. View the two newly created Requisitions.

   a) View the Trainee Reptile Keeper Requisition using the Position and 'as of' date options. What displays on the form?

   b) View the Trainee Bird Keeper Requisition using the Position and the Requisition Status option. What displays on the form?

   c) What would happen if a match could not be found?

3. Authorize both Requisitions and add the Campaign ID text box.

4. Delete the modified Requisition for the Trainee Reptile Keeper.

Review of Questions Answered

1. How and why can a Requisition status change?

2. What can you do to rectify a change made in error to a Requisition's basic details?

3. How do Requisition Administration and Position Administration interact?

CHAPTER 6

Creating and Maintaining Requisition Candidates

In This Chapter

Introduction

After you have established the Requisitions that represent your vacancies, you can begin the process of assigning Requisition Candidates to each of them. This section describes the key concepts and tasks associated with creating Requisition Candidates and subsequently viewing, amending, or deleting them.

Tasks

The following tasks are covered in this section:

- Creating Requisition Candidates
- Viewing Requisition Candidates
- Modifying Requisition Candidates
- Viewing Modified Requisitions
- Deleting Requisition Candidates

Prerequisites

Before you can carry out any of the tasks described in this section, the following tasks must have been completed:

- Ensure that Requisition Administration implementation tasks have been completed.

☞ *Refer to* **Implementing Requisition Administration** *(on page 29) for more information about this task.*

- Requisitions must be established prior to creating Requisition Candidates. Each Requisition Candidate must be associated with a Requisition.

☞ *Refer to* **Creating and Maintaining Requisitions** *(on page 45) for more information about this task.*

Questions answered

The following questions are answered in this section:

1. What methods are available for creating Requisition Candidate records?
2. How and why can a Requisition Candidate status change?
3. What can be modified on a Requisition Candidate record?

Methods of creating Requisition Candidates

Requisition Candidates can be created manually using the Requisition Candidate - Basic Details form (R11SCR) or automatically using the Job Or Position Applied For form (003SCR). Up to 9,999 candidates may be recorded for a single Requisition.

Requisition Candidates created in either of these ways have a default status of Candidate unless the Requisition status is Closed. If the associated Requisition status is Closed, the form appears in Display mode only with a message that reads, 'Warning—This Requisition has a status of Closed'.

Both Requisition Administration and Applicant Administration reject the Requisition Candidate record if no matching Requisition exists on the file. In a situation where, as an exception, there is no actual Requisition for a Position, you may need to set up a pool Requisition to handle the exception.

If you attempt to create a candidate record with a date earlier than the associated Requisition, it is rejected.

If the Requisition Remaining Amount is less than the Requisition Candidate's Budget Amount, a Warning or Reject message appears that reads, 'Candidate amount exceeds remaining limit'. If you override this warning, the process continues.

You may create a Requisition Candidate using the Job Or Position Applied For form (003SCR), which is accessible to all organizations, to allow existing employees or applicants on file to be candidates for Positions. This allows for internal Job postings. When executed, this program creates a Requisition Candidate - Basic Details record (R11SCR) for the employee or applicant. Its text boxes are copied to the respective candidate text boxes, defaulting to the first occurrence for the date entered. The Candidate Status is displayed as Candidate. When you select a candidate created in this way, you must then access the established Requisition Candidate - Basic Details form (R11SCR) and add the Budget Amount.

If a Job Or Position Applied For form (003SCR) has been created in error—for instance, the Requisition ID or date was incorrect—you may delete the entry and create a new one as long as no modified Requisition Candidate records have been added.

See also:

■ Single and multiple vacancies ***(on page 47)***
For more information on single and multiple vacancies.

Apply the Concept
True or False. Explain any false answers.

a) Both Requisition Administration and Applicant Administration will reject a candidate record if no matching Requisition exists on the file.

b) You can create a Requisition Candidate record in any organization by using the Job Or Position Applied For form (003SCR).

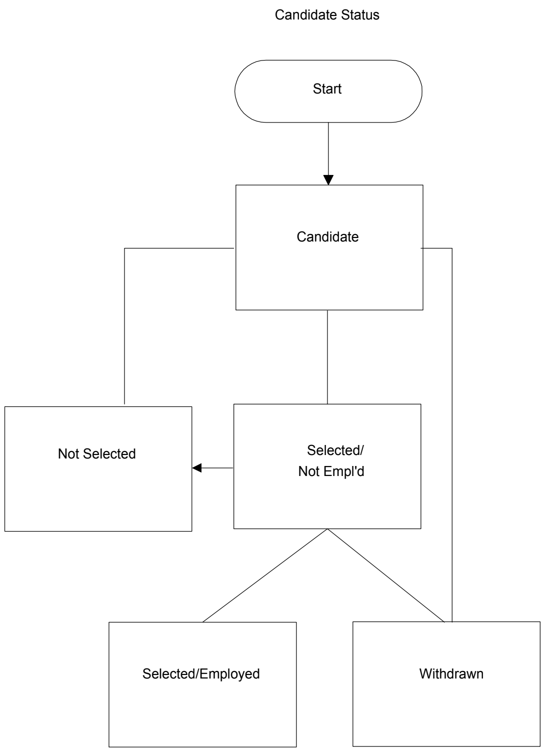
c) Requisition Candidate records can be added even if the associated Requisition status is Closed.

Requisition Candidate status - how and why it can change

Each Requisition Candidate has one of the following status options:

- Candidate
- Selected/Not Empl'd
- Selected/Employed
- Not Selected
- Withdrawn

The following chart represents the event sequence for Candidate status:



When a Requisition Candidate is first created, its status is Candidate. The Requisition Candidate status can be changed manually or automatically as the result of other processes.

You must manually change the status of Requisition Candidates who have been rejected to Not Selected. If a candidate has been offered a Position, you must manually change the status to Selected/Not Empl'd. If a candidate notifies you that he or she no longer has an interest in the Position, you must manually change the status to Withdrawn.

The Requisition Candidate status can also change because of other processes. If the Requisition status changes to Closed because all the vacancies have been filled, Requisition Candidates with a Candidate status are changed to Not Selected.

The Requisition Candidate status can also be changed as a result of entries made on these forms:

- Incumbency - Basic Details form (M40SCR)
- Set Up A New Employee form (NH-SCR)
- Employee Information form (EF-SCR)
- Applicant Transfer form (ET-SCR)

See also:

- Requisition and Requisition Candidate status options ***(on page 20)***

For more information on status options.

- Changed Procedures When Using Requisition Administration ***(on page 107)***

For more information on changed procedures.

Apply the Concept

Consider your current candidate process. Describe the tasks and decisions your organization would make to implement Requisition Administration.

Apply the Concept

True or False. If false, explain.

When first created, a Requisition Candidate's status must be Selected/Not Empl'd.

What you can modify

If you change the Status list box on the Requisition Candidate - Basic Details form (R11SCR), you will be prompted to also change either the Effective Date or the Key Separator for the Requisition Candidate.

You may create a new occurrence and manually change the Status list box to any other option except Selected/Employed. That change may take place only through the hiring process.

If you change the Status from Candidate to Selected/Not Empl'd:

- The Requisition status must be Open - Authorized; otherwise, a Reject message is displayed that reads, 'Requisition Status does not allow selection'.
- The Budget Amount may not exceed the Requisition Remaining Amount; otherwise, a message is displayed that reads, 'Candidate amount exceeds remaining limit'.
- The Requisition Remaining Amount text box is updated.

Once a Requisition Candidate has a status of Selected/Not Empl'd or Selected/Employed, any changes that you make to the FTE, Hours, Headcount, or Salary are checked to determine whether the new value is within the Requisition Limit. The Budget Amount must be equal to or less than the Requisition Remaining Amount; otherwise, a message is displayed that reads, 'Candidate Amount causes Requisition Limit to be exceeded'. Changes to the Requisition Candidate Budget Amount can not be made if the Requisition status is Closed.

If a Requisition Candidate's basic details have been established in error, that record should be deleted. However, the record can only be deleted if no modified Requisition Candidate records are associated with it.

See also:

- Modifying External and Internal Candidates ***(on page 96)***

For more information on modifying Requisition Candidates.

Using search criteria

After Requisition Candidate records have been created for vacancies, you may view selected Requisition Candidates. You may use the Requisition - Inquiry By Candidate Status form (R13SCR) to search by any two or all three of the following criteria:

- By Requisition ID
- By As of Date
- By Candidate Status

For example, you can view all Requisition Candidate records with a Requisition status of Candidate, for the Position of Zoo Manager, as of August 6, 1996.

After you enter your selection criteria and execute the form, the matching records display in list form in the body of the form. A button to the left of each matching Requisition Candidate record allows you to navigate to the Requisition Candidate - Basic Details form (R11SCR) for the record selected.

If you enter	The result is
Requisition ID and As of Date	A form display of only those Requisition Candidate records with a matching Requisition ID and As of Date. If no date is entered, the current date is used.
Candidate Status and As of Date	A form display of only those Requisition Candidate records with a matching Candidate Status and As of Date.
Requisition ID, Candidate Status, and As of Date	Records that match the specified Requisition ID and As of Date are located first. Within those selected records, any records that match the Candidate Status are then selected for display.

If no matching Requisition records are found, you will see the message 'Complete' at the bottom of the form.

If more requisitions are found than can be displayed on the form, click the More button to continue viewing Requisition Candidate information.

Detailed Directions

This section provides detailed directions on completing a business task.

Tasks

Creating a Requisition Candidate from an External Candidate

To create a Requisition Candidate from an external candidate, complete the following steps:

1. **Access the Requisition Candidate - Basic Details form (R11SCR)**

Access this form by making the following selections from the Navigator:

Component: Requisition Administration
Process: Requisition Details
Task: Requisition Candidate Details

For practice, access the Requisition Candidate - Basic Details form (R11SCR).

2. **Click the New Candidate command button**

Click the New Candidate button at the command bottom of the form. The Requisition Candidate - Basic Details form (R11SCR) is cleared and ready for the entry of a new Requisition Candidate.

For practice, click the New Candidate command button.

3. **Enter the Requisition ID**

Type an existing alphanumeric Requisition ID up to six characters in length.

For practice, type '000005'.

4. **Enter the Effective (Date)**

Type the Effective date for the Requisition Candidate. Dates are entered in MM-DD-CCYY or CCYYMMDD format (US and Canada) or DD-MM-CCYY or CCYYDDMM format (elsewhere). As an alternative, position the pointer in the Effective text box and right click to display the calendar or insert today's date.

If the Effective date is earlier than the Requisition-created date, an error message is displayed. Repeat this step, typing a different date.

For practice, type '10-01-1996' (US and Canada) or '01-10-1996' (elsewhere).

5. Enter the candidate's Name

For external candidates, type the candidate's full name in the format Last Name comma space First Name (for example, Smith, John).

For practice, type 'Jones, Elizabeth'.

6. Enter the Org (optional)

For external candidates, leave this text box blank.

For practice, leave this text box blank.

7. Enter the Number (optional)

For external candidates, leave this text box blank.

For practice, leave this text box blank.

8. Select the Status

Select an option from the Requisition Candidate Status list box.

This form may not be used to change the status to Selected/Employed. That change can take place only through hiring or transferring the candidate into a vacancy.

For practice, select 'Candidate'.

9. Enter the Amount

Type a unit amount for the Requisition Candidate. The format in which you enter the amount depends on the unit of measure you are using:

Unit of measure	**Format you must use**
FTE or Hours	Type an up-to-seven-digit figure with two decimal places. For example: 99,999.99
Headcount	Type an up-to-six-digit figure. For example: 999,999
Salary	Type an up-to-12-digit figure. For example: 999,999,999,999

For practice, type '1'.

10. Click Save or press Enter

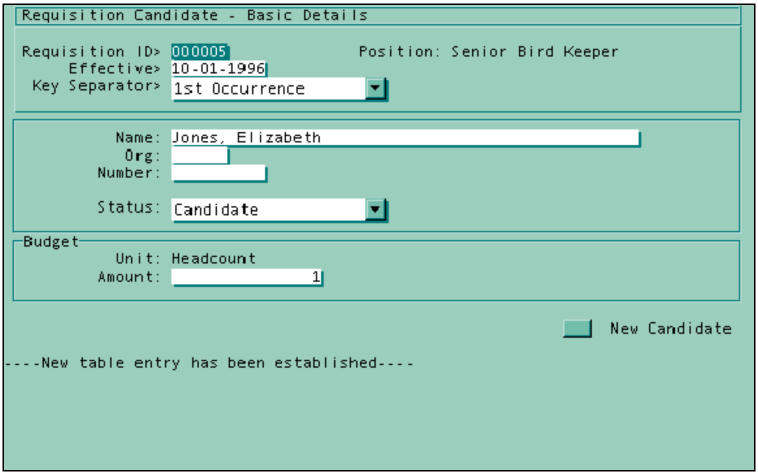
If the Remaining Amount on the Requisition is less than the Requisition Candidate's Amount, a Warning or Reject message is displayed that reads, 'Candidate amount exceeds remaining limit'. If it is a Warning, and is overridden, the process continues.

The data is entered and a 'New table entry has been established' message is displayed at the bottom of the form.

Note: *A new list box, Key Separator, is displayed. This is provided to record Requisition Candidate changes when more than one occurs on the same date.*

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Understanding Requisitions and Requisition Candidates ***(on page 15)***

For explanation of Requisitions and Requisition Candidates.

Creating a Requisition Candidate from an Internal Candidate

To create a Requisition Candidate from an internal candidate, complete the following steps:

1. Access the Requisition Candidate - Basic Details form (R11SCR)

Access this form by making the following selections from the Navigator:

Component: Requisition Administration
Process: Requisition Details
Task: Requisition Candidate Details

For practice, access the Requisition Candidate - Basic Details form(R11SCR).

2. Click the New Candidate command button

Click the New Candidate command button at the bottom of the form. The Requisition Candidate - Basic Details form (R11SCR) is cleared and ready for the entry of a new Requisition Candidate.

For practice, click the New Candidate command button.

3. Enter the Requisition ID

Type an existing alphanumeric Requisition ID up to six characters in length.

For practice, type '000005'.

4. Enter the Effective (Date)

Type the Effective Date for the Requisition Candidate. Dates are entered in MM-DD-CCYY or CCYYMMDD format (US and Canada) or DD-MM-CCYY or CCYYDDMM format (elsewhere). As an alternative, position the pointer in the Effective text box and right click to display the calendar or insert today's date.

If the Effective Date is earlier than the Requisition-created date, an error message is displayed. Repeat this step, typing a different date.

For practice, type '10-06-1996' (US and Canada) or '06-10-1996' (elsewhere).

5. Enter the candidate's Name

For internal candidates, this text box propagates if the Organization and Number are entered.

For practice, leave this text box blank.

6. Enter the Org (optional)

Type the organization designation associated with the internal candidate.

For practice, type '999999'.

7. Enter the Number (optional)

Type the employee number associated with the candidate.

For practice, type '6001'.

8. Select the Status

Select an option from the Requisition Candidate Status list box.

This form may not be used to change the status to Selected/Employed. That change can take place only through hiring or transferring the candidate into a vacancy.

For practice, select 'Candidate'.

9. Enter the Amount

Type a unit amount for the Requisition Candidate. The format in which you enter the amount depends on the unit of measure you are using:

Unit of measure	Format you must use
FTE or Hours	Type an up-to-seven-digit figure with two decimal places. For example: 99,999.99
Headcount	Type an up-to-six-digit figure. For example: 999,999
Salary	Type an up-to-12-digit figure. For example: 999,999,999,999

For practice, type '1'.

10. Click Save or press Enter

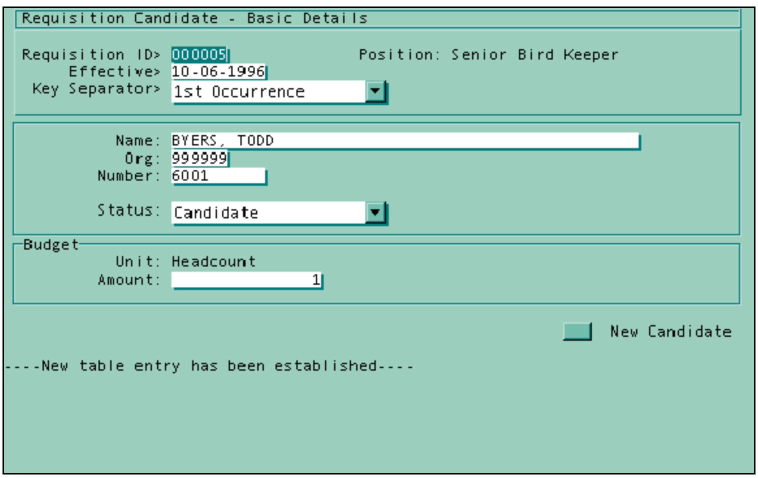
If the Remaining Amount on the Requisition is less than the Requisition Candidate's Amount, a Warning or Reject message is displayed that reads, 'Candidate amount exceeds remaining limit'. If it is a Warning, and is overridden, the process continues.

The data is entered and a 'New table entry has been established' message is displayed at the bottom of the form.

Note: *A new list box, Key Separator is displayed. This is provided to record Requisition Candidate changes when more than one occurs on the same date.*

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Requisition Candidate - Basic Details

Requisition ID> 000005 Position: Senior Bird Keeper
Effective> 10-06-1996
Key Separator> 1st Occurrence

Name: BYERS, TODD
Org: 999999
Number: 6001

Status: Candidate

Budget
Unit: Headcount
Amount: 1

New Candidate

----New table entry has been established----

Viewing Requisition Candidates

You can use the Requisition - Inquiry By Candidate Status form (R13SCR) to view Requisition Candidates.

1. Access the Requisition - Inquiry By Candidate Status form (R13SCR)

Access this form by making the following selections from the Navigator:

Component: Requisition Administration
Process: Requisition Details
Task: View Requisition Candidates

For practice, access the Requisition - Inquiry By Candidate Status form (R13SCR).

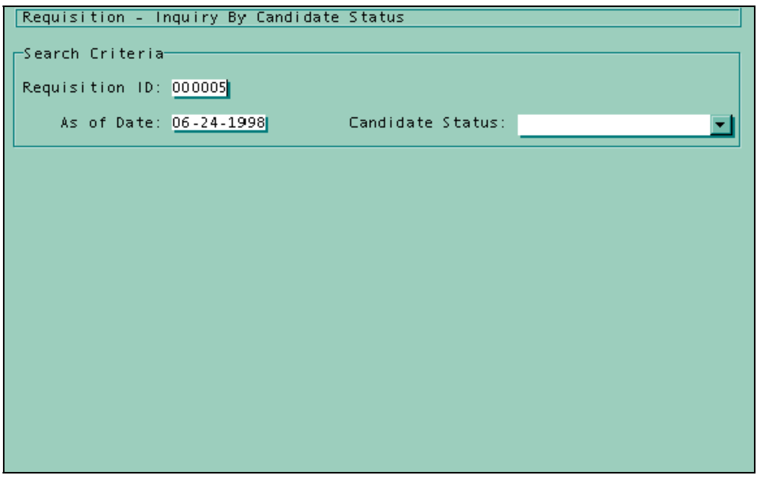
2. Enter the search criteria

You can search by:

- Requisition ID and As of Date
- Candidate Status and As of Date
- Requisition ID, As of Date, and Candidate Status

For practice, type '000005' in the Requisition ID text box.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Requisition - Inquiry By Candidate Status

Search Criteria

Requisition ID: 000005

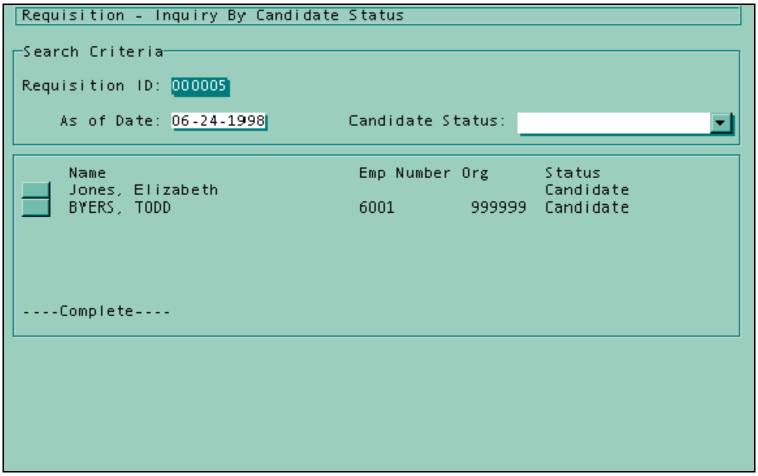
As of Date: 06-24-1998 Candidate Status:

3. Click Save or press Enter

The results of the search are displayed.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:

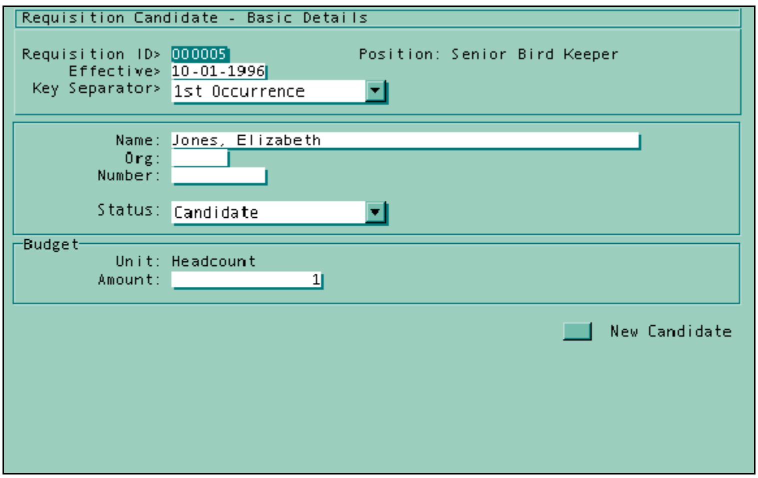


4. Click the button to the left of a candidate

The Requisition Candidate - Basic Details form (R11SCR) for that candidate will be displayed.

For practice, click the button to the left of Elizabeth Jones.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Using search criteria ***(on page 54)***

For more information on using search criteria.

Modifying External and Internal Candidates

To modify an external Requisition Candidate's basic details, follow these steps:

1. Access the Requisition Candidate - Basic Details form (R11SCR)

Access this form from the Navigator by selecting:

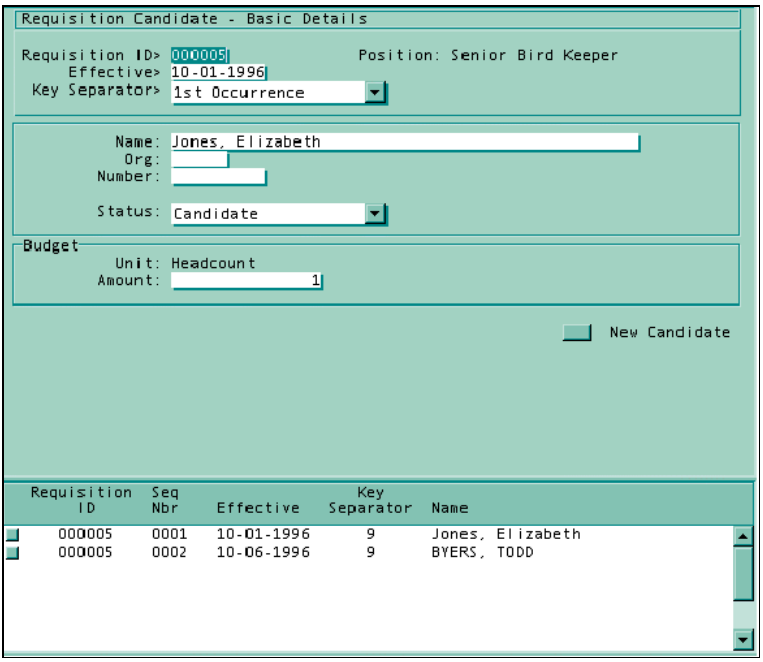
Component: Requisition Administration
Process: Requisition Details
Task: Requisition Candidate Details

For practice, access the Requisition Candidate - Basic Details form (R11SCR).

2. Click the Selection button in the toolbar

Click the Selection button in the toolbar. A list of Requisition Candidate records is displayed, beginning with the Requisition ID that was shown on the form.

For practice, click the Selection button.



3. Select the Requisition Candidate to be modified

Double-click the Requisition Candidate record to be modified. The selected Requisition Candidate record is displayed.

For practice, select Requisition ID 000005 for Elizabeth Jones.

4. Enter the necessary changes

Type or select new entries for the text boxes you wish to modify. Changing the Requisition ID or Effective text box creates a new occurrence for the Requisition Candidate.

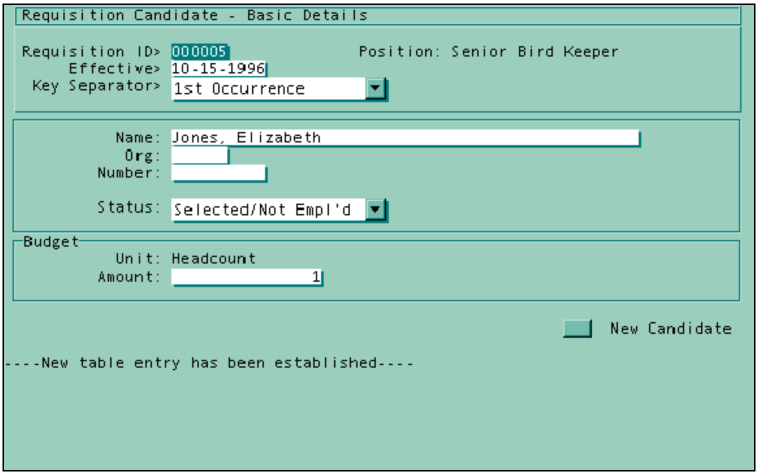
For practice, change the Effective text box to '10-15-1996' and change the Status list box to 'Selected/Not Emply'd'.

5. Click Save or press Enter

The data is modified and a 'Maintenance has been performed' or 'New table entry has been established' message is displayed at the bottom of the form.

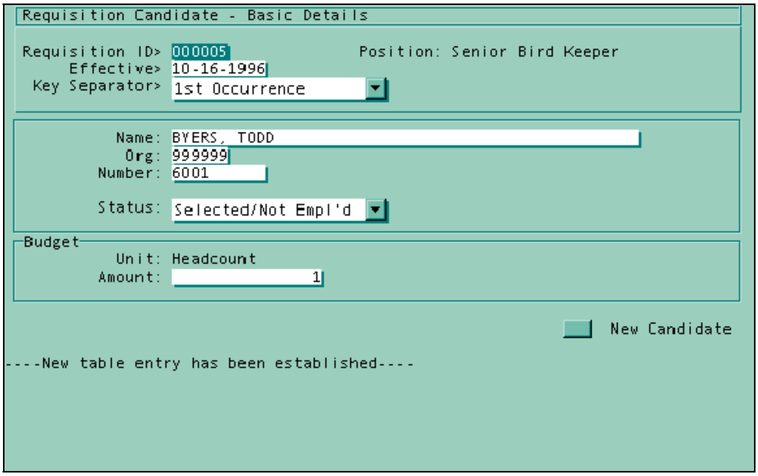
For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



For practice, select Requisition ID 000005 for Todd Byers. Change the Effective text box to '10-16-1996' and change the Status list box to 'Selected/Not Emply'd'.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Adding a Candidate from Applicant Tracking

To add a Candidate from Applicant Administration, follow these steps:

1. Access the Job Or Position Applied For form (003SCR)

Access this form from the Navigator by selecting:

Component: Employee Resourcing
Process: Recruit and Select Employees
Task: Update Applicant Status

For practice, access the Job Or Position Applied For form (003SCR) for organization 993333 and employee A003.

2. Enter Requisition ID

Enter the requisition ID in the Requisition ID text box.

For practice, type '000005'.

3. Enter Date 1st Considered

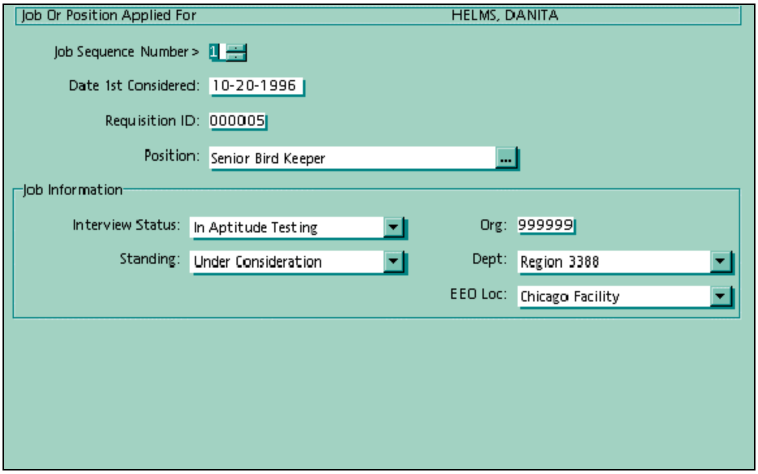
Type the effective date for the requisition candidate. Dates are entered in MM-DD-CCYY or CCYYMMDD format (US and Canada) or DD-MM-CCYY or CCYYDDMM format (elsewhere).

For practice, type '10-20-1996' (US and Canada) or '20-10-1996' (elsewhere).

4. Click Save or Press Enter

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



5. Access the Requisition Candidate - Basic Details form (R11SCR)

Access this form from the Navigator by selecting:

Component: Requisition Administration
Process: Requisition Details
Task: Requisition Candidate Details

For practice, access the Requisition Candidate - Basic Details form (R11SCR).

6. Click the Selection button in the toolbar

Click the Selection button in the toolbar. A list of Requisition Candidate records is displayed, beginning with the Requisition ID that was shown on the form.

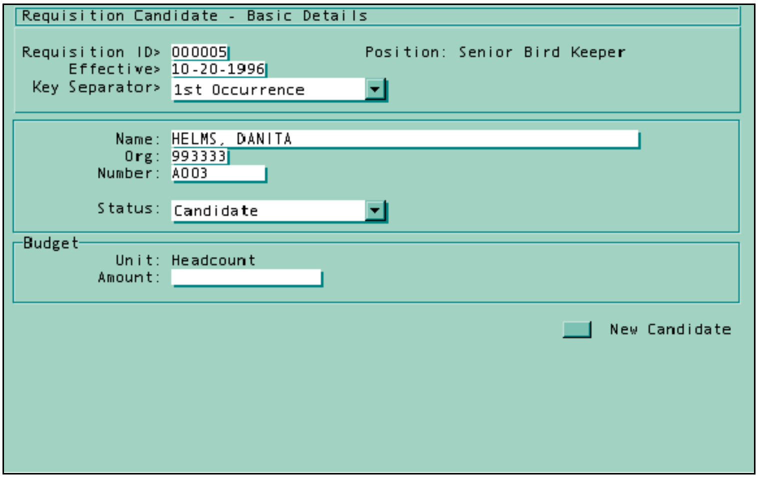
For practice, click the Selection button.

7. View the Requisition Candidate that was created

Double-click the Requisition Candidate record that was created. The selected Requisition Candidate record is displayed.

For practice, select Requisition ID 000005 for Danita Helms.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



8. Modify the record

Type or select new entries for the text boxes you wish to modify. Changing the Requisition ID or Effective text box creates a new occurrence for the Requisition Candidate.

For practice, change the Key separator to 2nd occurrence, change the Effective text box to '11-15-1996' and change the Status list box to 'Selected/Not Emply'd'.

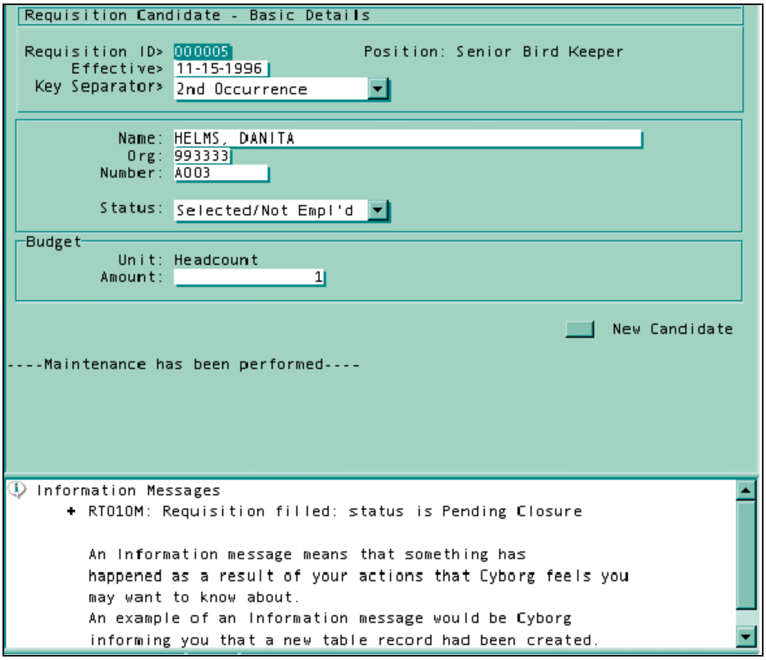
9. Click Save or press Enter

The data is modified and a 'Maintenance has been performed' or 'New table entry has been established' message is displayed at the bottom of the form.

Also, if this modification caused the Requisition limit amount or threshold to be reached, a message appears showing that the requisition's status has automatically been changed to Pending Closure.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Requisition Candidate status - how and why it can change ***(on page 85)***

For more information on Requisition Candidate status.

- **What you can modify** ***(on page 53)***

For more information on when you can modify Requisition Candidate status.

Viewing the Modified Requisition

After you have reached the Requisition limit amount or threshold, the status of the Requisition is automatically changed from Open-Authorized to Pending Closed.

1. Access the Requisition - Basic Details form (R10SCR)

Access this form by making the following selections from the Navigator:

Component: Requisition Administration
Process: Requisition Details
Task: Setup/Maintain a Requisition

For practice, access the Requisition - Basic Details form (R10SCR).

2. Click the Selection button on the toolbar

Click the Selection button on the toolbar. A list of Requisition records is displayed.

For practice, click the Selection button.

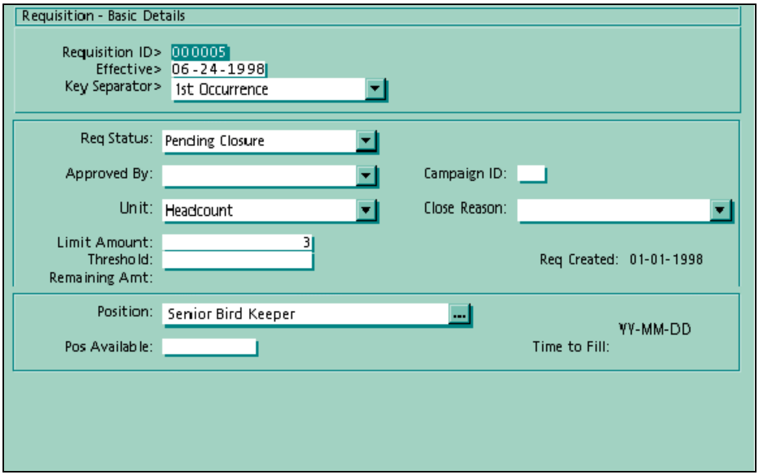
3. Select the Requisition to view

Double-click the Requisition record to be viewed. The selected Requisition is displayed.

The Req Status list box is automatically changed to Pending Closure when the Requisition limit amount or threshold is reached.

For practice, select '000005'.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Requisition - Basic Details

Requisition ID> 000005
Effective> 06-24-1998
Key Separator> 1st Occurrence

Req Status: Pending Closure
Approved By:
Campaign ID:
Unit: Headcount
Close Reason:
Limit Amount: 3
Threshold:
Remaining Amt:
Req Created: 01-01-1998

Position: Senior Bird Keeper
YY-MM-DD
Pos Available:
Time to Fill:

Deleting Requisition Candidates

You should delete a Requisition Candidate record only if it was created in error.

Warning: Performing this task deletes the modified Requisition Candidate record permanently. No history of the entry is kept.

1. Access the Requisition Candidate - Basic Details form (R11SCR)

Access this form from the Navigator by selecting:

Component: Requisition Administration
Process: Requisition Details
Task: Requisition Candidate Details

For practice, access the Requisition Candidate - Basic Details form (R11SCR).

2. Click the Selection button on the toolbar

Click the Selection button on the toolbar. A list of Requisition Candidate records is displayed.

For practice, click the Selection button on the toolbar.

3. Select the Requisition Candidate record you want to delete

Double-click the Requisition Candidate to be deleted. The selected Requisition Candidate record is displayed.

For practice, select Requisition ID '000005' dated '10-01-1996' for 'Elizabeth Jones'.

4. Click the Del Entry button on the toolbar

The Delete dialog box is displayed, warning you that continuing this process will permanently delete the Requisition Candidate record.

For practice, click the Del Entry button on the toolbar.

5. Click Yes or press Enter

Click the **Y**es command button or press Enter to delete the Requisition Candidate record.

The Requisition Candidate record is deleted and a 'Table record has been deleted' message is displayed. The record displayed is now the first Requisition Candidate record on the file.

All calculation text boxes are recalculated for the Requisition, and the Requisition status is changed, if appropriate.

For practice, click the Yes command button.

See also:

- What you can modify ***(on page 53)***

For more information on modifying Requisition Candidate status.

Extended Practice

1. Create two Requisition Candidate records.

   Facts: Effective today, you received two Requisition Candidates for the Trainee Bird Keeper Position. One is an external candidate, and one is an internal candidate.

2. Modify each of the Requisition Candidate records to show that they have been Selected.

3. View the Trainee Bird Keeper Requisition Candidate records using the Requisition ID and 'as of' date options. What displays on the form?

Review of Questions Answered

1. What methods are available for creating Requisition Candidate records?

2. How and why can a Requisition Candidate status change?

3. What can be modified on a Requisition Candidate record?

CHAPTER 7

Changed Procedures when using Requisition Administration

In This Chapter

Introduction

This section explains the existing procedures and processes that have changed when using Requisition Administration. Some of the changes require the entering of additional form data while other changes affect the processing done by the system after a form has been entered.

Procedures and/or processes are affected on the following forms when using Requisition Administration.

- Set Up A New Employee form (NH-SCR)
- Employee Information form (EF-SCR)
- Incumbency - Basic Details form (M40SCR)
- Applicant Transfer form (ET-SCR)
- Requisition Candidate - Basic Details form (R11SCR)
- Requisition - Basic Details form (R10SCR)

Tasks

The following tasks are affected when using Requisition Administration:

- Hiring an external candidate using the Set Up a New Employee form (NH-SCR)
- Putting an internal candidate into a new position using the Incumbency - Basic Details form (M40SCR)
- Transferring applicants to active employee Organizations using the Applicant Transfer form (ET-SCR)

Prerequisites

Before performing the tasks in this section, ensure that Requisition Administration implementation task has been completed.

☞ *Please refer to* **Implementing Requisition Administration** *(on page 29) for details about the implementation task.*

Question answered

The following question is answered in this section:

What are the differences in form procedures and processes when using Requisition Administration?

Differences in form processing when using Requisition Administration

Some standard forms are processed differently when you are using Requisition Administration. The changes in processing include:

- Assignment of the employee to a Position when processing a new hire or applicant transfer
- Creation of a Requisition Candidate record when a Job or Position Applied For is recorded in Applicant Administration

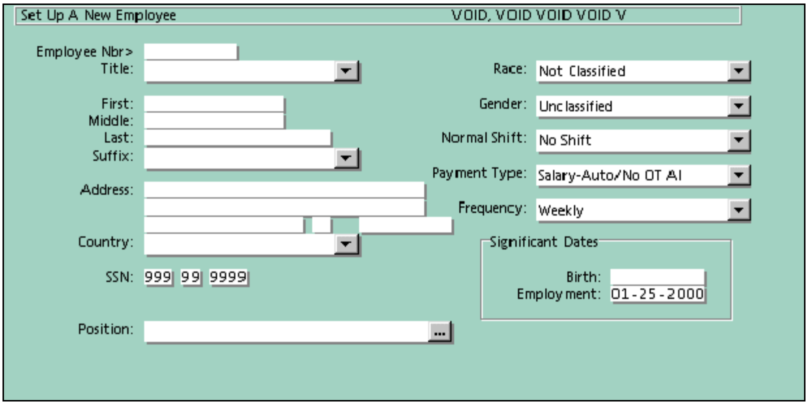
The forms affected by these processing changes are as follows:

- Set Up A New Employee form (NH-SCR)
- Incumbency - Basic Details form (M40SCR)
- Applicant Transfer form (ET-SCR)
- Requisition Candidate - Basic Details form (R11SCR)
- Requisition - Basic Details form (R10SCR)

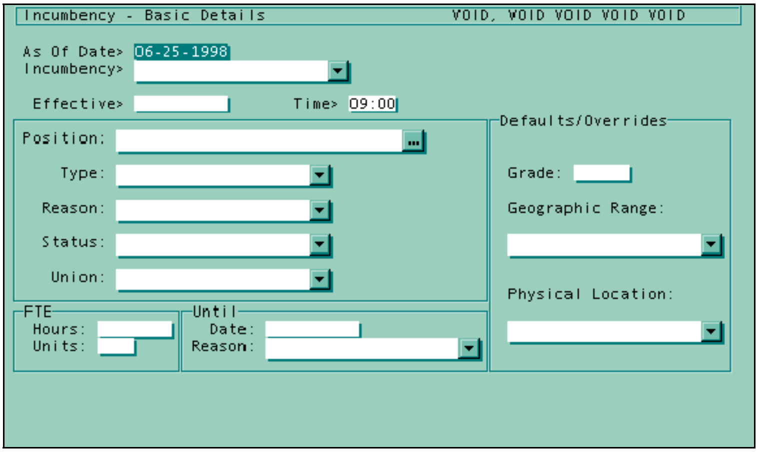
The processing changes for each of these forms are explained in detail in the following topic.

Set Up A New Employee form and Employee Information form

To hire an external candidate, use the Set Up A New Employee form (NH-SCR).



To put an internal candidate into a new position, use the Incumbency - Basic Details form (M40SCR).



If Position Administration is not in use, but Requisition Administration is, each of these forms has an extra text box included to enter the Requisition ID. After the form is processed, a modified Requisition Candidate - Basic Details record (R11SCR) is automatically created using the employment date and a status of Selected/Employed.

If Position Administration is in use, a Position text box has been added to let you select the primary incumbency Position to assign to the new employee. A second form panel is provided to record the Requisition ID entry. After the form is processed, a modified Requisition Candidate - Basic Details record (R11SCR) is automatically created. Text boxes are also provided on the second panel to record the incumbency status, employee activity status, and the complement amount for the Position (if Complement Control is in use). In this case, the Incumbency - Basic Details form (M40SCR) is automatically created or updated with the incumbency information using the employment date.

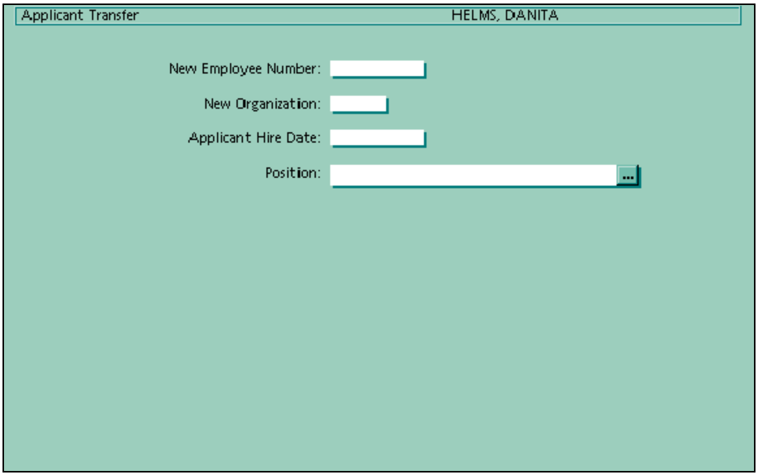
See also:

- Hiring an external candidate using the Set Up a New Employee form ***(on page 114)***
For detailed directions on hiring external candidates when using Requisition Administration.

- Putting an Internal Candidate into a New Position Using the Incumbency - Basic Details form ***(on page 121)***
For detailed directions on hiring internal candidates when using Requisition Administration.

Applicant Transfer form

To transfer applicants to active employee Organizations, use the Applicant Transfer form (ET-SCR).



If Position Administration is not in use, but Requisition Administration is, an extra text box is included on the form to enter the Requisition ID. However, the Requisition Candidate must be created first. No other forms are created or updated.

If Position Administration is in use, a Position text box has been added to let you select the primary incumbency Position to assign to the new employee. A second form panel is provided to record the incumbency status, employee activity status, and the complement amount for the Position (if Complement Control is in use).

The Incumbency - Basic Details form (M40SCR) is automatically created or updated with the incumbency information.

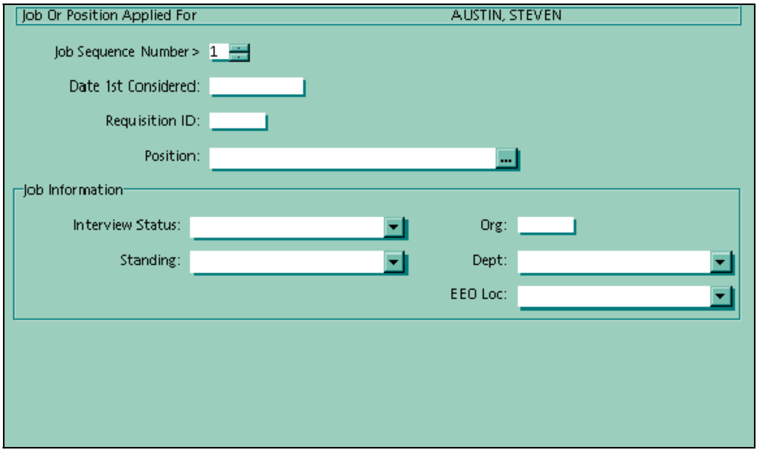
See also:

- Transferring applicants to active employee Organizations using the Applicant Transfer form ***(on page 123)***

For detailed directions on transferring applicants when using Requisition Administration.

Job Or Position Applied For form

The Job Or Position Applied For form (003SCR), from Applicant Administration, has been changed and can now be used with all your Organizations, not just your applicant companies. This means that the form can now be used for applicants as well as your internal candidates who are not in an applicant Organization.



The Requisition ID text box has been reduced from eight positions to six to better interface with Requisition Administration.

After a Job Or Position Applied For form (003SCR) is processed, a Requisition Candidate - Basic Details form (R11SCR) is automatically created for the Requisition ID with a Status of Candidate. The Job Or Position Applied For form (003SCR) can continue to be changed (for example, a new date) during the candidacy and will continue to update the Requisition Candidate - Basic Details form (R11SCR) data. However, once another Requisition Candidate - Basic Details form (R11SCR) entry is made (for instance, a status of Not Selected), no further changes are allowed on the Job Or Position Applied For form (003SCR). All future changes must be made on the Requisition Candidate - Basic Details form (R11SCR).

Apply the Concept

True or False. Explain any false answers.

a) The Employee Information form (EF-SCR) and the Set Up A New Employee form (NH-SCR) display a second panel for entry of Requisition Administration data if both Position Administration and Requisition Administration are in use.

b) If the second panel of the Employee Information form (EF-SCR) is processed, there is no effect on the Requisition Candidate - Basic Details form (R11SCR).

c) If Position Administration is in use, an applicant transfer will reject if the employee has any current or future-dated Positions assigned.

d) The Job Or Position Applied For form (003SCR), from Applicant Administration, cannot be used with all your Organizations, only your applicant companies.

e) The Job Or Position Applied For form (003SCR) can continue to be changed during the candidacy and will continue to update the Requisition Candidate - Basic Details form (R11SCR) data. Once another Requisition Candidate - Basic Details form (R11SCR) entry is made, no further changes are allowed on the Job Or Position Applied For form (003SCR).

Detailed Directions

This section provides detailed instructions for the tasks discussed in this section. The instructions assume that both Position Administration and the Requisition Administration are in use.

These instructions assume that, in the previous section practice, Requisition ID '000005' for three Senior Bird Keepers was created and authorized. They further require that three Requisition Candidate records be created for those vacancies using the Requisition Candidate - Basic Details form (R11SCR), and that those candidate records be subsequently modified to show that the candidates are Selected/Not Empl'd. The three candidates are as follows:

- Elizabeth Jones (external candidate)
- Todd Byers (existing employee 6001)
- Applicant number 'A003' in Organization '993333'

Tasks

Hiring an external candidate using the Set Up a New Employee form

To hire an external candidate, you use the Set Up a New Employee form (NH-SCR).

Note: *If Position Administration is in use, a Position list box is displayed on the Set Up a New Employee form (NH-SCR), and a second panel is displayed—where you enter Incumbency Details Status and Requisition ID. If Position Administration is not in use, the Requisition ID entry is recorded on the first form panel and no second panel is displayed.*

1. Access the Set Up a New Employee form (NH-SCR)

Access this form by making the following selections from the Navigator:

Component:	Employee Resourcing
Process:	Hire, Rehire, Reinstate an Employee
Task:	Quick Hire

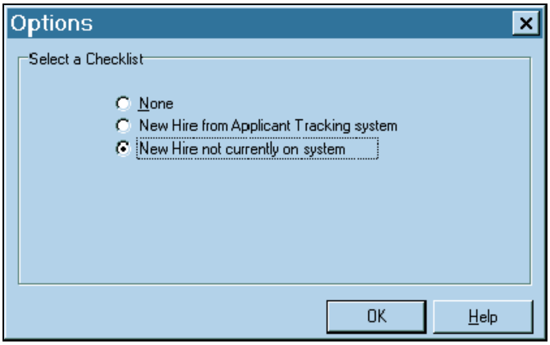
The Employee Selection dialog box is displayed.

For practice, make the Navigator selections to access the Set Up a New Employee form (NH-SCR).

2. Select a Checklist (for Solution Series 4.x users only)

Select the appropriate New Hire checklist.

For practice, select the 'New Hire not currently on system' option.



For practice, enter 'LMODEL 00'.

3. Click OK or press Enter (for Solution Series 4.x users only)

Click OK or press Enter to process the entry.

For practice, click OK or press Enter.

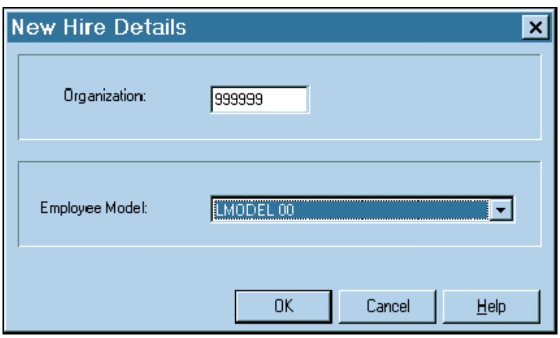
4. Enter Organization number and Employee Model number

Enter the number of the Organization that is hiring this new employee.

Select an Employee Model number.

For practice, enter '999999' using employee 'LMODEL 00'.

If you completed the Guided Practice, the resulting dialog box should look similar to the example that follows:



5. Click OK or press Enter

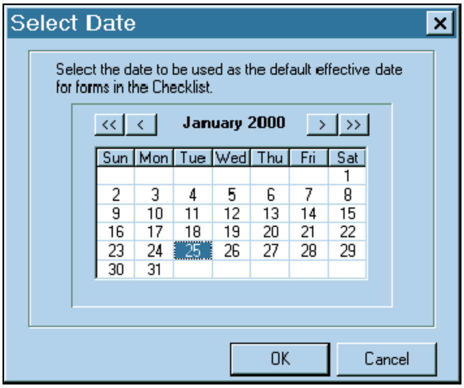
Click OK or press Enter to process the entry.

For practice, click OK or press Enter.

6. Select Date (for Solution Series 4.x users only)

Select the date to use as the default effective date for forms in the Checklist.

For practice, accept the current date.



7. Click OK or press Enter (for Solution Series 4.x users only)

Click OK or press Enter to process the entry.

For practice, click OK or press Enter.

8. Enter an Employee Number

Enter the employee number you would like to assign to this new employee.

For practice, enter 'A020'.

9. Enter Title

Select one of the titles from option list HR35.

For practice, enter 'Miss'.

10. Enter the First name

Enter the first name of the new employee.

For practice, type 'Elizabeth'.

11. Enter Middle name

Type the middle name, if any, of the new employee.

For practice, enter 'Ann'.

12. Enter Last name

Enter the new employee's last name.

For practice, enter 'Jones'.

13. Enter Suffix

Select the name suffix, if any, from option list HR37.

For practice, select '(None)'.

14. Enter Address

Enter the first line of the new employee's address. The second line is reserved for additional address information, such as an apartment number.

The third line consists of 3 text boxes for the city, state and zip code.

For practice, enter '1234 Main Street'.

Leave the second address line blank.

15. Enter the city name

On the third address line in the first text box, enter the city.

For practice, type 'Chicago'.

16. Enter the state code

In the second text box of the third address line, enter the two position state code.

For practice, type 'IL'.

17. Enter the zip code

In the third text box of the third address line, enter the zip code.

For practice, enter '60606'.

18. Select the Country

Select the country in which the employee lives.

For practice, select 'United States'.

19. Enter the Social Security

Enter the new employee's nine-digit social security number.

For practice, enter '123 45 8888'.

20. Enter the Requisition ID (if Position Administration is not in use)

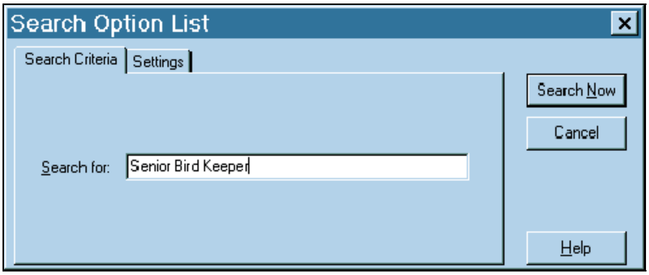
Type the associated Requisition ID in the Requisition ID text box.

For practice, this text box will not appear.

21. Click the Position box (if Position Administration is in use)

To specify the position that the new employee is going to fill, click the Position box to display the Search Option List.

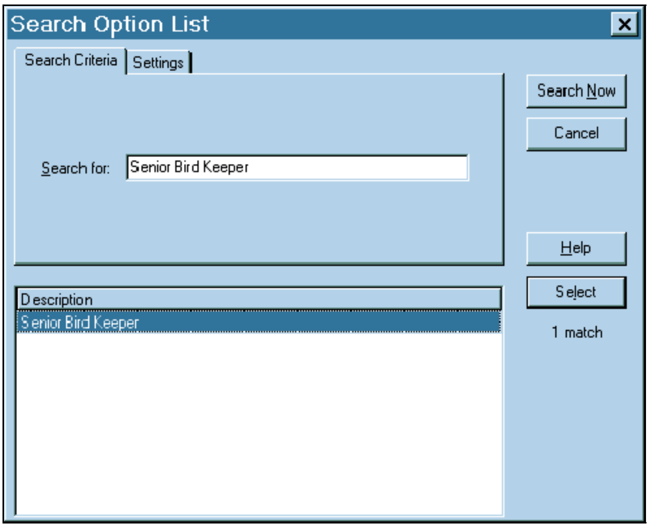
For practice, click the Position box.



22. Enter the Position name in the Search for text box and click Search Now (Position Administration only)

The search is initiated and a list of results is displayed.

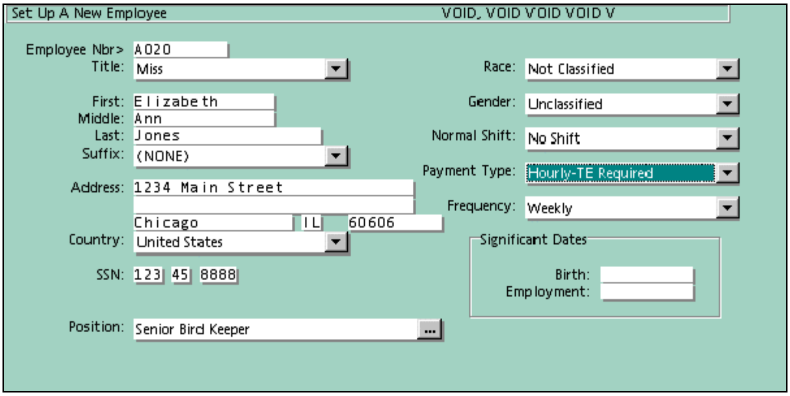
For practice, enter 'Senior Bird Keeper' and click Search Now.



23. Click Select (Position Administration only)

You are returned to the Set Up a New Employee form (NH-SCR) and the Position box is now filled in.

If you completed the Guided Practice, the resulting form should look similar to the example that follows (Position Administration is in use):



24. **Select the Race**

Select the employee's race from option list HR22. This option list should include all of the race source types your organization may need.

For practice, select 'Asian/Pacific Island'.

25. **Select the Gender**

Select the gender designation for the new employee from option list PP41.

For practice, select 'Female'.

26. **Select the Normal Shift**

Select the employee's normal shift from option list PP43. This option list should include all of the normal shift types your organization may need.

For practice, select 'No Shift'.

27. **Select the Payment Type**

Select whether the new employee is to be paid automatically or through time document entry. This option list should include all of the payment types your organization may need.

For practice, select 'Salary-Auto Paid'.

28. **Select the Frequency**

Select the new employee's pay frequency from option list PP29. This option list should include all of the pay frequencies your organization may use.

For practice, select 'Semi Monthly'.

29. **Enter the Birth Date**

Enter the employee's date of birth. Dates are entered in MM-DD-CCYY or CCYYMMDD format (US and Canada) or DD-MM-CCYY or CCYYDDMM format (elsewhere).

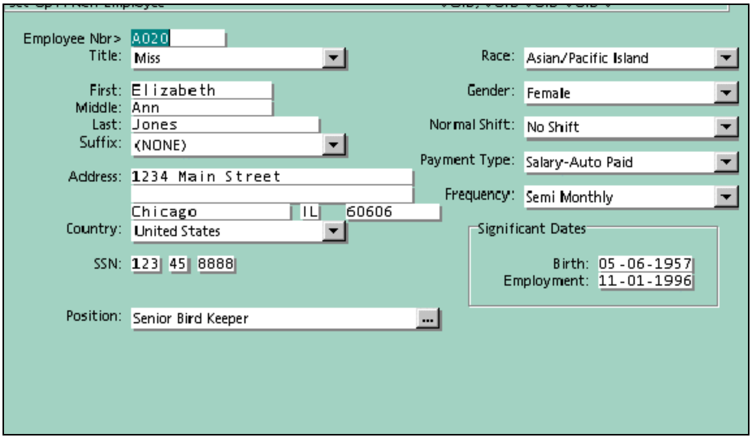
For practice, type '05-06-1957' (US and Canada) or '06-05-1957' (elsewhere).

30. Enter the Employment Date

Enter the date employment becomes effective. Dates are entered in MM-DD-CCYY or CCYYMMDD format (US and Canada) or DD-MM-CCYY or CCYYDDMM format (elsewhere).

For practice, type '11-01-1996' (US and Canada) or '01-11-1996' (elsewhere).

If you completed the Guided Practice, the resulting form should look similar to the example that follows (Position Administration is in use).



31. Click Save or press Enter

The second form panel for the Set Up a New Employee form (NH-SCR) is displayed.

For practice, click Save.

32. Select the Status

Select an Incumbency Status from option list PM17, usually Regular or Acting. This option list should be edited to include all the incumbency statuses your organization may need.

For practice, select 'Regular'.

33. Select an Activity status

Select an Activity status from option list HR72. This option list should be edited to include all the Activity statuses your organization may need.

For practice, select 'New Hire-Sal Reg FT'.

34. Select Union

Select the union option from option list PP429. This option list should include all of the union option types your organization may need.

For practice, leave this blank.

35. Enter a Complement Control Amount

Enter the Amount to be added to the Position complement for the complement unit displayed above this box.

For practice, enter '1'.

Note: *If the Complement Unit is Headcount, the system automatically assumes the entry is '1'. There is no need to enter it.*

36. Click the Previous Panel button or press Enter

If multiple selected candidates exist for the Requisition, an Employee Information - Selected Candidates panel is displayed. Select the associated candidate by clicking on the button to the left of the name.

An error message is displayed if one of the following conditions is present:

- No candidates with the status of Selected/Not Empl'd are found for the Requisition.
- The Requisition has a Closed status.
- The Requisition cannot be found.

If no errors occur, the form is processed with the following results:

- The new employee is added to the database.
- A modified Requisition Candidate - Basic Details record (R11SCR) is created using the employment date and a status of Selected/Employed.
- The Requisition record is Closed if the units are filled.
- If Position Administration is in use, an Incumbency - Basic Details form (M40SCR) is created, using the employment date and a time of 09:00 am.

For practice, click the Previous Panel button or press Enter.

For details on hiring external candidates when using Requisition Administration.

Putting an Internal Candidate into a New Position Using the Incumbency - Basic Details form

To put an internal candidate into a new position, you use the Incumbency - Basic Details form (M40SCR), and follow these steps.

Note: *This task is designed to be completed only when Position Administration is in use.*

1. Access the Incumbency - Basic Details form (M40SCR)

Access this form by making the following selections from the Navigator:

Component: Employee Resourcing
Process: Hire, Rehire, Reinstate an Employee
Task: Assign Position

For practice, access the Incumbency - Basic Details form (M40SCR) for employee 6001, Todd Byers.

2. Enter the As of Date

In the As of Date text box, enter the date of that this entry is being made. Dates are entered in MM-DD-CCYY or CCYYMMDD format (US and Canada) or DD-MM-CCYY or CCYYDDMM format (elsewhere).

For practice, accept the default of today's date.

3. Enter the Incumbency

Select the Incumbency number from the Incumbency list box.

For practice, select '1st Incumbency'.

4. Enter the Effective date

In the Effective date text box, enter the date this employee will begin employment at this new position. Dates are entered in MM-DD-CCYY or CCYYMMDD format (US and Canada) or DD-MM-CCYY or CCYYDDMM format (elsewhere).

For practice, enter '11-05-1996' (US and Canada) or '05-11-1996' (elsewhere).

5. Select the Position

In the Position box, select the position that this employee is being assigned to.

For practice, select 'Senior Bird Keeper'.

6. Select the Type

In the Type list box, specify the employee's incumbency relevant to this position.

For practice, select 'Primary Incumbency'.

7. Select the Reason

In the Reason list box, select the reason that this employee is changing positions.

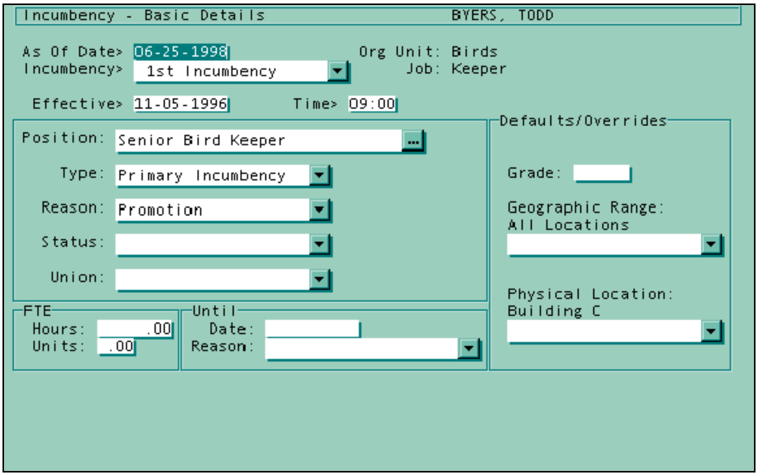
For practice, select 'Promotion'.

8. Click Save or press Enter

The Org Unit and Job information automatically appears, and other information appears in the Defaults/Overrides group box.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Differences in form processing when using Requisition Administration ***(on page 109)***

For details on hiring external candidates when using Requisition Administration

Transferring applicants to active employee Organizations using the Applicant Transfer form

To create a new employee record from existing information in the Applicant Administration application, use the Applicant Transfer form (ET-SCR) and follow these steps.

Note: *If Position Administration is in use, a Position list box is displayed on the Applicant Transfer form (ET-SCR), and a second panel is displayed—where you enter Incumbency Details Status and Requisition ID. If Position Administration is not in use, the Requisition ID entry is recorded on the first form panel and no second panel is displayed.*

1. Access the Applicant Transfer form (ET-SCR)

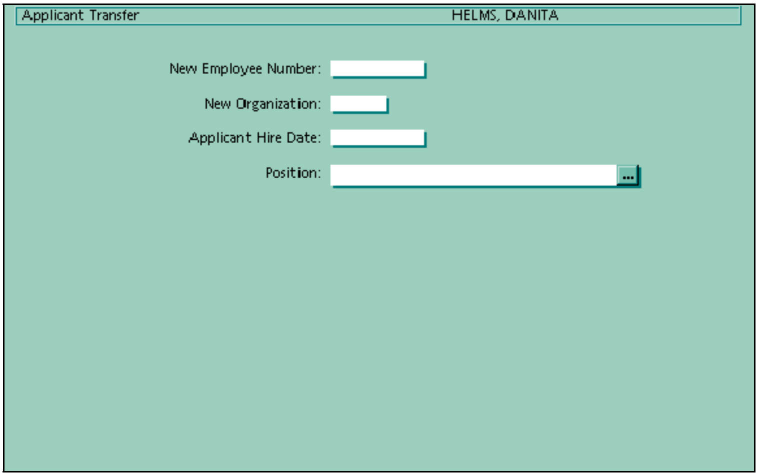
Access this form by making the following selections from the Navigator:

Component: Employee Resourcing
Process: Hire, Rehire, Reinstate an Employee
Task: Transfer Emp to New Organization

The Applicant Transfer form (ET-SCR) is displayed.

For practice, access the Applicant Transfer form (ET-SCR) for employee A003, Danita Helms, in Organization '993333'.

If you completed the Guided Practice, the resulting form should look similar to the example that follows (Position Administration is in use):



2. Assign a valid employee number

Type a unique alphanumeric employee number, up to 10 characters in length, in the New Employee Number text box.

For practice, type 'A003'

3. Enter a Organization

Type the Organization of the organization into which the candidate is to be hired.

For practice, type '999999'.

4. Enter an Applicant Hire Date

Type an entry into the Applicant Hire Date text box. Dates are entered in MM-DD-CCYY or CCYYMMDD format (US and Canada) or DD-MM-CCYY or CCYYDDMM format (elsewhere).

For practice, enter '11-06-1996' (US and Canada) or '06-11-1996' (elsewhere).

5. Enter Requisition ID (if Position Administration is not in use)

Type the associated Requisition ID in the Requisition ID text box.

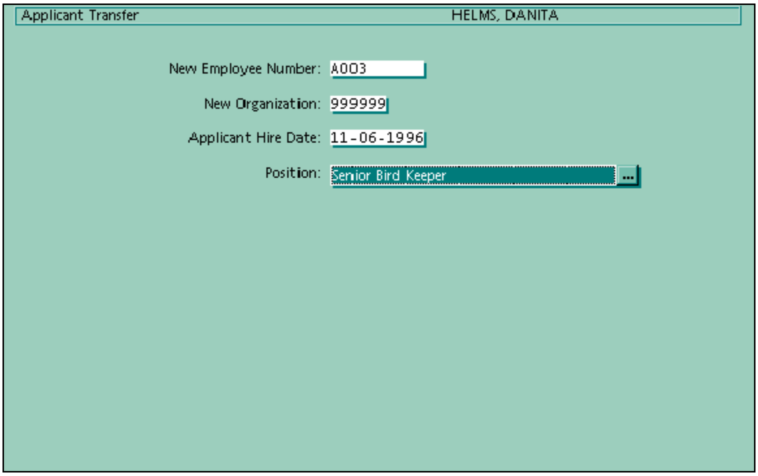
For practice, this text box will not appear.

6. Select a Position (if Position Administration is in use)

Select the appropriate position from the Position box.

For practice, select 'Senior Bird Keeper'.

If you completed the Guided Practice, the resulting form should look similar to the example that follows (Position Administration is in use):



7. Click Save or press Enter

If Position Administration is in use, the second form panel is displayed for entry of Requisition Administration information.

For practice, click Save or press Enter.

8. Enter the Incumbency Details Status (optional) (Position Administration only)

If you are using Position Administration, select an option from the Status list box.

For practice, leave this text box blank.

9. Enter the Employee Details Activity (Position Administration only)

Select an option from the Employee Details Activity list box.

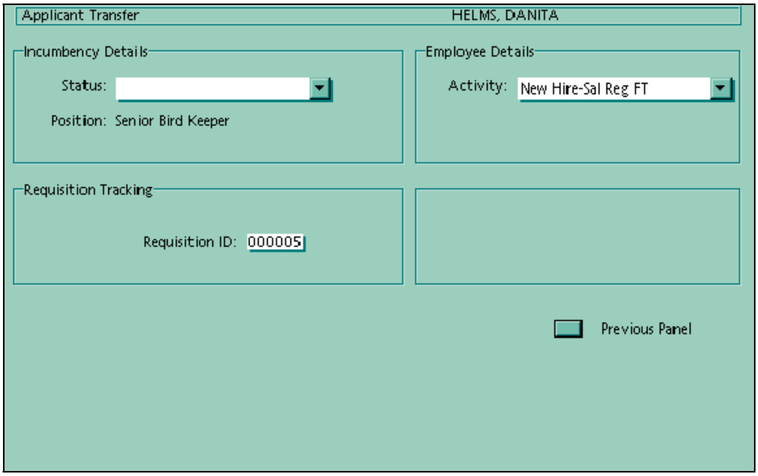
For practice, select 'New Hire-Sal Req FT'.

10. Enter the Requisition ID (Position Administration only)

Type the associated Requisition ID in the Requisition ID text box.

For practice, type '000005'.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



11. Click Save or press Enter

For practice, click Save or press Enter.

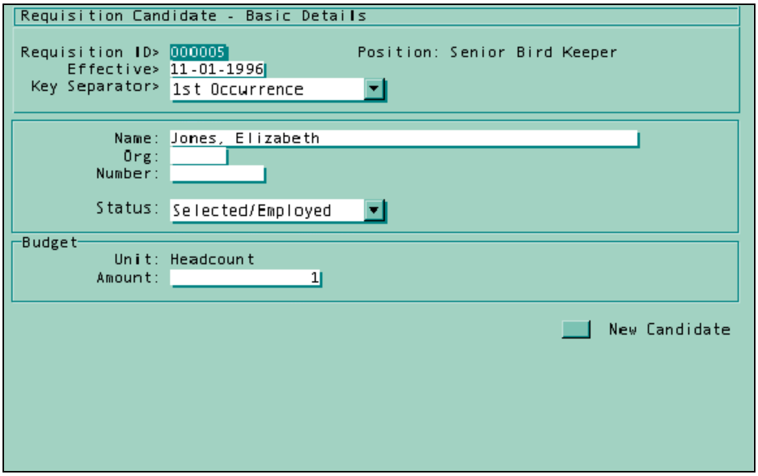
An error message is displayed if either of the following conditions is present:

- No candidates with the status of Selected/Not Empl'd are found for the Requisition.
- The Requisition has a Closed status.

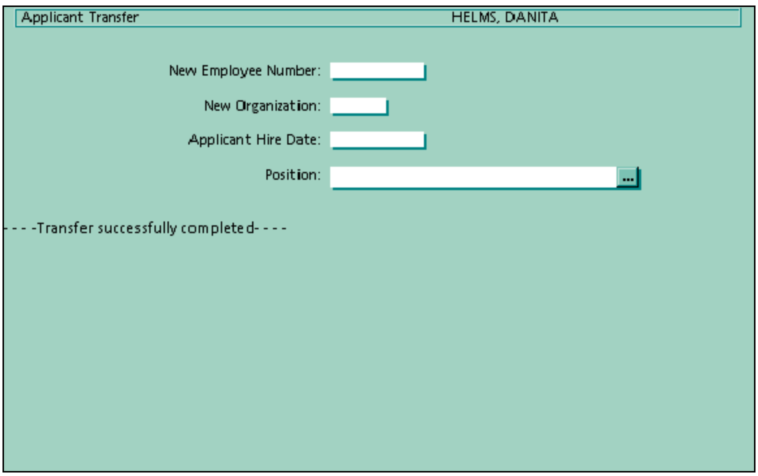
If no errors occur, the form is processed with the following results:

- The applicant is transferred.
- An amended Requisition Candidate record is created using the employment date and a status of Selected/Employed.
- The Requisition record is Closed if the units are filled.
- If Position Administration is in use, an Incumbency - Basic Details form (M40SCR) is created, using the employment date and a time of 09:00 am.

As each employee is hired, the status of the employee's Requisition Candidate Record is automatically changed to Selected/Employed on the Requisition Candidate - Basic Details form (R11SCR).

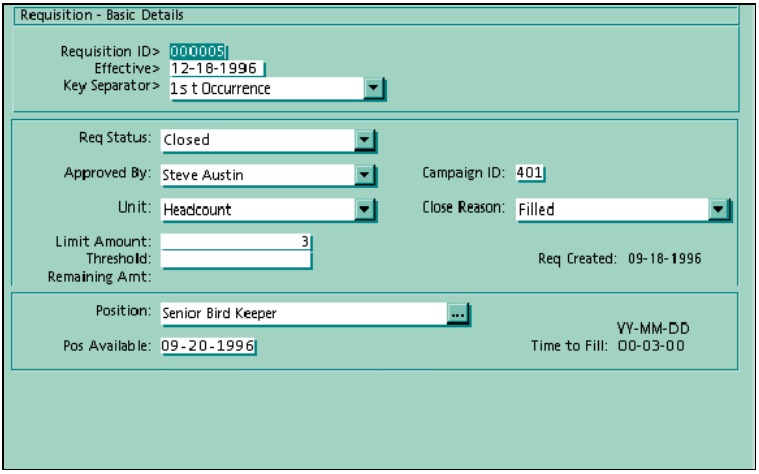


If you are transferring applicants to active employee Organizations using the Applicant Transfer form (ET-SCR), you receive the message 'transfer successfully completed' on the Applicant Transfer form (ET-SCR).



After the limit of the Requisition has been reached, the following changes are automatically made to that requisition's Requisition - Basic Details form (R10SCR):

- Req Status is changed to Closed
- Close Reason is changed to Filled
- Time to Fill is calculated and displayed



See also:

- Differences in form processing when using Requisition Administration ***(on page 109)***

For details on hiring external candidates when using Requisition Administration.

Extended Practice

1. Hire the external Selected Candidates for the Trainee Bird Keeper Position by using the Set Up a New Employee form (NH-SCR).

2. Hire the internal Selected Candidate for the Trainee Bird Keeper Position by using the Incumbency - Basic Details form (M40SCR).

3. View the resulting Requisition Candidate - Basic Details form (R11SCR) for each candidate. What is the status for each candidate?

4. View the resulting Requisition - Basic Details form (R10SCR). What is the Requisition status?

Review of Questions Answered

What are the differences in form procedures and processes when using Requisition Administration?

PART 4

Appendices

APPENDIX A

Report Quick Reference

In This Appendix

Introduction

This section provides a quick reference guide to Requisition Administration reports covered in this manual. Sample output for the report is included.

Requisition Details by Position/Organization Unit (M04RPT)

Business Task

The Requisition Details by Position/Organization Unit (M04RPT) report details existing requisitions. It is an alternative to viewing existing requisitions online.

Report Field Details

- **Organization Unit**—The Org Unit for which the requisition has been created.
- **Position**—The ID and title of the position for which the requisition was created.
- **Effective**—The date when the requisition was activated.
- **Status**—The status value used to designate the various stages of activity of the Requisition. A new Requisition may only have a status of 'Open-Not Authorized'. A Requisition's status can be changed manually or will change When certain processes are carried out.
- **Approved By**—The name or job title of managers authorized to approve Requisitions.
- **Unit**—The value of a Requisition expressed as an FTE, hours, salary, or headcount.
- **Limit Amount**—The total value of the Requisition expressed as FTE, hours, salary, or headcount.
- **Remaining Amount**—A system-calculated unit value that indicates how many vacancy units are left on the Requisition.

Report Sort Order

The report is sorted in the following order:

Organization Unit
Position ID
Requisition ID

Parameter Options and Setup

- **Position**—Select a position you want to report on.
- **Requisition Status**—Leave blank for open statuses only, enter 'A' for all statuses within the last 12 months.

See also:

- Viewing Requisitions on hard copy ***(on page 63)***

```

APPENDIX B

Practice and Review Answers

In This Appendix

Introduction

This appendix provides answers for the Apply the Concepts practices, as well as the Extended Practice and Review of Questions Answered that are included at the end of each instructional chapter.

Overview of Requisition Administration

Review of Questions Answered

1. Define Requisition Administration.

   Easy-to-use system for tracking the hires and transfers that can take place to fill vacancies. This application can keep a record of Requisition information and track the progress of a Requisition.

2. Match Requisition Administration feature to its corresponding description:

Feature	Answers	Description
1. Customizable level of control	b	a) Integration with the hiring and transfer processes to update relevant Requisition Administration records.
2. Flexibility in how vacancies are represented	c	b) Controlled by selecting the type of validation message, Warning or Reject.
3. Integration with other Solution Series processes	a	c) Vacancies are measured in four different ways (Headcount, FTE, Hours, Salary).
4. Maintenance of historical data	e	d) The system security feature.
5. Integrated system security	d	e) History is maintained to perform data analysis as of a particular date.

3. Identify and explain how Human Resources Administration interacts with Requisition Administration.

   The Applicant Administration application interacts with Requisition Administration. The Job Or Position Applied For form (003SCR) in the Applicant Administration application automatically creates a corresponding candidate record in Requisition Administration.

Understanding Requisitions and Requistion Candidates

Apply the Concept

1. Explain how Requisitions and Requisition Candidates could relate to each other in your organization.

   Your answer is specific to your organization.

   Cyborg Answer: A Requisition is a formal request to fill vacancies. Each candidate for a vacancy in a Requisition is assigned to the Requisition as a Requisition Candidate.

2. The value of a Requisition expressed as an FTE, Hours, Salary, or Headcount is called the <u>Requisition unit</u>.

3. What is the total value of a Requisition called?

   Requisition limit.

4. What must be the same throughout the life of the Requisition and for Requisition Candidates?

   Requisition unit

5. How is the Threshold Amount feature used?

   The Threshold Amount allows you to prevent a Requisition from remaining Open when the vacancies have been filled before reaching the Requisition's Limit Amount. The Threshold Amount should therefore be the unit value (less than the Limit Amount) that must be met in order for the Requisition to be considered filled. The Total Amount needs to be equal to or greater than the Threshold Amount to close the Requisition automatically. The Requisition's status changes to Pending Closure or Closed once its Total Amount is equal to or greater than its Threshold Amount.

Review of Questions Answered

1. What are Requisitions and Requisition Candidates and how do they relate to each other?

   A Requisition is a formal request to fill a vacancy or vacancies. A Requisition Candidate is a candidate for a vacancy represented on a Requisition. Each candidate for a vacancy on a Requisition is assigned to the Requisition as a Requisition Candidate.

2. How are Requisition vacancies measured?

   Each Requisition can measure vacancies in one of the following ways:

   - *By FTE (Full Time Equivalent)*
   - *By Headcount*

- *By Hours*
- *By Salary*

Vacancies are represented on a Requisition by selecting one of these units and entering a Limit Amount. For example, a formal request to fill four full-time vacancies could be represented by selecting a unit of Headcount and entering a Limit Amount of 4.

The same unit must be used throughout the life of the Requisition and for Requisition Candidates. Although different units can be used for different Requisitions, you may find it helpful to use one unit consistently or to have clear guidelines as to which units are used for which types of Requisitions.

3. What are a Requisition's Remaining Amount and Threshold Amount?

   As each candidate is selected, the status of the corresponding Requisition Candidate record is manually changed to Selected/Not Empl'd. When this happens, the system calculates how many vacancy units are left on the Requisition, displaying the figure as the Requisition's Remaining Amount. As vacancies are filled, the Remaining Amount decreases until, finally, no more Units are available and no further hires or transfers can take place.

   Regardless of the unit you have selected to measure the vacancies on a Requisition, you can set a Threshold Amount for the Requisition in addition to a Limit Amount. By doing this, you can prevent a Requisition from remaining Open when the vacancies have been filled before reaching the Requisition's Limit Amount. This could happen, for example, when a Requisition's Remaining Amount is less than the minimum salary that would be offered for a vacancy.

   The Threshold Amount should, therefore, be the unit value (less than the Limit Amount) that must be met in order for the Requisition to be considered filled. The Total Amount needs to be equal to or greater than the Threshold Amount to close the Requisition automatically. The Requisition's status changes to Pending Closure or Closed once its Total Amount is equal to or greater than its Threshold Amount.

   For example, the salary Threshold Amount could be 45,000 with a 55,000 Limit Amount for a Requisition. Filling the Requisition for 46,000 would exceed the Threshold Amount, causing a Requisition status change. Instead of remaining Open, the Requisition status would then change to reflect that the Requisition was Closed because it met the condition of the Threshold Amount.

Implementing Requisition Administration

Apply the Concept

1. Consider your current Requisition process. Describe the tasks and decisions your organization would make to implement Requisition Administration.

   Your answer is specific to your organization.

   Cyborg Answer:

   - Setting the Requisition Administration System Options using the Systems Options form (TG-SCR)

   - Editing the Requisition Administration option lists (optional)

   - Choosing the type of validation messages you will need

   - Determining how shared settings affect the way in which you implement Requisition Administration

   - Deciding if additional security is needed

2. Multiple choice. Circle the appropriate choice.

a) Requisition Administration validates whether the vacancy limit on a corresponding Requisition will be exceeded for:
   i) processing new hires
   ii) assigning an employee to a new Position
   iii) transferring an applicant to a live Organization
   iv) all of the above
   v) i & ii only

b) In shared settings:
   i) you will need to access the System Options form (TG-SCR) for each Organization in the group
   ii) all Organizations share the same System Options Control Number
   iii) all of the above
   iv) none of the above

3. Identify the option lists that can be edited within Requisition Administration. Give an example of how each option list might be modified to meet your organization's requirements.

   Approved By—This option list could be modified to include the names or job titles of those authorized to approve Requisitions.

   Reason for Closure—This option list could be modified to include other reasons for closing a Requisition.

4. Identify the option lists whose values Cyborg recommends not be modified. Give an example of when you could delete a value in one of these option lists.

Requisition Status option list (RT01)

Requisition Unit option list (RT04)

Requisition Candidate Status option list (RT05)

You could delete a value from the Requisition Unit option list (RT04) if, for example, the organization does not want Requisitions to be filled by Salary units.

5. Multiple choice. Circle the appropriate choice.

All Requisition Administration delivered option lists
- i) do not reflect an organization's requirements
- ii) will always have an effect on validation
- **iii)** can be added to, changed, or deleted
- iv) all of the above

All Requisition Administration option lists can be added to, changed, or deleted. However, adding values to the reserved Cyborg option lists will have no effect on validation. Only the delivered codes affect validation.

Review of Questions Answered

1. What Requisition Administration considerations should you take into account when deciding on an implementation strategy?

Before setting up Requisition Administration, you need to choose your implementation strategy . You must consider:

— *What type of validation messages you want.*

— *How shared settings affect the way you implement Requisition Administration.*

2. Which Requisition Administration option lists contain options that should never be changed?

— *Requisition Status (RT01)*

— *Requisition Unit (RT04)*

— *Requisition Candidate Status (RT05)*

3. What extra security might be needed for Requisition Administration?

You may want to consider adding additional security to the Requisition - Basic Details form (R10SCR) so that only certain personnel are able to use it to create Requisitions. By doing this you can ensure that Requisitions are not set up incorrectly or in error.

Creating and Maintaining Requistions

Apply the Concept

1. True or False. Explain any false answers.

a) A Requisition can represent one or more vacancies.

True.

b) You can change the unit of measure and Limit Amount once a Requisition has a candidate assigned to it.

False. You cannot change the unit of measure and Limit Amount once the Requisition has a candidate assigned to it. If more vacancies need to be added, a new Requisition must be created.

2. Consider your current Requisition approval process. How would you use Requisition Administration to support this process?

   Your answer is specific to your organization.

   Cyborg Answer: Populate the Approved By option list (RT03) using the Option list Edit Utility form (CSUPDT). Select an option from the Approved By entry on the Requisition - Basic Details form (R10SCR). This entry can be edited at any time.

3. Describe how your organization might use the recruitment campaign feature.

   Your use of this feature is specific to your organization.

   Cyborg Answer: Requisitions can be associated with a particular Requisition Campaign, which is a three-digit alphanumeric field on the Requisition - Basic Details form (R10SCR).

4. True or False. If false, explain.

   A Requisition can be linked to a Position at any time.

   False, only if it is Open-Not Authorized.

5. True or False. Explain any false answers.

   a) When first created, a Requisition's status must be Open - Not Authorized.

   True.

   b) Candidates assigned to the Requisition with a status of Selected/Not Empl'd.

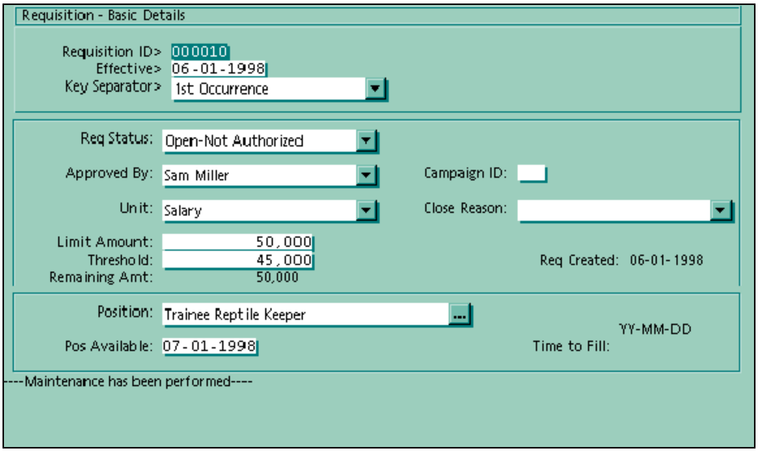
   False. This can only be done if there are no Selected/Not Empl'd candidates. If there are any Selected/Not Empl'd candidates and you still must close the Requisition, these *candidates must first be changed to Selected/Employed or Withdrawn before the Requisition can be closed manually.*

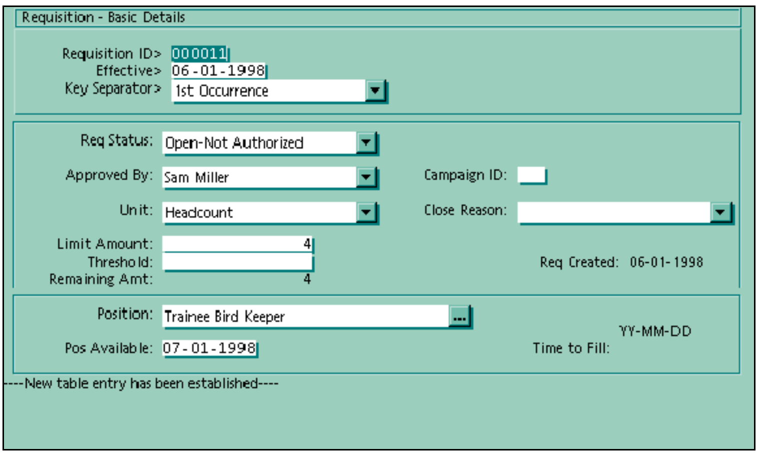
Extended Practice

1. Create two Requisitions.

   Facts: Effective today, you received two new Requisitions. The first Requisition is to fill one Trainee Reptile Keeper vacancy. The maximum salary for the Trainee Reptile Keeper Requisition is $50,000, with a Threshold of $45,000.

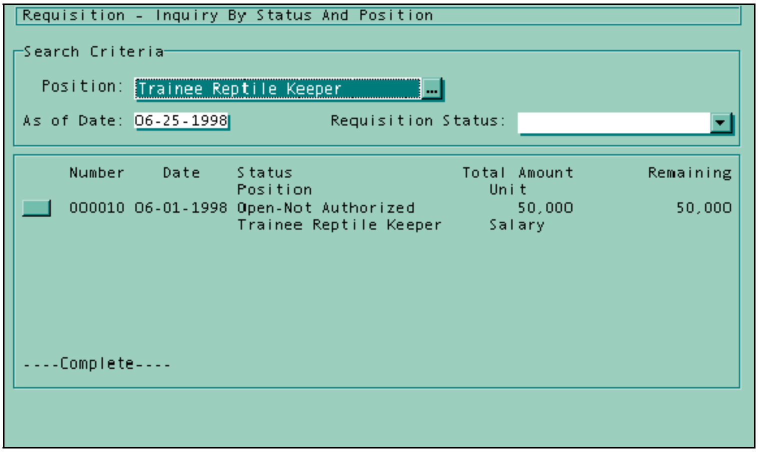
   The second Requisition is to fill four Trainee Bird Keeper vacancies.



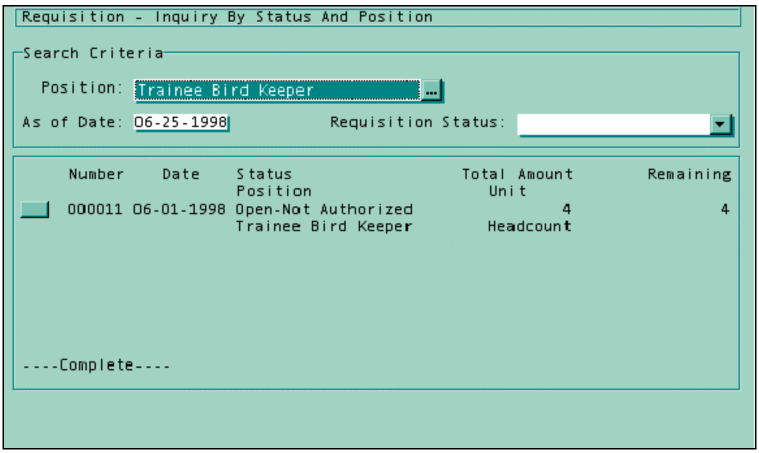


2. View the two newly created Requisitions.

a) View the Trainee Reptile Keeper Requisition using the Position and 'as of' date options. What displays on the form?



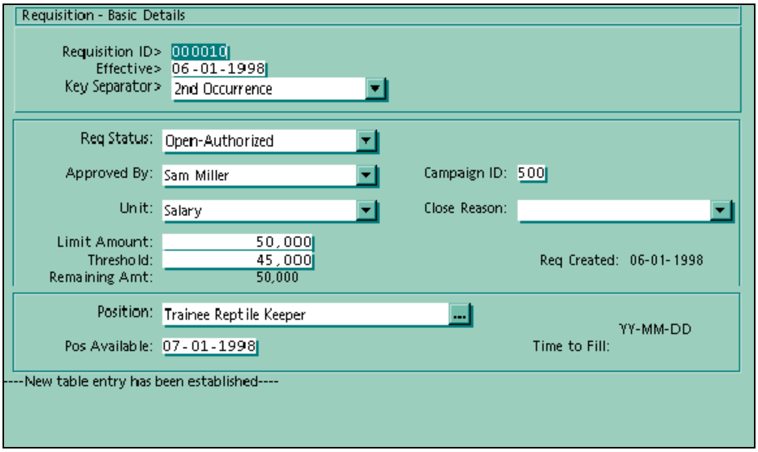
b) View the Trainee Bird Keeper Requisition using the Position and the Requisition Status option. What displays on the form?

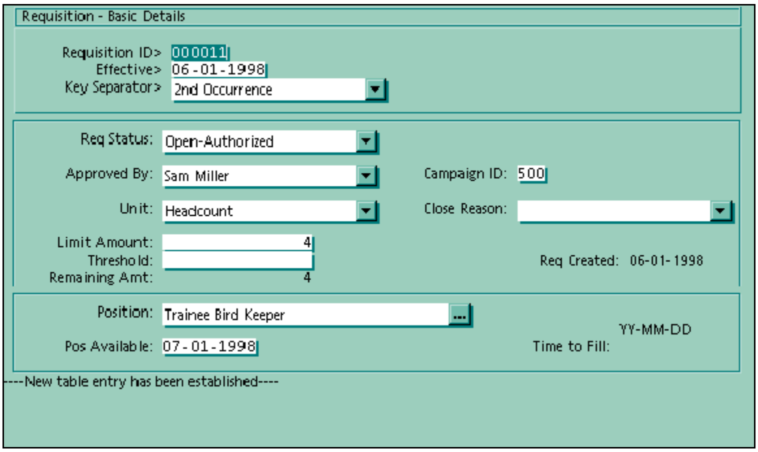


c) What would happen if a match could not be found?

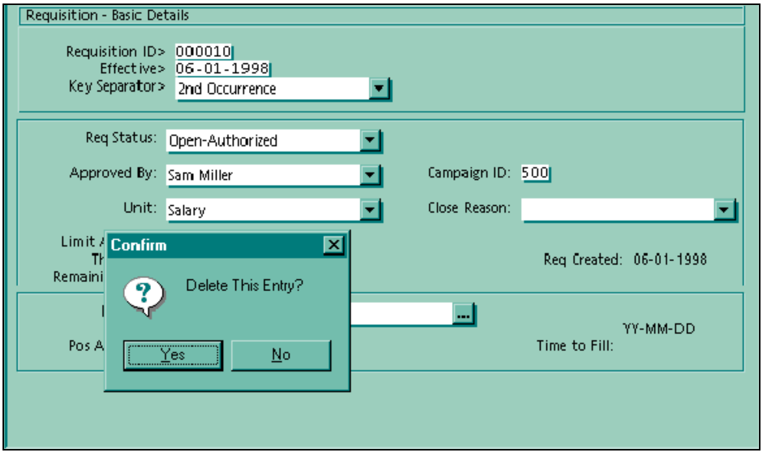
If no matching Requisition records are found, you will see a 'Complete' message at the bottom of the form.

3. Authorize both Requisitions and add the Campaign ID text box.





4. Delete the modified Requisition for the Trainee Reptile Keeper.



Review of Questions Answered

1. How and why can a Requisition status change?

   A Requisition's status when it is first created must be Open-Not Authorized.

   Pending Closure shows that the Limit Amount has been fulfilled, but that some of the Requisition Candidates still have a status of Selected/Not Empl'd. The Requisition's status changes to Closed only when all the Requisition Candidates filling the vacancies it represents have a status of Selected/Employed and there are no other Selected/Not Empl'd candidates.

   A Requisition's status can revert from Pending Closure back to Open - Authorized if a candidate who was Selected/Not Empl'd should withdraw.

   A Requisition's status cannot be changed to Closed if there are still Requisition Candidates assigned to the Requisition with a status of Selected/Not Empl'd.

   You can change the status manually or it can be changed automatically as a result of other processes.

2. What can you do to rectify a change made in error to a Requisition's basic details?

   If you change the Requisition status you will be prompted to also change either the Effective Date or the Key Separator for the Requisition. The original Effective Date of the first Requisition for this Requisition ID is stored and displayed on each succeeding Requisition occurrence.

   You may change the Position field only if the Requisition Status is Open - Not Authorized.

   To effect a recruitment freeze, change the Requisition Status to Closed - thus preventing candidates from being assigned against Requisitions. You can use the Close Reason *field to record the reason for the temporary closure of the Requisition, for example, Recruitment Freeze.*

Changes may be made to the Approved By, Pos Available, Campaign ID, and Close Reason fields as needed.

No changes are allowed to a Requisition whose Requisition status is Closed.

If a change to a Requisition's basic details has been made in error, that record should be deleted. However, the record can be deleted only if no Requisition Candidates are associated with it. Deletion of the original Requisition record is not allowed.

3. How do Requisitions and Position Administration interact?

   If you are using Position Administration along with Requisition Administration, you must link each Requisition with a Position. By doing this you can search for all Requisitions associated with a specific Position.

Creating and Maintaining Requisition Candidates

Apply the Concept

1. True or False. Explain any false answers.

   a) Both Requisition Administration and Applicant Administration will reject a candidate record if no matching Requisition exists on the file.

   True.

   b) You can create a Requisition Candidate record in any Organization by using the Job Or Position Applied For form (003SCR).

   True.

   c) Requisition Candidate records can be added even if the associated Requisition status is Closed.

   False. A Requisition Candidate record will be rejected if the associated Requisition status is Closed. The form appears in View Mode only with a message that reads, 'Warning—This Requisition has a status of Closed'.

2. Consider your current candidate process. Describe the tasks and decisions your organization would make to implement Requisition Administration.

   Your answer is specific to your organization.

   Cyborg Answer: Requisition Candidates can be created manually using the Requisition Candidate - Basic Details form (R11SCR) or automatically by using the Job Or Position Applied For form (003SCR).

3. True or False. If false, explain.

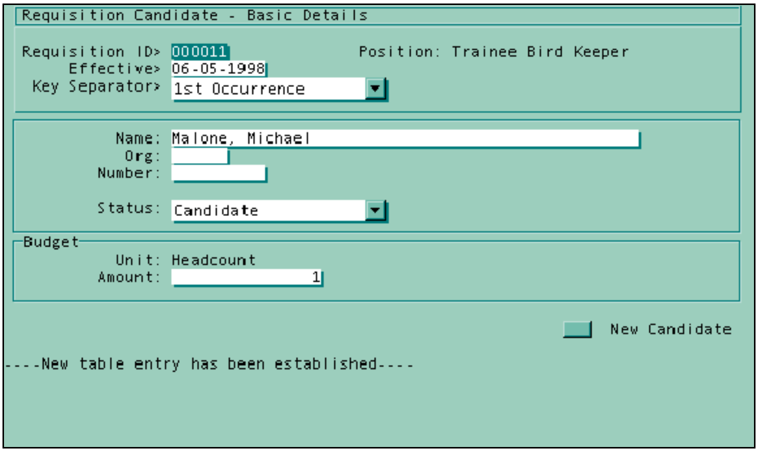
   When first created, a Requisition Candidate's status must be Selected/Not Empl'd.

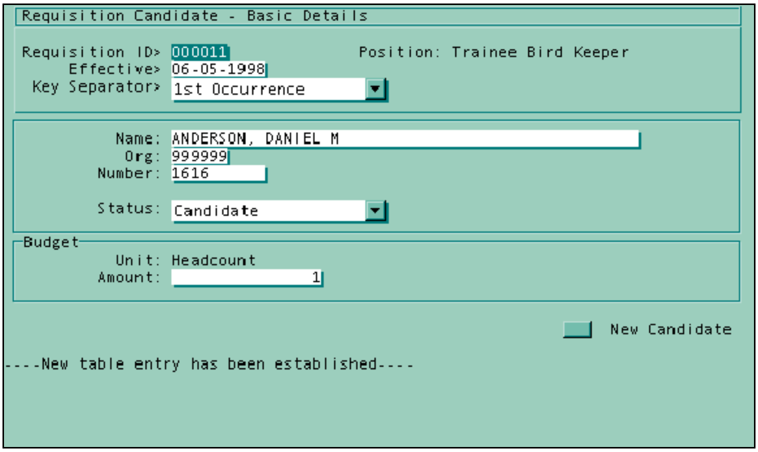
   False. Requisition Candidate records, regardless of the method used to create them, must have a status of Candidate.

Extended Practice

1. Create two Requisition Candidate records.

   Facts: Effective today, you received two Requisition Candidates for the Trainee Bird Keeper Position. One is an external candidate, and one is an internal candidate.





2. Modify each of the Requisition Candidate records to show that they have been Selected.

Requisition Candidate - Basic Details

Requisition ID> 000011 Position: Trainee Bird Keeper
Effective> 06-05-1998
Key Separator> 2nd Occurrence

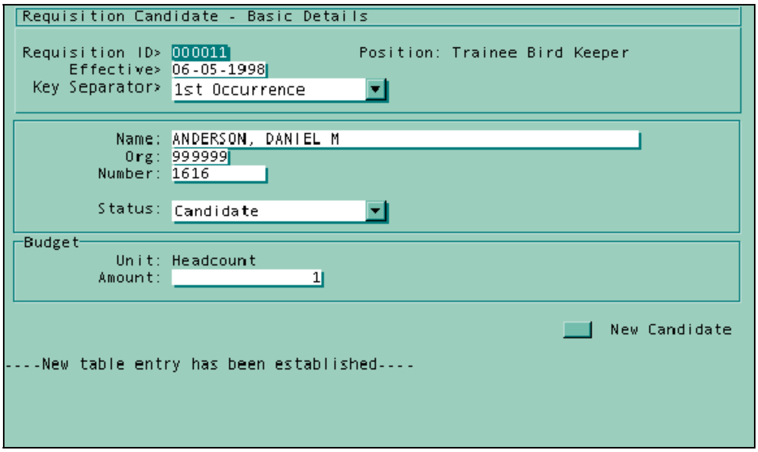
Name: Malone, Michael
Org:
Number:

Status: Selected/Not Empl'd

Budget
Unit: Headcount
Amount: 1

New Candidate

----New table entry has been established----



Requisition Candidate - Basic Details

Requisition ID> 000011 Position: Trainee Bird Keeper
Effective> 06-05-1998
Key Separator> 1st Occurrence

Name: ANDERSON, DANIEL M
Org: 999999
Number: 1616

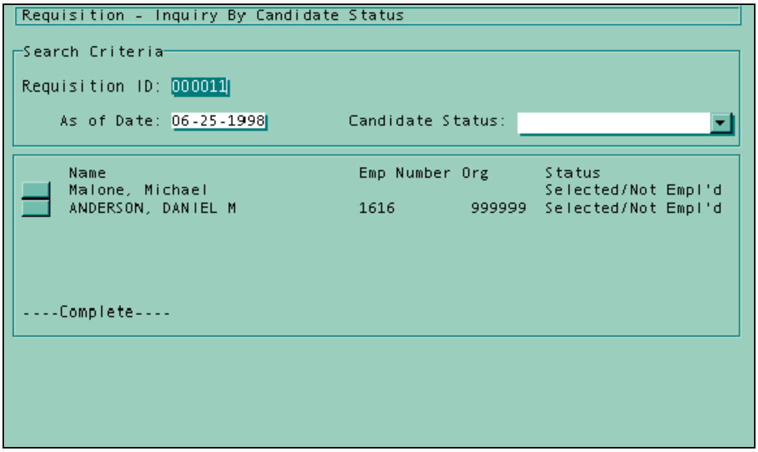
Status: Candidate

Budget
Unit: Headcount
Amount: 1

New Candidate

----New table entry has been established----

3. View the Trainee Bird Keeper Requisition Candidate records using the Requisition ID and 'as of' date options. What displays on the form?



Review of Questions Answered

1. What methods are available for creating Requisition Candidate records?

   Requisition Candidates can be created manually by using the Requisition Candidate - Basic Details form (R11SCR) or automatically by using the Job Or Position Applied For form (003SCR). Up to 9,999 candidates may be recorded for a single Requisition.

2. How and why can a Requisition Candidate status change?

   A Requisition Candidate's status when it is first created is Candidate. The Requisition Candidate status can be changed manually or automatically as the result of other processes.

   Manually change the status of candidates who have been rejected to Not Selected. If a candidate has been offered a Position, manually change the status to Selected/Not Empl'd. If a candidate notifies you that he or she no longer has an interest in the Position, manually change the status to Withdrawn.

   The Requisition Candidate status can also change because of other processes. If the Requisition status changes to Closed because all the vacancies have been filled, Requisition Candidates with a Candidate status are changed to Not Selected.

   The Requisition Candidate status can also be changed as a result of entries made on these forms:

   - Incumbency - Basic Details form (M40SCR)
   - Set Up A New Employee form (NH-SCR)
   - Employee Information form (EF-SCR)
   - Applicant Transfer form (ET-SCR)

3. What can be modified on a Requisition Candidate record?

If you change the Status entry, you will be prompted to also change either the Effective Date or the Key Separator for the Requisition Candidate.

You may create a new occurrence and manually change the Status field to any other option except Selected/Employed. That change may take place only through the hiring process.

If you change the Status from Candidate to Selected/Not Empl'd:

- The Requisition status must be Open-Authorized; otherwise, a Reject message is displayed that reads,'Requisition Status does not allow selection'.

- The Budget Amount may not exceed the Requisition Remaining Amount; otherwise, a message is displayed that reads, 'Candidate amount exceeds remaining limit'.

- The Requisition Remaining Amount field is updated.

Once a Requisition Candidate has a status of Selected/Not Empl'd or Selected/Employed, any changes that you make to the FTE, Hours, Headcount, or Salary are checked to determine whether the new value is within the Requisition Limit. The Budget Amount must be equal to or less than the Requisition Remaining Amount; otherwise, a message is displayed that reads, 'Candidate Amount causes Requisition Limit to be exceeded'. Changes to the Requisition Candidate Budget Amount cannot be made if the Requisition status is Closed.

If a Requisition Candidate's basic details have been established in error, that record should be deleted. However, the record can only be deleted if there are no modified Requisition Candidate records associated with it.

Changed Procedures when using Requisition Administration

Apply the Concept

True or False. Explain any false answers.

a) The Employee Information form (EF-SCR) and the Set Up A New Employee form (NH-SCR) display a second panel for entry of Requisition Administration data if both Position Administration and Requisition Administration are in use.

True.

b) If the second panel of the Employee Information form (EF-SCR) is processed, there is no effect on the Requisition Candidate - Basic Details form (R11SCR).

False. After the form is processed, a modified Requisition Candidate - Basic Details record (R11SCR) is automatically created using the employment date and a status of Selected/Employed.

c) If Position Administration is in use, an applicant transfer will reject if the employee has any current or future-dated Positions assigned.

True.

d) The Job Or Position Applied For form (003SCR), from Applicant Administration, cannot be used with all your Organizations, only your applicant companies.

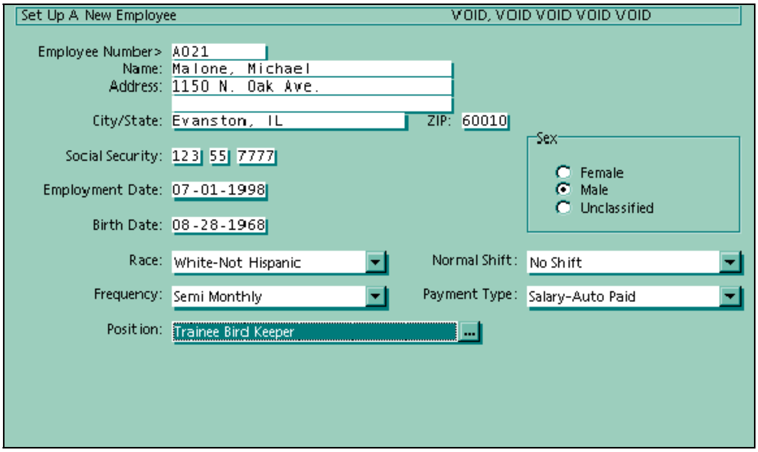
False. The Job Or Position Applied For form(003SCR), from Applicant Administration, has been changed and can now be used with all your Organizations, not just your applicant companies. This means that the form can now be used for your internal candidates who are not in an applicant Organization.

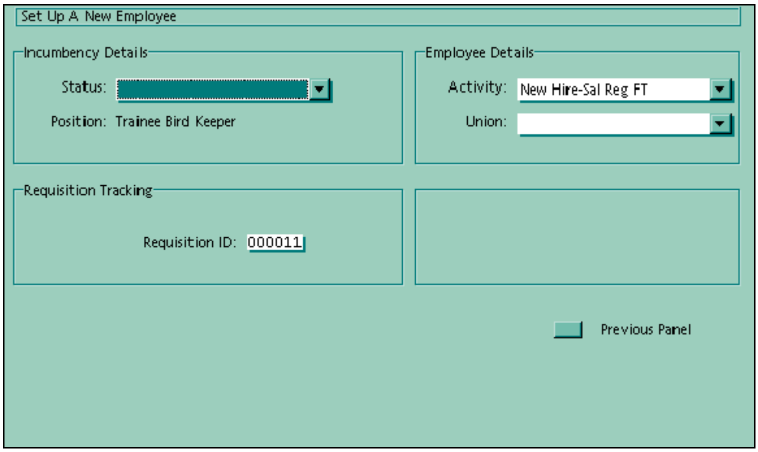
e) The Job Or Position Applied For form (003SCR) can continue to be changed during the candidacy and will continue to update the Requisition Candidate - Basic Details form (R11SCR) data. Once another Requisition Candidate - Basic Details form (R11SCR) entry is made, no further changes are allowed on the Job Or Position Applied For form (003SCR).

True.

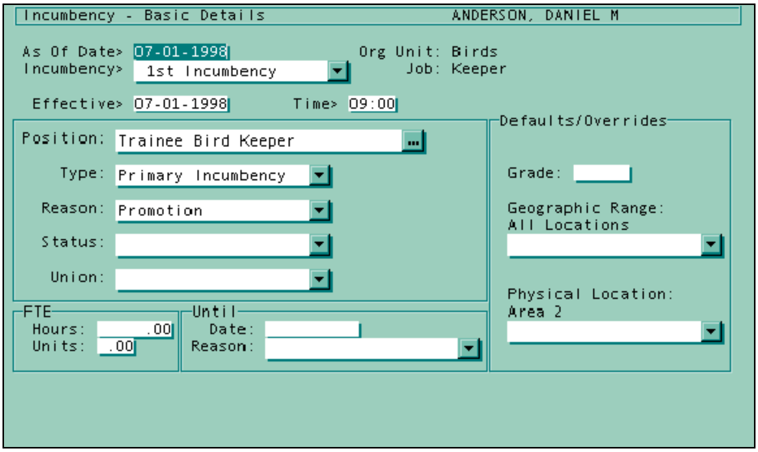
Extended Practice

1. Hire the external Selected Candidates for the Trainee Bird Keeper Position by using the Set Up a New Employee form (NH-SCR).



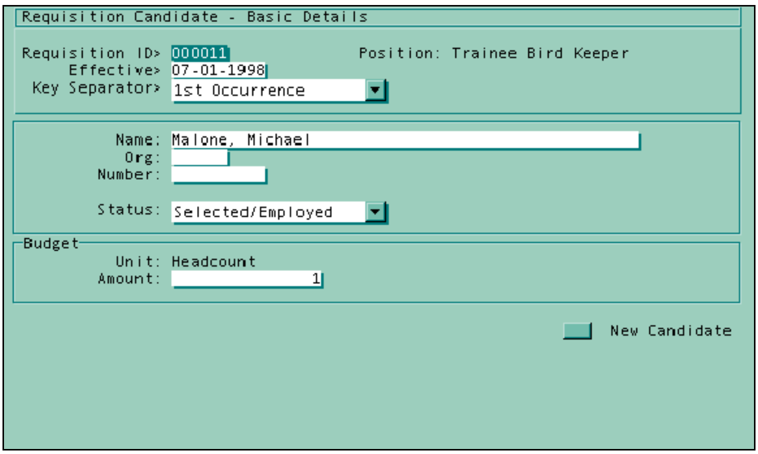


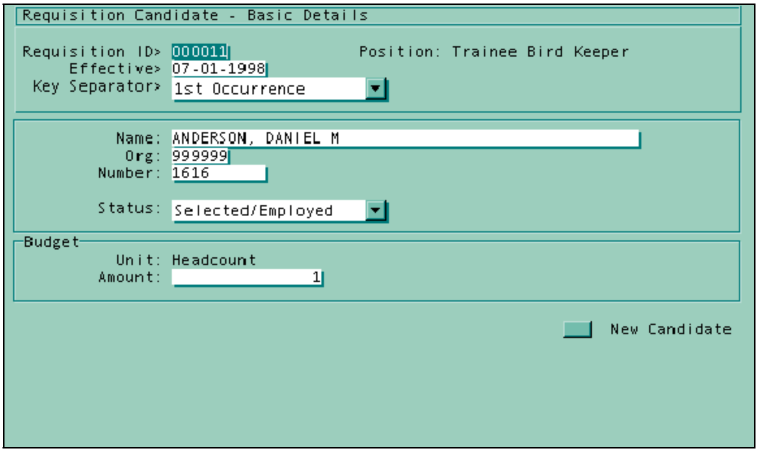
2. Hire the internal Selected Candidate for the Trainee Bird Keeper Position by using the Incumbency - Basic Details form (M40SCR).



3. View the resulting Requisition Candidate - Basic Details form (R11SCR) for each candidate. What is the status for each candidate?

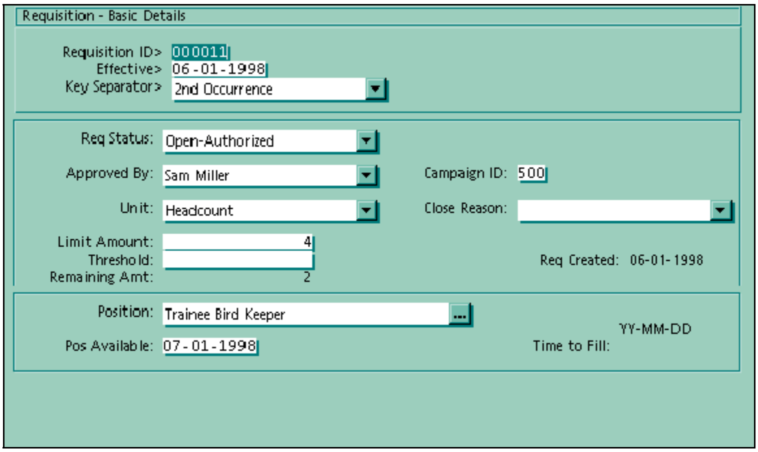
Selected/Employed





4. View the resulting Requisition - Basic Details form (R10SCR). What is the Requisition status?

   Open-Authorized, with the Remaining Amt set to 2.



Review of Questions Answered

What are the differences in form procedures and processes when using Requisition Administration?

If Position Administration is not in use, but Requisition Administration is, the following forms are processed differently:

Form	*Form Changes*	*Second Panel*	*Other Processes Affected*
Employee Information	*New Requisition ID field*	*No*	*Creates modified Requisition Candidate - Basic Details form (R11SCR)*
Set Up A New Employee	*New Requisition ID field*	*No*	*Creates modified Requisition Candidate - Basic Details form (R11SCR)*
Applicant Transfer	*New Requisition ID field*	*No*	*None*
Job Or Position Applied For	*Requisition ID has 6 positions instead of 8*	*No*	*Creates new Requisition Candidate - Basic Details form (R11SCR)*

If both Position Administration and Requisition Administration are in use, the following forms are processed differently:

Form	*Form Changes*	*Second Panel*	*Other Processes Affected*
Employee Information	*New Position field*	*Yes*	*Creates modified Requisition Candidate - Basic Details form (R11SCR) and Incumbency - Basic Details form (M40SCR)*
Set Up A New Employee	*New Position field*	*Yes*	*Creates modified Requisition Candidate - Basic Details form (R11SCR) and Incumbency - Basic Details form (M40SCR)*

Form	***Form Changes***	***Second Panel***	***Other Processes Affected***
Applicant Transfer	*New Position field*	*Yes*	*Creates modified Requisition Candidate - Basic Details form (R11SCR) and Incumbency - Basic Details form (M40SCR)*
Job Or Position Applied For	*Requisition ID has 6 positions instead of 8*	*No*	*Creates new Requisition Candidate - Basic Details form (R11SCR)*

Glossary of Terms

.EXE
A binary file containing a program in machine language that is ready to be executed.

.INI
A file that contains the parameters (values) used by the .exe file (program).

360-degree appraisal
Appraisals that include evaluations from an employee's managers and supervisors, peers, subordinates, and even customers, clients, and suppliers.

Absence data
Employee-level absence information that is entered on the absences forms.

Absence point
User-defined number that may be assigned for a particular absence and that can be totaled over time to determine if an employee is within the accepted number of absences for a time period.

Absence type
A classification of an employee absence, such as 'jury duty' or 'sick'. Employee absences are recorded by date and absence type.

Account timeout
The period of time that elapses before a user's account becomes invalid because of inactivity.

Accumulator id
A three-position, alphanumeric identifier for a benefits accumulator.

Acrobat
A suite of programs developed by Adobe Systems, Inc. For creating and distributing electronic documents. Programs in the suite allow you to create a portable document format (PDF) file for a document. You can then distribute the PDF file electronically to people who view the document with their freely distributed acrobat reader. People viewing a PDF file (or document) with the Acrobat Reader see the document with the exact layout intended by the author.

Action button
An action button performs an action such as saving the information you entered or telling the system you finished reviewing a page. An action button consists of an icon (or button) accompanied by underlined text (link text). For example, at various places throughout eCyborg Interactive Workforce you may see an action button displaying a check mark accompanied by the underlined text 'save changes'. You can click either the text or the button to save your changes to the page.

Activity code
Describes the clock transaction (ring) activity, such as clock start or meal end.

Activity types
With the time and attendance solution, you can set up the system so that an employee or group of employees may clock in and out for up to eight different activities: clock-in (1), break 1 start (2), break 1 end (3), meal start (4), meal end (5), break 2 start (6), break 2 end (7), and clock end (8).

Actuarial valuation
An examination of a pension plan to determine if contributions are being accumulated at a rate sufficient to pay the promised pensions.

Administration home page
The administration page that displays when a user logs on using his or her administrator user ID and password. The administration page displays links to individual administrator pages (eCyborg Interactive Workforce, Human Resources Administration, Benefits Administration, and Payroll Administration).

Administrative User ID
User ID created by an administrator with the role of eCyborg Interactive Workforce administrator. This ID

differs from the employee user ID generated for the administrator.

Aggregate tax method
Method of calculating taxes in which year-to-date income is used to project annual wages (using prorating), on which taxes are calculated. With this method, the amount of tax withheld can vary from pay period to pay period. This method is useful in preventing a salesperson from being over withheld as the result of fluctuations in commission over various pay periods. It is activated on the payroll solution by selecting aggregate/cumula tax (9) from the Withholding Method (PR09) option list on the Employee Tax Record Maintenance form. It is also referred to as cumulative tax calculation method.

Annualization
Process of calculating the annual amount of pay based on the number of pay periods and pay period amounts. Calculated by multiplying the number of pay periods in the year by the current taxable wages in the pay period.

Annualization factor
The factor that is used to multiply current pay period wages to determine annual wages. For example, a monthly pay frequency has an annualization factor of 12. The Payroll Solution typically calculates income taxes on the basis of annual wages. The annualization factor is entered by selecting an option from the Annualization (PP33) option list on the Company Pay Frequencies form for each pay frequency.

Annuitant
Someone entitled to receive or currently receiving payments from an annuity.

Annuity
A contract providing an income for a specific period of time.

Applicant
A person who is applying for a job or position in your organization. Internal applicants come from within your organization while external applicants come from outside of your organization.

Appraisal rating
A method of ranking the performance of an employee during a given period using options ranging from 1-outstanding to 5-unsatisfactory.

ASCII
American **S**tandard **C**ode for **I**nformation **I**nterchange. The basis of character sets used in almost all present-day computers; US-ASCII uses only seven bits to convey some control codes, space, numbers, most basic punctuation, and unaccented letters a-z and A-Z.

Ask Me wizard
A natural language, full-text search facility within the online help. This allows users to type in a question, the wizard interprets the question, and displays related topics.

As-of reporting
Ability to report on data for a specified date or date range.

Audit record
A snapshot of information entered on a form. Audit records are stored on the employee database and are displayed on audit reports in an is/was reporting format. Adjustments and time entries are stored as audit records and are extracted for a payroll run in which they update the employee's record.

Audit report
A report that is available after the running of a program; it lists created records as well as error messages for records that could not be created.

Audit trail
A report of changes made to your employee database, such as the Payroll Audit Trail (0101) report.

Authorized absence
Absences that are generally considered as paid time away from regularly scheduled work.

Automatic plan
A plan that has been defined with a default option and default pre- or posttax indicator (also known as core/default plan).

Average deferral percentage
Percentage used in nondiscrimination and compliance testing mandated by US law. The calculation is defined as the contribution divided by the compensation.

Average rating
A rating used for performance appraisal systems with categories weighted by relative importance, where the average score reflects the weighted scores.

Back
Takes the user back to the previous page.

Badge
Time and Attendance Administration can be set up to use two different types of badge readers. The type of badge your organization uses, is determined by your third party badge reader software. The two types of badges are magnetic badges and bar code badges.

Badge error
Occurs when a badge is used to create a clock transaction (ring) and an employee has not been assigned to the badge.

Badge number
Up to ten-character ID stored on employee badges and clock transactions (rings) that tie clock transactions (rings) to an employee on the ***Employee Database*** (on page 172).

Banner
Banner forms separate groupings on forms produced from the Federal, State/Local, and Employee Queues.

Batch
A group of transactions submitted to the batch payroll processing system. Also, a collection of time entries that corresponds to an employee group, such as department.

Batch control record
Precedes all transactions separated by group; used to identify the company to which the transactions in that group apply. By entering anticipated totals for dollars and hours on the batch control record, you may verify your totals against those accumulated by the system.

Batch layout facility
A program that produces a segment layout for loading forms via batch. This was formerly known as BATCHL.

Batch number
An alphanumeric field on the batch control record containing a user-defined value used to identify a unique group of time entries or transactions.

Batch processing
A processing method that runs in the background and requires limited intervention.

Benchmark job
A standard or point of reference for determining total job points.

Beneficiary
A person named by the participant in an insurance or pension plan to receive any benefit provided by the plan if the participant dies.

Benefits control number
A four-position, alphanumeric identifier that specifies which tables are accessed for an organization.

Benefits statement
Report that indicates the coverage and cost of each benefits plan in which an employee participates.

Big option list
A large option list that includes a search facility. This was formerly known as a big codeset.

Bridge loan
A loan made to assist a relocated employee in purchasing a new residence before the sale of their old residence is complete.

Browser
Software application used to locate and display web pages. Modern browsers give users access to graphics, text, and multimedia information, including sound and video.

Budget plan year
A twelve-month period over which a salary budget is effective.

Budget scenario
The result of creating one or more salary plans in order to see the effect of different increase policies on the budget.

Budget setting
The process of analyzing and selecting an organization's salary budget for the coming plan year.

Cafeteria plan
A specific type of flexible benefit plan that allows employees to select their benefits from a number of benefit plans. This term may be used interchangeably with flexible benefits plan.

Calculation option list
An option list that contains calculation formula. This was formerly known as a calculation codeset.

Candidate
A person who is applying for a job or position in your organization and is under consideration.

Career planning
Providing career incentives such as advancement and additional education and training for individual employees in order to meet projected organizational needs.

Carrier record
A carrier record supplies information from one application area to another application.

Case-sensitive
A program that distinguishes between uppercase (capital) and lowercase (small) letters. A case-sensitive program that expects you to enter all commands in uppercase will not respond correctly if you enter one or more characters in lowercase.

Catalog
A file (with the extension of .cat) that contains all the information necessary for Impromptu to access and retrieve information from a relational database. The catalog provides a business view of the data, as well as information about what database to access, where the database is stored, and how the tables in the catalog are joined in the datamart.

Category code
General term used to refer to the option selected from category (PP01 and PP02) option lists on the company earnings and company deductions forms. It is used to indicate the type of earning or deduction.

CE/H
Abbreviation for considered earnings/hours.

Change control facility
A facility for updating and comparing your system control repository. This was formerly known as MAINTI/MAINTO.

Check box
A standard windows control that displays a yes/no setting, either checked (yes) or unchecked (no).

Check digit
Unique identifier that is generated by the TBLCHK program and used by the system to check the table relationship records.

Checklist
A list of tasks to be performed in sequence. The checklist displays within the navigator area. Checklists link tasks and other checklists together to perform work flow functions. Users can display a checklist by selecting a checklist icon within the tasks in the navigator.

eCyborg Interactive Workforce specific—a list of tasks/pages generally displayed in a chart with hot spots (links) for the checklist items. The user clicks the link to access the page.

Checklist item
An item appearing within the navigator when a checklist is being displayed. Checklist items include tasks, dialogs and even other checklists.

Checklist item status
Defines the status of a checklist item. These can be:

- Available to perform
- Required
- Not available
- Already completed

Checklist margin
The area of the navigator that displays the checklist item status when a checklist is being displayed.

Checkmark
If in the done column of a eCyborg Interactive Workforce checklist, indicates that an item on a checklist is complete. Can also indicate OK, finished, submit, and so forth.

Class
A class is an occurrence of a course that is specific to a location and a date, that is being administered using Training Administration. For example, 'eCyborg: Using the Web Client′ on Thursday, December 21, in Chicago is a class of the course 'eCyborg: Using the Web Client'.

Class evaluation results
These are the results as entered on the evaluation forms filled out by the class participants upon completion of the class. These results are recorded on the class evaluation results form.

Client data file
File containing information replicated from the System Control Repository. Used by client workstations to improve response time, since editing can be performed locally. May be located on each client workstation or may be located on a server and be shared by multiple client workstations on the network. Formerly known as the Client Control File.

Clock in and out
Also referred to as swipe/swiping the clock. When an employee uses their badge to record an activity time, they must pass their badge through the badge reader. This action can be referred to as clocking in and out.

Clock transaction
Record containing the information needed to create time entries for payroll processing. Clock transaction (ring) information includes date, time, and badge number. A clock transaction (ring) is created when a badge is swiped through a clock.

Clock transaction warning
Occurs when a clock transaction (ring) time falls outside of an employee's schedule warning times.

Closing costs
The costs associated with the purchase of a new house.

CLP
Abbreviation for certificates, licenses, and permits.

Codeset
A list of valid code values and associated descriptions from which you may select an appropriate entry. This is now known as an option list.

Coefficient
Customer-defined value used in the formula to calculate a new salary grade midpoint value.

Combined register (2222) report
A report that provides a detailed printout of all earnings, hours, taxes, and deductions for all the payments and adjustments made on a payroll run. It is Report Generator 2222.

Command button
A standard windows control that initiates a command of sets an option (previously known as push button).

Common tax organization
A method of setting up taxation in an organization in which all necessary tax specification records are contained in a single organization. The common tax organization often handles tax specification records more efficiently, since it avoids duplication of the federal tax records and of any state or local records used by multiple companies.

Communication event
A letter or email that can be triggered automatically or manually within the system. Communication events are set up by the system administrator and usually include data from a form or record.

Compa ratio
The ratio of a given salary compared with the midpoint of the salary range. The formula is the salary divided by the midpoint.

Competency
A requisite capacity to perform a single or set of skills or activities.

Complement limit
A 'complement limit' is the maximum number of complement units that can be assigned to a position at any one time.

Complement position
A 'complement position' is a position that is included in complement control.

Complement unit
A 'complement unit' is the type of unit used to measure the value of a position, for example, headcount, fte or hours.

Compliance
Conformity in fulfilling legal requirements.

Component
The first level of functional organization on the navigator or menu, such as employee resourcing or employee development.

Component icon
An icon that denotes the current component. There are a number of components within the system. Each component appears as an icon on the navigator.

Component plan
Any plan included under the flex master plan or grouped together under a group master.

Condition
Predefined criteria that can be added to a report's filter.

Considered earnings
An employee's paid earnings that are to be accumulated, based on plan rules, for use in determining credited service or calculations of final benefits amounts.

Considered earnings/hours (CE/H) accumulators
Used only in benefits plans to accumulate the earnings and hours an employee has acquired toward eligibility for a deferred plan. Accumulators may be retained on a monthly, quarterly, or annual basis.

Considered hours paid
Actual number of hours for which an employee was paid and that are to be accumulated based on plan rules.

Considered hours worked
Actual number of hours an employee worked. These hours are to be accumulated based on plan rules for use in determining credited service for a plan participant (or for a non-participant if eligibility has been met).

Consolidated reporting
Option that enables packaged reports to be processed for all organizations (consolidated).

Customer-defined value used in the formula to calculate a new salary grade midpoint value.

Context-sensitive help
Information about an object and its current condition. It answers the question 'what is this?'

Contribution type
The type of contribution being made to a benefits plan. The system allows for the deduction and accumulation of up to five different contributions per plan: basic employee pretax, basic employee posttax, supplemental employee pretax, supplemental post-tax, and organization.

Control 1-2
A company or group of employees (now known as an organization).

Control levels
A hierarchy of values used to determine the breakdown of an organization for reporting purposes. The values are user-defined.

Control number
An alphanumeric designation assigned to a table to define the table records that will be used for each organization.

Conversion
A method for transferring data from either a manual or automated system into the system.

Co-ordinator
A coordinator is an instructional institution, organization or person who administers training courses.

Core plan
One of the plans that make up the minimum benefits in which all eligible employees are required to enroll—for

example, medical and life. Employees who fail to return enrollment forms with their benefit choices may be automatically enrolled in the core plans (also known as default plans).

Cost categories
Cost categories are classifications or divisions used to separate costs for training into broad groupings, for example, equipment or operating costs.

Cost types
Cost types are used to further define training costs. For example, the category of equipment could be further broken down into the cost type of overhead projector and monitor rental.

Costing
Projecting the future cost of a benefits plan contribution for budget purposes.

Course
A course is a separate unit of instruction in a subject being administered using the training administration solution. For example, 'eCyborg: Using the Web Client′ is a course. This may be applied to a training course provided internally or externally.

Course directory
A course directory is a list of all available courses.

CPI
Characters **p**er **i**nch

Credited service
The number of years of employment for which an employee is given credit for use in determining final benefits amounts.

Crew
A group of employees who rotate from one schedule assignment (shift) to another, following a rotation pattern.

Crew code
A unique, one-character, alphanumeric identifier of a crew.

Cross-reference keys
Provide direct query access to data within the system database.

CSL
Abbreviation for ***Cyborg Scripting Language*** (on page 169).

Cumulative data
Also called 'to-date data'. includes payroll earning, deduction, net pay, taxable wage, and tax to-date figures for employees.

Cursor
A special symbol, usually a solid rectangle or a blinking underline character, that signifies where the next character will be displayed on the screen. To type in different areas of the screen, you need to move the cursor. You can use the arrow keys or a mouse to move the cursor.

Customer-defined
Values that depend on an organization-specific definition--for example, option list.

CYB88X
An English Language root program used to set the production version switch to on or off, in addition to other automatic settings.

Cyborg Scripting Language
Cyborg's fourth-generation programming language, previously called English Language.

Data extract
Method for extracting information from The Solution Series for the purpose of subsequently loading it into eCyborg Interactive Workforce databases.

Data load
The process of moving data from one system or media to another. It encompasses data mapping, data extraction and conversion, and the actual loading of the data. Also the method of loading data extracted from The Solution Series into eCyborg Interactive Workforce databases using programming scripts.

Data mapping
The process of identifying, comparing, and matching data (field to field) to be converted from one system or media to another.

Database
A collection of information organized so that a computer program can quickly search for and select

specific pieces of data. Think of a database as an electronic filing system.

Datamart
Relational tables with a defined structure that have been designed to automatically accept full datamart extract data seamlessly.

Deduct credits by plan
A method of distributing flexible benefit credits. The total monetary value for credits is prorated based on the employee's pay frequency. Credits are given to employees as earnings added to their pay; the cost of individual employee plans are collected through payroll deductions and listed on the employee's payment stub.

Deduct credits by plan method
A method of distributing flexible benefit credits. Credits are given to employees as earnings added to their pay; the individual employee plan costs are then collected through payroll deductions.

Deduction
An amount subtracted from available net pay. Deductions can be involuntary (child support or maintenance) or voluntary (pension plans).

Deduction cycle
A predetermined schedule for taking voluntary deductions, based on the defined frequency.

De-enrollment
The process of shutting off plan benefits for an employee for reasons other than a separation activity.

Deferred compensation
Any benefit that is not immediately payable to an employee, but is instead deferred to a later date. This term refers to retirement vehicles, including all defined benefit, defined contribution, stock, and thrift/savings plan.

Deferred plan
Any benefits plan in which benefits are not immediately payable to an employee, but are deferred to some later date. This term refers to retirement vehicles, including all defined benefit, defined contribution, stock, and thrift/savings plans.

Delimiter
A character that tells the system where an item of data ends and another starts.

Dependent
An individual who relies or depends on another for his or her support.

Dependent number
A unique number in the eCyborg Interactive Workforce database that identifies an employee's spouse and his or her other dependents.

Detail page
A page in eCyborg Interactive Workforce that displays detailed information. Summary pages contain links to the detail for each record.

Dialog box
A secondary window that appears on the screen to present information or request input. Dialog boxes are generally temporary—they disappear after you enter the requested information.

Disability insurance tax
A tax required by some us states to be funded by employee-paid contributions to pay all or part of the cost of disability insurance coverage. On the Payroll Solution, us state disability insurance tax records are established as Type 4 taxes.

Disciplinary action
Action taken against an employee for violation of an organization policy or procedure.

Discretionary increase
A salary increase amount or percentage determined by a manager according to the guidelines established by the organization.

Display
Make data or images display on a computer monitor.

Display box
An area on a form in which data is displayed (formally known as an inquiry field).

Disposable income
For garnishment purposes in the us, an employee's earnings minus deductions required by state or federal law.

Distributed location
A customer location where data changes are replicated and may be distributed. A DL is identified to the system by a unique 5-position alphanumeric node ID.

Distribution
The process of passing data from a source DL to one or more target DLs.

Distribution rules
A set of parameters that determine how data will be distributed from one DL to another. These are defined at each DL by the owner using the distribution rules screens. Distribution rules are stored in tables that are not replicated (thus, they cannot be distributed).

DL
Abbreviation for ***distributed location*** (on page 171).

Double-click
Click a mouse button twice in rapid succession.

Drop-down list
A drop-down list is a view of the acceptable entry options available for a text box.

Drop-down list box
A standard windows control that displays a current setting but can be opened to display a list of choices. The user selects a choice by double clicking on the choice. The user can type into the field, and the system moves the list of choices to the last letter typed.

Dynamic SQL
Statements created by a program that must be interpreted and converted to executable sql statements at run time.

Earned income credit
A refundable amount that reduces the tax owed by certain low-income individuals in the us who meet adjusted gross income levels.

Earning
Money paid in return for work performed or services rendered. In Payroll Administration, earnings are separated by earning numbers into various categories such as regular pay, overtime pay, shift pay, bonuses, and so forth.

Earnings category
Used to categorize similar earnings. For example, all the overtime earnings can be grouped into category 01, all the shift differentials/premiums into category 06, and so forth.

EBCDIC
Extended **B**inary **C**oded **D**ecimal **I**nterchange **C**ode; binary code for alphabetic and numeric characters developed by IBM for its computers.

eCyborg Interactive Workforce Home
Button on every page that returns the user to the eCyborg Interactive Workforce Home Page.

eCyborg Interactive Workforce Home page
Home page that displays each time employees log on to eCyborg Interactive Workforce after completing the new user tasks on the New User Home page.

Effective date
Date on which an event takes place, for example, an enrollment or benefits plan change.

EIC
Abbrevation for ***earned income credit*** (on page 171).

EL
Abbreviation for English Language, now called CSL (Cyborg Scripting Language).

Electronic Performance Support system
Online tools that help users perform their job quickly and efficiently. EPSS can include online help, computer-based training (CBT), electronic manuals, wizards, and so on.

Email
Literally 'electronic mail'. This is a message that is sent to one or more people within or outside of your organization by an automated email software package.

Employee cancellation
An employee cancellation occurs when an employee is canceled from attending a training class or training program.

Employee Database
The file that contains organization and employee records. This is File02. It was formerly known as the Master File.

Employee Database record
The complete record for an employee. It may be composed of multiple physical records.

English Language
Former name of Cyborg's fourth-generation programming language, now called Cyborg Scripting Language.

Enrollment form
A customer-defined form used by employees to record their benefits elections and any associated dependent and/or beneficiary information.

Entitlement accrual
An accumulation of hours for an employee benefit, such as sick leave or vacation time, commonly known as an accrual.

Entity
Each Organization Unit, Job, Position, and Incumbent is an entity. Together they are entities.

Entry field
An area on a screen or browser page where the user can input information.

Entry form
An entry form is a form used to enter data.

Environment
The host platform and workstations where your Cyborg system resides, and any communication protocols. Also, a work space dedicated to a specific processing type. For example: development, test, and production.

EPSS
Abbreviation for ***Electronic Performance Support system*** (on page 171).

Establishment Reporting
Establishment Reporting occurs when an employer with several business locations chooses to file wage reports, broken down by location or unit, to the Social Security Administration. Each unit is identified by a four-character code, called an Establishment Number. The employer obtains approval from the SSA to use Establishment Reporting. Establishment Reporting does not apply to 1099s.

Event
The combination of a trigger (changes made to system data) and an action (the creation of an email or letter). Events always consist of these two component halves.

Excused absence
Absences from regularly scheduled work that can be considered as either paid or unpaid time off.

Extract file
A data file generated to be used by another system or application.

Federal Insurance Contributions Act
The United States Federal Insurance Contributions Act imposes two taxes on both employers and employees. Tax is withheld from an employee's wages to finance the Old-Age, Survivor's, and Disability Insurance (OASDI) social security program and the Hospital Insurance (HI) medicare program. Employers are then required to match the amounts withheld from employees. On the Payroll Solution, employee information for FICA-OASDI social security tax is entered on tax record 101 and FICA-HI Medicare tax on tax record 103.

FICA
Abbreviation for Federal Insurance Contributions Act.

Field
A data item on the database. This is usually displayed on a form as a text box.

eCyborg Interactive Workforce specific—A space allocated for a particular item of information. A tax form, for example, contains a number of fields: one for your name, one for your Social Security number, one for your income, and so on. Every field has a name (also called a field label).

Filter
Device used by report to select certain rows of information from the database, thus limiting the amount of data from the database to be viewed in the report.

Finished
Users click Finished when they have completed all information on a checklist or other *ESS* page.

Flat rate tax
A US local tax that is calculated as a standard percentage rate and that is calculated in the same way for all employees (that is, factors such as marital status do not enter into the calculation). For many such local taxes, Cyborg does not provide tax specification information on the Tax Authority File. Instead, you need to enter a Tax Specification Record for the tax on a Tax Specification Information form, indicating the tax rate in the Flat Rate text box.

Flex credits
Units granted to an employee in order to purchase benefits under a Flexible Benefits Program.

Flex Master Plan
Defines your Flexible Benefits Program and ties component plans together as a group. Employees are enrolled in the Master Plan and then select the benefit plans in which they wish to participate—for example, medical, dental, and life. Flex master plans are set up in Benefits Administration and used by eCyborg Interactive Benefits to display benefit plans to users for initial and open enrollment.

Flex plan
A benefit plan where, in addition to a core of basic benefits (if applicable), the organization/company allocates to each employee a credit for purchasing additional benefits tailored to their individual needs. Flexible benefit plans may include a flexible spending account.

Flexible Benefits Plan
A specific type of benefit plan that allows employees to select their benefits from a number of benefit plans. This term may be used interchangeably with cafeteria plan.

Flexible Benefits Program
A benefits program in which an organization may allocate to each employee a pool of credits or a monetary amount that is to be used to purchase benefits tailored to individual needs.

Flexible Spending Arrangement
A benefits welfare plan set up as an account in an employee's name that is used to reimburse the employee for certain personal expenses. In the United States, these accounts are provided by employers as a way for employees to pre-fund dependent care, legal services, or medical expenses with pretax currency.

Folder
Logical organization device for the content of a Cognos catalog.

Form
A window of information that appears within The Solution Series, including text boxes and other controls. This was formerly known as a screen.

Form area
An area of the window that contains a form.

Form Builder
A tool provided by Cyborg Systems for use with The Solution Series for designing forms.

Formal education
Education that is obtained from a college or university.

Forward
Displays the next page.

FSA
Abbreviation for Flexible Spending Arrangement.

FTE
Abbreviation for Full Time Equivalent.

FTP
File **T**ransfer **P**rotocol. A means of allowing a user on one computer to transfer files to and from another computer over a network

Full Time Equivalent
The ratio of total working time to the time that represents full time employment for a single employee. For example, an FTE of 0.5 means working half of the time that represents full time employment.

Funeral days
Absences from regularly scheduled work due to a funeral, which at the discretion of the organization, can

be considered as authorized or unauthorized, paid or unpaid time off.

Gap analysis
Comparison of a current state of being with a desired state of being. For example, you could perform a skill or competency gap analysis on individual employees or on the workforce as a whole, comparing the existing state of skills and competencies with the required state or level of skills and competencies.

Garnishment
A legal procedure authorizing a deduction from an employee's earnings to satisfy a legal requirement.

General ledger interface
A file that provides a balanced payroll journal for the period. This file contains journal entries for labor expenses, withheld deductions, income, disability, UI, and other withheld taxes, net pay, and company-paid taxes. The interface may also be produced on paper.

Go to details
Displays a new page with detailed information. Used on summary pages.

Graphical User Interface
The Solution Series provides integrated human resource and payroll functionality via the Microsoft Windows Graphical User Interface. These are the elements that display on your screen.

Grievance
A formal complaint made by an employee against the organization usually because of an unsatisfactory working condition or other work-related dispute.

Gross wages
The total of all earnings paid to an employee.

It is stored in the Total Pay (field 119 of the US Tax Authority File) field of the employee's US FICA tax record 101 (FICA-OASDI). This figure appears on the Combined Register (2222) report as Total Pay. It does not appear on US W-2 forms.

Group box
A standard Windows control that groups a set of controls.

Group plan
Defines any number of benefit plans tied together as a group. Group plans are used to define common eligibility and to cluster plans for reporting purposes.

GUI
Abbreviation for Graphical User Interface.

Handicap
Having a physical or mental disability that substantially limits activities especially in relation to employment or education.

Health and safety profile
Data on the employee record that includes information such as the employee's blood type, language, physician, emergency contacts, and any disabilities.

HED
Acronym for Hours, Earnings, and Deductions. Each earning or deduction must be established in The Solution Series with a unique identifying three-digit code. HEDs are used to record pay, hours worked, and deduction amounts and arrears for each employee.

Help
Hot spot on an eCyborg Interactive Workforce page that displays step-by-step directions for completing the page.

History record
Part of an employee's payment history; a snapshot of a check paid to an employee or an adjustment made to an HED or tax.

Holiday days
The time off that all employees are entitled to based on the decision of the organization or government regulation.

Home page
The main page of a Web site that generally serves as an index or table of contents to other documents stored as pages on the site.

HTML
Abbreviation for **HyperText Markup Language,** the authoring language used to create documents on the World Wide Web. HTML defines the structure and layout of a Web document by using a variety of tags and attributes.

Import facility
A tool delivered with The Solution Series that moves data from an external source to any organization or employee form.

Import record
A line in a spreadsheet or delimited file that contains employee or company data.

Inactive plan
A benefits plan that no longer allows employee enrollment.

Inactive tax record
An employee tax record that is no longer in effect for a given employee. Neither wages nor taxes are accumulated for the particular tax record. However, any wages and/or taxes already accumulated remain until clearing is performed. Such clearing is usually performed in preparing the Employee Database for a new year. The inactive records can be deleted at this time. The process of making a tax inactive is called deactivating.

Incumbent
An incumbent is an employee linked with a specific position. The linking of an employee with a Position is an incumbency. An employee may be linked to more than one position; in other words, an employee with multiple incumbencies. A position to which more than one employee is linked has multiple incumbents.

Information-level security
These records grant access to employee and table data via specific password records.

Initial Administrator
Only user whose user ID and password are created during installation. The initial administrator always has authority to all administrative functions: eCyborg Interactive Workforce, Human Resources Administration, Benefits Administration, and Payroll Administration, and can assign administrative roles to others by creating administrative user IDs and passwords.

Initial passwords
Password generated by eCyborg Interactive Workforce for each user ID extracted from The Solution Series. Users must create a user-defined password when they log on to eCyborg Interactive Workforce for the first time.

InitialAdmin
See Initial Administrator.

Inquiry form
A inquiry form is a form used to view data already entered.

Instructional text
Any paragraph(s) on the page that explain the function of the page or fields to the user.

Internal candidate
An employee of your organization who is applying for another job or position in your organization.

Internet
A global network connecting millions of computers.

Intranet
A network belonging to an organization, usually a corporation accessible only by the organization's members, employees, or others with authorization and used to share information.

Investment funds
Different options or accounts available to employees for allocating their contributions, usually applicable to thrift/savings plans.

IPEDS
Integrated Postsecondary Education Data System.

Job assignment
A job associated with a particular employee.

Job code
A designation for a job assignment.

Job streams
A generic reference, Job Control Language, for your operating system's command language.

Alternately: Jobstreams

Job type
A generic category that further defines a particular job.

Jury duty
This is compulsory service on court appointed juries. Employers are required by law to excuse jury duty

related absences. They are not, however, required by law to pay the employee during this time away from the job.

Label
Text that describes the information the user enters into the field.

Labor record
A record containing the hours, amounts, associated charge-to control levels, and function assigned on the employee's Payroll Home Location/Pay Allocations form.

Leave of absence
Occurs when an employee leaves the organization for a period of time, usually temporary, for personal reasons such as medical leave.

Log off
Logs the user off the system. When referring to the Log Off button, use initial caps.

Logical Employee Model
A collection of default employee information that is used to create a model. Logical Employee Model templates are used when hiring new employees to save time and ensure that critical information is established consistently and correctly. These were formally known as LMODELs.

LPI
Lines **p**er **i**nch

Mailing address
An address, other than your legal residence address, to which you have your mail sent.

Maintenance payroll run
A maintenance payroll run automatically updates organization and employee records, but it does not process time entries or generate payments, pay slips, or deposit advices. It is also used to create payment history records.

Major activity
Event that causes a change in an employee's employment status, such as a new hire, termination, or rehire.

Mandatory field
A field that requires the user to enter information before the user can exit the screen or page.

Map file
Stores the predefined relationships between an import file and a form.

Mass time entry creation
Creating time entries for a group of employees through one program execution, such as for a paid holiday.

Master File (0202) report
A Cyborg report that produces a formatted display of the data in an employee's current batch Employee Database record. This includes the wages and taxes accumulated for the employee, covering current, month-to-date, quarter-to-date, and year-to-date information for individual tax codes. It is report generator 0202.

Matrix ID
Unique identifier for each pay-for-performance matrix.

Menu
A list of choices; the choices are generally links that take the user to another screen or page.

Menu bar item
A menu that appears on the menu bar.

Message area
An area of the window that contains messages or selection lists relevant to the current form. The Message Area can be turned on or off.

Method code
One of many specific routines (usually delivered by Cyborg and identified by a two-character code) used to calculate earnings and deductions.

Midpoint
The middle of the span of currency from the minimum to the maximum of the employee salary grade.

Minimart
Relational tables you create so you can insert data from your Subset data extractions.

Monetary perquisites
A privilege or profit that an employee is entitled to that is incidental to regular wages or salary.

Moving expenses
The expenses incurred by an employee due to moving from one location to another for employment purposes.

Multiple master
A file compression technique that duplicates the current employee Permanent Master Record as many times as there are payments to that employee during one pay period. These multiple masters are detail records reflecting the amounts for the payment being made (current), and the adjusted MTD, QTD, and YTD totals. The system uses multiple master records to create history records showing the current payment figures only.

Navigation bar
In eCyborg Interactive Workforce the Navigation bar shows the name of the page you are using, for example, 'Mailing Address'. The top line of the Navigation bar shows the path you took from the Home page to reach the present page. Links on the Navigation bar let you return to the home page or log off the system.

Navigator
Left pane of the work area which forms the main method of moving through the forms. From the Navigator users select the component, process, and task in which they are interested.

Net credit method
A method allocating flex credits. An employee's cost of benefits is calculated as either a net cash earning or a net deduction from the employee's pay. The net amount is the difference, either plus or minus, between the credits allocated to the employee and the cost of his or her flex benefits choices.

New hire
Process of hiring a new employee for your organization.

New user
A user of eCyborg Interactive Workforce who has not yet completed reviewing and updating their personal information on the New User Home page.

New User Home page
Home page that displays for new users of eCyborg Interactive Workforce until they complete reviewing and updating their personal information.

Node
A Distributed Location.

Node ID
A unique 5-position identifier for a node. The naming convention is defined by the user.

Number registered
This is the number of employees registered for a training class. It is updated and displayed on the Class Schedule form.

Object
Each System Control Repository record type is assigned an object code. A single record type can have several object codes assigned to allow limited display.

Object key
A field that allows you to specify the System Control Repository record group you want to display. The value of this field is dependent on the type of information you want to display.

Obsolete plan
A benefits plan that will no longer be used.

Off cycle
An off-cycle payroll run is an additional payroll for the period just completed. An off-cycle payroll run is commonly used to process nonstandard payments, such as bonuses. It is sometimes referred to as an additional or bonus payroll run.

Online
Turned on and connected, for example, printers are on-line when they are ready to receive data from the computer. Users are considered on-line when they are connected to a computer service through a modem. That is, they are actually on the line.

Open enrollment
A period of time during which employees can enroll in or change their benefit choices for the upcoming year, generally in October or November.

Operator ID
A four-character code that identifies the user to the system.

Option
An item in the option list for a field. This was formerly known as a codeset item.

eCyborg Interactive Benefits and Benefits Administration specific—In Benefits, the plan coverage that an employee selects, such as single or family coverage.

Option button
A standard Windows control that allows you to select from a fixed set of mutually exclusive options (previously known as radio button).

Option list
An option list is a list of options that are available within a Text box. This was formerly known as a Codeset.

eCyborg Interactive Workforce specific—Options available in The Solution Series that the eCyborg Interactive Workforce administrator loads in to eCyborg Interactive Workforce. The options are then available in the drop-down list boxes in eCyborg Interactive Workforce.

Organization
A group of employees who are employed in a common structure, governed by the same set of rules or policies, and eligible for the same earnings and deductions For example, your organization may be structured into parts that represent employee groups such as active, union, retirees, applicants, and so forth.

Formerly known as a company or Control 1-2.

Organization Level 3
A customer-defined value used to determine the breakdown of an Organization for Human Resource reporting or selection purposes. This control level may be translated to a division, plant site, section, and so forth, as defined by you.

Organization Level 4
A customer-defined value used to determine the breakdown of an Organization for Human Resource reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Organization Level 5
A customer-defined value used to determine the breakdown of an Organization for Human Resource reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Organization Level 6
A customer-defined value used to determine the breakdown of an Organization for Human Resource reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Organization Number
A six-character user-defined code that represents an organization; the highest level of the organizational structure in Payroll Administration.

Formerly known as a Control 1-2.

Organization Unit
An organization unit ('Org Unit') is a grouping of Positions within an organization (for example, Accounts Department).

Organization Validation table
A table that validates that an organization is valid and payments can be made.

Organization-specific tax setup
A method of implementing Tax Specification Records in which each organization involved in tax processing contains all the specification records required to process taxes for its employees, as opposed to a common tax organization.

Override file
A file used to maintain COBOL or Report Generator changes to the system.

Packaged reporting
A processing mode in which a job is scheduled to be run at a certain time.

Paid absence
Employee absence that will be paid by the organization. A time entry will be created for this absence.

Parallel run
The process of executing the same programs simultaneously on two separate systems to obtain the same or similar results.

Parameter form
A form that is displayed when certain programs are called from the Navigator or menus. The form facilitates entering parameters for the program.

Password
A secret series of characters, generally user defined, that enables you to access a computer, a software application, or a file. On multi-user systems, each user must enter his or her password before the computer will respond to commands.

In eCyborg Interactive Workforce, the password ensures that unauthorized users cannot access user-specific information.

Password aging
The period of time that elapses before a user-defined password expires and the user must change his or her password.

Pay allocation
A means of allocating, on a percentage basis, employee labor hours and amounts to multiple sets of control levels 3 through 6 and function to accurately reflect employees whose labor must be charged to more than one area within an organization.

Pay document
A pay slip or deposit advice with its associated pay stub.

Pay frequency
The interval at which a group of employees is paid. Examples are weekly and semimonthly. Also referred to as a payroll period.

Pay schedule
A predetermined schedule for a calendar year, identifying period-end and payment dates for each pay frequency.

Pay stub
A preprinted form, corresponding to a check or deposit advice that lists all earning, gross pay, taxes, deduction, and net pay information for an employee.

Pay-for-performance matrix
Chart representation of the variables that result from the combination of salary increase information, how much to give and when.

Payment history record
A record documenting the detail information for a payment or adjustment. Multiple payment history records may be generated for an employee, reflecting multiple adjustments or payments. These records include all earning, deduction, and tax information included in the payment or adjustment.

Payroll home location
The location where the employee is normally assigned to work and where labor distribution information is charged. An employee's home location comprises specific Payroll Levels and is always assigned Allocation Number 01 on the Payroll Home Location/Pay Allocations form. The Function field may also be used as part of a home location, depending on your specific requirements.

Payroll Level 3
A customer-defined value used to determine the breakdown of an organization for Payroll reporting or selection purposes. This control level may be translated to a division, plant site, section, and so forth, as defined by you.

Payroll Level 4
A customer-defined value used to determine the breakdown of an organization for Payroll reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Payroll Level 5
A customer-defined value used to determine the breakdown of an organization for Payroll reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Payroll Level 6
A customer-defined value used to determine the breakdown of an organization for Payroll reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Payroll period
A defined period of time for which an employer pays wages to employees.

Payroll Process Control
A series of forms used during the Payroll Process to determine the type of run (payroll run or maintenance run). Allows you to specify the pay frequencies to be paid and which reports are to be produced.

Payroll run
Updates organization and employee records, processes time entries, calculates employee pay, generates pay documents and payroll reports, including the Combined Register. It also produces a variety of special interface outputs.

PCL
Printer **C**ontrol **L**anguage

PDF
A file format that captures formatting information from a variety of desktop publishing applications, making it possible to have formatted documents appear on the screen and be printed. To view a file in PDF format, you need Adobe Acrobat Reader, a free application distributed by Adobe Systems.

Peer-group appraisal
Appraisal that uses performance evaluations completed by an individual employee's co-workers or project team members.

Pending de-enrollment segment
Plans for which an employee is enrolled, but has lost eligibility, as listed on the Pending Plan Enrollment/De-Enrollment form.

Pending eligibility segment
Plans for which an employee is eligible but not enrolled, as listed on the Pending Plan Enrollment/De-Enrollment form.

Performance appraisal
A periodic assessment and ranking of an employee's skills and accomplishments.

Performance appraisal rating
A method of ranking the performance of an employee during a given period using options ranging from 1-Outstanding to 5-Unsatisfactory.

Performance rating
A method of ranking the performance of an employee during a given period using options ranging from 1-Outstanding to 5-Unsatisfactory.

Performance-related pay
Monetary payments made to employees based on how well an employee has fulfilled job expectations.

Perquisites
Property or privileges extended to an employee.

Personal days
Authorized absences that are generally considered as paid time away from regularly scheduled work, but can be either paid or unpaid.

Phonetic keys
The keys you use to access employee data using the phonetic spelling of an employee's last name.

Pixel
The smallest rectangular area of an image on a screen.

Plan deactivation
A process that makes a plan inactive and prevents future employee enrollment.

Plan ID
A three-position, alphanumeric identifier for a plan in the system.

Plan shutdown
The process of de-enrolling an employee from all benefits plans because of a separation activity.

Plan year
The 12-month period over which a salary budget is effective.

eCyborg Interactive Workforce specific—The calendar, policy, or fiscal year in which the records of a Benefits plan are maintained.

Policy tables
Highest level tables that are used to record the generic (or master) rules for an organization or group of employees. These included your organization's rules relating to working time procedures, such as clocking in and out, docking for lateness, and overtime. Each

policy consists of a Policy Master table and one or more Policy Activities table.

Pop-up menu
A menu that appears when you use the second mouse button within the system. This menu contains context sensitive commands and options that relate to the object you have clicked on.

Portable document format
See PDF.

Position
A specific role with an organization—for example, Accounts Manager.

Alternative definition: to place an object in a specified location.

Position Administration Control Number
Two-character alphanumeric value that tells Position Administration which tables to use for a specific company.

Position complement
A 'Position complement' is the value of a Position. The organization complement is the total value of all Positions included in the complement.

Position in range
The difference between a given salary and the minimum of the salary range, divided by the difference between the range's maximum and minimum, and expressed as a percentage.

Posttax
A contribution made after taxes have been withheld from earnings.

Premium
The amount of money an organization agrees to pay an insurance company for a policy or annuity, or the amount contributed by an employee to the employer to cover the employee's portion of the total premium.

Prenotification
Informing a bank or credit union that an employee will be using direct deposit with them in the future. Cyborg recommends that you fill out the Direct Deposit Information form two pay periods in advance of the first deposit date. This ensures that a prenotification record is provided to the bank or credit union in a timely manner.

Pretax
A contribution made before taxes have been withheld from earnings.

Primary account
The account set up in eCyborg Interactive Workforce to receive an employee's pay or reimbursement checks. After deductions and deposits to additional (secondary) accounts, the remainder of pay is deposited into the primary account.

Process
A subset of a component that logically groups tasks on the Navigator or menu. For example, the process 'Maintain Employee Details' contains tasks such as 'Basic Employee Information' and 'Personal Information'.

Alternate definition: An action that brings about a result.

Process bar
The graphical representation of a process on the navigator. Each process bar is within a Component.

Program
A program is a series of classes being administered using Training Administration. For example, 'The Cyborg Training Schedule for January-June 1996' may be a program consisting of eight different classes.

Alternative definition: a form or other program within the system, accessed directly from the Command dialog box. For example, form EF-SCR is a program.

Protected amount
The amount of disposable income protected from garnishment in the US This amount may vary from state to state.

Prototype HED
An HED defined on a benefits form for use in recording employee/organization contributions when an employee is enrolled in a benefits plan. This allows the setup and maintenance of payroll deductions using Benefits Administration.

Provider
A provider is an instructional institution, organization, or person who is available to teach training courses.

Push button
A button on the interface which appears depressed when clicked on (now known as command button).

Quartile
Points that represent the division of a salary grade range into four equal parts.

Query alternate keys
The keys you use to access the employee master record in an order other than by primary key.

Query primary keys
The keys you use to direct your QUERY program to a record type.

Quick Hire
The process of hiring an employee by entering one two-panel form with the required data elements rather than entering a series of forms.

Radio button
A button on a form that selects an option, the radio buttons that make a field are mutually exclusive (now known as an option button).

Recall
Return a laid-off employee to active status, usually with no affect to benefits.

Reciprocal taxation
Reciprocal tax withholding refers to agreements made between US states and (or) localities regarding income tax calculation and reporting for compensation paid to an employee who lives in one state or locality and works in another.

Record
A complete set of fields, such as the fields that make up a tax form or a name and address record.

Alternate definition: To set down for preservation in writing or other permanent form.

Recruitment
Process of finding and hiring new employees who meet the needs of your organization.

Recycle File
P05IN; A file that contains employee data and pay document information required for payment reconciliation. It also contains time entries to be processed and paid at a later date. This file is used to pass data to the next payroll or maintenance run.

Registration
Registration is the act of enrolling an employee in a class.

Registration number
A three-digit registration number is assigned to employees for tracking purposes when they register for a training class. This enables the order in which the employees registered to be viewed.

Rehire
The process of hiring a former employee of your organization. Typically, a break in service is incurred and benefits must start over (usually requiring a new adjusted seniority date if used in benefits tracking).

Reimbursement account
The account into which employee's travel and other expense type reimbursement checks are directly deposited.

Reinstatement
The process of returning a former employee to active status within a certain time period (such as 90 days), thus qualifying the employee to have certain benefits restored to the original hire date.

Reject time
The point at which an error condition will occur. An error condition must be manually corrected/approved and approved before a time entry can be generated by the system.

Relocation
The process of moving an employee from one organization to another geographic location, whether the move be domestic or international. This process also applies to applicants who are being relocated as part of the hire process.

Remaining net pay
The 'bucket' of money that is left after all employee deductions and taxes have been taken from the employee's gross pay. This 'bucket' of money can then be used for multiple deposits if the enterprise sets up multiple deposit HEDs.

Replication
The automatic process of writing changes made in the Employee Database and option lists and tables in the System Control Repository to the Replication Holding File (FILE08).

Replication Application
English Language program (DSAPLY) that reads records from the Replication Packet File (FILE20) produced by the Replication Reception program (DSRECV) and updates the System Control Repository and Employee Database accordingly.

Replication Distribution
Two COBOL programs that work together to distribute and receive updates. The Replication Distribution Program (DSTRIB reads either the Replication Holding File (FILE08) or a Replication Packet File (FILE20), selects data applicable to a specific DL and writes all necessary data to a new output-only Replication Packet File (FILE21). The resulting FILE21 will be processed on the remote DL via the DSRECV Replication Reception program.

Replication Holding File
FILE08. This file contains additions, changes, and deletions to the System Control and the Employee Database. Data is distributed from and written to this file, based on the data distribution rules configured for the target DL by the source DL.

Replication Packet File
(FILE21/20). This file contains data changes and is created specifically to update a target DL. This information may include Company/Employee data, tables and option lists, and time entry and adjustment records.

Report
The term report refers to a report produced on paper.

Report Generator
A program that produces the batch payroll and the batch payroll reports.

Report Group
A series of packaged reports that are created using the Report Group Activities form and are run together.

Report Group Scheduler
This is the program that allows you to schedule reports. This was formerly known as the Report Scheduler.

Report parameters
Specific guidelines for determining the information to be processed by a given report or program.

Requisition
A formal request to fill a vacancy or vacancies.

Requisition candidate
A candidate for a vacancy represented on a requisition.

Requisition limit
A total unit value of a requisition.

Requisition unit
The value of a requisition expressed as an FTE, hours, salary or headcount.

Retirement
Occurs when an employee retires from the organization.

Return
The activity of an employee returning as an employee to active status, usually following a leave of absence.

Alternative definition: key on keyboard used to perform a carriage return, can also be known as Enter.

Review process
A method used by an organization to evaluate an employee's salary or performance in a standard, timely manner.

Roll-up reporting
Option that enables packaged reports to be processed within organizations (roll-up).

Rotation pattern
A way of describing the working pattern for a group of employees (crew) who regularly work different shifts.

A crew is a group of employees who together regularly work the same schedules according to a rotation pattern.

Safety standards
Legally-mandated workplace safety standards.

Salary budget record
Defines, for each employee, the budgeted increase amount, percentage, and effective date for a specific salary plan year, and the prorated effect of this increase on the budget in terms of amounts and percentages for each employee.

Salary grade
A range of salary amounts associated with a particular job.

Salary grade range
A range of salary amounts associated with the salary grade for a particular job.

Salary plan
A set of rules or guidelines used to budget for salary increases for the coming year.

Salary plan year
A 12-month period over which a salary plan is effective.

Salary range
The span of salary amounts from the minimum to the maximum of the employee salary grade.

Salary review
A periodic evaluation of an employee's compensation.

Salary review authorization form
Hard copy format of the employee criteria necessary to review and approve proposed salary increases.

SAT file
The Solution Series form appearance table. Simple text file that reflects the form's layout.

Save Changes
Saves the page (form) the user completed. (When you click 'Save Changes', eCyborg Interactive Workforce saves the information on the page whether or not the user made changes.)

Schedule Activities table
Identifies activity types for each point in a work day where the process of clocking in and out should be dealt with. Each Schedule activity also contains time parameters that will be used to calculate whether an employee will be docked or credited time.

Schedule assignments
Also referred to as a schedule. This term refers to the details of the Schedule Master tables to which an employee is assigned. These details include the date the assignment took place, the Schedule Number and Sub-Schedule Number, and (if applicable), the crew to which the employee is assigned.

Schedule error
Occurs when a clock transaction (ring) time falls outside of an employee's schedule reject times.

Schedule Master table
Used to set up your organization's Time and attendance rules (such as HEDs and the minimum number of hours an employee must work before a meal deduction is made). A Schedule Master table is associated with a Calendar Routine, earnings Code, and Shift Premium table by entering the appropriate identifier.

Schedule number
A unique three-character alphanumeric identifier used to partially identify a schedule table.

Screen
Now known as a form.

Scroll bar
When information on a page takes up more than one screen of your monitor, the system adds scroll bars to the right side of the screen. On the scroll bar:

- Click the up arrow to move line by line to the top of the page
- Click the down arrow to move line by line to move to the bottom of the page
- Click the double arrows to move several lines up or down the page

Click and drag the bar in the scroll area to manually move up or down the page.

Search argument
The value from an employee's master record used to search benefits tables to apply plan rules to specific groups of employees.

Search type
The definition of a field from an employee's master record to use as the search argument.

Secondary account(s)
Additional account or accounts at financial institutions that employees set up in eCyborg Interactive Workforce receive a portion of their pay. A primary account must be defined before an employee can set up additional accounts.

Security Officer
The assigned employee who is responsible for the setting up and monitoring of the security your Cyborg system.

Self-adjusting taxes
Taxes for which the system automatically recalculates the tax on a cumulative year-to-date basis on each payroll run.

In the U. S. these include FICA taxes: Social Security (tax record 101) and Medicare (tax record 103). The purpose of this calculation is to avoid any differences (of pennies) in FICA tax paid versus FICA tax due at year-end due to rounding on a pay period basis. In addition, certain state disability taxes and employee-paid state unemployment insurance taxes also self-adjust.

Sequential Master File
P20IN; The batch processing version of the Employee Database. This file contains organization and employee data, tax tables, and the object code for programs.

Service interruption
A period of time during which an employee did not maintain an active working status in the organization.

Service method
A calculation option list that determines the method for calculating credited service.

Session
When users log onto a software application, they begin a session. When they log off, they end the session.

Alternate definition: The period of time during which a class is held.

Shift
An employee schedule assignment for a given day. For a rotation pattern, this is a Sub-Schedule Number.

Alternative definition: key on keyboard, typically used to describe key combinations for a shortcut key.

Shift premium
A premium (or differential) added to an employee's regular earnings, overtime earnings, or both. It is represented by a shift code or HED Number.

Shortcut menu
A menu that appears when you right-click within The Solution Series 4. This menu contains context-sensitive commands and options that relate to the object (form, Navigator, and so on) on which you have clicked.

Sick days
The time off that an employee is allowed to take due to illness as a result of an employment contract or organizational policy.

Solution View
An online utility that provides the tools for creating new forms, fields, and report programs without the direct use of Cyborg Scripting Language.

Source DL
The node that owns the data being distributed. Depending on the rules established, the same DL can alternate from source to target.

Special assessment
Extraordinary or temporary taxes, such as additional employer-paid or employee-paid contributions to state unemployment programs or to mandatory health insurance programs.

Spinbox
A control on the interface composed of a text box and increment and decrement buttons that allow you to adjust a value from a limited range of possible values.

Spreadsheet application
Software for recording ledger entries, creating worksheets, graphing data, and other accounting functions.

Standalone Time and Attendance
Customers who are using the Cyborg's Time and Attendance Administration but not the Cyborg's Payroll Administration.

Static data
Includes organization and employee information, such as name and salary.

Static SQL
Data Definition Language (DDL) and Data Manipulation Language (DML) statements embedded in application programs.

Status bar
The bar that appears at the bottom of The Solution Series window. The Status Bar displays useful information, such as your current session number, the currently displayed organization and employee, and so forth.

Statutory employee
Any of the four categories of workers who are independent contractors under common law and are treated by statute as employees. These include:
(1) a driver who distributes beverages (other than milk) or meat, vegetables, fruits, or bakery products; or who picks up or delivers laundry or dry cleaning, if the driver is your agent or is paid by commission.
(2) certain types of full-time insurance sales reps
(3) an individual who works at home on materials supplied by you that must be returned to you
(4) certain full-time traveling or city salespeople.

Social Security and Medicare (FICA) taxes may or may not be withheld. Income taxes are not withheld from a statutory employee. A statutory employee will receive a W-2 with the ‘Statutory Employee’ box checked.

Sub-schedule number
A two-digit numeric text box used to further identify a schedule table.

Succession planning
Finding and developing employees for placement into identified key positions that are expected to become vacant sometime in the future.

Summary page
To help you see information at a glance, eCyborg Interactive Workforce uses summary pages. The summary page displays a short view of detailed information. For example, all your emergency contacts appear on a summary page. You delete the contact or proceed to the detail for the contact from the summary page.

Summary plan
A customer-owned description of a benefits plan.

Supplemental wages
Wages that are separate from regular earnings may be classified as supplemental wages and taxed using the default method. The default method means using a set percentage specified by the tax authority. Examples of such earnings are bonuses and commissions.

Surplus
A 'surplus' is an exceeded complement position.

System administrator
An individual responsible for maintaining a multi-user computer system, including a local-area network (LAN). Typical duties include:

- Adding and configuring new workstations
- Setting up user accounts
- Installing system-wide software
- Performing procedures to prevent the spread of viruses
- Allocating mass storage space

System Control Repository
This is the file that contains system definitions for The Solution Series*,* (FILE01).This was formerly known as the Control File.

System Generator
A type of Report Generator that performs system functions, such as defining data elements and system messages.

Table
Contains an organization's rules and policies and controls what actions take place at the employee level.

Alternative definition: means of displaying information in columns and rows.

Table Definition Record
Table containing data about the Position Administration table records, including the location of keys to associated tables.

Target DL
The node that receives the data being distributed. Depending on the rules established, the same DL can alternate from target to source.

Task
The lowest level of organization on the Navigator or menu, generally equivalent to a form. checklist, or dialog.

Task icon
An icon denoting a task. Task icons describe the type of task, including Forms, Checklists, Dialogs and others.

Tax authority
A government agency to which an employer and employee has statutory tax obligations. The tax authorities for which you handle taxes exist at the federal, state/province, and local levels.

Tax Authority File
A Cyborg-supplied file that contains all the tax-specific information needed to calculate taxes for tax authorities. This includes wage-bracket tables for different marital statuses and information relating to allowances and standard deductions. The sources for the contents of this file are tax specifications published by the various tax authorities.

Tax code
The three-character to seven-character Cyborg-supplied reference code that identifies a tax and that serves as the link between the Tax Specification Record and the employee tax record.

Tax Maintenance File
One of the two Cyborg-supplied tax files. A Tax Maintenance File is a file issued by Cyborg in conjunction with a Tax Update Bulletin (TUB). It contains all the tax specifications that are being updated in the bulletin, in the form of tax specification transactions. These transactions are typically used as input to the batch maintenance run in which tax updates are applied.

Tax specification
Each tax authority publishes tax specification information that specifies how each tax must be administered. This information specifies how employers should calculate taxes and how taxes should be withheld from employees (if withholding applies). The tax specifications can be in the form of tax formulas and (or) tax tables.

Tax Specification record
A record on your Employee Database that contains the tax specifications for a tax. The record contains all the information, as obtained from the governmental authority, needed to calculate tax amounts for the tax. The record may contain more than one tax; for example, US state Tax Specification records contain information for both state income tax and state unemployment insurance. Once a Tax Specification record is activated, tax specification information from the Cyborg-supplied tax files can be loaded onto the record on your Employee Database.

Tax table
A set of information required to calculate a tax, for a specific set of employee parameters. Tax tables are stored and maintained in Tax Specification records. A table typically includes wage and bracket information and data relating to allowances, such as personal exemptions and to standard deductions. There can be several tables relating to marital and resident status in a given Tax Specification record.

Tax type
This term refers to various categories of taxes, for example, income, National Insurance, unemployment, disability, Social Security (FICA-OASDI), and Medicare (FICA-HI).

Taxability
The term refers to whether an hours, earnings, and deductions amount is to be included in taxable wages to be accumulated for a specific tax. If the hours, earnings, and deductions amount is excludable, then the amount is not included in taxable wages. If the hours, earnings, and deductions amount is taxable, then the amount is included in taxable wages. The term fully excludable or fully taxable implies that more than one type of tax is being referenced, for example, state income tax and state unemployment insurance in the US.

Taxable wage base
The taxable wage base represents the maximum amount of an employee's wages on which tax is levied and after which there is no liability. A wage base in the US

typically is in effect for FICA, unemployment taxes, and disability.

Tax-related Regulatory Bulletin
A TUB contains the updates to tax specifications supplied by Cyborg, consisting of a bulletin document, a tax file that contains the updated tax specifications, and a printed listing of tax specification transactions with the updates.

TDR
Table Definition Record.

Template
A basis from which to create a custom item. For example, you can use an existing Cyborg report as a template for your custom report.

Temporary password
A set of alphanumeric characters used with a user ID to limit access to a software application. The system requires that users replace their temporary password with a user-defined password within a certain number of days.

Termination
The activity of an employee no longer being employed by the organization.

Test environment
A separate organization or system partition used only for testing.

Text box
A control on the interface in which text can be entered and edited (formerly known as a field).

Text qualifier
The character surrounding an item between delimiters. All values between the qualifier are data items and are not scanned for a delimiter. This allows a delimiter character, such as a comma, to be a valid data item. Example:

"item 1","item 2","item 3, 4 and 5"

This string contains three data items:

Item 1

Item 2

Item 3, 4 and 5

Although the third item contains a comma, it is ignored as a delimiter because it is between the text qualifier of speech/quotation marks (").

Time entry
The form in which you enter the hours worked for an employee. This was formerly known as a Time Card.

Time entry extract file
A file of time entries external to the Time and Attendance Solution that is used to feed to payroll.

Time entry validation
The Time Entry Validation/Creation program identifies and assigns an activity, for example Clock In (1), to each clock transaction (ring) when performing the validation function. Each clock transaction must be assigned to an activity, in order for time entry hours to be calculated for an employee, for a particular shift. This program validates clock transactions (rings) and generates time entries.

Timeout
The period of time that elapses before a user's eCyborg Interactive Workforce account becomes invalid because of inactivity.

ToolTip
A standard Windows control that provides a small pop-up window that provides descriptive text, such as a label, for a control or graphic object.

Top-down appraisal
Appraisal made by a supervisor or manager of an employee's capabilities. Such an appraisal is generally based on the supervisor's or manager's day-to-day observation of an employee's work performance and will usually include an appraisal interview with the employee.

Trainer
Trainers are set up on the Provider Index Form. They are instructional institutions, organizations or persons who are available to teach a training class.

Trainer code
The trainer code is a four-character value that represents a trainer. This value resides in Option List TR38.

Training area
The training area is recorded on the Class Schedule Form. It is typically defined as the section of the organization to which the training applies, such as manufacturing.

Training class results
These are the class details and absence information recorded on the Process Class Results form. Details recorded include the objectives met when taking a training class.

Training class status
The status value is updated and displayed on the Class Schedule Form. It tracks whether the training class is canceled, full or available.

Training course code
The training course code is a six-character value that represents a training course. This value resides in Option List TR33 and is associated with a course title.

Training plan
A plan of training courses that an employee will attend in the future to achieve the necessary skills to perform a job.

Training reason
The reason for training is used to identify why a training request has been made. For example, the purpose of the training to act as a refresher, to acquire new skills, and so forth.

Training request
A training request is a request for an employee to attend a specific course or class. A formal request for training is not essential. This step could be omitted and the employee could be registered directly in the course of his or her choice.

Transfer
Process of moving an employee from one organization to another organization, such as moving an applicant from the applicant organization to the active employee organization.

Alternative definition: to move data or files from one computer to another

Trend analysis
Reporting or statistics that indicate the rate of change in costs and other elements of a benefits plan.

Trigger
A set of conditions that must occur for an email or letter communication event to start. This can involve the creation, deletion, or modification of forms or checklists within the system.

Tuition reimbursement
Remuneration made to employees for tuition expenses.

Type of training request
The type of training request indicated whether the employee was required to attend the training or whether he or she asked to attend the training.

Unauthorized absence
Absences that are generally not considered paid time away from regularly scheduled work.

Underlined text
In browser applications, text that provides a link to another screen or page.

Unemployment insurance tax
A tax required by some US states to be funded by employee-paid contributions to pay all or part of the cost of unemployment insurance coverage. On the Payroll Solution, state unemployment insurance tax records are established as Type 2 taxes.

Unpaid absence
Employee absence that will not be paid by the organization. A time entry will not be created for this absence.

Upward appraisal
Appraisal that calls for evaluations by those who work under the direction of the employee being evaluated.

URL
Acronym for uniform resource locator. A standard way of specifying the location of an object, typically a web page, on the Internet. URLs are the form of address used on the World-Wide Web. They are used in HTML documents to specify the target of a hyperlink which is often another HTML document (possibly stored on another computer).

User class
Cognos Impromptu assigns security according to configured user profiles. These security profiles are configured by your Impromptu administrator.

User code
A set of characters (up to eighteen alphanumeric characters) that, along with the password, identify the user to the system as a valid user user when they log on.

The user code is case-sensitive (upper case, lower case) and must be entered using the correct case.

User defined password
A set of alphanumeric characters created by users that allows them to view and update information in a software application.

User ID
A set of characters that identify you to the software application. The application contains a list of authorized users by user ID. When you attempt to log on, the system checks the list of authorized users to determine whether you have authority to use the application.

User profile
Used for security purposes to determine what you can and cannot do while you are using the system, and which parts of the system you can access. A user profile is created and maintained for you by a Security Officer. Each user of the system will have a user profile.

Vacancy
An open position that needs to be filled, or an unfilled complement position

Vacation days
The time off that an employee is entitled to as a result of an employment contract or due to length of service.

Validation
The process where the Time Entry Validation program identifies and assigns an activity to a clock transaction (ring) when performing the validation function.

Variant forms
Method of displaying country-specific variation of Cyborg-delivered forms.

Waive
The act of choosing not to enroll in an optional benefits plan.

Warning time
Used to set a period of time after which an employee will appear on the exception report for a particular activity. A Warning condition will allow the creation of a time entry. A Reject condition will not. This is part of the Time and Attendance Administration.

Welfare benefit plan group
First level of the logical organization of welfare benefit plans in eCyborg Interactive Workforce.

Welfare benefit plan subgroup
Second level of the logical organization of welfare benefit plans in eCyborg Interactive Workforce.

Welfare plan
Any insurance or other benefit plan that provides immediate benefits to a participant—for example, medical insurance.

What-if mode
Method for processing a report that allows viewing of information without updating of employee records.

Window
A standard Windows object that displays information. A window is a separately controllable area of the form that typically has a rectangular border.

Wizard
A form if user assistance that automates a task through a dialog with the user.

Work area
The Solution Series screen. It includes the menus, toolbars, Navigator, forms area, message area, and status bar.

Work instructions
Specific tasks to be completed during the migration of data and files from test to production.

Work restrictions
Restrictions that prevent an employee from participating in specific workplace functions.

Worker's compensation
Legislation in the US that provides compensation to employees who suffer work-related injuries.

Workforce competency
The capacity of the overall workforce to perform required functions and sets of activities.

XHTML
Extensible HyperText Markup Language, used by the help pages for eCyborg.

Year End Master File
P20OUT file from the final payroll run of the year

CHAPTER 1

About This Manual

Welcome

This manual has been designed to guide you through the use of Salary Administration, which provides the tools to maintain job evaluations, establish merit increase guidelines, perform budgeting analysis, and automate the performance appraisal and salary review process.

This manual has been designed as a reference document. It is also used in classroom training. You will find sufficient detail for self-study before and after classroom training.

Who should use this manual?

This manual is designed to be used by a number of different users. The following users will find it most useful:

- Salary administrators
  Salary administrators will find a helpful overview of Salary Administration features in Part 1. Part 2 will be of interest because it explains the steps necessary to implement the system as well as the additional concepts and tasks necessary to set up and maintain the essential Salary Administration elements. Part 4 contains details about performing and processing reviews.

- Compensation analysts and Human Resources personnel
  Both compensation analysts and Human Resources personnel involved in the compensation function will find detailed directions throughout the manual that will enable them to perform the specific steps necessary to implement and use Salary Administration.

Prerequisite skills

Users of this manual should possess a variety of technical skills, depending on the roles they will play. At a minimum, all users should have:

- Basic understanding of Microsoft Windows
- Attended training for or have experience using Cyborg's products (the eCyborg: Using the Web Client or Using The Solution Series: Administrative Solutions training class is recommended).
- Attended training for or have experience in the Human Resource basic functionality, including an understanding of HR tables and option lists (the Using Human Resources Administration training class is recommended)

Additional documentation and training courses

The following documentation and training courses are available from Cyborg Systems to help you understand and administer Salary Administration.

Documentation

Document	Description
eCyborg: Using the Web Client or Using The Solution Series: Administrative Solutions	This prerequisite course documentation covers the introductory concepts and tasks related to Cyborg's administrative solutions. It describes how to navigate through the software and explains the important concepts and functionality of the system.

If you do not have a copy of this document, you can obtain one from Customer Support.

Training Courses

Related Course	Description
eCyborg: Using the Web Client or Using The Solution Series: Administrative Solutions	This prerequisite course covers the introductory concepts and tasks related to your specific implementation of Cyborg's administration solutions.
Using Human Resources Administration	This prerequisite class provides a thorough understanding of the day-to-day tasks that form the foundation of Human Resources Administration.

If you wish to attend any of these courses, contact Customer Support or visit our website www.Cyborg.com for details of course dates and availability.

How this manual is organized

This manual has been organized to make it as easy to use as possible. The chapters are grouped accordingly into the following parts:

Part	Chapters	Description
1. Introduction	1–2	These chapters provide an overview of the system and explain its interaction with other system components.

Part	Chapters	Description
2. Setting Up Salary Administration	3–4	These chapters explain the concepts and give the detailed directions necessary for setting up essential Salary Administration data.
3. Producing the Annual Salary Budget	5–6	These chapters provide the methods used to set up and analyze salary budgets.
4. Performing and Processing Reviews	7–8	These chapters provide directions for administering the review process and processing salary changes.
5. Post Salary Review Process	9–10	These chapters provide directions for analyzing the results of cost and performance reviews and regenerating salary grades.
6. Appendices	A–C	Appendix A is a quick reference to Salary Administration reports. Appendix B provides details about and examples of the option lists introduced in this manual. Appendix C contains the answers to the practices and reviews at the end of the instructional chapters.

Following are descriptions of the chapters within the parts:

Part 1: Introduction

The chapters in Part 1 describe this manual and provide an overview of Salary Administration.

Read this chapter		To learn about
1	About This Manual	How the manual is organized, where to find what you are looking for, who should use the manual, and where to get help.
2	Overview of Salary Administration	The features included in Salary Administration and how it interfaces with other HR components and Payroll Administration.

Part 2: Setting Up Salary Administration

The chapters in Part 2 explain the concepts and provide detailed directions for setting up essential Salary Administration data.

Read this chapter		To learn about
3	Implementing Salary Administration	Implementing Salary Administration.
4	Setting Up Salary Plans	Establishing and maintaining salary plans.

Part 3: Producing the Annual Salary Budget

The chapters in Part 3 describe the methods and detailed directions used to set up and analyze salary budgets.

Read this chapter		To learn about
5	Creating Annual Salary Budgets for Employees	Methods of budgeting, using matrices to do budgeting, and creating budgets manually and automatically.
6	Reviewing and Finalizing Your Annual Salary Budget	The types of analyses and analysis reports available

Part 4: Performing and Processing Reviews

The chapters in Part 4 provide directions for administering the review process and processing salary changes.

Read this chapter		To learn about
7	Administering the Review Process	Administering reviews, including scheduling and forms
8	Entering the Results of the Review Process	Determining salary changes, entering actual salary amounts, and generating reports.

Part 5: Post Salary Review Process

The chapters in Part 5 provide directions for analyzing the cost and performance results of reviews and regenerating salary grades.

Read this chapter		To learn about
9	Analyzing the Results of the Review Process	Using Salary Administration reports to compare budgeted amounts with actual salary amounts.
10	Regenerating Salary Grades	When and how to regenerate salary grades.

Part 6: Appendices

The appendices in Part 6 contain quick reference information and practice and review answers:

Use this appendix		To learn about
A	Report Quick Reference	Salary Administration reports and their business uses.
B	Option List Quick Reference	Salary Administration option lists and examples.
C	Practice and Review Answers	Answers to the practices and reviews at the end of the instructional chapters.

How to use this manual

This manual has been designed as a reference manual as well as a training manual. It has been written to facilitate self-study before and after classroom training.

Table of contents

The manual has been carefully designed for ease of use. All our manuals are written to be task oriented to help you complete your business tasks using our software.

The table of contents lists all the tasks and their respective chapters.

Glossary of Terms

A Glossary of Terms section is provided to explain terms used in the documentation.

Index

An index is provided to help you locate specific information.

This document was designed to reduce your need for an index. You should find the table of contents sufficient.

Introductory chapters

It is important that you read the introductory chapters first. Chapter 1 ensures you get the most out of the information we have provided. Chapter 2 provides a high level overview. Read it to get the big picture before reading the detailed instructional chapters.

Instructional chapters

All chapters, other than the introductory chapters, are instructional chapters. They contain detailed instructions on how to complete the business tasks. Each instructional chapter has the following distinct sections:

Key Concepts

Always read the conceptual information first. This will help you understand why you have to perform certain tasks. It will also help you make decisions about your options and help you understand the importance of performing certain tasks. Exercises to help you apply the concept to a business task are included at the end of most concepts.

Apply the Concept

To be certain that you have understood the key concepts in a chapter, complete the Apply the Concept exercises provided. The answers to these exercises can be found in the appendices.

Detailed Directions

When you are ready to perform a task, review the Detailed Directions, which provide guidance, as well as the specific steps, to complete a task.

Guided Practice

The Guided Practice within the Detailed Directions offers you an opportunity to practice a task with step-by-step instructions. It takes you through the various steps, providing detailed examples so you can gain a comfort level with the task. Guided Practice is easy to locate.

For practice, type 'ABC Solutions'.

Note: *To successfully follow the Guided Practice, you must have completed all the previous Guided Practice exercises in the manual. The Guided Practice uses the test data installed with our software. For the Guided Practice exercises to work, this test data must not have been altered.*

All users who complete the Guided Practice must either have their own copies of the test data or have the test data restored for them.

Extended Practice

To be certain that you have understood the tasks in a chapter, complete the Extended Practice provided. The Extended Practice gives you the opportunity to complete one or more tasks without step-by-step guidance. The answers to these exercises can be found in the appendices.

Note: *To be able to complete the Extended Practice exercises in the manual, you must have completed all the previous exercises. You must also be using the test data delivered with the software. This test data must not have been altered.*

Review of Questions Answered

To be certain that you have understood all of the information in a chapter, complete the review questions provided at the end of a chapter. The answers to these questions can be found in the appendices.

Conventions used in this manual

The underlying page layout and design of this manual are meant to be as intuitive as possible for you. Our intent is to make it easy to navigate through the manual and concentrate on learning and doing.

Cross-references

Wherever appropriate, we provide cross-references to help you find additional information or further discussion of a specific topic.

☞ *Refer to a cross-reference to find more detail or more discussion on a given topic.*

Notes

Whenever there is important information you should be aware of, we provide a note.

Note: *You will find tips or quick techniques covered in notes.*

How to get additional help

If you can not find the answers to your questions in this manual, contact Customer Support, who will be able to answer specific questions and give you general advice on training.

Please visit our web site ***www.Cyborg.com*** (see "Cyborg Home - http://www.Cyborg.com") for the latest schedule of available courses and course descriptions.

Suggestions and feedback

We value your feedback on our performance support materials. Please forward any comments on this manual to Customer Support.

CHAPTER 2

Overview of Salary Administration

In This Chapter

Introduction to Overview of Salary Administration

Salary Administration is an integrated component of the Human Resources Administration that is designed to help you manage the salary-related events in your organization. The system provides the resources to track job evaluations, establish merit increase guidelines, perform budgeting analysis, and automate the salary review and performance appraisal processes.

Why use Salary Administration?

In today's intense business environment, the ability to access and evaluate information about your workforce may give you a competitive edge. Whether your company is doing long-term planning or developing a global strategy, accurate and timely salary and budgeting information is essential. An analysis of the cost, productivity, and compensation of an organization's workforce is essential to carrying out its mission.

Salary planning and budgeting is an important feature of this system component. These data can help you decide how you want to administer salaries for the coming fiscal year and analyze how projected salary expenditures might affect your total compensation.

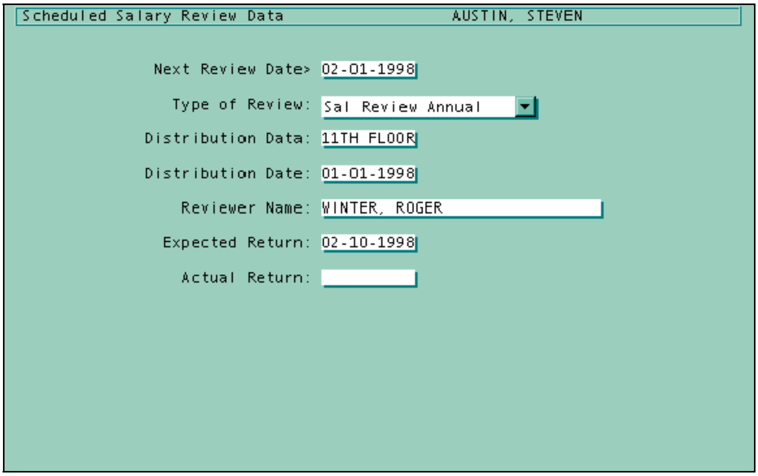
Salary Administration features

These are the important features of Salary Administration:

- Process salary reviews and conduct salary analysis
- Produce salary forecasts for budget purposes
- Update salary grades and ranges
- Report information used in the administration of salary changes/budgeting

Process salary reviews and conduct salary analysis

Staying on top of scheduled performance and merit reviews is easy with Salary Administration. Facilities are provided to record the dates and types of reviews as well as projected completion dates. If desired, these forms can be updated automatically to ensure that no reviews are inadvertently overlooked. In the illustration that follows, all the initial distribution information is recorded for the review, and the actual return of the review form has not yet been entered:



Scheduled Salary Review Data AUSTIN, STEVEN

Next Review Date> 02-01-1998
Type of Review: Sal Review Annual
Distribution Data: 11TH FLOOR
Distribution Date: 01-01-1998
Reviewer Name: WINTER, ROGER
Expected Return: 02-10-1998
Actual Return:

Bonuses/commissions, tuition refunds, and monetary perquisites may be taken into consideration when reviewing an employee's compensation package.

Online or batch reports may be run ahead of time to determine who is due for an upcoming performance and/or merit review in a specific time period. For example, the following report indicates that a review is due for Phil Costings during the month of March:

```
Corporation 99   Acme Manufacturing   Salary Reviews Scheduled   REPT   File
Version 00   Page   1
Division     9999 Midwestern Division     For Month of March      59-R   Time
08:24:29 Date 02-18-1998

Rating  Rate Salary ..
Thre   Four   Five   Six   Empl Name      Number   Salary Chg Date   Since  Ratio
Date    Code Grade ..
```

```
3030  4040  5050  6060 Costings, Phil  7006    991.57 03-01-1997  012   1.10 03-
01-1997 1    04
Frequency: Bi-weekly            Projected:  1237.50 03-01-1998  012   1.10
```

Salary Administration can be used to track overdue reviews and monitor performance review results for pay-for-performance salary changes. It can also produce salary authorization forms with or without budgeted increase amounts for use as turnaround documents for management signatures.

It is important to have a standard process for reviewing salaries in a timely manner. By using Salary Administration, you can record, track, and analyze the salary review results.

Produce salary plans for budget purposes

The system offers a planning and budgeting feature that permits analysis of expected salary expenditures for the coming budget year. The effect of each projected increase is automatically calculated to factor both the timing and amount of the increase within the budget year (for example, the net effect of a 6 percent increase in July is only half that of a 6 percent increase in January).

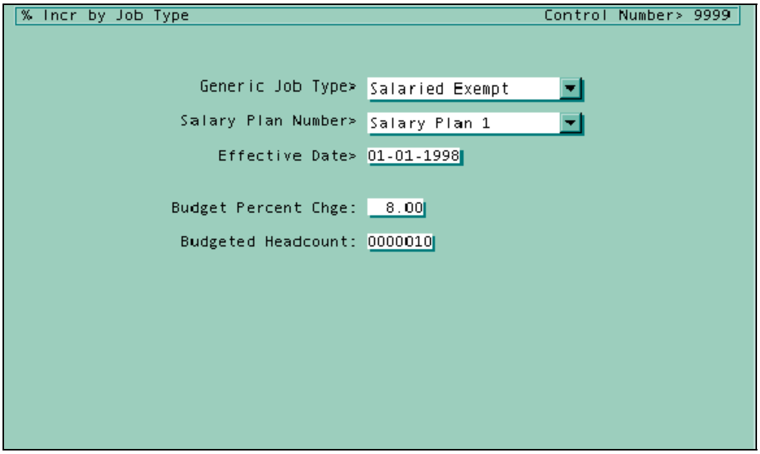
To support strategic planning, multiple salary plans can be created using different increase policies (both timing and amounts), creating 'what-if' scenarios. Within the various scenarios, each employee can be assigned up to three simultaneous plans (for example, an 8 percent, 5 percent, and 3 percent increase).

As plans are created, they can be analyzed by management to determine the budget effect in monetary terms from both a company-wide and individual employee perspective. Once management has endorsed a budget plan, you can automatically delete the unacceptable plans. The remaining accepted plan can assist you in assigning the actual amount and time of increase to an employee. The system allows you to adjust the employee salary increase information when creating an actual that is different from the original plan in terms of timing, lower/higher increases, or both.

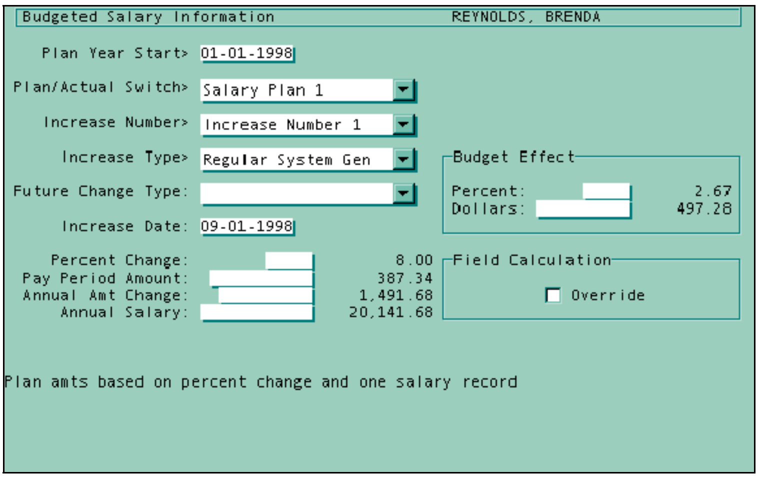
There are several different ways to budget for salary changes using Salary Administration. These methods may be used interchangeably and in combination, based on your organization's needs:

- Manager's discretion
- Increase matrices to consider each employee's job performance rating and position in salary grade
- Across-the-board increases targeted to specific groups of employees

The following form shows the setup for an across-the-board salary plan that will project an 8 percent increase for each salaried exempt employee on the anniversary of the employee's last salary increase:



At the employee level, the system allows you to enter the fiscal year or budget year amount and the employee's individual salary change date to calculate the impact of the employee's salary on the budget for the year. The salary information form that follows displays a projected 8 percent salary increase for Brenda Reynolds on September 1 as well as the budget effect in percentage and amount:



Update salary grades and ranges

Each job may be tied to a salary grade and range, allowing you to access an employee's compa ratio and position in range. Once your salary ranges have been established, they can be changed easily as salary grades are reevaluated.

Changes to salary grades can be calculated and applied automatically using a percentage or midpoint formula. When salary grades change, you can use a delivered report to automatically recalculate them so you can see where each employee's salary falls in relation to the changed salary grade range. You can immediately see the salary grade changes reflected in compa ratio and range penetration. The following illustration shows a delivered report that lists employees who are either below the minimum or over the maximum in their salary grade levels:

```
Corporation 99   Acme Manufacturing  Compensation Activity Message:REPT
Page 1
Division    9999 Midwestern Div       Over Maximum/Under Minimum   17-R  Time

Sal: 18,650.00  Title: Accountant, Class II Grade 24 Compa Sal: 18,650.00   Min:
24,500  Max: 37,500
```

Report information used in the administration of salary changes/budgeting

Whatever method or combination of methods is used, once budget and salary records have been created, comprehensive analysis reports are available to assist in the review and approval process. Delivered reports clearly identify high and low performers and those above and below the salary ranges.

For example, these are some of the Cyborg-delivered management reports:

- Salary Review Authorization Forms I and II (5O-RPT and 5P-RPT)—Displays historical and projected salary information along with comment and signature space
- Salary Increase Analysis report (1V-RPT)—Provides an analysis of the overall percentage of salary change for employees by job type and associated appraisal ratings
- Annual Budget report (5C-RPT)—Provides budget information by organizational levels with employee detail, making it easy to distribute and analyze
- Over Maximum/Under Minimum report (17-RPT)—Monitors and analyzes employee salary range penetration
- Salary Plan to Actual Comparison report (5J-RPT)—Tracks actual salary costs at any point in the fiscal year and compares them with projected salary budget figures

☞ *Refer to* **Report Quick Reference** *(on page 253) for complete information on each Salary Administration report.*

Interaction with other HR application components

Salary Administration shares some of the optional tables established in the Human Resource Recordkeeping (Base) component. Having these job and salary grade tables in place prior to, or as part of, Salary Administration implementation will allow your organization to fully utilize its capabilities:

- Job—Provides information needed to specify employee groups when setting up salary plans
- Job Points—Provides a component of the formula for regenerating salary grade ranges
- Salary Grade—Provides compa ratio and position-in-range information for calculating projected salary increases

Certain employee-level Human Resource Recordkeeping information must be populated in order to use Salary Administration. The following information is used in salary planning and the review process:

- Job assignment/changes—Contains the job type and salary grade that associate an employee with a specific salary plan
- Location assignment/changes—Contains control levels that associate an employee with a specific salary plan
- Salary assignment/changes—Provides a baseline salary from which projected salary increases can be calculated
- Scheduled salary review data—Provides a baseline date from which projected salary increase dates can be calculated
- Performance appraisal results—Provides a performance rating used in the calculation of a pay-for-performance salary increase
- Schedule/track performance appraisals—Allows the tracking of performance appraisal completion and return

Salary Administration forms and reports also interact with other components of the system:

- Scheduled salary review report—Automatically generates a scheduled salary review record for an employee
- Salary Review Authorization Forms I and II (5O-RPT and 5P-RPT)—Generates a scheduled salary review record for any employee who does not have one for the month specified
- Employee budgeted salary information—Converts to an actual employee salary change record

Interaction with Payroll Administration

The interaction between Salary Administration and Payroll Administration is especially useful when analyzing an employee's total compensation package. The total compensation package includes base earnings and monetary earnings (such as bonuses or monetary perquisites) as well as non-monetary perquisites.

The Solution View reporting solution provides the tools to combine and report on the monetary elements specific to your organization's compensation package. Employee payroll earning information can be incorporated into those reports and reviewed online to analyze the total compensation package:

- Employee pay rate or salary—Provides verification of the employee's compensation as of the current date
- HEDs (Hours, Earnings, and Deductions) to-date inquiry—Provides current and to-date bonus and perquisite earning information
- Employee earnings and deductions—Produces the actual payment of bonuses and monetary perquisites recorded in Salary Administration

PART 2

Setting Up Salary Administration

In This Section

CHAPTER 3

Implementing Salary Administration

In This Chapter

Introduction

This section provides guidelines for implementing Salary Administration. You can use these guidelines to help develop your implementation project plan.

Note: *Much of the specific information you need to complete these tasks will come from other sections in this document and other product documentation. You will see specific references throughout this section.*

Tasks

This section explains the following implementation tasks:

- Assembling the implementation team
- Conducting the familiarization phase
- Conducting the design phase
- Conducting the implementation phase

Prerequisites

Before you can implement Salary Administration, the following must be established:

- Companies
- Salary Grade tables
- Job Code tables
- Job Points tables (optional)
- Salary assignments for each employee
- Job assignments for each employee

If your organization has already implemented the basic functionality of the Human Resources Administration, these items will already be defined.

Questions answered

The following questions are answered in this section:

1. What expertise must the implementation team possess?
2. How can the implementation process be phased?
3. What does a salary plan analysis entail?
4. What are the security considerations?

Implementation team expertise

A successful implementation of Salary Administration requires that you assemble the correct implementation team. The team you assemble to implement Salary Administration should have expertise in the following areas:

- Human Resources
- Compensation
- Payroll
- Cyborg's Products
- Information Systems

Human Resources

The Human Resources (HR) specialist must understand all the HR processes that could affect an employee's compensation, including the hiring, transferring, and terminating of employees.

Together the HR specialist and Salary Administrator determine who will be responsible for Salary Administration tasks and what communication needs to take place between the HR and compensation groups. For example, they will determine who will record employee salary changes. If compensation is handled by an HR clerk, that person will require additional training and, possibly, additional security to access Salary Administration forms.

Compensation

The Salary Administrator and Compensation specialist must thoroughly understand your salary plans and how you intend to administer compensation in your organization. They must have expertise in the following areas:

- Current compensation policies. This person must be able to map your salary plan descriptions into Salary Administration tables.
- Compensation processes. This person must be able to document your processes and ensure their integration with Salary Administration. These processes include salary and performance reviews, salary grade table regeneration, perquisite administration, and salary budget management.
- Reporting. This person must be able to identify all of your organization's reporting and compensation communication requirements, such as organizational and regulatory reporting and budget-to-actual monitoring.

Payroll

The Payroll specialist will establish any bonus and monetary perquisite earnings required for tracking the total compensation package. These Hours/Earnings and Deductions (HEDs) must be set up before you can establish and test your monetary perquisites. The actual HEDs to be used for Salary Administration will be established on the Organization Earnings and Deductions form (A8-SCR).

☞ *Refer to the Payroll documentation for information on setting up Hours/Earnings and Deductions.*

Cyborg's Products

Because Salary Administration is an integral component of the Human Resources Administration, it is imperative that team members understand how this component affects other areas of the system. Team members must know the current organization structure (Control Number) setup and be able to assign a Salary Administration Control Number.

Information Systems

Some technical expertise is needed to implement Salary Administration, particularly in the following areas:

- Designing or modifying Salary Administration forms and reports. Knowledge of Form Builder and Cyborg Scripting Language will be necessary to implement required customizations.
- Modifying calculation option lists. Cyborg Scripting Language skills will also be needed to modify calculation option lists.
- Setting up environments: development, test, production, and so forth.
- Setting up job streams for Salary Administration reporting. The Salary Administrator and Payroll specialist will work with the Information Systems specialist to create job streams.

See also:

- Assembling the implementation team ***(on page 36)***

For some further considerations when assembling the implementation team.

Implementation phases

Successful implementations are typically phased. Consider using the following phases in your implementation of Salary Administration:

- Familiarization
- Design
- Customization facilities
- Implementation

Note: *The specific tasks associated with these phases are documented in the Detailed Directions section.*

Familiarization

In this phase implementation team members review current processes and compensation policies and learn Salary Administration. You are not expected to become an expert user of Salary Administration in this phase; however, you do need to understand how the system works and what you will need to do to automate your salary plans.

Team members must be given ample time to gather the information they require to proceed to the design phase.

See also:

- Conducting the familiarization phase ***(on page 36)***

For detailed directions on conducting this phase.

Design

Once you have familiarized yourself with your current processes and salary plans and with Salary Administration, you are ready to begin the design phase.

In this phase, implementation team members document and implement Salary Administration requirements. This includes documenting requirements for, and then implementing, any customizations. Representative salary plans should be tested in this phase.

Some of these steps can be conducted simultaneously. For example, the Compensation specialist can review the salary plan tables while the Security Officer is setting up the security matrix.

See also:

- Conducting the design phase ***(on page 37)***

For detailed directions on conducting the design phase.

Customization facilities

Because the system may require customization, team members should be able to use the customization facilities provided. These include:

- Form Builder
- Solution View
- Cyborg Scripting Language

☞ *Refer to the appropriate product documentation for more information on these facilities.*

Implementation

After completing the design phase, you are ready to implement Salary Administration.

In this phase, implementation team members complete all the tasks necessary to go live with the system. These include developing support materials for end users, conducting final test runs, and going live. You should run in parallel for at least one full production cycle before going live.

See also:

- Conducting the implementation phase ***(on page 38)***

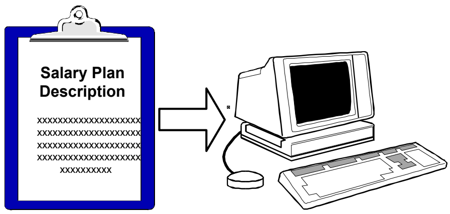
For detailed directions on conducting the implementation phase.

Salary plan analysis

A salary plan is a set of rules or guidelines used to budget for salary increases for the coming year. To conduct a salary plan analysis, you must have a thorough knowledge of both your salary plan descriptions and Salary Administration. This section describes the connection between your salary plan descriptions and Salary Administration.

Salary plan descriptions and salary plan tables

Your salary plan descriptions document the rules (discretionary, across-the-board, and pay-for-performance) for your salary plans. In Salary Administration, salary plan tables document the rules for salary plans. To automate your salary plans' rules, you map them into the salary tables.



Salary Administration's standard salary plan tables make it easy for you to automate salary increase rules. Across-the-board salary plans contain guidelines for giving a percentage increase on the anniversary of an employee's last salary increase. Following is a brief description of the across-the-board salary plan tables that can be used alone or in combination to set up your salary increase rules for specific groups of employees or the entire employee population:

Table	Purpose
% Incr by Job Type (TH1SCR)	Establishes budget year percentage increases for employees within a specified job type
% Incr by Org Level 3/Job Type (TH2SCR)	Establishes budget year percentage increases for employees within a specified organization level 3 and job type
% Incr by Org Level 4/Job Type (TH3SCR)	Establishes budget year percentage increases for employees within a specified organization level 4 and job type
% Incr by Org Level 3/Org Level 4/ Job Type (TH4SCR)	Establishes budget year percentage increases for employees within a specified organization level 3, organization level 4, and job type

Pay-for-performance salary plans contain guidelines for giving merit increases to employees. These increases are based on an employee's performance appraisal rating and the salary compa ratio, position in range, or time since last increase. Within these criteria, Salary Administration can project one or more budgeted employee salary increases using a percentage, range of percentages, or amount. Following is a brief description of the pay-for-performance salary plan tables that are used in combination to set up your salary increase rules:

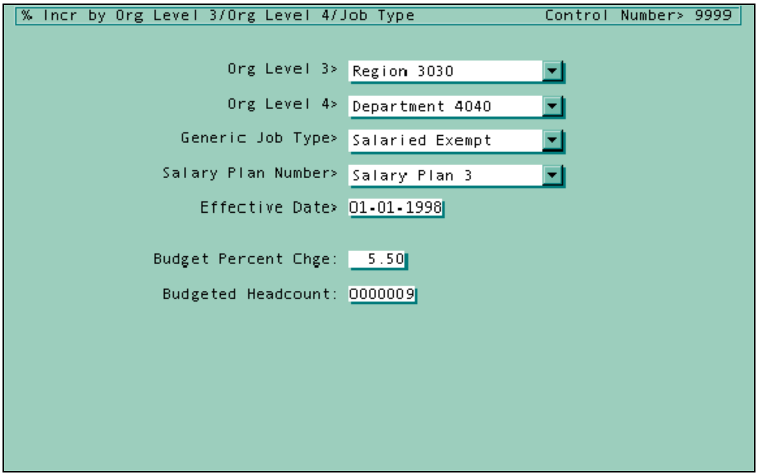
Criteria	**How much of an increase (choose percentage, amount, or range) ['Increase' tables]**			**When to give the increase ['Timing' tables]**
Criteria	**Percentage**	**Amount**	**Range of Percentages**	**Months**
Compa ratio	% Incr By Rating/Compa Ratio (TD1SCR)	$ Incr By Rating/Compa Ratio (TD2CR)	% Incr Range By Rating/ Compa Ratio (TD9SCR)	Time Until Incr By Rating/ Compa Ratio (TD3SCR)
Position in range	% Incr By Rating/Pos In Range (TD4SCR)	$ Incr By Rating/Pos In Range (TD5SCR)	% Incr Range By Rating/Pos In Range (TD0SCR)	Time Until Incr By Rating/Pos In Rnge (TD6SCR)
Time since last increase	% Incr By Rating/Time Since Last Incr (TD7SCR)	$ Incr By Rating/Time Since Last Incr (TD8SCR)		

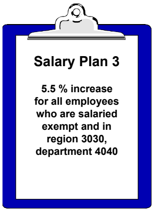
☞ *Refer to* **Setting Up Salary Plans** *(on page 41) where these tables are covered in detail.*

Salary plan tables and Salary Administration option lists

Each Salary Administration table is a separate fill-in-the-blank form. As you define a salary plan table, you will find that the numerous predefined option lists supplied with Salary Administration can accommodate most salary plans.

In the next example, an organization has made selections in each of four option lists to complete its salary plan. This Salary Plan 3 will project a 5.5 percentage increase for all employees who are Salaried Exempt, have an organization level 3 value of Region 3030, and have an organization level 4 value of Department 4040:





In each of the first four text boxes, you would choose an option from the option list that represents a criterion for employee inclusion in the salary plan.

Sample salary plans

Looking at examples can make it easier to learn about a new area. A variety of sample salary plans are delivered with Salary Administration. To view a list of the sample plans for Acme Manufacturing (organization 999999), display one of the salary plan forms and click on the Selections button on the toolbar. Then double-click to select the occurrence you want to view.

Salary Administration option lists

Salary Administration is delivered with several option lists. Review and modify them as necessary to meet your organization's requirements. Use the Option List Display/Report form (CDLIST) to obtain a list of the Salary Administration option lists. You can print the list of option lists by choosing:

File **P**rint Window

Option lists specific to Salary Administration begin with the letters 'SA'. For example, the valid Plan/Actual Switches are found in option list SA01. Values supplied with this option list include the following:

Value	Description
A	Actual
1	Salary Plan 1
2	Salary Plan 2
3	Salary Plan 3

When you define a salary plan, you will identify it using a value from this option list. In some Salary Administration option lists, you can use the values supplied or add your own values. Other option lists contain delivered options that must not be changed or deleted.

☞ *Refer to* **Option List Quick Reference** *(on page 343) for a description of each option list, the form(s) on which it appears, and examples of the delivered options/descriptions in option list name sequence.*

Human Resource option lists

Along with the delivered option lists for Salary Administration, you will work with several Human Resource option lists. Review all of these option lists while implementing Salary Administration to see which ones your organization will use and what options may need to be edited to meet your organization's requirements. Some of the option list meanings must not be changed because of their relationship with delivered forms and reports. Option lists containing delivered options that must not be modified or deleted are indicated by an asterisk in the following listing:

Option list	Description	Form containing option list
HR11*	Salary Change Type*	Budgeted Salary Information (45-SCR) Salary Assignment/Changes form (40-SCR)
HR12	Job Type	Percent Increase tables
HR15	Appraisal Types	Performance Appraisal Results (49-SCR) Schedule/Track Performance Appraisals (50-SCR)

Option list	Description	Form containing option list
HR16*	Appraisal Ratings *	Performance Appraisal Results form (49-SCR) $ Incr By Rating/Time Since Last Incr form (TD8SCR) % Incr By Rating/Pos In Range form (TD4SCR) % Incr Range By Rating/Compa Ratio form (TD9SCR) Time Until Incr By Rating/Compa Ratio form (TD3SCR)
HR17	Promotability Assessment	Performance Appraisal Results (49-SCR)
HR19	Relocation Willingness	Performance Appraisal Results (49-SCR)
HR20	Geographic Preferences	Performance Appraisal Results (49-SCR)
HR24	Perq/Co Prop Type	Perquisites: Monetary (27-SCR)
HR34*	Salary Review Type*	Scheduled Salary Review Data (43-SCR)
HR439	Org Level Three	Percent Increase Table forms
HR449	Org Level Four	Percent Increase Table forms
HR66	Geographic Range	Salary Grades To Benchmark Jobs Cross-Reference (TI-SCR)
HR70	Key Separator Value	Salary Assignment/Changes form (40-SCR)
PP29	Pay Frequency	Salary Assignment/Changes form (40-SCR) Employee Information form (EF-SCR)
PP49	HED Stop Code	Perquisites: Monetary (27-SCR)

☞ *Refer to* **Option List Quick Reference** *(on page 343) for a description of each option list, the form(s) on which it appears, and examples of the delivered options/descriptions in option list name sequence.*

Calculation option lists

The Appraisal Ratings option list (HR16) contains values identifying the maximum position in range attainable if an employee receives the performance rating specified. This option list performs calculations and relational editing (actions taken based on the relationship of values of different text boxes); the calculations and relational editing are written in Cyborg Scripting Language.

If you use the range indicator option in the generation of employee salary budget records, carefully review the documentation for this option list before modifying any of its delivered options. The documentation describes the function of the option list and the Cyborg Scripting Language code that it uses. Changing an option definition requires that you also change the Cyborg Scripting Language code. If you change or add to an option's logic, you should thoroughly test the change.

☞ *Refer to the* **Option List Quick Reference** *(on page 343) for more information about modifying this calculation option list.*

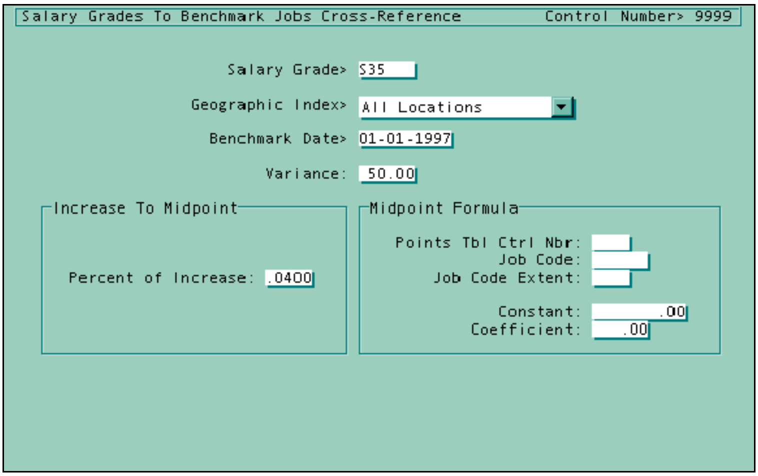
☞ *Refer to* **Creating Annual Salary Budgets for Employees** *(on page 101) for more information about the range indicator option*.

Using Salary Administration to regenerate salary grades

As you perform the various phases of your implementation, consider the ability of Salary Administration to assist you in setting up new salary grade tables when there are changes in the salary grade ranges. Current salary grade information may need to be updated in order to perform a more accurate salary analysis. You may also find it necessary to adjust your existing salary grades to account for changes in market value conditions.

Salary grades can be regenerated according to your organization's policies and procedures. You may change the salary grades manually or set up the table parameters that will allow Salary Administration to regenerate them automatically.

The next example shows the Salary Grades to Benchmark Jobs Cross-Reference form (TI-SCR) set up to calculate a 4 percent increase to the midpoint of the current salary grade, with a variance of 50 percent from the minimum to the maximum of the salary grade:



The familiarization phase of your implementation will provide the information necessary to choose the best method of salary grade regeneration for your organization. You may apply either an across-the-board percentage increase or a formula increase to the midpoint of your current salary grades. When the increase parameters have been set up, you can process a report that will perform the salary grade regeneration.

Using Salary Administration to track the total compensation package

Total compensation is the sum of an employee's base earnings plus any other monetary earnings (such as bonuses, commissions, and awards) and any non-monetary perquisites (such as club memberships or use of company vehicles).

Delivered Salary Administration reports can be used as a tracking tool for monetary and non-monetary perquisites. You can use Solution View to create customized reports that provide a complete picture of the specific compensation package awarded to each employee.

To report on employee total compensation, make sure that the relevant compensation package information is entered on the following forms:

- Automobile Information (24-SCR)
- Bonus/Commission Information (26-SCR)
- Perquisites: Monetary (27-SCR)
- Perquisites: Non-Monetary (20-SCR)
- Tuition Information (32-SCR)

☞ Refer to Entering the Results of the Review Process *(on page 181)* for more information on entering monetary perquisite data.

Security considerations

Salary Administration contains extremely sensitive data. As with any component of the system, you must set up a security matrix to reflect user access to the system. You will need to work with your Security Officer to implement the security matrix.

The security matrix should be tested thoroughly during the implementation process.

Detailed Directions

This section provides detailed directions on completing a business task.

Tasks

Assembling the implementation team

The right people with the right skills are crucial for a successful implementation.

1. Identify team members

Team members should have expertise in Human Resources, Salary Administration, Payroll systems, and Cyborg's products.

2. Train team members

Ensure that team members have the skills required to complete the implementation of Salary Administration.

- Review Salary Administration documentation.
- Attend the Salary Administration training class.

See also:

- Implementation team expertise ***(on page 23)***

For more information on the implementation team.

Conducting the familiarization phase

In this task, you analyze your current business processes and salary plans, and then determine how you will implement those processes and define those plans in Salary Administration. Use your current procedure manual and salary plan descriptions to complete this task.

1. Collect and review your salary plan descriptions

For each salary plan, document the following requirements:

- Eligibility
- Type of plan
- Plan year start date
- Increase rules
- Calculations
- Payroll interface(s)

2. Define customization requirements

Define both your form and reports customization requirements.

- Review forms.
- Determine new form and text box requirements.
- Perform internal report inventory.
- Discuss and identify any specific requirements.

See also:

- Familiarization ***(on page 25)***

For more information on the familiarization phase.

Conducting the design phase

In this phase, you document your requirements and then implement them.

1. Define Salary Administration system test requirements

Determine all the forms and reports necessary to complete tests using the test data. Also determine which test procedures to use.

2. Review and modify option lists

- Use the Option List Display/Report form (CDLIST) to obtain a list of existing option lists.
- Use the Option List Edit Utility (CSUPDT) to edit the option lists.

3. Review delivered Salary Administration tables

Use the tables established for the Acme Manufacturing test company (999999) as a basis for defining tables for your plans.

4. Establish security matrix

This task requires the cooperation of the Security Officer for the system.

- Determine user access needs.
- List all online users and their security needs.
- Set up or update the security matrix.
- Assign user passwords and user codes.

5. Add table data to the test company

Set up your salary plans, starting with the easiest plan. This will help you form a better understanding of the salary plan tables.

- Determine Salary Administration Control Number.
- Document salary plan table information for all plans.
- Identify required calculation codes.
- Prepare specifications for Cyborg Scripting Language coding.
- Test tables.

6. Conduct system test

- Add or generate employee salary budget record test data.
- Execute test runs.
- Test the payroll interface.

7. Write and test user-defined programs

- Write conversion programs.
- Test programs.

8. Create new forms and text boxes

9. Create new reports

10. Complete customizations

Perform these items as required:

- Customize online forms.
- Customize delivered reports.
- Review and customize option lists.
- Review and customize Salary Administration tables.

11. Conduct limited conversion test

- Test security matrix.
- Test a limited sample of employees, perhaps 10 to 20. Verify results by viewing forms and reading reports.

See also:

- Design ***(on page 25)***

For more information on the design phase.

Conducting the implementation phase

In this phase, you complete all the tasks necessary to go live with the system. These tasks include developing support materials for end users, conducting final test runs, and going live.

1. Develop user support materials and conduct training

- Develop a procedure manual for day-to-day activities.
- Document job streams for Information Systems personnel.
- Train end users.

2. Perform final test runs

- Test a full production cycle.
- Test all forms and tables.
- Make adjustments as required.

3. Go live

- Convert all data.
- Start using Salary Administration.

See also:

- Implementation ***(on page 26)***

For more information on the implementation phase.

Review of Questions Answered

1. What expertise must the implementation team possess?

2. How can the implementation process be phased?

3. What does a salary plan analysis entail?

4. What are the security considerations?

CHAPTER 4

Setting Up Salary Plans

In This Chapter

Introduction

A salary plan contains the guidelines for administering your organization's salary increases. You can reduce the amount of effort required to set up your salary increase guidelines by using Salary Administration for across-the-board and pay-for-performance increases. Salary Administration also supports discretionary increases.

You may create up to three salary plans for a budget year. Using multiple salary plans to set up your salary increase rules will allow you to make decisions about how you want to administer salaries for the coming year.

This section covers setting up the organization salary increase rules.

☞ *Refer to* **Creating Annual Salary Budgets for Employees** *(on page 101) for an explanation of how to use the plans to create a salary budget on either an employee or an employee group basis.*

Tasks

This section explains the following:

- Setting up Salary Administration Control Numbers
- Setting up across-the-board salary plans
- Opening the Mass Salary Update/Report parameters form (RGMSTR)
- Completing the Mass Salary/Update parameters form
- Running the Mass Salary Update/Report
- Using the Report Viewer to view the report
- Viewing across-the-board salary plans
- Setting up pay-for-performance salary plans
- Viewing pay-for-performance salary plans

Prerequisites

Before you can set up salary plans, one task must be completed.

Set up Salary Administration option lists

Before any data are entered, you must ensure that all option lists are populated with your organization's specific Salary Administration values.

☞ *Refer to* **Option List Quick Reference** *(on page 343) for detailed information.*

Questions answered

The following questions are answered in this section:

1. What are salary plans?
2. How can an organization use salary plans?
3. What types of salary plans can be set up using Salary Administration?
4. How can a mass salary update be performed online?
5. How can a mass salary update be performed in 'What-if' report-only mode online?

Salary Administration Control Numbers

Before you can define any Salary Plan tables for a Salary Administration, you must first establish a Salary Administration Control Number. This Control Number is automatically carried forward to all Salary Administration tables defined using that Control Number.

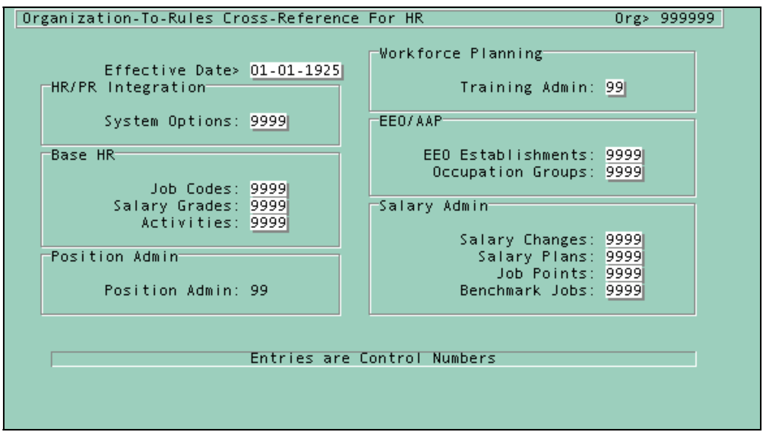
The Control Number gives the system direction as to what table records to access for a particular organization. The customer-defined Control Number can be used to determine whether all your organizations can share one set of tables or each organization will access its own individual unique table entries.

The four-character Salary Administration Control Numbers are defined on the Company-To-Rules Cross-Reference For HR form (AX-SCR). In the delivered Salary Administration test data, Control Number 9999 is used for each of the Salary Administration tables for the 999999 organization. Your production Control Numbers must not start with 9, which is a reserved value.

You need to enter the Control Number for Salary Administration in each of the following four text boxes on the Company-To-Rules Cross-Reference For HR form (AX-SCR):

- Salary Changes—Relates to the Pay for Performance matrix tables to be used to set up guidelines for calculating performance-related salary increases (this section)
- Salary Plans—Relates to the Percent Increase tables to be used to set up guidelines for calculating across-the-board salary increases (this section)
- Job Points—Relates to the Job Points table to be used to assign points that indicate the relative worth of a job in your organization (Regenerating Salary Grades)
- Benchmark Jobs—Relates to the Salary Grades to Benchmark Jobs Cross-Reference table to be used to record the parameters for recalculating salary grades (Regenerating Salary Grades)

Acme Manufacturing has the following entries on its Company-To-Rules Cross-Reference For HR form (AX-SCR):



See also:

- Setting up Salary Administration Control Numbers ***(see "Setting Up Salary Plans" on page 41)***

For detailed directions on setting up Salary Administration Control Numbers for each of your organizations.

Number of Salary Administration Control Numbers needed

If the entries on any of these tables differ from one organization to another, assign separate Control Numbers to each organization to associate the table record with the organization that will be using it.

To determine how many Control Numbers you need, refer to this table:

Situation	Actions
All salary plans apply to all companies	Define only one Control Number. Complete a Company-To-Rules Cross-Reference For HR form (AX-SCR) for each company, specifying the same Control Number.
Different salary plans apply to different companies	Define a separate Control Number for each company. Complete a Company-To-Rules Cross-Reference For HR form (AX-SCR) for each company, specifying its unique Control Number.
Same salary plans apply to all companies, but the salary plan rules differ	Define a separate Control Number for each company. Complete a Company-To-Rules Cross-Reference For HR form (AX-SCR) for each company, specifying its unique Control Number.

Note: *Control Number assignment can have a major impact on the size of your System Control Repository. Careful assignment of Control Numbers to organizations allows the flexibility of having a single table accessed by all organizations or each organization having its own table.*

Salary planning and your options

Before you can create your annual salary plans, it is helpful to understand the salary plan options, the types of plans available, and how to decide on the best type for your organization.

What are salary plans?

A salary plan is a set of rules or guidelines used to budget for salary increases for the coming year. You can create salary plans for the entire organization, for groups within the organization, or for individual employees.

Salary plans are used to generate salary budgets that can be reviewed, modified, and ultimately approved for use. Budget salary amounts can be changed to actual amounts, allowing you to analyze budget to actual comparisons as the year progresses.

How salary plans can be used by your organization

You need to determine your increase policy—for example, automatic (percentage across the board), discretionary (by manager), or by performance (using a matrix of how much and when). You also need to decide if you wish to implement the same policy for all employees or different policies for different groups of employees. Even if you decide to implement the same policy for all employees, there may be some differences in timing, rates, percentages, and so on.

Available plan types

There are three ways to budget for salary changes using Salary Administration. These methods may be used interchangeably, based on your organization's needs:

- Manager's discretion—Gives managers the option of specifying individual employee increases based on organization guidelines and timeframes
- Across-the-board percentage increases—Provide guidelines for giving fixed percentage increases to employees
- Pay-for-performance increases—Provide matrices for giving merit increases to employees based on their performance rating plus compa ratio, position in range, or time since last increase

Determining the best plan type for your organization

You may already know which type of salary increase will be used for your organization. If you are unsure or would like to investigate other types, you can set up and test different 'what if' scenarios and view the budget outcome.

Cyborg Consulting Services are available to assist in the selection process if you would like to contract their services.

How many plans can be created?

Using the various salary plan types, each employee can be assigned up to three salary plans—for example, a 7 percent, 5 percent, and 3.5 percent increase. You may need to set up only one plan if your salary guidelines are very well defined.

Depending on your needs, you may want to test various combinations of pay-for-performance matrix elements, such as timing or compa ratio. You may set up and view the results of different rates for different groups of employees within your organization.

After you have viewed the salary plan effects, you can automatically delete the budgets that are not acceptable. The remaining accepted plan can be used to generate the final salary budget.

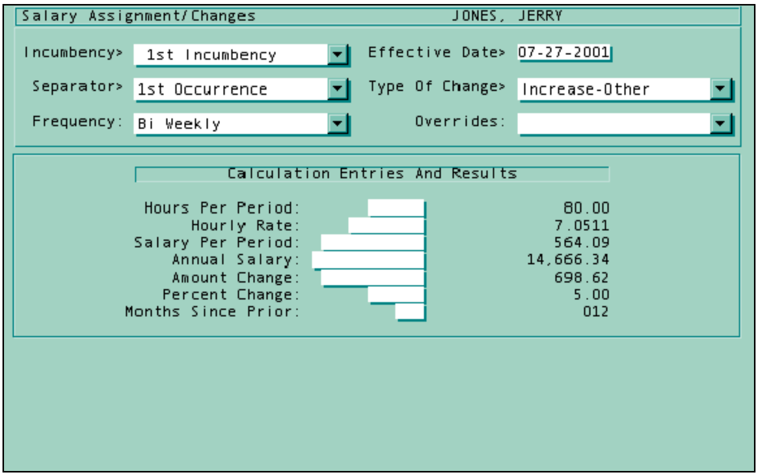
Discretionary increases—the easiest option

Of the three types of salary plans, discretionary increases are the most basic and the simplest to set up. With this method, employees may receive a salary review on the anniversary of their last salary change or at the discretion of the manager. The manager determines the amount or percentage of the salary change according to the guidelines established by the organization.

Discretionary increases are set up only at the employee level. There are no company setup requirements. Your organization can still create budget records for employees who have discretionary increases, but it is a manual activity and more time consuming.

If you have selected a discretionary increase policy, but within a maximum—for example, 3 percent, then, for budgeting purposes, it makes more sense to use the across-the-board feature.

To implement a future-dated increase for employees who have been selected for discretionary increases, use the Salary Assignment/Changes form (40-SCR) to record each employee's change amount or percentage. In the example that follows, Jerry Jones will receive a discretionary increase of 5 percent on July 27, 2001.



☞ *Refer to* **Creating Annual Salary Budgets for Employees** *(on page 101) for more information on creating budget records for discretionary increases.*

☞ *Refer to* **Entering the Results of the Review Process** *(on page 181) for more information on recording a discretionary salary increase.*

Across-the-board salary plans and their uses

Across-the-board salary plans contain guidelines for giving fixed percentage increases to employees. Using Cyborg-supplied tables, you define which groups of employees will receive across-the-board increases and the actual percentage increases they will receive.

You can define the employee groups to receive across-the-board increases in the following ways:

- Job Type
- Organization Level 3 and Job Type
- Organization Level 4 and Job Type
- Organization Level 3 and Organization Level 4 and Job Type

Information requirements for using fixed increases

Since the salary plan uses control levels to define which employees will be affected, your organization must be using Human Resource Organization Levels 3 and 4 to allow the plan to function properly. Human Resource Organization Levels 3 and 4 are assigned on the employee's Location Assignment/Changes form (05CSCR). All employees will also need job assignments so that the plan can access the job type when it is time to create the budget record. The employee job assignment is recorded on the Job Assignment/Changes form (05-SCR).

As an example, your organization may set up an across-the-board salary plan for all employees who are Hourly/Non-union (job type) and in the production department (Organization Level 3 value).

As a second example, your organization may set up an across-the-board salary plan for only those employees who are Salaried Exempt (job type) and who are in the programming department (Organization Level 3 value) in the Midwest Region (Organization Level 4 value).

See also:

- Setting up across-the-board salary plans ***(on page 69)***

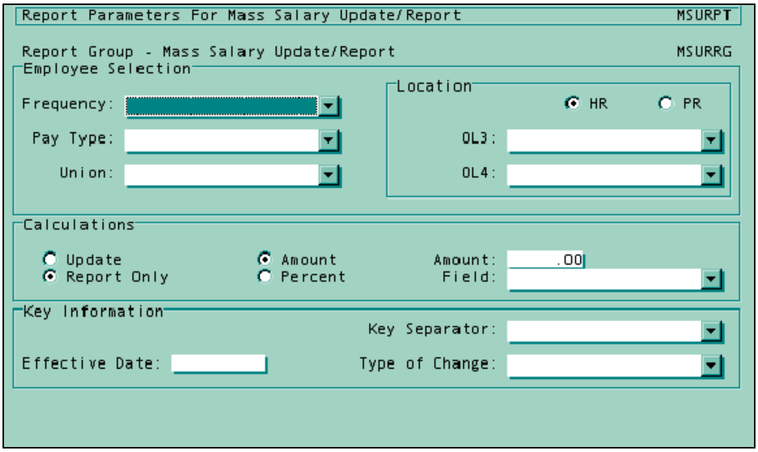
For detailed directions on setting up across-the-board salary plans.

Mass Salary Update/Report

The Mass Salary Update/Report program (MSURPT) is used to process mass salary updates based on parameters entered in a parameters form. It has the ability to update as well as report mass salary changes.

Mass Salary Update/Report program parameters form

A parameters form is used to specify the parameters of the Mass Salary Update/Report program (MSURPT):



See also:

- ***Opening the Mass Salary Update/Report parameters form (on page 71)***

For detailed directions on accessing the parameters form.

Employee Selection

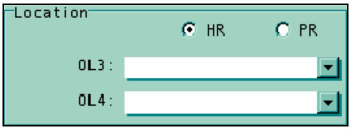
The Employee Selection group box contains options used to determine the group of employees to be processed.

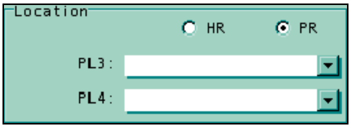
The Mass Salary Update/Report program (MSURPT) will process only for the employees who meet the criteria entered in these fields. Fields that are left blank will be ignored.

For example, to select all employees of a particular Frequency and Union Code combination, you would select only the appropriate Frequency and Union Code values, leaving all other selection fields blank.

When values are selected from the Frequency (PP29), Pay Type (SA07), and Union (PP429) option lists on the parameters form, they are compared to the values in the corresponding list boxes on the Employee Information form (EF-SCR).

Employees can also be selected for the Mass Salary Update/Report program (MSURPT) based on either the HR or Payroll location. The Organization Level 3 and Organization Level 4 option lists differ for each of the two locations selected, and the appropriate ones are made available when a selection is made. The field labels for the option lists change accordingly:





When HR is selected, the option lists will display the values seen on the Assignment/Changes form (05CSCR)—the Org Level Three (HR439) and Org Level Four (HR449) option lists. When PR is selected, the option lists will display the values seen on the Payroll Home Location/Pay Allocations form (GG-SCR)—the Pay Level 3 (PR019) and Control 4 (PR029) option lists.

Values selected from the Organization Level 3 and Organization Level 4 option lists on the Mass Salary Update/Report (MSURPT) parameters form are compared to the values in the corresponding fields on the Location Assignment/Changes form (05CSCR) and the Payroll Home Location/Pay Allocations form (GG-SCR) (as of the date entered in the Effective Date field). Only employees who match either or both non-blank fields will be processed.

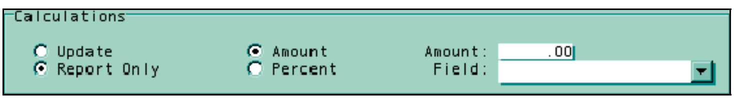
See also:

- Completing the Mass Salary Update/Report parameters form ***(on page 74)***

For detailed directions on completing the fields in the Employee Selection group on the parameters form.

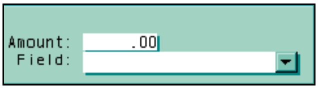
Calculations

The Calculations group box contains fields used to define the calculations and updates to be performed by the Mass Salary Update/Report program (MSURPT).

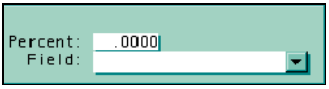


The Report Only selection allows you to run in 'What-if' report only mode. When satisfied with the results, you can run the report in Update mode by changing the selection to Update.

The Amount selection indicates that the update amount entry is to be used as an amount (with 2 decimals) or a rate (with 4 decimals), based on the value selected from the Field option list (SA08). When you select the Amount option, the field label for the text box changes to Amount:



When you select Percent, the field label changes to Percent, and the amount you enter must be a percentage (with 4 decimals).



This entry, labeled either Amount or Percent, is used to indicate the percentage, amount, or rate to be applied as an increase (or decrease) of the salary or hourly rate of the selected employees.

The Field option list, which is associated with the Update Field Option option list (SA08), is used to specify which entry the process will update. The five possible values are shown in the following table, along with the Cyborg form and entry with which the option is associated:

Field option list option	**Associated form**	**Associated field**
HR Annual Salary	Salary Assignment/Changes (40-SCR)	Annual Salary:
HR Period Salary	Salary Assignment/Changes (40-SCR)	Salary Per Period:
HR Hourly Rate	Salary Assignment/Changes (40-SCR)	Hourly Rate:
Payroll Period Salary	Employee Pay Rate Or Salary (H1-SCR)	Salary:
Payroll Hourly Rate	Employee Pay Rate Or Salary (H1-SCR)	Pay Rate:

The following table illustrates the effect of selecting the Amount or Percent option, along with the option selected from the Field option list (SA08):

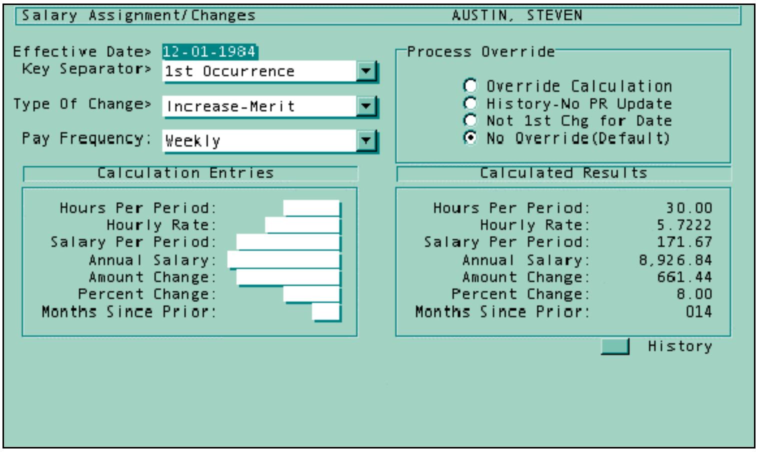
			Example	**Example**	**Example**
Option	**Update Field**	**Decimal Places**	**Current Value**	**Update Amount/ Percent**	**New Value**
Amount	HR Annual Salary	2	40,000.00	1,000.00	41,000.00
Amount	HR Period Salary	2	2,000.00	100.00	2,100.00
Amount	HR Hourly Rate	4	12.3456	2.0000	14.3456
Amount	Payroll Period Salary	14.3456	40,000.00	1,000.00	41,000.00
Amount	Payroll Hourly Rate	4	12.3456	2.0000	14.3456
Percent	HR Annual Salary	2	40,000.00	2.25	40,900.00

			Example	Example	Example
Percent	HR Period Salary	2	2	2.25	2,045.00
Percent	HR Hourly Rate	4	12.3456	2.2500	12.6233
Percent	Payroll Period Salary	2	40,000.00	2.25	2,045.00
Percent	Payroll Hourly Rate	Payroll Hourly Rate	12.3456	2.2500	12.6233

			Example	Example	Example
Option	**Update Field**	**Decimal Places**	**Current Value**	**Update Amount /Percent**	**New Value**
Amount	HR Annual Salary	2	40,000.00	1,000.00	41,000.00
Amount	HR Period Salary	2	2,000.00	100.00	2,100.00
Amount	HR Hourly Rate	4	12.3456	2.0000	14.3456
Amount	Payroll Period Salary	2	40,000.00	1,000.00	41,000.00
Amount	Payroll Period Salary	4	12.3456	2.0000	14.3456
Percent	HR Annual Salary	2	40,000.00	2.25	40,900.00
Percent	HR Period Salary	2	2,000.00	2.25	2,045.00
Percent	HR Hourly Rate	4	12.3456	2.2500	12.6233
Percent	Payroll Period Salary	2	40,000.00	2.25	2,045.00
Percent	Payroll Hourly Rate	4	12.3456	2.2500	12.6233

Salary Assignment/Changes form (40-SCR)

If the option selected from the Field option list (SA08) is HR Annual Salary, HR Period Salary, or HR Hourly Rate the Mass Salary Update/Report program (MSURPT) will use the date entered in the Key Information Group box on the parameters form to create a new entry for the selected employee on the Salary Assignment/Changes form (40-SCR).



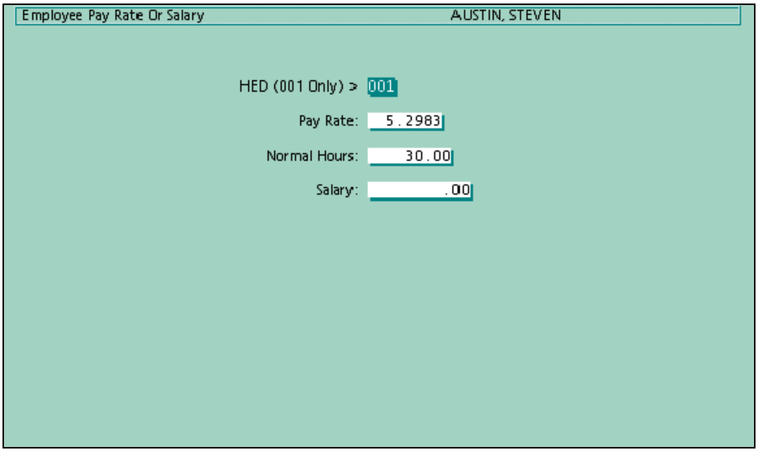
The other fields of the new Salary Assignment/Changes form (40-SCR) will be populated as if the new Key Information and updated field information had been keyed online. All processing that normally happens during an online update of the Salary Assignment/Changes form (40-SCR) will be done.

Note: *If the employee's record has reached maximum capacity, a new entry cannot be added to the Salary Assignment/Changes form (40-SCR).*

☞ *Refer to the Technical Administration documentation for determining the space capacity of the employee record.*

Employee Pay Rate Or Salary form (H1-SCR)

If the option selected from the Field option list (SA08) is Payroll Period Salary or Payroll Hourly Rate the Mass Salary Update/Report program (MSURPT) will replace the old values with the new values. The program will also calculate the other fields on the Employee Pay Rate or Salary form (H1-SCR).



When updating the Period Salary, the Hourly Rate will be recalculated by dividing the new Period Salary by the value in the Normal Hours entry. When updating the Hourly Rate entry, the Period Salary will be recalculated by multiplying the new Hourly Rate by the value in the Normal Hours entry.

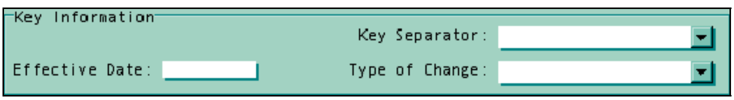
See also:

- Completing the Mass Salary Update/Report parameters form ***(on page 74)***

For detailed directions on completing the fields in the Calculations group on the parameters form.

Key Information

If you are increasing one of the fields on the Salary Assignment/Changes form (40-SCR)—HR Annual Salary, HR Period Salary, or HR Hourly Rate from the Field option list (SA08)—the additional parameters in the Key Information group box can be specified.



See also:

- Completing the Mass Salary Update/Report parameters form ***(on page 74)***

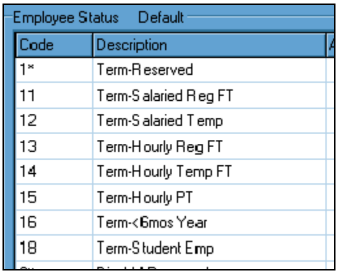
For detailed directions on completing the fields in the Key Information group on the parameters form.

- ***Running the Mass Salary Update/Report (on page 79)***

For detailed directions on running the Mass Salary Update/Report.

Terminated Employees

Terminated employees are automatically excluded. An employee is considered terminated if the resulting Employee Status on the specified Effective Date (on the parameters form) has a status code that begins with '1'. The following is a sample from the Employee Status option list (HR10), showing these status codes and their descriptions:



Employee Status Default

Code	Description
1*	Term-Reserved
11	Term-Salaried Reg FT
12	Term-Salaried Temp
13	Term-Hourly Reg FT
14	Term-Hourly Temp FT
15	Term-Hourly PT
16	Term-<6mos Year
18	Term-Student Emp

An employee will also be considered terminated if the Termination Date on the Employee Information form (EF-SCR) for that employee is dated prior to the specified Effective Date on the Mass Salary Update/Report (MSURPT) parameters form.

Audit Report

An audit report is produced each time the Mass Salary Update/Report program (MSURPT) is run, showing the results of the calculation for each selected employee. This report is produced in both update and report-only mode. The mode is indicated in the heading of the report, as can be seen in the sample that follows:

You may use the Report Viewer to view the audit report online.

☞ *Refer to the Using The Solution Series: Administrative Solutions documentation for more information on the Report Viewer utility.*

Note: Instead of using the Report Viewer to view the report online, the report could be scheduled via SUBMIT/VIEW, or by running the standard JREPORT.BAT job stream.

Before processing any employees, the Mass Salary Update/Report program (MSURPT) checks the data entered on the parameters form for the report. If errors are found in the parameters, messages will be printed in the report and *no* employees will be processed. It is advisable to run the program in report-only mode initially and check the resulting report. When you are satisfied with the results, then perform the mass salary update by running the Mass Salary Update/Report program (MSURPT) in update mode.

The following are some examples of error messages that may be produced:

- * Error, Increase Amount or Percent must be entered. Please correct and re-run.
- * Error, Effective Date must be entered. Please correct and re-run.
- * Error, Key Separator is required when updating HR data. Please correct and re-run.
- * Error, Type of Change is required when updating HR data. Please correct and re-run.

Error checks are also performed for each individual employee. No update is performed for an employee if any of the following error messages appear on the audit report. However, updates are performed for the remaining selected employees:

- * Duplicate Salary Entry *
  This message indicates that an entry already exists for the employee on the Salary Assignment/Changes form (40-SCR) with keys matching the keys specified on the report parameters form.
- * Future dated entry found *
  This message indicates that the employee has an entry on the Salary Assignment/Changes form (40-SCR) that is future dated, when compared to the key information entered on the report parameters form.
- * Prior entry not found *
  This message indicates that the employee does not have an entry on the Salary Assignments/Changes form (40-SCR) that is dated prior to the key information entered on the report parameters form.
- * Insert failed, tbl full *
  This message indicates that a new entry could not be added to the Salary Assignment/Changes form (40-SCR) because the employee's record reached maximum capacity. This would require an expansion of your employee area.

☞ *Refer to the Technical Administration documentation for information on managing working storage.*

Note: *If an error occurs for a particular employee during a run in update mode, it is not possible to rerun the Mass Salary Update/Report program (MSURPT) in update mode. The update will have successfully updated the remaining employees. In this instance, you will have to correct the rejected records manually.*

See also:

- ***Using the Report Viewer to view the report (on page 81)***

For detailed instructions on viewing the audit report.

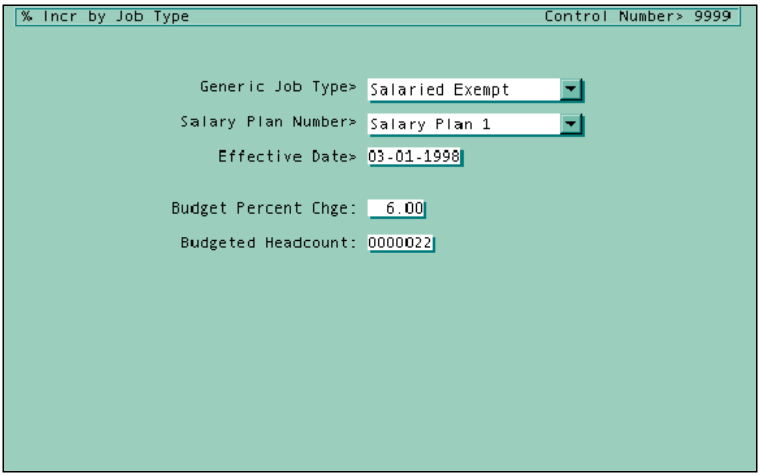
Fixed increase salary plan setup

Salary Administration provides tables for determining which groups of employees are to receive across-the-board increases and the percentage they are to receive. You have the following table choices:

- % Incr by Job Type (TH1SCR)
- % Incr by Org Level 3/Job Type (TH2SCR)
- % Incr by Org Level 4/Job Type (TH3SCR)
- % Incr by Org Level 3/Org Level 4/Job Type (TH4SCR)

You can express the budgeted percent increase on one or a combination of these tables to address specific groups of employees within the organization or the entire employee population. You will be able to tie together a group of tables by specifying the same plan number on each one. Across-the-board increases are effective one year from the date of an employee's last salary change.

In the following illustration, Salary Plan 1 defines a 6 percent increase for all employees with a job type of Salaried Exempt:



Refer to **Creating Annual Salary Budgets for Employees** *(on page 101) for information on using fixed percent salary plans to create budgets.*

See also:

- Setting up across-the-board salary plans ***(on page 69)***

For detailed directions on setting up across-the-board salary plans.

Reviewing the finished salary plans

When you have set up your salary plans and are ready to review them, you may view them online using the Salary Plan-Flat % Increase Table form (THISCR) or on hard copy by running the Salary Plan Table report (9H-RPT).

See also:

- Viewing across-the-board salary plans ***(on page 83)***

For detailed directions on displaying across-the-board salary plans.

Pay-for-performance salary plans and their uses

Pay-for-performance salary plans contain guidelines for giving merit increases to employees. Using Cyborg-delivered tables, you define the basis for the merit increases. These increases are based on an employee's performance appraisal rating and one of the following criteria:

Criteria	**Description**
Compa ratio	The salary divided by the midpoint between the minimum and the maximum of the salary grade
Position in range	The difference between the salary and the minimum of the salary range, divided by the difference between the salary grade range's maximum and minimum, and expressed as a percentage
Time since last increase	The number of months since the date of the last salary change for the employee

Within these criteria, Salary Administration can project budgeted salary increases using a percentage, range of percentages, or amount.

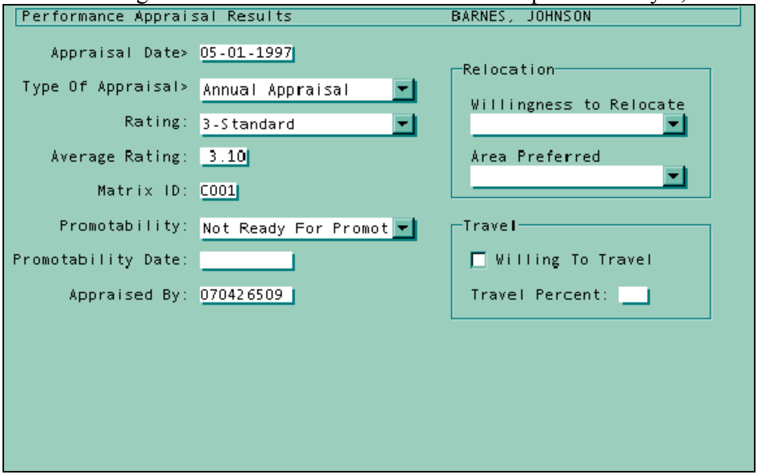
See also:

- Setting up pay-for-performance salary plans—Amount increase ***(on page 84)***
- Setting up pay-for-performance salary plans—Percentage increase ***(on page 87)***
- Setting up pay-for-performance salary plans—Percentage increase range ***(on page 89)***
- Setting up pay-for-performance salary plans—Time until increase ***(on page 91)***

For detailed directions on setting up pay-for-performance salary plans.

Where the salary increase criteria are found

Using a pay-for-performance salary plan, the first component for determining the salary change is the employee performance rating. It is recorded on an employee's Performance Appraisal Results form (49-SCR). In the following illustration, Johnson Barnes has a recorded rating of '3-Standard' for the review that took place on May 1, 1997:



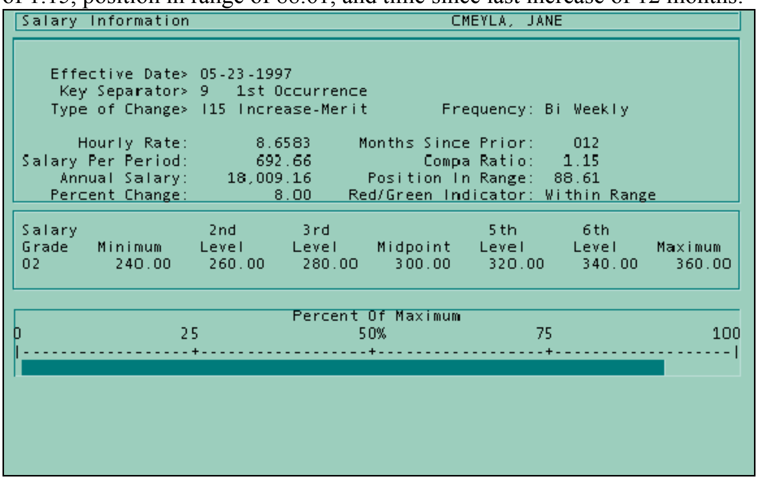
Performance Appraisal Results BARNES, JOHNSON

Appraisal Date> 05-01-1997
Type Of Appraisal> Annual Appraisal
Rating: 3-Standard
Average Rating: 3.10
Matrix ID: C001
Promotability: Not Ready For Promot
Promotability Date:
Appraised By: 070426509

Relocation
Willingness to Relocate
Area Preferred

Travel
Willing To Travel
Travel Percent:

When a pay-for-performance table is set up and used to calculate the employee's budgeted increase, the compa ratio, position in range, or time since last increase is used as the calculation criterion. You can see a display of these three informational items on the employee Salary Information form (41-SCR). This display-only form results from the calculation of the employee's salary on the Salary Assignment/ Changes form (40-SCR). In the following illustration, Jane Cmeyla's current salary is used to calculate the compa ratio of 1.15, position in range of 88.61, and time since last increase of 12 months:



Salary Information CMEYLA, JANE

Effective Date> 05-23-1997
Key Separator> 9 1st Occurrence
Type of Change> I15 Increase-Merit Frequency: Bi Weekly

Hourly Rate: 8.6583 Months Since Prior: 012
Salary Per Period: 692.66 Compa Ratio: 1.15
Annual Salary: 18,009.16 Position In Range: 88.61
Percent Change: 8.00 Red/Green Indicator: Within Range

Salary Grade	Minimum	2nd Level	3rd Level	Midpoint	5th Level	6th Level	Maximum
02	240.00	260.00	280.00	300.00	320.00	340.00	360.00

Percent Of Maximum
0 25 50% 75 100

Deciding which criterion to use

Your organization's established salary increase guidelines are the starting point for determining the criterion to be used in defining the salary plans in Salary Administration. Look at your policies and then decide whether you will use compa ratio, position in range, or time since last increase as the basis for your salary plans.

Recording how much and when to give an increase

For the criterion you select, you will indicate how much of an increase to give and when to give the increase. Depending on the criterion, you will use one or two of the Cyborg-delivered tables. If you have chosen compa ratio or position-in-range, then you must create the 'how much' and the 'when' parameters on separate tables. If you have chosen time since last increase as your criterion, then you must create only one table, which combines the 'when' and 'how much' information. The following chart identifies the potential pairings of tables:

Criteria	**How much of an increase (choose percentage amount, or range) ['Increase' tables]**			**When to give the increase ['Timing' tables]**
	Percentage	**Amount**	**Range of %s**	**Months**
Compa ratio	% Incr By Rating/Compa Ratio (TD1SCR)	$ Incr By Rating/Compa Ratio (TD2SCR)	% Incr Range By Rating/ Compa Ratio (TD9SCR)	Time Until Incr By Rating/ Compa Ratio (TD3SCR)
Position in range	% Incr By Rating/Pos In Range (TD4SCR)	$ Incr By Rating/Pos In Range (TD5SCR)	% Incr Range By Rating/Pos In Range (TD0SCR)	Time Until Incr By Rating/Pos In Rnge (TD6SCR)
Time since last increase	% Incr By Rating/Time Since Last Incr (TD7SCR)	$ Incr By Rating/Time Since Last Incr (TD8SCR)		

Based on your organization's salary policy, you will select one of the 'increase' tables and pair it with the 'when' table as shown on the same row in the grid above.

For example, if you wanted to give employees a percentage increase dependent on their performance rating and position in range, you would complete the % Increase By Rating/Pos In Range form (TD4SCR). In addition, you would complete the Time Until Incr By Rating/Pos In Rnge form (TD6SCR) to specify when those increases could be given.

If you elect to use only the criterion of time since last increase, no pairing is needed, because the increase and when it is to be given are stated on one table.

When you are defining 'how much to give' and 'when' on tables, you must establish one table record for each appraisal rating value you use. For example, if you use appraisal ratings of '1-Outstanding' through '5-Unsatisfactory', you will require at least five table records—one for each rating. You will also need to create a table record for a rating '8-Too New To Rate' for employees who do not yet have a performance appraisal on file.

Each of the tables you create will require an entry in the amount, percentage, or range text boxes shown on the form.

Linking 'how much to give' and 'when' criteria

This combination of information—how much to give and when—is called a pay-for-performance matrix. A unique four-character matrix ID identifies each matrix. Each pair of tables must contain the same matrix ID. Depending on the type(s) of table(s) you decide to use, the matrix ID used on each table begins with a specific character:

- C—Compa ratio
- R—Position in range
- T—Time since last increase

Compa ratio increases

When using compa ratio as the basis for pay-for-performance increases, you use a pair of tables—one to specify how much to give and one to specify when the increases can be given. For each compa ratio category, an increase entry is required.

How much to give for a compa ratio increase can be expressed as:

- Percentages
- Amounts
- Range of percentages

There is a separate table/matrix for each choice:

Compa ratio increase tables	**Matrix ID**
Percent of Increase (TD1SCR)	**C**xxx
Fixed Amount of Increase (TD2SCR)	**C**xxx
Range of Percents of Increase (TD9SCR)	**C**xxx

When to give a compa ratio increase is expressed as a range of months:

Compa ratio timing table	**Matrix ID**
Months Until Next Increase (TD3SCR)	**C**xxx

If you set up the % Incr By Rating/Compa Ratio table (TD1SCR) for performance rating values 1 through 4 and 8, the finished matrix might look like this:

Rating	**Compa ratio**					
	<80	**80-90**	**>90-100**	**>100-110**	**>110-120**	**>120**
1	12.50	12.00	10.50	9.50	6.75	5.00
2	11.00	10.00	9.00	8.00	6.25	4.25
3	8.00	7.25	6.75	6.00	4.75	3.75
4	5.00	4.50	3.50	3.00	2.50	1.00
8	8.50	8.00	7.00	6.00	4.50	2.00

The vertical variable of the matrix is the Appraisal Rating value from the performance appraisal results. The horizontal variable of the matrix is the compa ratio. The increase values are fixed percentages. If an employee has a rating of 3 and a compa ratio of 90-100, the increase will be 6.75 percent.

Position-in-range increases

When using position in range as the basis for pay-for-performance increases, you use a pair of tables—one to specify how much to give and one to specify when the increases can be given. Each of the position-in-range categories requires an increase entry.

How much to give for a position-in-range increase can be expressed as:

- Percentages
- Amounts
- Range of percentages

There is a separate table/matrix for each choice:

Position in range increase tables	**Matrix ID**
Percent of Increase (TD4SCR)	**R**xxx
Fixed Amount of Increase (TD5SCR)	**R**xxx
Range of Percents of Increase (TD0SCR)	**R**xxx

When to give a position-in-range increase is expressed as a range of months:

Position-in-range timing table	**Matrix ID**
Months Until Next Increase (TD6SCR)	**R**xxx

If you set up the $ Incr By Rating/Pos In Range table (TD5SCR) for performance rating values 1 through 4 and 8, the finished matrix might look like this:

Rating	**Position in range**					
	0%	**>0-25**	**>25-50**	**>50-75**	**>75-100**	**>100**
1	1.0000	0.9500	0.8500	0.8000	0.7000	0.6000
2	0.9000	0.8000	0.7500	0.7000	0.5000	0.4500
3	0.6000	0.5000	0.4500	0.4000	0.4000	0.0000
4	0.4000	0.3500	0.3000	0.2500	0.0000	0.0000
8	0.8000	0.7000	0.6000	0.5000	0.4000	0.0000

The vertical variable of the matrix is the Appraisal Rating value from the performance appraisal results. The horizontal variable of the matrix is the position in range. The increase values are fixed amounts. As an example, if an employee has a performance rating of 2 and a position in range of 25-50, the increase will be 0.75 (which is an hourly rate with four decimals in this example).

Time since last increase

When using time since last increase as the basis for pay-for-performance increases, you use one table to specify how much to give and when the increases can be given. Each time period requires an increase entry.

How much to give for a time since last increase, increase can be expressed as:

- Percentage
- Amount

There is a separate table/matrix for each choice:

Time since last increase tables	Matrix ID
Percent of Increase (TD7SCR)	**T**xxx
Fixed Amount of Increase (TD8SCR)	**T**xxx

If you set up the $ Incr By Rating/Time Since Last Incr table (TD8SCR) for performance rating values 1 through 4 and 8, the finished matrix might look like this:

Rating	Time since last increase (in months)					
	<3 Mos	**03-06**	**06-09**	**09-12**	**12-18**	**>18 Mos**
1	900	1,000	1,100	1,200	1,300	1,400
2	800	900	1,000	1,100	1,200	1,300
3	600	700	800	900	1,000	1,100
4	200	300	400	500	600	700
8	200	250	300	350	400	450

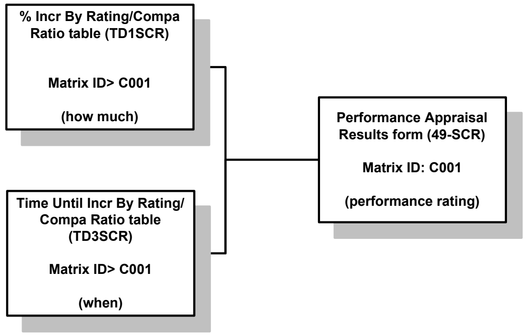
The vertical variable of the matrix is the Appraisal Rating value from the performance appraisal results. The horizontal variable of the matrix is the time in months. The increase values are fixed amounts. As an example, if an employee has a performance rating of 1, and the last increase was eight months ago, the increase will be 1,100 (which is an annual increase in this example.)

Matrix ID interactions

The Matrix ID text box that is established on the Increase Matrices tables is referenced on the Performance Appraisal Results form (49-SCR). This employee form identifies which matrix is to be used for an employee.

The tables that you choose will work together to determine how much an employee will receive and when the employee will receive it. The employee's performance rating will be the third determining factor in the process. To function properly, all these related salary planning components (tables and employee forms) must contain the same matrix ID.

In the following example, a matrix ID of 'C001' has been used to tie together the paired table matrices and the employee's performance results:



In the illustration above, the Matrix ID text boxes on the paired tables are both 'C001'. At the employee level, the Matrix ID text box is also 'C001'. This allows the employee form to link with the table records to determine the increase amount and when the employee will receive it, all based on the employee's performance rating.

☞ *Refer to* **Creating Annual Salary Budgets for Employees** *(on page 101) for information on automatically assigning the matrix ID at the employee level.*

For detailed directions on setting up pay-for-performance salary plans.

Reviewing the finished salary plans

When you have set up your salary plans and are ready to review them, you may view them online using the Job Performance Appraisal Display form (TDISCR) or on hard copy by printing the Job Performance Appraisal Table Detail report (9DDRPT).

Apply the Concept

Describe your organization's current method of budgeting salary increases and indicate which Salary Administration Salary Plan Tables might be used to implement its automation.

Apply the Concept
Describe any unique circumstances or contract terms that might require your organization to use more than one Salary Plan Table for forecasting budget increases.

For detailed directions on viewing pay-for-performance salary plans.

Detailed Directions

This section provides detailed directions on completing a business task.

Tasks

Setting up Salary Administration Control Numbers

To set up Salary Administration Control Numbers for each of your production organizations using the Company-To-Rules Cross-Reference For HR form (AX-SCR), follow these steps:

Note: *Before beginning this task, be sure that you are working with the correct organization. The Salary Administration Control Number establishes which tables are to be used for an organization. You cannot define any tables for an organization until a valid Control Number has been established.*

1. Access the Company-To-Rules Cross-Reference For HR form (AX-SCR)

Access this form by making the following selection from the Navigator:

Component: HR Setup
Process: Setup HR Rules
Task: Organization to Rules Cross-Reference

For practice, access the Company-To-Rules Cross-Reference For HR form (AX-SCR) for the 999999 organization.

2. Enter the Effective Date

This date must be early enough to cover the original hire date of the first employee in your organization. Many customers look to the original hire date of their employee with the greatest seniority, and then use an effective date of one day prior to that employee's original hire date.

Enter the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

For practice, verify that the Effective Date is '01-01-1925'.

3. Enter the Salary Administration Control Numbers

Type a four-character Salary Administration Control Number in each of the entry text boxes in the Salary Administration section of the form (bottom right group box).

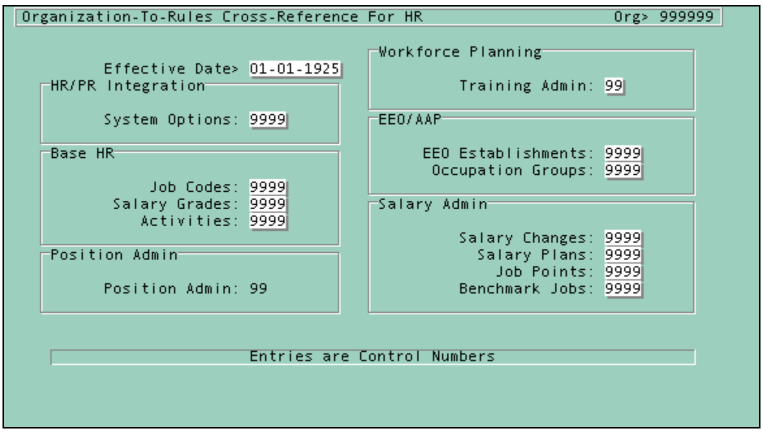
For practice, type '9999' in each text box if the entries are not already present on the form.

4. Click Save or press Enter

The Salary Administration Control Numbers are set up for the organization that is displayed in the form heading and a '---Maintenance has been performed---' message is displayed.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Note: *Perform these steps for each organization that will be using Salary Administration. Use the Select an Employee or Organization button on the toolbar to change organizations.*

See also:

- Salary Administration Control Numbers ***(on page 43)***

For an explanation of Control Numbers and their use.

Setting up across-the-board salary plans

To set up an across-the-board salary plan(s) using the percent increase tables, select the appropriate table(s) that will be used:

- Increase by Job Type (TH1SCR)
- Increase by Job Type/Control 3 (TH2SCR)
- Increase by Job Type/Control 4 (TH3SCR)
- Increase by Job Type/Control 3-4 (TH4SCR)

and then follow these steps:

1. Access one of the Percent Increase tables

Access the relevant form by making one of the following task selections from the Navigator:

Component:	Salary Administration
Process:	Setup Across-the-Board Plans
Task:	Increase by Job Type
Task:	Increase by Job Type/Control 3
Task:	Increase by Job Type/Control 4
Task:	Increase by Job Type/Control 3-4

Note: *To avoid copying pre-existing information, you may clear the form by choosing: **A**ctions **C**lear Fields.*

Note: *Make sure the appropriate Control Number is displayed in the form heading. This is the Control Number for which the table will be set up. Change to the appropriate organization if the displayed Control Number is incorrect.*

For practice, select Increase by Job Type/Org Level 3 to access the % Incr by Org Level 3/Job Type form (TH2SCR).

2. Select an Org Level 3

If the Org Level 3 text box is displayed on the table you have chosen, choose an option from the Org Level Three option list (HR439).

Use this text box to record one of your budget parameters for a group of employees. Only employees who have a matching OL3 value on their Location Assignment/Changes form (05CSCR) will be affected by this Salary Plan table.

For practice, select 'Region 3030'.

3. Select an Org Level 4

If the Org Level 4 text box is displayed on the table you have chosen, select an option from the Org Level Four option list (HR449).

Use this text box to record one of your budget parameters for a group of employees. Only employees who have a matching OL4 value on their Location Assignment/Changes form (05CSCR) will be affected by this Salary Plan table.

This text box is not present on the table record being used for this practice.

4. Select a Generic Job Type

Select a generic job type from the Job Type option list (HR12).

Use this text box to record one of your budget parameters for a group of employees. Only employees who have a matching job type associated with their assigned job on the Job Assignment/Changes form (05-SCR) will be affected by this Salary Plan Table.

For practice, select 'Salaried Exempt'.

5. Select a Salary Plan Number

Select an option from the Plan/actual Switches option list (SA01) to indicate which salary plan will be generated when this table record is used to produce budget records.

Select Salary Plan 1, 2, or 3 to identify the salary plan associated with this table. This indicator will also be present on the matching employee Budgeted Salary Information form (45-SCR).

For practice, select 'Salary Plan 2'

6. Enter an Effective Date

The first day of the salary plan year to which the table record applies is recorded in this text box. Type the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

This date is used as the plan year start date on any salary budget record that is created using this table record.

For practice, type a date that represents January 1 of 1998, for example, '01-01-1998' or '19980101'.

7. Enter the Budget Percent Chge

Type up to five digits in this text box, allowing two decimal places. You may type the decimal point.

This text box is used to assign a budgeted change percentage to each Salary Plan Table entry. The budget program uses this percentage to calculate the budgeted salary change for each employee to whom this Salary Plan table record applies.

For practice, type '500' to represent a 5 percent increase.

8. Enter the Budgeted Headcount (optional)

This seven-digit text box contains the estimated number of employees the organization expects to be affected by this salary plan record.

Note: *This text box is used for informational purposes only and is not used for calculations. No report uses the information in this text box.*

For practice, leave this text box blank.

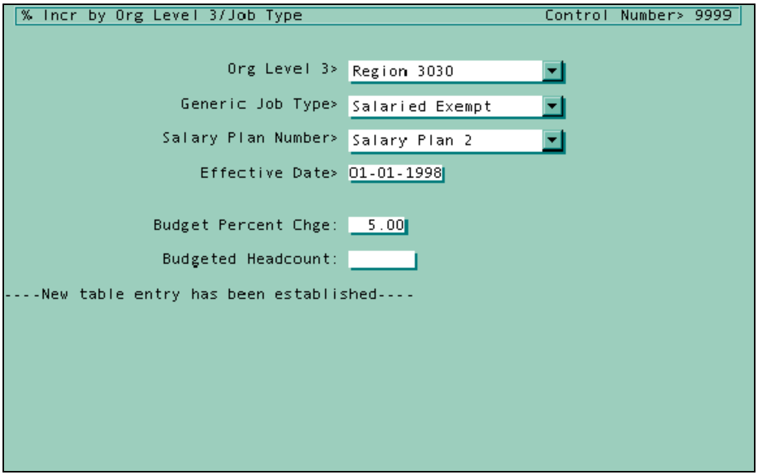
9. Click Save or press Enter

The Percent Increase table record is created and the following message is displayed:

'---New table entry has been established---'.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Note: *Be sure to perform these steps for each of the Percent Increase tables that will be used for Salary Administration.*

See also:

- Across-the-board salary plans and their uses ***(on page 48)***

For a description of these tables and their uses.

Opening the Mass Salary Update/Report parameters form

To open the Mass Salary Update/Report (MSURPT) parameters form, follow these steps:

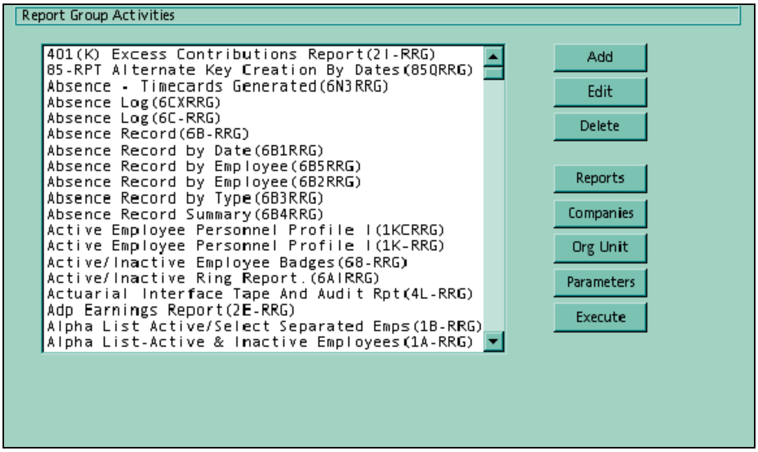
1. Access the Report Group Activities form (RGMSTR)

Access the Report Group Activities form (RGMSTR) by making the following selection from the Navigator:

Component: Reporting
Process: Report Scheduling
Task: Schedule Report Groups

For practice, access the Report Group Activities form (RGMSTR).

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



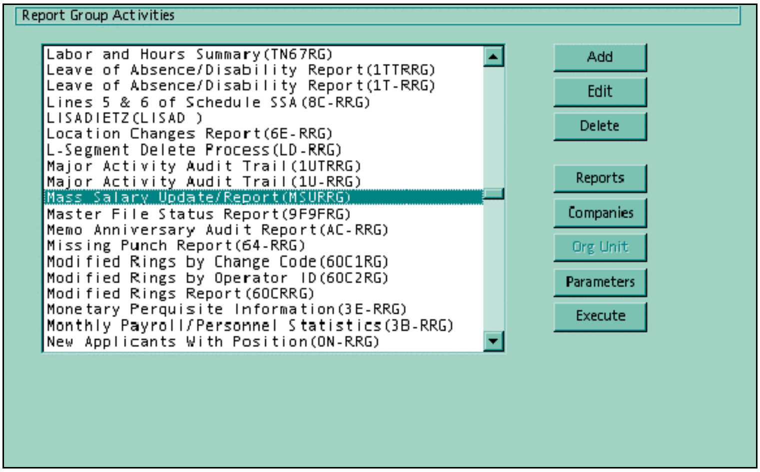
2. Select the Mass Salary Update/Report

Select the Mass Salary/Update Report group (MSURRG) from the list.

For practice, select the Mass Salary/Update Report group (MSURRG).

3. Click Parameters

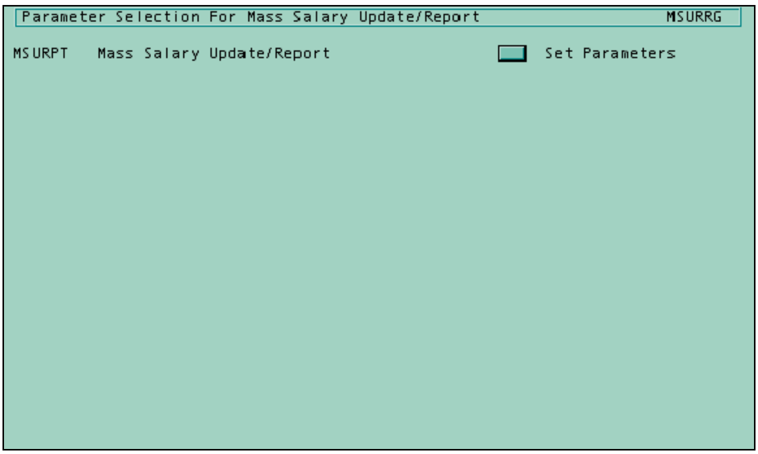
Click the Parameters button to the right of the list.



The Parameter Selection For Mass Salary Update/Report form (MSURPT) will display.

For practice, click Parameters.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



4. Click Set Parameters

Click the Set Parameters button. The Report Parameters for the Mass Salary Update/Report form (MSURPT) will display.

For practice, click Set Parameters.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:

For more information about the Mass Salary Update/Report.

Completing the Mass Salary Update/Report parameters form

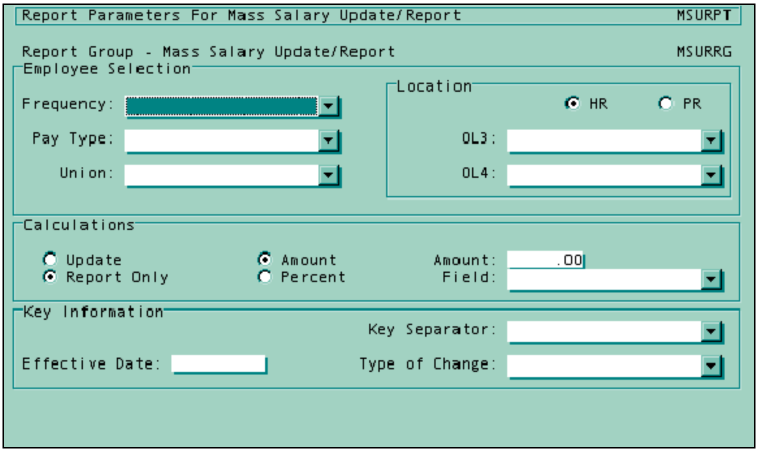
To complete the Mass Salary Update/Report program (MSURPT) parameters form, follow these steps:

1. Open the Report Parameters for Mass Salary Update/Report form (MSURPT)

Follow the steps in the previous task to open the parameters form.

For practice, open the Report Parameters for Mass Salary Update/Report form (MSURPT).

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



2. Select the Frequency

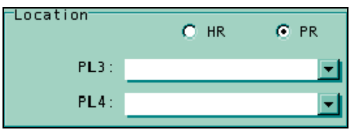
To select all employees of a particular frequency, make a selection from the Frequency option list (PP29). This field will be ignored if left blank.

For practice, select Bi Weekly from the Frequency option list (PP29).

3. Select the location

Employee selection can be based on the HR or Payroll location. The organization level 3 and 4 option lists will vary, depending on which option is selected.

This can be seen in the following examples:



For practice, select the 'HR' option.

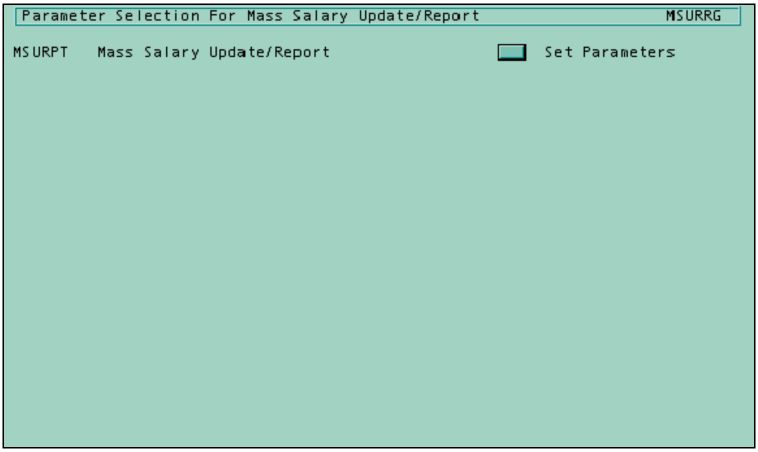
4. Press Enter

After making the HR or PR location selection, you need to exit and return to the parameters form in order to display the associated field labels and option lists. To exit the form, press Enter.

The Parameter Selection For Mass Salary Update/Report form (MSURPT) will display.

For practice, press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



5. Return to the parameters form

Click the Set Parameters button. The Report Parameters for Mass Salary Update/Report form (MSURPT) will re-display, showing the appropriate Location option list labels and option lists.

For practice, click Set Parameters.

6. Select the Organization levels

The Organization level 3 and 4 option lists will vary, depending on which option was selected in Step 3. When HR is selected, the option lists will display the values seen on the Location Assignment/Changes form (05CSCR). When PR is selected, the option lists will show the values seen on the Payroll Home Location/Pay Allocation form (GG-SCR).

For practice, select Region 3030 for OL3 and Department 4040 for OL4.

7. Select the Pay Type

To select all employees of a particular pay type, make a selection from the Pay Type option list (SA07). This field will be ignored if left blank.

For practice, select Salary-Auto Paid from the Pay Type option list (SA07).

8. Select the Union

To select all employees of a particular union code, make a selection from the Union option list (PP429). This field will be ignored if left blank.

For practice, leave the Union option list (PP429) blank (or 'make no selection').

9. Select program mode

Select the mode in which the program will be run—Update or Report Only. The Report Only selection allows you to run in 'What-if' report-only mode. When satisfied with the results, you can run the Mass Salary Update/Report program (MSURPT) in update mode by selecting the Update option.

For practice, select the Report Only option.

10. Select the type of increase

Decide whether you want the increase to be a fixed amount or a percentage by selecting the appropriate option. The amount field labels will vary, based on which selection is made.

This can be seen in the following examples:

For practice, select the Percent option.

11. Press Enter

After making the Amount or Percent calculation selection, you need to exit and return to the parameters form in order to display the associated amount text box label. To exit the form, press Enter.

The Parameter Selection For Mass Salary Update/Report form (MSURPT) will display.

For practice, press Enter.

12. Click Set Parameters

Return to the parameters form. The Report Parameters for Mass Salary Update/Report form (MSURPT) will re-display, showing the appropriate Calculations text box label.

For practice, click Set Parameters.

13. Enter the amount to be updated

Type the amount of the update in the Amount or Percent text box.

If the selection in Step 10 was Amount, the field label will be Amount, and the text box is used as either an amount (with 2 decimals), or a rate (with 4 decimals), based on the value selected from the Field option list (SA08).

If the selection in Step 10 was Percent, the field label will be Percent and the amount you type will be as a percentage (with 4 decimals).

For practice, type '10.0000' in the Percent text box.

14. Select the Field to be updated

Select which entry the process will update from the Field option list (SA08).

Note: *If you modify the value in this field you must follow Steps 11 and 12 above to exit and return to the parameters form.*

For practice, select 'HR Period Salary'. Exit and return to the parameters form by pressing Enter and then clicking Set Parameters.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:

15. If you selected HR Annual Salary, HR Period Salary, or HR Hourly Rate in the previous step, complete Steps 16 through 18

16. Select the Key Separator

Select the key separator to be used from the Key Separator option list (HR70).

For practice, select '1st Occurrence'.

17. Enter the Effective Date

Type the effective date to be used. Enter the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

For practice, type '01-01-1999'.

18. Select the Type of Change

Select the type of change from the Type of Change option list (HR11).

For practice, select 'Increase-Negotiated'.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:

Running the Mass Salary Update/Report

The process for running the Mass Salary Update/Report program (MSURPT) is the same for both Update or Report Only modes. To run the program, follow these steps:

Note: *Before running the program in Update mode, ensure that all users are logged off the system to avoid possible conflicts.*

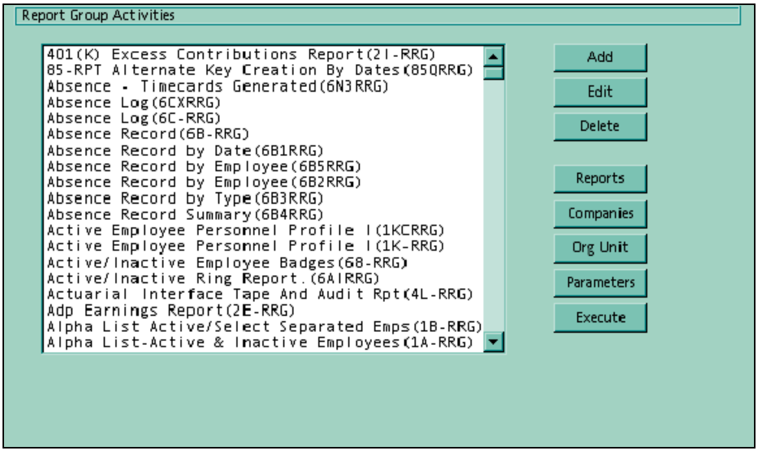
1. Access the Report Group Activities form (RGMSTR)

Access the Report Group Activities form (RGMSTR) by making the following selection from the Navigator:

Component: Reporting
Process: Report Scheduling
Task: Schedule Report Groups

For practice, access the Report Group Activities form (RGMSTR).

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



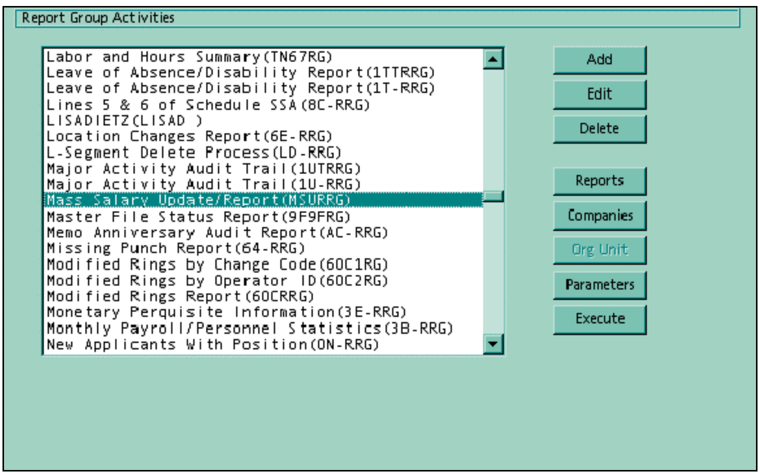
2. Select the Mass Salary Update/Report

Select the Mass Salary/Update Report group (MSURRG) from the list.

For practice, select the 'Mass Salary/Update Report group (MSURRG)'.

3. Click Execute

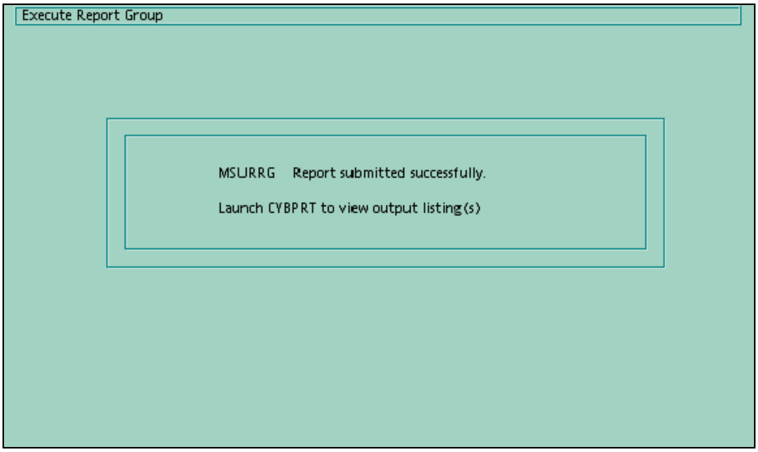
Click the Execute button on the lower right side of the form to launch the report.



A confirmation form will display.

For practice, click Execute.

If you completed the Guided Practice, the resulting confirmation form should look similar to the example that follows:



See also:

- Audit Report ***(on page 55)***

For more information about the audit report generated by the Mass Salary Update/Report program (MSURPT).

Using the Report Viewer to view the report

To use the Report Viewer to display the report online, complete the following steps:

Note: *Instead of using the Report Viewer to view the report online, the report could be scheduled via SUBMIT/VIEW, or by running the standard JREPORT.BAT job stream. Refer to either the eCyborg: Using the Web Client or Using The Solution Series: Administrative Solutions documentation for more information on SUBMIT and VIEW.*

Note: *In a classroom setting, verify the environment setting with your instructor before you begin this Guided Practice.*

1. Access the Report Viewer

Access the Report Viewer by clicking the Report Viewer button on the Launch toolbar.

For practice, open the Report Viewer utility.

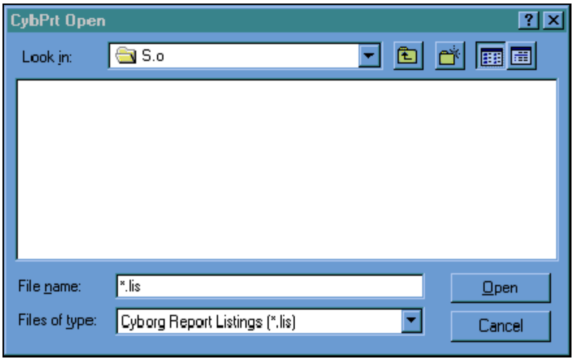
2. Open the report

Click the Open Report button on the toolbar.

The CybPrt Open dialog will display.

For practice, click the Open Report button.

If you completed the Guided Practice, the dialog displayed should look similar to the example that follows:

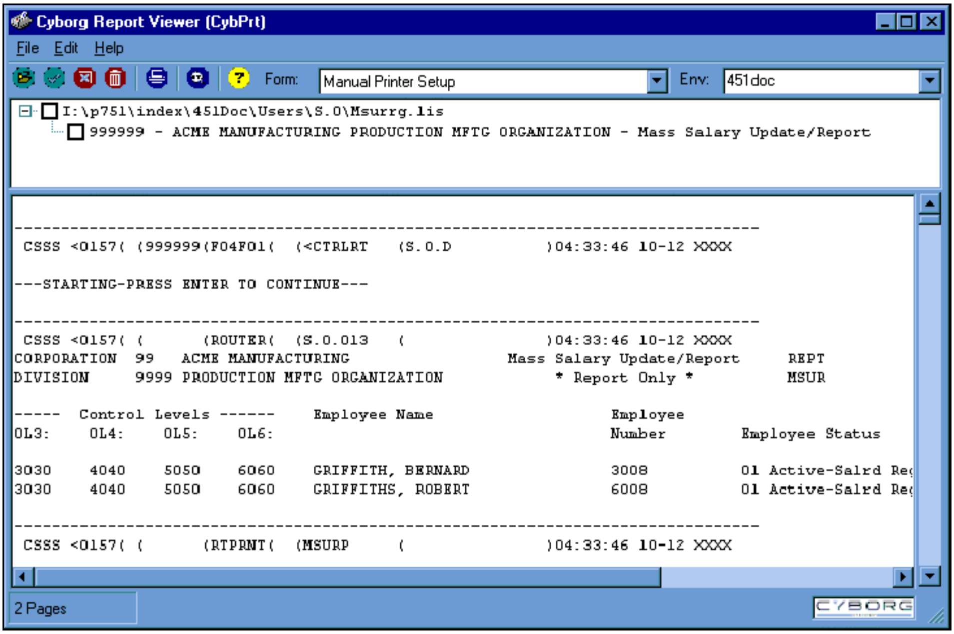


3. Open the Mass Salary Update/Report report group output file

You may need to navigate to the users directory to get to the location of the output file. Select and open the report group output file named MSURRG.LIS.

For practice, select and open 'MSURRG.LIS'.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Refer to the Using The Solution Series: Administrative Solutions documentation for more information on the Report Viewer utility.

See also:

- Audit Report ***(on page 55)***

For more information about the audit report generated by the Mass Salary Update/Report program (MSURPT).

Viewing across-the-board salary plans

To see a display of the across-the-board salary plans using the Salary Plan-Flat % Increase Table form (THISCR), follow these steps:

Access the Salary Plan-Flat % Increase Table form (THISCR)

Access this form by making the following selection from the Navigator:

Component: Salary Administration
Process: Setup Across-the-Board Plans
Task: View Across-the-Board Salary Plans

For practice, access the Salary Plan-Flat % Increase Table form (THISCR).

Up to 16 records are displayed on each form. Click Save or press Enter to view the next form.

A '--- COMPLETE ---' message appears when all the records on file have been viewed.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:

PLAN-FLAT % INCREASE TABLE

CTRL NMBR	OL3	OL4	GENERIC JOB TYPE/DESC	SAL TYPE	TABLE DATE	BUDGET % CHANGE	BUDGETED HEADCOUNT
9999			01 Salaried Exempt	1	03-01-1998	6.00	0000022

- Across-the-board salary plans and their uses ***(on page 48)***

For a description of this method of viewing across-the-board salary plans.

Setting up pay-for-performance salary plans—Amount increase

To set up a Salary Plan table record that allows the pay-for-performance increase to be calculated as a fixed amount, select the appropriate table(s):

- Amount Inc by Rating/Compa-Ratio (TD2SCR)
- Amount Inc by Rating/Pos In Range (TD5SCR)
- Amount Inc Rating/Time Since Last Inc (TD8SCR)

and then follow these steps:

1. Access one of the fixed amount increase tables

Access one of the forms by making one of the following task selections from the Navigator:

Component:	Salary Administration
Process:	Setup Pay-for-Performance Plans
Task:	Amount Inc by Rating/Compa-Ratio
Task:	Amount Inc by Rating/Pos In Range
Task:	Amount Inc Rating/Time Since Last Inc

Note: *To avoid copying pre-existing information, you may clear the form by choosing: **A**ctions **C**lear Fields.*

Note: *Make sure the appropriate Control Number is displayed in the form heading. This is the Control Number for which the table will be set up. Change to the appropriate organization if the displayed Control Number is incorrect.*

For practice, select Amount Inc Rating/Time Since Last Inc to access the $ Incr By Rating/Time Since Last Incr form (TD8SCR).

2. Enter the Matrix ID

Type a three-character alphanumeric identifier for this matrix ID. If left blank, this text box defaults to a value of '001'.

The form displays an alpha character before this text box, based on the table record being generated. For example, any table using compa ratio values will display a 'C'. Any table using position-in-range values will display an 'R'. Those using time since the last increase will display a 'T'.

For practice, type '198'.

3. Select a Rating

Select an option from the Appraisal Ratings option list (HR16) to indicate the performance appraisal rating to which the values being entered in the table Results text box apply.

For practice, select '1-Outstanding'.

4. Enter the Effective Date

Type the salary plan start date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

For practice, type a date that represents January 1 of 1998, for example, '19980101'.

5. Select the Number of Decimals

Select an option from the Number of Decimals option list (SA06) that identifies the decimal point placement for all currency values entered on this form.

For practice, select 'None (Annual Amt)'.

6. Enter the Compa Ratio, Position In Range, or Months Since text boxes

Type the six-character recommended fixed amount of increase in each of the Compa Ratio, Position In Range, or Months Since results text boxes provided by this table.

Do not type the decimal point in these text boxes. The system edits these text boxes based on the entry made in the Number of Decimals text box. If the number of decimals entry is zero (no decimals), the system assumes the fixed amount entered is an annual amount. For example, the entry '010000' represents 10,000. If the number of decimals entry is four, the entry '010000' represents 1.0000.

The Compa Ratio results text boxes display the following categories: <80; 80-90; >90-100; >100-110; >110-120; and >120.

The Position In Range results text boxes display the following categories: <0%; 0-25; 25-50; 50-75; 75-100; and >100%.

The Months Since results text boxes display the following categories: <3 Mos; 3-6; 6-9; 9-12; 12-18; and >18 Mos.

For practice, type '900', '1000', '1100', '1200', '1300', and '1400', respectively, in the Months Since text boxes.

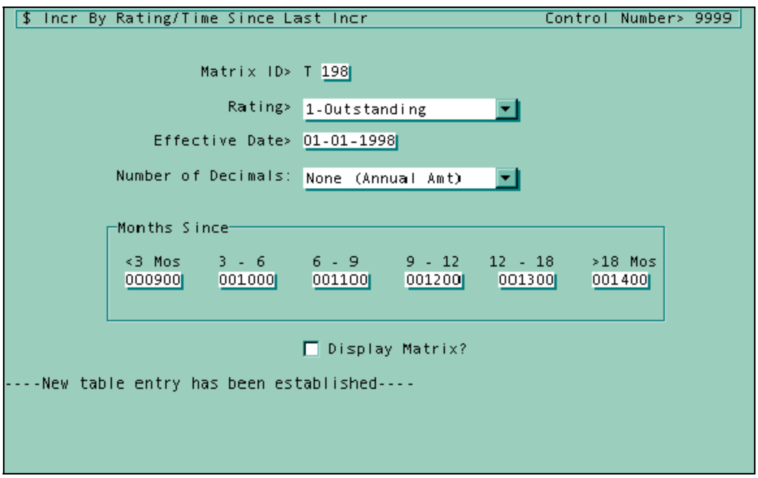
7. Click Save or press Enter

The Percent Increase By Rating table record is created and the following message is displayed:

'---New table entry has been established---'.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Note: *Be sure to repeat these steps to create a Fixed Amount Increase By Rating table record for each of the ratings (performance appraisal) that you will be using for Salary Administration, for example, 2, 3, 4, 5, and 8.*

To view the entire matrix, enter the four required key text boxes and select the Display Matrix check box. The matrix is displayed beginning with the Rating entered.

See also:

- Pay-for-performance salary plans and their uses ***(on page 59)***
For a description of these tables and their uses.

Setting up pay-for-performance salary plans—Percentage increase

To set up a Salary Plan table record that allows the pay-for-performance increase to be calculated as a fixed percentage, select the appropriate table(s):

- % Incr by Rating/Compa-Ratio (TD1SCR)
- % Inc by Rating/Position In Range (TD4SCR)
- % Inc Rating/Time Since Last Inc (TD7SCR)

and then follow these steps:

1. Access one of the fixed percentage increase tables

Access one of these forms by making one of the following task selections from the Navigator:

Component:	Salary Administration
Process:	Setup Pay-for-Performance Plans
Task:	% Incr by Rating/Compa-Ratio
Task:	% Inc by Rating/Position In Range
Task:	% Inc Rating/Time Since Last Inc

Note: *To avoid copying pre-existing information, you may clear the form by choosing:* ***A****ctions* ***C****lear Fields.*

Note: *Make sure the appropriate Control Number is displayed in the form heading. This is the Control Number for which the table will be set up. Change to the appropriate organization if the displayed Control Number is incorrect.*

For practice, select % Inc by Rating/Position In Range to access the % Incr By Rating/Pos In Range form (TD4SCR).

2. Enter the Matrix ID

Type a three-character alphanumeric identifier for this matrix ID. If left blank, this text box defaults to a value of '001'.

The form displays an alpha character before this text box, based on the table record being generated. For example, any table using compa ratio values will display a 'C'. Any table using position-in-range values will display an 'R'. Those using time since the last increase will display a 'T'.

For practice, type '298'.

3. Select a Rating

Select an option from the Appraisal Ratings option list (HR16) to indicate the performance appraisal rating to which the values being entered in the table Results text box apply.

For practice, select '1-Outstanding'.

4. Enter the Effective Date

Type the salary plan start date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

For practice, type a date that represents January 1 of 1998, for example, '19980101'.

5. Enter the Compa Ratio, Position In Range, or Months Since text boxes

Type the four-character, two-decimal recommended percentage increase in the Compa Ratio, Position In Range, or Months Since results text boxes provided by this table. An example of the entry is '1000', or '10.00', for a 10 percent increase. You may type the decimal point in the text box.

The Compa Ratio results text boxes display the following categories: <80; 80-90; >90-100; >100-110; >110-120; and >120.

The Position In Range results text boxes display the following categories: 0%; >0-25; >25-50; >50-75; >75-100; and >100%.

The Months Since results text boxes display the following categories: <3 Mos; 3-6; 6-9; 9-12; 12-18; and >18 Mos.

For practice, type '1250', '1200', '1050', '950', '675', and '500', respectively, in the Position In Range text boxes.

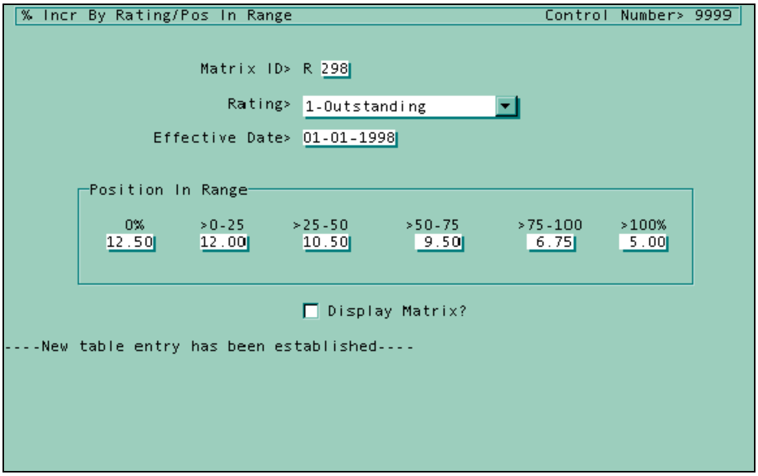
6. Click Save or press Enter

The Fixed Percentage Increase By Rating table record is created and the following message is displayed:

'---New table entry has been established---'.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Note: *Be sure to repeat these steps to create a Fixed Percentage Increase By Rating table record for each of the performance appraisal ratings that you will be using for Salary Administration, for example, 2, 3, 4, 5, and 8.*

To view the entire matrix, enter the three required key text boxes and select the Display Matrix check box. The matrix is displayed beginning with the Rating entered.

See also:

- Pay-for-performance salary plans and their uses ***(on page 59)***

For a description of these tables and their uses.

Setting up pay-for-performance salary plans—Percentage increase range

To set up a Salary Plan table record that allows the pay-for-performance increase to be calculated as a percentage increase range, select the appropriate table(s):

- % Inc Range by Rating/Compa-Ratio (TD9SCR)
- % Inc Range by Rating/Pos In Range (TD0SCR)

and then follow these steps:

1. Access one of the percentage increase range tables

Access one of these forms by making one of the following task selections from the Navigator:

Component: Salary Administration
Process: Setup Pay-for-Performance Plans
Task: % Inc Range by Rating/Compa-Ratio
Task: % Inc Range by Rating/Pos In Range

Note: *To avoid copying pre-existing information, you may clear the form by choosing: **A**ctions **C**lear Fields.*

Note: *Make sure the appropriate Control Number is displayed in the form heading. This is the Control Number for which the table will be set up. Change to the appropriate organization if the displayed Control Number is incorrect.*

For practice, select % Inc Range by Rating/Compa-Ratio to access the % Incr Range By Rating/Compa Ratio form (TD9SCR).

2. Enter the Matrix ID

Type a three-character alphanumeric identifier for this matrix ID. If left blank, this text box defaults to a value of '001'.

The form displays an alpha character before this text box, based on the table record being generated. For example, any table using compa ratio values will display a 'C'. Any table using position-in-range values will display an 'R'. Those using time since the last increase will display a 'T'.

For practice, type '398'.

3. Select a Rating

Select an option from the Appraisal Ratings option list (HR16) to indicate the performance appraisal rating to which the values being entered in the table Results text box apply.

For practice, select '1-Outstanding'.

4. Enter the Effective Date

Type the salary plan start date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

For practice, type a date that represents January 1 of 1998, for example, '19980101'.

5. Enter the Compa Ratio or Position In Range text boxes

Type the recommended range of percent increase amounts in the Compa Ratio or Position In Range text boxes provided by this table. Each percentage range is composed of two 2-position text boxes (minimum and maximum) and expressed as whole numbers. An example of an entry is minimum = 10 and maximum = 12, which represents a range of 10 to 12 percent.

Note: *The first percentage in each range is used when determining the increase.*

The Compa Ratio results text boxes display a minimum and maximum percentage for each of the following categories: <80; 80-90; >90-100; >100-110; >110-120; and >120.

The Position-In-Range results text boxes display a minimum and maximum percentage for each of the following categories: 0%; >0-25; >25-50; >50-75; >75-100; and >100%.

For practice, type '10-12%', '9-11%', '8-10%', '6-8%', '4-6%', and '2-4%', respectively, in the Compa Ratio text boxes.

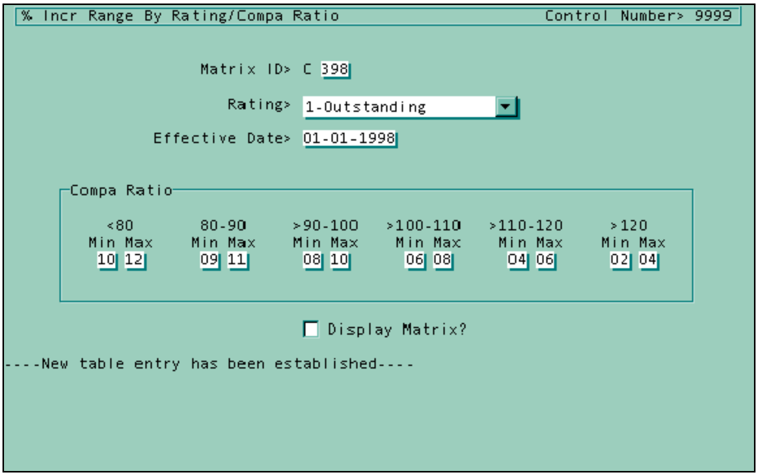
6. Click Save or press Enter

The Percent Increase Range By Rating table record is created and the following message is displayed:

'---New table entry has been established---'.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Note: *Be sure to repeat these steps to create a Percent Increase Range By Rating table record for each of the performance appraisal ratings that you will be using forSalary Administration, for example, 2, 3, 4, 5, and 8.*

To view the entire matrix, enter the three required key text boxes and select the Display Matrix check box. The matrix is displayed beginning with the Rating entered.

See also:

- Pay-for-performance salary plans and their uses ***(on page 59)***

For a description of these tables and their uses.

Setting up pay-for-performance salary plans—Time until increase

To set up a Salary Plan table record that works with other table records to determine the time until the next increase, select the appropriate table:

- Time Until Incr by Rating/Compa-Ratio (TD3SCR)
- Time Until Incr by Rating/Pos In Range (TD6SCR)

and then follow these steps:

1. Access one of the time until increase tables

Access one of these forms by making one of the following task selections from the Navigator:

Component:	Salary Administration
Process:	Setup Pay-for-Performance Plans
Task:	Time Until Incr by Rating/Compa-Ratio
Task:	Time Until Incr by Rating/Pos In Range

*Note: To avoid copying pre-existing information, you may clear the form by choosing: **A**ctions **C**lear Fields.*

Note: Make sure the appropriate Control Number is displayed in the form heading. This is the Control Number for which the table will be set up. Change to the appropriate organization if the displayed Control Number is incorrect.

For practice, select Time Until Incr by Rating/Compa-Ratio to access the Time Until Incr By Rating/Compa Ratio form (TD3SCR).

2. Enter the Matrix ID

Type a three-character alphanumeric identifier for this matrix ID. If left blank, this text box defaults to a value of '001'.

The form displays an alpha character before this text box, based on the table record being generated. For example, any table using compa ratio values will display a 'C'. Any table using position-in-range values will display an 'R'. Those using time since the last increase will display a 'T'.

For practice, type '398' (so that it matches its 'paired' form in the prior directions).

3. Select a Rating

Select an option from the Appraisal Ratings option list (HR16) to indicate the performance appraisal rating to which the values being entered in the table Results text box apply.

For practice, select '1-Outstanding'.

4. Enter the Effective Date

Type the salary plan start date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

For practice, type a date that represents January 1 of 1998, for example, '19980101'.

5. Enter the Compa Ratio or Position In Range text boxes

Type the recommended time range in the Compa Ratio or Position In Range month text boxes provided by this table. This represents the number of months since the employee's last salary change.

Each month range is composed of two three-position numeric text boxes, minimum and maximum. An example of an entry is minimum = 009 and maximum = 012, which represents a range of 9 to 12 months.

The Compa Ratio results text boxes display a minimum and maximum number of months for each of the following categories: <80; 80-90; >90-100; >100-110; >110-120; and >120.

The Position In Range result text boxes display a minimum and maximum number of months for each of the following categories: <0%; 0-25; 25-50; 50-75; 75-100; and >100%.

For practice, enter '6-6', '9-9', '12-12', '12-12', '12-15', and '15-15', respectively, in the Compa Ratio text boxes.

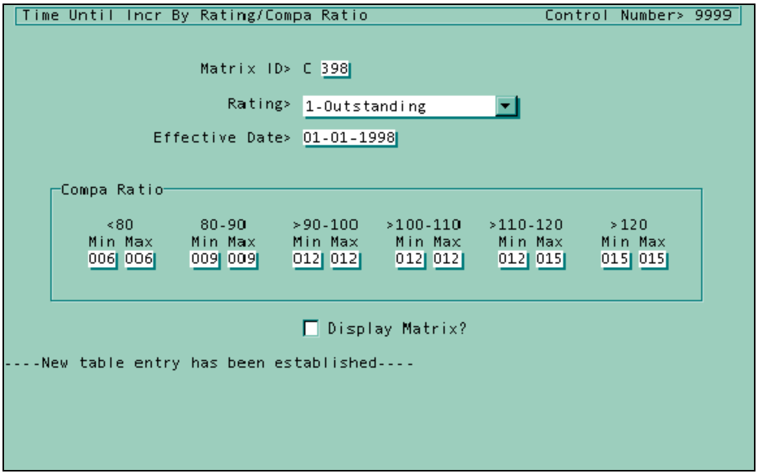
6. Click Save or press Enter

The Time Until Increase By Rating table record is created and the following message is displayed:

'---New table entry has been established---'.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Time Until Incr By Rating/Compa Ratio   Control Number> 9999

Matrix ID> C 398

Rating> 1-Outstanding

Effective Date> 01-01-1998

Compa Ratio

<80		80-90		>90-100		>100-110		>110-120		>120	
Min	Max	Min	Max	Min	Max	Min	Max	Min	Max	Min	Max
006	006	009	009	012	012	012	012	012	015	015	015

Display Matrix?

----New table entry has been established----

Note: *Be sure to repeat these steps to create a Time Until Increase By Rating table record for each of the performance appraisal ratings that you will be using for Salary Administration, for example, 2, 3, 4, 5, and 8.*

To view the entire matrix, enter the three required key text boxes and select the Display Matrix check box. The matrix is displayed beginning with the Rating entered.

See also:

- Pay-for-performance salary plans and their uses ***(on page 59)***

For a description of these tables and their uses.

Viewing pay-for-performance salary plans

To view the pay-for-performance table records using the Job Performance Appraisal Display form (TDISCR), follow these steps:

1. Access the Job Performance Appraisal Display form (TDISCR)

Access this form by making the following selection from the Navigator:

Component: Salary Administration
Process: Setup Pay-for-Performance Plans
Task: View Pay-for-Performance Plans

For practice, access the Job Performance Appraisal Display form (TDISCR).

2. Enter a Control Number

Type the 4-character Control Number associated with the Salary Plan Tables that you wish to view.

Note: *If you are unsure about the Control Number value, access the Company-To-Rules Cross-Reference For HR form (AX-SCR) and view the value in the Salary Changes text box.*

For practice, type '9999'.

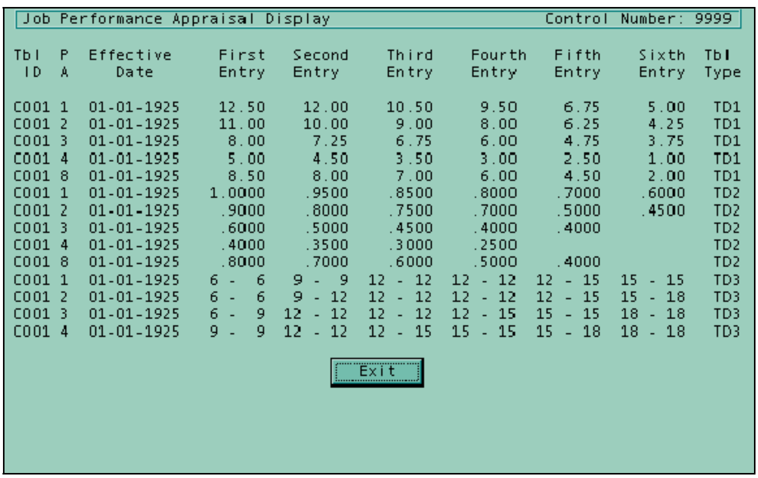
3. Click Save or press Enter

Up to 16 records are displayed on each form. Click Save or press Enter to view the next form.

A '----Complete----' message appears when all the records on file have been viewed.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Job Performance Appraisal Display — Control Number: 9999

Tbl ID	PA	Effective Date	First Entry	Second Entry	Third Entry	Fourth Entry	Fifth Entry	Sixth Entry	Tbl Type

Extended Practice

1. Set up an across-the-board salary plan that will allow your organization to give a 10 percent increase to all employees with a job type of Hourly/Union. Use a plan year start date of January 1 of next year and indicate that this is Salary Plan 2.

2. View the completed salary plan in Display mode.

Review of Questions Answered

1. What are salary plans?

2. How can an organization use salary plans?

3. What types of salary plans can be set up using Salary Administration?

4. How can a mass salary update be performed online?

5. How can a mass salary update be performed in 'What-if' report-only mode online?

PART 3

Producing the Annual Salary Budget

In This Section

CHAPTER 5

Creating Annual Salary Budgets for Employees

In This Chapter

Introduction

Once you have set up salary plans for across-the-board or pay-for-performance increases, you can start the annual salary budget process that will utilize the salary plan information. You can create employee budget records manually or use the salary plans to generate individual budget records for each employee. Prior to generating budgets for pay-for-performance plans, you must link each employee to a matrix ID on the employee's performance appraisal. All employee salary budget records may be viewed on the Budgeted Salary Information form (45-SCR). After you have created the employee salary budget records, you will be able to analyze the projected salary budgets and select the plan(s) to be used to create the final annual budget.

☞ *Refer to* **Reviewing and Finalizing Your Annual Salary Budget** *(on page 131) for information on analyzing and finalizing your annual salary budget.*

Tasks

This section explains the following:

- Manually entering salary budget records
- Automatically creating salary budget records from an across-the-board salary plan
- Automatically generating the matrix ID on an employee performance appraisal for a pay-for-performance plan
- Automatically creating salary budget records from a pay-for-performance salary plan
- Manually overriding an automatically generated salary budget record

Prerequisites

Before you can set up the annual salary budget, all of the following tasks must be completed.

Set up Salary Administration option lists

Before any data are entered, you must ensure that all option lists are populated with your organization's specific Salary Administration values.

☞ *Refer to* **Option List Quick Reference** *(on page 343) for detailed information.*

Set up Control Numbers for all production organizations

Before any data are entered, you must ensure that Control Numbers have been selected and entered for each company using Salary Administration.

☞ *Refer to* **Setting Up Salary Plans** *(on page 41) for detailed information.*

Set up salary plans

Before annual salary budgets can be set up, your salary plans must be established.

☞ *Refer to* **Setting Up Salary Plans** *(on page 41) for detailed information.*

Questions answered

The following questions are answered in this section:

1. What are the benefits of generating employee salary budgets?
2. How do salary plans relate to setting up employee salary budgets?
3. When should salary budgets be generated?
4. What tools are available for creating salary budgets automatically?
5. How is employee salary budget information displayed?
6. What role does the employee salary budget play in preparing for the generation of overall salary budget totals?

General salary budget considerations

Before you can create your annual salary budgets, it is helpful to understand the budget options, when to create salary budgets, the types of budgets, and how budgets are created.

Why create salary budgets?

The planning and budgeting of salaries allows you to see the overall cost impact to your organization. Budget information will enable you decide how you want to administer salaries for the coming year and find out how projected salary expenditures might affect your total compensation costs.

What salary budgets are based on

Annual salary budgets are based on the rules you have set up in your salary plans. Each salary plan contains the amount or percentage of the increase, the employee selection criterion, and the timing of the increase. Each employee budget reflects the results of the specific plan criterion.

Types of salary budgets

A salary budget is a budgeted salary amount for an employee for the coming year. Salary budgets can be viewed on the Budgeted Salary Information form (45-SCR). Because a salary budget is based on a salary plan, a salary budget can be expressed in a number of ways. For example, it can be a percentage, a salary increase amount, a new annual salary amount, and so on. Salary budget records are calculated based on an across-the-board fixed increase or on an increase based on an employee's performance appraisal.

When to create salary budgets

Salary budgets may be created annually any time prior to the start of your next budget year. You will need to allow sufficient time for setting up the salary plans, generating the budget, and selecting the plan or plans that will compose your final annual salary budget. If multiple levels of approval are required before finalizing your budget, ample time should be provided for turnaround of hard copy budgets.

If you are creating your salary budget based on pay-for-performance criteria, allow enough time in your budget schedule to verify that the appraisal results are present on the employee's Performance Appraisal Results form (49-SCR).

How many budgets you can have per employee

Each employee budget has a limit of three concurrent budgets—Salary Plans 1, 2, and 3. However, you may create budgets based on the results of three plans and, if you find that none meets your salary budgeting needs, you may delete them. You can then modify your salary plans and generate your employee budgets again.

Ways of creating salary budgets

Salary budget records are created two ways:

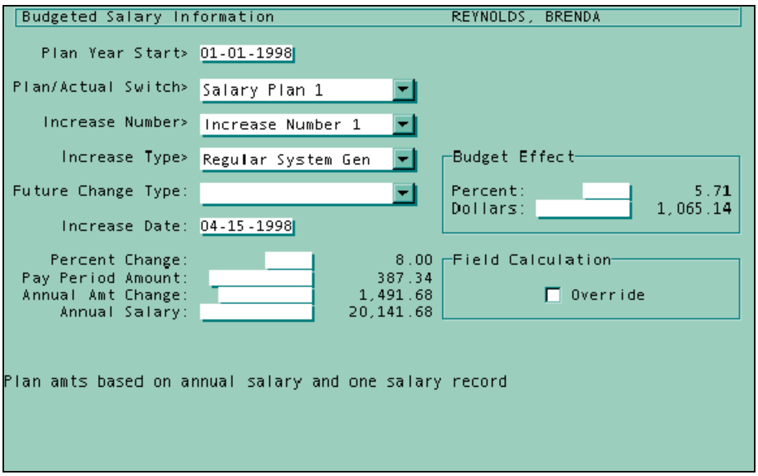
- Manually, with entries to the Budgeted Salary Information form (45-SCR)
- Automatically, by running the Salary Planning/Budget Programs [TD Tables] report (5D-RPT) or the Salary Planning/Budget Programs [TH Tables] report (5H-RPT)

Depending on the number of employees for whom you are creating budgets and how much control you wish to exercise during the process, you can select either the manual or the automated method.

How salary budgets are displayed for an employee

The Budgeted Salary Information form (45-SCR) is used to store salary budget information. A salary budget record must be created and maintained for each employee for your budget process. This record defines the budgeted increase amount, percentage, and effective date for a specific salary plan year and the prorated effect of this increase on the budget in terms of amounts and percentages for each employee.

Following is the salary budget record for employee Brenda Reynolds. It shows that, using Salary Plan 1, she will receive an 8 percent increase on April 15, 1998:

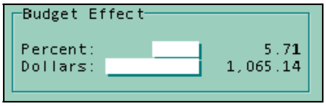


You can budget for employees based on the entry of one of the salary values:

- Pay Period Amount
- Annual Amt Change
- Annual Salary

The system calculates the resulting salary amounts and percentages (to the right of the value text boxes) based on the entry of one of the salary values (Pay Period Amount, Annual Amt Change, or Annual Salary) or a value in the Percent Change text box. The calculations use the employee's current, permanent salary as a base:

The Budget Effect Percent and Dollars text boxes are calculated based on the Plan Year Start date and the Increase Date (required) entered. These text boxes contain the impact of this increase on the budget prorated for the remainder of the budget year. This is the actual increase for the plan year based on the number of months (in this case, 8 months) the increase is in effect:



This form allows the effect of an increase on the budget to be reviewed and changed, if necessary, prior to implementing the increase. Once the form has been generated, you may override any of the calculated amounts.

☞ *Refer to* **Reviewing and Finalizing Your Annual Salary Budget** *(on page 131) for information on analyzing the effect of budgets.*

See also:

- Manually entering salary budget records ***(on page 117)***

For detailed directions on entering a salary budget record manually.

Discretionary increases and budgets

If you used the Manager's Discretion option to create individual future-dated employee increases on the Salary Assignment/Changes form (40-SCR), you may want to manually create a Budgeted Salary Information form (45-SCR) for these employees. Otherwise, these costs will need to be added manually into the totals of the Annual Budget report (5C-RPT) after all other employee budgets have been reviewed and accepted.

☞ *Refer to* **Reviewing and Finalizing Your Annual Salary Budget** *(on page 131) for more information about including Manager's Discretion increases in budget reports.*

Apply the Concept

Which employees in your organization might qualify for manually entered salary budget records and why?

Across-the-board salary plans and budgets

As you may recall, across-the-board salary plans contain guidelines for giving fixed percentage increases to employees. Using Cyborg-supplied tables, you define which groups of employees will receive across-the-board increases and the actual percentage increases they will receive.

Across-the-board increases are defined in the following ways:

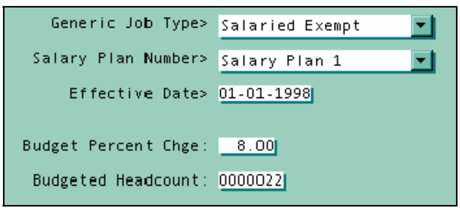
- Percent increase by Job Type (TD1SCR)
- Percent increase by Organization Level 3 and Job Type (TD2SCR)
- Percent increase by Organization Level 4 and Job Type (TD3SCR)
- Percent increase by Organization Level 3 and Organization Level 4 and Job Type (TD4SCR)

Once your Percent Increase tables are in place, you are ready to use that plan information to create individual employee salary budget records.

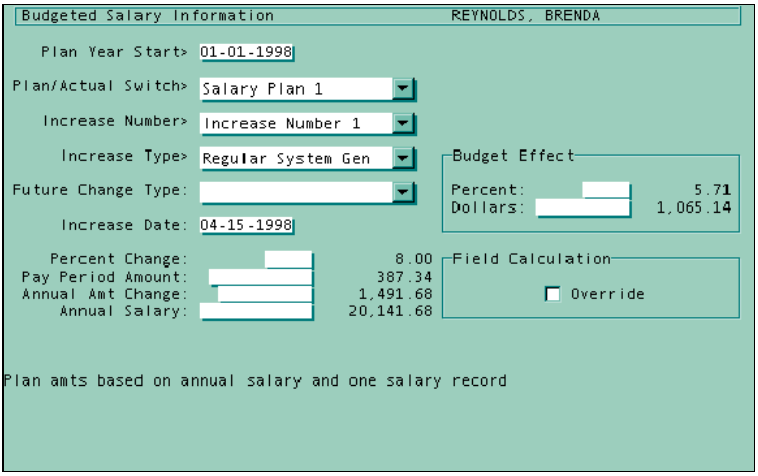
How the plan information is converted into a budget

If you used the Percent Increase tables to record budget-year increase parameters, you can create the Budgeted Salary Information forms (45-SCR) by running the Salary Planning/Budget Programs [TH Tables] report (5H-RPT).

For example, the following illustration shows what might appear on the % Incr by Job Type form (TH1SCR) if you set up an across-the-board salary plan with an 8 percent increase for all Salaried Exempt employees:



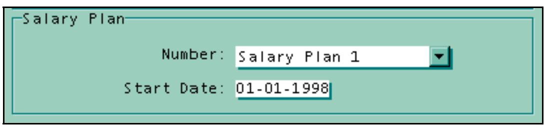
The following illustration shows a salary budget record that would be created for each Salaried Exempt employee, showing an 8 percent increase as of the one-year anniversary of the employee's last increase:



This process creates one budgeted increase for the salary plan year on the one-year anniversary of the employee's last salary change. An audit report is printed showing the created budget records or an error message if the record cannot be created.

How to specify which plan you want to use

You must specify the salary plan number in the report parameters for the Salary Planning/Budget Programs [TH Tables] report (5H-RPT). The parameters form contains a Salary Plan Number text box. The entry in this text box allows you to specify that Salary Plan 1, 2, or 3 will be used to generate the budget. If two or more percentage tables were used to create the budget for your employees, then you will need to schedule this program to run multiple times, once for each salary plan.



How to specify the effective date of the budget

The report parameters for the Salary Planning/Budget Programs [TH Tables] report (5H-RPT) contain a Salary Plan Start Date text box. The entry in this text box allows you to specify the plan year start date that will be used on each of the budgets. The value in this text box is copied to each of the employee budgets created by the Salary Planning/Budget Programs [TH Tables] report (5H-RPT).

- Automatically creating salary budget records from an across-the-board salary plan ***(on page 121)***

For detailed directions on creating salary budget records automatically from an across-the-board salary plan.

Pay-for-performance salary plans and budgets

Recall that pay-for-performance salary plans contain guidelines for giving merit increases to employees. Using Cyborg-delivered tables, you define the basis for the merit increases. These increases are based on an employee's most recent performance appraisal rating and one of the following factors:

- Compa ratio
- Position in range
- Time since last increase

For each factor, you will indicate how much of an increase to give and when to give the increase. This combination of information—how much to give and when—makes up the pay-for-performance matrix, which is identified by a unique matrix ID.

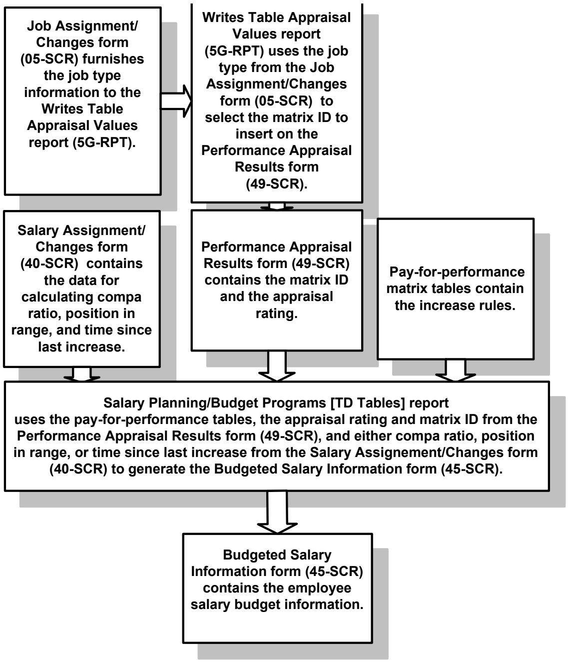
Once the pay-for-performance tables are set up, you can associate a matrix ID with each employee performance appraisal and then generate employee salary budget records.

The big picture

If you wish to automatically generate the salary budget records after you have set up the Merit Increase Matrices tables, the employee record must include the following:

- Current salary information on the Salary Assignment/Changes form (40-SCR)
- Appraisal results on the Performance Appraisal Results form (49-SCR)
- Job assignment on the Job Assignment/Changes form (05-SCR)

The following illustration shows the system interactions that will occur when you generate employee salary budget records:

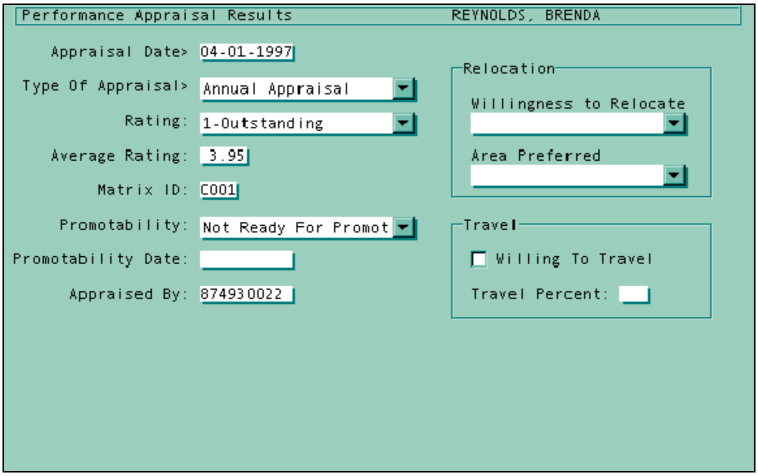


The details of this illustration are explained in the following sections.

Determining which plan applies to which employee

As the first step in generating the salary budget record, run the Writes Table Appraisal Values program (5G-RPT) to add the matrix identifier to each employee's Performance Appraisal Results form (49-SCR). The matrix identifier provides the system with the link that tells it which set of tables to access for each employee and what percentage or amount of increase to apply, as well as the appropriate time factor.

Note: *If no Performance Appraisal Results form (49-SCR) is found for an employee, one is created using the 'as of' date from the report parameter, a type of 'System Generated', a rating of 'Too New To Rate', and the matrix ID assigned by the report.*



As an alternative, you may add the matrix identifier manually online.

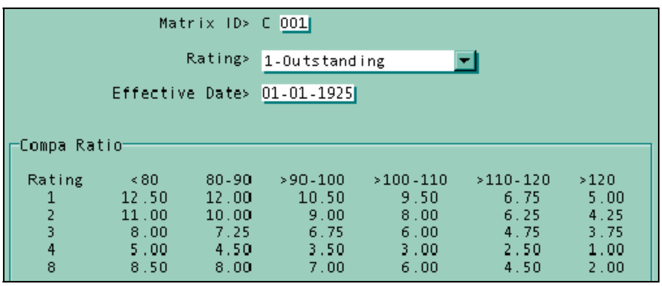
Note: *As delivered, the Writes Table Appraisal Values program (5G-RPT) generates a matrix ID based on the job type found on an employee's Job Assignment/Changes form (05-SCR). As an alternative to job types, you can modify the program to generate the matrix ID based on some other text box or logic. You must at least specify in the coding of the program the names of the matrix IDs you have set up on the system. Refer your technical staff to line numbers 00260–00300 in the Writes Table Appraisal Values program (5G-RPT) for any coding changes required by your company.*

```
IF JOB-TYPE EQUAL '01' OR '04' MOVE 'C001' TO W8-04-036
ELSE IF JOB-TYPE EQUAL '02' OR '03'
  MOVE 'R001' TO W8-04-036.
```

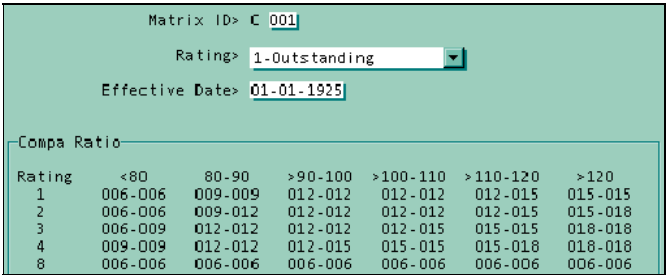
How the plan information is converted into a budget

The second step in generating the salary budget record is to run the Salary Planning/Budget Programs [TD Tables] report (5D-RPT) to create a Budgeted Salary Information form (45-SCR) for those employees due for an increase within the budget plan year.

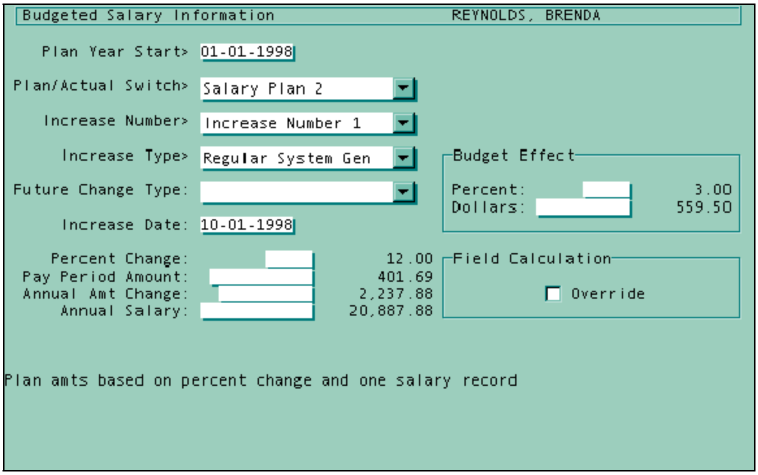
For example, if you set up a pay-for-performance matrix that allowed a fixed percentage increase for employees based on their most recent appraisal rating and compa ratio as shown here:



and paired it with a pay-for-performance matrix that specified the time until the next increase as shown here:



then a salary budget record would be created for each qualifying employee, showing a percentage increase based on performance appraisal rating and compa ratio:



This process can create multiple increases for one salary plan year based on company policy, the employee's performance appraisal rating value, and compa ratio (or position in range, whichever is applicable). An audit report is printed, showing the budget records created or an error message if one cannot be created.

The proposed employee increase can be limited to the in-range maximum position-in-range value by modifying the Appraisal Ratings calculation option list (HR16) and setting an indicator in the Salary Planning/Budget Programs [TD Tables] report (5D-RPT).

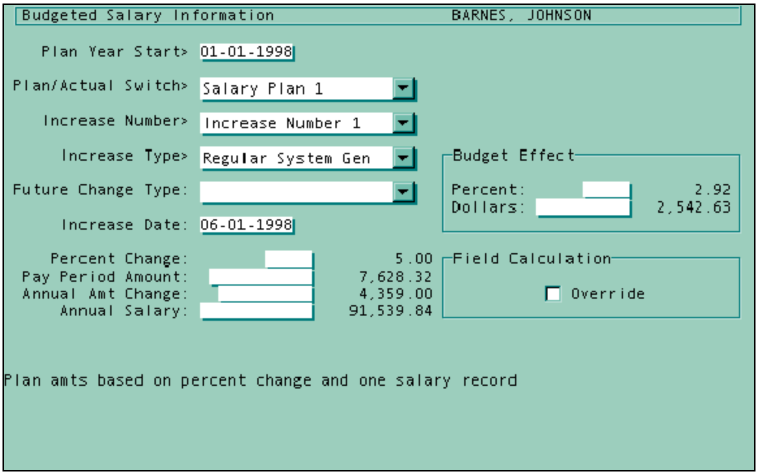
Salary budget scenarios

You can create up to three budget scenarios (Salary Plan 1, 2, and 3) for each employee per salary plan year in order to see the effect of different increase policies on the budget.

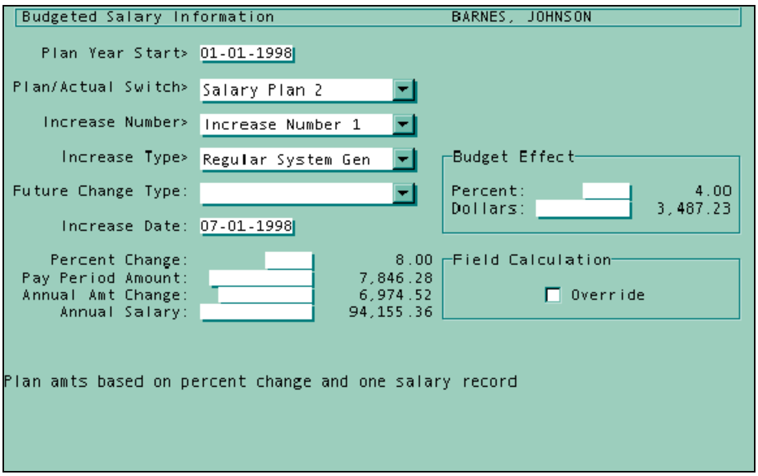
For example, you may create one scenario that reflects an increase of 5 percent on June 1 and a second scenario that reflects an 8 percent increase on July 1. Since there are two salary plans, each employee who qualifies for the increase will have two Budgeted Salary

Information forms (45-SCR), one for each scenario. This situation is shown in the following illustrations.

In the following illustration, Salary Plan 1 proposes a 5 percent increase on June 1:



In the next illustration, Salary Plan 2 proposes an 8 percent increase on July 1:



Refer to **Reviewing and Finalizing Your Annual Salary Budget** *(on page 131) for information on how to analyze the budget results and delete unneeded salary budget information.*

Apply the Concept

If your company plans to use the pay-for-performance method, what modifications would your company have to make to the Writes Table Appraisal Values program (5G-RPT) to generate the appropriate matrix ID on the employee performance appraisal record?

See also:

- Automatically generating the matrix ID on an employee performance appraisal for a pay-for-performance salary plan ***(on page 122)***

For detailed directions on manually overriding an amount on an automatically generated salary budget record.

Detailed Directions

This section provides detailed directions on completing a business task.

Tasks

Completing the Guided Practice

In the Guided Practice for this section, you will enter a manual salary budget record for employee 3008. You will then manually override that salary budget record with a new projected increase amount. Although report parameter explanations are included in tasks 2, 3, and 4 for your convenience, you are not expected to run these reports as part of the Guided Practice.

You must have completed the Guided Practices in the prior sections to guarantee the successful completion of the Guided Practice that follows.

Manually entering salary budget records

To enter a salary budget record manually using the Budgeted Salary Information form (45-SCR), follow these steps:

1. Access the Budgeted Salary Information form (45-SCR)

Access this form by making the following selection from the Navigator:

Component: Salary Administration
Process: Produce the Annual Salary Budget
Task: Manually Enter Salary Budget

For practice, access the Budgeted Salary Information form(45-SCR) for employee 3008.

2. Enter the Plan Year Start

Type the plan year start date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). May 21, 1998, for example, is entered as '19980521' or '05-21-1998' (US and Canada) or '19982105' or '21-05-1998' (elsewhere).

This date represents the first day of a Salary Plan Year.

For practice, type a date that represents January 1, 1998, for example, '01-01-1998'.

3. Select the Plan/Actual Switch

Select a Salary Plan (1, 2 , or 3) from the Plan/actuals Switch option list (SA01).

This entry identifies the Salary Plan to which this record Plan/Budget applies. Multiple plans can be created for an employee in any one Plan Year—usually to view a 'what if' situation.

Note: The 'Actual' option may be entered to trigger the conversion of the salary budget information to an actual future increase after the salary budget has been approved.

Refer to **Entering the Results of the Review Process** *(on page 181) for an explanation of this process.*

For practice, select 'Salary Plan 1'.

4. Enter the Increase Number

Select an increase number from the Budget Increase Nbr option list (SA05).

This is a customer-assigned number that represents the sequence in which the increase is to be applied during the salary plan year. The first increase scheduled in the year is recorded as Increase Number 1, the second as Increase Number 2, and so on. In the case of a single increase in a plan year, select the Increase Number 1 option.

For practice, select 'Increase Number 1'.

5. Enter the Increase Type

Select the type of increase from the Increase Type option list (SA04).

This indicates whether this increase was generated (or entered) as a normal by-product of the Salary Planning/Budget Policy ('Regular System Gen') or was entered as an exception to the policy because the employee is a high or low performer.

Note: If a high or low performer record exists for an Increase Number, the system uses the High Performer or Low Performer record for all budgeting, reporting, and calculation purposes.

Refer to **Reviewing and Finalizing Your Annual Salary Budget** *(on page 131) for details on employee exceptions.*

For practice, select 'Regular System Gen'.

6. Enter the Future Change Type (optional)

If you are entering the initial budget, leave this text box blank.

For practice, leave this text box blank.

7. Enter the Increase Date

Type the effective date of the salary plan/budget increase in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). May 21, 1998, for example, is entered as '19980521' or '05-21-1998' (US and Canada) or '19982105' or '21-05-1998' (elsewhere).

This date may be overridden prior to the conversion of the plan data to an actual salary change and used as the salary effective date in creating an actual increase.

For practice, type a date that represents April 1 of 1998, for example, '04-01-1998' (US and Canada) or '01-04-1998' (elsewhere).

8. Enter one of the increase text boxes

Select one of the salary text boxes from the selection below and enter the appropriate value:

Note: *The system calculates the other salary text boxes based on the entry of one of the salary values or a value in the Percent Change text box.*

- Percent Change
  Enter the percent change between the old salary amount and the new budget increase using up to five positions with two decimals. For example, a 6.25 percent increase is entered as '6.25' (or '625').
- Pay Period Amount
  Enter the new pay period amount using up to 11 positions with two decimals. For example, a new pay period amount of 690.75 is entered as '690.75' (or '69075').
- Annual Amt Change
  Enter the annual difference between the old annual salary amount and the new budget annual amount using up to 10 positions with two decimals. For example, a difference of 4,560.00 is entered as '4,560.' (or '456000').
- Annual Salary
  Enter the new annual salary amount using up to 12 positions with two decimals. For example, a new annual salary of 37,800.00 is entered as '37,800.' (or '3780000').

Note: *After the form is executed, the results are displayed to the right of the entry text boxes. The calculations use the employee's current, permanent salary as a base, or a future-dated increase that is closer to the Plan Year Start date than the effective date of the current salary. If there is a future-dated salary change with an Increase Date after the Plan Year Start date, the system will not be able to calculate any of the values. In this case, you are required to manually enter all form data.*

For practice, type '500' in the Percent Change text box.

9. Enter the Budget Effect (optional)

These text boxes contain the percentage and amount impact of this increase on the budget prorated for the remainder of the budget year.

To allow the Budget Effect Percent and Dollars text boxes to be calculated by the form program based on the Plan Year Start date and the Increase Date (required) entered, leave these text boxes blank.

For practice, leave these text boxes blank.

10. Select the Field Calculation Override check box (optional)

If you want to calculate all the salary/budget increase or decrease text boxes manually, select the Field Calculation Override check box. This indicates you are entering overrides and will not allow the system to do any calculations. You must then manually enter all text boxes on the form. The form is returned exactly as you entered it.

You may also select the Field Calculation Override check box if, after executing the form, you do not like one of the text box results and want to override that text box only. Enter any single text box override that is required and execute the form. For instance, if you entered a percent change and the annual salary calculation does not reflect a rounded figure, you may use the override to correct the annual salary amount.

For practice, leave this check box unselected.

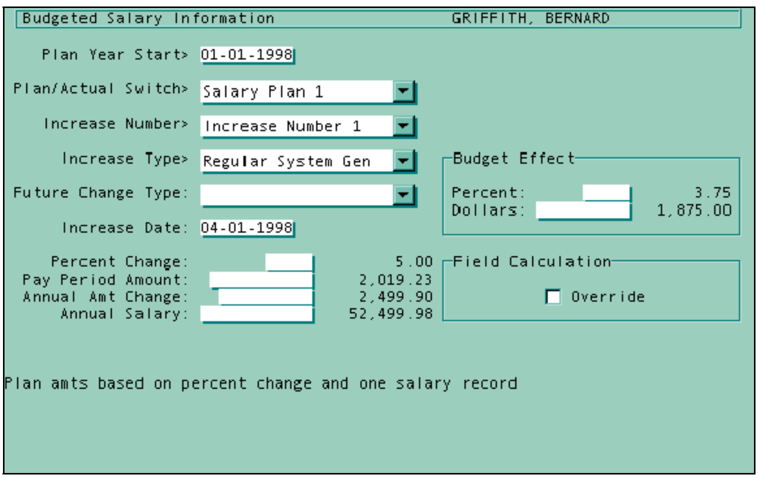
11. Click Save or press Enter

The salary information record is created and a variable message is displayed that indicates the basis for the calculation, such as:

'Plan amts based on percent change and one salary record'.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- General salary budget considerations ***(on page 104)***

For an explanation of the use of this form to create budget records manually.

Automatically creating salary budget records from an across-the-board salary plan

To create salary budget records automatically from an across-the-board salary plan using the Salary Planning/Budget Programs [TH Tables] report (5H-RPT), complete the report schedule by entering the following report parameters:

☞ *Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.*

1. Enter the TH Table Indicator Option

Type the TH Table indicator to identify which TH Table records are to be used by this pass of the program to create budget records.

A TH Table identifies the select groups of employees for whom the percent increase entered on the specified table applies. Even though you may use TH1 records for one group of employees, you are not limited to using TH1 records for all employees. You can use a combination of TH1, TH2, TH3, and TH4 records; however, each time the Salary Planning/Budget Programs [TH Tables] report (5H-RPT) is scheduled to run, only one type of TH record will be accessed.

2. Select the Salary Plan Number

Select the salary plan number from the Plan/actuals Switch option list (SA01).

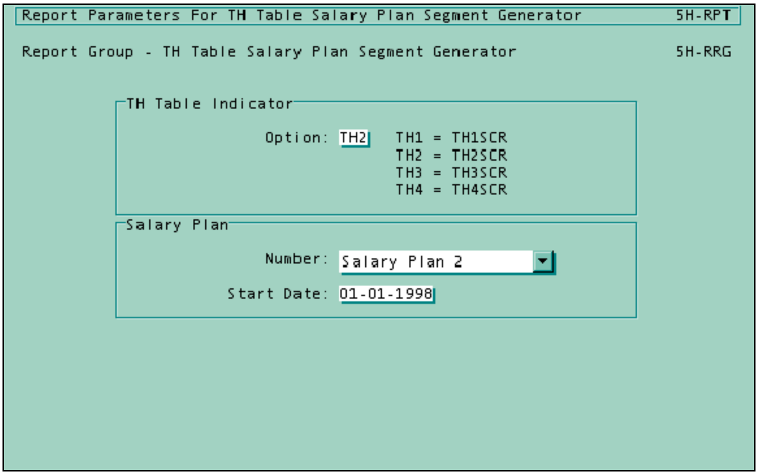
This identifies the value to be used in the Plan/Actual Switch text box on the employee budget records created by this program.

3. Enter the Salary Plan Start Date

Type the plan year start date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). May 21, 1998, for example, is entered as '19980521' or '05-21-1998' (US and Canada) or '19982105' or '21-05-1998' (elsewhere).

This date is used to match the table date of all TH records selected and is used in the Plan Year Start Date text box of each employee budget record created by this program.

When completed, the report parameters may look similar to the example that follows:



Once it has been processed, the Salary Planning/Budget Programs [TH Tables] report (5H-RPT) creates one budgeted increase for the salary plan year for each employee effective on the one-year anniversary of the employee's last salary change. An audit report is printed showing the created budget records or an error message if the record cannot be created.

Note: *If two or more percentage tables were used to create budget records for your employees, then you will need to schedule this program to run multiple times.*

See also:

■ Across-the-board salary plans and budgets ***(on page 108)***
For an explanation of using this program to create budget records.

Automatically generating the matrix ID on an employee performance appraisal for a pay-for-performance salary plan

To add the appropriate table matrix identifier to an employee's Performance Appraisal Results form (49-SCR) using the Writes Table Appraisal Values program (5G-RPT), complete the report schedule by entering the following report parameters:

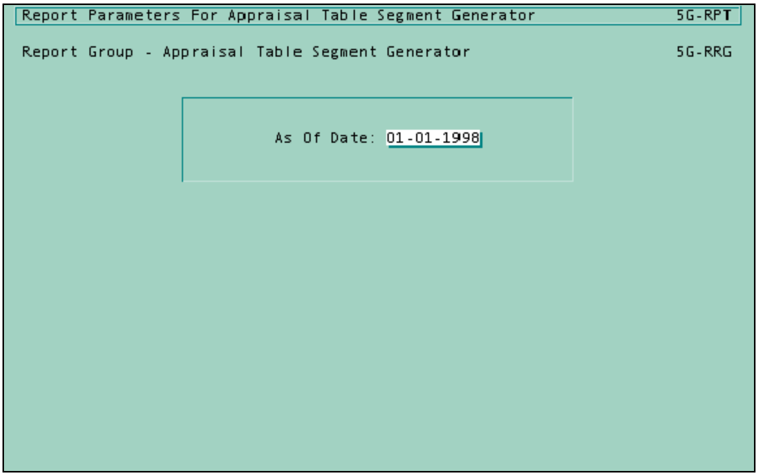
Note: *Before running this program, you must at least modify it to include all the matrix IDs that have been set up.*

☞ *Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.*

Type the 'as of' date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). May 21, 1998, for example, is entered as '19980521' or '05-21-1998' (US and Canada) or '19982105' or '21-05-1998' (elsewhere).

This date is used as the entry in the Salary Plan Date text box on the employee budget record that is created by this program when no existing budget record is found for the employee.

When completed, the report parameters may look similar to the example that follows:



Once it has been processed, the Writes Table Appraisal Values program (5G-RPT) supplies the appropriate table matrix identifier to the employee's Performance Appraisal Results form (49-SCR). No hard copy output is produced.

Note: *If no Performance Appraisal Results form (49-SCR) is found for an employee, one is created using the 'as of' date from the report parameter, a type of 'System Generated', a rating of 'Too New To Rate', and the matrix ID assigned by the program.*

See also:

- Pay-for-performance salary plans and budgets ***(on page 111)***

For an explanation of using this program to create matrix identifiers.

Automatically creating salary budget records from a pay-for-performance salary plan

To create budget records automatically from a pay-for-performance salary plan using the Salary Planning/Budget Programs [TD Tables] report (5D-RPT), complete the report schedule by entering the following report parameters:

☞ *Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.*

1. Enter the Salary Plan Year

Type the plan year date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). May 21, 1998, for example, is entered as '19980521' or '05-21-1998' (US and Canada) or '19982105' or '21-05-1998' (elsewhere).

This date is used in the Plan Year Start text box in all employee budget records created by this program. A budget record is created for an employee for each calculated increase with an effective date falling within the plan year beginning with this date.

2. Select the Salary Plan Number

Select the salary plan number from the Plan/actuals Switch option list (SA01).

This identifies the value to be used in the Plan/Actual Switch text box on the employee budget records created by this program.

3. Enter the Logic Indicator Option

This option represents the TD table (salary increase guidelines matrix) to be used to calculate the next scheduled increase date and proposed increase amount/percentage on the employee budget record. The options values are as follows:

- C% = TD Tables—TD1 and TD3 in combination (utilizes compa ratio; results in percent increase)
- C$ = TD Tables—TD2 and TD3 in combination (utilizes compa ratio; results in an amount increase)
- CR = TD Tables—TD9 and TD3 in combination (utilizes compa ratio; results in an amount increase)
- R% = TD Tables—TD4 and TD6 in combination (utilizes position in range; results in percent increase)
- R$ = TD Tables—TD5 and TD6 in combination (utilizes position in range; results in an amount increase)
- RR = TD Tables—TD0 and TD6 in combination (utilizes position in range; results in range-of-percents of increase)

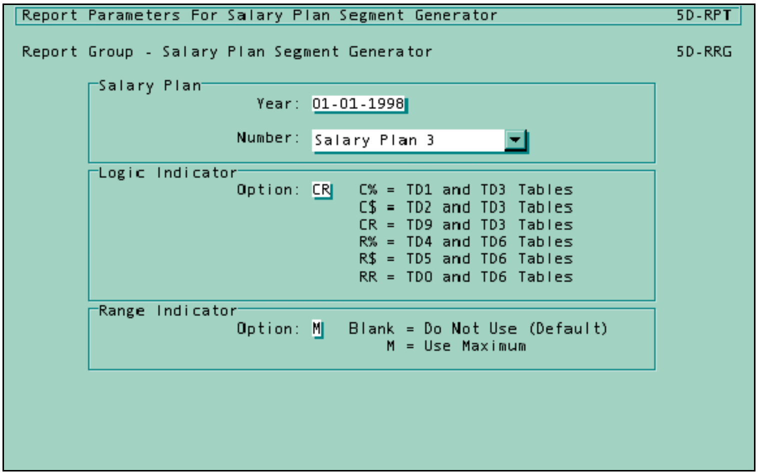
4. Enter the Range Indicator Option

Type the range indicator option.

An 'M' entered in this text box indicates that the increase and resulting projected salaries being calculated in the program are subject to a performance appraisal based on the in-range maximum position-in-range value. The maximum position in range to which the proposed increase can bring the employee is specified for each appraisal rating value in the Appraisal Ratings calculation option list (HR16).

The only valid values for this text box are 'M' and blank.

When completed, the report parameters may look similar to the example that follows:



Once it has been processed, the Salary Planning/Budget Programs [TD Tables] report (5D-RPT) creates multiple increases for one salary plan year based on company policy, the employee's performance appraisal rating value, and compa ratio (or position in range, whichever is applicable). An audit report is printed, showing the budget records created or an error message if one cannot be created.

Note: *Budget records will not be created if the next increase date is in the current year or if the next increase date does not fall within the plan year. If two or more matrix identifiers were used to create budget records for your employees, then you will need to schedule this program to run multiple times.*

See also:

- Pay-for-performance salary plans and budgets ***(on page 111)***

For an explanation of using this program to create budget records.

Manually overriding an automatically generated salary budget record

To manually override an amount on an automatically generated salary budget record using the Budgeted Salary Information form (45-SCR), follow these steps:

1. Access the Budgeted Salary Information form (45-SCR)

Access this form by making the following selection from the Navigator:

Component: Salary Administration
Process: Produce the Annual Salary Budget
Task: Manually Override Auto Salary Budget

Note: *If the form is not already displaying the record you wish to modify, click on the Selections button on the toolbar. Then double-click to select the occurrence you want to modify.*

For practice, access the Budgeted Salary Information form (45-SCR) for employee 3008.

2. Enter the changed text box

Access one of the salary text boxes from the selection below and enter the new value:

- Pay Period Amount
  Enter the new pay period amount using up to 11 positions with two decimals. For example, a new pay period amount of 690.75 is entered as '690.75' (or '69075').
- Annual Salary
  Enter the new annual salary amount using up to 12 positions with two decimals. For example, a new annual salary of 37,800.00 is entered as '37,800.' (or '3780000').

Note: *Only the entered text box will be changed. No recalculation of the other percentages or amounts will be performed.*

For practice, type '52,500.' in the Annual Salary text box.

3. Select the Field Calculation Override check box

Select the Field Calculation Override check box to override the changed text box only.

For practice, select the Field Calculation Override check box.

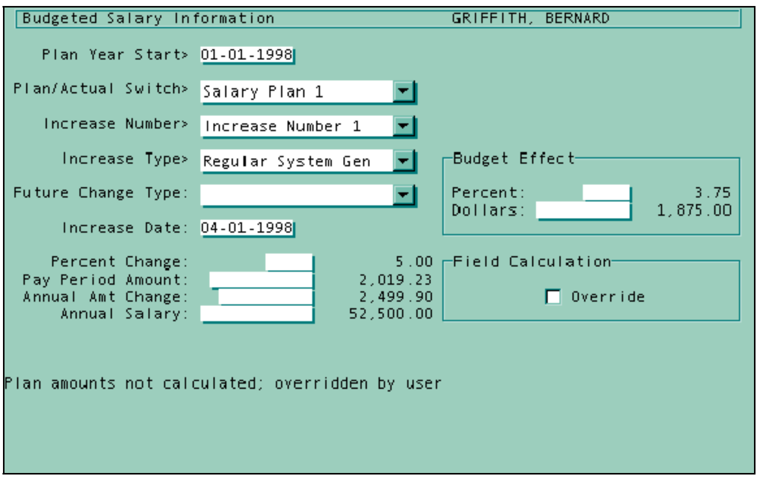
4. Click Save or press Enter

The entered text box on the salary information record is modified and a message is displayed:

'Plan amounts not calculated; overridden by user'.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Note: *In this example, the annual salary of 52,499.98 is replaced by the new amount of 52,500.00.*

See also:

- Pay-for-performance salary plans and budgets ***(on page 111)***

For a discussion of the use of this form to manually override automatically generated salary budget records.

Extended Practice

Note: You must have completed the Extended Practices in the prior sections to guarantee the successful completion of the Extended Practice that follows.

1. Add a Salary Assignment/Changes form (40-SCR) for employee 3023 using today's date. Give the employee an increase to 23,000 annually.

2. View the Salary Information form (41-SCR) for the same employee and record the compa ratio and position in range as of today's increase.

3. Process the Salary Planning/Budget Programs [TH Tables] report (5H-RPT). In the report parameters, enter 'TH1' in the TH Table Indicator Option text box, select 'Salary Plan 2' in the Number text box, and enter a Salary Plan Start Date of January 1 of next year.

4. View the Budgeted Salary Information form (45-SCR) for employee 3023. Note the new annual salary amount of 25,300.08 and the 10 percent increase on the one-year anniversary of the employee's last increase. Why the 10 percent increase? Why the increase on the one-year anniversary of the last increase? Note the effect on the budget. (Note: The effect will be different depending on the date that is used for the preceding steps.)

Review of Questions Answered

1. What are the benefits of generating employee salary budgets?

Reviewing and Finalizing Your Annual Salary Budget

In This Chapter

Introduction

After you completed the decision process for your salary plans and set up across-the-board fixed-percentage salary plans or merit increase salary plans, you generated or manually entered the employee salary budget records that will now allow you to create your annual salary budgets. This section explains the process of analyzing and then finalizing your organization's salary budget for the coming plan year.

Tasks

This section explains the following:

- Analyzing the budgeted salary information
- Analyzing individual employee projected salary increases
- Determining individual employee exceptions
- Recording individual employee salary budget exceptions
- Deleting obsolete salary budget records
- Viewing the final annual salary budget

Prerequisites

Before you can finalize the annual salary budget, all of the following tasks must be completed.

Set up Salary Administration option lists

Before any data are entered, you must ensure that all option lists are populated with your organization's specific Salary Administration values.

☞ *Refer to* **Option List Quick Reference** *(on page 343) for detailed information.*

Set up Control Numbers for all production organizations

Before any data are entered, you must ensure that Control Numbers have been selected and entered for each company using Salary Administration.

☞ *Refer to* **Setting Up Salary Plans** *(on page 41) for detailed information.*

Set up salary plans

Before annual salary budgets can be set up, your salary plans must be established.

☞ *Refer to* **Setting Up Salary Plans** *(on page 41) for detailed information.*

Create the annual salary budget

Before annual salary budgets can be analyzed and finalized, you must ensure that annual salary budgets have been generated.

☞ *Refer to* **Creating Annual Salary Budgets for Employees** *(on page 101) for detailed information.*

Questions answered

The following questions are answered in this section:

1. How can an organization use salary budget reporting?
2. What options are available for analyzing the salary budget?
3. How can variances or exceptions be made to the salary budget?
4. What tool is available for automatically deleting unused employee budget records?

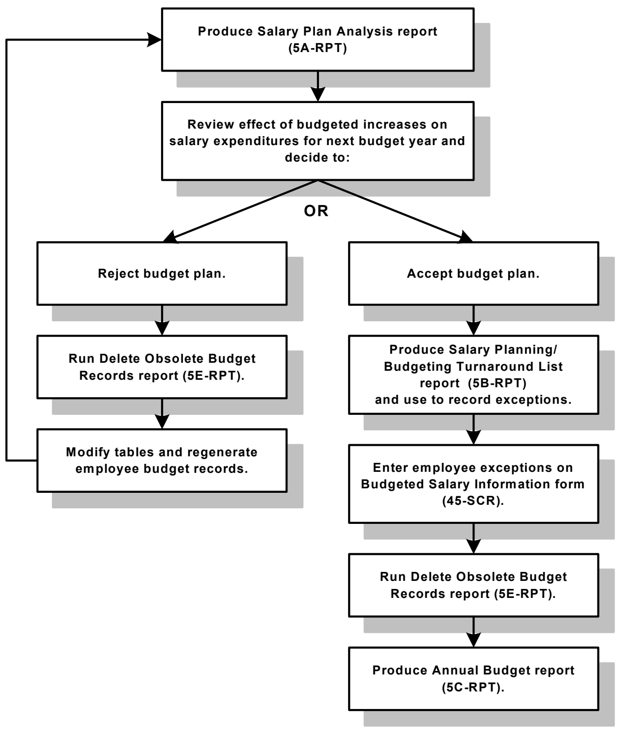
Overview of the budget setting process

Once your salary plans are in place and you have generated the salary budget records for each employee, you are ready to produce the budgeting reports that reflect the cost effect of each plan on the salary budget.

You may need to do some individual employee analysis, group analysis, or both to determine the impact of salaries on the total budget.

After you complete the budget analysis using Cyborg's delivered salary budgeting reports and record any employee exceptions, you can select the salary plan that best meets your needs. You can then delete all other unnecessary employee budget records and possibly some of the salary plans. A final report of the approved salary budget can then be printed.

The following illustration shows the steps that you may take to complete the salary budget process:



The illustration is explained in the sections that follow.

Salary budgets—cost analysis options

You need to agree on the best salary budget for each employee group. If a salary budget is not appropriate for certain employees in a group, it is possible to manually override the budget figures to create a more appropriate one on an employee-by-employee basis. In your analysis process you should consider:

- Initially analyzing all the plans
- Individual employee projected salary increase
- Approvals and exceptions
- Individual employee exceptions

The options for analyzing salary budgets are explained here.

Initially analyzing all the plans

As the first step in the analysis process, run the Salary Plan Analysis by Control Level and Job Type report (5A-RPT). The report parameters allow you to specify the salary plan and plan year to be included as well as the organization level and job type for which the plan is effective. If a report of the employee budget records for more than one salary plan is to be printed, you will need to process the program multiple times.

This report provides an analysis, by organization level, of the salary expense resulting from a salary plan. It lists the average percent increase and the total annual budget year salary costs by organization level and generic job type.

When you compare your prior year versus upcoming budget year salary costs as shown on this report, you may decide to accept or reject the salary plan(s).

If you choose to totally reject the salary plan(s), you must do the following:

- Delete the existing employee salary budget records related to the salary plan(s)
- Modify the salary plan(s) to reflect different increase estimates
- Regenerate the salary budget records

If you accept one of the salary plans, you may proceed with the analysis and subsequent approval stages that will provide an acceptable salary budget.

See also:

- Analyzing the budgeted salary information ***(on page 141)***

For detailed directions on analyzing the budgeted salary information.

Individual employee projected salary increases

As an optional part of your analysis, you may wish to display the results of a salary plan for an individual employee. You may use the Projected Salary Changes form (42-SCR) for this purpose.

The following information for Alan Edward Cremmins shows the effect of a projected increase on his salary and position within salary grade range. The projected increase information that is displayed may come from a number of sources, including Salary Plan 1, 2, or 3.

The following illustration shows the entry panel of the form on which you may specify the information source for the projected increase:

```
Projected Salary Changes                          CREMMINS, ALAN EDWARD

To display the effect of a projected increase, enter the desired definitions
needed for salary calculation.

                         $ or % or R: For Performance Rating Tables

    Increase Source: 1   1 or 2 or 3: For Salary Budget Information

                                  F: For a Future Dated Salary

   In Range Maximum:     M: To use Position-in-Range Maximum Values

    Plan Year Start: 01-01-1998 To define Salary Budget Plan Year Date
```

The next illustration shows the display panel of the form that contains the calculated results based on the options you selected. The comment line at the bottom of the form displays the source of the projected increase information:

```
Projected Salary Changes                          CREMMINS, ALAN EDWARD

       Incumbency> 01
   Effective Date> 10-10-1998
   Type of Change> F01 Cyborg-Generated
  Increase Number> 1
    Increase Type> A  Regular System Gen    Frequency: Bi Weekly

      Hourly Rate:      17.1718         Months Since: 143

|----------------+-----------------+-----------------+------------------|
Projected Data Source: Salary Plan Administration (ZP) segment
```

In addition, you can request to limit the employee's projected increase based on the performance appraisal rating value so that the projected salary does not exceed a stated position in range. The form calculates the allowable maximum, compares that amount with the employee's position in range after receiving the projected increase, then limits the increase to the maximum position in range, if applicable.

See also:

- Analyzing individual employee projected salary increases ***(on page 142)***

For detailed directions on analyzing the effect of a projected increase on an employee's salary and position.

Approvals and exceptions

When you determine that the average percentage of increase for a salary plan meets your requirements, you will want to distribute the proposed employee salary increases to each manager for review. You can use the Salary Planning/Budgeting Turnaround List report (5B-RPT) as a means of obtaining feedback and adjustments to the proposed salary budgets.

The report parameters allow you to specify the salary plan and plan year to be included.

This report lists all employees by department (or customer-defined budget group), their current salary data, and scheduled increase date(s) and amount(s). It includes space to write in individual employee exceptions to the salary plan.

This listing can be used by department managers to plan their salary budgets for the coming budget year. The list includes totals, by department, of the number of employees, current salaries, planned increase amounts, and salaries for the coming plan year.

You can use this report for group or individual employee salary increase analysis. Variances or exceptions for high or low performers can be entered into the system from this report so that a final budget listing can be produced. For example, if the proposed increase for an employee is 3 percent based on the performance rating in place at the time the employee budget record was generated, but the employee is a high performer, you can write a higher increase on the turnaround list. You can also use this report for departmental or budget-center approvals of the projected salary increases.

See also:

- Determining individual employee exceptions ***(on page 145)***

For detailed directions on determining and manually writing an individual employee exception.

Individual employee exceptions

If variances or exceptions must be recorded at the employee level, you can make these entries on the Budgeted Salary Information form (45-SCR). This form already contains the budget information for the employee. You may add a separate record showing that the employee is a high or low performer with an associated change in salary. The exception record, rather than the original budget record, is used for any future reporting or analysis.

Keep in mind that if a high performer or low performer record is added and another record is already in place after it, that following record will no longer contain a correct projected increase and will need to be recalculated. For example, if an employee qualified for an increase in April and again in November, the November increase is based on the salary resulting from the April increase. If an exception record is added for the April increase, the November increase may be understated or overstated. Before you can recalculate the November increase, you must delete the existing record and reenter it.

Apply the Concept
What policies or procedures does your organization use to determine whether an employee is an exception to the salary budget as a high or low performer? What delivered report would you use to indicate employee exceptions to the salary budget?

See also:

- Determining individual employee exceptions ***(on page 145)***

For detailed directions on determining and manually writing an individual employee exception.

- Recording individual employee salary budget exceptions ***(on page 146)***

For detailed directions on entering budget corrections for high or low performers.

Ways of setting your annual budget

The salary budget that you choose can be converted into actual increases, for example, with across-the-board plans. Typically, however, the salary review and resulting salary increase are part of a review process, which can be salary related, performance related, or both.

☞ *Refer to* **Entering the Results of the Review Process** *(on page 181)* *for information about converting budget records to future-dated salary changes.*

Disposing of unused salary budgets

Regardless of how you choose to activate your salary budget increases at the employee level, you will want to avoid the confusion of having unnecessary salary budget records on file. You will need to delete all the employee salary budget records that no longer have any use or meaning in the budgeting process. This can be done by running the Delete Obsolete Budget Records report (5E-RPT) as soon as you complete the salary budget approval process.

The report parameters require the entry of the plan year and plan number to identify which employee budget records are to be deleted. If employee budget records from more than one plan are to be deleted, you will need to process the program multiple times.

It is not necessary to remove the table records used to define the salary plans at the company level. These may be useful in your salary budget planning for another plan year. To reuse a Salary Plan table, give it a revised plan year date and modify it as needed.

See also:

- Deleting obsolete salary budget records ***(on page 147)***

For detailed directions on deleting obsolete employee budget records.

Reviewing the final salary budget

After exception records are approved and entered, and all extraneous budget records are removed from the system, you can produce a report that displays the approved budget for the plan year.

The Annual Budget report (5C-RPT) is the outcome of the data processed by the Salary Planning/Budgeting Turnaround List report (5B-RPT). Report parameters allow you to specify the plan year and plan number to be displayed on the report.

This report is identical to the turnaround list in that it lists all employees by department (or customer-defined budget group), their current salary data, and scheduled increase date(s) and amount(s). However, there is no space for writing in adjustments to the existing information.

You may manually write in any of the manager's discretion increases that were not reflected on the Budgeted Salary Information forms (45-SCR).

This report is one of several tools that can be used by department managers to monitor their progress in the budgeting process. You can still make individual employee salary budget corrections at this point and rerun the report as many times as necessary to produce an acceptable final budget.

☞ *Refer to* **Analyzing the Results of the Review Process** *(on page 211) for information about comparing salary plan data with actual salary data.*

Apply the Concept
How could your organization use the final annual salary budget reports to monitor managerial adherence to budget guidelines for salary increases?

For detailed directions on displaying the final annual budget.

Detailed Directions

For information on how to complete a business task, select one of the following topics:

Tasks

Completing the Guided Practice

In the Guided Practice for this section, you will view a projected increase online for employee 3008. You will then record a salary budget exception of 'high performer' for that employee. Although report parameter explanations are included in some tasks for your convenience, you are not expected to run these reports as part of the Guided Practice.

You must have completed the Guided Practices in the prior sections to guarantee the successful completion of the Guided Practice that follows.

Analyzing the budgeted salary information

To determine if a proposed salary plan is acceptable in terms of budgeted salary for the coming plan year using the Salary Plan Analysis by Control Level and Job Type report (5A-RPT) , complete the report schedule by entering the following report parameters:

☞ *Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.*

1. Enter the Salary Plan Year

Type the plan year start date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). May 21, 1998, for example, is entered as '19980521' or '05-21-1998' (US and Canada) or '19982105' or '21-05-1998' (elsewhere).

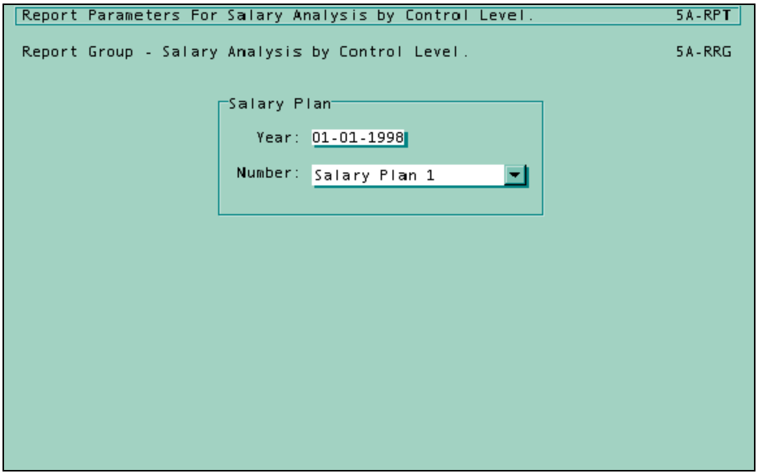
This is the plan year for which the report will be generated.

2. Select the Salary Plan Number

Select the salary plan number from the Plan/actual Switches option list (SA01).

This is the Plan/Actual Switch (plan number) for which the report will be generated.

When completed, the report parameters may look similar to the example that follows:



Report Parameters For Salary Analysis by Control Level. 5A-RPT

Report Group - Salary Analysis by Control Level. 5A-RRG

Salary Plan

Year: 01-01-1998

Number: Salary Plan 1

Once it has been processed, the Salary Plan Analysis by Control Level and Job Type report (5A-RPT) displays the monetary effect of a salary plan by organization level and job type. The average percent increase, total budgeted salaries, and number of employees are displayed.

See also:

- Salary budgets—cost analysis options ***(on page 135)***

For an explanation of the contents and use of this report.

Analyzing individual employee projected salary increases

To analyze the effect of a projected increase (actual or proposed) on an employee's salary and position within his or her salary grade range using the Projected Salary Changes form (42-SCR), follow these steps:

1. Access the Projected Salary Changes form (42-SCR)

Access this form by making the following selection from the Navigator:

Component: Salary Administration
Process: Perform and Process Reviews
Task: View Projected Salary Changes

For practice, access the Projected Salary Changes form (42-SCR) for employee 3008.

2. Enter the Increase Source

To indicate to the system the kind of information you are requesting, type the appropriate value in this text box. A blank in this text box defaults to 'F'.

The valid options include the following:

Option	Source of the increase amount/percentage and date
F	Future-dated salary increases entered on the Salary/Assignment Changes form (40-SCR).
1, 2, or 3	Salary Plan 1, 2, or 3 from the employee's Budgeted Salary Information form (45-SCR). The Plan Year Start text box must be entered when using a 1, 2, or 3.
$ (* below)	Amount of increase from the $ Incr By Rating/Compa Ratio table (TD2SCR) or the $ Incr By Rating/Pos In Range table (TD5SCR). Effective date from the Time Until Incr By Rating/Compa Ratio table (TD3SCR) or Time Until Incr By Rating/Pos In Rnge table (TD6SCR).
% (* below)	Percent change from the % Incr By Rating/Compa Ratio table (TD1SCR) or the % Incr By Rating/Pos In Range table (TD4SCR). Scheduled increase date from the Time Until Incr By Rating/Compa Ratio table (TD3SCR) or the Time Until Incr By Rating/Pos In Rnge table (TD6SCR).
R (* below)	Range of increase from the % Incr Range By Rating/Pos In Range table (TD0SCR) or the % Incr Range By Rating/Compa Ratio table (TD9SCR). Scheduled increase date from the % Incr By Rating/Pos In Range table (TD4SCR) or the Time Until Incr By Rating/Pos In Rnge table (TD6SCR).

Note: **The value in the first position of the Matrix ID text box determines which tables are used.*

For practice, type '1'.

3. Enter the In Range Maximum (optional)

Type 'M' in this text box to indicate that you want to limit the employee's projected increase based on the performance appraisal rating value, so the projected salary does not exceed a stated position in range. Otherwise, leave this text box blank.

Note: *To use the 'M' option, you must update the desired position-in-range maximum values in the Appraisal Ratings calculation option list (HR16). The form calculates the allowable maximum, compares that amount with the employee's position in range after receiving the projected increase, then limits the increase to the maximum position in range, if applicable. The 'M' option can only be used with a value of '$', '%', or 'R' in the Increase Source text box.*

Refer to **Option List Quick Reference** *(on page 343) for more information on updating calculation option lists.*

For practice, leave this text box blank.

4. Enter the Plan Year Start

Type the plan year start date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). May 21, 1998, for example, is entered as '19980521' or '05-21-1998' (US and Canada) or '19982105' or '21-05-1998' (elsewhere).

This is the date that will be used to calculate the results on this form.

Note: *This text box must be entered if you entered a value of '1', '2', or '3' in the Increase Source text box.*

For practice, type a date that represents January 1 1998, for example, '01-01-1998'.

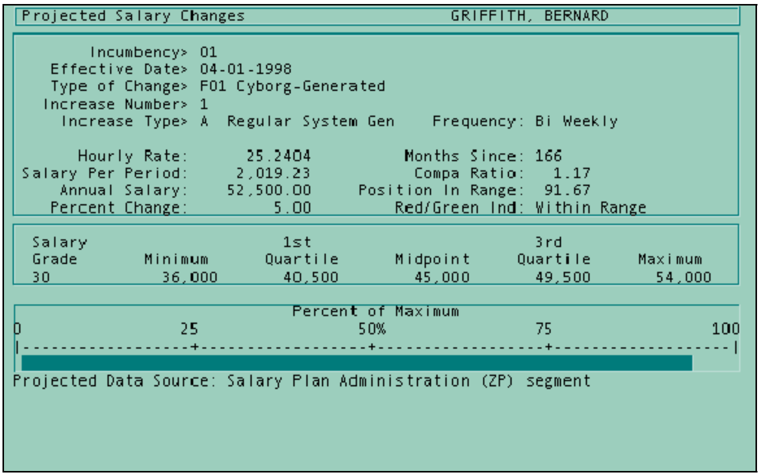
5. Click Save or press Enter

The form program calculates and displays the Compa Ratio, Range Penetration, and Red/Green Indicator text boxes. A histogram graphically displays where the employee falls within his or her salary range (percentage of maximum) based on the projected increase. The source on which the projection was based is displayed below the histogram.

This form appears in Display-only mode and does not update any employee information.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



```
Projected Salary Changes                    GRIFFITH, BERNARD

       Incumbency> 01
    Effective Date> 04-01-1998
    Type of Change> F01 Cyborg-Generated
   Increase Number> 1
     Increase Type> A  Regular System Gen    Frequency: Bi Weekly

       Hourly Rate:      25.2404          Months Since: 166
Salary Per Period:      2,019.23           Compa Ratio:   1.17
     Annual Salary:    52,500.00     Position In Range:  91.67
    Percent Change:         5.00         Red/Green Ind: Within Range

 Salary                      1st                      3rd
 Grade         Minimum     Quartile      Midpoint    Quartile     Maximum
 30             36,000       40,500        45,000      49,500      54,000

                              Percent of Maximum
0                25                  50%                75                 100
|-----------------+------------------+------------------+------------------|
Projected Data Source: Salary Plan Administration (ZP) segment
```

- Salary budgets—cost analysis options ***(on page 135)***

For an explanation of how to use this form for analyzing projected employee salary increases.

Determining individual employee exceptions

To determine and manually write in individual employee exceptions using the Salary Planning/Budgeting Turnaround List report (5B-RPT), complete the report schedule by entering the following report parameters:

☞ *Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.*

1. Enter the Salary Plan Year

Type the plan year start date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). May 21, 1998, for example, is entered as '19980521' or '05-21-1998' (US and Canada) or '19982105' or '21-05-1998' (elsewhere).

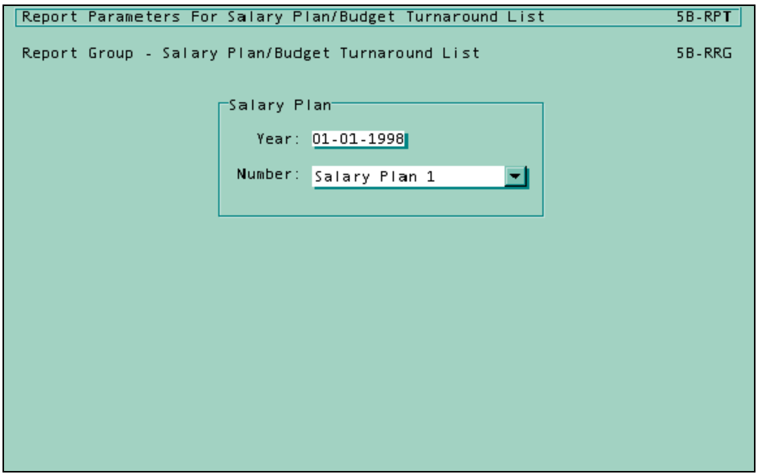
This is the plan year for which the report will be generated.

2. Select the Salary Plan Number

Select the salary plan number from the Plan/actual Switches option list (SA01).

This is the Plan/Actual Switch (plan number) for which the report will be generated.

When completed, the report parameters may look similar to the example that follows:



Once it has been processed, the Salary Planning/Budgeting Turnaround List report (5B-RPT) lists all employees by department (or user-defined budget group), their current salary data, and scheduled increase date(s) and amount(s). This includes space to manually enter individual employee exceptions to the salary pan. The list includes totals, by department, of the number of employees, current salaries, planned increase amounts, and salaries for the coming plan year.

The report lists budget records for the plan year and salary plan requested. Variances or exceptions for high or low performers can be entered into the system from the manual entries made on this report, so that a final budget listing can be produced.

See also:

- Salary budgets—cost analysis options ***(on page 135)***

For an explanation of the contents and use of this report.

Recording individual employee salary budget exceptions

To enter budget corrections for high or low performers using the Budgeted Salary Information form (45-SCR), follow these steps:

1. Access the Budgeted Salary Information form (45-SCR)

Access this form by making the following selection from the Navigator:

Component:	Salary Administration
Process:	Produce the Annual Salary Budget
Task:	Manually Enter Salary Budget Records

For practice, access the Budgeted Salary Information form (45-SCR) for employee 3008.

2. Select the Increase Type

Select High Performer or Low Performer from the Increase Type option list (SA04).

This value indicates whether the increase was system-generated (or entered) as a normal by-product of the salary planning/budget policy or was entered online as an exception to the policy because the employee is a high or low performer.

For practice, select 'High Performer'.

3. Enter one of the increase text boxes

Select one of the salary text boxes from the selection below and enter the appropriate value:

- Percent Change
  Enter the percent change between the old salary amount and the new budget increase using up to five positions with two decimals. For example, 6.25 percent is entered as '6.25' (or '625').
- Pay Period Amount
  Enter the new pay period amount using up to 11 positions with two decimals. For example, a new pay period amount of 690.75 is entered as '690.75' (or '69075').
- Annual Amt Change
  Enter the annual difference between the old annual salary amount and the new budget annual amount using up to 10 positions with two decimals. For example, a difference of 4560.00 is entered as '4,560.' (or '456000').
- Annual Salary
  Enter the new annual salary amount using up to 12 positions with two decimals. For example, a new annual salary of 37,800.00 is entered as '37,800.' (or '3780000').

Note: *After the form is executed, the system calculates the other salary text boxes based on the entry of one of the salary values, or a value in the Percent Change text box. The results are displayed to the right of the entry text boxes.*

For practice, type '650' in the Percent Change text box.

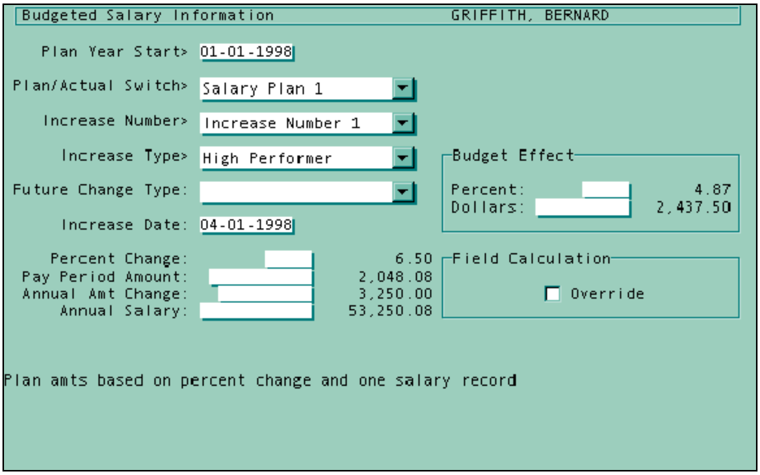
4. Click Save or press Enter

The salary information record is created and a variable message is displayed indicating the basis for the calculation, such as:

'Plan amts based on percent change and one salary record'.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Salary budgets—cost analysis options ***(on page 135)***

For an explanation of how to use this form to enter individual employee salary budget exceptions.

Deleting obsolete salary budget records

To delete all employee budget records for salary plans that no longer have any use or meaning in the budgeting process using the Delete Obsolete Budget Records report (5E-RPT), complete the report schedule by entering the following report parameters:

☞ *Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.*

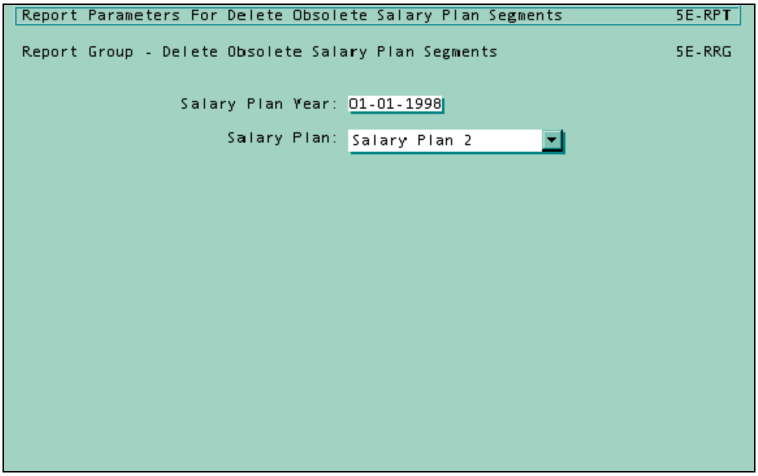
1. Enter the Salary Plan Year

Type the plan year start date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). May 21, 1998, for example, is entered as '19980521' or '05-21-1998' (US and Canada) or '19982105' or '21-05-1998' (elsewhere). This is the plan year for which the report will be generated.

2. Select the Salary Plan

Select the salary plan number from the Plan/actual Switches option list (SA01). This is the Plan/Actual Switch (plan number) for which employee salary budget records will be deleted.

When completed, the report parameters may look similar to the example that follows:



Once it has been processed, the Delete Obsolete Budget Records report (5E-RPT) deletes all employee salary budget records created from the salary plan number you specified. If you added exception budget records for high or low performers for a plan number, those records will also be deleted. No hard copy out put is produced by this report.

If salary budget records from more than one salary plan are to be deleted, you will need to process the program multiple times.

See also:

- Ways of setting your annual budget ***(on page 139)***

For an explanation of the uses of this program.

Viewing the final annual salary budget

To display the final annual budget using the Annual Budget Report (5C-RPT), complete the report schedule by entering the following report parameters:

☞ *Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.*

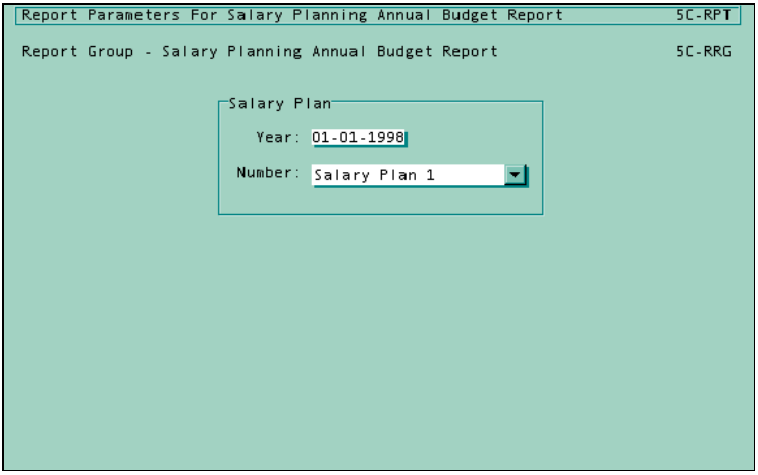
1. Enter the Salary Plan Year

Type the plan year start date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). May 21, 1998, for example, is entered as '19980521' or '05-21-1998' (US and Canada) or '19982105' or '21-05-1998' (elsewhere). This is the plan year for which the report will be generated.

2. Select the Salary Plan Number

Select the salary plan number from the Plan/actual Switches option list (SA01). This is the Plan/Actual Switch (plan number) for which the report will be generated.

When completed, the report parameters may look similar to the example that follows:



The Annual Budget Report (5C-RPT) is a duplicate of the Salary Planning/Budgeting Turnaround List report (5B-RPT), except that it does not allow room to write exception information. It includes any data that were manually entered into the system from the turnaround report.

Once it has been processed, the Annual Budget Report (5C-RPT) displays all employees by department (or user-defined budget group), their current salary data, and scheduled increase date(s) and amount(s). The list includes totals, by department, of the number of employees, current salaries, planned increase amounts, and salaries for the coming plan year.

Extended Practice

Note: You must have completed the Extended Practices in the prior sections to guarantee the successful completion of the Extended Practice that follows.

View the Projected Salary Changes form (42-SCR) for employee 3023 and note the projected compa ratio and position in range for the projected increase. Use an Increase Source of '2' and a Plan Year Start Date of January 1 of next year.

Review of Questions Answered

1. How can an organization use salary budget reporting?

2. What options are available for analyzing the salary budget?

3. How can variances or exceptions be made to the salary budget?

4. What tool is available for automatically deleting unused employee budget records?

PART 4

Performing and Processing Reviews

In This Section

CHAPTER 7

Administering the Review Process

In This Chapter

Introduction

The review process is used by an organization to evaluate an employee's salary or performance in a standard, timely manner. This section explains the steps that are part of the review process and how Cyborg supports each of the steps.

Tasks

This section explains the following:

- Setting up the salary review schedule
- Identifying employees due for a salary review
- Generating salary review authorization forms
- Tracking the return of salary reviews
- Setting up the performance appraisal schedule
- Identifying employees due for a performance appraisal
- Tracking the return of performance appraisals

Prerequisites

Before you can begin reviews as they relate to the salary budget process, all of the following tasks must be completed.

Set up Salary Administration option lists

Before any data are entered, you must ensure that all option lists are populated with your organization's specific Salary Administration values.

☞ *Refer to* **Option List Quick Reference** *(on page 343) for detailed information.*

Set up Control Numbers for all production organizations

Before any data are entered, you must ensure that Control Numbers have been selected and entered for each company using Salary Administration.

☞ *Refer to* **Setting Up Salary Plans** *(on page 41) for detailed information.*

Set up salary plans

Before annual salary budgets can be set up, your salary plans must be established.

☞ *Refer to* **Setting Up Salary Plans** *(on page 41) for detailed information.*

Create the annual salary budget

Before annual salary budgets can be analyzed and finalized, you must ensure that annual salary budgets have been generated.

☞ *Refer to* **Creating Annual Salary Budgets for Employees** *(on page 101) for detailed information.*

Analyze and finalize the annual salary budget

Before the salary review process can begin, you must have analyzed and finalized the annual salary budget.

☞ *Refer to* **Reviewing and Finalizing Your Annual Salary Budget** *(on page 131) for detailed information.*

Questions answered

The following questions are answered in this section:

1. What is the review process?
2. How can scheduled review dates be monitored?
3. What options are available for automatically generating salary review forms?
4. How can review forms be tracked after distribution?

Overview of the review process

Once you have established salary plans, generated employee salary budget records, recorded employee budget exceptions, and approved your annual salary budget, you may start the process of scheduling and performing employee reviews using the projected salary increase information.

Salary reviews may be handled as part of a salary review process or may be tied to a performance appraisal. When to perform the review is ultimately up to each organization. Company policy may dictate reviews on a quarterly, semiannual, or annual basis. Regardless of the type or timing of reviews you are performing, Cyborg can help you administer and track them.

During the review process, you can use the 'when' information created by the salary budget process to trigger reviews and the 'how much' information to provide increase information for approval. You can effectively administer the review process for each of the methods you used to project salary increases.

You may perform these tasks as part of your review process:

- Schedule employee reviews
- Generate lists of upcoming reviews
- Produce and distribute Cyborg-delivered review forms that display salary history, historic performance results, and the projected salary increase
- Track the review distribution date, receiver, expected return date, and actual return date
- Generate a list of employees for whom forms have not yet been returned
- Generate a list of employees who have not received salary adjustments in the past 12 months

☞ *Refer to* **Creating Annual Salary Budgets for Employees** *(on page 101) for information on generating employee budget records.*

What triggers a review?

The system can be set up to trigger the review process based on scheduled review dates. The advanced warning period for both the review reminder and the review period is customer defined.

Scheduled review dates

To ensure that the review reminder will work, all new employees must have the date of their next scheduled review set up on their record. You can do this manually at the time an employee is hired or you can create a customer-written program to generate the needed information.

Depending on the type of review you have selected, salary or performance, you can schedule review dates on either the Scheduled Salary Review Data form (43-SCR) or the Schedule/Track Performance Appraisals form (50-SCR).

You can automatically generate a Scheduled Salary Review Data form (43-SCR) for employees if you are using either the across-the-board or pay-for-performance method for projected increases and you have generated employee budget records. The program logic within the Scheduled Salary Reviews Within Selected Months report (59-RPT) can identify employees due for a review and create a scheduled review record for them automatically.

Ways of viewing scheduled dates

When scheduled review dates are in place, you can view the scheduled dates online using the Scheduled Salary Review Data form (43-SCR) or the Schedule/Track Performance Appraisals form (50-SCR).

As an alternative, you may generate the reports that list reviews scheduled within a customer-defined period. Upcoming salary reviews are listed on the Scheduled Salary Reviews Within Selected Months report (59-RPT). This report provides a listing that contains two lines per employee: line 1 displays existing salary data and line 2 shows the employee's projected increase.

Future performance appraisals are listed on the Performance Appraisals Scheduled for Month of: XX report (1R-RPT). There is space on the report to manually record reviewer, distribution, and expected return date information.

Missed reviews

If an employee is overlooked and no review takes place, that employee can be included on a report that lists all active employees who have not received a salary adjustment in the past 12 months. The No Salary Adjustment on File for Last 12 Month Period report (1Z-RPT) can be modified to include those employees who are on leave of absence. The report can also be modified to display results for a time span of 18 months rather than 12.

Administration options

When you have determined which employees require a review, you may prepare the review paperwork.

Review forms

You may already have internal salary and performance review forms that meet the needs of the organization and can be used to record the outcome of the review. However, if you prefer a form that includes employee information already stored on the system, you may want to use the Cyborg-delivered review authorization forms. These forms include job information, salary grade, salary and rating history, and current wage and salary information. Proposed salary increase information and an area for comments and signatures are also provided on the forms.

Cyborg provides two review authorization forms, which differ only in their size and the format of the information: The Salary Review Authorization Form I (5O-RPT) prints one 8.5" x 11" form for each employee. The Salary Review Authorization Form II (5P-RPT) prints two employee forms per 11" x 14" page.

These reports provide detailed and basic salary data on the employee as well as space to manually enter or automatically print proposed and actual increase amounts, effective dates, and so forth, for any employee who is scheduled to receive a salary increase within the month requested (a customer-defined date).

In addition to basic employee data, these reports also include current salary, salary grade with minimum, midpoint, and maximum range values, the last three performance appraisal ratings, and salary increases.

A number of options are available for calculating the next review date and recommended amount or percent of increase. These options use the Scheduled Salary Review Data form (43-SCR), TD table salary increase matrices, or the Budgeted Salary Information form (45-SCR) to supply the 'when' and 'how much' data to the report:

Option	Description	Source of the proposed increase data
C%	TD1 and TD3 Tables	Pay-for-performance tables that match the employee's matrix ID on the Performance Appraisal Results form (49-SCR)
C$	TD2 and TD3 Tables	Pay-for-performance tables that match the employee's matrix ID on the Performance Appraisal Results form (49-SCR)
CR	TD9 and TD3 Tables	Pay-for-performance tables that match the employee's matrix ID on the Performance Appraisal Results form (49-SCR)
R%	TD4 and TD6 Tables	Pay-for-performance tables that match the employee's matrix ID on the Performance Appraisal Results form (49-SCR)

Option	Description	Source of the proposed increase data
R$	TD5 and TD6 Tables	Pay-for-performance tables that match the employee's matrix ID on the Performance Appraisal Results form (49-SCR)
RR	TD0 and TD6 Tables	Pay-for-performance tables that match the employee's matrix ID on the Performance Appraisal Results form (49-SCR)
P1	Salary Plan 1	Budgeted Salary Information form (26-SCR) with matching salary plan number
P2	Salary Plan 2	Budgeted Salary Information form (26-SCR) with matching salary plan number
P3	Salary Plan 3	Budgeted Salary Information form (26-SCR) with matching salary plan number
SR	Salary Review	Scheduled Salary Review Data form (43-SCR) (next review date only)

When applicable, the Salary Review Authorization Form I (5O-RPT) and Salary Review Authorization Form II (5P-RPT) reports can calculate the range maximum and compare the maximum with the employee's position in range after receiving the projected increase. The increase displayed is then limited to the employee's maximum position in range.

As an added feature, the review form program generates a Scheduled Salary Review Data form (43-SCR) for any employee who does not have one for the month specified in the report parameters, if the Budgeted Salary Information form (45-SCR) shows the employee is due for a salary increase during that month.

The Personnel/Wage and Salary area can use either form to initiate the salary review process and gather the appropriate signatures. The forms can also be the source documents from which the review data are entered into the system.

Note: *You can use these reports to identify employees due for a salary review within a selected period instead of using the Scheduled Salary Reviews Within Selected Months report (59-RPT).*

■ Generating salary review authorization forms ***(on page 170)***
For detailed directions on generating salary review forms.

Tracking review forms

Once review forms have been prepared, your next concern is their distribution and return. Important information such as the name of the reviewer, the distribution location and date, and the expected return date needs to be entered into the employee's record. If a review form is returned after the expected return date, monitoring must be done to ensure its return. When the form has been returned to the originating department, the return date must be noted.

Each of these process stages of the salary review form can be tracked by completing the corresponding text boxes on the Scheduled Salary Review Data form (43-SCR). Forms not returned by the expected return date can be listed on the Salary Review Forms Not Returned By Date report (18-RPT).

Performance appraisals can be tracked by completing the distribution and return text boxes on the Schedule/Track Performance Appraisals form (50-SCR). Appraisals not returned by the expected return date can be listed on the Performance Appraisal Forms Not Returned By Expected Date report (1Q-RPT).

☞ *Refer to* **Entering the Results of the Review Process** *(on page 181) for information on recording the review results.*

☞ *Refer to* **Analyzing the Results of the Review Process** *(on page 211) for information on analyzing cost and performance results.*

Apply the Concept
Describe your organization's current policy for employee reviews. For example, are your reviews tied to the timing of the proposed salary increases or do you periodically review individuals regardless of when proposed increases may take place? Based on your answer, would you perform both salary and performance reviews?

Apply the Concept
If your organization chose to use Cyborg-delivered reports for salary review authorization forms, which form would be most effective in supporting your review guidelines, and why?

Detailed Directions

This section provides detailed directions on completing a business task.

Tasks

Completing the Guided Practice

In the Guided Practice for this section, you will schedule a salary review and a performance appraisal for employee 3008. Specific details for scheduling these reviews are described in the steps for the tasks. Although report parameter explanations are included in the remaining tasks 2, 3, 4, 6, and 7 for your convenience, you are not expected to run these reports as part of the Guided Practice.

You must have completed the Guided Practices in the prior sections to guarantee the successful completion of the Guided Practice that follows.

Setting up the salary review schedule

To record the next salary review date using the Scheduled Salary Review Data form (43-SCR), follow these steps:

Note: *It is intended that the next scheduled salary review date will be generated by a customer-written program run once a year or will be manually entered at the time of budgeting.*

1. Access the Scheduled Salary Review Data form (43-SCR)

Access this form by making the following selection from the Navigator:

Component: Salary Administration
Process: Perform and Process Reviews
Task: Next Salary Review Date

For practice, access the Scheduled Salary Review Data form (43-SCR) for employee 3008.

2. Enter the Next Review Date

Type the next review date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). May 21, 1998, for example, is entered as '19980521' or '05-21-1998' (US and Canada) or '19982105' or '21-05-1998' (elsewhere).

This text box contains the date the next salary review is to be performed.

For practice, type a date that represents March 16 1998, for example,'03-16-1998' (US and Canada) or '16-03-1998' (elsewhere).

3. Select the Type of Review

Select the type of review from the Salary Review Type option list (HR34).

This text box defines the type of salary review to be performed.

For practice, select 'Sal Review Annual'.

Note: The following text boxes need to be recorded only when the review date is reached and the salary review form is sent out.

4. Enter the Distribution Data

Type an up-to-10-character location for the distribution of the appraisal.

This is the mail/distribution data that indicates where the salary review was sent. It may be the reviewer's or (in the case of mass distribution) the central mailing location.

For practice, type '12th floor'.

5. Enter the Distribution Date

Type the distribution date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). The 21st of May, 1998, for example, is entered as '19980521' or '05-21-1998' (US and Canada) or '19982105' or '21-05-1998' (elsewhere).

This is the date the salary review form is released and sent.

For practice, type a date that represents January 16 1998, for example, '01-16-1998' (US and Canada) or '16-01-1998' (elsewhere).

6. Enter the Reviewer Name

Type the name of the person who is responsible for collecting completed salary review forms (as in the case of mass distribution) or performing the review and returning the form.

For practice, type 'Miller, Carl'.

7. Enter the Expected Return

Type the expected return date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). May 21, 1998, for example, is entered as '19980521' or '05-21-1998' (US and Canada) or '19982105' or '21-05-1998' (elsewhere).

This is the date the salary review form is due back in the originating department.

For practice, type a date that represents April 1 1998, for example, '04-01-1998' (US and Canada) or '01-04-1998' (elsewhere).

8. Enter the Actual Return

Type the actual return date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). May 21, 1998, for example, is entered as '19980521' or '05-21-1998' (US and Canada) or '19982105' or '21-05-1998' (elsewhere).

This is the date the salary review form is actually received back in the originating department.

For practice, leave this text box blank.

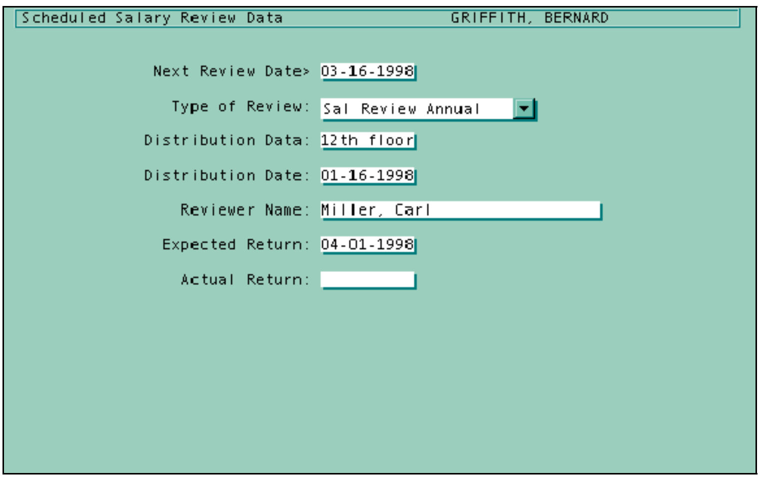
9. Click Save or press Enter

The next scheduled salary review date is recorded and may be used by these reports to determine who is eligible for a salary review:

- Scheduled Salary Reviews Within Selected Months report (59-RPT)
- Salary Review Authorization Form I (5O-RPT)
- Salary Review Authorization Form II (5P-RPT)

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Scheduled Salary Review Data GRIFFITH, BERNARD
Next Review Date> 03-16-1998
Type of Review: Sal Review Annual
Distribution Data: 12th floor
Distribution Date: 01-16-1998
Reviewer Name: Miller, Carl
Expected Return: 04-01-1998
Actual Return:

See also:

- What triggers a review? ***(on page 159)***

For information about the role of this form in triggering a review.

Scheduled Salary Reviews Within Selected Months report (59-RPT)

Two reports identify employees due for a salary review:

- Scheduled Salary Reviews Within Selected Months report (59-RPT)
- No Salary Adjustment on File for Last 12 Month Period report (1Z-RPT)

To identify employees due for a salary review using the Scheduled Salary Reviews Within Selected Months report (59-RPT), complete the report schedule by entering the following report parameters:

☞ *Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.*

1. Enter the Effective Date

Type the effective date using the format CCYYMMDD or MM-DD-CCYY (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) to mark the beginning date of a one-month period.

This report prints all salary reviews that are scheduled within this period. If an entry other than a numeric date is entered, the system defaults to the system date.

2. Enter the Salary Plan Year

Type the salary plan year using the format CCYYMMDD or MM-DD-CCYY (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

This text box is required if the logic indicator option is P1, P2, or P3, indicating that data from the Budgeted Salary Information form (45-SCR) are to be used.

3. Enter the Logic Indicator Option

Type the logic indicator option to identify the logic to be used in calculating or selecting the next salary review date and/or proposed increase amount.

The options use the table matrices, Budgeted Salary Information form (45-SCR) data, or data from the next Scheduled Salary Review Data form (43-SCR). The options are as follows:

Option	Date and increase source
C%	TD1 table (percent of increase) and TD3 table (calculates Date of Increase using the first number of months in range)
C$	TD2 table (amount of increase) and TD3 table (calculates Date of Increase using the first number of months in range)
CR	TD9 table (percent of increase using the first percentage in range of percentages) and TD3 table (calculates Date of Increase using the first number of months in range)
R%	TD4 table (percent of increase) and TD6 table (calculates Date of Increase using the first number of months in range)
R$	TD5 table (amount of increase) and TD6 table (calculates Date of Increase using the first number of months in range)

Option	Date and increase source
RR	TD0 table (percent of increase using first percentage in range of percentages) and TD6 table (calculates Date of Increase using the first number of months in range)
P1	Increase date, percentage, and amounts from the employee budget record that contains Plan/Actual Switch = 1 from Budgeted Salary Information form (45-SCR)
P2	Increase date, percentage, and amounts from the employee budget record that contains Plan/Actual Switch = 2 from Budgeted Salary Information form (45-SCR)
P3	Increase date, percentage, and amounts from the employee budget record that contains Plan/Actual Switch = 3 from Budgeted Salary Information form (45-SCR)
SR	Next Scheduled Review Date (only) from Scheduled Salary Review Data form (43-SCR)

Note: *If you select the C%, C$, CR, R%, R$, or RR logic indicator option, the Writes Table Appraisal Values report (5G-RPT) must be run prior to this report in order to supply the matrix ID to the Performance Appraisal Results form (49-SCR).*

4. Enter the Range Indicator Option (optional)

Type the range indicator option.

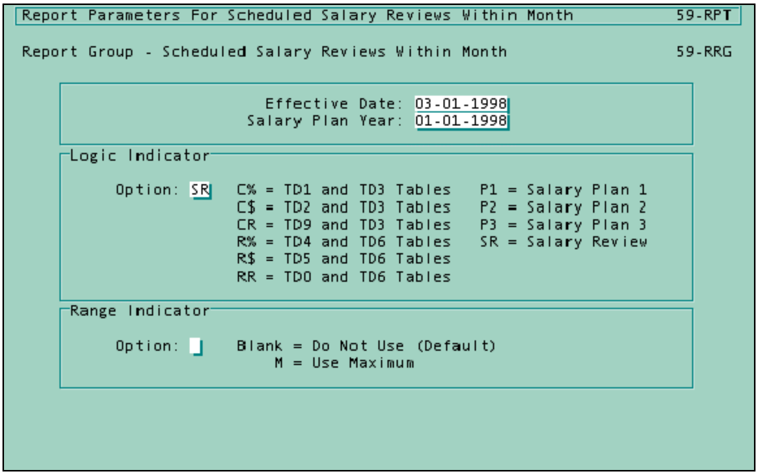
Type an 'M' in this text box to limit the employee's appraisal rating projected new salary to the maximum position in range in the Appraisal Ratings option list (HR16). It may be used only with the C%, C$, CR, R%, R$, and RR logic options.

Otherwise, leave this text box blank.

Note: *To use the 'M' option, you must update the desired position-in-range maximum values in the Appraisal Ratings calculation option list (HR16).*

☞ *Refer to* **Option List Quick Reference** *(on page 343) for more information on updating calculation option lists.*

When completed, the report parameters may look similar to the example that follows:



Once it has been processed, the Scheduled Salary Reviews Within Selected Months report (59-SCR) provides a listing that contains two lines per employee: line 1 displays existing salary data and line 2 shows the employee's projected increase.

For all logic indicator options other than 'SR', the batch generator automatically generates a new Scheduled Salary Review Data form (43-SCR) for employees. On that record the next review date is determined through the program logic and the type of review indicates that the record was system generated by this program.

See also:

■ What triggers a review? ***(on page 159)***
For information about methods of notifying managers about upcoming employee salary reviews.

No Salary Adjustment on File for Last 12 Month Period report

Two reports identify employees due for a salary review:

- Scheduled Salary Reviews Within Selected Months report (59-RPT)
- No Salary Adjustment on File for Last 12 Month Period report (1Z-RPT)

To identify employees due for a salary review using the No Salary Adjustment on File for Last 12 Month Period report (1Z-RPT), review the following information:

☞ *Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.*

Note: *This report can be modified to include employees on leave of absence. In addition, the time span may be modified to 18 months. Instructions for these modifications are documented within the report program and are commented by a leading '@'.*

There are no parameters to enter for this report.

Once it has been processed, the No Salary Adjustment on File for Last 12 Month Period report (1Z-RPT) provides a list of employees and the time span since their last increase. A total of employees listed is given at the end of the report.

Note: *This report includes only employees whose organizations have a Company Category option equal to 'Pay-Normal Master' on the Company Options form (AF-SCR).*

See also:

- What triggers a review? ***(on page 159)***

For more information about ways to notify managers about upcoming employee reviews.

Generating salary review authorization forms

To generate salary review forms using the Salary Review Authorization Form I (5O-RPT) or the Salary Review Authorization Form II (5P-RPT), complete the report schedule by entering the following report parameters:

☞ *Refer to* **Report Quick Reference** *(on page 253) for the technical considerations that must be reviewed prior to running this report.*

☞ *Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.*

1. Enter the Effective Date

Type the effective date using the format CCYYMMDD or MM-DD-CCYY (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

The system determines the month for which the Salary Review Forms are to be printed by adding one month to this date to determine the month end. For example, '19980201' selects all pending increases between 19980201 and 19980301. The program will use the system date if the literal 'CCYYMMDD' is entered (in that format) in this text box.

2. Enter the Salary Plan Year

Type the date of the first day in the salary plan year using the format CCYYMMDD or MM-DD-CCYY (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

This date entry is required only if you choose to run the Salary Review Authorization Form I report (5O-RPT) or the Salary Review Authorization Form II report (5P-RPT) using a P1, P2, or P3 option. The date supplies the program with the plan year start date of the employee budget records selected.

3. Enter the Logic Indicator Option

Type the logic indicator option to identify the area from which the projected increase date and amount, or percentage, are to be taken.

The options use the table matrices, Budgeted Salary Information form (45-SCR) data, or data from the next Scheduled Salary Review Data form (43-SCR). The options are as follows:

Option	Date and increase source
C%	TD1 table (percent of increase) and TD3 table (calculates Date of Increase using the first number of months in range)
C$	TD2 table (amount of increase) and TD3 table (calculates Date of Increase using the first number of months in range)
CR	TD9 table (percent of increase using the first percentage in range of percentages) and TD3 table (calculates Date of Increase using the first number of months in range)
R%	TD4 table (percent of increase) and TD6 table (calculates Date of Increase using the first number of months in range)
R$	TD5 table (amount of increase) and TD6 table (calculates Date of Increase using the first number of months in range)
RR	TD0 table (percent of increase using first percentage in range of percentages) and TD6 table (calculates Date of Increase using the first number of months in range)
P1	Increase date, percentage, and amounts from the employee budget record that contains Plan/Actual Switch = 1 from Budgeted Salary Information form (45-SCR)
P2	Increase date, percentage, and amounts from the employee budget record that contains Plan/Actual Switch = 2 from Budgeted Salary Information form (45-SCR)
P3	Increase date, percentage, and amounts from the employee budget record) that contains Plan/Actual Switch = 3 from Budgeted Salary Information form (45-SCR)
SR	Next Scheduled Review Date (only) from Scheduled Salary Review Data form (43-SCR)

Note: *If you select the C%, C$, CR, R%, R$, or RR logic indicator option, the Writes Table Appraisal Values report (5G-RPT) must be run prior to this report in order to supply the matrix ID to the Performance Appraisal Results form (49-SCR).*

4. Enter the Range Indicator Option (optional)

Type the range indicator option.

An 'M' entered in this text box limits the employee's appraisal rating projected new salary to the maximum position in range in the Appraisal Ratings option list (HR16). It may be used only with the C%, C$, CR, R%, R$, and RR logic options

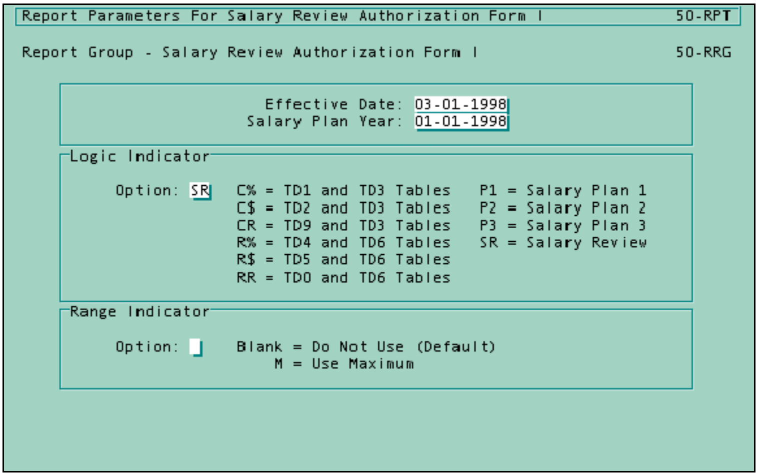
Otherwise, leave this text box blank.

When applicable, the Salary Review Authorization Form I report (5O-RPT) or the Salary Review Authorization Form II report (5P-RPT) can calculate the range maximum and compare the maximum with the employee's position in range after receiving the projected increase. The increase displayed is then limited to the employee's maximum position in range.

Note: *To use the 'M' option, you must update the desired position-in-range maximum values in the Appraisal Ratings calculation option list (HR16).*

☞ *Refer to* **Option List Quick Reference** *(on page 343) for more information on updating calculation option lists.*

When completed, the report parameters may look similar to the example that follows:



```
Report Parameters For Salary Review Authorization Form I                    5O-RPT

Report Group - Salary Review Authorization Form I                           5O-RRG

                   Effective Date: 03-01-1998
                 Salary Plan Year: 01-01-1998

Logic Indicator
     Option: SR   C% = TD1 and TD3 Tables    P1 = Salary Plan 1
                  C$ = TD2 and TD3 Tables    P2 = Salary Plan 2
                  CR = TD9 and TD3 Tables    P3 = Salary Plan 3
                  R% = TD4 and TD6 Tables    SR = Salary Review
                  R$ = TD5 and TD6 Tables
                  RR = TD0 and TD6 Tables

Range Indicator
     Option:      Blank = Do Not Use (Default)
                      M = Use Maximum
```

The Salary Review Authorization Form I report (5O-RPT) prints one 8.5" x 11" form per employee. The Salary Review Authorization Form II report (5P-RPT) prints two employee forms per 11" x 14" page.

For all logic indicator options other than 'SR', both reports automatically generate a Scheduled Salary Review Data form (43-SCR) with the Next Review Date text box printed as the proposed increase date on the Salary Review Authorization Form.

See also:

- Administration options ***(see "Administering the Review Process" on page 155)***

For information about Cyborg-delivered salary review forms.

Tracking the return of salary reviews

To track the return of salary review forms using the Salary Review Forms Not Returned By Date report (18-RPT), complete the report schedule by entering the following report parameters.

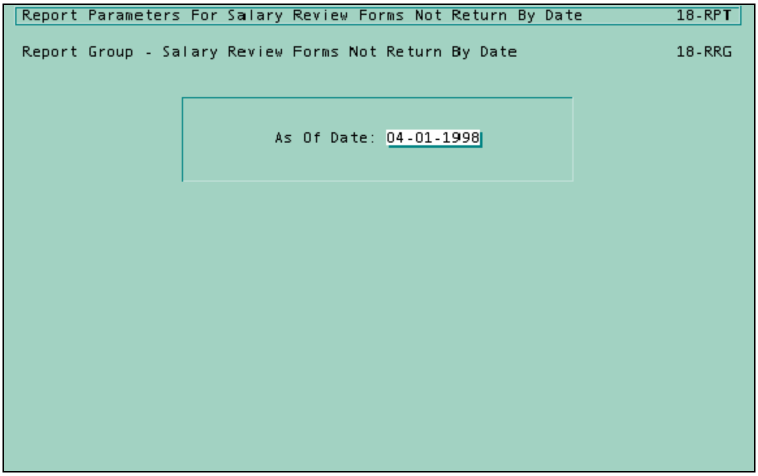
Type the 'as of' date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). May 21, 1998, for example, is entered as '19980521' or '05-21-1998' (US and Canada) or '19982105' or '21-05-1998' (elsewhere).

☞ *Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.*

Type the 'as of' date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). May 21, 1998, for example, is entered as '19980521' or '05-21-1998' (US and Canada) or '19982105' or '21-05-1998' (elsewhere).

If this text box is not entered, the system defaults to the system date.

When completed, the report parameters may look similar to the example that follows:



Once it has been processed, the Salary Review forms Not Returned by Date report (18-RPT) lists all employees for whom salary review paperwork has not been returned.

If the date entered in the Expected Return text box on an employee's Scheduled Salary Review Data form (43-SCR) has passed and no date is recorded in the Actual Return text box on that form, then the employee information is included in the report.

See also:

- Administration options ***(see "Administering the Review Process" on page 155)***

For information about tracking the return of salary reviews.

Setting up the performance appraisal schedule

To record the next performance appraisal date using the Schedule/Track Performance Appraisals form (50-SCR), follow these steps:

1. Access the Schedule/Track Performance Appraisals form (50-SCR)

Access this form by making the following selection from the Navigator:

Component: Salary Administration
Process: Perform and Process Reviews
Task: Setup Performance Appraisal Schedule

For practice, access the Schedule/Track Performance Appraisals form (50-SCR) for employee 3008.

2. Enter the Date Scheduled

Type the scheduled date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). May 21, 1998, for example, is entered as '19980521' or '05-21-1998' (US and Canada) or '19982105' or '21-05-1998' (elsewhere).

This is the date the next performance appraisal is to be performed.

For practice, type a date that represents March 16 1998, for example, '03-16-1998' (US and Canada) or '16-03-1998' (elsewhere).

3. Select the Type of Appraisal

Select the type of appraisal from the Appraisal Types option list (HR15).

This text box defines the type of performance appraisal to be performed.

For practice, select 'Annual Appraisal'.

Note: The following text boxes need to be recorded only when the review date is reached and the performance appraisal form is sent out.

4. Enter the Location Delivered

Type an up-to-10-character location for the distribution of the appraisal.

These are the mail/distribution data indicating where the performance appraisal form was sent. It may be the reviewer's or (in the case of mass distribution) the central mailing location.

For practice, type '12th floor'.

5. Enter the Date Distributed

Type the distribution date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). May 21, 1998, for example, is entered as '19980521' or '05-21-1998' (US and Canada) or '19982105' or '21-05-1998' (elsewhere).

This is the date the performance appraisal form is released and sent.

For practice, type a date that represents January 16 1998, for example, '01-16-1998' (US and Canada) or '16-01-1998' (elsewhere).

6. Enter the Person Responsible

Type the name of the person who is responsible for collecting completed performance appraisal forms (as in the case of mass distribution) or performing the review and returning the form.

For practice, type 'Miller, Carl'.

7. Enter the Completed Appraisal Date Expected

Type the completed appraisal date expected in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). May

21, 1998, for example, is entered as '19980521' or '05-21-1998' (US and Canada) or '19982105' or '21-05-1998' (elsewhere).

This is the date the performance appraisal form is due back in the originating department.

For practice, type a date that represents April 1 1998, for example, '04-01-1998' (US and Canada) or '01-04-1998' (elsewhere).

8. Enter the Completed Appraisal Date Returned

Type the completed appraisal date returned in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). May 21, 1998, for example, is entered as '19980521' or '05-21-1998' (US and Canada) or '19982105' or '21-05-1998' (elsewhere).

This is the date the performance appraisal form is actually received back in the originating department.

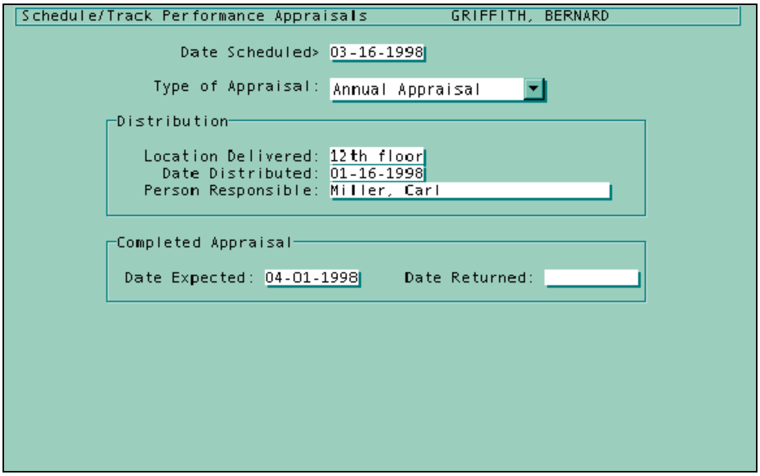
For practice, leave this text box blank.

9. Click Save or press Enter

The next scheduled performance appraisal date is recorded. It may be used by the Performance Appraisals Scheduled for Month of: XX report (1R-RPT) to determine who is eligible for a performance appraisal.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- What triggers a review? ***(on page 159)***

For information about scheduling performance appraisals.

Identifying employees due for a performance appraisal

To identify employees due for a performance appraisal using the Performance Appraisals Scheduled for Month of: XX report (1R-RPT), complete the report schedule by entering the following report parameters:

☞ *Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.*

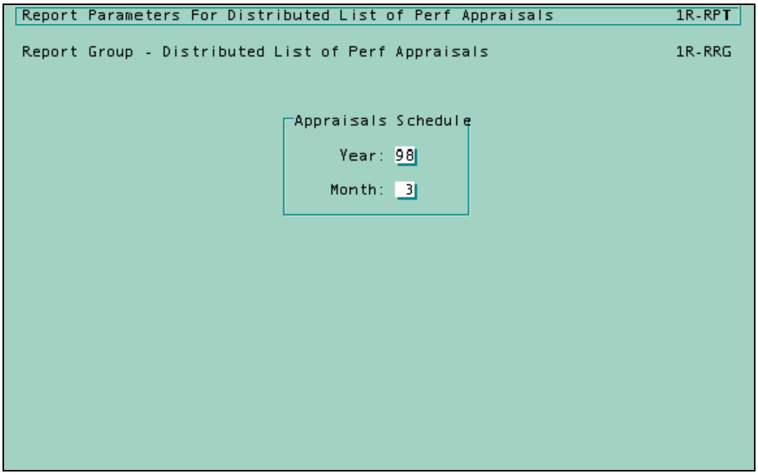
1. Enter the Appraisals Scheduled Year

Type the appraisals scheduled year in the format YY. This is the year for which you want to list performance appraisals. Leave this text box blank to use the system year.

2. Enter the Appraisals Scheduled Month

Type the appraisals scheduled month in the format MM. This is the month for which you want to list performance appraisals. Leave this text box blank to use the system month.

When completed, the report parameters may look similar to the example that follows:



Once it has been processed, the Performance Appraisals Scheduled for Month of: XX report (1R-RPT) provides a distribution list of performance appraisals scheduled for a specified month and year.

See also:

- What triggers a review? ***(on page 159)***

For information about identifying employees due for a performance appraisal.

Tracking the return of performance appraisals

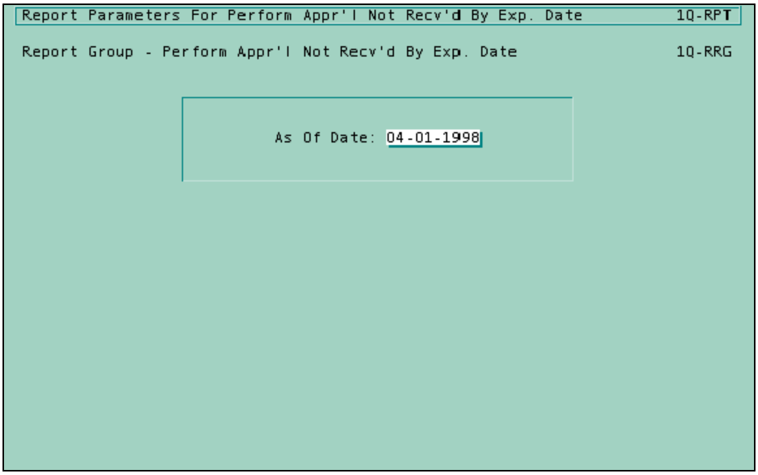
To track the return of performance appraisal forms using the Performance Appraisal Forms Not Returned By Expected Date report (1Q-RPT), complete the report schedule by entering the following report parameters:

☞ *Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.*

Enter an As Of Date

Type the 'as of' date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). May 21, 1998, for example, is entered as '19980521' or '05-21-1998' (US and Canada) or '19982105' or '21-05-1998' (elsewhere). If this text box is not entered, the system defaults to the system date.

When completed, the report parameters may look similar to the example that follows:



Once it has been processed, the Performance Appraisal Forms Not Returned By Expected Date report (1Q-RPT) lists all employees for whom performance appraisal paperwork has not been returned.

If the date in the Completed Appraisal Date Expected text box on the employee's Schedule/Track Performance Appraisals form (50-SCR) has passed and a rating has not been recorded on the Performance Appraisal Results form (49-SCR), then the employee is included in the report. If the date is a future date, blanks, or zeros, then this record is ignored by the report. Once the Completed Appraisal Date Returned text box on the employee's Schedule/Track Performance Appraisals form (50-SCR) is entered, the employee is no longer included in the report.

Extended Practice

Note: You must have completed the Extended Practices in the prior sections to guarantee the successful completion of the Extended Practice that follows.

1. Schedule an annual salary review for employee 3023 one year from today's date.

2. Schedule an annual performance review for employee 3023 one year from today's date.

Review of Questions Answered

1. What is the review process?

2. How can scheduled review dates be monitored?

3. What options are available for automatically generating salary review forms?

4. How can review forms be tracked after distribution?

CHAPTER 8

Entering the Results of the Review Process

In This Chapter

Introduction

Once you have completed the review process, you may use the information written on the review forms to enter the results on the employee's record. This information may include a revised performance rating, one or more salary changes, monetary perquisites and bonuses, and dates for scheduled future reviews.

Tasks

This section explains the following:

- Recording performance appraisal results
- Entering salary changes directly
- Converting an employee salary budget record to an actual salary change
- Recording monetary perquisites and bonuses
- Scheduling a future review

Prerequisites

Before you can begin to enter the results of the review process, all the following tasks must be completed.

Set up Salary Administration option lists

Before any data are entered, you must ensure that all option lists are populated with your organization's specific Salary Administration values.

☞ *Refer to* **Option List Quick Reference** *(on page 343) for detailed information.*

Set up Control Numbers for all production organizations

Before any data are entered, you must ensure that Control Numbers have been selected and entered for each company using Salary Administration.

☞ *Refer to* **Setting Up Salary Plans** *(on page 41) for detailed information.*

Set up salary plans

Before annual salary budgets can be set up, your salary plans must be established.

☞ *Refer to* **Setting Up Salary Plans** *(on page 41) for detailed information.*

Create the annual salary budget

Before annual salary budgets can be analyzed and finalized, you must ensure that annual salary budgets have been generated.

☞ *Refer to* **Creating Annual Salary Budgets for Employees** *(on page 101) for detailed information.*

Analyze and finalize the annual salary budget

Before the salary review process can begin, you must have analyzed and finalized the annual salary budget.

☞ *Refer to* **Reviewing and Finalizing Your Annual Salary Budget** *(on page 131) for detailed information.*

Administer the review process

Before you can enter the results of the review process, you must have already administered the review process.

☞ *Refer to* **Administering the Review Process** *(on page 155) for detailed information.*

Questions answered

The following questions are answered in this section:

1. How are performance appraisals used in the salary budget process?
2. What methods are available for recording salary increases?

Performance ratings and how they are used

Once you have completed the review process and manually completed the performance appraisal form, you must record the rating information on the employee's record.

A specific rating, as well as an average rating for weighted categories, may be entered. You may record a promotability assessment and date the employee should be considered for promotion as well as the employee's willingness to travel or relocate and his or her geographic preference. The reviewer's identification can be a unique number used to identify the reviewer in the event that questions arise pertaining to a particular rating or the overall consistency of the reviewer.

The Performance Appraisal Results form (49-SCR) contains the Matrix ID text box used to link an employee record to specific pay-for-performance salary increase guideline matrices. You may enter a value in this text box or let it be generated by the Writes Table Appraisal Values report (5G-RPT) batch program during the next salary plan year's budget process.

The new rating that results from the performance appraisal will be used by next year's pay-for-performance Salary Budget tables to generate a proposed increase.

☞ *Refer to* **Creating Annual Salary Budgets for Employees** *(on page 101) for more information about using performance appraisals to generate employee salary budget records.*

See also:

- Recording performance appraisal results ***(on page 189)***

For detailed directions on entering the performance appraisal results.

Methods of entering salary changes

Salary changes that result from an employee review may be recorded manually by entering an actual salary change. As an alternative, you may convert the proposed salary increase information from an employee's salary budget record to an actual salary increase.

Direct entry of salary changes

If you used discretionary increases and recorded individual employee salary increases on the Salary Assignment/Changes form (40-SCR), a review of each salary increase may be done at this time. If the salary review indicates a change to the proposed salary increase, you may revise the existing future-dated salary increase record by using the override capability of the form.

If you used either the across-the-board or pay-for-performance salary plan option and want to enter an employee's authorized salary change directly into the system, you may record the salary increase using the Salary Assignment/Changes form (40-SCR).

See also:

■ **Entering a salary change directly** ***(on page 192)***
For detailed directions on entering salary changes directly on an employee record.

Multiple increases on the same date

It occasionally may be necessary to process multiple salary changes with the same effective date, such as merit and promotional increases. If you enter multiple salary changes for an employee as percentage increases (versus multiple increases as monetary values), each percentage is calculated on the same annual salary base instead of being compounded with each addition.

For example, if an employee has a starting annual salary of 10,000 and you give that person a merit increase of 5 percent and a promotional increase of 10 percent on the same date, the system calculates the increase amounts as follows:

```
Merit   =        10,000 x 5%       =          500
Promotion        =        10,000 x 10%      =         1,000
New salary       =        10,000 + 500 + 1000         =        11,500
```

It is important to enter salary changes in the order in which you want to have them presented on reports and forms. For example, enter a merit increase before a promotional increase or vice versa, because the last entry will be considered the most current salary change.

Conversion of salary budget data to an actual salary change

As an alternative to directly entering a salary increase that was generated by an across-the-board or pay-for-performance salary plan, you may convert the employee's salary budget record into an actual salary increase.

A feature of the Budgeted Salary Information form (45-SCR) allows conversion of a projected increase to an actual increase on the Salary Assignment/Changes form (40-SCR).

Note: If you entered any high- or low- performer exceptions in the process of finalizing your annual salary budget, you must first convert each system generated increase; then you may convert each budgeted increase exception record. Converting the Budgeted Salary Information form (45-SCR) in this sequence provides an audit trail that shows both the employee's original budgeted increase and the exception record that follows it.

The salary data that you enter may be the same value as already displayed on the Budgeted Salary Information form (45-SCR) or you may change the data at this time. You may also change the increase date from the one originally entered.

After you enter the required text boxes on the existing Budgeted Salary Information form and execute the form, the system automatically recalculates all text boxes. The recalculated information is used to create a salary record, which will become effective on the date that was entered on the Budgeted Salary Information form (45-SCR).

The creation of an actual salary increase from a budgeted salary record does not delete or replace the employee's budgeted salary record. You must delete these records using the Delete Obsolete Budget Records report (5E-RPT) after the salary plan year is completed.

☞ *Refer to* **Creating Annual Salary Budgets for Employees** *(on page 101) for information on generating employee budget records.*

☞ *Refer to* **Reviewing and Finalizing Your Annual Salary Budget** *(on page 131) for information on deleting obsolete employee budget records.*

See also:

- Converting an employee salary budget record to an actual salary change ***(on page 195)***

For detailed directions on converting an employee salary budget record to an actual salary change.

Viewing future-dated salary changes

Once salary changes have been entered into the system, you may want to follow up on those that are future-dated. A future-dated increase is one that will become actual on a date that exceeds the current pay period ending date.

You may monitor these salary changes by using the Future Dated Salary Adjustments On File report (3T-RPT). The report parameters allow the entry of an 'as of' date. Only salary changes with an effective date greater than the 'as of' date are included in the report.

See also:

- Scheduling a future salary review ***(on page 202)***

For detailed directions on scheduling a future salary review.

Monetary perquisites and bonuses

In addition to salary changes, you may also approve employee bonuses or monetary perquisites based on employee performance ratings.

Use the Bonus/Commission Information form (26-SCR) to record bonuses awarded to an employee. This information is often considered part of total compensation and is stored on the employee record. Authorization data can be entered, including location and the person or department.

The Perquisites: Monetary form (27-SCR) is used to record monetary perquisites or special allowances granted to an employee. These may be generally recurring payments such as automobile allowances, travel subsidies, and so forth.

Multiple perquisites may be active at the same time as long as each is paid by a separate HED. The Date Awarded text box is not necessarily the first date a perquisite was paid—you can award a perquisite that is not to be paid until the employee relocates, receives a green card, or meets some other criterion. You may want to record the award now as the Date Awarded and enter the perquisites effective date in the Start Text box.

If you need to change the perquisite parameters, inactivate the existing perquisite and add a new perquisite with a new date and amount. Do this instead of changing the current perquisite. This provides a running history of the perquisites.

Bonus and monetary perquisite information does not automatically update payroll information. Time entries or one-time payments must be processed to actually compensate the employee. However, both of these forms can be modified to create a payment automatically.

Apply the Concept
Under what circumstances would your organization want to enter salary changes directly?

Apply the Concept
What benefit would there be to your organization to convert employee salary budget records to future-dated salary changes?

See also:

■ Recording Bonus Information ***(on page 198)***
For detailed directions on recording bonuses.

■ Recording monetary perquisites ***(on page 200)***
For detailed directions on recording monetary perquisites.

Review schedules

As soon as review results have been recorded on the employee's record, you may schedule the next salary review and/or performance appraisal. When your organization's salary review policy includes a fixed period, a procedure of setting schedules in advance makes the review process more efficient. These future review dates can be cancelled or rescheduled if changes occur.

Salary review schedules

The next salary review may be scheduled on the Scheduled Salary Review Data form (43-SCR). The information may be used by these reports to determine who is eligible for a salary review:

- Scheduled Salary Reviews Within Selected Months (59-RPT)
- Salary Review Authorization Form I (5O-RPT)
- Salary Review Authorization Form II (5P-RPT)

Performance appraisal schedules

You may schedule future-dated performance appraisals on the Schedule/Track Performance Appraisals form (50-SCR). The information may be used by the Performance Appraisals Scheduled for Month of XX report (1R-RPT) to determine who is eligible for a performance appraisal.

☞ *Refer to* **Administering the Review Process** *(on page 155) for information on scheduling employee reviews.*

See also:

- Scheduling a future salary review ***(on page 202)***

For detailed directions on scheduling a future performance review.

Detailed Directions

This section provides detailed directions on completing a business task.

Tasks

Completing the Guided Practice

In the Guided Practice for this section, you will record the performance appraisal results for employee 3008. You will enter a salary change manually for employee 2001. Then you will convert a salary budget record for employee 3008 to an actual salary change. A monetary perquisite and a bonus are recorded for employee 3008, followed by the scheduling of that employee's next salary and performance reviews. Specific details for these tasks are described in the steps for the tasks.

You must have completed the Guided Practices in the prior sections to guarantee the successful completion of the Guided Practice that follows.

Recording performance appraisal results

To enter the performance appraisal results using the Performance Appraisal Results form (49-SCR), follow these steps:

1. Access the Performance Appraisal Results form (49-SCR)

Access this form by making the following selection from the Navigator:

Component: Employee Development
Process: Track Performance Appraisals
Task: Performance Appraisal Results

Note: *To avoid copying preexisting information, you may clear the form by choosing: **A**ctions **C**lear Fields.*

For practice, access the Performance Appraisal Results form (49-SCR) for employee 3008.

2. Enter the Appraisal Date

Type the appraisal date in the format CCYYMMDD or MM-DD-CCYY (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). May 21, 1998, for example, is entered as '19980521' or '05-21-1998' (US and Canada) or '19982105' or '21-05-1998' (elsewhere).

This is the date on which the performance appraisal took place.

For practice, type a date that represents March 16 1998, for example, '03-16-1998' (US and Canada) or '16-03-1998' (elsewhere).

3. Select the Type Of Appraisal

Select the type of appraisal from the Appraisal Types option list (HR15).

This value indicates the type of performance appraisal that was performed.

For practice, select 'Annual Appraisal'.

4. Select the Rating

Select the performance rating for the employee from the Appraisal Ratings option list (HR16).

For practice, select '1-Outstanding'.

5. Enter the Average Rating

Type up to a five-position average performance rating in the format nnn.nn. For example, the number 123.45 is entered as '123.45' (or '12345').

This text box can be used for performance appraisal systems with categories weighted by relative importance, where the average score reflects the weighted scores.

For practice, type '5.0'.

6. Enter the Matrix ID (optional)

Type up to a four-character matrix ID to link the record to the pay-for-performance TD tables.

This text box may be manually entered or it may be generated by the Writes Table Appraisal Values report (5G-RPT).

For practice, leave this text box blank.

7. Select the Promotability

Select a promotability value from the Promotability Assessment option list (HR17).

This value indicates the employee's promotability potential as listed on his or her performance appraisal.

For practice, select 'Ready For Promotion'.

8. Enter the Promotability Date

Type the promotability data in the format CCYYMMDD or MM-DD-CCYY (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). May 21, 1998, for example, is entered as '19980521' or '05-21-1998' (US and Canada) or '19982105' or '21-05-1998' (elsewhere).

This is the date the employee may be considered for a promotion.

For practice, type a date that represents September 1 1998, for example, '09-01-1998' (US and Canada) or '01-09-1998' (elsewhere).

9. Type an Appraised By entry

Type an-up-to-10-character identifier for the person who conducted the appraisal.

This text box is used to record the employee number or any other identification scheme that indicates the person or persons responsible for completing and/or administering the employee's performance appraisal.

For practice, type '57-8167'.

10. Select the Willingness to Relocate

Select a value from the Relocation Willingness option list (HR19) indicating the willingness of the employee to relocate for the job.

For practice, select 'Will Considr Reloctn'.

11. Select the Area Preferred

Select a relocation area from the Geographic Preferences option list (HR20).

This value identifies the employee's geographic preference for relocation.

For practice, select 'USA Rocky Mountain'.

12. Select the Willing To Travel check box

Select the willing to travel check box to indicate that the employee is willing to travel as part of the job. Leave the check box unselected if the employee is not willing to travel.

For practice, select the check box.

13. Enter the Travel Percentage

Type the percentage of time the employee is willing to travel as part of the job. For example, 50 percent is entered as '50'. Decimal points are not allowed in the text box.

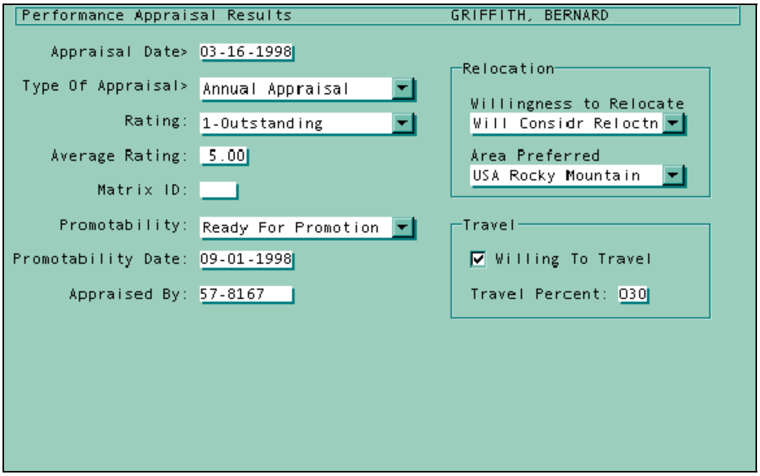
For practice, type '30'.

14. Click Save or press Enter

The performance appraisal results are added to the employee's record.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Performance ratings and how they are used ***(on page 184)***

For an explanation of the use of performance ratings in the salary budgeting process.

Entering a salary change directly

To enter salary changes directly on an employee record using the Salary Assignment/Changes form (40-SCR), follow these steps:

Note: *This procedure assumes that an initial salary assignment has already been recorded for the employee at the time of hire.*

1. Access the Salary Assignment/Changes form (40-SCR)

Access this form by making the following selection from the Navigator:

Component: Employee Resourcing
Process: Hire, Rehire, Reinstate an Employee
Task: Assign Salary

Note: *To avoid copying preexisting information, you may clear the form by choosing: **A**ctions **C**lear Fields, or clicking the Clear Fields button on the toolbar.*

For practice, access the Salary Assignment/Changes form (40-SCR) for employee 2001, and clear the form.

2. Enter the Effective Date

Type the effective date in the format CCYYMMDD or MM-DD-CCYY (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). May 21, 2002, for example, is entered as '20020521' or '05-21-2002'(US and Canada) or '20022105' or '21-05-2202' (elsewhere).

This is the effective date of the employee's salary change.

For practice, type a date that represents April 1 of next year, for example, '04-01-2002' (US and Canada) or '01-04-2002' (elsewhere).

3. Select the Key Separator

Select the key separator from the Key Separator Value option list (HR70).

The key separator is used to distinguish between two salary changes effective on the same date.

- If only one salary change is entered on a date, you must select '1st Occurrence' in this text box.
- If more than one salary change is effective on the same date, you must select an incremental key separator for each salary change. For example, the first change for the date must be entered with a key separator of '1st Occurrence', the second with '2nd Occurrence', and so on.

Note: *If an entry other than '1st Occurrence' is selected in this text box, the 'Not 1st Chg for Date' option button must be selected in the Process Override section.*

For practice, select '1st Occurrence'.

4. Select the Type Of Change

Select the type of change from the Salary Change Type option list (HR11).

This value identifies the reason for the employee's salary change. If you want to indicate that this record is the result of a salary plan projected increase, use one of the three following options:

- P1 Saly Plan Option
- P2 Saly Plan Option
- P3 Saly Plan Option

For practice, select 'P1 Saly Plan Option'.

5. Select the Pay Frequency

Select a pay frequency option from the Pay Frequency option list (PP29).

The system compares the option you select from this option list with the value in the Frequency field on the Employee Information form (EF-SCR). If the values are different, the system displays a warning message. If you accept the warning message, the salary calculation will no longer equate to the payroll frequency. The selected value will be used to calculate the salary.

For practice, select (None), or leave this text box blank.

6. Enter the Hours Per Period (optional)

The hours-per-period value is used to calculate the salary. This text box in the Calculation Entries section of the form represents the normal hours in an employee's pay period.

- If you do not enter a value in this text box, the system uses the value in the Normal Hours text box on the Employee Pay Rate or Salary form (H1-SCR).
- If you do type an entry in this text box, the system uses it to calculate the salary.

For practice, leave the Hours Per Period text box blank.

7. Enter the Calculation Entries amount or percentage

Type an entry in one of the amount or percent text boxes in the Calculation Entries section of the form. The system calculates salary values based on the entry in one of the following text boxes:

- Hourly Rate (seven positions, four decimals)
- Salary Per Period (eight positions, two decimals)
- Annual Salary (nine positions, two decimals)
- Amount Change (annual; eight positions, two decimals)
- Percent Change (four positions, two decimals)

For practice, type '500' in the Percent Change text box.

8. Select a process Override (optional)

Select a process override from the options in the process Override box to indicate that you want to override one of the normal functions of this form. Choose one of the following options:

- Override Calculation
  This option allows you to calculate a salary increase or decrease manually and will not allow any system calculations. You must enter all text boxes on this form manually. The form returns exactly as you entered it. If you would like to override one text box only, select this option and then reenter only the text box to be replaced.
- History-No PR Update
  This action records only history, rather than activating a change. It allows you to backload salary history data. It has no direct effect on the employee's current salary information.
- Not 1st Chg for Date
  Select this option when you need to process multiple salary changes with the same effective date, such as merit and promotional increases. Select Not 1st Chg for Date here for all changes having a Key Separator option other than '1st Occurrence'.
- No Override (Default)
  Select this option if no overrides are to be performed on this form.

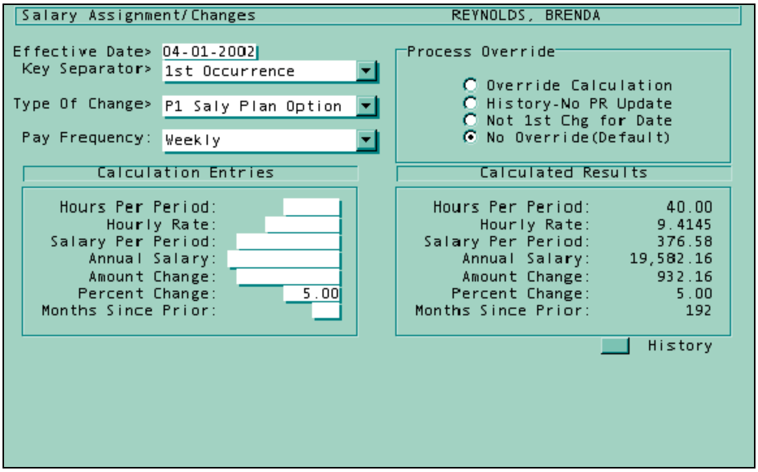
*For practice, select No Override (Defa*ult).

9. Click Save or press Enter

The system performs the calculation of the remaining Calculation Entries text boxes and the Months Since Prior text box and displays the results in the Calculated Results box.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Note: *Because this form has calculation capabilities, salary errors can be corrected in the two following ways:*

- *To recalculate the form, access the erroneous form and type zero ('0') in the Percent Change text box. Execute the form. The system zero-fills all calculation text boxes on the returned form. Then enter the correct data and execute the form. When complete, only the correct data will be on the employee's record.*
- *To delete the form when an incorrect Effective Date was used or when an entry for an employee should not have been made, use the Actions Delete This Entry option from the menu bar.*

See also:

- Methods of entering salary changes ***(on page 185)***

For an explanation of this method of entering salary changes.

Converting an employee salary budget record to an actual salary change

To convert an employee salary budget record to an actual salary change using the Budgeted Salary Information form (45-SCR), follow these steps:

1. Access the Budgeted Salary Information form (45-SCR)

Access this form by making the following selection from the Navigator:

Component: Employee Compensation
Process: Manage Employee Compensation
Task: Budgeted Salary Change

For practice, access the Budgeted Salary Information form (45-SCR) for employee 3008 dated January 1 of next year and showing an Increase Type text box of 'Regular System Gen'.

Note: *If the form is not already displaying the correct record occurrence, click on the Selections button on the toolbar. Double-click the occurrence you want to display.*

2. Select the Plan/Actual Switch

Select the value 'Actual' from the Plan/actual Switches option list (SA01) to replace the salary plan number that is currently in the text box. This option will result in a conversion of the information on this form to an actual salary increase on the Salary Assignment/Changes form (40-SCR) for an employee.

For practice, select 'Actual'.

3. Select the Future Change Type

Select a future change type from the Salary Change Type option list (HR11).

The option selected here may match the plan number that was displayed in the Plan/Actual Switch text box, for example, P1 Saly Plan Option, P2 Saly Plan Option, or P3 Saly Plan Option.

You may also select an option that reflects the nature of the increase, for example, merit increase.

For practice, select 'P1 Saly Plan Option'.

4. Enter an Increase Date (optional)

If the date of the increase has changed, type a replacement effective date in this text box in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). Otherwise, bypass this text box.

For practice, bypass this text box to retain the existing date.

5. Enter the Percent Change or Annual Amt Change

Using the displayed value to the right of the entry text box as your entry, type the percent change value into the Percent Change text box or the annual amount change value into the Annual Amt Change text box.

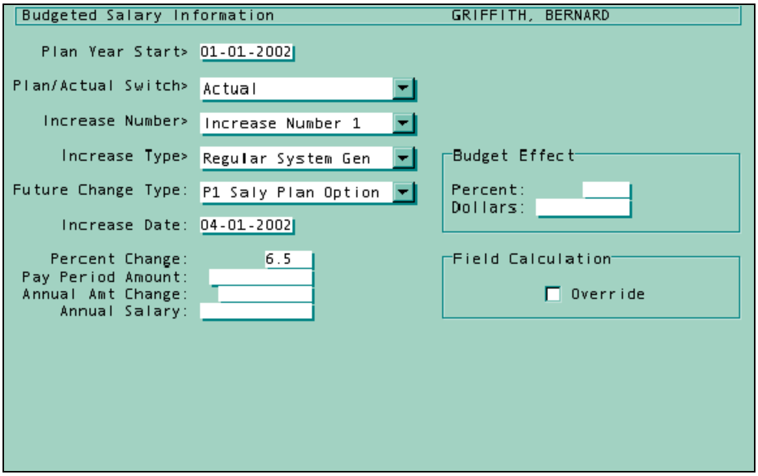
You may also record a revised percentage or amount in these text boxes.

For example, if the percent change is 7.50, type '7.5' (or '750') as the entry in the Percent Change text box. If the annual amount change is 2,560.50, type '2,560.50' (or '256050') as the entry in the Annual Amt Change text box.

Note: *Verify your entry before completing the next step. The entry made in this text box will be used in the calculation of the future-dated salary increase on the Salary Assignment/Changes form (40-SCR).*

For practice, type '6.5' in the Percent Change text box.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:

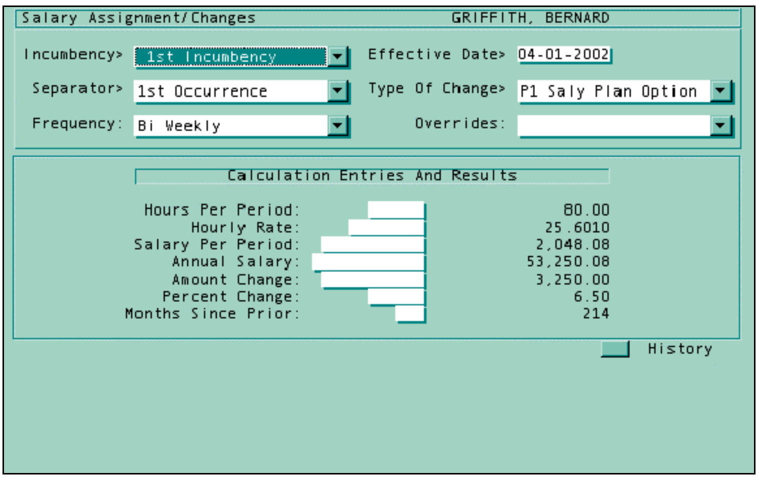


6. Click Save or press Enter

The proposed salary increase is converted to an actual salary increase. The result is immediately displayed on the employee's Salary Assignment/Changes form (40-SCR).

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Methods of entering salary changes ***(on page 185)***

For an explanation of converting salary budget data to an actual salary increase.

Recording Bonus Information

To record an employee bonus using the Bonus/Commission Information form (26-SCR), follow these steps:

Note: *This form is only used to record bonus/commission information and does not interact with the payroll information used to pay the employee bonus/commission unless modified to do so.*

1. Access the Bonus/Commission Information form (26-SCR)

Access this form by making the following selection from the Navigator:

Component:	Employee Compensation
Process:	Manage Employee Compensation
Task:	Bonuses and Commissions

Note: *To avoid copying preexisting information, you may clear the form by choosing: **A**ctions **C**lear Fields.*

For practice, access the Bonus/Commission Information form (26-SCR) for employee 3008.

2. Select the HED Xref

Select the earning HED from the Bonus/Money Perq HED option list (SA029).

This text box is used to record the Payroll Hours, Earnings, or Deduction by which the bonus is paid to the employee.

For practice, select 'Bonus'.

3. Enter the Date Recorded

Type the award date in the format CCYYMMDD or MM-DD-CCYY (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). May 21, 1998, for example, is entered as '19980521' or '05-21-1998' (US and Canada) or '19982105' or '21-05-1998' (elsewhere).

This text box is used to record the date on which the bonus was granted.

For practice, type a date that represents April 1 1998, for example, '04-01-1998' (US and Canada) or '01-04-1998' (elsewhere).

4. Enter the Amount Awarded

Type the award amount using up to eight digits with two decimals, for example, 1,275.00 is entered as '1,275.' (or '127500').

This text box is used to record the amount of the bonus to be paid.

For practice, type '1,500.' in this text box.

5. Enter the Date Paid

Type the date of the payment in the format CCYYMMDD or MM-DD-CCYY (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). May 21, 1998, for example, is entered as '19980521' or '05-21-1998' (US and Canada) or '19982105' or '21-05-1998' (elsewhere).

This text box is used to record the check/pay run date of the bonus payment.

For practice, type a date that represents May 1 1998, for example, '05-01-1998' (US and Canada) or '01-05-1998' (elsewhere).

6. Select the Authorization Location

Select the authorization location from the Authorization Location option list (SA03).

This text box is used to record the plant, office, or department location where the bonus was authorized.

For practice, select 'Accounting Dept'.

7. Enter the Authorization By

Type an up-to-30-character name for the authorizing person, function, department, or other agency.

For practice, type 'J. P. Miller'.

8. Enter the Bonus/Commission Year

Type a two-digit year for which the bonus was granted.

For practice, type a year that represents 1998, for example, '98'.

9. Enter the Bonus/Commission Month

Type a two-digit month for which the bonus was granted.

This is the month to which the bonus applies. Generally, you will record a bonus-month or bonus-quarter to further define the bonus-year.

For practice, leave this text box blank.

10. Enter the Bonus/Commission Quarter

Type a single-digit quarter for which the bonus was granted.

This is the quarter to which the bonus applies. Generally, you will record either a bonus-month or bonus-quarter to further define the bonus-year.

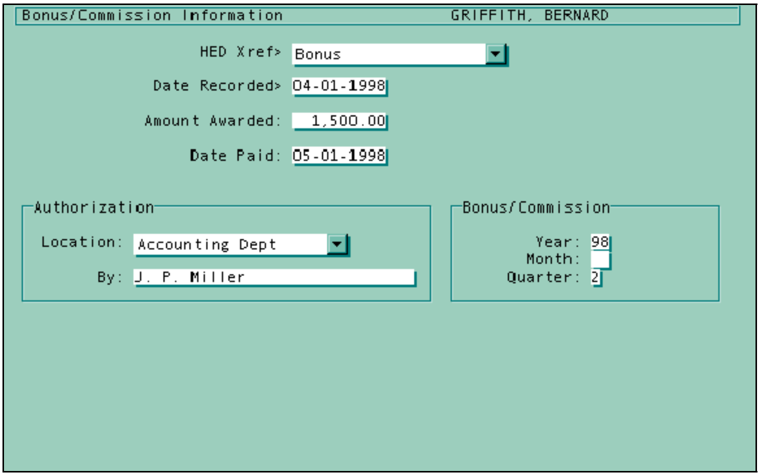
For practice, type '2'.

11. Click Save or press Enter

The employee bonus information is recorded.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Methods of entering salary changes ***(on page 185)***

For an explanation of recording employee bonuses.

Recording monetary perquisites

To record an employee monetary perquisite using the Perquisites: Monetary form (27-SCR), follow these steps:

1. Access the Perquisites: Monetary form (27-SCR)

Access this form by making the following selection from the Navigator:

Component:	Employee Compensation
Process:	Manage Employee Compensation
Task:	Monetary Perquisites

*Note: To avoid copying preexisting information, you may clear the form by choosing: **A**ctions **C**lear Fields.*

For practice, access the Perquisites: Monetary form (27-SCR) for employee 3008.

2. Select the HED Xref

Select the earning HED from the Bonus/Money Perq HED option list (SA029).

This text box is used to record the Payroll Hours, Earnings, or Deduction by which the monetary perquisite is paid to the employee.

For practice, select 'Housing Allowance'.

3. Enter the Date Awarded

Type the award date in the format CCYYMMDD or MM-DD-CCYY (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). May 21, 1998, for example, is entered as '19980521' or '05-21-1998' (US and Canada) or '19982105' or '21-05-1998' (elsewhere).

This text box is used to record the date on which the monetary perquisite was awarded.

For practice, type a date that represents April 1 1998, for example, '04-01-1998' (US and Canada) or '01-04-1998' (elsewhere).

4. Enter the Amount Awarded

Type the award amount using up to eight digits with two decimals, for example, 455.00 is entered as '455.' (or '45500').

This text box is used to record the amount of the monetary perquisite to be paid each period.

For practice, type '25500'.

5. Enter the Start Field

Type the start date in the format YYMMDD (US and Canada) or YYDDMM (elsewhere). May 21, 1998, for example, is entered as '980521'(US and Canada) or '982105' (elsewhere).

This text box is used to record the date which, when reached, starts the automatic payment of the monetary perquisite.

For practice, type a date that represents May 1 1998, for example, '980501'(US and Canada) or '980105' (elsewhere).

6. Select the Stop Method

Select the stop method from the HED Stop Code option list (PP49). A detailed description of each option is displayed in the option list documentation.

This text box is used to record the method that will be used to determine when to stop the automatic payment of the monetary perquisite. Based on the selection that is made in this text box, the Stop text box will contain an amount or a date.

For practice, select 'Date'.

7. Enter the Stop Field

Type an up-to-six-digit amount or date that, when reached, will stop the automatic payment of the monetary perquisite.

Type a stop date in the format YYMMDD (US and Canada) or YYDDMM (elsewhere).

The format of an amount will depend on the entry selected in the Stop Method text box. A detailed description of each option and its associated amount format is displayed in the text box documentation.

For practice, type a date that represents November 1 1998, for example, '981101' (US and Canada) or '980111' (elsewhere).

8. Select the Active check box

Select the active check box to indicate that the perquisite is active and still being paid.

If you need to change the perquisite parameters, set the Active check box to inactive by deselecting it; then add a new perquisite with a new date and amount. Do this instead of changing the existing perquisite. This provides a running history of the perquisites.

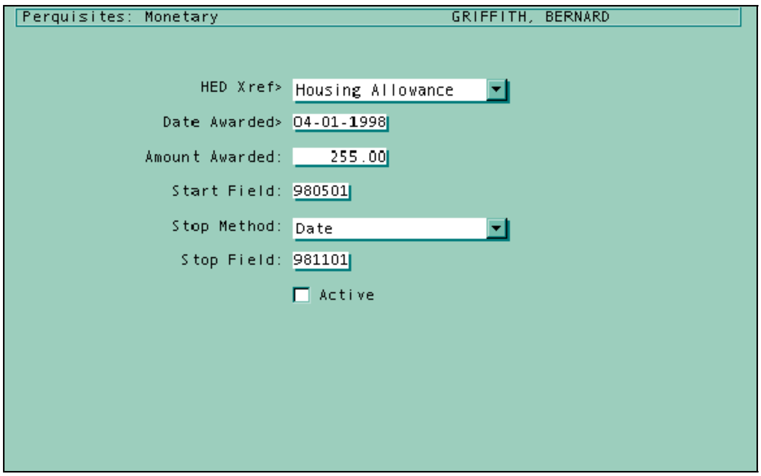
For practice, leave this text box blank.

9. Click Save or press Enter

The monetary perquisite information is recorded.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Methods of entering salary changes ***(on page 185)***

For an explanation of recording employee bonuses.

Scheduling a future salary review

To schedule a future salary review using the Scheduled Salary Review Data form (43-SCR), follow these steps:

1. Access the Scheduled Salary Review Data form (43-SCR)

Access this form by making the following selection from the Navigator:

Component: Employee Compensation
Process: Manage Employee Compensation
Task: Next Salary Review Date

Note: *To avoid copying preexisting information, you may clear the form by choosing: Actions Clear Fields.*

For practice, access the Scheduled Salary Review Data form (43-SCR) for employee 3008.

2. Enter the Next Review Date

Type the next review date in the format CCYYMMDD or MM-DD-CCYY (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). May 21, 1998, for example, is entered as '19980521' or '05-21-1998' (US and Canada) or '19982105' or '21-05-1998' (elsewhere).

This text box contains the date of the next salary review to be performed.

For practice, type a date that represents one year from the employee's most recent review date, for example, '03-16-1999' (US and Canada) or '16-03-1999' (elsewhere).

3. Select the Type of Review

Select the type of review from the Salary Review Type option list (HR34).

This text box defines the type of salary review to be performed.

For practice, select 'Sal Review Annual'.

Note: *The remaining text boxes need to be recorded only when the review date is reached and the salary review form is sent out.*

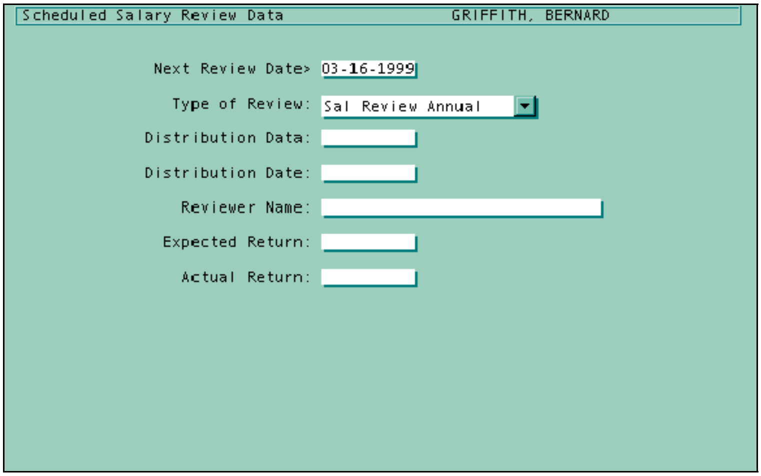
4. Click Save or press Enter

The next scheduled salary review date is recorded and may be used by these reports to determine who is eligible for a salary review:

- Scheduled Salary Reviews Within Selected Months report (59-RPT)
- Salary Review Authorization Form I (5O-RPT)
- Salary Review Authorization Form II (5P-RPT)

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Scheduled Salary Review Data GRIFFITH, BERNARD

Next Review Date> 03-16-1999

Type of Review: Sal Review Annual

Distribution Data:

Distribution Date:

Reviewer Name:

Expected Return:

Actual Return:

See also:

For an explanation of scheduling future salary reviews.

Scheduling a future performance appraisal

To schedule a future performance appraisal using the Schedule/Track Performance Appraisals form (50-SCR), follow these steps:

1. Access the Schedule/Track Performance Appraisals form (50-SCR)

Access this form by making the following selection from the Navigator:

Component: Employee Development
Process: Track Performance Appraisals
Task: Next Performance Review Date

Note: To avoid copying preexisting information, you may clear the form by choosing: Actions Clear Fields.

For practice, access the Schedule/Track Performance Appraisals form (50-SCR) for employee 3008.

2. Enter the Date Scheduled

Type the scheduled date in the format CCYYMMDD or MM-DD-CCYY (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). The 21st of May, 1998, for example, is entered as '19980521' or '05-21-1998' (US and Canada) or '19982105' or '21-05-1998' (elsewhere).

This is the date of the next performance appraisal to be performed.

For practice, type a date that represents one year from the employee's most recent review date, for example, '03-16-1999' (US and Canada) or '16-03-1999' (elsewhere).

3. Select the Type of Appraisal

Select the type of appraisal from the Appraisal Types option list (HR15).

This text box defines the type of performance appraisal to be performed.

For practice, select 'Annual Appraisal'.

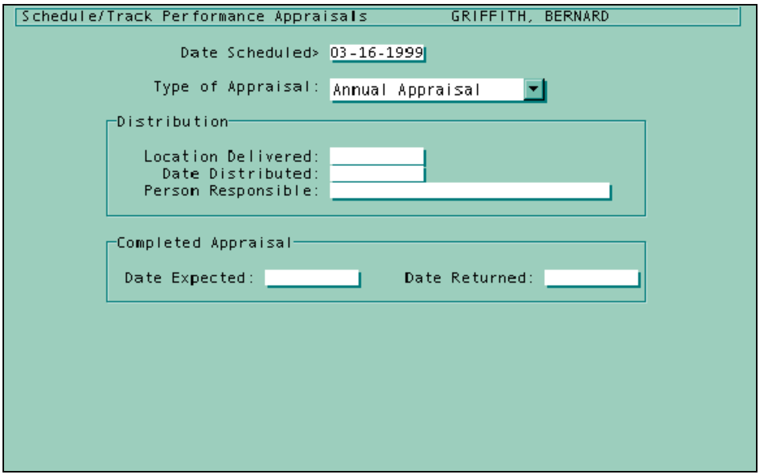
Note: *The remaining text boxes need to be recorded only when the review date is reached and the performance appraisal form is sent out.*

4. Click Save or press Enter

The next scheduled performance appraisal date is recorded. It may be used by the Performance Appraisal Distribution List for a Specified Month report to determine who is eligible for a performance appraisal.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Performance appraisal schedules ***(on page 188)***

For an explanation of scheduling future performance appraisals.

Extended Practice

Note: *You must have completed the Extended Practices in the prior sections to guarantee the successful completion of the Extended Practice that follows.*

1. Record the annual performance appraisal results for employee 3023. Using a date that is one year from today's date, record a rating of '1-Outstanding' and then indicate the employee's promotability and relocation/travel preferences.

2. Convert this employee's Regular System Generated budgeted salary increase into a future-dated salary increase. Use the same budgeted salary increase date and a 12 percent increase. What effective date and new annual salary are displayed on the resulting salary change record?

3. Record a bonus of 2,300.00 for employee 3023 using the Bonus/Commission Information form (26-SCR).

Review of Questions Answered

1. How are performance appraisals used in the salary budget process?

2. What methods are available for recording salary increases?

PART 5

Post Salary Review Process

In This Section

CHAPTER 9

Analyzing the Results of the Review Process

In This Chapter

Introduction

Periodically the Wage and Salary Administration area reviews employee salaries to monitor whether salary increases have been awarded according to company policy, the salary budget guidelines, and compensation measures such as compa ratio and percentage of range penetration.

To aid in this task, Salary Administration provides online and reporting support to allow you to analyze salaries and projected increases on an individual or group basis.

You may view salary distribution by job and organization level as well as by performance appraisal rating. You can also produce salary budget to actual salary comparisons on a scheduled or as-needed basis to assist you in monitoring compliance with salary budget projections.

This section focuses on understanding the online and reporting tools available to analyze cost and performance results.

Tasks

This section explains the following:

- Viewing the results of a salary calculation
- Comparing salary plan to actual salary data

Prerequisites

Before you can begin to analyze the results of the review process, all the following tasks must be completed.

Set up Salary Administration option lists

Before any data are entered, you must ensure that all option lists are populated with your organization's specific Salary Administration values.

☞ *Refer to* **Option List Quick Reference** *(on page 343) for detailed information.*

Set up Control Numbers for all production organizations

Before any data are entered, you must ensure that Control Numbers have been selected and entered for each company using Salary Administration.

☞ *Refer to* **Setting Up Salary Plans** *(on page 41) for detailed information.*

Set up salary plans

Before annual salary budgets can be set up, your salary plans must be established.

☞ *Refer to* **Setting Up Salary Plans** *(on page 41) for detailed information.*

Create the annual salary budget

Before annual salary budgets can be analyzed and finalized, you must ensure that annual salary budgets have been generated.

☞ *Refer to* **Creating Annual Salary Budgets for Employees** *(on page 101) for detailed information.*

Analyze and finalize the annual salary budget

Before the salary review process can begin, you must have analyzed and finalized the annual salary budget.

☞ *Refer to* **Reviewing and Finalizing Your Annual Salary Budget** *(on page 131) for detailed information.*

Administer the review process

Before you can enter the results of the review process, you must have already administered the review process.

☞ *Refer to* **Administering the Review Process** *(on page 155) for detailed information.*

Enter the results of the review process

Before you can analyze the results of the review process, you must have already entered the results of the review process.

☞ *Refer to* **Entering the Results of the Review Process** *(on page 181) for detailed information.*

Questions answered

The following questions are answered in this section:

1. What methods are available for analyzing the results of the review process?
2. What are the benefits of comparing salary budgets to actual salary increase amounts?

Overview of the review analysis process

Once the salary review process is completed and the results are recorded, you may need to periodically review and analyze the information for an employee or group of employees. Salary increase analysis allows you to monitor current employee compensation as compared with the corporation's proposed salary budget. You may even have a policy of monitoring and then updating the salary budget at specific points in the fiscal year.

You may decide that you need to review one or a combination of the reports provided by Cyborg to see how your budgeted projections varied or what you may need to change for next year's salary projections. There may be a need for a display of summary information for employee groups or you may want to display totals with embedded individual employee salary information.

The information that the system provides can specifically help you to analyze employee salary distribution by performance rating or by job. A summary salary analysis by salary grade is available. Any employee whose salary is over the maximum or under the minimum salary allowed by the salary grade can be reported as well. You may also want to monitor periods during which compensation incentive programs are in place, to learn whether employee job performance shows any improvement.

You can schedule monthly, quarterly, or as-needed reporting to satisfy your corporation's analysis requirements. You can also view individual employee salary grade and performance information online.

See also:

- ***Viewing the results of a salary calculation***

For detailed directions on viewing the results of a salary calculation.

Ways of analyzing cost results

As reviews occur and employee salary increases are entered, you will need to review the effects of the changes. You may do this online or by using the several reports that are available for this purpose.

Employee salary calculation information

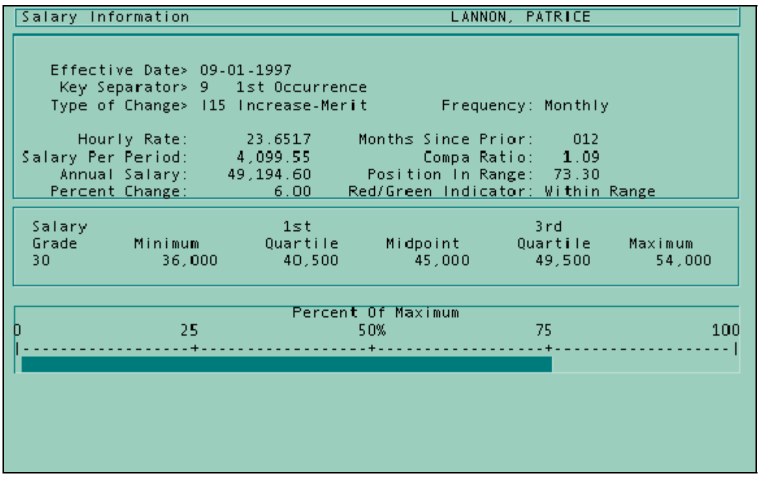
The effect of an employee's salary calculation can be viewed online as soon as the salary change entry has been completed.

The salary grade used in the form calculation is displayed on the form. The salary grade range is shown in steps or quartiles, whichever is appropriate.

Also displayed is the red/green indicator resulting from a comparison of an employee's salary with the maximum and minimum of the salary grade range for the grade associated with an employee's job assignment on the Job Assignment/Changes form (05-SCR).

A histogram shows the percent of maximum and graphically indicates where an employee's salary falls in the salary grade range.

In the following illustration, Patrice Lannon's most recent merit increase is represented on this display-only form. Her salary now represents a compa ratio of 1.09 and a position in range of 73.30. The red/green indicator shows that her salary is within the salary grade range. The histogram at the bottom of the form pictorially shows her salary's range penetration as a percent of maximum.



Salary Information LANNON, PATRICE

0 25 50% 75 100

☞ *Refer to* **Entering the Results of the Review Process** *(on page 181) for more information on how to enter salary changes.*

Cost results with summary information

You may produce reports that give you summary information about the cost results of the review process.

To display an analysis of the number and distribution of job appraisal ratings and the average percentage of salary change classified by job appraisal rating, run the Salary Increase Analysis report (1V-RPT). This report provides a count of increases/decreases per associated performance appraisal rating and the percentage of changes reported per performance appraisal rating. Use this report to analyze the overall percentage of employees by job type and the associated appraisal ratings. Ongoing analysis of this data may provide rating trends related to compensation incentive programs.

The following is a representation of the information included on the Salary Increase Analysis report (1V-RPT):

```
Ctrl   Ctrl   Ctrl   Ctrl   Job    Job Type Description       Rating:  1    2    3
4    5    7    8

8
                                              Percent in Rating:     .00  .10  .10
.00  .80  .00  .00
                                              Merit Increases:       .00  .10  .10
.00  .80  .00  .00
```

To produce a statistical analysis of salary variances by job assignment within a salary grade for all active employees, run the Summary—Salary Analysis by Grade report (14-RPT). This report provides salary totals and averages for each job assignment within the salary grade. Use this report to compare your salary grades with industry standards.

The following is a representation of the information included on the Summary—Salary Analysis by Grade report (14-RPT):

```

```

To view an analysis of the distribution of salaries within a salary grade range by appraisal rating, use the Quartile Distribution by Appraisal Rating report (1W-RPT). Statistics are given for the number and percentage of employees falling below the minimum, over the maximum, and within each quartile of the salary grade range. Use this report to monitor the relationship between employee appraisal ratings and the associated salary grade range penetration.

The following is a representation of the information included on the Quartile Distribution by Appraisal Rating report (1W-RPT):

```
Ctrl  Ctrl  Ctrl  Ctrl  Salary ----- Grade Range -----   Below  First    Second
Third    Fourth   Above
Three Four  Five  Six   Grade Min     Mid      Max Rating Min   Quartile Quartile

                                                          .00   100.00      .00
.00     .00     .00
```

To analyze the distribution of salaries within a salary grade range by job assignment, run the Quartile Distribution by Job Code report (1X-RPT). Statistics are given for the number and percentage of employees falling below the minimum, over the maximum, and within each quartile of the salary grade range. Use this report to monitor the relationship between employee job assignments and the associated salary grade range penetration.

The following is a representation of the information included on the Quartile Distribution by Job Code report (1X-RPT):

```

.00      .00     .00
```

Cost results with employee detail

You may need to view reports that display detailed information by employee as well as provide summary totals.

To provide information that alerts management when employee salaries are either above the maximum or below the minimum allowed within each employee's salary grade range, run the Over Maximum/Under Minimum report (17-RPT). Use this report to monitor and analyze range penetration and compensation activity for employees who fall below or exceed their salary grade range. This report can also be used to determine whether to decrease/increase certain salary ranges for the coming fiscal year.

The following is a representation of some of the information included on the Over Maximum/Under Minimum report (17-RPT):

```
Employee        Pay   Employee     *****Last Salary Change*********    Ratg

```

To provide an analysis (with supporting employee detail) of salary treatment by time in the job within a performance appraisal, run the Salary Distribution by Performance/Time-In Job report (1Y-RPT). This report displays the total number of employees in each rating value type. Use this report to evaluate the frequency of performance appraisal based on time in the job for individuals or departments.

The following is a representation of the information included on the Salary Distribution by Performance/Time-In Job report (1Y-RPT):

Ways of analyzing performance results

Although the reports that are used to analyze cost results contain employee performance information, you may want to review the statistics provided by reporting that is specifically focused on the performance rating information.

To produce two major sets of statistics to aid the Wage and Salary Administration area in planning and developing their future merit increase policy and resulting matrices, run the Employees by Rating and Range Categories report (5F-RPT). This report categorizes all active employees by performance rating and position in range. Use this report to monitor employee performance appraisal results and the range penetration by organization level.

The following is a representation of the information included on the Employees by Rating and Range Categories report (5F-RPT).

```
---------Controls--------                                      Number of
Three Four Five Six       Rating / Range Value                 Employees

                                                  Totals:           18
100.00
```

Salary budget to actual salary comparisons

You can monitor salary costs at any time during the fiscal year by periodically comparing the proposed salary budget with the actual employee salary increases.

To compare salary budget data with actual salary increases with effective dates that fall within the salary plan year, run the Salary Plan to Actual Comparison report (5J-RPT).

This report displays an entry for each employee, indicating the salary variance figures. Depending on your needs, you can first view the corporate totals to see the total variance and then analyze the variances for individual employees. Use this report to monitor compliance with the proposed salary budget and any variances that may affect the salary budget for the remainder of the salary plan year.

The following is a representation of the information included on the Salary Plan to Actual Comparison report (5J-RPT):

```
-------Controls-------               Emp              Rat --Prior Year Salary --
--- Current Activity ---
Three Four Five Six   Employee Name  Nbr   Job Title   ing   Date       Annual
Date         Status

3388  4488 5508 6608  Kwong, Alan    2004  Exec Sales  3   07-15-1996   77,840.00
06-30-1995   Actv-Sal
Budget: 1  10-01-97  6.50 82,899.60  Actual: 02-01-1997  4.00  87,180.84
Variance: -2.50  4,281.24
```

Apply the Concept
Of the reports available for analyzing the cost and performance results of the review process, which ones will your organization schedule for regular review, and why?

Apply the Concept
How will your organization use the comparison of salary plan to actual salary data?

See also:

- Comparing salary plan to actual salary data ***(on page 224)***

For detailed directions on comparing a salary plan to actual salary data.

Detailed Directions

This section provides detailed directions on completing a business task.

Tasks

Completing the Guided Practice

In the Guided Practice for this section, you will view the salary calculation results for employee 3008. Although report parameter explanations are included in Task 2 for your convenience, you are not expected to run this report as part of the Guided Practice.

You must have completed the Guided Practices in the prior sections to guarantee the successful completion of the Guided Practice that follows.

Viewing the results of a salary calculation

To view the results of a salary calculation using the Salary Information form (41-SCR), follow this step:

Access the Salary Information form (41-SCR)

Access this form by making the following selection from the Navigator:

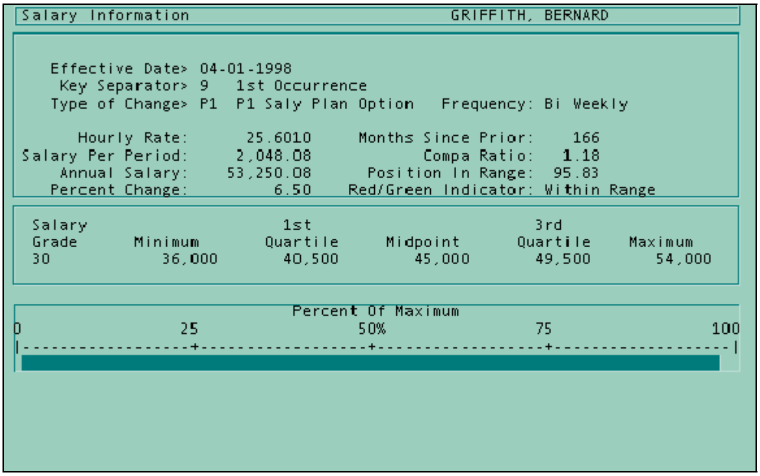
Component:	Employee Compensation
Process:	Manage Employee Compensation
Task:	View Salary/Range Information

The Salary Information form (41-SCR) displays the calculated results of entries made to the Salary Assignment/Changes form (40-SCR) for an employee's new compa ratio and position in range.

This is a display-only form. Calculations may not be updated on this form.

For practice, access the Salary Information form (41-SCR) for employee 3008.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Overview of the review analysis process ***(on page 215)***

For an explanation of how this form is used to view the results of the salary calculation.

Comparing salary plan to actual salary data

To compare salary plan to actual salary data using the Salary Plan to Actual Comparison report (5J-RPT), complete the report schedule by entering the following report parameters:

☞ *Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.*

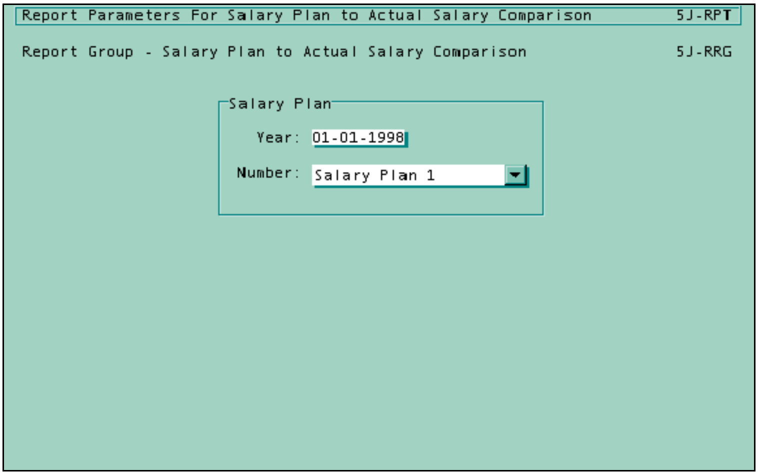
1. Enter the Salary Plan Year

Type the salary plan year start date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). This date identifies the salary plan year for which employee current salary or increases (decreases) will be listed. This is also the plan year used to select the budget data to be included in the report.

2. Select the Salary Plan Number

Select the salary plan number from the Plan/actual Switches option list (SA01). This is the salary plan number used to select the budget data to be included in the report.

When completed, the report parameters may look similar to the example that follows:



Once it has been processed, the Salary Plan to Actual Comparison report (5J-RPT) provides a comparison of salary plan budget data to actual salary increases awarded with effective dates that fall within the salary plan year.

See also:

- Salary budget to actual salary comparisons ***(on page 222)***

For an explanation of how this report is used in salary budget to actual salary comparisons.

Extended Practice

Note: You must have completed the Extended Practices in the prior sections to guarantee the successful completion of the Extended Practice that follows.

1. Note the effect of employee 3023's future-dated salary increase on his salary's compa ratio and position in range using the Salary Information form (41-SCR). Is this employee's salary within the range?

2. Process the Salary Plan to Actual Comparison report (5J-RPT). In the parameter record, use January 1 of next year as the salary plan year start date and select 'Salary Plan 2' as the salary plan number. Note the information displayed for employee 3023.

Review of Questions Answered

1. What methods are available for analyzing the results of the review process?

2. What are the benefits of comparing salary budgets to actual salary increase amounts?

CHAPTER 10

Regenerating Salary Grades

In This Chapter

Introduction

Once the salary review process is completed and you have analyzed the outcome, the results may indicate that some employees are either above or below the assigned salary grade range. The current salary grade information may need to be updated in order to perform a more accurate salary analysis. You may also find it necessary to adjust your existing salary grades to account for changes in market value conditions.

For example, once a year the salary grades may be reviewed by your corporation. You may find that only certain salary grades should be increased or that all salary grades should be increased by a percentage or a flat monetary amount. Salary grades can then be regenerated according to your organization's policies and procedures. You may change the salary grades manually or set up the parameters that will allow you to regenerate them automatically.

☞ *Refer to* **Analyzing the Results of the Review Process** *(on page 211) for more information about analyzing the results of the review process.*

This section focuses on the options available for updating your existing salary grades.

Tasks

This section explains the following:

- Setting up a salary grade percent increase
- Viewing the salary grades to benchmark jobs cross-reference
- Regenerating salary grades by percent increase
- Setting up a salary grade formula increase
- Regenerating salary grades by the formula increase
- Recalculating employee salary grade information

Prerequisites

Before you can regenerate salary grades and recalculate employee salary grade information, the following HR Recordkeeping tasks should be considered for completion:

Set up Salary Grade tables

Before regenerating salary grades, you must ensure that the Salary Grade tables of your choice have been established.

Set up Job Code tables

Before regenerating salary grades, it is important that you establish Job Code tables that incorporate a salary grade designation.

Set up Job Points tables---optional

Before regenerating salary grades, you may optionally establish Job Points tables to provide formula information for the salary grade regeneration.

Record employee job assignments

Before recalculating employee salary grade information, it is important that you assign a job designation to each employee on the Job Assignment/Changes form (05-SCR).

Record employee salary assignments

Before recalculating employee salary grade information, it is important that you assign an initial salary to each employee on the Salary Assignment/Changes form (40-SCR).

Questions answered

The following questions are answered in this section:

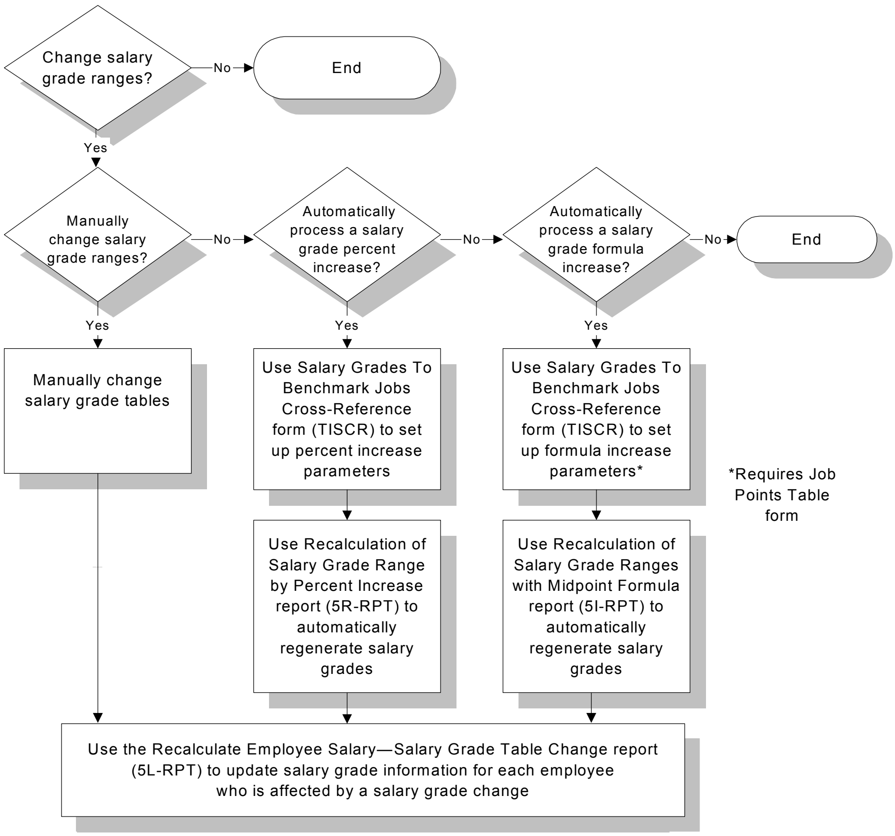
1. Why regenerate salary grades?
2. What methods are available for updating salary grades?
3. What process needs to occur to reflect the results of the salary grade regeneration at the employee level?

Salary grade regeneration methods and results

Once you have reviewed your salary grades and recommended the appropriate changes, you can recalculate the salary grade ranges in three ways:

- Manually enter Salary Grade tables with new effective dates
- Establish a percent increase and regenerate the salary grades automatically
- Establish a formula increase and regenerate the salary grades automatically

The following diagram illustrates the tasks needed to complete each salary grade recalculation:



Manual entry of salary grade changes

If very few salary grades require updating or you want to make different percentage or amount changes to several salary grades, you may change them manually.

Make the changes to your existing salary grades and enter a new effective date using one or more of the following Salary Grade tables:

- Salary Grade—Annual (TBASCR)
- Salary Grade—Per Pay Period (TBBSCR)
- Salary Grade—Hourly (TBCSCR)

Refer to the Using Human Resources Administration documentation for detailed instructions on making these table entries.

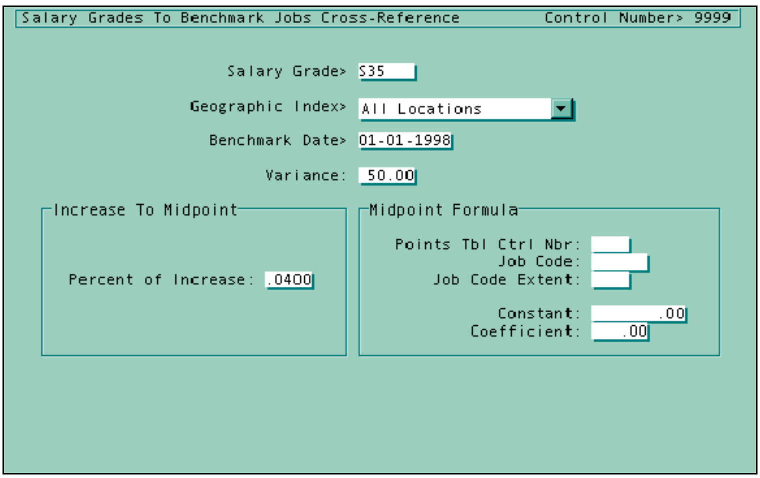
Automatic percent changes to salary grade midpoints

If you need to apply an across-the-board percent increase to the midpoint of your current salary grades and then recalculate the ranges, two steps are required:

1. Set up the percent increase to be applied to the midpoint of your current salary grade
2. Regenerate the salary grade with the new range information

To set up the percent increase, use the Salary Grades To Benchmark Jobs Cross-Reference form (TI-SCR) to create a table record for each salary grade to be recalculated. You must complete the first four text boxes and the Increase To Midpoint Percent of Increase text box. The Benchmark Date text box on this table will be used as the effective date of the new Salary Grade table record when it is regenerated.

In the form example that follows, salary grade S35 has been set up to calculate a 4 percent increase to the midpoint of the current salary grade, with a variance of 50 percent from the minimum to the maximum of the salary grade:



Salary Grades To Benchmark Jobs Cross-Reference   Control Number> 9999

Salary Grade> S35
Geographic Index> All Locations
Benchmark Date> 01-01-1998
Variance: 50.00

Increase To Midpoint
Percent of Increase: .0400

Midpoint Formula
Points Tbl Ctrl Nbr:
Job Code:
Job Code Extent:
Constant: .00
Coefficient: .00

You can review the cross-reference entries online or on hard copy by using the following programs:

- Salary Grades/Benchmark Table form (TIISCR)
- Salary Grades To Benchmark Jobs Cross-Reference Records report (9I-RPT)

To regenerate the salary grade values based on a percent increase applied to the midpoint value of the old salary grade, use the Recalculation of Salary Grade Range by Percent Increase report (5R-RPT). Once the new midpoint value is determined, this program calculates the minimum and maximum values based on a variance percentage that you specify on the Salary Grades to Benchmark Jobs Cross-Reference form (TI-SCR). Internal quartile or values are then proportionately calculated based on the Salary Grade table type (annual, per pay period, or hourly) and the number of quartiles or steps.

The Recalculation of Salary Grade Range by Percent Increase report (5R-RPT) then generates a Salary Grade table record that contains the new calculated values and the new date. An audit report lists the new Salary Grade table records generated.

See also:

■ Setting up a salary grade percent increase ***(on page 238)***
For detailed directions on setting up a salary grade percent increase.

■ Viewing the salary grades to benchmark jobs cross-reference ***(on page 240)***
For detailed directions on viewing the salary grades to benchmark job cross-reference.

■ Regenerating salary grades by percent increase ***(on page 241)***
For detailed directions on regenerating salary grades by percent increase.

Automatic formula changes to salary grade midpoints

If you want to update multiple salary grades by applying an increase formula to the midpoint of your current salary grade and then recalculating the salary grade, two steps are required:

1. Set up the values to be used in the increase formula to be applied to the midpoint of your current salary grade
2. Regenerate the salary grade with the new range information

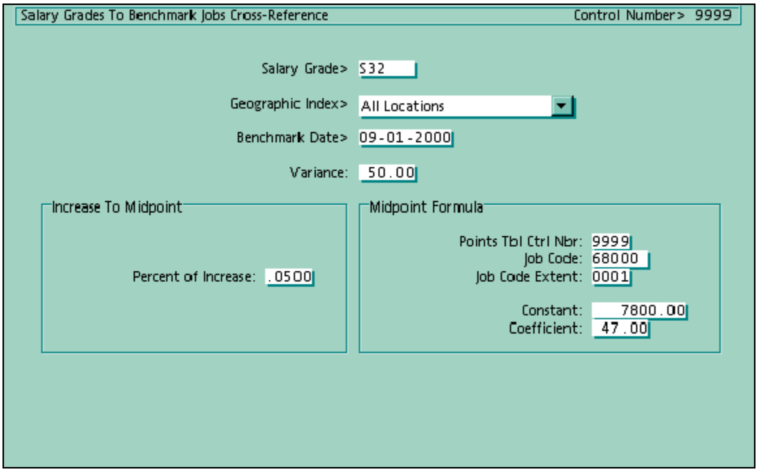
To set up the formula increase, use the Salary Grades To Benchmark Jobs Cross-Reference form (TI-SCR) to create a table record for each salary grade to be recalculated. You must complete the first four text boxes and all the text boxes in the Midpoint Formula group box. The Benchmark Date text box on this table will be used as the effective date of the new Salary Grade table record when it is regenerated.

The formula for the midpoint increase is based on a constant, a coefficient, and the total points from a benchmark job, as shown in the following illustration:

```
CONSTANT + (TOTAL POINTS x COEFFICIENT) = NEW MIDPOINT
```

The Salary Grades To Benchmark Jobs Cross-Reference form (TI-SCR) allows the entry of the constant and the coefficient, which are customer-determined values for this formula. The system-generated total points are accessed from the Job Points Table form (TC-SCR).

In the following form example, salary grade S32 has been set up to calculate a formula increase to the midpoint of the current salary grade:



Salary Grades To Benchmark Jobs Cross-Reference   Control Number> 9999

Salary Grade> S32

Geographic Index> All Locations

Benchmark Date> 09-01-2000

Variance: 50.00

Increase To Midpoint

Percent of Increase: .0500

Midpoint Formula

Points Tbl Ctrl Nbr: 9999

Job Code: 68000

Job Code Extent: 0001

Constant: 7800.00

Coefficient: 47.00

This form example shows a formula increase that has a variance of 50 percent from the minimum to the maximum of the salary grade. The benchmark job code/job code extent is 68000-0001 and the total job points stored on the Job Points Table form (TC-SCR) for that job code/job code extent is 1500. The constant has been set at 7800.00 and the coefficient at 47.00. So the resulting formula for this increase is:

```
7800.00  +  (1500  x  47.00)  =  78,300.00 (new midpoint)
```

You can review the cross-reference entries online or on hard copy by using the following programs:

- Salary Grades/Benchmark Table form (TIISCR)
- Salary Grades To Benchmark Jobs Cross-Reference Records report (9I-RPT)

To regenerate the salary grade values based on an increase formula applied to the midpoint value of the old salary grade, use the Recalculation of Salary Grade Ranges with Midpoint Formula report (5I-RPT).

Once the new midpoint value is determined, this program calculates the minimum and maximum values based on a variance percentage that you specify on the Salary Grades to Benchmark Jobs Cross-Reference form (TI-SCR). Internal quartile or values are then proportionately calculated based on the Salary Grade table type (annual, per pay period, or hourly) and the number of quartiles or steps.

The Recalculation of Salary Grade Ranges with Midpoint Formula report (5I-RPT) then generates a Salary Grade table record that contains the new calculated values and the new date. An audit report is produced listing the new Salary Grade table records generated.

Apply the Concept

Which method(s) of regenerating salary grades would be most effective in your organization, and why?

See also:

- ***Setting up a salary grade formula increase***

For detailed directions on setting up a salary grade formula increase.

- Regenerating salary grades by the formula increase ***(on page 246)***

For detailed directions on regenerating salary grades by the formula increase.

Updating employee salary information

Once the salary grades have been regenerated, the results must be applied to each employee record that is affected. Until this takes place, employee salary information continues to be compared with the prior salary grade values on all reports.

Regardless of whether the salary grades were updated manually or automatically, the Salary Information form (41-SCR) will calculate and display the updated information. However, the updated information you see on that form is not permanently stored on the employee record until this one additional task is performed.

Applying the results to the employee's salary grade values can be done automatically by a batch program that examines each employee record and determines if the employee's current salary grade has changed.

If the employee's salary grade has changed, the Recalculate Employee Salary—Salary Grade Table Change report (5L-RPT) generates a new employee Salary Assignment/ Changes form (40-SCR). The record contains a change type that indicates that a table change has caused the creation of this record, and an effective date equal to the Salary Grade table date.

All salary data are propagated, as is, from the most current salary record. No employee salary increase or decrease results from the generation of this salary form. The employee's compa ratio, position in range, and red/green indicator values are recalculated using the new Salary Grade table record values.

The Recalculate Employee Salary—Salary Grade Table Change report (5L-RPT) produces an audit listing of all employee records for which a new salary assignment record was created.

Apply the concept

Once salary grades are regenerated, what additional task must be completed so that salary grade changes will be reflected at the employee level?

See also:

- Recalculating employee salary grade information ***(on page 247)***

For detailed directions on recalculating employee salary grade information.

Detailed Directions

This section provides detailed directions on completing a business task.

Tasks

Completing the Guided Practice

In the Guided Practice for this section, you will set up a salary grade percent increase for salary grade 30 for 5.5 percent and then view the increase table online. You will then set up a salary grade formula increase for salary grade 34. Although report parameter explanations are included in several tasks for your convenience, you are not expected to run these reports as part of the Guided Practice.

Setting up a salary grade percent increase

To set up a salary grade percent increase using the Salary Grades To Benchmark Jobs Cross-Reference form (TI-SCR), follow these steps:

1. Access the Salary Grades To Benchmark Jobs Cross-Reference form (TI-SCR)

Access this form by making the following selection from the Navigator:

Component: HR Setup
Process: Setup HR Rules
Task: Benchmark Jobs For Salary Admin

Note: *To avoid copying preexisting information, you may clear the form by choosing: **A**ctions **C**lear Fields.*

For practice, access the Salary Grades To Benchmark Jobs Cross-Reference form (TI-SCR).

2. Enter the Salary Grade

Type an up-to-six-character salary grade designation. The value in this text box must match an existing salary grade on one of the Salary Grade tables.

For practice, type '30'.

3. Select the Geographic Index

Select a geographic range value from the Geographic Range option list (HR66).

The geographic index further identifies the salary grade to which this record applies. If your organization uses only one geographic index value, select that value in this text box.

If multiple salary grade ranges are established for the same salary grade based on geographic index variations, you must establish matching Salary Grades To Benchmark Jobs Cross-Reference form (TI-SCR), one for each unique salary grade/geographic index.

For practice, select 'All Locations'.

4. Enter the Benchmark Date

Type the benchmark date in the format CCYYMMDD or MM-DD-CCYY (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). The 21st of May, 1998, for example, is entered as '19980521' or '05-21-1998' (US and Canada) or '19982105' or '21-05-1998' (elsewhere).

This text box is the effective date that will be used on the recalculated Salary Grade table.

Note: *When recalculating Salary Grade tables, it may be necessary to differentiate Salary Grades To Benchmark Jobs Cross-Reference forms (TI-SCR) used by the Recalculation of Salary Grade Range by Percent Increase report (5R-RPT) from records used by the Recalculation of Salary Grade Ranges with Midpoint Formula report (5I-RPT) if the Salary Grade table records exist under the same Control Number. For example, you may be recalculating some Salary Grade table records by midpoint on the Salary Grade Ranges with Midpoint Formula report (5I-RPT) and others by percent increase on the Recalculation of Salary Grade Range by Percent Increase report (5R-RPT). It is suggested you use a different effective date, even if it differs by just one day, for example, '19980301' versus '19980302'.*

For practice, type a date that represents June 1 1998, for example, '06-01-1998' (US and Canada) or '01-06-1998' (elsewhere).

5. Enter the Variance

Type an up-to-five-digit variance with two decimals. For example, enter 55.75 as '55.75' (or '5575').

This value is used to calculate the minimum and the maximum of the new salary grade. It is required if you are recalculating the Salary Grade tables using either the Recalculation of Salary Grade Ranges with Midpoint Formula report (5I-RPT) or the Recalculation Of Salary Grade Range By Percent Increase report (5R-RPT).

For practice, type '4000'.

6. Enter the Percent of Increase

Type an up-to-four-digit midpoint percentage of increase with four decimals. For example, enter 4.5 percent as '450' (or '.045').

This is the percent increase recalculation for a salary grade range value. This text box is required when recalculating Salary Grade tables using the Recalculation Of Salary Grade Range By Percent Increase report (5R-RPT).

For practice, type '550'.

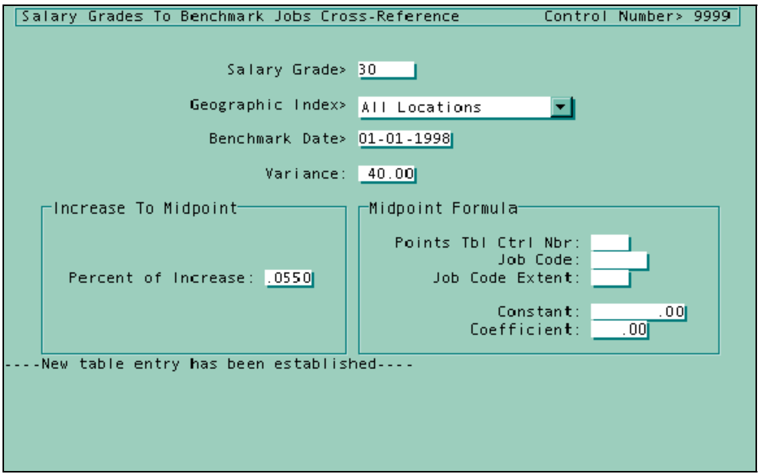
Note: The remaining text boxes on this form are used only for regeneration of the salary grades using the midpoint formula calculation. Leave them blank if you are using the percent increase calculation.

7. Click Save or press Enter

The variables for the salary grade midpoint percent calculation are established. These data may be used by the Recalculation Of Salary Grade Range By Percent Increase report (5R-RPT) to recalculate the salary grade ranges automatically.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Salary Grades To Benchmark Jobs Cross-Reference Control Number> 9999
Salary Grade> 30
Geographic Index> All Locations
Benchmark Date> 01-01-1998
Variance: 40.00
Increase To Midpoint
Percent of Increase: .0550
Midpoint Formula
Points Tbl Ctrl Nbr:
Job Code:
Job Code Extent:
Constant: .00
Coefficient: .00
----New table entry has been established----

See also:

- Salary grade regeneration methods and results ***(on page 232)***

For an explanation of the use of this form to set up a percent midpoint increase.

Viewing the salary grades to benchmark jobs cross-reference

To view the salary grades to benchmark jobs cross-reference using the Salary Grades/Benchmark Table form (TIISCR), complete this step:

Access the Salary Grades/Benchmark Table form (TIISCR)

Access this form by making the following selection from the Navigator:

Component: HR Setup
Process: Setup HR Rules
Task: Benchmark Jobs For Salary Admin

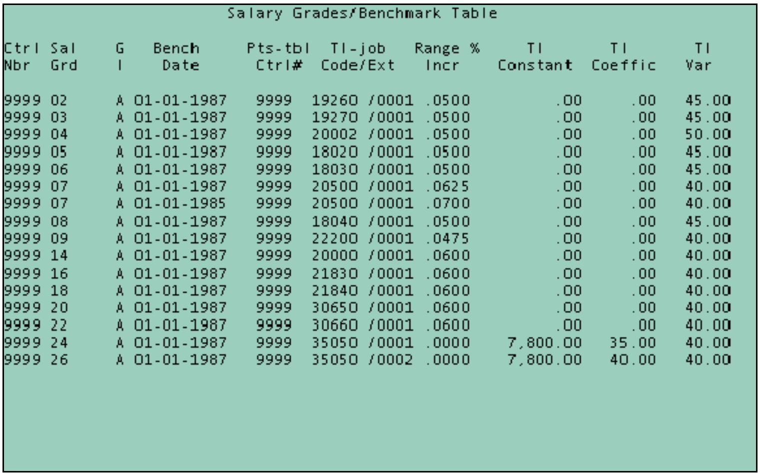
For practice, access the Salary Grades/Benchmark Table form (TIISCR).

The Salary Grades/Benchmark Table form (TIISCR) displays up to 16 table records on each form. Click Save or press Enter to see the next form of records.

A '---COMPLETE---' message appears when all the records on file have been viewed.

Maintenance may not be performed using this form—it is for viewing records in Display mode only.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Salary Grades/Benchmark Table

Ctrl Nbr	Sal Grd	G I	Bench Date	Pts-tbl Ctrl#	TI-job Code/Ext	Range % Incr	TI Constant	TI Coeffic	TI Var

See also:

- Salary grade regeneration methods and results ***(on page 232)***

For a description of using this form to view cross-reference records.

Regenerating salary grades by percent increase

To regenerate salary grades by percent increase using the Recalculation of Salary Grade Range by Percent Increase report (5R-RPT), complete the report schedule by entering the following report parameters:

Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.

1. Enter the Effective Date

Type the effective date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

This date is used to cross reference the Salary Grades to Benchmark Jobs Cross-Reference form (TI-SCR) on which the recalculated salary grade midpoint value is based.

Note: *When recalculating Salary Grade tables, it may be necessary to differentiate Salary Grades to Benchmark Jobs Cross-Reference forms (TI-SCR) used by the Recalculation of Salary Grade Range by Percent Increase report (5R-RPT) from records used by the Salary Grade Ranges with Midpoint Formula report (5I-RPT) if the Salary Grade table records exist under the same Control Number. For example, you may be recalculating some Salary Grade table records by midpoint on the Salary Grade Ranges with Midpoint Formula report (5I-RPT) and others by percent increase on the Recalculation of Salary Grade Range by Percent Increase report (5R-RPT). It is suggested you use a different effective date, even if it differs by just one day, for example, '19980301' versus '19980302'.*

2. Enter the TI/TB Control Nbr

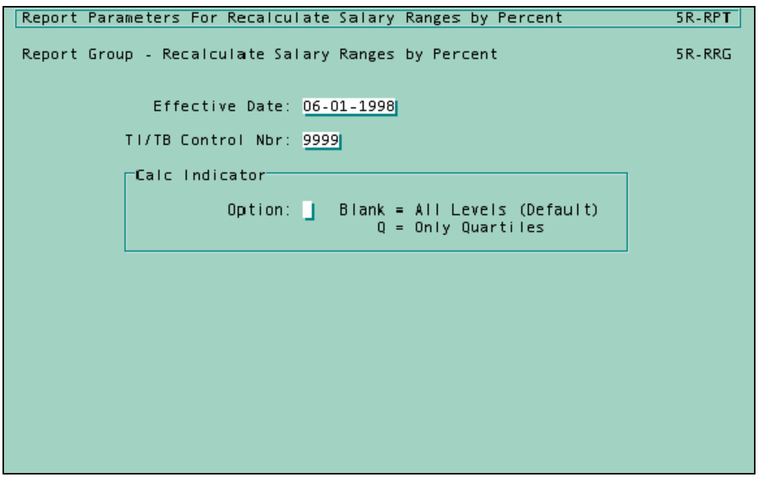
Type an up-to-four-character table Control Number to cross reference the Salary Grades to Benchmark Jobs Cross-Reference form (TI-SCR) to the Salary Grade tables for the recalculations.

3. Enter the Calc Indicator Option

Type a one-character calculation indicator option.

This option determines whether only quartiles or all the salary steps within a range are to be calculated. Leave this text box blank to calculate all the salary steps within a range. Type 'Q' in this text box to calculate only quartiles.

When completed, the report parameters may look similar to the example that follows:



Once it has been processed, the Recalculation of Salary Grade Range by Percent Increase report (5R-RPT) regenerates salary grade values based on a percent increase applied to the midpoint value of the old salary grade. The report then generates a new Salary Grade table record with the newly calculated values and the Salary Grades to Benchmark Jobs Cross-Reference form (TI-SCR) benchmark date as the Salary Grade table date.

See also:

- Salary grade regeneration methods and results ***(on page 232)***

For an explanation of the use of this program to regenerate salary grades.

Setting up a salary grade formula increase

To set up a salary grade formula increase using the Salary Grades To Benchmark Jobs Cross-Reference form (TI-SCR), follow these steps:

1. Access the Salary Grades To Benchmark Jobs Cross-Reference form (TI-SCR)

Access this form by making the following selection from the Navigator:

Component:	HR Setup
Process:	Setup HR Rules
Task:	Benchmark Jobs For Salary Admin

Note: *To avoid copying preexisting information, you may clear the form by choosing: **A**ctions **C**lear Fields.*

For practice, access the Salary Grades To Benchmark Jobs Cross-Reference form (TI-SCR).

2. Enter the Salary Grade

Type an up-to-six-character salary grade designation. The value in this text box must match an existing salary grade on one of the Salary Grade tables.

For practice, type '34'.

3. Select the Geographic Index

Select a geographic range value from the Geographic Range option list (HR66).

The geographic index further identifies the salary grade to which this record applies. If your organization uses only one geographic index value, select that value in this text box.

If multiple salary grade ranges are established for the same salary grade based on geographic index variations, you must establish matching Salary Grades to Benchmark Jobs Cross-Reference forms (TI-SCR), one for each unique salary grade/geographic index.

For practice, select 'All Locations'.

4. Enter the Benchmark Date

Type the benchmark date in the format CCYYMMDD or MM-DD-CCYY (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). The 21st of May, 1998, for example, is entered as '19980521' or '05-21-1998' (US and Canada) or '19982105' or '21-05-1998' (elsewhere).

This text box is the effective date that will be used on the recalculated Salary Grade table.

Note: When recalculating Salary Grade tables, it may be necessary to differentiate Salary Grades to Benchmark Jobs Cross-Reference forms (TI-SCR) used by the Recalculation of Salary Grade Range by Percent Increase report (5R-RPT) from records used by the Salary Grade Ranges with Midpoint Formula report (5I-RPT) if the Salary Grade table records exist under the same Control Number. For example, you may be recalculating some Salary Grade table records by midpoint on the Salary Grade Ranges with Midpoint Formula report (5I-RPT) and others by percent increase on the Recalculation of Salary Grade Range by Percent Increase report (5R-RPT). It is suggested you use a different effective date, even if it differs by just one day, for example, '19980301' versus '19980302'.

For practice, type a date that represents June 2 1998, for example, '06-02-1998' (US and Canada) or '02-06-1998' (elsewhere).

5. Enter the Variance

Type an up-to-five-digit variance with two decimals. For example, enter 55 as '55.' (or '5500').

This value is used to calculate the minimum and the maximum of the new salary grade. It is required if you are recalculating the Salary Grade tables using either the Recalculation of Salary Grade Ranges with Midpoint Formula report (5I-RPT) or the Recalculation Of Salary Grade Range By Percent Increase report (5R-RPT).

For practice, type '5000'.

6. Enter the Points Tbl Ctrl Nbr

Type an up-to-four-position Control Number in this text box.

This is the Control Number of the Job Points Table form (TC-SCR) for the Job Code and Job Code Extent text boxes pointed to by this table record.

Note: If you are unsure of the Control Number value, access the Company-To-Rules Cross-Reference for HR form (AX-SCR) and view the value in Benchmark Jobs text box.

This text box is required if you are recalculating Salary Grade tables using the Recalculation of Salary Grade Ranges with Midpoint Formula report (5I-RPT).

For practice, type '9999'.

7. Enter the Job Code

Type an up-to-six-character job code in this text box.

This text box identifies the job used as the benchmark for this salary grade. This information is used to determine the total job points used in the midpoint formula for recalculating the Salary Grade tables.

The job code entered in this text box must match an existing job code/job code extent combination established on the Job Code Table form (TA-SCR). This text box is required if you are recalculating Salary Grade tables using the Recalculation of Salary Grade Ranges with Midpoint Formula report (5I-RPT).

For practice, type '68000'.

8. Enter the Job Code Extent

Type an up-to-four-character job code extent in this text box.

This value is an extension of the job code entered in the prior text box. The job code/job code extent value entered here must match an existing job code/job code extent established on the Job Code Table form (TA-SCR).

This text box is required if you are recalculating Salary Grade tables using the Recalculation of Salary Grade Ranges with Midpoint Formula report (5I-RPT).

☞ For practice, type '0001'.

9. Enter the Constant

Type an up-to-eight-digit constant with two decimals. For example, 5,900.50 is entered as '5,900.5' (or '590050').

This customer-defined value is used in the midpoint recalculation formula for salary grade values.

This text box is required if you are recalculating a Salary Grade table using the Recalculation of Salary Grade Ranges with Midpoint Formula report (5I-RPT).

For practice, type '780000'

10. Enter the Coefficient

Type an up-to-five-digit coefficient with two decimals. For example, 35.5 is entered as '35.5' (or '3550').

This customer-defined value is used in the midpoint recalculation formula for salary grade values.

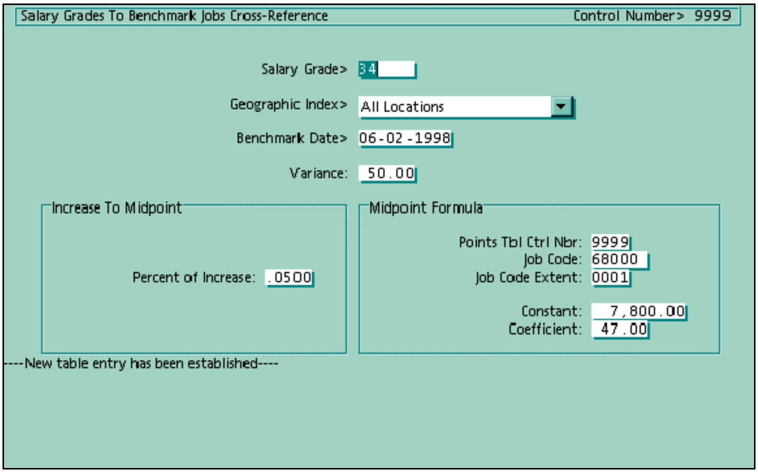
This text box is required if you are recalculating a Salary Grade table using the Recalculation of Salary Grade Ranges with Midpoint Formula report (5I-RPT).

For practice, type '4700'.

11. Click Save or press Enter

The variables for the salary grade midpoint percent calculation are established. These data may be used by the Recalculation of Salary Grade Ranges with Midpoint Formula report (5I-RPT) to automatically recalculate the salary grades.

For practice, click Save or press Enter.



See also:

- Salary grade regeneration methods and results ***(on page 232)***

For an explanation of the use of this form to set up a formula midpoint increase.

Regenerating salary grades by the formula increase

To regenerate salary grades by the formula increase using the Recalculation of Salary Grade Ranges with Midpoint Formula report (5I-RPT), complete the report schedule by entering the following report parameters:

Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.

1. Enter the Effective Date

Type the effective date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

This text box represents the date to cross-reference to the Salary Grades to Benchmark Jobs Cross-Reference form (TI-SCR) on which the recalculated salary grade midpoint value is based.

Note: *When recalculating Salary Grade tables, it may be necessary to differentiate Salary Grades To Benchmark Jobs Cross-Reference forms (TI-SCR) used by the Recalculation of Salary Grade Range by Percent Increase report (5R-RPT) from records used by the Salary Grade Ranges with Midpoint Formula report (5I-RPT) if the Salary Grade table records exist under the same Control Number. For example, you may be recalculating some Salary Grade table records by midpoint on the Salary Grade Ranges with Midpoint Formula report (5I-RPT) and others by percent increase on the Recalculation of Salary Grade Range by Percent Increase report (5R-RPT). It is suggested you use a different effective date, even if it differs by just one day, for example, '19980301' versus '19980302'.*

2. Enter the TI/TB Control Nbr

Type an up-to-four-character table Control Number to cross reference the Salary Grades To Benchmark Jobs Cross-Reference form (TI-SCR) to the Salary Grade tables for the recalculations.

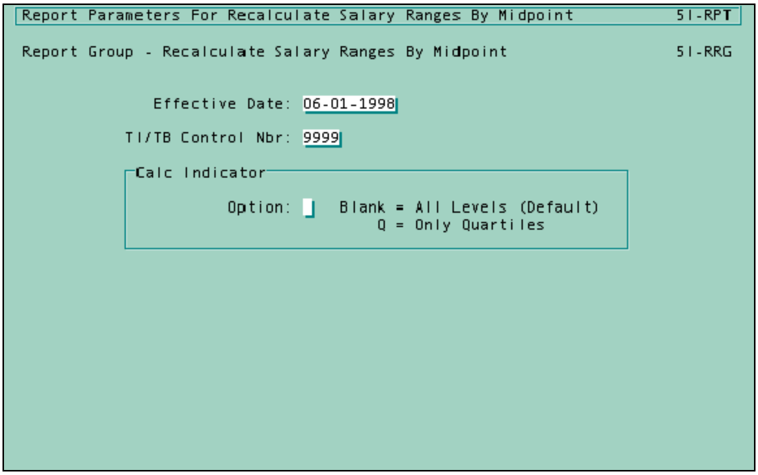
Note: If you are unsure about the Control Number value, access the Company-To-Rules Cross-Reference For HR form (AX-SCR) and view the value in Benchmark Jobs text box.

3. Enter the Calc Indicator Option

Type a one-character calculation indicator option.

This option determines whether only quartiles or all the salary steps within a range are to be calculated. Leave this text box blank to calculate all the salary steps within a range. Type 'Q' in this text box to calculate only quartiles.

When completed, the report parameters may look similar to the example that follows:



Once it has been processed, the Recalculation of Salary Grade Ranges with Midpoint Formula report (5I-RPT) regenerates salary grade values based on a midpoint formula. The report then generates a new Salary Grade table record with the newly calculated values and the Salary Grades To Benchmark Jobs Cross-Reference form (TI-SCR) benchmark date as the Salary Grade table date.

See also:

- Salary grade regeneration methods and results ***(on page 232)***

For an explanation of how to use this program to regenerate salary grades.

Recalculating employee salary grade information

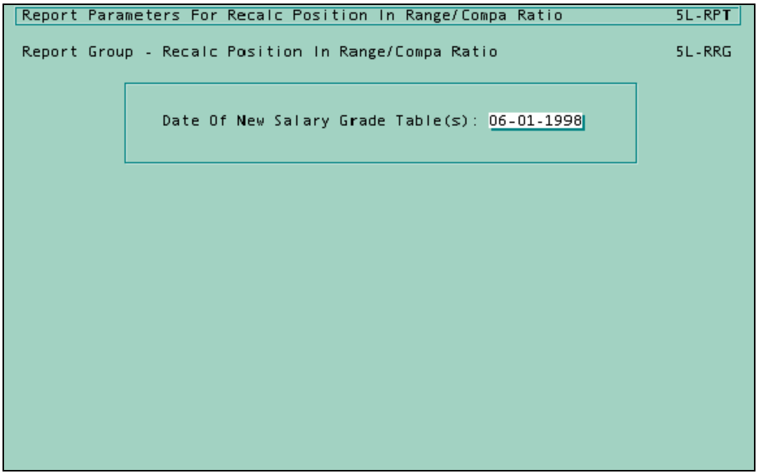
To recalculate employee salary grade information using the Recalculate Employee Salary—Salary Grade Table Change report (5L-RPT), complete the report schedule by entering the following report parameters:

Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.

Enter the Date Of New Salary Grade Table(s)

Type the date of the new Salary Grade table(s) in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). This date identifies the Salary Grade tables that will be recalculated for this report.

When completed, the report parameters may look similar to the example that follows:



Once it has been processed, the Recalculate Employee Salary—Salary Grade Table Change report (5L-RPT) evaluates each employee record to determine if the employee is affected by a Salary Grade table record change. It produces an Audit Trail listing of all employee records for which a new salary segment was created.

If the Salary Grade table record pointed to by the employee's job code/job code extent has been recalculated, the Recalculate Employee Salary—Salary Grade Table Change report (5L-RPT) will create a new Salary Assignment/Changes form (40-SCR) for the employee.

For a description of using this program to recalculate employee salary grades.

Extended Practice

Note: You must have completed the Extended Practices in the prior sections to guarantee the successful completion of the Extended Practice that follows.

1. Access the Salary Information form (41-SCR) for employee 3023. What is his salary grade? What compa ratio and position in range are displayed? What are the values for the salary grade's minimum, midpoint, and maximum?

2. Set up the percent increase parameters for a salary grade percent increase as of June 1 of next year for Salary Grade 08. Indicate a variance of 50.00 and a 5 percent increase.

3. Recalculate the salary grade using the Recalculation of Salary Grade Range by Percent Increase report (5R-RPT). For parameters, enter an Effective Date of June 1 of next year, Control Number 9999, and leave the Option text box blank.

4. Process the Recalculate Employee Salary—Salary Grade Table Change report (5L-RPT) using a date of June 1 of next year in the Date Of New Salary Grade Table(s) text box.

5. What changes occurred in the employee's compa ratio and position in range after the Recalculate Employee Salary—Salary Grade Table Change report (5L-RPT) was processed? What are the values for the salary grade minimum, midpoint, and maximum? What caused these changes?

6. Display the Salary Assignment/Changes form (40-SCR) for the resulting table change entry for employee 3023 and verify that no amount changes have taken place.

Review of Questions Answered

1. Why regenerate salary grades?

2. What methods are available for updating salary grades?

3. What process needs to occur to reflect the results of the salary grade regeneration at the employee level?

PART 6

Appendices

In This Section

APPENDIX A

Report Quick Reference

In This Appendix

Introduction

This appendix provides a quick reference guide to Salary Administration reports covered in this manual.

Annual Budget (5C-RPT)

The Annual Budget report (5C-RPT) is the outcome of the data that were processed using the Salary Plan/Budget Turnaround List report. Its contents represent the approved final salary budget for the plan year.

Business Tasks

This report is used to complete the following business tasks:

- Monitor progress in the budgeting process
- Analyze the budgeted salary information
- Analyze individual employee projected salary increases
- Review the final annual budget

Report field details

- **Control Three**—Human Resource Organization Level 3 value assigned to this employee.
- **Control Four**—Human Resource Organization Level 4 value assigned to this employee.
- **Control Five**—Human Resource Organization Level 5 value assigned to this employee.
- **Control Six**—Human Resource Organization Level 6 value assigned to this employee.
- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Job Type**—Generic category that further identifies a job.
- **Job Title**—Description of a job.
- **Rating**—Value that identifies an employee's performance appraisal rating.
- **Salary Change**—Date and amount of the employee's most recent salary change.

Report sort order

As delivered, the sort order of this report is CONTROL-1, CONTROL-2, CTRL-THREE, CTRL-FOUR, CTRL-FIVE, CTRL-SIX, JOB-TYPE, and EMPLOYEE-NAME.

Parameter options and setup

- **Salary Plan Year**—Enter the plan year start date in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).
- **Salary Plan Number**—Select Salary Plan 1, 2, or 3 from the option list.

See also:

- Viewing the final annual salary budget ***(on page 148)***

For information on completing the parameters for this report.

Annual Budget (5C-RPT) - Example

```

Compa Ratio - Range of Increase ((D9RPT)

This report is used to print the TD9SCR table records on a batch report.

Business Tasks

This report is used to complete the following business task:

- Review the Compa Ratio, Range Of Percentage of Increase entries

Report field details

- **Control Number**—Control Number associated with this table.
- **Appraisal Table Code**—Matrix ID associated with the table entries.
- **Table Date**—The first effective date for the table entry.
- **JPA**—Job performance appraisal rating code.
- **<80**—The range of percent of salary increase for an employee if the compa ratio is less than 80.
- **80-90**—The range of percent of salary increase for an employee if the compa ratio is between 80 and 90.
- **>90-100**—The range of percent of salary increase for an employee if the compa ratio is between 90 and 100.
- **>100-110**—The range of percent of salary increase for an employee if the compa ratio is between 100 and 110.
- **>110-120**—The range of percent of salary increase for an employee if the compa ratio is between 110 and 120.
- **>120**—The range of percent of salary increase for an employee if the compa ratio is greater than 120.

Report sort order

As delivered, the sort of the report is CONTROL 1-2, CONTROL-NUMBER, TD-TABLE-ID, PERFORM-APPRAISAL, and TD-TABLE-DATE.

Parameter options and setup

- **As Of Date**—Enter the As Of Date in MM-DD-YY (US and Canada) or DD-MM-YY format (elsewhere). The system selects the Table records in effect as of this date. You may specify this parameter and leave the Control Number text box blank to print all Table records.
- **Control Number**—Enter the Control Number of the Table set you want to print. You may specify this parameter and leave the As Of Date text box blank to print all Table records in the Table set, regardless of date.
- **Matrix ID**—Enter the Matrix ID to specify the three-character table identifier of a table you want to print.

Compa Ratio - Range of Increase (9D9RPT) - Example

```
DIVISION     000  PRODUCTION MFTG ORGANIZATION    COMPA RATIO - RANGE OF INCREASE  9D9R                  TIME 16:34 DATE 01-19-2001

```

Delete Obsolete Budget Records (5E-RPT)

The Delete Obsolete Budget Records report (5E-RPT) deletes all employee salary budget records that no longer have any use or meaning in the budgeting process.

Business Tasks

This report is used to complete the following business task:

- Delete obsolete employee salary budget records

Report field details

No report is generated by this program.

Parameter options and setup

- **Salary Plan Year**—Enter the plan year start date in MM-DD-CCYY or CCYYMMDD format (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).
- **Salary Plan**—Enter Salary Plan 1, 2, or 3 from the option list.

See also:

- Deleting obsolete salary budget records ***(on page 147)***

For information on completing the parameters for this report.

Delete Obsolete Budget Records (5E-RPT) - Example

```
Delete Obsolete Budget Records report(5E-RPT) generates no output.
```

Employees by Rating and Range Categories (5F-RPT)

The Employees by Rating and Range Categories report (5F-RPT) categorizes all active employees by two measures—performance rating and position in range.

Business Tasks

This report is used to complete the following business tasks:

- Analyze employee performance appraisal results
- Monitor salary range penetration by control level

Report field details

- **Control Three**—Human Resource Organization Level 3 value assigned to this employee.
- **Control Four**—Human Resource Organization Level 4 value assigned to this employee.
- **Control Five**—Human Resource Organization Level 5 value assigned to this employee.
- **Control Six**—Human Resource Organization Level 6 value assigned to this employee.
- **Rating/Range Value**—Performance appraisal rating and range category descriptions.
- **Number Of Employees**—Total number of employees for each category.
- **Percentage**—Percentage of total employees in this Ctrl-3-thru-6 in this category (rating or position in range).
- **Range Category**—Position-in-range quartile description.

Report sort order

As delivered, the sort order of this report is CONTROL-1, CONTROL-2, CTRL-THREE, CTRL-FOUR, CTRL-FIVE, CTRL-SIX, JOB-TYPE, and EMPLOYEE-NAME.

Parameter options and setup

- **As Of Date**—Enter the As Of Date in MM-DD-YY (US and Canada) or DD-MM-YY format (elsewhere).

See also:

- Ways of analyzing performance results ***(on page 221)***

For information about this report.

Employees by Rating and Range Categories (5F-RPT) - Example

```
CORPORATION  99   ACME MANUFACTURING          SUMMARY: EMPLOYEES BY RATING        REPT                FILE VERSION 00  PAGE    1

Future Dated Salary Adjustments On File (3T-RPT)

The Future Dated Salary Adjustments On File report (3T-RPT) provides a listing of employees with a future-dated salary adjustment on file that will become actual on the effective date.

Business Tasks

This report is used to complete the following business tasks:

- Monitor salary changes
- Review future-dated salary adjustments

Report field details

- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Effective Date**—Effective date of the employee's salary change.
- **Change Type**—Value identifying the reason for the employee's salary change.
- **Hourly Rate**—Employee's hourly rate of pay.
- **Period Hours**—Number of normal hours in the employee's pay period.
- **Pay Freq**—Value identifying the interval at which the employee is paid.
- **Salary Per Period**—Employee's salary per pay period.
- **Annual Salary**—Employee's annual salary amount.
- **Annual Amt Change**—Amount of annual salary change from the prior salary to the most recent salary.
- **Percent Change**—Percent change between the prior salary and the current one.
- **Months Since**—Number of months between the prior salary effective date and the current one.
- **Compa Ratio**—Ratio of the employee's salary compared with the midpoint of the salary range.

Report sort order

As delivered, the sort order of this report is CONTROL-1, CONTROL-2, CTRL-THREE, CTRL-FOUR, CTRL-FIVE, CTRL-SIX, and EMPLOYEE-NAME.

Parameter options and setup

- **As Of Date**—Enter the As Of Date in MM-DD-YY (US and Canada) or DD-MM-YY format (elsewhere).

Job Performance Appraisal by Pos in Range - Pct of Increase (9D4RPT)

This report is used to print the TD4SCR table records on a batch report.

Business Tasks

This report is used to complete the following business task:

- Review the Position in Range—Percent of Increase entries

Report field details

- **Control Number**—Control Number associated with this table.
- **Appraisal Table Code**—Matrix ID associated with the table entries.
- **Table Date**—The first effective date for the table entry.
- **JPA**—Job performance appraisal rating code.
- **0%**—The percent of projected salary increase due to an employee when the position in range is 0 percent.
- **>0-25**—The percent of projected salary increase due to an employee when the position in range is between 0 and 25 percent.
- **>25-50**—The percent of projected salary increase due to an employee when the position in range is between 25 and 50 percent.
- **>50-75**—The percent of projected salary increase due to an employee when the position in range is between 50 and 75 percent.
- **>75-100**—The percent of projected salary increase due to an employee when the position in range is between 75 and 100 percent.
- **>100%**—The percent of projected salary increase due to an employee when the position in range is greater than 100 percent.

Report sort order

As delivered, the sort of the report is CONTROL 1-2, CONTROL-NUMBER, TD-TABLE-ID, PERFORM-APPRAISAL, and TD-TABLE-DATE.

Parameter options and setup

- **As Of Date**—Enter the As Of Date in MM-DD-YY (US and Canada) or DD-MM-YY format (elsewhere). The system selects the Table records in effect as of this date. You may specify this parameter and leave the Control Number text box blank to print all Table records.
- **Control Number**—Enter the Control Number of the Table set you want to print. You may specify this parameter and leave the As Of Date text box blank to print all Table records in the Table set, regardless of date.
- **Matrix ID**—Enter the Matrix ID to specify the three-character table identifier of a table you want to print.

Job Performance Appraisal Table Detail (9DDRPT)

The Job Performance Appraisal Table Detail report (9DDRPT) provides a printed copy of the Job Performance Appraisal tables on a batch report.

Business Tasks

This report is used to complete the following task:

- Review the pay-for-performance Salary Plan table records

Report field details

- **Control Number**—Control Number associated with the table.
- **Appraisal Table Code**—Matrix ID associated with the table entries.
- **Table Date**—The first effective date for the table entry.
- **JPA**—Job performance appraisal rating code.
- **First Entry**—Text box entries, dependent on table.
- **Second Entry**—Text box entries, dependent on table.
- **Third Entry**—Text box entries, dependent on table.
- **Fourth Entry**—Text box entries, dependent on table.
- **Fifth Entry**—Text box entries, dependent on table.
- **Sixth Entry**—Text box entries, dependent on table.
- **Access Screen**—Program name of table record.

Report sort order

As delivered, the sort order of this report is CONTROL-1-2, CONTROL-NUMBER, TD Table form (determined by TD-TABLE-TYPE and TD-TABLE-PREFIX), APPRAISAL-TABLE-CODE, PERFORM-APPRAISAL, and TD-TABLE-DATE.

Parameter options and setup

- **As Of Date**—Enter the As Of Date in MM-DD-YY (US and Canada) or DD-MM-YY format (elsewhere). You may specify this parameter and leave the Control Number text box blank to print all table records.
- **Control Number**—Enter the four-digit Control Number of the table set to be printed. You may specify this parameter and leave the As Of Date text box blank to print all table records in the table set, regardless of date.
- **Matrix ID**—Enter the three-character Matrix ID of the table set to be printed.

Mass Salary Update/Report (MSURPT)

An output report is produced each time the Mass Salary Update/Report program (MSURPT) is run, showing the results of the calculation for each employee.

Business Tasks

This report is used to complete the following business task:

- Review the results of a mass salary update

Report field details

- **Column Title**—Description.
- **OL3: / PL3:**—Organization Level 3 (HR or Payroll) value assigned to this employee.
- **OL4: / PL4:**—Organization Level 4 (HR or Payroll) value assigned to this employee.
- **OL5: / PL5:**—Organization Level 5 (HR or Payroll) value assigned to this employee.
- **OL6: / PL6:**—Organization Level 6 (HR or Payroll) value assigned to this employee.
- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier.
- **Employee Status**—Employee's activity status.
- **Previous Amount**—Salary or hourly rate of pay before update calculation.
- **New Amount**—Salary or hourly rate of pay after update calculation.

Report sort order

As delivered, the sort order of this report is CONTROL 1-2, and EMPLOYEE-NAME.

Parameter options and setup

- **Frequency**—Select all employees of a particular frequency, or leave blank.
- **Pay Type**—Select all employees of a particular pay type, or leave blank.
- **Union**—Select all employees of a particular union code, or leave blank.
- **OL3 / PL3**—Select the Organization Level 3 (HR or Payroll).
- **OL4 / PL4**—Select the Organization Level 4 (HR or Payroll).
- **Amount / Percent**—Type the salary or hourly rate increase, as a fixed amount or as a percentage.
- **Field**—Select the update field.
- **Key Separator**—Select the Key Separator to be used.
- **Effective Date**—Type the effective date to be used. Enter the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).
- **Type of Change**—Select the type of change.

Monetary Perquisite Information (3E-RPT)

The Monetary Perquisite Information report (3E-RPT) provides a listing of employees who have been awarded monetary perquisites.

Business Tasks

This report is used to complete the following task:

- Track monetary awards

Report field details

- **Perquisite HED Xref/Name**—The identifier for the Payroll earning by which the monetary perquisite is paid to the employee.
- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Perq Date Awarded**—Date on which the monetary perquisite was awarded to the employee.
- **Perq Amt Awarded**—Amount of the monetary perquisite to be paid each period.
- **Perq Start Field**—The date or amount that, when reached, starts the automatic earning.
- **Perq Stop Code**—The code representing the stop method for the automatic earning.
- **Perq Stop Field**—Specifies a date or amount that, when reached, stops the automatic earning.
- **Active Perq Switch**—Indicates that either a perquisite is active and still being paid (Y) or is inactive (N).

Report sort order

As delivered, the sort order of this report is CONTROL-1, CONTROL-2, PERQ-HED-XREF, and EMPLOYEE-NAME-10.

Parameter options and setup

- **Employees To Include Option**—Enter 'A' to print only those employees with active perquisites. Leave this text box blank to print all employees with perquisites.

No Salary Adjustment For Last 12 Month Period (1Z-RPT)

The No Salary Adjustment For Last 12 Month Period report (1Z-RPT) lists employees who have not had a salary adjustment in more than 12 months. This report may be modified to include employees on leave of absence. The time span may be modified to 18 months.

Business Tasks

This report is used to complete the following business task:

- Track employees who have had no salary review in 12 months

Report field details

- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Status**—Value representing the employee's current activity status.
- **Current Salary**—Employee's current annual salary amount.
- **Effective Date**—Effective date of the employee's last salary change.
- **Change Type**—Value and description of the reason for the employee's salary change.
- **Compa Ratio**—Ratio of the employee's salary compared with the midpoint of the salary range.
- **Scheduled Date**—Date the next salary review is to be performed.
- **Salary Review If Present Review Type**—Value and description of the type of salary review to be performed. A 'No Review On File' message prints if no review is scheduled.

Report sort order

As delivered, the sort order of this report is CONTROL-1, CONTROL-2, CTRL-THREE, CTRL-FOUR, CTRL-FIVE, CTRL-SIX, and EMPLOYEE-NAME.

Parameter options and setup

There are no report parameters for this report.

Over Maximum/Under Minimum (17-RPT)

The Over Maximum/Under Minimum report (17-RPT) lists employee salaries that are either above the maximum or below the minimum allowed within each employee's salary range.

Business Tasks

This report is used to complete the following business tasks:

- Monitor and analyze employee salary range penetration
- Determine whether to decrease/increase certain salary ranges for the coming fiscal year

Report field details

- **Control Three**—Human Resource Organization Level 3 value assigned to this employee.
- **Control Four**—Human Resource Organization Level 4 value assigned to this employee.
- **Control Five**—Human Resource Organization Level 5 value assigned to this employee.
- **Control Six**—Human Resource Organization Level 6 value assigned to this employee.
- **Employee Name**—Employee's legal name.
- **Pay Freq**—Value identifying the interval at which the employee is paid.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Status**—Value representing the employee's current activity status.
- **Last Salary Change Date**—Effective date of the last salary change.
- **Last Salary Change Type**—Value identifying the reason for the employee's salary change.
- **Last Salary Change Amount Chg**—Annual amount of salary change from the prior salary to the most recent salary.
- **Last Salary % Chg**—Percent change between the prior salary and the current one.
- **Rating Date**—Effective date of the performance appraisal.
- **Rate Type**—Value that identifies the type of performance appraisal that was performed.
- **Rating**—Performance appraisal rating value.
- **Range Penetr**—Difference between the employee salary and the minimum of the range, divided by the difference between the range's maximum and minimum.
- **Compa Ratio**—Ratio of the employee's salary compared with the midpoint of the salary range.

Report sort order

As delivered, the sort order of this report is CONTROL-1, CONTROL-2, CTRL-FOUR, RED/GREEN-INDICATOR, TB-SALARY-TYPE, and EMPLOYEE-NAME.

Parameter options and setup

Performance Appraisal Forms Not Returned By Expected Date (1Q-RPT)

The Performance Appraisal Forms Not Returned By Expected Date report (1Q-RPT) lists performance appraisal forms not returned by the expected date.

Business Tasks

This report is used to complete the following business tasks:

- Track employees who have passed their scheduled performance appraisal date and for whom no rating results have been recorded
- Record the date the form was actually returned

Report field details

- **Ctrl Three**—Human Resource Organization Level 3 value assigned to this employee.
- **Ctrl Four**—Human Resource Organization Level 4 value assigned to this employee.
- **Ctrl Five**—Human Resource Organization Level 5 value assigned to this employee.
- **Ctrl Six**—Human Resource Organization Level 6 value assigned to this employee.
- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Appraisal Scheduled Date—**Date the next performance appraisal is to be performed.
- **Appraisal Scheduled Type—**Value and description of the type of review to be performed.
- **Expected Return Date**—Date the performance appraisal form is due in the originating department.
- **Actual Return Date**—Date the salary review form was actually received in the originating department.

Report sort order

As delivered, the sort order of this report is CONTROL-1, CONTROL-2, CTRL-THREE, CTRL-FOUR, CTRL-FIVE, CTRL-SIX.

Parameter options and setup

- **As Of Date**—Enter the As Of Date in MM-DD-YY (US and Canada) or DD-MM-YY format (elsewhere).

Performance Appraisals Scheduled for Month of: XX (1R-RPT)

The Performance Appraisals Scheduled for Month of: XX report (1R-RPT) lists performance appraisals scheduled for a specified month and year.

Business Tasks

This report is used to complete the following business task:

- Track employees who have a performance appraisal due in the future

Report field details

- **Ctrl Three**—Human Resource Organization Level 3 value assigned to this employee.
- **Ctrl Four**—Human Resource Organization Level 4 value assigned to this employee.
- **Ctrl Five**—Human Resource Organization Level 5 value assigned to this employee.
- **Ctrl Six**—Human Resource Organization Level 6 value assigned to this employee.
- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Appraisal Scheduled Date**—Date the next performance appraisal is to be performed.
- **Appraisal Scheduled Type—**Value and description of the type of review to be performed.
- **Job Information Date**—Effective date of the job assigned to an employee.
- **Job Information Title**—Description of the job assigned to an employee.

Report sort order

As delivered, the sort order of this report is CONTROL-1, CONTROL-2, CTRL-THREE, CTRL-FOUR, CTRL-FIVE, CTRL-SIX.

Parameter options and setup

- **Appraisals Scheduled Year**—Enter the year (YY) for which you want to list performance appraisals. Leave this text box blank to use the system year.
- **Appraisals Scheduled Month**—Enter the month (MM) for which you want to list performance appraisals. Leave this text box blank to use the system month.

Quartile Distribution by Appraisal Rating (1W-RPT)

The Quartile Distribution by Appraisal Rating report (1W-RPT) provides an analysis of the distribution of salaries within a salary grade range by appraisal rating. Statistics are given for the number and percentage of employees falling below the minimum, over the maximum, and within each quartile of the salary range.

Business Tasks

This report is used to complete the following business tasks:

- Analyze the distribution of salaries within a salary grade range by appraisal rating
- Monitor the relationship between employee job assignments and the associated salary grade range penetration

Report field details

- **Ctrl Three**—Human Resource Organization Level 3 value assigned to this employee.
- **Ctrl Four**—Human Resource Organization Level 4 value assigned to this employee.
- **Ctrl Five**—Human Resource Organization Level 5 value assigned to this employee.
- **Ctrl Six**—Human Resource Organization Level 6 value assigned to this employee.
- **Salary Grade**—A value associated with each salary grade and its range.
- **Grade Range Minimum**—Lowest amount of the salary grade range.
- **Grade Range Midpoint**—Amount equidistant between the salary grade minimum and maximum values.
- **Grade Range Maximum**—Highest amount of the salary grade range.
- **Rating**—Value representing a performance appraisal rating.
- **Below Minimum, First Quartile, Second Quartile, Third Quartile, Fourth Quartile, Above Maximum**—Count and percentage of employees falling into each point on the salary grade range.

Report sort order

As delivered, the sort order of this report is CONTROL-1, CONTROL-2, CTRL-THREE through -SIX, TB-SALARY-GRADE and JOB-CODE.

Parameter options and setup

- **As Of Date**—Enter the As Of Date in MM-DD-YY (US and Canada) or DD-MM-YY format (elsewhere). All employees with an active status as of this date, a salary segment, and a rating segment as of this date are selected for the report.

Recalculate Employee Salary - Salary Grade Table Change (5L-RPT)

The Recalculate Employee Salary—Salary Grade Table Change report (5L-RPT) is used to evaluate each employee record to determine if the employee is affected by a salary range table record change. If the salary grade record pointed to by the employee's job code/job code extent has been recalculated, this report will create a new salary record for the employee. This report produces an audit listing of all employee records for which a new salary assignment record was created.

Business Tasks

This report is used to complete the following task:

- Recalculate employee salary grade information

Report field details

- **Ctrl Three**—Human Resource Organization Level 3 value assigned to this employee.
- **Ctrl Four**—Human Resource Organization Level 4 value assigned to this employee.
- **Ctrl Five**—Human Resource Organization Level 5 value assigned to this employee.
- **Ctrl Six**—Human Resource Organization Level 6 value assigned to this employee.
- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Salary Grade**—A value associated with each salary grade and its range.
- **Salary Date**—Effective date of the new salary change record.
- **Change Type**—Value and description of the reason for the employee's salary change.
- **Compa Ratio**—Updated ratio of the employee's salary compared with the midpoint of the salary range.
- **Position In Range**—Updated difference between the employee salary and the minimum of the range, divided by the difference between the range's maximum and minimum.
- **Red/Green Indicator**—Indicator that reflects whether the salary is below, within, or above the salary range.

Report sort order

As delivered, the sort order of this report is CONTROL-1, CONTROL-2, CTRL-THREE, CTRL-FOUR, CTRL-FIVE, CTRL-SIX, EMPLOYEE-NAME.

Parameter options and setup

- **Date Of New Salary**—Enter the date of the new salary grade table(s).
- **Grade Table(s)**—in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). This date identifies the salary grade tables that will be recalculated for this report.

Recalculation of Salary Grade Range by Percent Increase (5R-RPT)

The Recalculation of Salary Grade Range by Percent Increase report (5R-RPT) regenerates the salary grade values based on a percent increase applied to the midpoint value of the old salary grade. It then generates a salary grade table record that contains the new calculated values and the new date. An audit report lists the new salary grade table records generated.

Business Tasks

This report is used to complete the following business tasks:

- Regenerate salary grade values based on a percent increase
- Generate new salary grade table records with the newly calculated values

Report field details

- **Ctrl Nbr**—The Control Number assigned to the table entry.
- **Salary Grade**—A value associated with each salary grade and its range.
- **Geographic Ind**—Indicates multiple locations for salary grade.
- **Table Date**—The first effective date for the table change.
- **Seq Nbr**—Number used to indicate a combination of two or more salary grade tables.
- **Freq Ind**—The pay frequency used to calculate the range amounts.
- **Variance Percent**—Percentage difference between the minimum and maximum of the salary grade; used to recalculate salary grade range values.
- **Minimum**—Lowest amount of the salary range.
- **First**—Value of the second span for a salary grade; it is one third the amount between the minimum and midpoint of the salary range if the range has seven points, or one half if the salary range has five points.
- **Second**—Value of the third span for a salary grade; it is two thirds of the amount between the minimum and midpoint of the salary range if the range has seven points.
- **Midpoint**—Amount equidistant between the salary grade minimum and maximum values.
- **Third**—Value of the fifth span for a salary grade; it is one third the amount between the midpoint and maximum of the salary range if the range has seven points, or one-half if the salary range has five points.
- **Fourth**—Value of the sixth span for a salary grade; it is two thirds of the amount between the midpoint and maximum of the salary range if the range has seven points.
- **Maximum**—Highest amount of the salary grade range.

Report sort order

As delivered, the sort order of this report is CONTROL-1, CONTROL-2, CONTROL-NUMBER, SALARY GRADE.

Parameter options and setup

- **Effective Date**—Enter the effective date in the format MM-DD-CCYY or CCYYMMDD. This date is used to cross reference the Salary Grades To Benchmark Jobs Cross-Reference form on which the recalculated salary grade midpoint value is based.

Recalculation of Salary Grade Ranges with Midpoint Formula (5I-RPT)

The Recalculation of Salary Grade Ranges with Midpoint Formula report (5I-RPT) regenerates salary grade values based on a formula increase applied to the midpoint value of the old salary grade. The report then generates a new salary grade table record with the newly calculated values. An audit report is produced listing the new salary grade table records generated.

Business Tasks

This report is used to complete the following business tasks:

- Regenerate salary grade values based on a formula increase
- Generate new salary grade table records with the newly calculated values

Report field details

- **Ctrl Nbr**—The Control Number assigned to the table entry.
- **Salary Grade**—A value associated with each salary grade and its range.
- **Geographic Ind**—Indicates multiple locations for salary grade.
- **Table Date**—The first effective date for the table change.
- **Seq Nbr**—Number used to indicate a combination of two or more salary grade tables.
- **Freq Ind**—The pay frequency used to calculate the range amounts.
- **Variance Percent**—Percentage difference between the minimum and maximum of the salary grade; used to recalculate salary grade range values.
- **Minimum**—Lowest amount of the salary range.
- **First**—Value of the second span for a salary grade; one third the amount between the minimum and midpoint of a seven-point salary range, or one half if the salary range has five points.
- **Second**—Value of the third span for a salary grade; two thirds of the amount between the minimum and midpoint of a seven-point salary range.
- **Midpoint**—Amount equidistant between the salary grade minimum and maximum values.
- **Third**—Value of the fifth span for a salary grade; one third the amount between the midpoint and maximum of a seven-point salary range, or one half if the salary range has five points.
- **Fourth**—Value of the sixth span for a salary grade; two thirds of the amount between the midpoint and maximum of a seven-point salary range.
- **Maximum**—Highest amount of the salary grade range.

Report sort order

As delivered, the sort order of this report is CONTROL-1, CONTROL-2, CONTROL-NUMBER, SALARY GRADE.

Parameter options and setup

- **As Of Date**—Enter the As Of Date in MM-DD-YY (US and Canada) or DD-MM-YY format (elsewhere) to include the table records in effect as of this date. Specify this parameter and leave the Control Number text box blank to include all table records in effect as of this date, regardless of Control Number.
- **Control Number**—Enter up to a four-character Control Number of the table set you want to include. Specify this parameter and leave the As Of Date text box blank to include all table records in the table set, regardless of date.

Salary Distribution by Job and Control Level (11-RPT)

The Salary Distribution by Job and Control Level report (11-RPT) displays an analysis (with supporting employee detail) of salary treatment by job assignment within the control levels.

Business Tasks

This report is used to complete the following business tasks:

- Analyze salaries by job assignment
- Analyze salary budget cost results

Report field details

- **Ctrl Three**—Human Resource Organization Level 3 value assigned to this employee.
- **Ctrl Four**—Human Resource Organization Level 4 value assigned to this employee.
- **Ctrl Five**—Human Resource Organization Level 5 value assigned to this employee.
- **Ctrl Six**—Human Resource Organization Level 6 value assigned to this employee.
- **Job Code**—Value representing a job.
- **Job Code Extension**—Extension of the job code allowing the same job code to be used to define a job that is the same except for a few attributes.
- **Job Title**—Description of the job assigned to an employee.
- **Salary Grade**—A value associated with each salary grade and its range.
- **Table Type**—A value that identifies which type of salary grade table was used to create this salary grade.
- **Salary Range Information**—Level description and amount for each point on the salary grade range.
- **Employee Name**—Employee's legal name.
- **Sex**—Gender of the employee.
- **Date In Job**—Effective date of the employee job assignment.
- **Current Annual Salary**—Employee's annual salary amount.
- **Compa Ratio**—Ratio of the employee's salary compared with the midpoint of the salary range.
- **Position In Range**—An automatically calculated difference between the employee salary and the minimum of the range, divided by the difference between the range's maximum and minimum.

Report sort order

As delivered, the sort order of this report is CONTROL-1, CONTROL-2, CTRL-THREE, CTRL-FOUR, CTRL-FIVE, CTRL-SIX, TA-JOB-CODE, TA-JOB-CODE-EXTENT, and EMPLOYEE-NAME-20.

Parameter options and setup

There are no report parameters for this report.

Salary Distribution by Performance/Time-In Job (1Y-RPT)

The Salary Distribution by Performance/Time-In Job report (1Y-RPT) provides an analysis (with supporting employee detail) of salary treatment by time in job within a performance appraisal.

Business Tasks

This report is used to complete the following task:

- Analyze compensation distribution by time in job
- Evaluate the frequency of performance appraisal based on time in job for individuals or departments

Report field details

- **Ctrl Three**—Human Resource Organization Level 3 value assigned to this employee.
- **Ctrl Four**—Human Resource Organization Level 4 value assigned to this employee.
- **Ctrl Five**—Human Resource Organization Level 5 value assigned to this employee.
- **Ctrl Six**—Human Resource Organization Level 6 value assigned to this employee.
- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Job Title**—Description of the job assigned to an employee.
- **Salary Grade**—A value associated with each salary grade and its range.
- **Compa Ratio**—Ratio of the employee's salary compared with the midpoint of the salary range.
- **Annual Salary**—Employee's current annual salary amount.
- **Time-In Job**—The job effective date subtracted from the system date. The result is in YYMMDD format.
- **Pct Chg**—Percent change between the prior salary and the current one.
- **Salary Effective**—Effective date of the last salary change.

Report sort order

As delivered, the sort order of this report is CONTROL-1, CONTROL-2, CTRL-THREE, CTRL-FOUR, CTRL-FIVE, CTRL-SIX, RATING-VALUE, and SALARY-GRADE.

Parameter options and setup

- **As Of Date**—Enter the As Of Date in MM-DD-YY (US and Canada) or DD-MM-YY format (elsewhere).

Salary Grades To Benchmark Jobs Cross-Reference Records (9I-RPT)

The Salary Grades To Benchmark Jobs Cross-Reference Records report (9I-RPT) displays the Salary Grades To Benchmark Jobs Cross-Reference table records on a batch report.

Business Tasks

This report is used to complete the following business task:

- Review cross-reference table records used to set up salary grade midpoint increase guidelines

Report field details

- **Control Number**—Control Number associated with the table record.
- **Salary Grade**—Value that identifies the salary grade to which all other values on the table record apply.
- **Geographic Index**—A value attached to the salary grade that represents a location and allows multiple salary ranges by location for one salary grade.
- **Benchmark Date**—Effective date of the table record.
- **Points Tabl Cntrl Nbr**—Control Number of the job points table record for the job code/job code extent pointed to by this cross-reference table record.
- **Job Cd/Extent**—Values that identify the job that is used as the benchmark for this table record salary grade to determine the total job points used in the midpoint formula for recalculating the salary range values.
- **Range/Pct Increase**—Percent increase used to recalculate the salary grade range values.
- **Constant**—Customer-defined value used in the midpoint recalculation formula for the salary grade range values.
- **Coefficient**—Customer-defined value used in the midpoint recalculation formula for the salary grade range values.
- **Variance Percent**—Percentage difference between the minimum and maximum of the salary grade; used to recalculate salary grade range values.

Report sort order

As delivered, the sort order of this report is CONTROL-1, CONTROL-2, CONTROL-NUMBER, SALARY-GRADE.

Parameter options and setup

- **As Of Date**—Enter the As Of Date in MM-DD-YY (US and Canada) or DD-MM-YY format (elsewhere). You may specify this parameter and leave the Control Number text box blank to print all table records.
- **Control Number**—Enter the four-digit Control Number of the table set to be printed. You may specify this parameter and leave the As Of Date text box blank to print all table records in the table set, regardless of date.

Salary Increase Analysis (1V-RPT)

The Salary Increase Analysis report (1V-RPT) provides an analysis of the number and distribution of job appraisal ratings and the average percentage of salary change as classified by job appraisal rating.

Business Tasks

This report is used to complete the following business tasks:

- Analyze the overall percentage of salary change for employees by job type and associated appraisal ratings
- Review rating trends related to compensation incentive programs

Report field details

- **Ctrl Three**—Human Resource Organization Level 3 value assigned to this employee.
- **Ctrl Four**—Human Resource Organization Level 4 value assigned to this employee.
- **Ctrl Five**—Human Resource Organization Level 5 value assigned to this employee.
- **Ctrl Six**—Human Resource Organization Level 6 value assigned to this employee.
- **Job Type**—Generic category that further identifies a job.
- **Job Type Description**—Description of the job type associated with an employee's job.
- **Rating 1-8**—Count and percentage of salary changes per performance rating. An employee may be counted more than once depending on the number of increases that fall within the date entered on the parameter form.

Report sort order

As delivered, the sort order of this report is CONTROL-1, CONTROL-2, CTRL-THREE, CTRL-FOUR, CTRL-FIVE, CTRL-SIX, JOB-TYPE, and SALARY-CHANGE-TYPE.

Parameter options and setup

- **As Of Date**—Enter the As Of Date in MM-DD-YY (US and Canada) or DD-MM-YY format (elsewhere). If you leave this text box blank, the system date is used.

Salary Plan Analysis by Control Level and Job Type (5A-RPT)

The Salary Plan Analysis by Control Level and Job Type report (5A-RPT) provides an analysis of the dollar effect of a salary plan budget (Plan/Actual Switch value) by control level and job type. The average increase percentage, total budgeted salaries, and number of employees are displayed.

Business Tasks

This report is used to complete the following business tasks:

- Analyze the salary expense resulting from a salary plan
- Accept or reject the salary plan based on salary budget comparisons

Report field details

- **Ctrl Three**—Human Resource Organization Level 3 value assigned to this employee.
- **Ctrl Four**—Human Resource Organization Level 4 value assigned to this employee.
- **Ctrl Five**—Human Resource Organization Level 5 value assigned to this employee.
- **Ctrl Six**—Human Resource Organization Level 6 value assigned to this employee.
- **Job Type**—Generic category that further identifies a job.
- **Total Salaries**—The sum of employee current annual salaries for the control levels and job type.
- **Average % Inc**—The total of percentage increases divided by the number of increases for the control levels and job type.
- **Total Budget Salaries**—If the increase number is equal to 1, the employee budgeted annual salary is added to the total amount. If the increase number is greater than 1, only the amount of the budgeted increase is added.
- **Total Headcount**—Number of employees included in the totals for the line.
- **Total Number Increases**—Number of increases on this line is totaled. If an employee is budgeted for two or more increases, this total is incremented by the actual number of increases budgeted for the plan year.

Report sort order

As delivered, the sort order of this report is CONTROL-1, CONTROL-2, CTRL-THREE, CTRL-FOUR, CTRL-FIVE, CTRL-SIX, and JOB-TYPE.

Parameter options and setup

- **Salary Plan Year**—Enter the plan year start date in the format MM-DD-CCYY or CCYYMMDD. (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere)
- **Salary Plan Number**—Select a salary plan number from the option list.

Salary Plan Table (9H-RPT)

The Salary Plan Table report (9H-RPT) provides a printed copy of the Percent Increase tables on a batch report.

Business Tasks

This report is used to complete the following business task:

- Review and analyze fixed-percentage salary plans

Report field details

- **Control Number**—Control Number associated with the Salary Plan table record.
- **Control Four**—Human Resource Organization Level 4 value associated with this Salary Plan table record.
- **Control Five**—Human Resource Organization Level 5 value associated with this Salary Plan table record.
- **Generic Job Type**—Generic category that further identifies a job.
- **Generic Job Description**—Description for the category associated with a job.
- **Salary Plan Type**—Value identifying the salary plan.
- **Salary Plan Description**—Description for the value identifying the salary plan.
- **Table Date**—Effective date of the Salary Plan table.
- **Budget Pct-Chge**—Percentage used to calculate the budgeted salary change for each employee to whom this Salary Plan table record applies.
- **Budgeted Headcount**—Number of employees expected to be affected by this Salary Plan table record.

Report sort order

As delivered, the sort order of this report is CONTROL-1, CONTROL-2, CONTROL-NUMBER, CTRL-THREE, CTRL-FOUR, JOB-TYPE.

Parameter options and setup

- **As Of Date**—Enter the As Of Date in MM-DD-YY (US and Canada) or DD-MM-YY format (elsewhere). You may specify this parameter and leave the Control Number text box blank to print all table records.
- **Control Number**—Enter the four-digit Control Number of the table set to be printed. You may specify this parameter and leave the As Of Date text box blank to print all table records in the table set, regardless of date.
- **Table Record Type Option**—Enter the associated number of the table record type you want to print. You may run any combination of the TH tables in batch, for example, '34' or '234'.

Salary Plan to Actual Comparison (5J-RPT)

The Salary Plan to Actual Comparison report (5J-RPT) provides a comparison of salary plan budget data to actual salary increases awarded with effective dates that fall within the salary plan year.

Business Tasks

This report is used to complete the following business tasks:

- Compare salary budget to actual salary data
- Review corporate salary variance figures
- Analyze individual employee salary variances

Report field details

- **Control Three**—Human Resource Organization Level 3 value assigned to this employee.
- **Control Four**—Human Resource Organization Level 4 value assigned to this employee.
- **Control Five**—Human Resource Organization Level 5 value assigned to this employee.
- **Control Six**—Human Resource Organization Level 6 value assigned to this employee.
- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Job Title**—Description of the job assigned to an employee.
- **Rating**—Performance appraisal rating value.
- **Prior Year Salary Date**—Effective date of the employee's last salary change.
- **Prior Year Salary Annual**—Annual salary as of the employee's last salary change.
- **Current Activity Date**—Date of the employee's last major activity.
- **Current Activity Status**—Description of the result of the major activity entry.

Report sort order

As delivered, the sort order of this report is CONTROL-2, CTRL-THREE- through CTRL-SIX, JOB-TYPE, and EMPLOYEE-NAME-20.

Parameter options and setup

- **Salary Plan Year**—Enter the plan year start date in the format MM-DD-CCYY or CCYYMMDD. (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).
- **Salary Plan Number**—Select a salary plan number from the option list.

Salary Planning/Budgeting Turnaround List (5B-RPT)

The Salary Plan/Budget Turnaround List report (5B-RPT) lists all employees by department (or customer-defined budget group), their current salary data, and scheduled increase date(s) and amount(s). This includes space to manually enter individual employee exceptions to the salary plan.

Business Tasks

This report is used to complete the following business tasks:

- Review and analyze the proposed salary increase for each employee
- Approve projected salary increases
- Write in exceptions or variances for individual employees

Report field details

- **Control Three**—Human Resource Organization Level 3 value assigned to an employee.
- **Control Four**—Human Resource Organization Level 4 value assigned to an employee.
- **Control Five**—Human Resource Organization Level 5 value assigned to an employee.
- **Control Six**—Human Resource Organization Level 6 value assigned to an employee.
- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Job Type**—Generic category that further identifies a job.
- **Job Title**—Description of the job assigned to an employee.
- **Rating**—Performance appraisal rating value.
- **Salary Change**—Reason for the salary change.
- **Employee Status**—Employee's activity status.

Report sort order

As delivered, the sort order of this report is CONTROL-1, CONTROL-2, CTRL-THREE, CTRL-FOUR, CTRL-FIVE, CTRL-SIX, JOB-TYPE, and EMPLOYEE-NAME.

Parameter options and setup

- **Salary Plan Year**—Enter the plan year start date in the format MM-DD-CCYY or CCYYMMDD. (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).
- **Salary Plan Number**—Select a salary plan number from the option list.

Salary Planning/Budget Programs [TD Tables] (5D-RPT)

The Salary Planning/Budget Programs [TD Tables] report (5D-RPT) automatically creates employee salary budget records from a pay-for-performance salary plan. This process creates multiple increases for one salary plan year based on company policy, the employee's performance appraisal rating value, and compa ratio (or position in range, whichever is applicable). An audit report is printed showing the salary budget records created or an error message if the record cannot be created.

Business Tasks

This report is used to complete the following business task:

- Automatically create employee salary budget records from a pay-for-performance salary plan

Report field details

- **Ctrl Three**—Human Resource Organization Level 3 value assigned to this employee.
- **Ctrl Four**—Human Resource Organization Level 4 value assigned to this employee.
- **Ctrl Five**—Human Resource Organization Level 5 value assigned to this employee.
- **Ctrl Six**—Human Resource Organization Level 6 value assigned to this employee.
- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Increase #**—Sequence of increase for the salary plan year.
- **Increase Type**—Value indicating reason for the increase.
- **Increase Date**—Effective date of the increase.
- **Percent Change**—Percent change between the prior salary and the current one.
- **Per Pay Period Amt**—Annual salary divided by number of pay periods.
- **Amt Change**—Amount difference between the prior annual salary and the current one.
- **Annual Salary**—Employee's current annual salary amount.

Report sort order

As delivered, the sort order of this report is CONTROL-1, CONTROL-2, CTRL-THREE, CTRL-FOUR, CTRL-FIVE, CTRL-SIX, EMPLOYEE-NAME.

Parameter options and setup

- **Salary Plan Year**—Enter the plan year date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).
- **Salary Plan Number**—Select a salary plan number from the option list.
- **Logic Indicator Option**—Enter a value to represent the table records to be used to create the salary budget record.
- **Range Indicator Option**—Enter a value to indicate whether a maximum is to be applied to the resulting projected salary.

Salary Planning/Budget Programs [TH Tables] (5H-RPT)

The Salary Planning/Budget Programs [TH Tables] report (5H-RPT) creates employee salary budget records automatically from an across-the-board salary plan. This process creates one budgeted increase for the salary plan year on the one-year anniversary of the employee's last salary change. An audit report is printed showing the created salary budget records, or an error message if the record cannot be created.

Business Tasks

This report is used to complete the following task:

- Automatically create employee salary budget records from an across-the-board salary plan

Report field details

- **Ctrl Three**—Human Resource Organization Level 3 value assigned to this employee.
- **Ctrl Four**—Human Resource Organization Level 4 value assigned to this employee.
- **Ctrl Five**—Human Resource Organization Level 5 value assigned to this employee.
- **Ctrl Six**—Human Resource Organization Level 6 value assigned to this employee.
- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Increase #**—Sequence of increase for the salary plan year.
- **Increase Type**—Value indicating reason for the increase.
- **Increase Date**—Effective date of the increase.
- **Percent Change**—Percent change between the prior salary and the current one.
- **Per Pay Period Amt**—Annual salary divided by number of pay periods.
- **Amt Change**—Amount difference between the prior annual salary and the current one.
- **Annual Salary**—Employee's current annual salary amount.

Report sort order

As delivered, the sort order of this report is CONTROL-1, CONTROL-2, CTRL-THREE, CTRL-FOUR, CTRL-FIVE, CTRL-SIX, EMPLOYEE-NAME.

Parameter options and setup

- **TH Table Indicator Option**—Enter the TH table type to be used by this pass of the program to create salary budget records. You can use a combination of TH1, TH2, TH3, and TH4 records; however, each time this report is scheduled to run, only one type of TH record will be processed.
- **Salary Plan Number**—Select a salary plan number from the option list.
- **Salary Plan Start Date**—Enter the plan year start date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Salary Review Authorization Form I (5O-RPT)

The Salary Review Authorization Form I report (5O-RPT) provides detailed and basic salary data on the employee as well as space to manually enter or automatically print proposed and actual increase amounts, effective dates, and so forth, for any employee who is scheduled to receive a merit increase within the month requested. This report prints one 8.5" x 11" form per employee.

Business Tasks

This report is used to complete the following business tasks:

- Initiate the salary review process
- Review salary history and statistics
- Record salary increase information
- Record salary increase authorization signatures
- Enter review information online

Report field details

- **Salary Change Type**—Value and description that explains how the proposed salary increase was determined.
- **Salary Effective Date**—Effective date of the proposed salary increase.
- **Increase Amount**—Annual amount of the proposed increase.
- **New Salary/Wage**—Proposed salary expressed as an annual, per pay period, or hourly amount based on the salary grade table associated with the employee's salary grade.
- **Percent Change**—Percentage difference between the current salary and the proposed salary amount.
- **New Compa Ratio**—Compa ratio of the proposed salary.
- **Appraisal Table**—The Matrix ID associated with the pay-for-performance.
- **Used**—Salary Plan table used to generate this report is printed here if one of the TD logic indicator options is used to run this report.
- **Suggested Date Range**—The recommended range of dates, calculated from the range of months found in the TD3 or TD6 table, is printed here if one of the TD options is used to run this report.
- **Suggested Range**—The recommended range of percentages found in the TD9 or TD0 table is printed here if the CR or RR logic indicator option is used to run this report.

Parameter options and setup

- **Effective Date**—Enter the effective date in the format MM-DD-CCYY or CCYYMMDD. The program will use the system date if the literal 'CCYYMMDD' is entered (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).
- **Salary Plan Year**—Enter the date of the first day in the salary plan year using the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). This entry is required only if you have chosen to run the report using a logic indicator option of P1, P2, or P3.
- **Logic Indicator Option**—Enter a value to represent the table records or salary plans to be used to create the salary information.
- **Range Indicator Option**—Enter a value to indicate whether a maximum is to be applied to the resulting projected salary.

Technical considerations*:*

The following technical considerations must be reviewed prior to running this report:

- A change to the Appraisal Ratings option list (when using the 'M' option) requires a RECALC of the option list as well as a RELOAD of program 5OTABL.
- Any format changes made to the 5-DATA program may require a modification to, and RETYPE of, any of the following RTEDIT files: 5O-R0, 5O-R1, 5O-R2, 5O-R3, 5O-R4.

Salary Review Authorization Form II (5P-RPT)

The Salary Review Authorization Form II report (5P-RPT) provides detailed and basic salary data on the employee as well as space to manually enter or automatically print proposed and actual increase amounts, effective dates, and so forth, for any employee who is scheduled to receive a merit increase within the month requested. This report prints two employee forms per landscape page.

Business Tasks

This report is used to complete the following business tasks:

- Initiate the salary review process
- Review salary history and statistics
- Record salary increase information
- Record salary increase authorization signatures
- Enter review information online

Report field details

- **Type**—Value that indicates how the proposed salary increase was determined.
- **Eff Date**—Effective date of the proposed salary increase.
- **Inc Amt**—Annual amount of the proposed increase.
- **New Sal**—Proposed salary expressed as an annual, per pay period, or hourly amount based on the salary grade table associated with the employee's salary grade.
- **Inc %**—Percentage difference between the current salary and the proposed salary amount.
- **Compa Ratio**—Compa ratio of the proposed salary.

Parameter options and setup

- **Effective Date**—Enter the effective date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). The program will use the system date if the literal 'CCYYMMDD' is entered.
- **Salary Plan Year—**Enter the date of the first day in the salary plan year using the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). This entry is required only if you have chosen to run the report using a logic indicator option of P1, P2, or P3.
- **Logic Indicator Option—**Enter a value to represent the table records or salary plans to be used to create the salary information.
- **Range Indicator Option—**Enter a value to indicate whether a maximum is to be applied to the resulting projected salary.

Technical considerations:

Review the following technical considerations prior to running this report:

- A change to the Appraisal Ratings option list (when using the M option) requires a RECALC of the option list as well as a RELOAD of program 5PTABL.
- Any format changes made to the 5-DATA program may require a modification to, and RETYPE of, any of the following RTEDIT files: 5P-R0, 5P-R1, 5P-R2, 5P-R3, 5P-R4.

Salary Review Forms Not Returned By Date (18-RPT)

The Salary Review Forms Not Returned By Date report (18-RPT) lists all employees for whom salary review paperwork has not been returned by the expected return date.

Business Tasks

This report is used to complete the following business task:

- Track salary review forms not returned by the expected return date

Report field details

- **Ctrl Three**—Human Resource Organization Level 3 value assigned to this employee.
- **Ctrl Four**—Human Resource Organization Level 4 value assigned to this employee.
- **Ctrl Five**—Human Resource Organization Level 5 value assigned to this employee.
- **Ctrl Six**—Human Resource Organization Level 6 value assigned to this employee.
- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Review Scheduled Date**—Date the next salary review is to be performed.
- **Review Scheduled Type**—Value that defines the type of salary review to be performed.
- **Expected Return Date**—Date the salary review form is due back in the originating department.
- **Actual Return Date**—Date the salary review form was actually received back in the originating department.

Report sort order

As delivered, the sort order of this report is CONTROL-1, CONTROL-2, CTRL-THREE, CTRL-FOUR, CTRL-FIVE, CTRL-SIX, and DATE-RETURN-EXPECTED.

Parameter options and setup

- **As Of Date**—Enter the As Of Date in MM-DD-YY (US and Canada) or DD-MM-YY format (elsewhere). If this text box is left blank, the system date is used.

Scheduled Salary Reviews Within Selected Months (59-RPT)

The Scheduled Salary Reviews Within Selected Months report (59-RPT) lists all employees who are scheduled to receive salary reviews within the next month.

Business Tasks

This report is used to complete the following business task:

- Track employees due for a salary review in a specified month

Report field details

- **Ctrl Three**—Human Resource Organization Level 3 value assigned to this employee.
- **Ctrl Four**—Human Resource Organization Level 4 value assigned to this employee.
- **Ctrl Five**—Human Resource Organization Level 5 value assigned to this employee.
- **Ctrl Six**—Human Resource Organization Level 6 value assigned to this employee.
- **Employee Name**—Employee's legal name.
- **Employee Number**—Unique employee identifier, up to 10 characters in length.
- **Salary**—Current pay amount based on salary grade frequency.
- **Salary Chg Date**—Most recent salary change date.
- **Months Since**—Number of months since last salary change.
- **Compa Ratio**—Ratio of the employee's salary compared with the midpoint of the salary range.
- **Rating Date**—Date of performance appraisal rating.
- **Rating Code**—Performance appraisal rating value.
- **Salary Grade**—A value associated with each salary grade and its range.
- **Salary Range**—Level description and amount for each point on the salary grade range.

Report sort order

As delivered, the sort order of this report is CONTROL-1, CONTROL-2, CTRL-3, CTRL-4, CTRL-5, CTRL-6, and EMPLOYEE-NAME.

Parameter options and setup

- **Effective Date**—Enter the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) to mark the start of a one-month period.
- **Salary Plan Year**—Enter the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere) if budget records are specified in the Logic Indicator Option.
- **Logic Indicator Option**—Type an option to identify the logic to calculate the review date and amount of increase.
- **Range Indicator Option**—Type 'M' or leave the text box blank.

Summary - Salary Analysis by Grade (14-RPT)

The Summary—Salary Analysis by Grade report (14-RPT) provides a statistical analysis of salary variance by job code within a salary grade for all active employees.

Business Tasks

This report is used to complete the following business tasks:

- Review salary totals and averages for each job assignment within the salary grade
- Analyze salary costs by job assignment

Report field details

- **Salary Grade**—A value associated with each salary grade and its range.
- **Geographic Index**—A value attached to the salary grade that represents a location and allows multiple salary ranges by location for one salary grade.
- **Job Code/Extent**—Value representing a job.
- **Job Title**—Description of a job.
- **Grade Midpoint**—Amount equidistant between the salary grade minimum and maximum values.
- **Converted Salary**—Salary expressed as an annual, per period, or hourly amount depending on the salary grade table type.
- **Compa Ratio**—Ratio of the employee's salary compared with the midpoint of the salary range.
- **Actual Salary**—Annual salary amount.
- **Total Employees**—Count of employees represented by the total figures.
- **Average Actual**—Total of the actual salary amounts divided by the number of employees.

Report sort order

As delivered, the sort order of this report is CONTROL-1, CONTROL-2, SALARY-GRADE, JOB-CODE, and JOB-CODE-EXTENT.

Parameter options and setup

There are no report parameters for this report.

TC Table Records (9C-RPT)

The TC Table Records report (9C-RPT) retains the results of the evaluation of relative worth of jobs with an organization by associating the resulting code and point data to the JOB-CODE and JOB-CODE-EXTENT previously established on the TA Table. The evaluation code categories provided on the TC Table are Knowledge, Resourceful, Responsibility, Work-Environment, and Other. The 9C-RPT prints these Tables records on a batch report.

Business Tasks

This report is used to complete the following business task:

- Review the Job Points Table Entries for each Job Code/Extent

Report field details

- **Cntl Nbr**—Control Number associated with this table.
- **Job Cd**—The job code value representing a job.
- **Extent**—Extension of the job code allowing the same job code to be used to define a job that is the same except for a few attributes
- **Table Date**—The first effective date for the table entry.
- **Seq Nbr**—The sequence number used to combine TC tables in the event you need more than five code and point categories.
- **Job Profile**—A percent rating for each of the five job evaluation categories to the TOTAL-JOB-POINTS. The percentage is correlated on a high-high, low-low basis with the importance of each category.
- **Knowledge Code**—The code received in the Knowledge category.
- **Knowledge Points**—The value associated with the point score received in the Knowledge category.
- **Resourceful Code**—The code received in the Resourceful category.
- **Resourceful Points**—The value associated with the point score received in the Resourceful category.
- **Responsibility Code**—The code received in the Responsibility category.
- **Responsibility Points**—The value associated with the point score received in the Responsibility category.
- **Work Environ Code**—The code received in the Work Environment category.
- **Work Environ Points**—The value associated with the point score received in the Work Environment category.
- **Other Code**—The code received in the Other category.
- **Other Points**—The value associated with the point score received in the Other category.
- **Total Job Pts**—The Total Job Points field in the system that is added to the sum of the five job evaluation points categories.
- **Date Last Evaluated**—The date this particular job was last assessed.

Report sort order

As delivered, the sort of the report is CONTROL 1-2, CONTROL-NUMBER, TC-JOB-CODE, TC-JOB-CODE-EXTENT, and TC-TABLE-DATE.

Parameter options and setup

- **As Of Date**—Enter the As Of Date in MM-DD-YY (US and Canada) or DD-MM-YY format (elsewhere). The system selects the Table records in effect as of this date. You may specify this parameter and leave the Control Number text box blank to print all Table records.
- **Control Number**—Enter the Control Number of the Table set you want to print. You may specify this parameter and leave the As Of Date text box blank to print all Table records in the Table set, regardless of date.

Writes Table Appraisal Values (5G-RPT)

The Writes Table Appraisal Values report (5G-RPT) adds a matrix identifier to the employee's Performance Appraisal Results form based on the Job Type displayed on the employee's Job Assignment/Changes form (05-SCR).

Business Tasks

This report is used to complete the following business task:

- Automatically add a matrix identifier to the employee's record

Report field details

No report is generated by this program.

Parameter options and setup

- **As Of Date**—Enter the As Of Date in MM-DD-YY (US and Canada) or DD-MM-YY format (elsewhere).

See also:

- Automatically generating the matrix ID on an employee performance appraisal for a pay-for-performance salary plan ***(on page 122)***

APPENDIX B

Option List Quick Reference

In This Appendix

Introduction

This section provides a quick reference guide to Salary Administration option lists covered in this manual.

The option lists and their description, associated form(s), and examples of the delivered options/descriptions are shown in option list name sequence. Option lists containing delivered options that must not be modified are indicated by an asterisk.

HR11 - Salary Change Type*

Budgeted Salary Information form (45-SCR)
Salary Assignment/Changes form (40-SCR)
Report Parameters form for Mass Salary Update/Report program (MSURPT)

This three-character value is used to indicate the type of future-budgeted increase.

Do not change or delete the delivered options in this option list.

Examples:

01	Salaried Exempt
03	Hourly Non Union
04	Hourly Union

HR12 - Job Type

Percent Increase Table forms

This two-character customer-defined value is used to indicate the job type associated with the table entry and matches the job type from an employee's Job Code Table form.

Examples:

A02	New Hire
I15	Increase-Merit
S06	Increased Hours

HR15 - Appraisal Types

Performance Appraisal Results form (49-SCR)

Schedule/Track Performance Appraisals form (50-SCR)

This two-character value defines the type of appraisal that has been or is scheduled to be performed.

Examples:

JA	Annual Appraisal
JD	Scheduled Appraisal
JE	Exit Appraisal

HR16 - Appraisal Ratings*

Performance Appraisal Results form (49-SCR)
Increase Matrices Table forms

This one-character value defines the performance rating that an employee is given. As used in Salary Administration, this is a calculation option list in which the rankings range from high to low. You may change the descriptions, but changing the rating order requires additional system modifications.

Examples:

1	1-Outstanding
2	2-Above Standard
3	3-Standard

This calculation option list contains Cyborg Scripting Language for each rating, identifying the maximum position in range attainable by an employee if he or she receives the performance rating specified. Values displayed are for reference purposes only and should be changed to reflect your operating rules.

Examples:

1	1-Outstanding.
1	MOVE :100.00 TO WORK-RANGE-MAX. CODE-SET-DONE.
2	2-Above Standard.
2	MOVE :080.00 TO WORK-RANGE-MAX. CODE-SET-DONE.

Technical considerations: When using the Maximum Indicator concept in Salary Administration report programs, you must modify the Cyborg Scripting Language for those ratings that have a maximum position in range different from your own. After the changes are entered, you must execute the Compile Calculation Codeset Code program for this option list. Then run the Compile a Source program for the TD Table Routine for 5O-RPT and 5P-RPT Reports subroutine (5OTABL), the TD Table Routine for 5D-RPT Report (5DTABL), and P-HR16.

HR17 - Promotability Assessment

Performance Appraisal Results form (49-SCR)

This one-character value defines a reviewer's evaluation of an employee's potential for promotability.

Examples:

1	Not Ready for Promot
2	Promotable/Dept
3	Promotable/Job family

HR19 - Relocation Willingness

Performance Appraisal Results form (49-SCR)

This one-character value defines an employee's willingness to relocate.

Examples:

1	Wants To Relocate
2	Willing To Relocate
3	Will Considr Reloctn

HR20 - Geographic Preferences

Performance Appraisal Results form (49-SCR)

This one-character value defines an employee's geographic preference for purposes of relocation.

Examples:

0	USA Anywhere
8	Hawaii
G	United Kingdom

HR24 - Perquisite/Company Property Type

Perquisites: Monetary form (27-SCR)

This two-character value identifies the perquisite awarded to, or the company's property in the possession of, an employee.

Examples:

12	Membershp, Club
19	Financial/Est Plan'g
A6	Diner's Club

HR34 - Salary Review Type*

Scheduled Salary Review Data form (43-SCR)

This two-character value identifies the type of salary review recorded.

Do not change the meaning of options that begin with C, P, R, or T.

Examples:

C$	Sys Gen Used TD2 Tbl
SA	Sal Review Annual
SE	Sal Review Exit

HR439 - Org Level Three

Location Assignment/Changes form (05CSCR)
Percent Increase Table forms
Report Parameters form for Mass Salary Update/Report program (MSURPT)

This four-character value is the table value used to match the OL3 text box value on an employee's Location Assignment/Changes form (05CSCR).

Examples:

3030	Region 3030
3333	Region 3333
3388	Region 3388

HR449 - Org Level Four

Location Assignment/Changes form (05CSCR)
Percent Increase Tables
Report Parameters form for Mass Salary Update/Report program (MSURPT)

This four-character customer-defined value is the table value used to match the OL4 text box value on an employee's Location Assignment/Changes form (05CSCR).

Examples:

4040	Department 4040
4444	Department 4444
4488	Department 4488

HR66 - Geographic Range

Salary Grades to Benchmark Jobs Cross-Reference form (TI-SCR)
Location Assignment/Changes form (05CSCR)

This one-character value allows establishment of multiple salary ranges for one salary grade, based on the need for different salary ranges by geographic location. If your organization uses only one geographic range, the same geographic index value is used for all your Salary Grade table entries.

The geographic range further identifies the salary grade to which a benchmark record applies. If multiple salary grade ranges are established for the same salary grade, multiple benchmark table records are created, one for each unique salary grade/geographic range.

Example:

A	All Locations

HR70 - Key Separator Value

Salary Assignment/Changes form (40-SCR)
Location Assignment/Changes form (05CSCR)
Job Assignment/Changes form (05-SCR)
Report Parameters form for Mass Salary Update/Report program (MSURPT)

This one-character value defines the separation of multiple occurrences of the same transaction key. If only one salary change is entered on a date, '1st Occurrence' must be selected.

If more than one salary change is effective on the same date, you must enter a key separator in descending sequence for each salary change. For example, the first change for the date must be entered with '1st Occurrence', (that is, a key separator of 9); the second must be '2nd Occurrence', (a key separator of 8), and so on.

Examples:

0	Tenth Occurrence
1	9th Occurrence
8	2nd Occurrence
9	1st Occurrence

PP29 - Pay Frequency

Salary Assignment/Changes form (40-SCR)
Employee Information form (EF-SCR)
Report Parameters form for Mass Salary Update/Report program (MSURPT)

This one-character defines the frequency of payment.

Examples:

1	Weekly
2	Bi Weekly
3	Semi Monthly
4	Monthly

PP429 - Union Code

Report Parameters form for Mass Salary Update/Report program (MSURPT)

This five-character user-defined option list describes the employee's appropriate Union code. You must enter these options and descriptions as necessary for your organization.

Examples:

#	(None)
629	AFL-C10

PP49 - HED Stop Code

Perquisites: Monetary form (27-SCR)

This one-character value identifies the ceiling or maximum amount of a perquisite or the time period over which a perquisite is to be paid.

Examples:

1	Date
9	Monthly Max
A	YTD Max

PR019 - Pay Level 3

Report Parameters form for Mass Salary Update/Report program (MSURPT)
Payroll Home Location/Pay Allocations form (GG-SCR)

This is a four-character user-defined option list to describe the location to which the employee's labor is to be charged. You must enter these codes and descriptions as necessary for your organization. Pay Level 3 is the third level of location identification for your organization.

For Time Entry:

This entry is used to enter an override Organization-level 3 number. Select an option id the employee worked any hours at an Organization-level 3 other than his normal location.

Note: *This entry can be used to block the creation of labor records. To do this, enter '****' (four asterisks).*

Examples:

****	Inhibit Labor
01	Midwest
02	Eastern
03	Western

PR029 - Control 4

Report Parameters form for Mass Salary Update/Report program (MSURPT)
Payroll Home Location/Pay Allocations form (GG-SCR)

This is a four-character user-defined option list to describe the location to which the employee's labor is to be charged. You must enter these codes and descriptions as necessary for your organization. Pay Level 4 is the fourth level of location identification for your organization.

For Time Entry:

This field is used to enter an override Organization-level 4 number. Select an option id the employee worked any hours at an Organization-level 4 other than his normal location.

Examples:

ADM	Administration
DIST	Distribution
MAIN	Maintenance
MANU	Manufacturing

SA01 - Plan/actual Switches*

Budgeted Salary Information form (45-SCR)
Percent Increase tables
Report parameters form for Salary Plan to Actual Comparison report (5J-RPT)
Report parameters form for Salary Plan Analysis By Control Level and Job Type report (5A-RPT)
Report parameters form for Salary Planning/Budgeting Turnaround List report (5B-RPT)
Report parameters form for Delete Obsolete Budget Records report (5E-RPT)
Report parameters form for Annual Budget Report (5C-RPT)

This one-character value identifies the salary plan to which this plan/budget record applies. Up to three plans can be created for an employee in any one plan year—usually to view a 'what if' situation. 'Actual' may be selected to trigger the conversion of a plan segment to an actual future increase.

Do not change or delete the delivered options in this option list.

Examples:

1	Salary Plan 1
2	Salary Plan 2
3	Salary Plan 3
A	Actual

SA029 - Bonus/Money Perq Hed

Bonus/Commission Information form (26-SCR)

Perquisites: Monetary form (27-SCR)

This three-character customer-defined value is intended for entering HED numbers used to pay a bonus or monetary perquisite. HED numbers should match those used to pay earnings in payroll, but the description may differ from that contained on the Company Earnings form.

Examples:

005	Bonus

023	Sales Commission
035	Housing Allowance

SA03 - Authorizing Location

Bonus/Commission Information form (26-SCR)

This four-character customer-defined value identifies the locations that authorize bonus amounts or monetary perquisites. Your own values should be added to this option list.

Examples:

ACCT	Accounting Dept

SA04 - Increase Type*

Budgeted Salary Information form (45-SCR)

This one-character value indicates whether this increase was generated (or entered) as a normal by-product of the salary planning/budget policy (Regular System Gen) or entered as an exception to the policy because an employee is a high or low performer.

Do not change or delete the delivered options in this option list.

Examples:

A	Regular System Gen
H	High Performer
L	Low Performer

SA05 - Budget Increase Number*

Budgeted Salary Information form (45-SCR)

This one-character value is assigned to an increase to represent the sequence in which the increase is to be applied during a salary plan year.

Do not change or delete the delivered options in this option list.

Examples:

1	Increase Number 1
2	Increase Number 2
3	Increase Number 3

SA06 - Number of Decimals*

Increase Matrices Table forms

This one-character value identifies the decimal point placement for all values entered in the following three forms:

- $ Incr By Rating/Compa Ratio form(TD2SCR)
- $ Incr by Rating/Pos in Range (TD5SCR)
- $ Incr by Rating/Time Since Last Incr (TD8SCR).

Do not change or delete the delivered options in this option list.

Examples:

0	None (Annual Amt)
2	Two (Pay Period Amt)

4 Four (Hourly Rate)

SA07 - Pay Code Description*

Report Parameters form for Mass Salary Update/Report program (MSURPT)

This one-character value indicates whether an employee is paid automatically or through time document entry. Within each of the given categories, the employee can be hourly or salaried.

Do not change the description of any existing PA only.

Examples:

1 Hourly-TE Required
2 Salary-TE Required
3 Salary TE/No OT Allw
4 Hourly Auto Paid

SA08 - Update Field Option*

Report Parameters form for Mass Salary Update/Report program (MSURPT)

This one-character field is used by the Mass Salary Update program (MSURPT) to determine which field of either the Salary Assignment/Changes form (40-SCR) or the Employee Pay Rate Or Salary form (H1-SCR) will be updated by the process.

Do not change or delete the delivered options in this option list.

Examples:

1 HR Annual Salary
2 HR Period Salary
3 HR Hourly Rate
4 PR Period Salary
5 PR Hourly Rate

APPENDIX C

Practice and Review Answers

In This Appendix

Implementing Salary Administration

Review of Questions Answered

1. What expertise must the implementation team possess?

   The team you assemble to implement Salary Administration should have expertise in the following areas:

   Human Resources*—The Human Resources (HR) specialist must understand all the HR processes that could affect an employee's compensation, including the hiring, transferring, and terminating of employees.*

   Compensation*—The Salary Administrator and Compensation specialist must thoroughly understand your salary plans and how you intend to administer compensation in your organization.*

   Payroll*—The Payroll specialist will establish any bonus and monetary perquisite earnings required for tracking the total compensation package.*

   Cyborg's Products*—Because Salary Administration is an integral component of the Human Resources Administration, it is imperative that team members understand how this component affects other areas of the system. Team members must know the current organization structure (Control Number) setup and be able to assign a Salary Administration Control Number.*

   Information Systems*—Some technical expertise is needed to design and modify forms and reports, modify calculation option lists, set up test and development environments, and set up job streams.*

2. How can the implementation process be phased?

   Consider using the following phases in your implementation of Salary Administration:

   Familiarization*—Review current processes and compensation policies and learn Salary Administration*

   Design*—Document and implement Salary Administration requirements, test salary plans, and customize system*

   Implementation*—Complete all the tasks needed to go live*

3. What does a salary plan analysis entail?

   To conduct a salary plan analysis, you must have a thorough knowledge of both your salary plan descriptions and Salary Administration. You must map your existing plans into the Salary Administration tables. This may require that you review the test data and plan examples that are delivered with the system.

   4. What are the security considerations?

   Salary Administration contains extremely sensitive data. As with any component, you must set up a security matrix to reflect user access to the system. You will need to work *with your Security Officer to implement the security matrix. The security matrix should be tested thoroughly during the implementation process.*

Setting Up Salary Plans

Apply the Concept

1. Describe your organization's current method of budgeting salary increases and indicate which Salary Administration Salary Plan Tables might be used to implement its automation.

   This answer will be specific to the organization. You may use across-the-board, pay-for-performance, or a combination to address your organization's unique salary budgeting needs.

2. Describe any unique circumstances or contract terms that might require your organization to use more than one Salary Plan Table for forecasting budget increases.

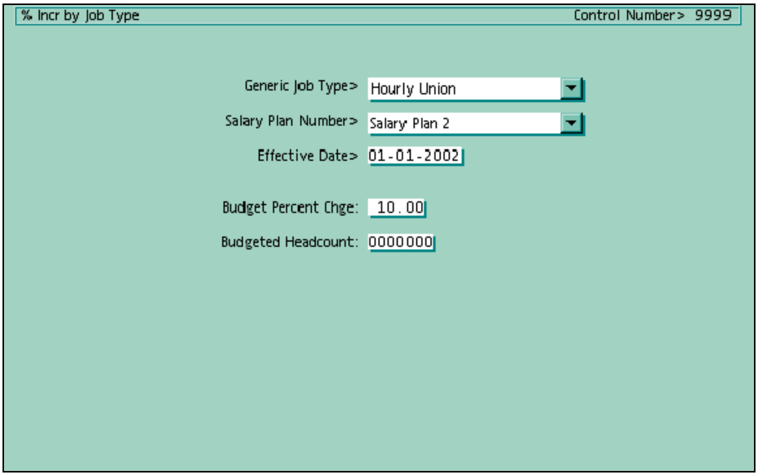
   This answer will be specific to the organization. You may have special groups of employees, such as union employees, whose salary increases are different from the remainder of your employee population. Some employee salary increases may be dictated by professional standing or salary step structure. In these cases, you may want to use different table records to address each employee group.

Extended Practice

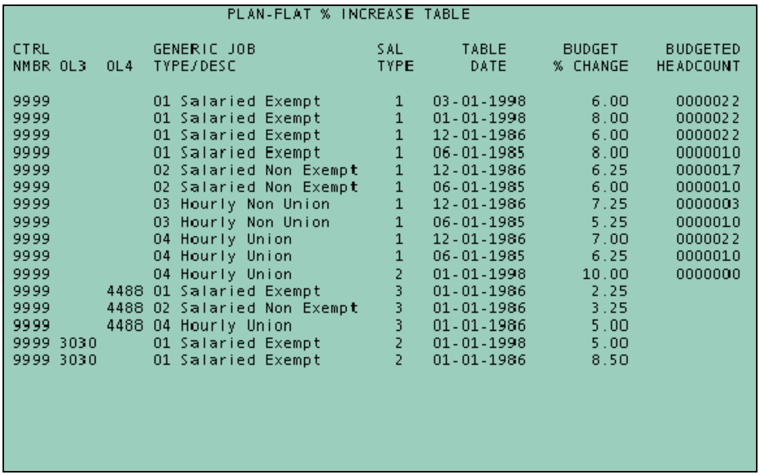
1. Set up an across-the-board salary plan that will allow your organization to give a 10 percent increase to all employees with a job type of Hourly/Union. Use a plan year start date of January 1 of next year and indicate that this is Salary Plan 2.

   Edit the % Incr by Job Type form (TH1SCR):

Component: Salary Administration
Process: Setup Across-the-Board Plans
Task: Increase By Job Type



2. View the completed salary plan in Display mode.



PLAN-FLAT % INCREASE TABLE

CTRL NMBR	OL3	OL4	GENERIC JOB TYPE/DESC	SAL TYPE	TABLE DATE	BUDGET % CHANGE	BUDGETED HEADCOUNT
9999			01 Salaried Exempt	1	03-01-1998	6.00	0000022
9999			01 Salaried Exempt	1	01-01-1998	8.00	0000022
9999			01 Salaried Exempt	1	12-01-1986	6.00	0000022
9999			01 Salaried Exempt	1	06-01-1985	8.00	0000010
9999			02 Salaried Non Exempt	1	12-01-1986	6.25	0000017
9999			02 Salaried Non Exempt	1	06-01-1985	6.00	0000010
9999			03 Hourly Non Union	1	12-01-1986	7.25	0000003
9999			03 Hourly Non Union	1	06-01-1985	5.25	0000010
9999			04 Hourly Union	1	12-01-1986	7.00	0000022
9999			04 Hourly Union	1	06-01-1985	6.25	0000010
9999			04 Hourly Union	2	01-01-1998	10.00	0000000
9999		4488	01 Salaried Exempt	3	01-01-1986	2.25	
9999		4488	02 Salaried Non Exempt	3	01-01-1986	3.25	
9999		4488	04 Hourly Union	3	01-01-1986	5.00	
9999	3030		01 Salaried Exempt	2	01-01-1998	5.00	
9999	3030		01 Salaried Exempt	2	01-01-1986	8.50	

Review of Questions Answered

1. What are salary plans?

A salary plan is a set of rules or guidelines used to budget for salary increases for the coming year.

2. How can an organization use salary plans?

   Salary plans are used to generate salary budgets that can be reviewed, modified, and ultimately approved for use. Budget salary amounts can be changed to actual amounts, allowing you to analyze budget to actual comparisons as the year progresses. You need to determine your increase policy—for example, automatic (percentage across the board), discretionary (by manager), or by performance (using a matrix of how much and when). You also need to decide whether to implement the same policy for all employees or implement different policies for different groups of employees. Even if you decide to implement the same policy for all employees, there may be some differences in timing, rates, percentages, and so on.

3. What types of salary plans can be set up using Salary Administration?

   There are several different ways to budget for salary changes using Salary Administration. These methods may be used interchangeably, based on your organization's needs:

   Manager's discretion*—Gives managers the option of specifying individual employee increases based on organization guidelines and timeframes.*

   Across-the-board percentage increases*—Provide guidelines for giving fixed percentage increases to employees.*

   Pay-for-performance increases*—Provide increase matrices for giving merit increases to employees based on their performance rating plus compa ratio, position in range, or time since last increase.*

4. How can a mass salary update be performed online?

   Open the Report Parameters For Mass Salary Update/Report form (MSURPT) by selecting the Mass Salary Update/Report group (MSURRG) from the Report Group Activities form (RGMSTR) and clicking the Parameters button.

   Complete the parameters form for the mass salary update, and select the Update option.

   Return to the Report Group Activities form (RGMSTR), select the Mass Salary Update/Report group (MSURRG), and click the Execute button.

   An audit report will be produced, which can be viewed using the Report Viewer, if you have it installed, SUBMIT/VIEW, or by running the standard JREPORT.BAT job stream.

5. How can a mass salary update be performed in 'What-if' report-only mode online?

   You would follow the same procedure as when running an update online, the only difference being that you would select Report Only on the parameters form instead of Update. You would then execute the program in the same manner as described in question 1.

Creating Annual Salary Budgets for Employees

Apply the Concept

1. Which employees in your organization might qualify for manually entered salary budget records, and why?

   This answer will be specific to your organization. Highly compensated employees may qualify for manually entered salary budget records. Your organization may also create salary budget records manually for employees who fall into groups that are too small to qualify for a salary budget plan of their own.

2. If your company plans to use the pay-for-performance method, what modifications would your company have to make to the Writes Table Appraisal Values program (5G-RPT) to generate the appropriate matrix ID on the employee performance appraisal record?

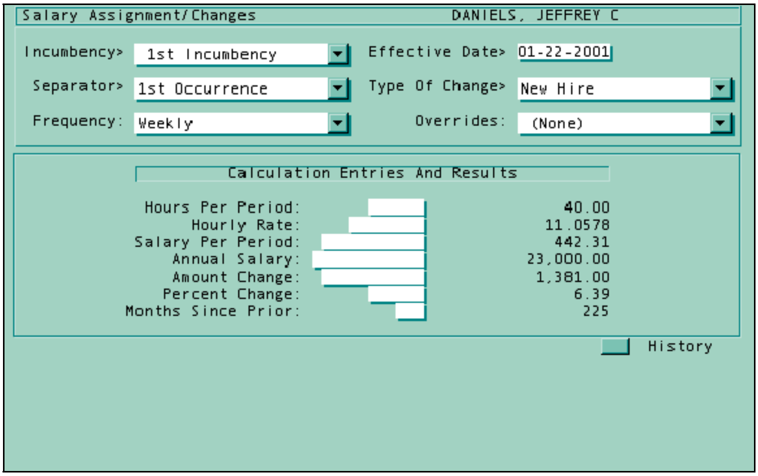
   As delivered, the Writes Table Appraisal Values program (5G-RPT) generates a matrix ID based on the job type found on an employee's Job Assignment/Changes form (05-SCR). As an alternative to job types, you can modify the program to generate the matrix ID based on some other text box or logic. You must at least specify in the coding of the program the names of the matrix IDs you have set up on the system. Refer your technical staff to line numbers 00260–00300 in the Writes Table Appraisal Values program (5G-RPT) for any coding changes required by your company.

Extended Practice

1. Add a Salary Assignment/Changes form (40-SCR) for employee 3023 using today's date. Give the employee an increase to 23,000 annually.

   Edit the Salary Assignment/Changes form (40-SCR):

   Component: Salary Administration
   Process: Perform and Process Reviews
   Task: Record Salary Increases



Salary Assignment/Changes DANIELS, JEFFREY C

Incumbency> 1st Incumbency
Effective Date> 01-22-2001
Separator> 1st Occurrence
Type Of Change> New Hire
Frequency: Weekly
Overrides: (None)

Calculation Entries And Results

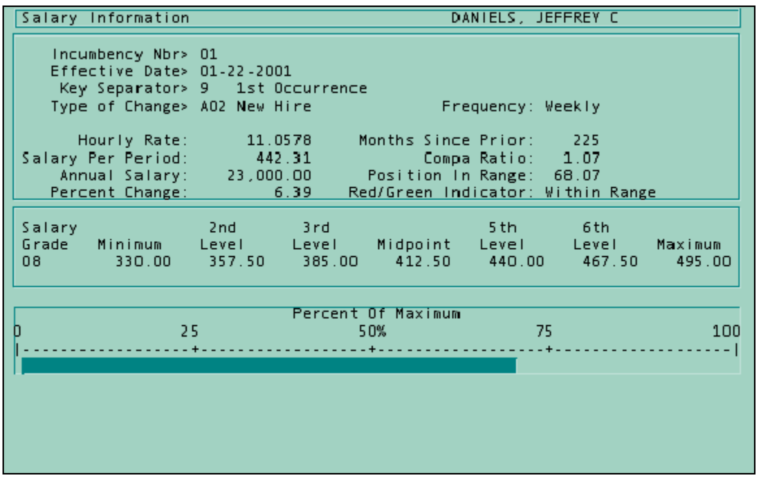
Hours Per Period:	40.00
Hourly Rate:	11.0578
Salary Per Period:	442.31
Annual Salary:	23,000.00
Amount Change:	1,381.00
Percent Change:	6.39
Months Since Prior:	225

History

2. View the Salary Information form (41-SCR) for the same employee and record the compa ratio and position in range as of today's increase.

Open the Salary Information form (41-SCR) for employee 3023:

Component: Salary Administration
Process: Perform and Process Reviews
Task: View Salary/Range Information



Salary Information DANIELS, JEFFREY C

Incumbency Nbr> 01
Effective Date> 01-22-2001
Key Separator> 9 1st Occurrence
Type of Change> A02 New Hire
Frequency: Weekly

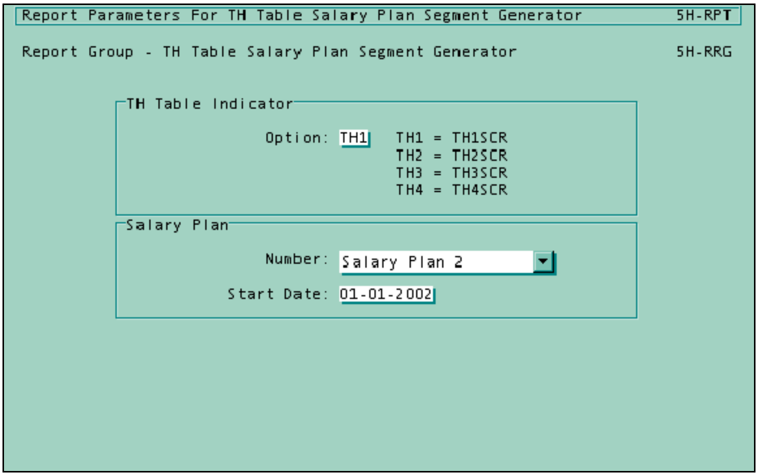
Hourly Rate:	11.0578	Months Since Prior:	225
Salary Per Period:	442.31	Compa Ratio:	1.07
Annual Salary:	23,000.00	Position In Range:	68.07
Percent Change:	6.39	Red/Green Indicator:	Within Range

Salary Grade	Minimum	2nd Level	3rd Level	Midpoint	5th Level	6th Level	Maximum
08	330.00	357.50	385.00	412.50	440.00	467.50	495.00

Percent Of Maximum
0 25 50% 75 100

The compa ratio is 1.07 and the position in range is 68.07.

3. Process the Salary Planning/Budget Programs [TH Tables] report (5H-RPT). In the report parameters, enter 'TH1' in the TH Table Indicator Option text box, select 'Salary Plan 2' in the Number text box, and enter a Salary Plan Start Date of January 1 of next year.

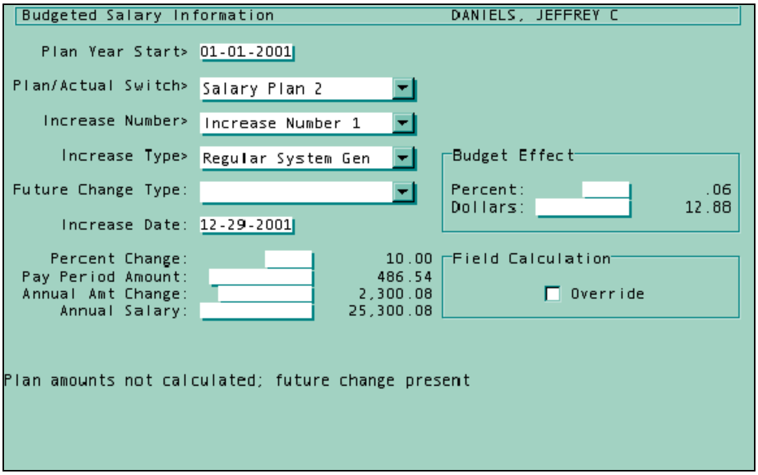


An audit report is produced.

4. View the Budgeted Salary Information form (45-SCR) for employee 3023. Note the new annual salary amount of 25,300.08 and the 10 percent increase on the one-year anniversary of the employee's last increase. Why the 10 percent increase? Why the increase on the one-year anniversary of the last increase? Note the effect on the budget. (Note: The effect will be different depending on the date that is used for the preceding steps.)

Open the Budgeted Salary Information form (45-SCR) for employee 3023:

Component: Salary Administration
Process: Produce the Annual Salary Budget
Task: Manually Override Auto Salary Budget



The employee received a ten percent increase because he is an hourly union employee who qualifies for the salary plan that was set up. When the Salary Planning/Budget Programs [TH Tables] report (5H-RPT) was run, a Budgeted Salary Information record was generated for him. The Salary Planning/Budget Programs [TH Tables] report (5H-RPT) creates one budgeted increase for the salary plan year for each employee effective on the one-year anniversary of the employee's last salary change. The budgetary effect is .06 percent and 12.88 for the example that was processed at the time this document was created.

Note: *Your amounts may be different because the results are date-dependent.*

Review of Questions Answered

1. What are the benefits of generating employee salary budgets?

   The planning and budgeting of salaries allows you to see the overall cost impact to your organization. Budget information will enable you to make decisions about how you want to administer salaries for the coming year as well as how projected salary expenditures might affect your total compensation costs.

2. How do salary plans relate to setting up employee salary budgets?

   Annual salary budgets are based on the rules you have set up in your salary plans. Each salary plan contains the amount or percentage of the increase, the employee selection criteria, and the timing of the increase. Each employee budget reflects the results of the specific plan criteria.

3. When should salary budgets be generated?

   Salary budgets may be created annually any time prior to the start of your next budget year. You will need to allow sufficient time for setting up the salary plans, generating the budget, and selecting the plan or plans that will compose your final annual salary budget. If multiple levels of approval are required before finalizing your budget, provide ample time for the turnaround of hard copy budgets.

4. What tools are available for creating salary budgets automatically?

   Salary budget records are created in two ways:

   ***Manually**, with entries to the Budgeted Salary Information form (45-SCR).*

   ***Automatically generated** by running the Salary Planning/Budget Programs [TD Tables] report (5D-RPT) or the Salary Planning/Budget Programs [TH Tables] report (5H-RPT).*

   Depending on the number of employees for whom you are creating budgets, and how much control you wish to exercise during the process, you can select either the manual or the automated method.

5. How is employee salary budget information displayed?

   The Budgeted Salary Information form (45-SCR) is used to store salary budget information and must be created and maintained for each employee for your budget process. This record defines the budgeted increase amount, percentage, and effective date for a specific salary plan year, and the prorated effect of this increase on the budget in terms of amounts and percentages for each employee.

6. What role does the employee salary budget play in preparing for the generation of overall salary budget totals?

   After you have created the employee salary budget records, you will be able to analyze the projected salary budgets and select the plan(s) used in the creation of the final annual budget. Once all employee salary budget records are generated, reports will access this information to produce total salary budget information for the organization. These reports will also use employee salary budget information to make budgeted to actual comparisons.

Reviewing and Finalizing Your Annual Salary Budget

Apply the Concept

1. What policies or procedures does your organization use to determine whether an employee is an exception to the salary budget as a high or low performer? What delivered report would you use to indicate employee exceptions to the salary budget?

   The answer to this question will be specific to your organization. You can use the Salary Planning/Budgeting Turnaround List report (5B-RPT) as a means of obtaining feedback and making adjustments to the proposed salary budgets.

2. How could your organization use the final annual salary budget reports to monitor managerial adherence to budget guidelines for salary increases?

   The answer to this question will be specific to your organization. The Annual Budget report (5C-RPT) can be distributed at any time during the salary plan year to allow managers to compare projected salary increases against actual salary increases.

Extended Practice

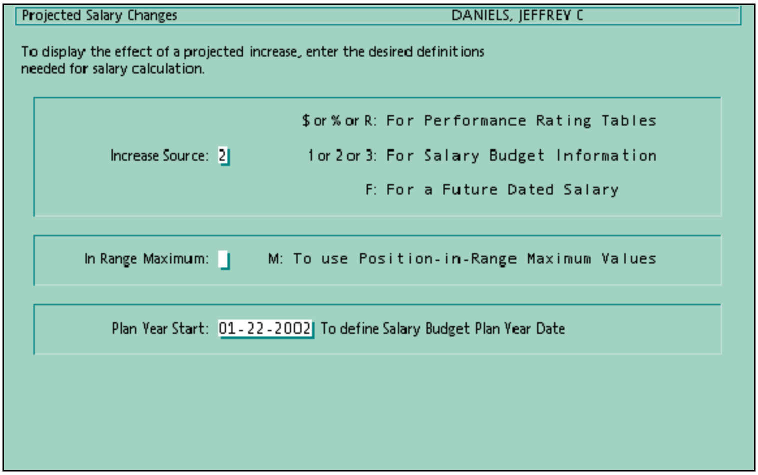
View the Projected Salary Changes form (42-SCR) for employee 3023 and note the projected compa ratio and position in range for the projected increase. Use an Increase Source of '2' and a Plan Year Start date of January 1 of next year.

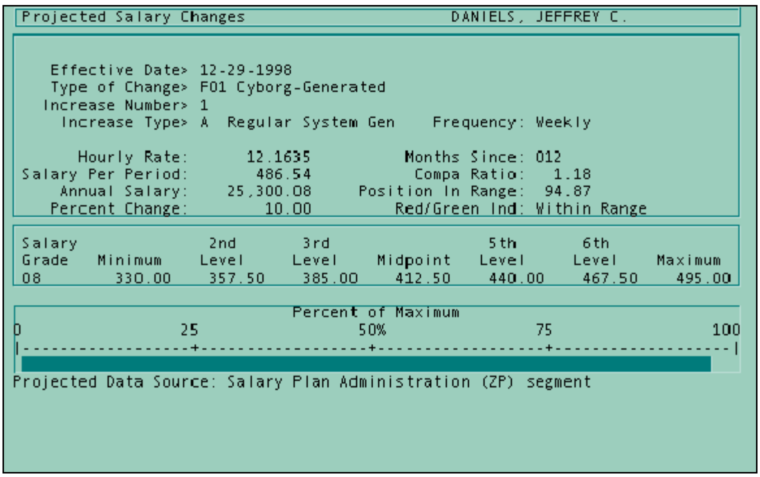
Make the following selection from the Navigator:

Component: Salary Administration
Process: Perform and Process Reviews
Task: View Projected Salary Changes

or

Component: Salary Administration
Process: Produce the Annual Salary Budget
Task: Analyze Employee Projected Increase





The compa ratio is now 1.18 and position in range is 94.87.

Review of Questions Answered

1. How can an organization use salary budget reporting?

   You may use salary budget reporting to do some individual employee analysis, group analysis, or both to determine the impact of salaries on the total budget. After you *complete the budget analysis using Cyborg's delivered salary budgeting reports and record any employee exceptions, you can select the salary plan that best meets your needs. You can then delete all other unnecessary employee budget records and possibly some of the salary plans. A final report of the approved salary budget can then be printed.*

2. What options are available for analyzing the salary budget?

   The Salary Plan Analysis by Control Level and Job Type report (5A-RPT) provides an analysis, by control level, of the salary expense resulting from a salary plan. It lists the average percent increase and the total annual budget year salary costs by control level and generic job type.

   The Salary Planning/Budgeting Turnaround List report (5B-RPT) lists all employees by department (or customer-defined budget group), their current salary data, and scheduled increase date(s) and amount(s). It includes space to write in individual employee exceptions to the salary plan.

3. How can variances or exceptions be made to the salary budget?

   If variances or exceptions must be recorded at the employee level, you can make these entries on the Budgeted Salary Information form (45-SCR). This form already contains the budget information for the employee. You may add a separate record showing that the employee is a high or low performer with an associated change in salary. The exception record, rather than the original budget record, is used for any future reporting or analysis.

4. What tool is available for automatically deleting unused employee budget records?

   To delete all the employee salary budget records that no longer have any use or meaning in the budgeting process, you may run the Delete Obsolete Budget Records report (5E-RPT).

Administering the Review Process

Apply the Concept

1. Describe your organization's current policy for employee reviews. For example, are your reviews tied to the timing of the proposed salary increases or do you periodically review individuals regardless of when proposed increases may take place? Based on your answer, would you perform both salary and performance reviews?

   This answer will be specific to your organization. Salary reviews may be handled as part of a salary review process or may be tied to a performance appraisal. When to perform the review is ultimately up to each organization. Company policy may dictate reviews on a quarterly, semiannual, or annual basis. Regardless of the type or timing of reviews you are performing, the system can help you administer and track them.

   During the review process, you can use the 'when' information created by the salary budget process to trigger reviews and the 'how much' information to provide increase information for approval. You can effectively administer the review process for each of the methods you used to project salary increases.

2. If your organization chose to use Cyborg-delivered reports for salary review authorization forms, which form would be most effective in supporting your review guidelines, and why?

   This answer will be specific to your organization. You may already have internal salary and performance review forms that meet the needs of the organization and can be used to record the outcome of the review. However, if you prefer a form that includes employee information already stored on the system, you may want to use the Cyborg-delivered review authorization forms. These forms include job, salary grade, salary and rating history, and current wage and salary information. Proposed salary increase information and an area for comments and signatures are also provided on the forms.

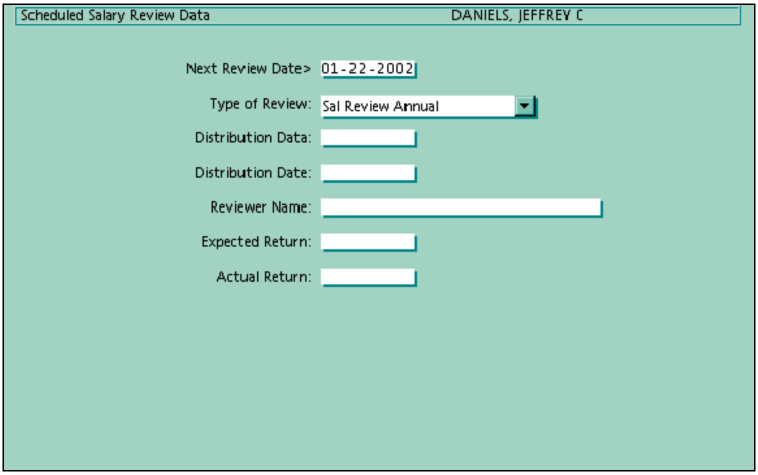
   Cyborg provides two review authorization forms, which differ only in their size and the format of the information: The Salary Review Authorization form I (5O-RPT) prints one 8.5" x 11" form per employee. The Salary Review Authorization form II (5P-RPT) prints two employee reports per11" x 14" page.

Extended Practice

1. Schedule an annual salary review for employee 3023 one year from today's date.

   Edit the Scheduled Salary Review Data form (43-SCR):

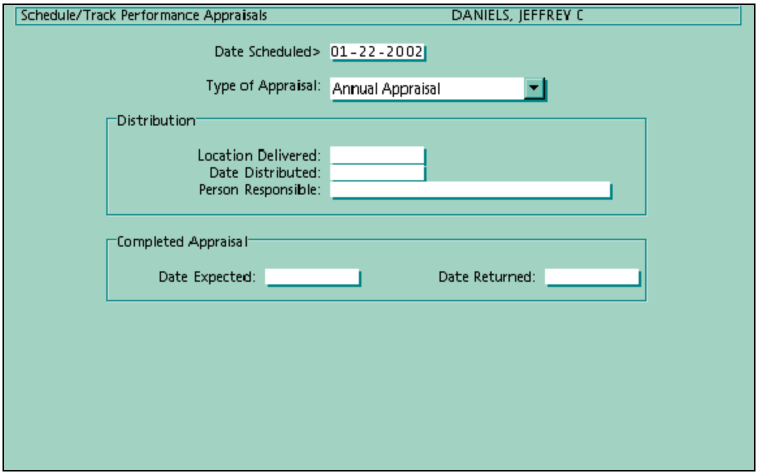
Component: Salary Administration
Process: Perform and Process Reviews
Task: Setup Salary Review Schedule



2. Schedule an annual performance review for employee 3023 one year from today's date.

   Open the Schedule/Track Performance Appraisals form (50-SCR) by making the following selection from the Navigator:

Component: Salary Administration
Process: Perform and Process Reviews
Task: Setup Performance Appraisal Schedule



Review of Questions Answered

1. What is the review process?

   The review process is used by an organization to evaluate an employee's salary or performance in a standard, timely manner.

2. How can scheduled review dates be monitored?

   You can view scheduled review dates online using the Scheduled Salary Review Data form (43-SCR) or the Schedule/Track Performance Appraisals form (50-SCR).

   Upcoming salary reviews are listed on the Scheduled Salary Reviews Within Selected Months report (59-RPT).

   Future performance appraisals are listed on the Performance Appraisals Scheduled for Month Of XX report (1R-RPT).

3. What options are available for automatically generating salary review forms?

   Cyborg provides two review authorization forms, which differ only in their size and the format of the information: The Salary Review Authorization Form I (5O-RPT) prints one 8.5" x 11" form per employee. The Salary Review Authorization Form II (5P-RPT) prints two employee forms per 11" x 14" page. The Personnel/Wage and Salary area can use either form, to initiate the salary review process and gather the appropriate *signatures. The form can be the document from which the review data are entered into the system.*

4. How can review forms be tracked after distribution?

   Each process stage associated with the salary review form can be tracked by completing the corresponding text boxes on the Scheduled Salary Review Data form (43-SCR). Forms not returned by the expected return date can be listed on the Salary Review forms Not Returned by Date report (18-RPT).

   Performance appraisals can be tracked by completing the Distribution and Completed Appraisal text boxes on the Schedule/Track Performance Appraisals form (50-SCR). Appraisals not returned by the expected date can be listed on the Performance Appraisal forms Not Returned by Expected Date report (1Q-RPT).

Entering the Results of the Review Process

Apply the Concept

1. Under what circumstances would your organization want to enter salary changes directly?

   This answer will be specific to your organization. If you used discretionary increases and recorded individual employee salary increases on the Salary Assignment/Changes form (40-SCR), each salary increase may be reviewed at this time. If the salary review indicates a change to the proposed salary increase, you may revise the existing future-dated salary increase record by using the form's override option.

   If you used either the across-the-board or pay-for-performance salary plan option and want to enter an employee's authorized salary change directly into the system, you may record the salary increase using the Salary Assignment/Changes form (40-SCR).

2. What benefit would there be to your organization to convert employee salary budget records to future-dated salary changes?

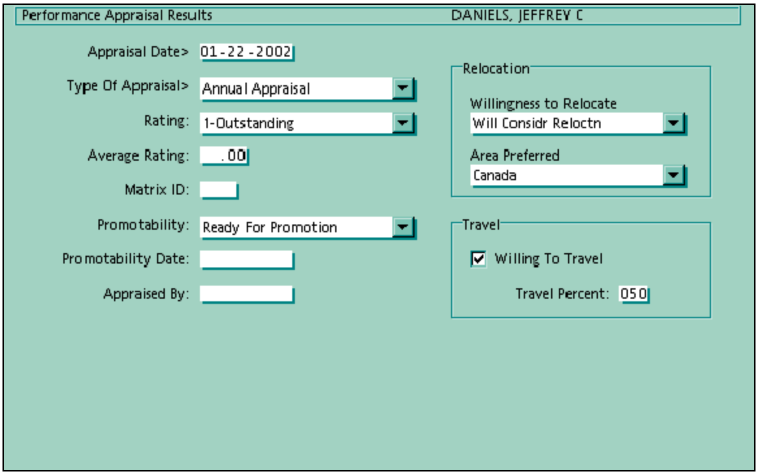
   Using the conversion method for creating a salary change from a budgeted salary record removes the possibility of keying errors. After you enter the required text boxes on the existing Budgeted Salary Information form (45-SCR) and execute the form, the system automatically recalculates all text boxes. The recalculated information is used to create a salary record, which will become effective on the date that was entered on the Budgeted Salary Information form (45-SCR).

Extended Practice

1. Record the annual performance appraisal results for employee 3023. Using a date that is one year from today's date, record a rating of '1-Outstanding' and then indicate the employee's promotability and relocation/travel preferences.

   Open the Performance Appraisal Results form (49-SCR) by making the following selection from the Navigator:

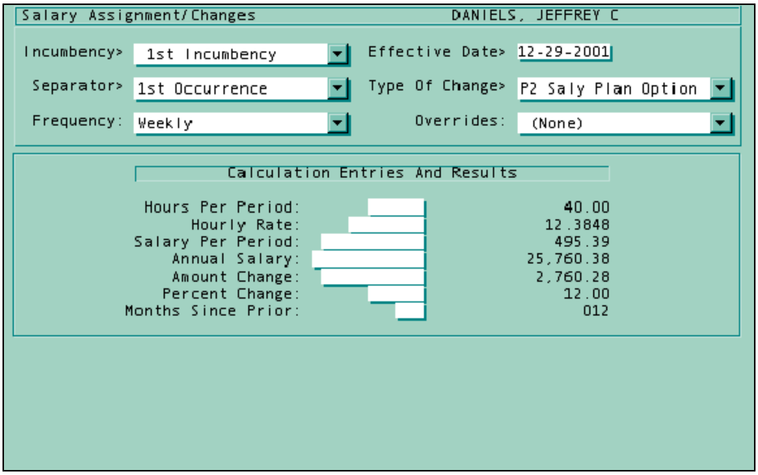
Component: Employee Development
Process: Track Performance Appraisals
Task: Performance Appraisal Results



2. Convert this employee's Regular System Generated budgeted salary increase into a future-dated salary increase. Use the same budgeted salary increase date and a 12 percent increase. What effective date and new annual salary are displayed on the resulting salary change record?

   Open the Salary Assignment/Changes form (40-SCR) by making the following selection from the Navigator:

Component: Salary Administration
Process: Perform and Process Reviews
Task: Record Salary Increases

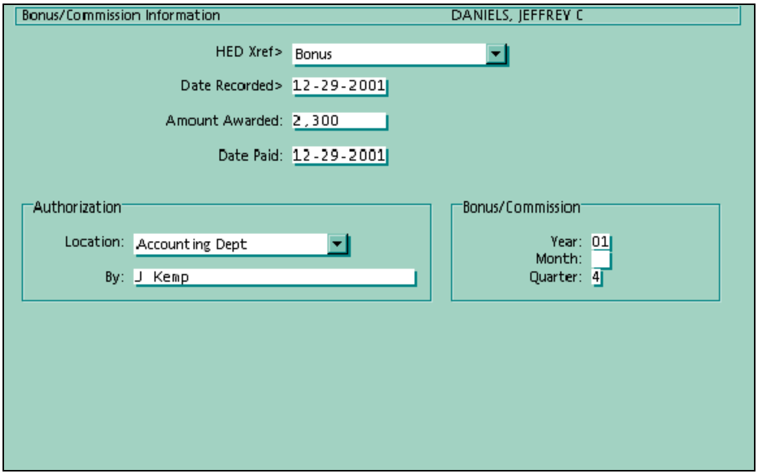


The displayed effective date is 12-29-2001 and the new annual salary is 25,760.38.

3. Record a bonus of 2,300.00 for employee 3023 using the Bonus/Commission Information form (26-SCR). Use the same date as the future-dated increase.

   Open this form by making the following selection from the Navigator:

Component: Salary Administration
Process: Perform and Process Reviews
Task: Bonuses and Commissions



Review of Questions Answered

1. How are performance appraisals used in the salary budget process?

   The Performance Appraisal Results form (49-SCR) contains the Matrix ID text box used to link an employee record to specific pay-for-performance salary increase guideline matrices. You may enter a value in this text box or let it be generated by the Writes Table Appraisal Values report (5G-RPT) program during the next salary plan year's budget process.

   The new rating that results from the performance appraisal will be used by next year's pay-for-performance salary budget tables to generate a proposed increase.

2. What methods are available for recording salary increases?

   Salary changes that result from an employee review may be recorded manually by entering an actual salary change. As an alternative, you may convert the proposed salary increase information from an employee's salary budget record to an actual salary increase.

Analyzing the Results of the Review Process

Apply the Concept

1. Of the reports available for analyzing the cost and performance results of the review process, which ones will your organization schedule for regular review, and why?

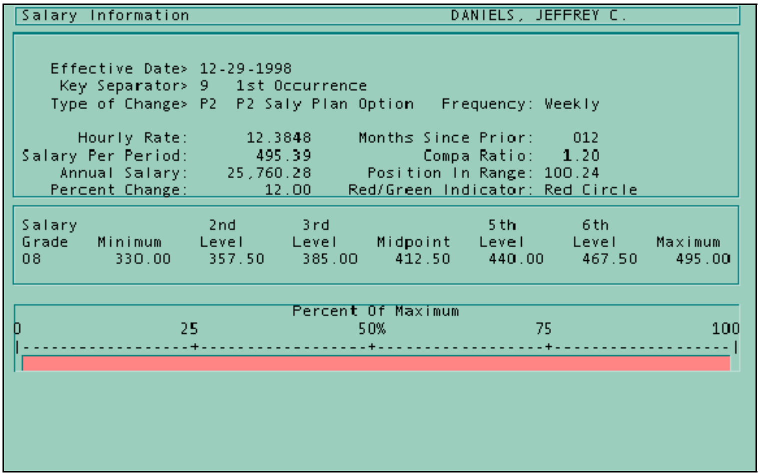
   This answer will be specific to your organization.The information that the system provides can specifically help you to analyze employee salary distribution by performance rating or by job. A summary salary analysis by salary grade is available. Any employee whose salary is over the maximum or under the minimum salary allowed by the salary grade can be reported as well. You may also want to monitor periods during which compensation incentive programs are in place, to learn whether employee job performance shows any improvement.

2. How will your organization use the comparison of salary plan to actual salary data?

   This answer will be specific to your organization. The Salary Plan to Actual Comparison report (5J-RPT) provides a comparison of salary budget data to actual salary increases with effective dates that fall within the salary plan year. This report displays an entry for each employee, indicating the salary variance figures. Depending on your needs, you can first view the corporate totals to see the total variance and then analyze the variances for individual employees. You may use this report to monitor compliance with the proposed salary budget and any variances that may affect the salary budget for the remainder of the salary plan year.

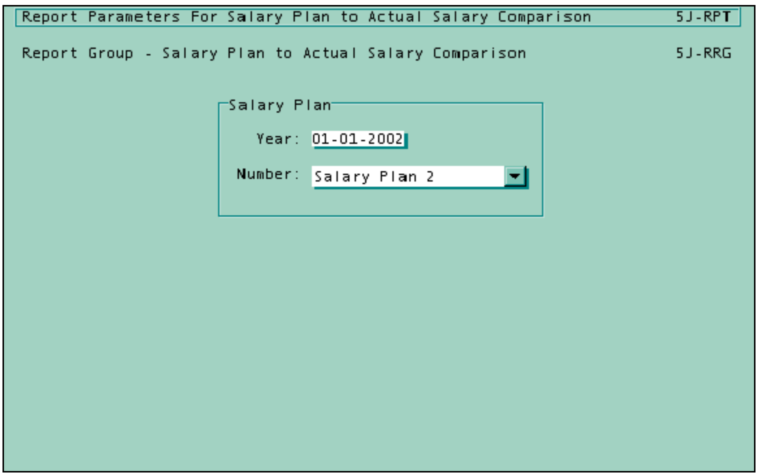
Extended Practice

1. Note the effect of employee 3023's future-dated salary increase on his salary's compa ratio and position in range using the Salary Information form (41-SCR). Is this employee's salary within the range?



The employee's salary is now above the range, showing a position in range of 100.24. The Red/Green Indicator now shows 'Red Circle'.

2. Process the Salary Plan to Actual Comparison report (5J-RPT). In the parameter record, use January 1 of next year as the salary plan year start date and select 'Salary Plan 2' as the salary plan number. Note the information displayed for employee 3023.



Depending on the date the report is run, the projected increase will display as an amount and the actual will be blank if the increase has not yet taken place. The actual will display if the effective date has been reached.

Review of Questions Answered

1. What methods are available for analyzing the results of the review process?

   To aid in this task, Salary Administration provides online and reporting support to allow you to analyze salaries and projected increases on an individual or group basis. You may view salary distribution by job and control level as well as by performance appraisal rating. You can also produce salary budget to actual salary comparisons on a scheduled or as-needed basis to help you monitor compliance with salary budget projections.

   You can schedule monthly, quarterly, or as-needed reporting to satisfy your corporation's analysis requirements. You can also view individual employee salary grade and performance information online.

2. What are the benefits of comparing salary budgets to actual salary increase amounts?

   Salary increase analysis allows you to monitor current employee compensation as compared with the corporation's proposed salary budget. You may even have a policy of monitoring and then updating the salary budget at specific points in the fiscal year. Use the Salary Plan to Actual Comparison report (5J-RPT) to monitor compliance with the proposed salary budget and any variances that may affect the salary budget for the remainder of the salary plan year.

Regenerating Salary Grades

Apply the Concept

1. Which method(s) of regenerating salary grades would be most effective in your organization, and why?

   This answer will be specific to your organization. You may change the salary grades manually or set up the parameters that will allow you to regenerate them automatically. You have three options:

   Manually enter salary grade tables with new effective dates.

   Establish a percent increase and regenerate the salary grades automatically.

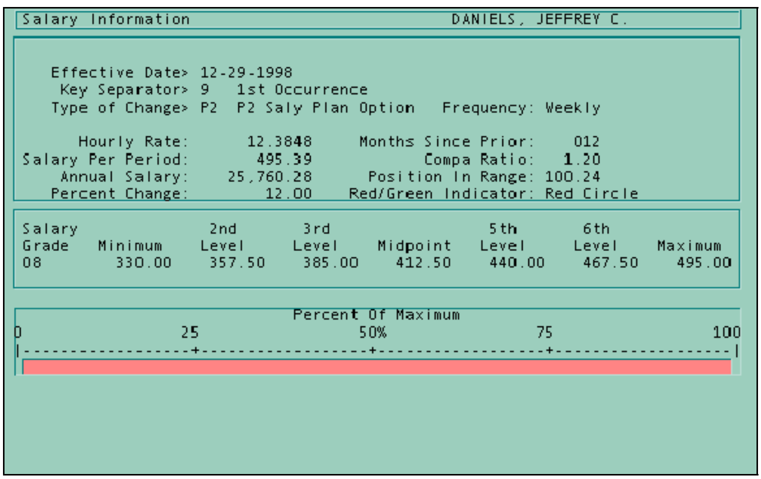
   Establish a formula increase and regenerate the salary grades automatically.

2. Once salary grades are regenerated, what additional task must be completed so that salary grade changes will be reflected at the employee level?

   Once the salary grades have been regenerated, the results must be applied to each employee record that is affected by processing the Recalculate Employee Salary—Salary Grade Table Change report (5L-RPT). Until this step is performed, employee salary information continues to be compared to the prior salary grade values.

Extended Practice

1. Access the Salary Information form (41-SCR) for employee 3023. What is his salary grade? What compa ratio and position in range are displayed? What are the values for the salary grade's minimum, midpoint, and maximum?



Salary Information DANIELS, JEFFREY C.

Effective Date> 12-29-1998
Key Separator> 9 1st Occurrence
Type of Change> P2 P2 Saly Plan Option Frequency: Weekly

Hourly Rate: 12.3848 Months Since Prior: 012
Salary Per Period: 495.39 Compa Ratio: 1.20
Annual Salary: 25,760.28 Position In Range: 100.24
Percent Change: 12.00 Red/Green Indicator: Red Circle

Salary Grade	Minimum	2nd Level	3rd Level	Midpoint	5th Level	6th Level	Maximum
08	330.00	357.50	385.00	412.50	440.00	467.50	495.00

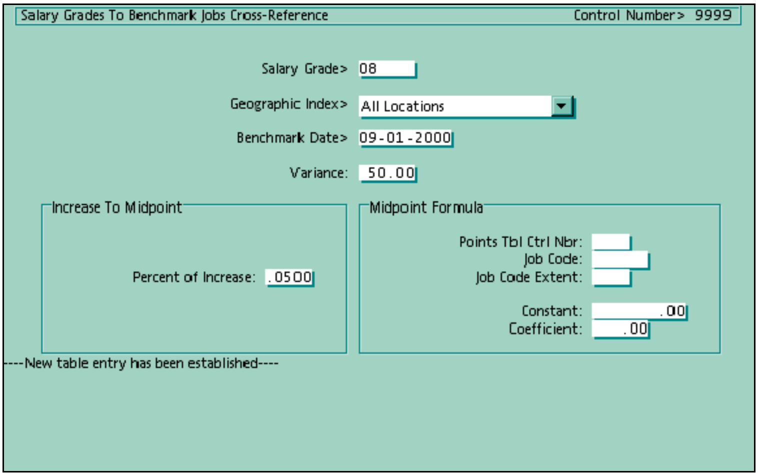
Percent Of Maximum
0 25 50% 75 100

The employee's salary grade is 08. The salary compa ratio is 1.20 and the position in range is 100.24. The minimum of the salary grade range is 330.00, the midpoint is 412.50, and the maximum is 495.00 (expressed as per pay period amounts).

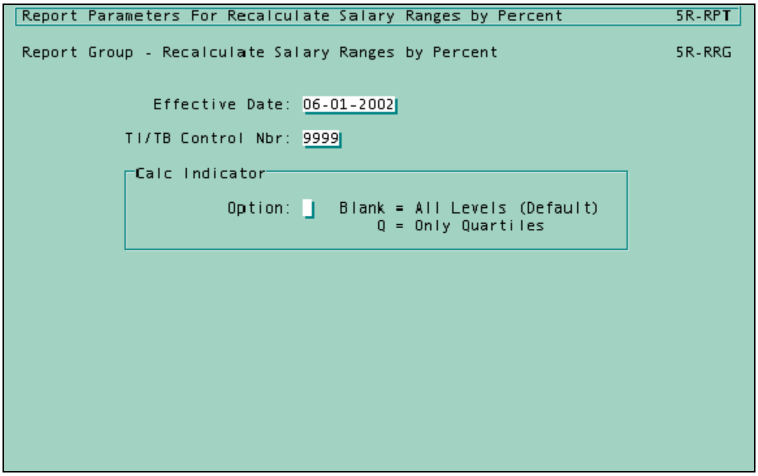
2. Set up the percent increase parameters for a salary grade percent increase as of June 1 of next year for Salary Grade 08. Indicate a variance of 50.00 and a 5 percent increase.

   Open the Salary Grades to Benchmark Jobs Cross-Reference form (TI-SCR) by making the following selection from the Navigator:

Component:	HR Setup
Process:	Setup HR Rules
Task:	Benchmark Jobs for Salary Admin

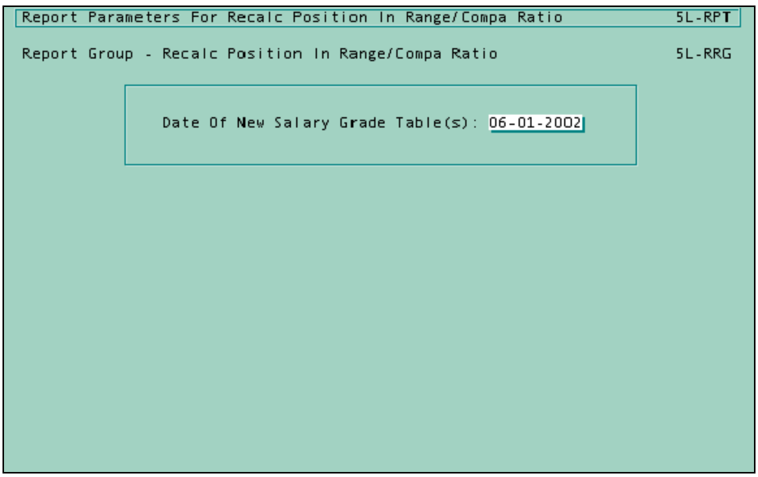


3. Recalculate the salary grade using the Recalculation of Salary Grade Range by Percent Increase report (5R-RPT). For parameters, enter an Effective Date of June 1 of next year, Control Number 9999, and leave the Option text box blank.

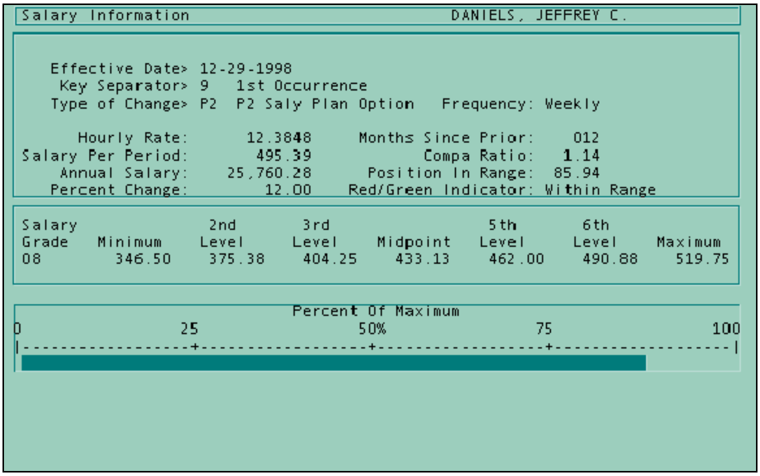


The program produces an audit listing.

4. Process the Recalculate Employee Salary—Salary Grade Table Change report (5L-RPT) using a date of June 1 of next year in the Date Of New Salary Grade Table(s) text box:



5. What changes occurred in the employee's compa ratio and position in range after the Recalculate Employee Salary—Salary Grade Table Change report (5L-RPT) was processed? What are the values for the salary grade minimum, midpoint, and maximum? What caused these changes?



Salary Information DANIELS, JEFFREY C.

Effective Date> 12-29-1998
Key Separator> 9 1st Occurrence
Type of Change> P2 P2 Saly Plan Option Frequency: Weekly

Hourly Rate: 12.3848 Months Since Prior: 012
Salary Per Period: 495.39 Compa Ratio: 1.14
Annual Salary: 25,760.28 Position In Range: 85.94
Percent Change: 12.00 Red/Green Indicator: Within Range

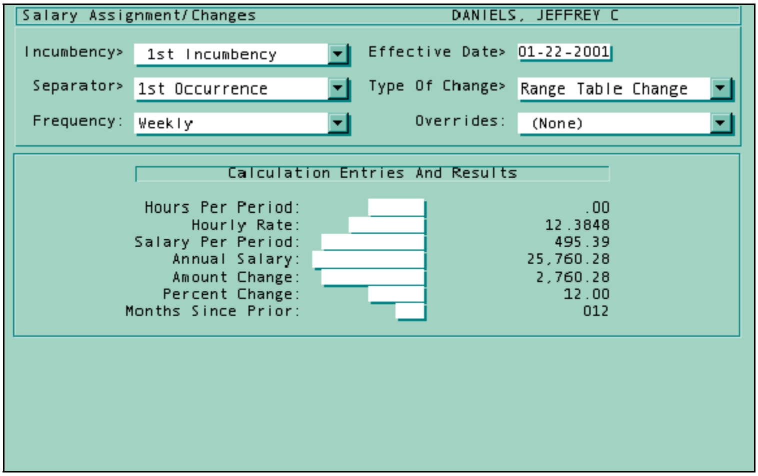
Salary Grade	Minimum	2nd Level	3rd Level	Midpoint	5th Level	6th Level	Maximum
08	346.50	375.38	404.25	433.13	462.00	490.88	519.75

Percent Of Maximum
0 25 50% 75 100

The salary compa ratio is 1.14 and the position in range is now 85.94. His salary is no longer over the maximum of the range. The minimum of the salary grade range is 346.50, the midpoint is 433.13, and the maximum is 519.75 (expressed as per pay period amounts). These permanent changes were caused by processing the Recalculate Employee Salary—Salary Grade Table Change report (5L-RPT).

6. Display the Salary Assignment/Changes form (40-SCR) for the resulting table change entry for employee 3023 and verify that no amount changes have taken place.
Open this form by making the following selection from the Navigator:

Component: Salary Administration
Process: Perform and Process Reviews
Task: Record Salary Increases



Review of Questions Answered

1. Why regenerate salary grades?

   Once the salary review process is completed and you have analyzed the outcome, the results may indicate that some employees are either above or below the assigned salary grade range. The current salary grade information may need to be updated in order to perform a more accurate salary analysis. You may also find it necessary to adjust your existing salary grades to account for changes in market value conditions.

   For example, once a year the salary grades may be reviewed by your corporation. You may find that only certain salary grades should be increased or that all salary grades should be increased by a percentage or a flat monetary amount.

2. What methods are available for updating salary grades?

   You may change the salary grades manually or set up the parameters that will allow you to regenerate them automatically. The three ways to recalculate salary grade ranges are:

   Manually enter salary grade tables with new effective dates

   Establish a percent increase and regenerate the salary grades automatically

   Establish a formula increase and regenerate the salary grades automatically

3. What process needs to occur to reflect the results of the salary grade regeneration at the employee level?

   Once the salary grades have been regenerated, the results must be permanently applied to each employee record that is affected by processing the Recalculate Employee Salary—Salary Grade Table Change report (5L-RPT). Until this step is performed, *employee salary information continues to be compared with the prior salary grade values on all reports.*

Glossary of Terms

.EXE
A binary file containing a program in machine language that is ready to be executed.

.INI
A file that contains the parameters (values) used by the .exe file (program).

360-degree appraisal
Appraisals that include evaluations from an employee's managers and supervisors, peers, subordinates, and even customers, clients, and suppliers.

Absence data
Employee-level absence information that is entered on the absences forms.

Absence point
User-defined number that may be assigned for a particular absence and that can be totaled over time to determine if an employee is within the accepted number of absences for a time period.

Absence type
A classification of an employee absence, such as 'jury duty' or 'sick'. Employee absences are recorded by date and absence type.

Account timeout
The period of time that elapses before a user's account becomes invalid because of inactivity.

Accumulator id
A three-position, alphanumeric identifier for a benefits accumulator.

Acrobat
A suite of programs developed by Adobe Systems, Inc. For creating and distributing electronic documents. Programs in the suite allow you to create a portable document format (PDF) file for a document. You can then distribute the PDF file electronically to people who view the document with their freely distributed acrobat reader. People viewing a PDF file (or document) with the Acrobat Reader see the document with the exact layout intended by the author.

Action button
An action button performs an action such as saving the information you entered or telling the system you finished reviewing a page. An action button consists of an icon (or button) accompanied by underlined text (link text). For example, at various places throughout eCyborg Interactive Workforce you may see an action button displaying a check mark accompanied by the underlined text 'save changes'. You can click either the text or the button to save your changes to the page.

Activity code
Describes the clock transaction (ring) activity, such as clock start or meal end.

Activity types
With the time and attendance solution, you can set up the system so that an employee or group of employees may clock in and out for up to eight different activities: clock-in (1), break 1 start (2), break 1 end (3), meal start (4), meal end (5), break 2 start (6), break 2 end (7), and clock end (8).

Actuarial valuation
An examination of a pension plan to determine if contributions are being accumulated at a rate sufficient to pay the promised pensions.

Administration home page
The administration page that displays when a user logs on using his or her administrator user ID and password. The administration page displays links to individual administrator pages (eCyborg Interactive Workforce, Human Resources Administration, Benefits Administration, and Payroll Administration).

Administrative User ID
User ID created by an administrator with the role of eCyborg Interactive Workforce administrator. This ID

differs from the employee user ID generated for the administrator.

Aggregate tax method
Method of calculating taxes in which year-to-date income is used to project annual wages (using prorating), on which taxes are calculated. With this method, the amount of tax withheld can vary from pay period to pay period. This method is useful in preventing a salesperson from being over withheld as the result of fluctuations in commission over various pay periods. It is activated on the payroll solution by selecting aggregate/cumula tax (9) from the Withholding Method (PR09) option list on the Employee Tax Record Maintenance form. It is also referred to as cumulative tax calculation method.

Annualization
Process of calculating the annual amount of pay based on the number of pay periods and pay period amounts. Calculated by multiplying the number of pay periods in the year by the current taxable wages in the pay period.

Annualization factor
The factor that is used to multiply current pay period wages to determine annual wages. For example, a monthly pay frequency has an annualization factor of 12. The Payroll Solution typically calculates income taxes on the basis of annual wages. The annualization factor is entered by selecting an option from the Annualization (PP33) option list on the Company Pay Frequencies form for each pay frequency.

Annuitant
Someone entitled to receive or currently receiving payments from an annuity.

Annuity
A contract providing an income for a specific period of time.

Applicant
A person who is applying for a job or position in your organization. Internal applicants come from within your organization while external applicants come from outside of your organization.

Appraisal rating
A method of ranking the performance of an employee during a given period using options ranging from 1-outstanding to 5-unsatisfactory.

ASCII
American **S**tandard **C**ode for **I**nformation **I**nterchange. The basis of character sets used in almost all present-day computers; US-ASCII uses only seven bits to convey some control codes, space, numbers, most basic punctuation, and unaccented letters a-z and A-Z.

Ask Me wizard
A natural language, full-text search facility within the online help. This allows users to type in a question, the wizard interprets the question, and displays related topics.

As-of reporting
Ability to report on data for a specified date or date range.

Audit record
A snapshot of information entered on a form. Audit records are stored on the employee database and are displayed on audit reports in an is/was reporting format. Adjustments and time entries are stored as audit records and are extracted for a payroll run in which they update the employee's record.

Audit report
A report that is available after the running of a program; it lists created records as well as error messages for records that could not be created.

Audit trail
A report of changes made to your employee database, such as the Payroll Audit Trail (0101) report.

Authorized absence
Absences that are generally considered as paid time away from regularly scheduled work.

Automatic plan
A plan that has been defined with a default option and default pre- or posttax indicator (also known as core/default plan).

Average deferral percentage
Percentage used in nondiscrimination and compliance testing mandated by US law. The calculation is defined as the contribution divided by the compensation.

Average rating
A rating used for performance appraisal systems with categories weighted by relative importance, where the average score reflects the weighted scores.

Back
Takes the user back to the previous page.

Badge
Time and Attendance Administration can be set up to use two different types of badge readers. The type of badge your organization uses, is determined by your third party badge reader software. The two types of badges are magnetic badges and bar code badges.

Badge error
Occurs when a badge is used to create a clock transaction (ring) and an employee has not been assigned to the badge.

Badge number
Up to ten-character ID stored on employee badges and clock transactions (rings) that tie clock transactions (rings) to an employee on the ***Employee Database*** (on page 394).

Banner
Banner forms separate groupings on forms produced from the Federal, State/Local, and Employee Queues.

Batch
A group of transactions submitted to the batch payroll processing system. Also, a collection of time entries that corresponds to an employee group, such as department.

Batch control record
Precedes all transactions separated by group; used to identify the company to which the transactions in that group apply. By entering anticipated totals for dollars and hours on the batch control record, you may verify your totals against those accumulated by the system.

Batch layout facility
A program that produces a segment layout for loading forms via batch. This was formerly known as BATCHL.

Batch number
An alphanumeric field on the batch control record containing a user-defined value used to identify a unique group of time entries or transactions.

Batch processing
A processing method that runs in the background and requires limited intervention.

Benchmark job
A standard or point of reference for determining total job points.

Beneficiary
A person named by the participant in an insurance or pension plan to receive any benefit provided by the plan if the participant dies.

Benefits control number
A four-position, alphanumeric identifier that specifies which tables are accessed for an organization.

Benefits statement
Report that indicates the coverage and cost of each benefits plan in which an employee participates.

Big option list
A large option list that includes a search facility. This was formerly known as a big codeset.

Bridge loan
A loan made to assist a relocated employee in purchasing a new residence before the sale of their old residence is complete.

Browser
Software application used to locate and display web pages. Modern browsers give users access to graphics, text, and multimedia information, including sound and video.

Budget plan year
A twelve-month period over which a salary budget is effective.

Budget scenario
The result of creating one or more salary plans in order to see the effect of different increase policies on the budget.

Budget setting
The process of analyzing and selecting an organization's salary budget for the coming plan year.

Cafeteria plan
A specific type of flexible benefit plan that allows employees to select their benefits from a number of benefit plans. This term may be used interchangeably with flexible benefits plan.

Calculation option list
An option list that contains calculation formula. This was formerly known as a calculation codeset.

Candidate
A person who is applying for a job or position in your organization and is under consideration.

Career planning
Providing career incentives such as advancement and additional education and training for individual employees in order to meet projected organizational needs.

Carrier record
A carrier record supplies information from one application area to another application.

Case-sensitive
A program that distinguishes between uppercase (capital) and lowercase (small) letters. A case-sensitive program that expects you to enter all commands in uppercase will not respond correctly if you enter one or more characters in lowercase.

Catalog
A file (with the extension of .cat) that contains all the information necessary for Impromptu to access and retrieve information from a relational database. The catalog provides a business view of the data, as well as information about what database to access, where the database is stored, and how the tables in the catalog are joined in the datamart.

Category code
General term used to refer to the option selected from category (PP01 and PP02) option lists on the company earnings and company deductions forms. It is used to indicate the type of earning or deduction.

CE/H
Abbreviation for considered earnings/hours.

Change control facility
A facility for updating and comparing your system control repository. This was formerly known as MAINTI/MAINTO.

Check box
A standard windows control that displays a yes/no setting, either checked (yes) or unchecked (no).

Check digit
Unique identifier that is generated by the TBLCHK program and used by the system to check the table relationship records.

Checklist
A list of tasks to be performed in sequence. The checklist displays within the navigator area. Checklists link tasks and other checklists together to perform work flow functions. Users can display a checklist by selecting a checklist icon within the tasks in the navigator.

eCyborg Interactive Workforce specific—a list of tasks/pages generally displayed in a chart with hot spots (links) for the checklist items. The user clicks the link to access the page.

Checklist item
An item appearing within the navigator when a checklist is being displayed. Checklist items include tasks, dialogs and even other checklists.

Checklist item status
Defines the status of a checklist item. These can be:

- Available to perform
- Required
- Not available
- Already completed

Checklist margin
The area of the navigator that displays the checklist item status when a checklist is being displayed.

Checkmark
If in the done column of a eCyborg Interactive Workforce checklist, indicates that an item on a checklist is complete. Can also indicate OK, finished, submit, and so forth.

Class
A class is an occurrence of a course that is specific to a location and a date, that is being administered using Training Administration. For example, 'eCyborg: Using the Web Client′ on Thursday, December 21, in Chicago is a class of the course 'eCyborg: Using the Web Client'.

Class evaluation results
These are the results as entered on the evaluation forms filled out by the class participants upon completion of the class. These results are recorded on the class evaluation results form.

Client data file
File containing information replicated from the System Control Repository. Used by client workstations to improve response time, since editing can be performed locally. May be located on each client workstation or may be located on a server and be shared by multiple client workstations on the network. Formerly known as the Client Control File.

Clock in and out
Also referred to as swipe/swiping the clock. When an employee uses their badge to record an activity time, they must pass their badge through the badge reader. This action can be referred to as clocking in and out.

Clock transaction
Record containing the information needed to create time entries for payroll processing. Clock transaction (ring) information includes date, time, and badge number. A clock transaction (ring) is created when a badge is swiped through a clock.

Clock transaction warning
Occurs when a clock transaction (ring) time falls outside of an employee's schedule warning times.

Closing costs
The costs associated with the purchase of a new house.

CLP
Abbreviation for certificates, licenses, and permits.

Codeset
A list of valid code values and associated descriptions from which you may select an appropriate entry. This is now known as an option list.

Coefficient
Customer-defined value used in the formula to calculate a new salary grade midpoint value.

Combined register (2222) report
A report that provides a detailed printout of all earnings, hours, taxes, and deductions for all the payments and adjustments made on a payroll run. It is Report Generator 2222.

Command button
A standard windows control that initiates a command of sets an option (previously known as push button).

Common tax organization
A method of setting up taxation in an organization in which all necessary tax specification records are contained in a single organization. The common tax organization often handles tax specification records more efficiently, since it avoids duplication of the federal tax records and of any state or local records used by multiple companies.

Communication event
A letter or email that can be triggered automatically or manually within the system. Communication events are set up by the system administrator and usually include data from a form or record.

Compa ratio
The ratio of a given salary compared with the midpoint of the salary range. The formula is the salary divided by the midpoint.

Competency
A requisite capacity to perform a single or set of skills or activities.

Complement limit
A 'complement limit' is the maximum number of complement units that can be assigned to a position at any one time.

Complement position
A 'complement position' is a position that is included in complement control.

Complement unit
A 'complement unit' is the type of unit used to measure the value of a position, for example, headcount, fte or hours.

Compliance
Conformity in fulfilling legal requirements.

Component
The first level of functional organization on the navigator or menu, such as employee resourcing or employee development.

Component icon
An icon that denotes the current component. There are a number of components within the system. Each component appears as an icon on the navigator.

Component plan
Any plan included under the flex master plan or grouped together under a group master.

Condition
Predefined criteria that can be added to a report's filter.

Considered earnings
An employee's paid earnings that are to be accumulated, based on plan rules, for use in determining credited service or calculations of final benefits amounts.

Considered earnings/hours (CE/H) accumulators
Used only in benefits plans to accumulate the earnings and hours an employee has acquired toward eligibility for a deferred plan. Accumulators may be retained on a monthly, quarterly, or annual basis.

Considered hours paid
Actual number of hours for which an employee was paid and that are to be accumulated based on plan rules.

Considered hours worked
Actual number of hours an employee worked. These hours are to be accumulated based on plan rules for use in determining credited service for a plan participant (or for a non-participant if eligibility has been met).

Consolidated reporting
Option that enables packaged reports to be processed for all organizations (consolidated).

Customer-defined value used in the formula to calculate a new salary grade midpoint value.

Context-sensitive help
Information about an object and its current condition. It answers the question 'what is this?'

Contribution type
The type of contribution being made to a benefits plan. The system allows for the deduction and accumulation of up to five different contributions per plan: basic employee pretax, basic employee posttax, supplemental employee pretax, supplemental post-tax, and organization.

Control 1-2
A company or group of employees (now known as an organization).

Control levels
A hierarchy of values used to determine the breakdown of an organization for reporting purposes. The values are user-defined.

Control number
An alphanumeric designation assigned to a table to define the table records that will be used for each organization.

Conversion
A method for transferring data from either a manual or automated system into the system.

Co-ordinator
A coordinator is an instructional institution, organization or person who administers training courses.

Core plan
One of the plans that make up the minimum benefits in which all eligible employees are required to enroll—for

example, medical and life. Employees who fail to return enrollment forms with their benefit choices may be automatically enrolled in the core plans (also known as default plans).

Cost categories
Cost categories are classifications or divisions used to separate costs for training into broad groupings, for example, equipment or operating costs.

Cost types
Cost types are used to further define training costs. For example, the category of equipment could be further broken down into the cost type of overhead projector and monitor rental.

Costing
Projecting the future cost of a benefits plan contribution for budget purposes.

Course
A course is a separate unit of instruction in a subject being administered using the training administration solution. For example, 'eCyborg: Using the Web Client′ is a course. This may be applied to a training course provided internally or externally.

Course directory
A course directory is a list of all available courses.

CPI
Characters **p**er **i**nch

Credited service
The number of years of employment for which an employee is given credit for use in determining final benefits amounts.

Crew
A group of employees who rotate from one schedule assignment (shift) to another, following a rotation pattern.

Crew code
A unique, one-character, alphanumeric identifier of a crew.

Cross-reference keys
Provide direct query access to data within the system database.

CSL
Abbreviation for ***Cyborg Scripting Language*** (on page 391).

Cumulative data
Also called 'to-date data'. includes payroll earning, deduction, net pay, taxable wage, and tax to-date figures for employees.

Cursor
A special symbol, usually a solid rectangle or a blinking underline character, that signifies where the next character will be displayed on the screen. To type in different areas of the screen, you need to move the cursor. You can use the arrow keys or a mouse to move the cursor.

Customer-defined
Values that depend on an organization-specific definition--for example, option list.

CYB88X
An English Language root program used to set the production version switch to on or off, in addition to other automatic settings.

Cyborg Scripting Language
Cyborg's fourth-generation programming language, previously called English Language.

Data extract
Method for extracting information from The Solution Series for the purpose of subsequently loading it into eCyborg Interactive Workforce databases.

Data load
The process of moving data from one system or media to another. It encompasses data mapping, data extraction and conversion, and the actual loading of the data. Also the method of loading data extracted from The Solution Series into eCyborg Interactive Workforce databases using programming scripts.

Data mapping
The process of identifying, comparing, and matching data (field to field) to be converted from one system or media to another.

Database
A collection of information organized so that a computer program can quickly search for and select

specific pieces of data. Think of a database as an electronic filing system.

Datamart
Relational tables with a defined structure that have been designed to automatically accept full datamart extract data seamlessly.

Deduct credits by plan
A method of distributing flexible benefit credits. The total monetary value for credits is prorated based on the employee's pay frequency. Credits are given to employees as earnings added to their pay; the cost of individual employee plans are collected through payroll deductions and listed on the employee's payment stub.

Deduct credits by plan method
A method of distributing flexible benefit credits. Credits are given to employees as earnings added to their pay; the individual employee plan costs are then collected through payroll deductions.

Deduction
An amount subtracted from available net pay. Deductions can be involuntary (child support or maintenance) or voluntary (pension plans).

Deduction cycle
A predetermined schedule for taking voluntary deductions, based on the defined frequency.

De-enrollment
The process of shutting off plan benefits for an employee for reasons other than a separation activity.

Deferred compensation
Any benefit that is not immediately payable to an employee, but is instead deferred to a later date. This term refers to retirement vehicles, including all defined benefit, defined contribution, stock, and thrift/savings plan.

Deferred plan
Any benefits plan in which benefits are not immediately payable to an employee, but are deferred to some later date. This term refers to retirement vehicles, including all defined benefit, defined contribution, stock, and thrift/savings plans.

Delimiter
A character that tells the system where an item of data ends and another starts.

Dependent
An individual who relies or depends on another for his or her support.

Dependent number
A unique number in the eCyborg Interactive Workforce database that identifies an employee's spouse and his or her other dependents.

Detail page
A page in eCyborg Interactive Workforce that displays detailed information. Summary pages contain links to the detail for each record.

Dialog box
A secondary window that appears on the screen to present information or request input. Dialog boxes are generally temporary—they disappear after you enter the requested information.

Disability insurance tax
A tax required by some us states to be funded by employee-paid contributions to pay all or part of the cost of disability insurance coverage. On the Payroll Solution, us state disability insurance tax records are established as Type 4 taxes.

Disciplinary action
Action taken against an employee for violation of an organization policy or procedure.

Discretionary increase
A salary increase amount or percentage determined by a manager according to the guidelines established by the organization.

Display
Make data or images display on a computer monitor.

Display box
An area on a form in which data is displayed (formally known as an inquiry field).

Disposable income
For garnishment purposes in the us, an employee's earnings minus deductions required by state or federal law.

Distributed location
A customer location where data changes are replicated and may be distributed. A DL is identified to the system by a unique 5-position alphanumeric node ID.

Distribution
The process of passing data from a source DL to one or more target DLs.

Distribution rules
A set of parameters that determine how data will be distributed from one DL to another. These are defined at each DL by the owner using the distribution rules screens. Distribution rules are stored in tables that are not replicated (thus, they cannot be distributed).

DL
Abbreviation for ***distributed location*** (on page 393).

Double-click
Click a mouse button twice in rapid succession.

Drop-down list
A drop-down list is a view of the acceptable entry options available for a text box.

Drop-down list box
A standard windows control that displays a current setting but can be opened to display a list of choices. The user selects a choice by double clicking on the choice. The user can type into the field, and the system moves the list of choices to the last letter typed.

Dynamic SQL
Statements created by a program that must be interpreted and converted to executable sql statements at run time.

Earned income credit
A refundable amount that reduces the tax owed by certain low-income individuals in the us who meet adjusted gross income levels.

Earning
Money paid in return for work performed or services rendered. In Payroll Administration, earnings are separated by earning numbers into various categories such as regular pay, overtime pay, shift pay, bonuses, and so forth.

Earnings category
Used to categorize similar earnings. For example, all the overtime earnings can be grouped into category 01, all the shift differentials/premiums into category 06, and so forth.

EBCDIC
Extended **B**inary **C**oded **D**ecimal **I**nterchange **C**ode; binary code for alphabetic and numeric characters developed by IBM for its computers.

eCyborg Interactive Workforce Home
Button on every page that returns the user to the eCyborg Interactive Workforce Home Page.

eCyborg Interactive Workforce Home page
Home page that displays each time employees log on to eCyborg Interactive Workforce after completing the new user tasks on the New User Home page.

Effective date
Date on which an event takes place, for example, an enrollment or benefits plan change.

EIC
Abbrevation for ***earned income credit*** (on page 393).

EL
Abbreviation for English Language, now called CSL (Cyborg Scripting Language).

Electronic Performance Support system
Online tools that help users perform their job quickly and efficiently. EPSS can include online help, computer-based training (CBT), electronic manuals, wizards, and so on.

Email
Literally 'electronic mail'. This is a message that is sent to one or more people within or outside of your organization by an automated email software package.

Employee cancellation
An employee cancellation occurs when an employee is canceled from attending a training class or training program.

Employee Database
The file that contains organization and employee records. This is File02. It was formerly known as the Master File.

Employee Database record
The complete record for an employee. It may be composed of multiple physical records.

English Language
Former name of Cyborg's fourth-generation programming language, now called Cyborg Scripting Language.

Enrollment form
A customer-defined form used by employees to record their benefits elections and any associated dependent and/or beneficiary information.

Entitlement accrual
An accumulation of hours for an employee benefit, such as sick leave or vacation time, commonly known as an accrual.

Entity
Each Organization Unit, Job, Position, and Incumbent is an entity. Together they are entities.

Entry field
An area on a screen or browser page where the user can input information.

Entry form
An entry form is a form used to enter data.

Environment
The host platform and workstations where your Cyborg system resides, and any communication protocols. Also, a work space dedicated to a specific processing type. For example: development, test, and production.

EPSS
Abbreviation for ***Electronic Performance Support system*** (on page 393).

Establishment Reporting
Establishment Reporting occurs when an employer with several business locations chooses to file wage reports, broken down by location or unit, to the Social Security Administration. Each unit is identified by a four-character code, called an Establishment Number. The employer obtains approval from the SSA to use Establishment Reporting. Establishment Reporting does not apply to 1099s.

Event
The combination of a trigger (changes made to system data) and an action (the creation of an email or letter). Events always consist of these two component halves.

Excused absence
Absences from regularly scheduled work that can be considered as either paid or unpaid time off.

Extract file
A data file generated to be used by another system or application.

Federal Insurance Contributions Act
The United States Federal Insurance Contributions Act imposes two taxes on both employers and employees. Tax is withheld from an employee's wages to finance the Old-Age, Survivor's, and Disability Insurance (OASDI) social security program and the Hospital Insurance (HI) medicare program. Employers are then required to match the amounts withheld from employees. On the Payroll Solution, employee information for FICA-OASDI social security tax is entered on tax record 101 and FICA-HI Medicare tax on tax record 103.

FICA
Abbreviation for Federal Insurance Contributions Act.

Field
A data item on the database. This is usually displayed on a form as a text box.

eCyborg Interactive Workforce specific—A space allocated for a particular item of information. A tax form, for example, contains a number of fields: one for your name, one for your Social Security number, one for your income, and so on. Every field has a name (also called a field label).

Filter
Device used by report to select certain rows of information from the database, thus limiting the amount of data from the database to be viewed in the report.

Finished
Users click Finished when they have completed all information on a checklist or other *ESS* page.

Flat rate tax
A US local tax that is calculated as a standard percentage rate and that is calculated in the same way for all employees (that is, factors such as marital status do not enter into the calculation). For many such local taxes, Cyborg does not provide tax specification information on the Tax Authority File. Instead, you need to enter a Tax Specification Record for the tax on a Tax Specification Information form, indicating the tax rate in the Flat Rate text box.

Flex credits
Units granted to an employee in order to purchase benefits under a Flexible Benefits Program.

Flex Master Plan
Defines your Flexible Benefits Program and ties component plans together as a group. Employees are enrolled in the Master Plan and then select the benefit plans in which they wish to participate—for example, medical, dental, and life. Flex master plans are set up in Benefits Administration and used by eCyborg Interactive Benefits to display benefit plans to users for initial and open enrollment.

Flex plan
A benefit plan where, in addition to a core of basic benefits (if applicable), the organization/company allocates to each employee a credit for purchasing additional benefits tailored to their individual needs. Flexible benefit plans may include a flexible spending account.

Flexible Benefits Plan
A specific type of benefit plan that allows employees to select their benefits from a number of benefit plans. This term may be used interchangeably with cafeteria plan.

Flexible Benefits Program
A benefits program in which an organization may allocate to each employee a pool of credits or a monetary amount that is to be used to purchase benefits tailored to individual needs.

Flexible Spending Arrangement
A benefits welfare plan set up as an account in an employee's name that is used to reimburse the employee for certain personal expenses. In the United States, these accounts are provided by employers as a way for employees to pre-fund dependent care, legal services, or medical expenses with pretax currency.

Folder
Logical organization device for the content of a Cognos catalog.

Form
A window of information that appears within The Solution Series, including text boxes and other controls. This was formerly known as a screen.

Form area
An area of the window that contains a form.

Form Builder
A tool provided by Cyborg Systems for use with The Solution Series for designing forms.

Formal education
Education that is obtained from a college or university.

Forward
Displays the next page.

FSA
Abbreviation for Flexible Spending Arrangement.

FTE
Abbreviation for Full Time Equivalent.

FTP
File **T**ransfer **P**rotocol. A means of allowing a user on one computer to transfer files to and from another computer over a network

Full Time Equivalent
The ratio of total working time to the time that represents full time employment for a single employee. For example, an FTE of 0.5 means working half of the time that represents full time employment.

Funeral days
Absences from regularly scheduled work due to a funeral, which at the discretion of the organization, can

be considered as authorized or unauthorized, paid or unpaid time off.

Gap analysis
Comparison of a current state of being with a desired state of being. For example, you could perform a skill or competency gap analysis on individual employees or on the workforce as a whole, comparing the existing state of skills and competencies with the required state or level of skills and competencies.

Garnishment
A legal procedure authorizing a deduction from an employee's earnings to satisfy a legal requirement.

General ledger interface
A file that provides a balanced payroll journal for the period. This file contains journal entries for labor expenses, withheld deductions, income, disability, UI, and other withheld taxes, net pay, and company-paid taxes. The interface may also be produced on paper.

Go to details
Displays a new page with detailed information. Used on summary pages.

Graphical User Interface
The Solution Series provides integrated human resource and payroll functionality via the Microsoft Windows Graphical User Interface. These are the elements that display on your screen.

Grievance
A formal complaint made by an employee against the organization usually because of an unsatisfactory working condition or other work-related dispute.

Gross wages
The total of all earnings paid to an employee.

It is stored in the Total Pay (field 119 of the US Tax Authority File) field of the employee's US FICA tax record 101 (FICA-OASDI). This figure appears on the Combined Register (2222) report as Total Pay. It does not appear on US W-2 forms.

Group box
A standard Windows control that groups a set of controls.

Group plan
Defines any number of benefit plans tied together as a group. Group plans are used to define common eligibility and to cluster plans for reporting purposes.

GUI
Abbreviation for Graphical User Interface.

Handicap
Having a physical or mental disability that substantially limits activities especially in relation to employment or education.

Health and safety profile
Data on the employee record that includes information such as the employee's blood type, language, physician, emergency contacts, and any disabilities.

HED
Acronym for Hours, Earnings, and Deductions. Each earning or deduction must be established in The Solution Series with a unique identifying three-digit code. HEDs are used to record pay, hours worked, and deduction amounts and arrears for each employee.

Help
Hot spot on an eCyborg Interactive Workforce page that displays step-by-step directions for completing the page.

History record
Part of an employee's payment history; a snapshot of a check paid to an employee or an adjustment made to an HED or tax.

Holiday days
The time off that all employees are entitled to based on the decision of the organization or government regulation.

Home page
The main page of a Web site that generally serves as an index or table of contents to other documents stored as pages on the site.

HTML
Abbreviation for **HyperText Markup Language,** the authoring language used to create documents on the World Wide Web. HTML defines the structure and layout of a Web document by using a variety of tags and attributes.

Import facility
A tool delivered with The Solution Series that moves data from an external source to any organization or employee form.

Import record
A line in a spreadsheet or delimited file that contains employee or company data.

Inactive plan
A benefits plan that no longer allows employee enrollment.

Inactive tax record
An employee tax record that is no longer in effect for a given employee. Neither wages nor taxes are accumulated for the particular tax record. However, any wages and/or taxes already accumulated remain until clearing is performed. Such clearing is usually performed in preparing the Employee Database for a new year. The inactive records can be deleted at this time. The process of making a tax inactive is called deactivating.

Incumbent
An incumbent is an employee linked with a specific position. The linking of an employee with a Position is an incumbency. An employee may be linked to more than one position; in other words, an employee with multiple incumbencies. A position to which more than one employee is linked has multiple incumbents.

Information-level security
These records grant access to employee and table data via specific password records.

Initial Administrator
Only user whose user ID and password are created during installation. The initial administrator always has authority to all administrative functions: eCyborg Interactive Workforce, Human Resources Administration, Benefits Administration, and Payroll Administration, and can assign administrative roles to others by creating administrative user IDs and passwords.

Initial passwords
Password generated by eCyborg Interactive Workforce for each user ID extracted from The Solution Series. Users must create a user-defined password when they log on to eCyborg Interactive Workforce for the first time.

InitialAdmin
See Initial Administrator.

Inquiry form
A inquiry form is a form used to view data already entered.

Instructional text
Any paragraph(s) on the page that explain the function of the page or fields to the user.

Internal candidate
An employee of your organization who is applying for another job or position in your organization.

Internet
A global network connecting millions of computers.

Intranet
A network belonging to an organization, usually a corporation accessible only by the organization's members, employees, or others with authorization and used to share information.

Investment funds
Different options or accounts available to employees for allocating their contributions, usually applicable to thrift/savings plans.

IPEDS
Integrated Postsecondary Education Data System.

Job assignment
A job associated with a particular employee.

Job code
A designation for a job assignment.

Job streams
A generic reference, Job Control Language, for your operating system's command language.

Alternately: Jobstreams

Job type
A generic category that further defines a particular job.

Jury duty
This is compulsory service on court appointed juries. Employers are required by law to excuse jury duty

related absences. They are not, however, required by law to pay the employee during this time away from the job.

Label
Text that describes the information the user enters into the field.

Labor record
A record containing the hours, amounts, associated charge-to control levels, and function assigned on the employee's Payroll Home Location/Pay Allocations form.

Leave of absence
Occurs when an employee leaves the organization for a period of time, usually temporary, for personal reasons such as medical leave.

Log off
Logs the user off the system. When referring to the Log Off button, use initial caps.

Logical Employee Model
A collection of default employee information that is used to create a model. Logical Employee Model templates are used when hiring new employees to save time and ensure that critical information is established consistently and correctly. These were formally known as LMODELs.

LPI
Lines **p**er **i**nch

Mailing address
An address, other than your legal residence address, to which you have your mail sent.

Maintenance payroll run
A maintenance payroll run automatically updates organization and employee records, but it does not process time entries or generate payments, pay slips, or deposit advices. It is also used to create payment history records.

Major activity
Event that causes a change in an employee's employment status, such as a new hire, termination, or rehire.

Mandatory field
A field that requires the user to enter information before the user can exit the screen or page.

Map file
Stores the predefined relationships between an import file and a form.

Mass time entry creation
Creating time entries for a group of employees through one program execution, such as for a paid holiday.

Master File (0202) report
A Cyborg report that produces a formatted display of the data in an employee's current batch Employee Database record. This includes the wages and taxes accumulated for the employee, covering current, month-to-date, quarter-to-date, and year-to-date information for individual tax codes. It is report generator 0202.

Matrix ID
Unique identifier for each pay-for-performance matrix.

Menu
A list of choices; the choices are generally links that take the user to another screen or page.

Menu bar item
A menu that appears on the menu bar.

Message area
An area of the window that contains messages or selection lists relevant to the current form. The Message Area can be turned on or off.

Method code
One of many specific routines (usually delivered by Cyborg and identified by a two-character code) used to calculate earnings and deductions.

Midpoint
The middle of the span of currency from the minimum to the maximum of the employee salary grade.

Minimart
Relational tables you create so you can insert data from your Subset data extractions.

Monetary perquisites
A privilege or profit that an employee is entitled to that is incidental to regular wages or salary.

Moving expenses
The expenses incurred by an employee due to moving from one location to another for employment purposes.

Multiple master
A file compression technique that duplicates the current employee Permanent Master Record as many times as there are payments to that employee during one pay period. These multiple masters are detail records reflecting the amounts for the payment being made (current), and the adjusted MTD, QTD, and YTD totals. The system uses multiple master records to create history records showing the current payment figures only.

Navigation bar
In eCyborg Interactive Workforce the Navigation bar shows the name of the page you are using, for example, 'Mailing Address'. The top line of the Navigation bar shows the path you took from the Home page to reach the present page. Links on the Navigation bar let you return to the home page or log off the system.

Navigator
Left pane of the work area which forms the main method of moving through the forms. From the Navigator users select the component, process, and task in which they are interested.

Net credit method
A method allocating flex credits. An employee's cost of benefits is calculated as either a net cash earning or a net deduction from the employee's pay. The net amount is the difference, either plus or minus, between the credits allocated to the employee and the cost of his or her flex benefits choices.

New hire
Process of hiring a new employee for your organization.

New user
A user of eCyborg Interactive Workforce who has not yet completed reviewing and updating their personal information on the New User Home page.

New User Home page
Home page that displays for new users of eCyborg Interactive Workforce until they complete reviewing and updating their personal information.

Node
A Distributed Location.

Node ID
A unique 5-position identifier for a node. The naming convention is defined by the user.

Number registered
This is the number of employees registered for a training class. It is updated and displayed on the Class Schedule form.

Object
Each System Control Repository record type is assigned an object code. A single record type can have several object codes assigned to allow limited display.

Object key
A field that allows you to specify the System Control Repository record group you want to display. The value of this field is dependent on the type of information you want to display.

Obsolete plan
A benefits plan that will no longer be used.

Off cycle
An off-cycle payroll run is an additional payroll for the period just completed. An off-cycle payroll run is commonly used to process nonstandard payments, such as bonuses. It is sometimes referred to as an additional or bonus payroll run.

Online
Turned on and connected, for example, printers are on-line when they are ready to receive data from the computer. Users are considered on-line when they are connected to a computer service through a modem. That is, they are actually on the line.

Open enrollment
A period of time during which employees can enroll in or change their benefit choices for the upcoming year, generally in October or November.

Operator ID
A four-character code that identifies the user to the system.

Option
An item in the option list for a field. This was formerly known as a codeset item.

eCyborg Interactive Benefits and Benefits Administration specific—In Benefits, the plan coverage that an employee selects, such as single or family coverage.

Option button
A standard Windows control that allows you to select from a fixed set of mutually exclusive options (previously known as radio button).

Option list
An option list is a list of options that are available within a Text box. This was formerly known as a Codeset.

eCyborg Interactive Workforce specific—Options available in The Solution Series that the eCyborg Interactive Workforce administrator loads in to eCyborg Interactive Workforce. The options are then available in the drop-down list boxes in eCyborg Interactive Workforce.

Organization
A group of employees who are employed in a common structure, governed by the same set of rules or policies, and eligible for the same earnings and deductions For example, your organization may be structured into parts that represent employee groups such as active, union, retirees, applicants, and so forth.

Formerly known as a company or Control 1-2.

Organization Level 3
A customer-defined value used to determine the breakdown of an Organization for Human Resource reporting or selection purposes. This control level may be translated to a division, plant site, section, and so forth, as defined by you.

Organization Level 4
A customer-defined value used to determine the breakdown of an Organization for Human Resource reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Organization Level 5
A customer-defined value used to determine the breakdown of an Organization for Human Resource reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Organization Level 6
A customer-defined value used to determine the breakdown of an Organization for Human Resource reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Organization Number
A six-character user-defined code that represents an organization; the highest level of the organizational structure in Payroll Administration.

Formerly known as a Control 1-2.

Organization Unit
An organization unit ('Org Unit') is a grouping of Positions within an organization (for example, Accounts Department).

Organization Validation table
A table that validates that an organization is valid and payments can be made.

Organization-specific tax setup
A method of implementing Tax Specification Records in which each organization involved in tax processing contains all the specification records required to process taxes for its employees, as opposed to a common tax organization.

Override file
A file used to maintain COBOL or Report Generator changes to the system.

Packaged reporting
A processing mode in which a job is scheduled to be run at a certain time.

Paid absence
Employee absence that will be paid by the organization. A time entry will be created for this absence.

Parallel run
The process of executing the same programs simultaneously on two separate systems to obtain the same or similar results.

Parameter form
A form that is displayed when certain programs are called from the Navigator or menus. The form facilitates entering parameters for the program.

Password
A secret series of characters, generally user defined, that enables you to access a computer, a software application, or a file. On multi-user systems, each user must enter his or her password before the computer will respond to commands.

In eCyborg Interactive Workforce, the password ensures that unauthorized users cannot access user-specific information.

Password aging
The period of time that elapses before a user-defined password expires and the user must change his or her password.

Pay allocation
A means of allocating, on a percentage basis, employee labor hours and amounts to multiple sets of control levels 3 through 6 and function to accurately reflect employees whose labor must be charged to more than one area within an organization.

Pay document
A pay slip or deposit advice with its associated pay stub.

Pay frequency
The interval at which a group of employees is paid. Examples are weekly and semimonthly. Also referred to as a payroll period.

Pay schedule
A predetermined schedule for a calendar year, identifying period-end and payment dates for each pay frequency.

Pay stub
A preprinted form, corresponding to a check or deposit advice that lists all earning, gross pay, taxes, deduction, and net pay information for an employee.

Pay-for-performance matrix
Chart representation of the variables that result from the combination of salary increase information, how much to give and when.

Payment history record
A record documenting the detail information for a payment or adjustment. Multiple payment history records may be generated for an employee, reflecting multiple adjustments or payments. These records include all earning, deduction, and tax information included in the payment or adjustment.

Payroll home location
The location where the employee is normally assigned to work and where labor distribution information is charged. An employee's home location comprises specific Payroll Levels and is always assigned Allocation Number 01 on the Payroll Home Location/Pay Allocations form. The Function field may also be used as part of a home location, depending on your specific requirements.

Payroll Level 3
A customer-defined value used to determine the breakdown of an organization for Payroll reporting or selection purposes. This control level may be translated to a division, plant site, section, and so forth, as defined by you.

Payroll Level 4
A customer-defined value used to determine the breakdown of an organization for Payroll reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Payroll Level 5
A customer-defined value used to determine the breakdown of an organization for Payroll reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Payroll Level 6
A customer-defined value used to determine the breakdown of an organization for Payroll reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Payroll period
A defined period of time for which an employer pays wages to employees.

Payroll Process Control
A series of forms used during the Payroll Process to determine the type of run (payroll run or maintenance run). Allows you to specify the pay frequencies to be paid and which reports are to be produced.

Payroll run
Updates organization and employee records, processes time entries, calculates employee pay, generates pay documents and payroll reports, including the Combined Register. It also produces a variety of special interface outputs.

PCL
Printer **C**ontrol **L**anguage

PDF
A file format that captures formatting information from a variety of desktop publishing applications, making it possible to have formatted documents appear on the screen and be printed. To view a file in PDF format, you need Adobe Acrobat Reader, a free application distributed by Adobe Systems.

Peer-group appraisal
Appraisal that uses performance evaluations completed by an individual employee's co-workers or project team members.

Pending de-enrollment segment
Plans for which an employee is enrolled, but has lost eligibility, as listed on the Pending Plan Enrollment/De-Enrollment form.

Pending eligibility segment
Plans for which an employee is eligible but not enrolled, as listed on the Pending Plan Enrollment/De-Enrollment form.

Performance appraisal
A periodic assessment and ranking of an employee's skills and accomplishments.

Performance appraisal rating
A method of ranking the performance of an employee during a given period using options ranging from 1-Outstanding to 5-Unsatisfactory.

Performance rating
A method of ranking the performance of an employee during a given period using options ranging from 1-Outstanding to 5-Unsatisfactory.

Performance-related pay
Monetary payments made to employees based on how well an employee has fulfilled job expectations.

Perquisites
Property or privileges extended to an employee.

Personal days
Authorized absences that are generally considered as paid time away from regularly scheduled work, but can be either paid or unpaid.

Phonetic keys
The keys you use to access employee data using the phonetic spelling of an employee's last name.

Pixel
The smallest rectangular area of an image on a screen.

Plan deactivation
A process that makes a plan inactive and prevents future employee enrollment.

Plan ID
A three-position, alphanumeric identifier for a plan in the system.

Plan shutdown
The process of de-enrolling an employee from all benefits plans because of a separation activity.

Plan year
The 12-month period over which a salary budget is effective.

eCyborg Interactive Workforce specific—The calendar, policy, or fiscal year in which the records of a Benefits plan are maintained.

Policy tables
Highest level tables that are used to record the generic (or master) rules for an organization or group of employees. These included your organization's rules relating to working time procedures, such as clocking in and out, docking for lateness, and overtime. Each

policy consists of a Policy Master table and one or more Policy Activities table.

Pop-up menu
A menu that appears when you use the second mouse button within the system. This menu contains context sensitive commands and options that relate to the object you have clicked on.

Portable document format
See PDF.

Position
A specific role with an organization—for example, Accounts Manager.

Alternative definition: to place an object in a specified location.

Position Administration Control Number
Two-character alphanumeric value that tells Position Administration which tables to use for a specific company.

Position complement
A 'Position complement' is the value of a Position. The organization complement is the total value of all Positions included in the complement.

Position in range
The difference between a given salary and the minimum of the salary range, divided by the difference between the range's maximum and minimum, and expressed as a percentage.

Posttax
A contribution made after taxes have been withheld from earnings.

Premium
The amount of money an organization agrees to pay an insurance company for a policy or annuity, or the amount contributed by an employee to the employer to cover the employee's portion of the total premium.

Prenotification
Informing a bank or credit union that an employee will be using direct deposit with them in the future. Cyborg recommends that you fill out the Direct Deposit Information form two pay periods in advance of the first deposit date. This ensures that a prenotification record is provided to the bank or credit union in a timely manner.

Pretax
A contribution made before taxes have been withheld from earnings.

Primary account
The account set up in eCyborg Interactive Workforce to receive an employee's pay or reimbursement checks. After deductions and deposits to additional (secondary) accounts, the remainder of pay is deposited into the primary account.

Process
A subset of a component that logically groups tasks on the Navigator or menu. For example, the process 'Maintain Employee Details' contains tasks such as 'Basic Employee Information' and 'Personal Information'.

Alternate definition: An action that brings about a result.

Process bar
The graphical representation of a process on the navigator. Each process bar is within a Component.

Program
A program is a series of classes being administered using Training Administration. For example, 'The Cyborg Training Schedule for January-June 1996' may be a program consisting of eight different classes.

Alternative definition: a form or other program within the system, accessed directly from the Command dialog box. For example, form EF-SCR is a program.

Protected amount
The amount of disposable income protected from garnishment in the US This amount may vary from state to state.

Prototype HED
An HED defined on a benefits form for use in recording employee/organization contributions when an employee is enrolled in a benefits plan. This allows the setup and maintenance of payroll deductions using Benefits Administration.

Provider
A provider is an instructional institution, organization, or person who is available to teach training courses.

Push button
A button on the interface which appears depressed when clicked on (now known as command button).

Quartile
Points that represent the division of a salary grade range into four equal parts.

Query alternate keys
The keys you use to access the employee master record in an order other than by primary key.

Query primary keys
The keys you use to direct your QUERY program to a record type.

Quick Hire
The process of hiring an employee by entering one two-panel form with the required data elements rather than entering a series of forms.

Radio button
A button on a form that selects an option, the radio buttons that make a field are mutually exclusive (now known as an option button).

Recall
Return a laid-off employee to active status, usually with no affect to benefits.

Reciprocal taxation
Reciprocal tax withholding refers to agreements made between US states and (or) localities regarding income tax calculation and reporting for compensation paid to an employee who lives in one state or locality and works in another.

Record
A complete set of fields, such as the fields that make up a tax form or a name and address record.

Alternate definition: To set down for preservation in writing or other permanent form.

Recruitment
Process of finding and hiring new employees who meet the needs of your organization.

Recycle File
P05IN; A file that contains employee data and pay document information required for payment reconciliation. It also contains time entries to be processed and paid at a later date. This file is used to pass data to the next payroll or maintenance run.

Registration
Registration is the act of enrolling an employee in a class.

Registration number
A three-digit registration number is assigned to employees for tracking purposes when they register for a training class. This enables the order in which the employees registered to be viewed.

Rehire
The process of hiring a former employee of your organization. Typically, a break in service is incurred and benefits must start over (usually requiring a new adjusted seniority date if used in benefits tracking).

Reimbursement account
The account into which employee's travel and other expense type reimbursement checks are directly deposited.

Reinstatement
The process of returning a former employee to active status within a certain time period (such as 90 days), thus qualifying the employee to have certain benefits restored to the original hire date.

Reject time
The point at which an error condition will occur. An error condition must be manually corrected/approved and approved before a time entry can be generated by the system.

Relocation
The process of moving an employee from one organization to another geographic location, whether the move be domestic or international. This process also applies to applicants who are being relocated as part of the hire process.

Remaining net pay
The 'bucket' of money that is left after all employee deductions and taxes have been taken from the employee's gross pay. This 'bucket' of money can then be used for multiple deposits if the enterprise sets up multiple deposit HEDs.

Replication
The automatic process of writing changes made in the Employee Database and option lists and tables in the System Control Repository to the Replication Holding File (FILE08).

Replication Application
English Language program (DSAPLY) that reads records from the Replication Packet File (FILE20) produced by the Replication Reception program (DSRECV) and updates the System Control Repository and Employee Database accordingly.

Replication Distribution
Two COBOL programs that work together to distribute and receive updates. The Replication Distribution Program (DSTRIB reads either the Replication Holding File (FILE08) or a Replication Packet File (FILE20), selects data applicable to a specific DL and writes all necessary data to a new output-only Replication Packet File (FILE21). The resulting FILE21 will be processed on the remote DL via the DSRECV Replication Reception program.

Replication Holding File
FILE08. This file contains additions, changes, and deletions to the System Control and the Employee Database. Data is distributed from and written to this file, based on the data distribution rules configured for the target DL by the source DL.

Replication Packet File
(FILE21/20). This file contains data changes and is created specifically to update a target DL. This information may include Company/Employee data, tables and option lists, and time entry and adjustment records.

Report
The term report refers to a report produced on paper.

Report Generator
A program that produces the batch payroll and the batch payroll reports.

Report Group
A series of packaged reports that are created using the Report Group Activities form and are run together.

Report Group Scheduler
This is the program that allows you to schedule reports. This was formerly known as the Report Scheduler.

Report parameters
Specific guidelines for determining the information to be processed by a given report or program.

Requisition
A formal request to fill a vacancy or vacancies.

Requisition candidate
A candidate for a vacancy represented on a requisition.

Requisition limit
A total unit value of a requisition.

Requisition unit
The value of a requisition expressed as an FTE, hours, salary or headcount.

Retirement
Occurs when an employee retires from the organization.

Return
The activity of an employee returning as an employee to active status, usually following a leave of absence.

Alternative definition: key on keyboard used to perform a carriage return, can also be known as Enter.

Review process
A method used by an organization to evaluate an employee's salary or performance in a standard, timely manner.

Roll-up reporting
Option that enables packaged reports to be processed within organizations (roll-up).

Rotation pattern
A way of describing the working pattern for a group of employees (crew) who regularly work different shifts.

A crew is a group of employees who together regularly work the same schedules according to a rotation pattern.

Safety standards
Legally-mandated workplace safety standards.

Salary budget record
Defines, for each employee, the budgeted increase amount, percentage, and effective date for a specific salary plan year, and the prorated effect of this increase on the budget in terms of amounts and percentages for each employee.

Salary grade
A range of salary amounts associated with a particular job.

Salary grade range
A range of salary amounts associated with the salary grade for a particular job.

Salary plan
A set of rules or guidelines used to budget for salary increases for the coming year.

Salary plan year
A 12-month period over which a salary plan is effective.

Salary range
The span of salary amounts from the minimum to the maximum of the employee salary grade.

Salary review
A periodic evaluation of an employee's compensation.

Salary review authorization form
Hard copy format of the employee criteria necessary to review and approve proposed salary increases.

SAT file
The Solution Series form appearance table. Simple text file that reflects the form's layout.

Save Changes
Saves the page (form) the user completed. (When you click 'Save Changes', eCyborg Interactive Workforce saves the information on the page whether or not the user made changes.)

Schedule Activities table
Identifies activity types for each point in a work day where the process of clocking in and out should be dealt with. Each Schedule activity also contains time parameters that will be used to calculate whether an employee will be docked or credited time.

Schedule assignments
Also referred to as a schedule. This term refers to the details of the Schedule Master tables to which an employee is assigned. These details include the date the assignment took place, the Schedule Number and Sub-Schedule Number, and (if applicable), the crew to which the employee is assigned.

Schedule error
Occurs when a clock transaction (ring) time falls outside of an employee's schedule reject times.

Schedule Master table
Used to set up your organization's Time and attendance rules (such as HEDs and the minimum number of hours an employee must work before a meal deduction is made). A Schedule Master table is associated with a Calendar Routine, earnings Code, and Shift Premium table by entering the appropriate identifier.

Schedule number
A unique three-character alphanumeric identifier used to partially identify a schedule table.

Screen
Now known as a form.

Scroll bar
When information on a page takes up more than one screen of your monitor, the system adds scroll bars to the right side of the screen. On the scroll bar:

- Click the up arrow to move line by line to the top of the page
- Click the down arrow to move line by line to move to the bottom of the page
- Click the double arrows to move several lines up or down the page

Click and drag the bar in the scroll area to manually move up or down the page.

Search argument
The value from an employee's master record used to search benefits tables to apply plan rules to specific groups of employees.

Search type
The definition of a field from an employee's master record to use as the search argument.

Secondary account(s)
Additional account or accounts at financial institutions that employees set up in eCyborg Interactive Workforce receive a portion of their pay. A primary account must be defined before an employee can set up additional accounts.

Security Officer
The assigned employee who is responsible for the setting up and monitoring of the security your Cyborg system.

Self-adjusting taxes
Taxes for which the system automatically recalculates the tax on a cumulative year-to-date basis on each payroll run.

In the U. S. these include FICA taxes: Social Security (tax record 101) and Medicare (tax record 103). The purpose of this calculation is to avoid any differences (of pennies) in FICA tax paid versus FICA tax due at year-end due to rounding on a pay period basis. In addition, certain state disability taxes and employee-paid state unemployment insurance taxes also self-adjust.

Sequential Master File
P20IN; The batch processing version of the Employee Database. This file contains organization and employee data, tax tables, and the object code for programs.

Service interruption
A period of time during which an employee did not maintain an active working status in the organization.

Service method
A calculation option list that determines the method for calculating credited service.

Session
When users log onto a software application, they begin a session. When they log off, they end the session.

Alternate definition: The period of time during which a class is held.

Shift
An employee schedule assignment for a given day. For a rotation pattern, this is a Sub-Schedule Number.

Alternative definition: key on keyboard, typically used to describe key combinations for a shortcut key.

Shift premium
A premium (or differential) added to an employee's regular earnings, overtime earnings, or both. It is represented by a shift code or HED Number.

Shortcut menu
A menu that appears when you right-click within The Solution Series 4. This menu contains context-sensitive commands and options that relate to the object (form, Navigator, and so on) on which you have clicked.

Sick days
The time off that an employee is allowed to take due to illness as a result of an employment contract or organizational policy.

Solution View
An online utility that provides the tools for creating new forms, fields, and report programs without the direct use of Cyborg Scripting Language.

Source DL
The node that owns the data being distributed. Depending on the rules established, the same DL can alternate from source to target.

Special assessment
Extraordinary or temporary taxes, such as additional employer-paid or employee-paid contributions to state unemployment programs or to mandatory health insurance programs.

Spinbox
A control on the interface composed of a text box and increment and decrement buttons that allow you to adjust a value from a limited range of possible values.

Spreadsheet application
Software for recording ledger entries, creating worksheets, graphing data, and other accounting functions.

Standalone Time and Attendance
Customers who are using the Cyborg's Time and Attendance Administration but not the Cyborg's Payroll Administration.

Static data
Includes organization and employee information, such as name and salary.

Static SQL
Data Definition Language (DDL) and Data Manipulation Language (DML) statements embedded in application programs.

Status bar
The bar that appears at the bottom of The Solution Series window. The Status Bar displays useful information, such as your current session number, the currently displayed organization and employee, and so forth.

Statutory employee
Any of the four categories of workers who are independent contractors under common law and are treated by statute as employees. These include:
(1) a driver who distributes beverages (other than milk) or meat, vegetables, fruits, or bakery products; or who picks up or delivers laundry or dry cleaning, if the driver is your agent or is paid by commission.
(2) certain types of full-time insurance sales reps
(3) an individual who works at home on materials supplied by you that must be returned to you
(4) certain full-time traveling or city salespeople.

Social Security and Medicare (FICA) taxes may or may not be withheld. Income taxes are not withheld from a statutory employee. A statutory employee will receive a W-2 with the 'Statutory Employee' box checked.

Sub-schedule number
A two-digit numeric text box used to further identify a schedule table.

Succession planning
Finding and developing employees for placement into identified key positions that are expected to become vacant sometime in the future.

Summary page
To help you see information at a glance, eCyborg Interactive Workforce uses summary pages. The summary page displays a short view of detailed information. For example, all your emergency contacts appear on a summary page. You delete the contact or proceed to the detail for the contact from the summary page.

Summary plan
A customer-owned description of a benefits plan.

Supplemental wages
Wages that are separate from regular earnings may be classified as supplemental wages and taxed using the default method. The default method means using a set percentage specified by the tax authority. Examples of such earnings are bonuses and commissions.

Surplus
A 'surplus' is an exceeded complement position.

System administrator
An individual responsible for maintaining a multi-user computer system, including a local-area network (LAN). Typical duties include:

- Adding and configuring new workstations
- Setting up user accounts
- Installing system-wide software
- Performing procedures to prevent the spread of viruses
- Allocating mass storage space

System Control Repository
This is the file that contains system definitions for The Solution Series, (FILE01).This was formerly known as the Control File.

System Generator
A type of Report Generator that performs system functions, such as defining data elements and system messages.

Table
Contains an organization's rules and policies and controls what actions take place at the employee level.

Alternative definition: means of displaying information in columns and rows.

Table Definition Record
Table containing data about the Position Administration table records, including the location of keys to associated tables.

Target DL
The node that receives the data being distributed. Depending on the rules established, the same DL can alternate from target to source.

Task
The lowest level of organization on the Navigator or menu, generally equivalent to a form. checklist, or dialog.

Task icon
An icon denoting a task. Task icons describe the type of task, including Forms, Checklists, Dialogs and others.

Tax authority
A government agency to which an employer and employee has statutory tax obligations. The tax authorities for which you handle taxes exist at the federal, state/province, and local levels.

Tax Authority File
A Cyborg-supplied file that contains all the tax-specific information needed to calculate taxes for tax authorities. This includes wage-bracket tables for different marital statuses and information relating to allowances and standard deductions. The sources for the contents of this file are tax specifications published by the various tax authorities.

Tax code
The three-character to seven-character Cyborg-supplied reference code that identifies a tax and that serves as the link between the Tax Specification Record and the employee tax record.

Tax Maintenance File
One of the two Cyborg-supplied tax files. A Tax Maintenance File is a file issued by Cyborg in conjunction with a Tax Update Bulletin (TUB). It contains all the tax specifications that are being updated in the bulletin, in the form of tax specification transactions. These transactions are typically used as input to the batch maintenance run in which tax updates are applied.

Tax specification
Each tax authority publishes tax specification information that specifies how each tax must be administered. This information specifies how employers should calculate taxes and how taxes should be withheld from employees (if withholding applies). The tax specifications can be in the form of tax formulas and (or) tax tables.

Tax Specification record
A record on your Employee Database that contains the tax specifications for a tax. The record contains all the information, as obtained from the governmental authority, needed to calculate tax amounts for the tax. The record may contain more than one tax; for example, US state Tax Specification records contain information for both state income tax and state unemployment insurance. Once a Tax Specification record is activated, tax specification information from the Cyborg-supplied tax files can be loaded onto the record on your Employee Database.

Tax table
A set of information required to calculate a tax, for a specific set of employee parameters. Tax tables are stored and maintained in Tax Specification records. A table typically includes wage and bracket information and data relating to allowances, such as personal exemptions and to standard deductions. There can be several tables relating to marital and resident status in a given Tax Specification record.

Tax type
This term refers to various categories of taxes, for example, income, National Insurance, unemployment, disability, Social Security (FICA-OASDI), and Medicare (FICA-HI).

Taxability
The term refers to whether an hours, earnings, and deductions amount is to be included in taxable wages to be accumulated for a specific tax. If the hours, earnings, and deductions amount is excludable, then the amount is not included in taxable wages. If the hours, earnings, and deductions amount is taxable, then the amount is included in taxable wages. The term fully excludable or fully taxable implies that more than one type of tax is being referenced, for example, state income tax and state unemployment insurance in the US.

Taxable wage base
The taxable wage base represents the maximum amount of an employee's wages on which tax is levied and after which there is no liability. A wage base in the US

typically is in effect for FICA, unemployment taxes, and disability.

Tax-related Regulatory Bulletin

A TUB contains the updates to tax specifications supplied by Cyborg, consisting of a bulletin document, a tax file that contains the updated tax specifications, and a printed listing of tax specification transactions with the updates.

TDR

Table Definition Record.

Template

A basis from which to create a custom item. For example, you can use an existing Cyborg report as a template for your custom report.

Temporary password

A set of alphanumeric characters used with a user ID to limit access to a software application. The system requires that users replace their temporary password with a user-defined password within a certain number of days.

Termination

The activity of an employee no longer being employed by the organization.

Test environment

A separate organization or system partition used only for testing.

Text box

A control on the interface in which text can be entered and edited (formerly known as a field).

Text qualifier

The character surrounding an item between delimiters. All values between the qualifier are data items and are not scanned for a delimiter. This allows a delimiter character, such as a comma, to be a valid data item. Example:

"item 1","item 2","item 3, 4 and 5"

This string contains three data items:

Item 1

Item 2

Item 3, 4 and 5

Although the third item contains a comma, it is ignored as a delimiter because it is between the text qualifier of speech/quotation marks (").

Time entry

The form in which you enter the hours worked for an employee. This was formerly known as a Time Card.

Time entry extract file

A file of time entries external to the Time and Attendance Solution that is used to feed to payroll.

Time entry validation

The Time Entry Validation/Creation program identifies and assigns an activity, for example Clock In (1), to each clock transaction (ring) when performing the validation function. Each clock transaction must be assigned to an activity, in order for time entry hours to be calculated for an employee, for a particular shift. This program validates clock transactions (rings) and generates time entries.

Timeout

The period of time that elapses before a user's eCyborg Interactive Workforce account becomes invalid because of inactivity.

ToolTip

A standard Windows control that provides a small pop-up window that provides descriptive text, such as a label, for a control or graphic object.

Top-down appraisal

Appraisal made by a supervisor or manager of an employee's capabilities. Such an appraisal is generally based on the supervisor's or manager's day-to-day observation of an employee's work performance and will usually include an appraisal interview with the employee.

Trainer

Trainers are set up on the Provider Index Form. They are instructional institutions, organizations or persons who are available to teach a training class.

Trainer code

The trainer code is a four-character value that represents a trainer. This value resides in Option List TR38.

Training area
The training area is recorded on the Class Schedule Form. It is typically defined as the section of the organization to which the training applies, such as manufacturing.

Training class results
These are the class details and absence information recorded on the Process Class Results form. Details recorded include the objectives met when taking a training class.

Training class status
The status value is updated and displayed on the Class Schedule Form. It tracks whether the training class is canceled, full or available.

Training course code
The training course code is a six-character value that represents a training course. This value resides in Option List TR33 and is associated with a course title.

Training plan
A plan of training courses that an employee will attend in the future to achieve the necessary skills to perform a job.

Training reason
The reason for training is used to identify why a training request has been made. For example, the purpose of the training to act as a refresher, to acquire new skills, and so forth.

Training request
A training request is a request for an employee to attend a specific course or class. A formal request for training is not essential. This step could be omitted and the employee could be registered directly in the course of his or her choice.

Transfer
Process of moving an employee from one organization to another organization, such as moving an applicant from the applicant organization to the active employee organization.

Alternative definition: to move data or files from one computer to another

Trend analysis
Reporting or statistics that indicate the rate of change in costs and other elements of a benefits plan.

Trigger
A set of conditions that must occur for an email or letter communication event to start. This can involve the creation, deletion, or modification of forms or checklists within the system.

Tuition reimbursement
Remuneration made to employees for tuition expenses.

Type of training request
The type of training request indicated whether the employee was required to attend the training or whether he or she asked to attend the training.

Unauthorized absence
Absences that are generally not considered paid time away from regularly scheduled work.

Underlined text
In browser applications, text that provides a link to another screen or page.

Unemployment insurance tax
A tax required by some US states to be funded by employee-paid contributions to pay all or part of the cost of unemployment insurance coverage. On the Payroll Solution, state unemployment insurance tax records are established as Type 2 taxes.

Unpaid absence
Employee absence that will not be paid by the organization. A time entry will not be created for this absence.

Upward appraisal
Appraisal that calls for evaluations by those who work under the direction of the employee being evaluated.

URL
Acronym for uniform resource locator. A standard way of specifying the location of an object, typically a web page, on the Internet. URLs are the form of address used on the World-Wide Web. They are used in HTML documents to specify the target of a hyperlink which is often another HTML document (possibly stored on another computer).

User class
Cognos Impromptu assigns security according to configured user profiles. These security profiles are configured by your Impromptu administrator.

User code
A set of characters (up to eighteen alphanumeric characters) that, along with the password, identify the user to the system as a valid user user when they log on.

The user code is case-sensitive (upper case, lower case) and must be entered using the correct case.

User defined password
A set of alphanumeric characters created by users that allows them to view and update information in a software application.

User ID
A set of characters that identify you to the software application. The application contains a list of authorized users by user ID. When you attempt to log on, the system checks the list of authorized users to determine whether you have authority to use the application.

User profile
Used for security purposes to determine what you can and cannot do while you are using the system, and which parts of the system you can access. A user profile is created and maintained for you by a Security Officer. Each user of the system will have a user profile.

Vacancy
An open position that needs to be filled, or an unfilled complement position

Vacation days
The time off that an employee is entitled to as a result of an employment contract or due to length of service.

Validation
The process where the Time Entry Validation program identifies and assigns an activity to a clock transaction (ring) when performing the validation function.

Variant forms
Method of displaying country-specific variation of Cyborg-delivered forms.

Waive
The act of choosing not to enroll in an optional benefits plan.

Warning time
Used to set a period of time after which an employee will appear on the exception report for a particular activity. A Warning condition will allow the creation of a time entry. A Reject condition will not. This is part of the Time and Attendance Administration.

Welfare benefit plan group
First level of the logical organization of welfare benefit plans in eCyborg Interactive Workforce.

Welfare benefit plan subgroup
Second level of the logical organization of welfare benefit plans in eCyborg Interactive Workforce.

Welfare plan
Any insurance or other benefit plan that provides immediate benefits to a participant—for example, medical insurance.

What-if mode
Method for processing a report that allows viewing of information without updating of employee records.

Window
A standard Windows object that displays information. A window is a separately controllable area of the form that typically has a rectangular border.

Wizard
A form if user assistance that automates a task through a dialog with the user.

Work area
The Solution Series screen. It includes the menus, toolbars, Navigator, forms area, message area, and status bar.

Work instructions
Specific tasks to be completed during the migration of data and files from test to production.

Work restrictions
Restrictions that prevent an employee from participating in specific workplace functions.

Worker's compensation
Legislation in the US that provides compensation to employees who suffer work-related injuries.

Workforce competency
The capacity of the overall workforce to perform required functions and sets of activities.

XHTML
Extensible HyperText Markup Language, used by the help pages for eCyborg.

Year End Master File
P20OUT file from the final payroll run of the year

CHAPTER 1

About This Manual

Welcome

In response to the growing need for detailed employee training record keeping, Cyborg Systems, Inc. provides Training Administration, a practical addition to the system. Our approach has been to supplement the Human Resources Administration data with a flexible and easy-to-use system to record and analyze training information.

Training Administration is designed to aid organizations in the administration of employee training classes. Its features provide administrative support and allow for detailed record keeping of employee training history, class results, and skills/competencies acquired during training.

This manual has been designed as a reference document. It is also used in classroom training. You will find sufficient detail for self-study, before and after classroom training.

Who should use this manual?

This manual is intended for users who already have a working knowledge of Cyborg's products. The following users will find it most useful:

- Data Managers
  Data Managers will find it helpful to read Parts 1 and 2 of this manual for an overview of Training Administration and the steps that are necessary to implement it.

- End Users
  End users and data-entry personnel will find detailed directions throughout the manual outlining the specific steps necessary to carry out various tasks.

Prerequisite skills

Users of this manual should possess a variety of technical skills, depending on the roles they will play. At a minimum, all users should have:

- Basic understanding of Microsoft Windows
- Attended training or have experience using Cyborg's products (the eCyborg: Using the Web Client or Using The Solution Series: Administrative Solutions training class is recommended).

Additional documentation and training courses

The following documentation and training courses are available from Cyborg Systems:

Documentation

Document	Description
eCyborg: Using the Web Client or Using The Solution Series: Administrative Solutions	This prerequisite course documentation covers the introductory concepts and tasks related to Cyborg's administrative solutions. It describes how to navigate through the software and explains the important concepts and functionality of the system.

If you do not have a copy of this document, you can obtain one from Customer Support.

Training Courses

Related Course	Description
eCyborg: Using the Web Client or Using The Solution Series: Administrative Solutions	This prerequisite course covers the introductory concepts and tasks related to your specific implementation of Cyborg's administration solutions.

If you wish to attend any of these courses, contact Customer Support or visit our website www.Cyborg.com for details of course dates and availability.

How this manual is organized

This manual has been organized to make it as easy to use as possible. The chapters are grouped accordingly into the following parts:

Part	Chapters	Description
1. Introducing Training Administration	1–2	These chapters provide an overview of the system and explain its interaction with other system components.
2. Setting Up Training Administration	3–6	These chapters explain the key concepts and detailed directions required to implement Training Administration.
3. Entering Employee Training Data	7–9	These chapters explain the key concepts and detailed directions required to establish employee training information.

Part	Chapters	Description
4. Processing Training Results	10–11	These chapters explain the key concepts and detailed directions required to process training results and evaluations and analyze training costs.
5. Appendices	A–B	Appendix A is a quick reference to Training Administration reports. Appendix B provides feedback on the practice and review at the end of each instructional chapter.

Following are descriptions of the chapters within the parts.

Part 1: Introduction

The chapters in Part 1 describe this manual and provide an overview of the features of Training Administration, and its interaction with other Human Resource and payroll components:

Read this chapter		To learn about
1	Introduction	How this manual is organized and how to make the most of using it
2	Overview of Training Administration	A high-level overview of Training Administration, including an introduction to its important features

Part 2: Setting Up Training Administration

The chapters in Part 2 explain the implementation and setup tasks that must be completed before you can begin using Training Administration:

Read this chapter		To learn about
3	Implementing Training Administration	How to implement Training Administration
4	Setting Up and Maintaining Training Courses	How to establish, maintain, and delete training courses
5	Setting Up and Maintaining Training Classes	How to establish, maintain, and review training class information
6	Setting Up and Maintaining Training Programs	How to set up, maintain, and delete training programs

Part 3: Entering Employee Training Data

The chapters in Part 3 explain how to enter the employee-level information for courses, classes, and programs:

Read this chapter		To learn about
7	Requesting Training for an Employee	How to identify the best course for an employee, check prerequisites, and request employee training
8	Registering an Employee for Training	How to check class availability, register an employee for a class, and confirm registrations
9	Canceling Registrations	How to cancel an employee class registration and program registration

Part 4: Processing Training Results

The chapters in Part 4 explain how to record and analyze training results and costs:

Read this chapter		To learn about
10	Processing Training Results and Evaluations	How to record, review, and analyze training results and evaluations
11	Completing and Analyzing Training Costs	How to establish employee costs and view course, class, and employee costs

Part 5: Appendices

The appendices in Part 5 contain the following quick reference information and review answers.

Read this appendix		To learn about
A	Report Quick Reference	A quick reference to Training Administration reports and their business uses
B	Practice and Review Answers	Detailed answers to the practices at the end of the chapters

How to use this manual

This manual has been designed as a reference manual as well as a training manual. It has been written to facilitate self-study before and after classroom training.

Table of contents

The manual has been carefully designed for ease of use. All our manuals are written to be task oriented to help you complete your business tasks using our software.

The table of contents lists all the tasks and their respective chapters.

Glossary of Terms

A Glossary of Terms section is provided to explain terms used in the documentation.

Index

An index is provided to help you locate specific information.

This document was designed to reduce your need for an index. You should find the table of contents sufficient.

Introductory chapters

It is important that you read the introductory chapters first. Chapter 1 ensures you get the most out of the information we have provided. Chapter 2 provides a high level overview. Read it to get the big picture before reading the detailed instructional chapters.

Instructional chapters

All chapters, other than the introductory chapters, are instructional chapters. They contain detailed instructions on how to complete the business tasks. Each instructional chapter has the following distinct sections:

Key Concepts

Always read the conceptual information first. This will help you understand why you have to perform certain tasks. It will also help you make decisions about your options and help you understand the importance of performing certain tasks. Exercises to help you apply the concept to a business task are included at the end of most concepts.

Apply the Concept

To be certain that you have understood the key concepts in a chapter, complete the Apply the Concept exercises provided. The answers to these exercises can be found in the appendices.

Detailed Directions

When you are ready to perform a task, review the Detailed Directions, which provide guidance, as well as the specific steps, to complete a task.

Guided Practice

The Guided Practice within the Detailed Directions offers you an opportunity to practice a task with step-by-step instructions. It takes you through the various steps, providing detailed examples so you can gain a comfort level with the task. Guided Practice is easy to locate.

For practice, type 'ABC Solutions'.

Note: *To successfully follow the Guided Practice, you must have completed all the previous Guided Practice exercises in the manual. The Guided Practice uses the test data installed with our software. For the Guided Practice exercises to work, this test data must not have been altered.*

All users who complete the Guided Practice must either have their own copies of the test data or have the test data restored for them.

Extended Practice

To be certain that you have understood the tasks in a chapter, complete the Extended Practice provided. The Extended Practice gives you the opportunity to complete one or more tasks without step-by-step guidance. The answers to these exercises can be found in the appendices.

Note: *To be able to complete the Extended Practice exercises in the manual, you must have completed all the previous exercises. You must also be using the test data delivered with the software. This test data must not have been altered.*

Review of Questions Answered

To be certain that you have understood all of the information in a chapter, complete the review questions provided at the end of a chapter. The answers to these questions can be found in the appendices.

Conventions used in this manual

The underlying page layout and design of this manual are meant to be as intuitive as possible for you. Our intent is to make it easy to navigate through the manual and concentrate on learning and doing.

Cross-references

Wherever appropriate, we provide cross-references to help you find additional information or further discussion of a specific topic.

☞ *Refer to a cross-reference to find more detail or more discussion on a given topic.*

Notes

Whenever there is important information you should be aware of, we provide a note.

Note: *You will find tips or quick techniques covered in notes.*

How to get additional help

If you can not find the answers to your questions in this manual, contact Customer Support, who will be able to answer specific questions and give you general advice on training.

Please visit our web site ***www.Cyborg.com*** (see "Cyborg Home - http://www.Cyborg.com") for the latest schedule of available courses and course descriptions.

Suggestions and feedback

We value your feedback on our performance support materials. Please forward any comments on this manual to Customer Support.

CHAPTER 2

Overview of Training Administration

In This Chapter

Introduction

This section provides an overview of Training Administration and the features it offers. It also provides a suggested list of steps for setting up internal and external training classes.

What is Training Administration?

Training Administration is an easy-to-use system designed to aid organizations in the administration of employee training classes. Training Administration features provide administrative support and allow for detailed record keeping of employee training history, class results, and skills/competencies acquired during training.

Training Administration provides a variety of query (online) reports to display accurate class and employee information. It also provides several batch reports to help you make decisions about employee training plans and class development.

Why use Training Administration?

Training Administration should be used if your organization needs to maintain greater control of, and more extensive record keeping for, employee training.

Keeping your administration requirements in mind, you can perform the following functions with system-provided facilities:

- Define courses
- Schedule classes (a course given on a certain date, at a specified location)
- Set up programs (a series of classes that the student must complete)
- View and analyze class results and costs

Training Administration features

The main features of Training Administration include the following:

- Course/Class/Program Setup
- Student Registration/Cancellation
- Training Required/Training History
- Class/Program Administration
- Cost Analysis/Charge Back
- Management Tools

These features are described in more detail on the next pages.

Course/Class/Program Setup

In Training Administration you set up your training courses with basic course information, including effective date, objectives, skills, costs, and prerequisites. Course information is dated, allowing you to keep track of any changes to the course over time. A Course Copy facility copies course information to a new date and eliminates the need to retype common course data.

A class is a course given on a specific date(s) at a specific location. When a class is scheduled, it assumes the attributes of the course, although you can override some data (such as minimum and maximum class size) at the class table level. Additional class details are recorded, including class times and locations.

A program is set up as a series of training classes. An employee must complete all the classes in the series to complete the program.

Details about providers (trainers) and class coordinators can also be defined and then recorded at the class level.

Student Registration/Cancellation

After scheduling classes in the system, you can register employees for the classes and cancel their registrations. The system automatically keeps track of the number of students registered and will not process a registration if the class is full. Students can then be wait-listed or enrolled in another class.

Employees can also be registered in, or canceled from, programs. An employee is registered in every class in the program that has seats available; otherwise, the employee is wait-listed for any classes that are full.

The system generates confirmation letters, class cancellation letters, and reminder notices to send to registered employees.

Training Required/Training History

Training is a very important part of an employee's development. Knowing this, Training Administration is designed to record when training is required for an employee, and it uses this data to alert you that there are potential future students for a class.

Once the class has been completed, class results can be recorded. Recognizing that this can be a laborious task for an administrator who must input many class results, an automatic process that scrolls from one employee to the next is included. A history of past training and class results is kept on file for analysis and reporting purposes.

Class/Program Administration

Before a class is held, an administrator typically has many tasks to perform, including sending students notices confirming class registration, monitoring class registrations to determine if another class should be scheduled, and producing class reminders before the class starts.

After the class is held, a separate set of tasks must be performed, including processing evaluations and results.

Cost Analysis/Charge Back

Costs can be defined at the course level, class level, and employee level. Employee costs might be recorded at the course or class level if they apply to every student who takes the class. Costs are differentiated by a Category that defines whether the cost is considered an operating, equipment, participant, or individual cost. To allow you to analyze the different types of costs, the system includes forms and reports that accumulate all the appropriate costs. You can then analyze total class costs and total employee costs.

Management Tools

Many organizations look at training as the means by which they develop their employees to meet the organization's short- or long-term staffing needs. Organizations must decide which courses to provide and when to schedule a class. This decision is usually based on the number of employees who need a certain type of training and when these employees are available.

Training Administration features help you make informed decisions about department staffing, scheduling employees for training, deciding whether new courses or classes need to be added, and so forth. A combination of queries and reports supports this need for information.

Interaction with other system components

In some cases, Training Administration can interact with other system components to provide additional information for decision making or calculations.

Skills and competencies

If you use the skills and competencies information in Training Administration, these values automatically populate the Skills and Competencies form (33-SCR) for students once the class has been successfully completed.

Optionally, if you do not use the skills and competencies information in Training Administration, you may manually record skills and competencies attained through the employee's training program on the Skills And Competencies form (33-SCR). This serves as a supplement to Training Administration's management tools and provides decision-making information regarding department staffing requirements.

Salary Information

The salary expense amount can be included in the total employee costs for a training class. Salary expense is calculated automatically.

The salary amount can be automatically calculated on a Training Administration form using information on the Salary Assignment/Changes form (40-SCR). The number of class hours is multiplied by the employee's hourly rate and the resulting expense amount is displayed in Display mode.

The salary expense amount can also be automatically calculated using HED 001 (Regular Pay) as displayed on the Employee Pay Rate Or Salary form (H1-SCR). The number of class hours is multiplied by the employee's hourly rate and the result is shown in Display mode.

Control Numbers

In Training Administration, the Control Number is two alphanumeric characters. Control Numbers are handled differently in Training Administration as compared with other system tables. Rather than displaying the Control Number as a text box in the body of each table form, the system automatically generates the Control Number from the entry on the Organization-To-Rules Cross-Reference For HR form (AX-SCR) and displays it in the form heading.

Navigator structures

In a graphical User Interface (GUI) version of the system, Training Administration features can be found in the Navigator under the Training Administration component icon.

How to get started - internal classes

This section describes 12 steps to help you start using Training Administration features for internal classes. Three additional steps are provided for optional use. For more information, refer to the documentation for the forms and reports.

1. (Required) Set up Control Number(s) on the Organization-To-Rules Cross-Reference For HR form (AX-SCR).
2. (Required) Set up the Training Administration option lists. There are 38 delivered sample option lists. Review each sample option list and set up production option lists to meet your requirements. Be sure to set up your courses in the Course Codes option list (TR33).
3. (Required) Set up Course Directory forms (10RSCR) to establish your training courses.
4. (Optional) Set up training course coordinators on the Coordinator Index form (14RSCR).
5. (Optional) Set up training course providers (trainers) on the Provider Index form (19RSCR).
6. (Required) Schedule classes using the Class Schedule form (13RSCR).
7. (Required) Register employees into the scheduled classes using the Class Registration/Cancellation form (20RSCR).
8. (Required) Once a training class has been held, record class results using the Process Class Results form (22RSCR). Skills will be automatically updated if the employee passes the class.
9. (Optional) Record the results of class evaluations on the Process Class Evaluation Results form (23RSCR).
10. (Required) Use the Training Results/History form (30RSCR) to view employee training history.
11. (Optional) Use the Training Required form (33RSCR) to record or view training required for employees.
12. (Optional) Record employee-level training costs on the Employee Training Class Costs form (34RSCR).
13. (Optional) Set up a program of classes on the Program Schedule form (15RSCR).
14. (Optional) Register employees into programs using the Program Registration/ Cancellation form (16RSCR).
15. (Optional) Cancel, copy, or transfer classes using the Class Maintenance Facility form (18RSCR).

How to get started - external classes

This section describes six steps to help you start using the Training Administration features for external classes. For more information, Refer to the documentation for the forms and reports.

1. (Required) Set up Control Number(s) on the Organization-To-Rules Cross-Reference For HR form (AX-SCR).
2. (Required) Set up the Training Administration option lists. There are 38 delivered sample option lists. Review each sample option list and set up production option lists to meet your requirements. Be sure to set up your courses in the Course Codes option list (TR33).
3. (Optional) Set up Course Directory forms (10RSCR) to establish your training courses.
4. (Required) Record the training results data on the Training Results/History form (30RSCR) with External in the Location text box.
5. (Optional) Record employee-level training costs on the Employee Training Class Costs form (34RSCR).
6. (Optional) Record skills and competencies on the Skills And Competencies form (33-SCR).

PART 2

Setting Up Training Administration

In This Section

CHAPTER 3

Implementing Training Administration

In This Chapter

Introduction

Before using the features of Training Administration that are discussed later in this manual, it is necessary to complete some basic implementation tasks.

Tasks

This chapter explains the following implementation tasks:

- Setting up Control Numbers for all production organizations
- Setting up Training Administration option lists

Prerequisites

The following task must be completed before you begin to implement Training Administration:

Organization details

Before any implementation data can be entered, you must ensure that your organization details have been set up on the system.

Questions answered

The following questions are answered in this chapter:

1. How are Control Numbers set up in Training Administration?
2. How are Training Administration option lists set up?

Control Numbers

A Control Number is used to define which table records will be used for each of your organizations. The two-character Training Administration Control Number is defined on the Organization-To-Rules Cross-Reference For HR form (AX-SCR) .

For example, in the delivered Training Administration test data, Control Number '99' is used for organization '999999'.

See also:

- Setting up Control Numbers for all production organizations ***(on page 35)***

For detailed directions on setting up Control Numbers.

Apply the Concept

Describe the two primary differences between the Control Numbers used in Training Administration and those used in other system tables.

Uses of Training Administration option lists

Thirty-eight sample option lists are delivered with Training Administration. You should review and, where necessary, edit these option lists to reflect your organization's requirements.

Nine of the option lists should not be modified because Training Administration needs them to function properly. They are:

- Cost Category (TR14)
- Course Results (TR09)
- Course Status (TR11)
- Register List Option (TR37)
- Registration Options (TR34)
- Registration Status (TR16)
- Salary Costs Method (TR29)
- Session Maintenance (TR35)
- Training Required Status (TR15)

Course/Class option lists			**Evaluation option lists**	
Level Required	TR01		Evaluation Category	TR39
Course Type	TR02		Evaluation 1	TR17
Course Objectives	TR03		Evaluation 2	TR18
Course Location	TR05		Evaluation 3	TR19
Course Results	TR09*		Evaluation 4	TR20
Training Area	TR10		Evaluation 5	TR21
Course Status	TR11*		Evaluation 6	TR22
Training Location	TR13		Evaluation 7	TR23
Cost Category	TR14*		Evaluation 8	TR24
Course Subjects	TR30		Evaluation 9	TR25
Training Cost Type	TR31		Evaluation 10	TR26
Course Prerequisite	TR32			
Course Codes	TR33			
Provider/Coordinator option lists			**Additional option lists**	
Provider Type	TR07		Absence Reason	TR12
Provider Course Category	TR08		Training Required Status	TR15*
Coordinator Index	TR27		Registration Status	TR16*

Course/Class option lists			**Evaluation option lists**	
Provider Index	TR38		Training Required Reason	TR28
			Salary Costs Method	TR29*
			Registration Options	TR34*
			Session Maintenance	TR35*
			Training Elective	TR36
			Register List Option	TR37*
			Program Schedules	TR40

*This option list should not be modified.

A description of each option list follows. The option lists have been divided into the following categories: course/class option lists, provider/coordinator option lists, evaluation option lists, and additional option lists.

Course/Class option lists

Level Required (TR01)

This one-character alphanumeric value defines the level of difficulty of the training course subject matter.

Examples:

2 Advanced
4 Introductory
6 Intermediate

Course Type (TR02)

This two-character alphanumeric value defines the kind of training that applies to the training course.

Examples:

01 CBT
P2 Lecture

Course Objectives (TR03)

This three-character alphanumeric value defines the objectives to be met by attending the training course.

Examples:

POL Understand Policy
SKG Gain General Skills

Course Location (TR05)

This three-character alphanumeric value defines the location of a training class, such as a training center.

Examples:

CHI Chicago Training Center
SYD Sydney Training Center

Course Results (TR09) - (Do not delete or modify delivered options)

This one-character alphanumeric value defines the final result after an employee attends a training course.

Examples:

C Completed
F Failed
I Incomplete
P Passed

Training Area (TR10)

This two-character alphanumeric value defines the section or department responsible for the training.

Examples:

02 Sales and Marketing
03 Corporate Services

Course Status (TR11) - (Do not delete or modify delivered options)

This one-character alphanumeric value defines the current availability of the training course. These options are automatically generated and displayed on the Class Schedule form (13RSCR).

Examples:

A Available
C Canceled
F Full

Training Location (TR13)

This two-character alphanumeric value defines the general location of the training class.

Examples:

01 Chicago
UK London

Cost Category (TR14) - (Do not delete or modify delivered options)

This one-character alphanumeric value defines the kind of cost to be associated with the training course. The delivered options (listed below) are used in various packaged reports in Training Administration. If this option list is modified, the appropriate packaged reports must also be modified to recognize any customizations.

Examples:

E Equipment
H Per Head
I Individual
M Miscellaneous
O Operating
P Participant

Course Subjects (TR30)

This three-character alphanumeric value defines the subject of a training course.

Examples:

002Marketing Theory
M01 Management Skills

Training Cost Type (TR31)

This two-character alphanumeric value defines the specific items associated with the cost category for the training course (these examples could be associated with a category of Equipment).

Examples:

01 Overhead Projector
04 Large Monitor rental

Course Prerequisite (TR32)

This six-character alphanumeric value defines the prerequisites needed to register for a training course.

Examples:

MGMT01 1 Year Mgmt Experience

Course Codes (TR33)

This six-character alphanumeric value defines training course titles.

Examples:

111111 Human Resource Mgmt
222222 Position Management

Provider/Coordinator option lists

Provider Type (TR07)

This two-character alphanumeric value defines the source of the training provider, usually an employee or external provider.

Examples:

EMEmployee
EX External

Provider Course Category (TR08)

This two-character alphanumeric value defines the training courses a provider is qualified to teach.

Examples:

A1 All
01 HR Management

Coordinator Index (TR27)

This five-character alphanumeric value uniquely identifies the training course coordinator who administers the course. Sample options in the Coordinator Index option list provide titles such as 'Management Classes', meaning the Coordinator of Management Classes. Your descriptions may be titles or actual names.

Examples:

11111 HR Classes
22222 Orientation Sessions

Provider Index (TR38)

This 10-character alphanumeric value defines the training course provider. Sample options in the Provider Index option list (TR38) provide titles such as 'Chicago Staffed', meaning the trainer is based in Chicago. Your descriptions may be titles or actual names.

Examples:

1 Chicago Staffed
2 New Orleans Staffed

Evaluation option lists

Evaluation Category

This four-character alphanumeric value defines up to 10 categories for training class evaluations. The first two positions of the value are the Control Number and the last two positions are numbered 01 through 10. Match the Control Number here and on the Organization-To-Rules Cross-Reference For HR form (AX-SCR) for each organization. This allows different organizations to have different categories.

Note: *It is not possible to have different categories within the same organization.*

Examples:

9901—Instructor
9902—Subject Matter
9903—Class Facilities
9904—Refreshment Service
9905—Audio-Visual
9906—Class Materials
9907—Presentation Quality
9908—Class Effectiveness
9909—Met Objectives?

9910—Registration Process

Each of the options in this option list can be tied to its own option list, which allows custom rankings within a category. See below for the option lists that are tied to each of these options.

Evaluation 1 (TR17)

This one-character alphanumeric value is tied to the Evaluation Category option list (TR39) value 9901.

Examples:

1 Excellent
2 Very Good
3 Fair
4 Poor

Evaluation 2 (TR18)

This one-character alphanumeric value is tied to the Evaluation Category option list (TR39) value 9902.

See the ***Evaluation 1*** (see "Earned income credit" on page 349) option list for examples.

Evaluation 3 (TR19)

This one-character alphanumeric value is tied to the Evaluation Category option list (TR39) value 9903.

See the ***Evaluation 1*** (see "Earned income credit" on page 349) option list for examples.

Evaluation 4 (TR20)

This one-character alphanumeric value is tied to the Evaluation Category option list (TR39) value 9904.

See the ***Evaluation 1*** (see "Earned income credit" on page 349) option list for examples.

Evaluation 5 (TR21)

This one-character alphanumeric value is tied to the Evaluation Category option list (TR39) value 9905.

See the ***Evaluation 1*** (see "Earned income credit" on page 349) option list for examples.

Evaluation 6 (TR22)

This one-character alphanumeric value is tied to the Evaluation Category option list (TR39) value 9906.

See the ***Evaluation 1*** (see "Earned income credit" on page 349) option list for examples.

Evaluation 7 (TR23)

This one-character alphanumeric value is tied to the Evaluation Category option list (TR39) value 9907.

See the ***Evaluation 1*** (see "Earned income credit" on page 349) option list for examples.

Evaluation 8 (TR24)

This one-character alphanumeric value is tied to the Evaluation Category option list (TR39) value 9908.

See the ***Evaluation 1*** (see "Earned income credit" on page 349) option list for examples.

Evaluation 9 (TR25)

This one-character alphanumeric value is tied to the Evaluation Category option list (TR39) value 9909.

See the ***Evaluation 1*** (see "Earned income credit" on page 349) option list for examples.

Evaluation 10 (TR26)

This one-character alphanumeric value is tied to the Evaluation Category option list (TR39) value 9910.

See the ***Evaluation 1*** (see "Earned income credit" on page 349) option list for examples.

Additional option lists

Absence Reason (TR12)

This three-character alphanumeric value defines the reason for an employee's absence from a training class.

Examples:

002Death in Family
003Did not finish class

Training Required Status (TR15) - (Do not delete or modify delivered options)

This one-character alphanumeric value defines the reason the employee is required to attend a training class. These options are used to create the Training Required inquiry form (33RSCR). If options are added, the form logic may need changes or additions.

Examples:

C Employee Canceled
D Class Canceled
F Employee Failed
I Class Incomplete

Registration Status (TR16) - (Do not delete or modify delivered options)

This one-character alphanumeric value defines the status of an employee registration. These options are used to create the Training Required inquiry form (33RSCR).

Examples:

N No Status
R Registered
W Wait List

Training Required Reason (TR28)

This one-character alphanumeric value defines the reason training is required for the employee.

Examples:

T Training Plan

Salary Costs Method (TR29) - (Do not delete or modify delivered options)

This one-character alphanumeric value defines the method used to calculate the salary expense to be included in the employee's training class cost. These options are options used to calculate salary expense on the Employee Training Class Costs form (34RSCR).

Examples:

2 Use Salary Segment

Registration Options (TR34) - (Do not delete or modify delivered options)

This one-character alphanumeric value defines the training class registration options. These are the options generated by programs when creating/deleting segments.

Examples:

C Cancel Registration
D Delete Registration
R Register in Session

Session Maintenance (TR35) - (Do not delete or modify delivered options)

This one-character alphanumeric value defines class maintenance options. These are the options generated by programs when creating/deleting segments.

Examples:

C Cancel Class
D Delete Class
P Copy Class
T Transfer Class
Y Class Canceled

Training Elective (TR36)

This one-character alphanumeric value defines the training elective options.

Examples:

E Elective
R Required

Register List Option (TR37) - (Do not delete or modify delivered options)

This one-character alphanumeric value defines the listing employee options. These options are internally determined and sorted by the system. They become the values used for selecting employees for queries.

Examples:

8 List register/wait
R List registered
W List wait listed

Program Schedules (TR40)

This five-character alphanumeric value defines training program titles.

Example:

11111 HR Mgmt Program

See also:

- Setting up Training Administration option lists ***(on page 37)***

For detailed directions on setting up Training Administration option lists.

Apply the Concept

How many different types of Training Administration option lists are there? Give a few examples of each type.

Apply the Concept

If your organization has five separate organizations but the training function is administered centrally using all the same tables and so forth, what value(s) would be entered on each Organization-to-Rules Cross-Reference For HR form (AX-SCR) in the Training Admin text box?

Detailed Directions

This section provides detailed instructions for the tasks discussed in this chapter.

Tasks

Setting up Control Numbers for all production organizations

To set up the Training Administration Control Numbers for all of your production organizations, follow these steps:

1. Determine what organization/Control Number combinations you want to use

Determine your organization/Control Number strategy.

2. Access the Organization To Rules Cross-Reference For HR form (AX-SCR)

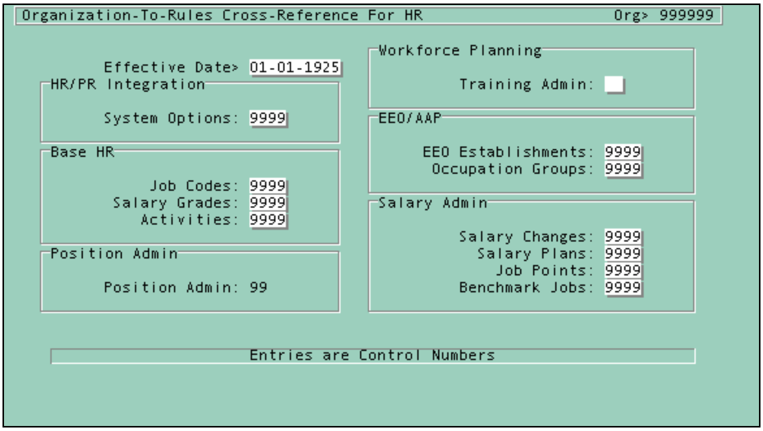
Make sure the appropriate organization is displayed in the status bar. This is the organization for which the Control Number is set up.

Access this form by making the following selection from the Navigator.

Component:	HR Setup
Process:	Setup HR Rules
Task:	Organization To Rules Cross-Reference

For practice, access the Organization-To-Rules Cross-Reference For HR form (AX-SCR).

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Organization-To-Rules Cross-Reference For HR Org> 999999

Effective Date> 01-01-1925

HR/PR Integration
System Options: 9999

Base HR
Job Codes: 9999
Salary Grades: 9999
Activities: 9999

Position Admin
Position Admin: 99

Workforce Planning
Training Admin:

EEO/AAP
EEO Establishments: 9999
Occupation Groups: 9999

Salary Admin
Salary Changes: 9999
Salary Plans: 9999
Job Points: 9999
Benchmark Jobs: 9999

Entries are Control Numbers

3. Enter the Training Administration Control Number

Type the two-character Training Administration Control Number in the Training Administration text box.

For practice, type '99' if the entry is not already present on the form.

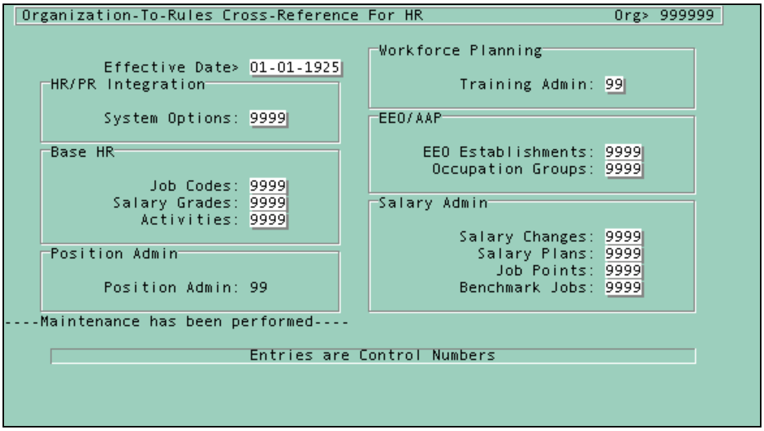
4. Click Save or press Enter

The Training Administration Control Number is set up for the organization displayed on the status bar and the following message is displayed:

'—Maintenance has been performed—'.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Organization-To-Rules Cross-Reference For HR Org> 999999

Effective Date> 01-01-1925

HR/PR Integration
System Options: 9999

Base HR
Job Codes: 9999
Salary Grades: 9999
Activities: 9999

Position Admin
Position Admin: 99

Workforce Planning
Training Admin: 99

EEO/AAP
EEO Establishments: 9999
Occupation Groups: 9999

Salary Admin
Salary Changes: 9999
Salary Plans: 9999
Job Points: 9999
Benchmark Jobs: 9999

----Maintenance has been performed----

Entries are Control Numbers

Be sure to perform these steps for each organization that will be using Training Administration.

See also:

■ Control Numbers ***(on page 25)***

For an explanation of how Control Numbers are used.

Setting up Training Administration option lists

To set up the production option lists, follow these steps:

1. Determine options and descriptions for option lists

Review the option lists for values and descriptions you want to add (recall that some option lists should not be modified).

2. Access the Option List Editor (CSUPDT)

Access this form by making the following selection from the Navigator.

Component: Development Tools
Process: Option Lists
Task: Edit

For practice, access the Option List Editor (CSUPDT) dialog box.

3. Enter the Option List Name

Enter the name of the option list to be edited.

For practice, type 'TR33'.

4. Click the Find Now command button

The system displays the detailed information for the requested option list.

For practice, click the 'Find Now' command button.

5. Click the Create command button

A blank line will be inserted, allowing you to add the new code.

For practice, click the Create command button.

6. Enter the Code

Enter a unique code or value. The length of the code will depend on the particular option list with which you are working.

For practice, type 'SA0001'.

7. Enter the Description

Enter a description of up to 20 characters. This description will be displayed in the options provided by the list box.

For practice, type 'Salary Admin'.

8. Enter the Alternate Language

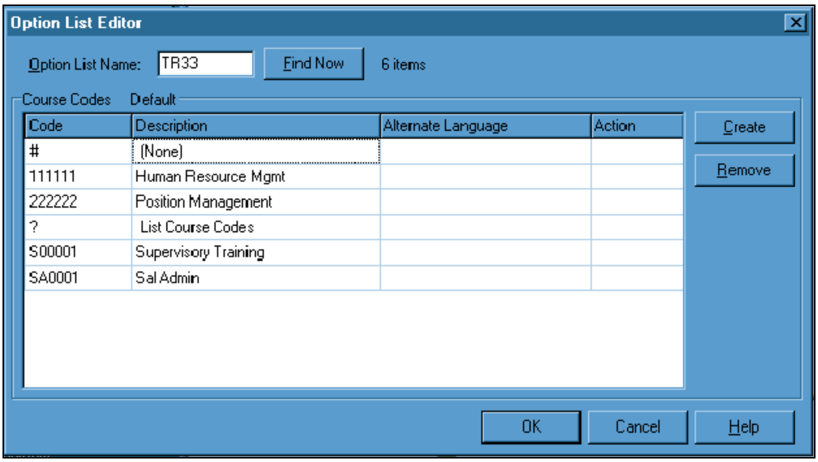
If an alternate language is being used, enter the description in that language.

For practice, leave this text box blank.

9. Click Save or press Enter

The Option List Editor dialog box is displayed with the description that has been added.

For practice, click Save or press Enter.



☞ *Be sure to perform these steps for all the Training Administration option lists that need customization.*

See also:

- Uses of Training Administration option lists ***(on page 26)***

For an explanation of Training Administration option lists.

Extended Practice

Add the following codes to the option lists below using the Option List Editor:

Option list	Code	Description
Provider Index (TR38)	CYBOR G	Cyborg Systems
Coordinator Index (TR27)	CYB	Cyborg Class Coord
Provider Course Category (TR39)	CY	All Cyborg Classes

Review of Questions Answered

1. How are Control Numbers set up in Training Administration?

2. How are Training Administration option lists set up?

CHAPTER 4

Setting Up and Maintaining Training Courses

In This Chapter

Introduction

To use Training Administration, you must set up the training courses that you want to administer. This task is essential because you can not schedule training classes and register your employees into them until you set up your courses. This is an initial setup task. There are, however, some ongoing main finance tasks as well.

Tasks

This section explains the following:

- Setting up training courses
- Entering course objectives (optional)
- Entering skills and competencies (optional)
- Entering course costs (optional)
- Entering course prerequisites (optional)
- Entering course development costs (optional)
- Changing course details
- Copying training courses (optional)
- Checking available courses
- Deleting courses
- Setting up training course coordinators (optional)
- Setting up training course providers (optional)

Prerequisites

Before you begin to enter course details, the following task must have been completed.

Training Administration implementation

Before any data are entered, you must ensure that all option lists are populated with information such as course details, prerequisites, and objectives.

☞ *Refer to* **Implementing Training Administration** *(on page 23) for details.*

Questions answered

The following questions are answered in this section:

1. What is a course?
2. What are training objectives and how are they used?
3. What types of costs can be recorded?
4. How are prerequisites and skills used?
5. How are coordinators and providers used?

What is a course?

A course is a separate unit of instruction in a subject. For example, 'Using The Solution Series: Administrative Solutions' is a course. This may be applied to a training course provided internally or externally.

See also:

- Setting Up Training Courses ***(on page 53)***

For detailed directions on setting up Training Courses.

Apply the Concept
Define the term *course.*

The differences between courses, classes, and programs

One of the differences between courses, classes, and programs is that a course is a separate unit of instruction in a subject. Course information is set up using the Course Directory form. Training course information is defined on six form panels. Each form panel is used to define a different type of course information.

A class is an occurrence of a course that is specific to a location and a date. For example, 'Using The Solution Series: Administrative Solutions' on Thursday, December 21, in Chicago is a class of the course 'Using The Solution Series: Administrative Solutions'. Class information is set up using the Class Schedule form.

Finally, a program is a series of classes. For example, 'The Cyborg Training Schedule for January-June 1999' is a program of the classes provided by Cyborg Systems. Program information is set up using the Program Schedule form.

See also:

- Setting Up Training Courses ***(on page 53)***

For detailed directions on setting up Training Courses.

Apply the Concept
Define the term *class.*

Apply the Concept
Define the term *program.*

Training objectives and their uses

The provider identifies a course objective for each course. The objective may be a skill, level of competency, and so forth. All courses set up on Training Administration can have training objectives associated with them. These can then be matched against an employee's training objective to find the best course for the employee to attend.

It is important to set up all courses with a full range of identified training objectives so that the staff can find the best course available for an employee.

The list of course objectives is displayed in the Course Objectives option list (TR03) on the Course Directory: Objectives form (10RSCR). Once the Course Objectives list boxes are populated, you will be able to search for a desired training objective without knowing the name of the training course.

The Objectives panel of the Course Directory form (10RSCR) allows you to input objectives to be met by students attending the course. These objectives are displayed on the Training Results/History form (30RSCR) for each employee who completes the course. Depending on how the employee did in the course, each objective may or may not have been met. For example, the employee may have met only four of the eight course objectives. Or, if the employee failed the course, no objectives were met.

See also:

- Entering course objectives (optional) ***(on page 56)***

For detailed directions on entering course objectives.

Types of costs

Costs are recorded at three levels within Training Administration: course, class, and employee. This is appropriate because costs are often incurred at these three levels. For example, the cost of books might be standard for all classes within a course and therefore would need to be recorded at the course level. Alternatively, the cost for a course instructor's fee might vary at the class level, since different instructors might charge different amounts. Finally, airfare and other costs of attending the class would be associated with an employee.

The system automatically totals all costs to determine a total cost for each level of each course given.

In addition to the three levels of cost, the system uses six categories to further define those costs. These are defined in the Cost Category option list (TR14) on the Course Directory: Costs form (10RSCR). The categories of 'Equipment', 'Individual', and 'Operating' are carried through to the class level. Categories of 'Per Head' and 'Participant' indicate employee-level costs.

The Course Development Costs form (11RSCR) is used to record and view the costs associated with the development of a training course. These are the one-time up-front costs associated with the course.

The Employee Training Class Costs form (34RSCR) is used to record costs associated with a specific employee taking an internal or external training class. Examples of these costs include airfare, lodging, prorated salary expenses, and so forth. For internally administered classes, employee-level costs that are the same for all class participants are recorded at the course or class level. These costs can be viewed in Display mode on a second form panel to give a complete picture of employee training costs.

The Course Directory form (10RSCR) must already be established for the course for which development costs are being recorded.

See also:

- Entering course costs (optional ***(see "Entering course costs (optional)" on page 59))***
For detailed directions on entering course costs.

- Entering course development costs (optional) ***(on page 62)***
For detailed directions on entering course development costs.

Apply the Concept
What three types of costs can be recorded in Training Administration?

Apply the Concept

List two examples of employee-level costs.

Prerequisites and skills and their relationship

Using the course Prerequisite panel to define skills and course-level requirements for a particular course is optional. A prerequisite may be prior course attendance, mastery of certain skills and abilities, level of experience, and so forth. Prerequisites are recorded on the Course Directory: Prerequisites form.

The Skills/Competencies panel of the Course Directory form (10RSCR) allow you to input skills that will be obtained by students who successfully complete a course. These skills will be populated onto the student's Skills And Competencies form (33-SCR) upon successful completion of the course, thus reducing the amount of data input necessary to maintain a current and accurate skills log for employees.

The achievement of certain skills (such as Claim Accounting, Procedure Writing, Project Presentation, Banking Regulations) as defined in the Skill Code option list (MP01) could be considered prerequisites for other courses. Because of this relationship between skills and prerequisites, it is important to populate the list of prerequisites with selected skills (as one source of prerequisite information) if you plan to use this form panel. When prerequisites for a student's participation in a course are checked at some point in the future, the Skills And Competencies form (33-SCR) can be viewed to see if any skill requirements have been met.

See also:

- Entering skills and competencies (optional) ***(on page 57)***
For detailed directions on entering skills and competencies.

- Entering course prerequisites (optional) ***(on page 61)***
For detailed directions on entering course prerequisites.

Apply the Concept
What are the prerequisites to setting up training course details?

Apply the Concept
List two examples of skills/competencies that can be defined on the system.

Copying common course information

The Course Copy Facility panel of the Course Directory form allows you to copy course information that has already been defined to a different Course/Effective Date. This is especially helpful if you are retaining a course history and the data on only one form panel is changing with the new effective date. You may also copy course information to a new or different course with the same date.

See also:

- **Copying training courses (optional)** ***(on page 65)***

For detailed directions on copying training courses.

Apply the Concept

Consider the way course information is currently managed/tracked in your organization and determine whether it will be useful for you to use all or some of the optional panels included on the Course Directory form. Which ones will be most beneficial to you?

Uses of coordinators and providers

Coordinators are set up on the Coordinator Index form (14RSCR) and are either employees or external persons who administer training classes. Sample options in the Coordinator Index option list (TR27) provide titles such as 'Management Classes', meaning the Coordinator of Management Classes. Your descriptions may be titles or actual names. Coordinators should be set up during implementation.

Providers are set up on the Provider Index form (19RSCR) and are instructional institutions, organizations, or persons who are available to teach training classes. Sample options in the Provider Index option list (TR38) provide titles such as 'Chicago Staffed', meaning the trainer is based in Chicago. Your descriptions may be titles or actual names. Providers should be set up during implementation.

Details about course providers and coordinators can be defined on forms and then recorded at the class level to help you capture all training-related data. Queries and reports provide administrative support and create management tools to determine instructors' schedules, courses taught, dates booked, and so forth, and to produce class confirmation letters that contain provider and coordinator information along with all other relevant class information.

See also:

- Setting up training course coordinators (optional) ***(on page 70)***
For detailed directions on setting up coordinators.

- Setting up training course providers (optional) ***(on page 72)***
For detailed directions on setting up providers.

Apply the Concept
When setting up a new training course coordinator who is an employee (versus an external coordinator), what , if anything, do you do differently when entering data on the Coordinator Index form?

Apply the Concept
Consider how your organization might use the Provider Index and Coordinator Index and describe how you might customize these option lists to meet your needs.

Detailed Directions

This section provides detailed instructions for the tasks discussed in this section.

Tasks

Setting up Training Courses

To set up training courses using the Course Directory form (10RSCR), follow these steps:

Note: *You must set up the titles of new courses in the Course Codes option list (TR33) before following this procedure.*

You may also need to add entries to the following option lists: Providers (TR38) , Course Subject (TR30), Course Level (TR01), Course Type (TR02), and Training Area (TR10).

1. Access the Course Directory form (10RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Setup and Maintain Courses
Task: Setup/Maintain Course

For practice, access the Course Directory form (10RSCR).

2. Click the Clear button

To avoid copying pre-existing information, click the Clear button on the toolbar to clear the text boxes on the form.

For practice, click the Clear button on the toolbar.

3. Select the Course

Select the appropriate training course.

As an alternative, select the List Course Options option in the Course Codes option list (TR33) and then click Save or press Enter to display a list of course options and their descriptions. Select a course code from the list, then click Save or press Enter.

For practice, select 'Human Resource Mgmt'.

4. Enter the Effective Date

Type the date the course becomes effective. The format for this text box must be entered as MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

For practice, type '01-01-1997'.

5. Type a Description (optional)

If left blank, the description defaults to the course name.

For practice, leave this text box blank.

6. Enter Comments (optional)

This text box may be used for additional information about the course.

For practice, type 'This course is a Human Resource overview'.

7. Select a Subject (optional)

Select the subject of the course, for example, 'Marketing Theory'.

For practice, select 'HR Management'.

8. Select the Type (optional)

Select the type of course, for example, 'CBT' or 'Orientation'.

For practice, select 'Lecture'.

9. Select the Training Area (optional)

Select the area responsible for this course, for example, 'Customer Support'.

For practice, select 'Corporate Services'.

10. Select the Course Level (optional)

Select the level of difficulty of the training course subject matter.

For practice, select 'Introductory'.

11. Select the Provider (optional)

Select the provider (trainer) of the training course.

For practice, type 'Chicago Staffed'.

12. Enter the Training Units (optional)

Type the number of training units this course is to be assigned, using an nnn format with no decimals.

For practice, type '20'.

13. Enter the Duration (Hours) (optional)

Type the total hours for this course in nnn.n format.

For practice, type '24.0'.

14. Type the Minimum (number of students)

This entry must be less than or equal to the entry for the maximum number of students who may attend this course based on space availability and/or instructor preferences.

For practice, type '5'.

15. Type the Maximum (number of students)

This entry must be greater than or equal to the minimum number of students required for the course to be held.

For practice, type '10'.

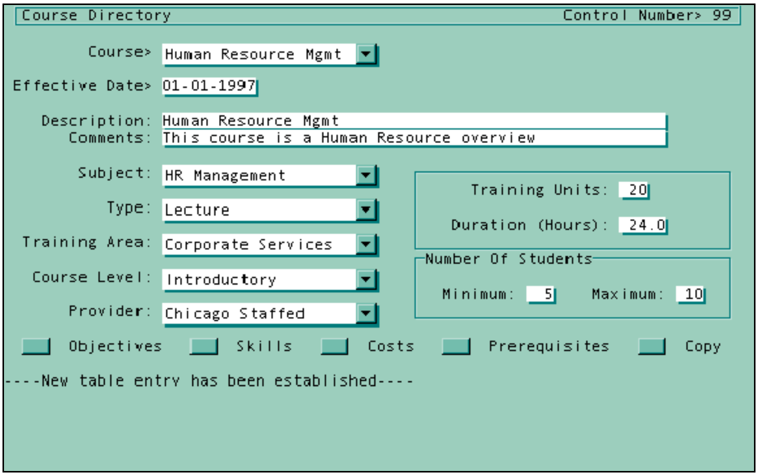
16. Click Save or press Enter

The training course record is created and the following message is displayed:

'—New table entry has been established—'.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- What is a course? ***(on page 45)***

For an explanation of what a course is.

- The differences between courses, classes, and programs ***(on page 46)***

For an explanation of the differences between course, classes and programs.

Entering course objectives (optional)

To set up course objectives, follow these steps:

Note: *You may skip steps 1 and 2 if you have just completed the setup of a new course and are still displaying the Course Directory form (10RSCR). You may need to set up options in the Course Objectives option list (TR03) before following this procedure.*

1. Access the Course Directory form (10RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Setup and Maintain Courses
Task: Setup/Maintain Course

For practice, access the Course Directory form (10RSCR).

2. Select a training course

Access the selections list by clicking the Selections button on the toolbar. Then double-click the appropriate training course.

For practice, click the Selections button on the toolbar and select 'Human Resource Mgmt' dated '01-01-1997'.

3. Access the Objectives panel

Click the Objectives command button to access the Objectives form panel. The Course list box and Effective Date text box are carried over from the Set Up form panel.

For practice, click the Objectives command button.

4. Select Objectives

Select up to eight course objectives.

For practice, select 'Gain General Skills' for Objective 1 and 'Org Structures' for Objective 2.

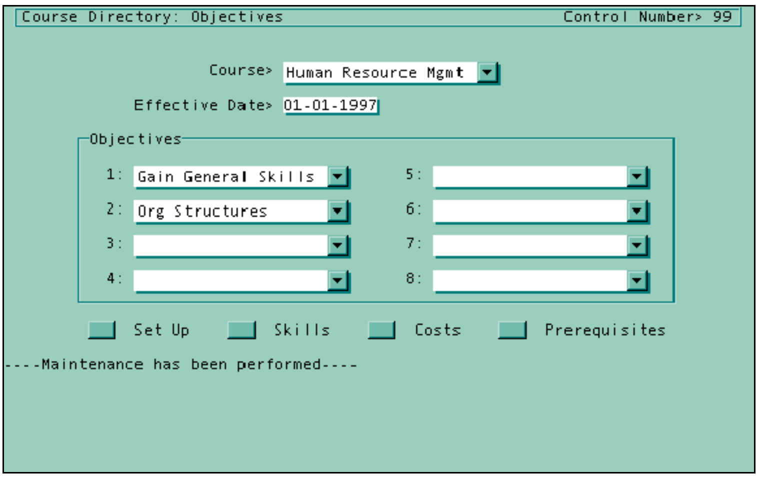
5. Click Save or press Enter

The following message is displayed:

'—Maintenance has been performed—'.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Training objectives and their uses ***(on page 47)***

For an explanation of training objectives and their uses.

Entering skills and competencies (optional)

To enter skills and competencies for a course, follow these steps:

Note: You may skip steps 1 and 2 if you have just completed the setup of a new course and are still displaying the Course Directory: Objectives form (10RSCR).

You may need to review and set up additional skills and competencies in the Skill Code option list (MP01) before following this procedure.

1. Access the Course Directory form (10RSCR)

Access this form by making the following selection from the Navigator.

Component:	Training Administration
Process:	Setup and Maintain Courses
Task:	Setup/Maintain Course

For practice, access the Course Directory form (10RSCR).

2. Select a training course

Access the selections list by clicking the Selections button on the toolbar. Then double-click the appropriate training course.

For practice, click the Selections button on the toolbar and select 'Human Resource Mgmt' dated '01-01-1997'.

3. Access the Skills/Competencies panel

Click the Skills command button to access the Skills/Competencies form panel. The Course list box and Effective Date text box are carried over from the Set Up form.

For practice, click the Skills command button.

4. Select the Skills/Competencies

Select a suitable entry. Up to five skills and the relevant proficiency level for each can be entered on this panel. If you want to define up to five additional skills and proficiency levels, select the Skills 6-10 command button in the upper right of the form.

For practice, select 'Human Resource Manag'.

5. Select the Proficiency

Select a proficiency level for each skill.

For practice, select 'Expert'.

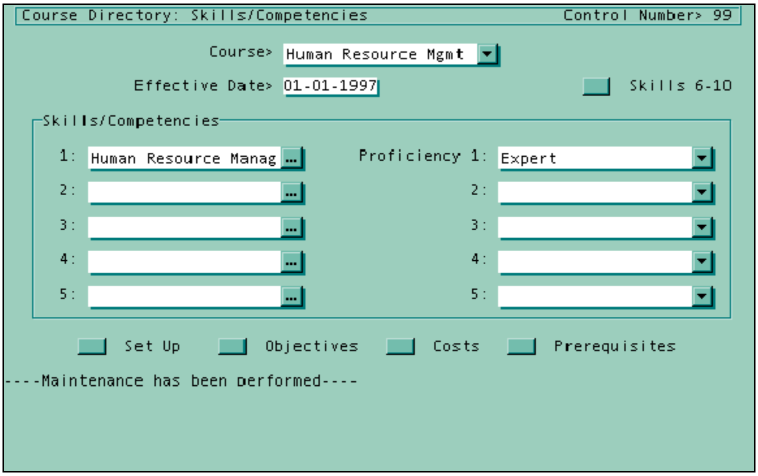
6. Click Save or press Enter

The following message is displayed:

'—Maintenance has been performed—'.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Prerequisites and skills and their relationship ***(on page 50)***

For an explanation of perquisites and skills and their relationship.

Entering course costs (optional)

To enter course costs, follow the steps in this task.

Note: *You may skip steps 1 and 2 if you have just completed the setup of a new course and are still displaying the Course Directory: Skills /Competencies form (10RSCR).*

You may need to review and set up additional Cost Categories (TR14) and Training Cost Types (TR31) option list values before following this procedure.

1. Access the Course Directory form (10RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Setup and Maintain Courses
Task: Setup/Maintain Course

For practice, access the Course Directory form (10RSCR).

2. Select a training course

Access the selections list by clicking the Selections button on the toolbar. Then double-click the appropriate training course.

For practice, click the Selections button on the toolbar and select 'Human Resource Mgmt' dated '01-01-1997'.

3. Access the Costs panel

Click the Costs command button to access the Costs panel. The Course list box and Effective Date text box are carried over from the Set Up form panel.

For practice, click the Costs command button.

4. Select the Category

Select up to five cost categories (such as 'Equipment').

Note: *Categories of 'Equipment', 'Individual', or 'Operating' are carried through to class level. Categories of 'Per Head' and 'Participant' indicate employee-level costs.*

For practice, select a cost category of 'Equipment'.

5. Select the Type

Select up to five cost types, for example, 'Overhead Projector'.

For practice, select 'Large Monitor rental'.

6. Enter the amount

This text box is edited as --,---.99

Note: *The Category, Type, and Cost Amount on each line are tied together and define a cost description and amount.*

For practice, type '2,000.00'.

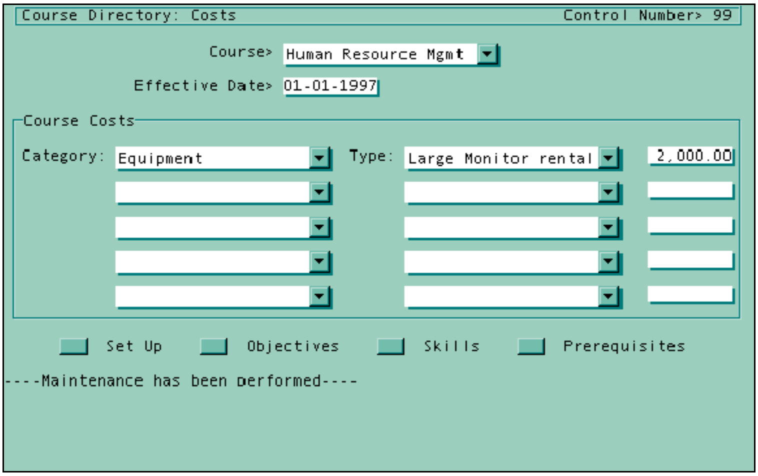
7. Click Save or press Enter

The following message is displayed:

'—Maintenance has been performed—'.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Types of costs ***(on page 48)***

For an explanation of types of costs.

Entering course prerequisites (optional)

To set up course prerequisites, follow these steps:

Note: *You may skip steps 1 and 2 if you have just completed the setup of a new course and are still displaying the Course Directory: Costs form (10RSCR).*

You may need to review and set up additional prerequisites in the Course Pre-requisite option list (TR32) before following this procedure.

1. Access the Course Directory form (10RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Setup and Maintain Courses
Task: Setup/Maintain Course

For practice, access the Course Directory form (10RSCR).

2. Select a training course

Access the selections list by clicking the Selections button on the toolbar. Then double-click the appropriate training course.

For practice, click the Selections button on the toolbar and select 'Human Resource Mgmt' dated '01-01-1997'.

3. Access the Prerequisites panel

Click the Prerequisites command button to access the Prerequisites form panel. The Course list box and Effective Date text box are carried over from the Set Up form panel.

For practice, click the Prerequisites command button.

4. Select Prerequisites

Select up to six prerequisites, for example, 'Supervisory Course'.

For practice, select '1 Yr Mgmt Experience' for Prerequisite 1 and 'Supervisory Course' for Prerequisite 2.

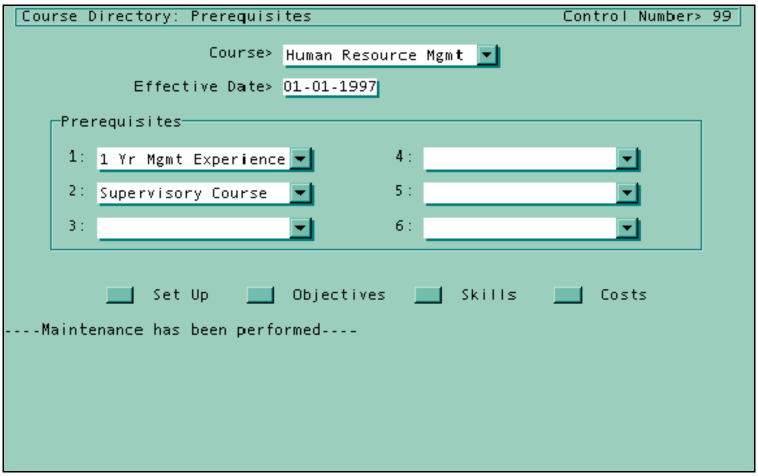
5. Click Save or press Enter

The following message is displayed:

'—Maintenance has been performed—'.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Prerequisites and skills and their relationship ***(on page 50)***

For an explanation of perquisites and skills and their relationship.

Entering course development costs (optional)

To set up course development costs, follow these steps:

1. Access the Course Development Costs form (11RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Setup and Maintain Courses
Task: Entering Development Costs

For practice, access the Course Development Costs form (11RSCR).

2. Select a Course

Select a course. As an alternative, select the List Course Options option in the Course list box and then click Save or press Enter to display a list of course options and their descriptions. Select a course code from the list, then click Save or press Enter.

For practice, select 'Human Resource Mgmt'.

3. Enter the Effective Date

Type the date the cost was incurred in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

For practice, type '10-02-1997'(US and Canada) or '02-10-1997'(elsewhere).

4. Enter the Development Cost

Type the cost of developing the training course.

This text box is edited as -,---,---. For example, 5,000.00 is entered as '5000'.

For practice, type '7550'.

5. Enter Comments (optional)

Type free-form comments here.

For practice, type 'One-time cost for all facilities'.

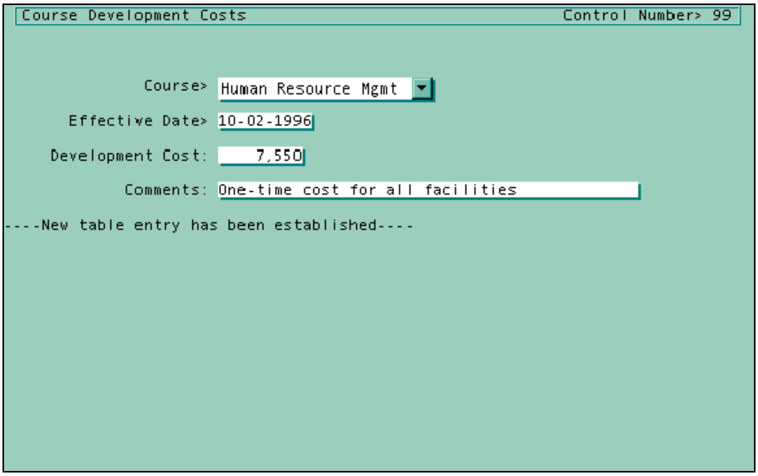
6. Click Save or press Enter

The following message is displayed:

'—New table entry has been established—'.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Course Development Costs Control Number> 99

Course> Human Resource Mgmt

Effective Date> 10-02-1996

Development Cost: 7,550

Comments: One-time cost for all facilities

----New table entry has been established----

See also:

- Types of costs ***(on page 48)***

For an explanation of types of costs.

Changing course details

To modify course details, follow these steps:

1. **Access the Course Directory form (10RSCR)**

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Setup and Maintain Courses
Task: Setup/Maintain Course

For practice, access the Course Directory form (10RSCR).

2. **Select a training course**

Access the selections list by clicking the Selections button on the toolbar. Then double-click the appropriate training course.

For practice, click the Selections button on the toolbar and select 'Human Resource Mgmt' dated '01-01-1997'.

3. **Select a text box to change**

Select the text box you need to change and enter the changed information.

For practice, change the Duration (Hours) text box to '16.0'.

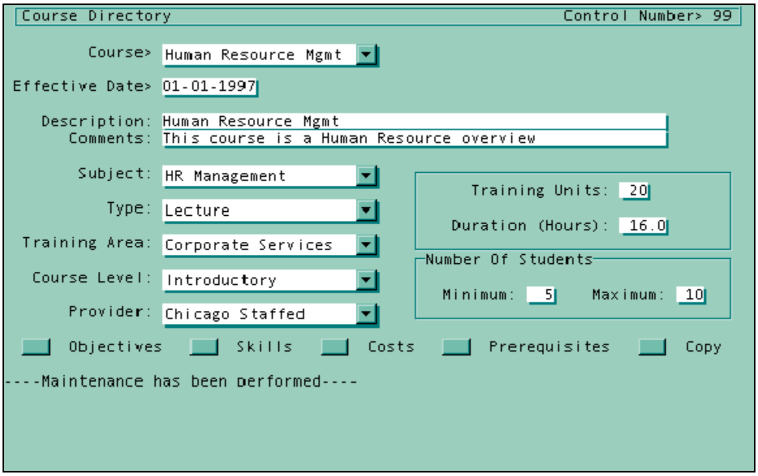
4. Click Save or press Enter

The modified record is created for the course details and the following message is displayed:

'—Maintenance has been performed—'.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Copying training courses (optional)

Follow these steps to copy course information to a different Course/Effective Date:

Note: *You may need to set up the new course title in the Course Codes option list (TR33) before following this procedure.*

1. Access the Course Directory form (10RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Setup and Maintain Courses
Task: Setup/Maintain Course

For practice, access the Course Directory form (10RSCR).

2. Select a training course

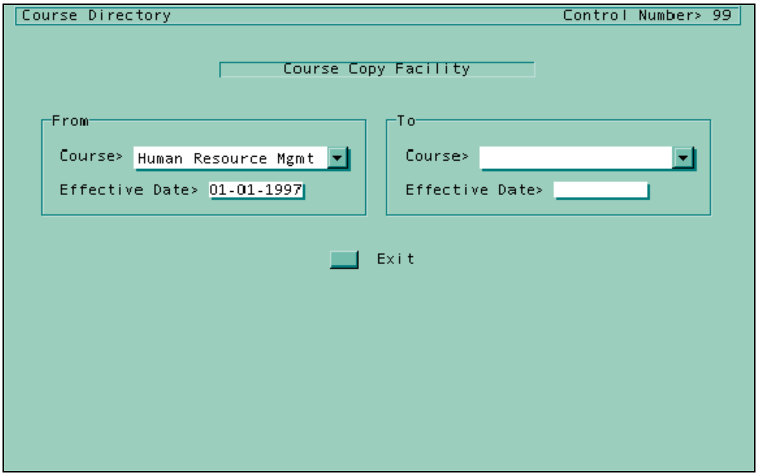
Access the selections list by clicking the Selections button on the toolbar. Then double-click the appropriate training course.

For practice, click the Selections button on the toolbar and select 'Human Resource Mgmt' dated '01-01-1997'.

3. Access the Copy panel

Click the Copy command button to access the Course Copy Facility. The Course list box and Effective Date text box are displayed in the 'From' group box.

For practice, click the Copy command button.



4. Select the Course and/or Effective Date for the new course in the 'To' group box

Leave the course selection blank to copy the old course value to the new course with a different effective date, or select a new course and type its effective date (if different from the one in the From group box) to copy data to a new course.

For practice, select a new course, 'Position Management', and leave the Effective Date text box blank.

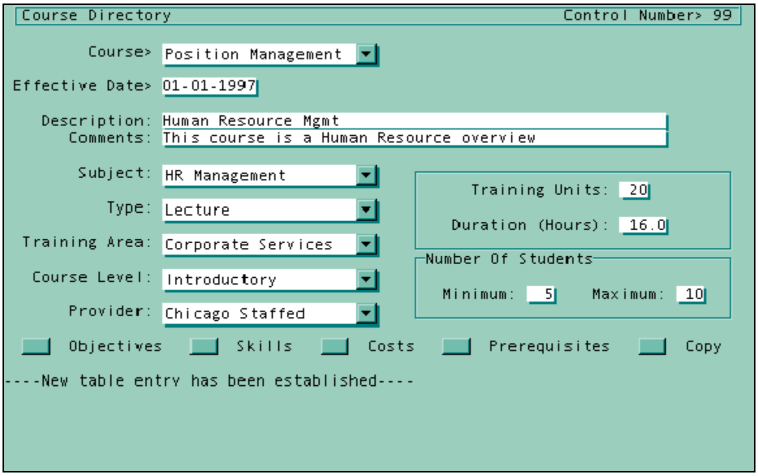
5. Click Save or press Enter

The course data are copied to the new course and/or effective date. The Set Up form is returned with the new course information and the following message is displayed:

'—New table entry has been established—'.
Modifications to other text boxes can now be made, if required.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Copying common course information ***(on page 51)***

For an explanation of copying common course information.

Checking available courses

To view available training courses using the Course Directory report (44RRPT), complete the report schedule by entering the following report parameters:

Note: *Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.*

1. Enter the As Of Date (optional)

Type the 'As of Date' in the MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM format (elsewhere). Only current courses in effect as of this date are included on the report.

Note: *If this text box is left blank, the system date is used.*

For practice, type '01-01-1997'.

2. Select the Course (optional)

Select the course to be printed.

Note: *If this list box is left blank, all courses are reported.*

For practice, leave this list box blank.

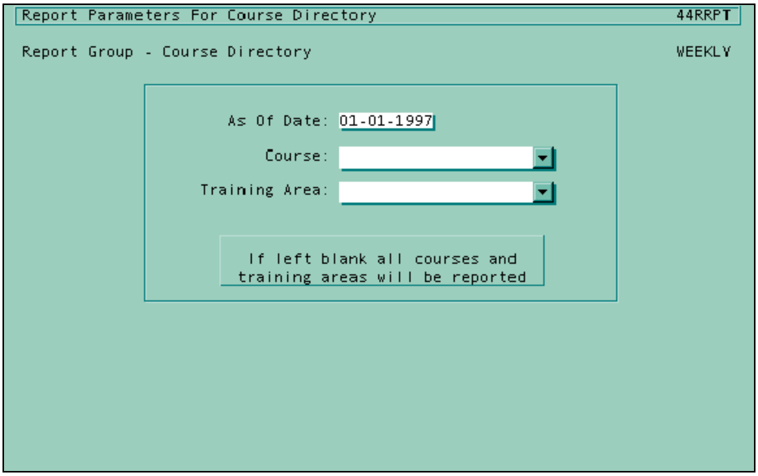
3. Select the Training Area (optional)

Select the training area to be printed.

Note: *If this list box is left blank, all training areas are reported.*

For practice, leave this list box blank.

When completed, the report parameters may look similar to the example that follows:



4. **Click Save or press Enter**

Once it has been processed, this report provides a printout of the information on the Course Directory table (10RSCR).

For practice, click Save or press Enter.

See also:

- **Course Directory report** ***(see "Report Quick Reference" on page 243)***

For an explanation of this report and its business uses.

Deleting courses

To delete a training course set up in error, follow these steps:

1. **Access the Course Directory form (10RSCR)**

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Setup and Maintain Courses
Task: Setup/Maintain Course

For practice, access the Course Directory form (10RSCR).

2. **Select a training course**

Access the selections list by clicking the Selections button on the toolbar. Then double-click the appropriate training course.

For practice, click the Selections button on the toolbar and select 'Position Management' dated '01-01-1997'.

3. Click Save or press Enter

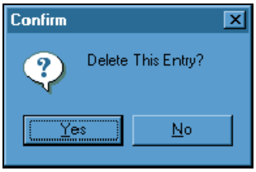
Click Save or press Enter to display the course.

For practice, click Save or press Enter.

4. Click the Del Entry button

Delete the entry by clicking on the Del Entry button on the toolbar.

A Confirm dialog box displays.



For practice, click the Del Entry button.

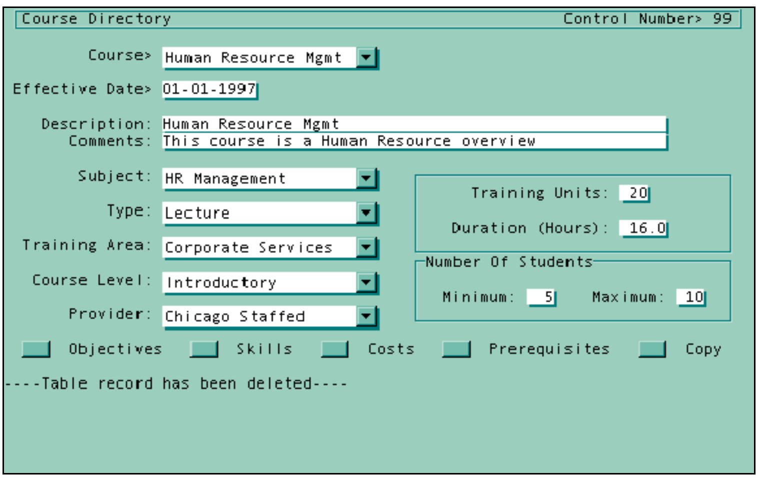
5. Click the Yes command button

Confirm the deletion by clicking on the **Y**es command button.

The message '—Table record has been deleted—' displays at the bottom of the form. The form displayed is the first form on the selections list.

For practice, click the Yes command button.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Setting up training course coordinators (optional)

To set up training course coordinators (employees or external persons who administer training classes), follow these steps:

Note: *You may need to set up Coordinators in the Coordinator Index option list (TR27) before following this procedure.*

1. Access the Coordinator Index form (14RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Setup and Maintain Courses
Task: Setup/Maintain Course Coordinators

For practice, access the Coordinator Index form (14RSCR).

2. Click the Clear button

To avoid copying pre-existing information, click the Clear button on the toolbar to clear the text boxes on the form.

For practice, click the Clear button on the toolbar.

3. Select a Coordinator

Select a training course coordinator.

For practice, select 'HR Classes'.

4. Enter an Address and ZIP Code (optional)

Type an address and ZIP code for the coordinator.

For practice, type a sample address and ZIP code.

5. Select a Type (optional)

Select the type of coordinator, for example, employee or external.

For practice, select 'Employee'.

6. Enter a Name (optional)

Type the coordinator's name. If this is an employee, this text box will be populated by the system.

For practice, leave this text box blank.

7. Enter an Organization (optional)

If the coordinator is an employee, type the employee's organization.

For practice, type '999999'.

8. Enter a Phone and Ext (optional)

Type the coordinator's phone number and extension. If this is an employee and this information is present on the employee's record, these text boxes will be populated by the system.

For practice, leave these text boxes blank.

9. Enter an Employee Nbr (optional)

If the coordinator is an employee, type the employee number.

For practice, type '1234'.

10. Enter a FAX (optional)

Type the coordinator's fax number.

For practice, leave this text box blank.

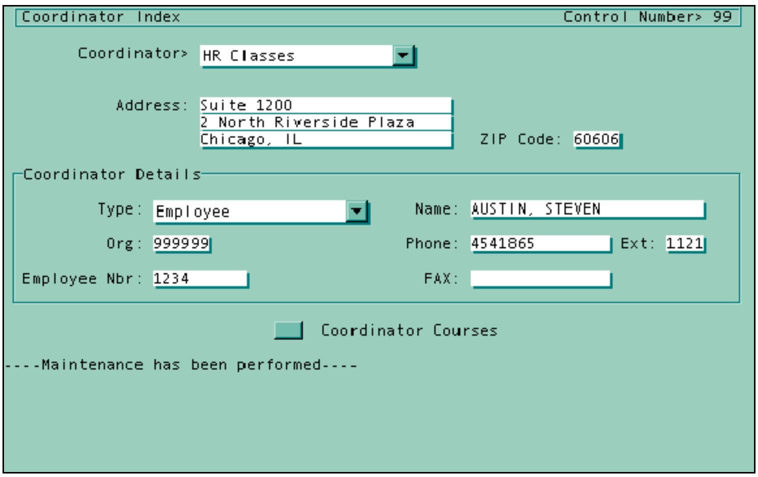
11. Click Save or press Enter

Click Save or press Enter to process the new Coordinator information. The coordinator information is set up and the following message is displayed:

'—Maintenance has been performed—'.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



12. Click the Coordinator Courses command button (optional)

The Coordinator Courses panel is displayed. The Coordinator list box is carried over from the first form panel and does not need to be entered.

For practice, click Coordinator Courses.

13. Select Coordinator Courses (optional)

Using the option lists, select up to eight courses the coordinator can administer.

For practice, select 'Human Resource Mgmt'.

14. Select the Stop Date (optional)

Each coordinator course selected can have a stop date entered to indicate when the coordinator will no longer administer the course. Type the date in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM format (elsewhere).

For practice, type '01-01-1998'.

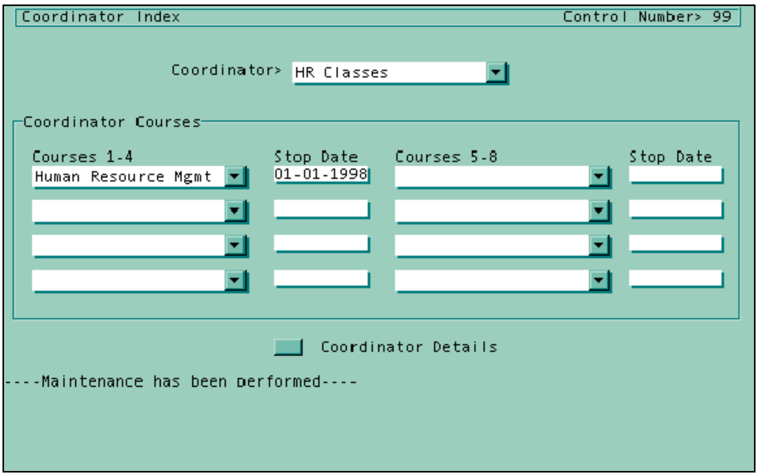
15. Click Save or press Enter

The coordinator course information is set up and the following message is displayed:

'—Maintenance has been performed—'.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Uses of coordinators and providers ***(on page 52)***

For an explanation of the use of coordinators and providers.

Setting up training course providers (optional)

To set up training course providers (individuals or organizations who are available to teach training courses), follow these steps:

Note: You may need to set up the following option lists: Providers (TR38), Course Categories (TR14), and Provider Types (TR07) before following this procedure.

1. Access the Provider Index form (19RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Setup and Maintain Courses
Task: Setup/Maintain Course Providers

For practice, access the Provider Index form (19RSCR).

2. Click the Clear button

To avoid copying pre-existing information, click the Clear button on the toolbar to clear the text boxes on the form.

For practice, click the Clear button on the toolbar.

3. Select a Provider

Select a training course provider.

For practice, select 'Chicago Staffed'.

4. Enter an Address and ZIP Code (optional)

Type an address and ZIP code for the provider.

For practice, type a sample address and ZIP code.

5. Select a Course Category (optional)

Select a course category to show what types of courses the provider can teach.

For practice, select 'HR Management'.

6. Select a Type (optional)

Select the type of provider, for example, 'Employee' or 'External'.

For practice, select 'Employee'.

7. Enter the Org (optional)

If the provider is an employee, type the employee's organization designation.

For practice, type '999999'.

8. Enter the Employee Nbr (optional)

If the provider is an employee, type the employee number.

For practice, type '1111'.

9. Enter the Contact (optional)

Type the name for the provider's contact.

For practice, leave this text box blank.

10. Enter the Phone (optional)

Type the phone number for the provider's contact.

For practice, leave this text box blank.

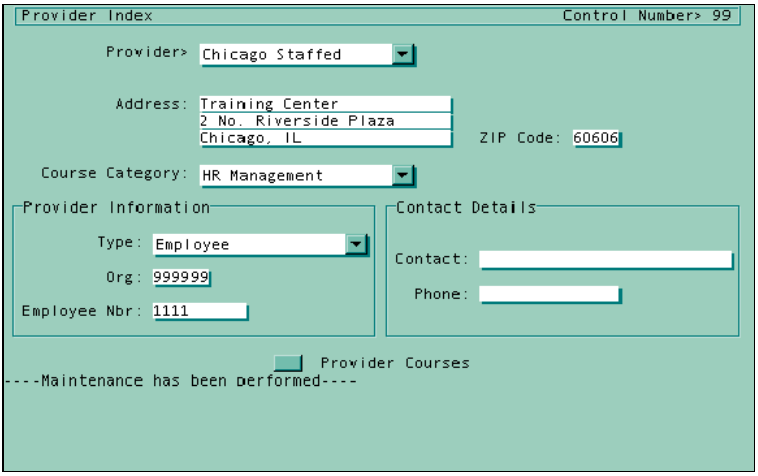
11. Click Save or press Enter

Click Save or press Enter to process the new provider information. The provider information is set up and the following message is displayed:

'—Maintenance has been performed—'.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



12. Click the Provider Courses command button (optional)

The Eligible to Teach panel is displayed. The Provider list box is carried over from the first form panel and does not need to be entered.

For practice, click the Provider Courses command button.

13. Select Courses (optional)

Using the option lists, select up to eight courses the provider can teach.

For practice, select 'Human Resource Mgmt'.

14. Select the Stop Date (optional)

Each provider course selected can have a stop date entered to indicate when the provider will no longer teach the course. Type the date in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM format (elsewhere).

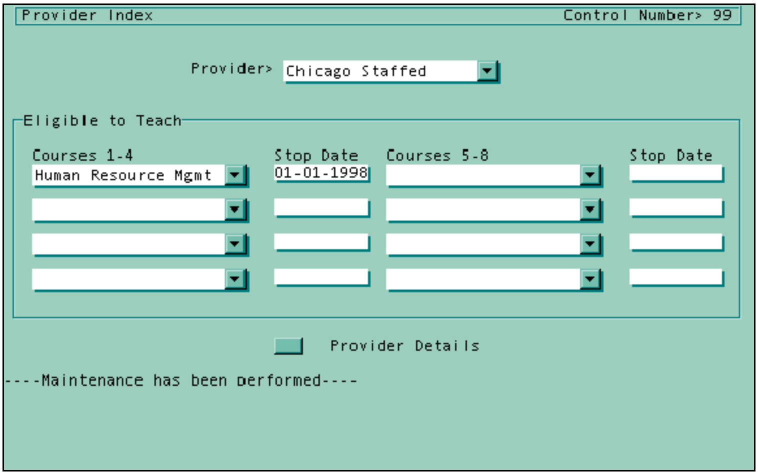
For practice, type '01-01-1998'.

15. Click Save or press Enter

The provider course information is set up and the following message is displayed:

'—Maintenance has been performed—'.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Uses of coordinators and providers ***(on page 52)***

For an explanation of the use of coordinators and providers.

Extended Practice

1. Add these additional codes to the option lists below using the Option List Editor (CSUPDT) dialog box:

Option List	**Code**	**Description**
Course Options (TR33)	FB001	Flex Benefits
Course Subjects (TR30)	FBC	Flex Benefit Concpts
Course Objectives (TR03)	GFK	Gain Flex Knowledge
Training Cost Type (TR31)	BF	Breaks/Refreshments

2. Set up a new course with these characteristics:

Text box	**Entry**
Course	Flex Benefits
Effective Date	September 1, 1996
Description	Provide overview of Flex Benefits administration.
Comments	Provides foundation for implementing Flex Benefits.
Subject	Flex Benefits Concpts
Type	Lecture
Training Area	IT Services
Course Level	Introductory
Provider	Cyborg Systems
Training Units	[Leave Blank]
Duration	16.0 Hours
Number of Students	Between 4 and 15

3. Select two appropriate course objectives for this courses from the option lists.

4. Select these skills and proficiency levels for Flex Benefits:

Skills/Competencies	**Proficiency**
Administration/manag	Above Average Knowld
Benefits Coordinator	Working Knowledge

5. Set up these course-related costs for Flex Benefits:

Category	**Type**	**Amount**
Participant	Class Fee	300.00
Operating	Breaks/Refreshments	50.00

6. Return to the Set Up panel and select the course 'Human Resource Management' dated '01-01-1994'. Copy this same course with a new effective date of February 1, 1997. When the Set Up form is returned, modify the Provider list box to an entry of 'Cyborg

Systems' and change the maximum number of students to '12'. Update the Instructor Fee cost to 1500.00 on the appropriate panel.

7. Set up a Course Development Costs form (11RSCR) for the Flex Benefits course, indicating a fee of 7500 for developing the course manual.

8. Set up a Flex Benefits course provider with these characteristics:

Text box	**Entry**
Provider	Cyborg Systems
Address, ZIP code	2 North Riverside Plaza, Chicago, IL 60606
Course Category	All Cyborg Classes
Type	External
Org	[Leave Blank]
Employee Nbr	[Leave Blank]
Contact	Smith, Sarah Jane
Phone	312/454-1865
Courses 1-4	HR Mgmt and Position Management courses
Stop Date	December 31, 1999 for both

9. Set up a Flex Benefits course coordinator with these characteristics:

Text box	**Entry**
Coordinator	Cyborg Class Coord
Address	1142 N. Rush Street, Commerce Plaza, Chicago, IL 60606
Type	Employee
Name	[Leave blank (self-populating)]
Org	999999
Phone	[Leave blank (self-populating)]
Employee Nbr	2008
FAX	[Leave blank]
Courses 1-4	HR Mgmt and Position Management courses
Stop Date	[Leave blank]

10. The contact listed for provider 'Cyborg Systems' just got married. Change the contact details to reflect a name change to 'Jones' and a new phone number of '312/252-6888'.

11. The Cyborg Class Coordinator just terminated her employment. The new Cyborg Class Coordinator is Employee '1006'. Make this change on the appropriate form.

Review of Questions Answered

1. What is a course?

2. What are training objectives and how are they used?

3. What types of costs can be recorded?

4. How are prerequisites and skills used?

5. How are coordinators and providers used?

C H A P T E R 5

Setting Up and Maintaining Training Classes

In This Chapter

Introduction

Training Administration facilitates the setting up and maintenance of training classes to be given on a specific date(s). The information that can be recorded includes class location, class dates, class times, trainer/coordinator information, and class costs.

The information discussed in this section is essential to using Training Administration.

Tasks

You may complete the following tasks to set up training classes. Only the first task is essential. The tasks have been divided into two categories, Set Up Training Classes and Maintain Training Classes.

Set Up Training Classes

The following are typical setup tasks that you may wish to perform:

- Setting up a training class
- Setting up class time and location
- Checking trainer schedules online
- Checking trainer schedules on paper
- Setting up the class trainer/coordinator
- Setting up class costs

Maintain Training Classes

The following are typical maintenance tasks that you may wish to perform:

- Changing class details
- Copying, canceling, and transferring a class
- Notifying students of a class cancellation
- Checking what classes have been set up - online
- Checking what classes have been set up - using a report

Prerequisites

Before you can begin to set up training classes, all the following tasks must have been completed.

Organization details

Before any data can be entered, you must ensure that your organization details have been set up.

☞ *Refer to* **Implementing Training Administration** *(on page 23) for more information.*

Training Courses

Before setting up training classes, it is important to enter all available training courses on the system and to set up objectives, prerequisites, and costs for each course.

☞ *Refer to* **Setting Up and Maintaining Training Courses** *(on page 43) for details on setting up and maintaining training courses.*

Questions answered

The following questions are answered in this section:

1. What is a class?
2. What four text boxes define a training class?
3. What tool can be used to display all available course options and courses?
4. What are the available class costing options?
5. What types of maintenance can be performed on classes?

Relationship between a training course and a class

A training course is a separate unit of instruction on a subject. Courses are established on the Course Directory form (10RSCR).

A class is a training course occurrence given on a specific date(s) at a specific location. Classes are established on the Class Schedule form (13RSCR). When a class is scheduled, it assumes the attributes of the course, although you can override some data (such as minimum and maximum class size) at the class-setup level.

For example, 'Using The Solution Series: Administrative Solutions' is a training course; when given on December 21 in Chicago, this is a class of this course.

Classes can only be scheduled for courses that have already been established.

Definition of a training class

The four text boxes required to define a training class are recorded on the Class Schedule form (13RSCR):

- Course
- Start Date
- Training Location
- Class sequence number

These text boxes are carried forward to many of the Training Administration class-level forms. All other information that may be entered on the Class Schedule form (13RSCR) is optional.

After entering the required text boxes, other text boxes on this form are copied from the Course Directory table (10RSCR) if they are available.

After scheduling a class, three other form panels become available and can be accessed by selecting the appropriate command buttons at the bottom of the form.

Prior to or after scheduling a training class, you may use the Training Schedule inquiry form (53RSCR) to display the upcoming schedule of training classes. You can display all upcoming classes, classes for a specific course, classes as of a specific date, classes at a specific training location, or any combination of these. Classes are always listed in ascending date order. Print the Training Schedule report (29RRPT) to provide a hard-copy listing of classes that have been scheduled for a training location. Each training location is reported separately.

See also:

For detailed directions on setting up a training class.

- Changing class details (optional) ***(on page 102)***

For detailed directions on changing class details.

- Checking what classes have been set up - online - optional ***(see "Checking what classes have been setup - online - optional" on page 107)***
- Checking what classes have been set up - using a report - optional

For detailed directions on verifying an existing training class.

- Training Schedule report ***(see "Report Quick Reference" on page 243)***

For a description of this report and its business uses.

Apply the Concept

Describe how the use of delivered online inquiry forms such as the Individual Trainers Schedule inquiry form (55RSCR) and the Training Schedule inquiry form (53RSCR) can be helpful to you.

Uses of the Class text box

When training classes have the same course, start date, and training location values, the one-character Class sequence number text box on the Class Schedule form (13RSCR) is used to separate individual training classes. For example, you may enter a value of '1' for a particular class being offered on January 3 from 9:00 AM to 12:00 PM and a '2' for the same class being offered that afternoon from 1:00 PM to 4:00 PM.

See also:

- Setting up a training class ***(on page 90)***

For detailed directions on setting up a training class.

Using the Course/Class Selection menu

The Course/Class Selection menu is used to simplify the selection of training courses, especially if you are more familiar with the training course code than the course title.

When accessing a training course, select List Course Options in the Course option list to display a menu of available course options. Click Save or press Enter to display the options and description listing. Select a course code, then click Save or press Enter.

In addition, on all forms on which training class information is recorded, entering a question mark (?) on class forms in the Start Date text box after selecting a course will display a menu of classes from which you may make your selection.

See also:

- Setting up a training class ***(on page 90)***

For detailed directions on setting up a training class.

Uses of class time and location data

Class time and location can be set up on the Time And Location panel of the Class Schedule form (13RSCR). This is an optional panel. The location specified on this panel is different (usually more specific) than the course training location that is defined when setting up the training course (see ***Setting Up and Maintaining Training Courses*** (on page 43)). For example, a course training location could be defined as Chicago, and the Location value on the Time And Location form panel could be defined as the University of Chicago Training Center.

Other text boxes can be used to further define class time and location. Information that can be recorded includes:

- Day(s)
- Start Time
- End Time
- Room

For classes with multiple days and times, each class can have up to three of each of these descriptors set up.

See also:

- Setting up class time and location (optional) ***(on page 93)***

For detailed directions on setting up class time and location.

Scheduling class trainers/coordinators

Details about providers (trainers) and class coordinators (administrators) can be defined and then recorded at the class level. Use the Class Schedule form (13RSCR) to assign the trainers and coordinators for a specific class.

The Trainer Name is displayed in Display mode from the Provider Index table (19RSCR), if available. The Coordinator Name, Phone/Ext, and FAX are displayed in Display mode from the Coordinator Index table, if available. Otherwise, these text boxes remain blank.

Prior to scheduling a trainer for a class, you may use the Individual Trainers Schedule inquiry form (55RSCR) to display all the classes a trainer is scheduled to teach. Start and/or End Dates can be entered to limit the time period of classes displayed. Classes are always listed in ascending date order. You can also print the Individual Trainer Schedule report (38RRPT), which provides a hard-copy schedule of a trainer's upcoming classes. Each trainer is reported separately.

See also:

- Checking trainer schedules online - optional ***(on page 95)***
- Checking trainer schedules on paper - optional ***(on page 97)***

For detailed directions on checking trainer schedules.

- Setting up class time and location (optional) ***(on page 93)***

For detailed directions on setting up the class coordinator/trainer.

- Individual Trainer Schedule report ***(see "Report Quick Reference" on page 243)***

For a description of this report and its business uses.

Apply the Concept

Describe the benefit to be realized by optionally printing hard-copy reports such as the Individual Trainer Schedule report (38RRPT) and Training Schedule report (29RRPT).

Class costing options

Class costs can be set up on the Class Costs panel of the Class Schedule form (13RSCR). This is an optional panel. Costs specified on this panel are different from those specified at the course level on the Course Directory form (10RSCR). For example, the cost of books might be standard for all classes within a course and therefore needs to be recorded at the course level. Alternatively, a course instructor fee might vary at the class level, since different instructors might charge different amounts. These costs could be recorded at the class level.

Costs can also be set up at the employee level using the Employee Training Class Costs form (34RSCR). For example, the cost of supplying an alternative vegetarian meal for an employee might be associated with an individual employee cost.

The Course Costs command button at the bottom of the Class Costs panel returns another panel that provides a summary of both the class and course costs. This panel can be used to compare and review costs at both levels.

Other methods of reviewing class costs include the Training Expenditure Charge-Back report (27RRPT), Training Expenditure Disbursement report (28RRPT), and Training Class Costs Summary inquiry form (35RSCR).

☞ *See Completing and Analyzing Training Costs for more information.*

See also:

For a description of this report and its business uses.

- Training Expenditure Disbursement report ***(see "Report Quick Reference" on page 243)***

For a description of this report and its business uses.

Apply the Concept

What types of specific class costs would you set for a new training course in your organization called 'Managing Diversity'? How would these costs differ from those established at the course level?

Types of class maintenance and their results

The Class Maintenance Facility form (18RSCR) is used to transfer, copy, and cancel training class information. A class must already exist for it to be canceled, transferred, or copied 'from'. For a class to be copied or transferred 'to' another date or location, it can not already exist. Each function is explained next.

Transferring a class

Transferring a class moves the class to a new date or location. All the currently registered and wait-listed employees are moved to the new class.

Copying a class

Copying a class copies all class-level information to a new date or location. Employee records are not changed.

Canceling a class

Canceling a class cancels any employee registrations for that class and removes any employees from the wait list for that class.

When a class is canceled, the Status text box value on the Class Schedule form (13RSCR) is changed to Canceled. For each employee enrolled or wait-listed in the class, the Class Registration/Cancellation form (20RSCR) record is deleted, as is the employee-level registration record.

A Training Required form (31RSCR) is created (or updated if it already exists) for each employee with a Status text box value of Class Canceled. The Class Cancellation report (31RRPT) is used to inform registered class participants that the entire class has been canceled.

See also:

- Copying, canceling, and transferring a class (optional) ***(on page 104)***
For detailed directions on class maintenance.

- Notifying students of a class cancellation ***(on page 105)***
For detailed directions on notifications for class cancellation.

- Class Cancellation report ***(see "Report Quick Reference" on page 243)***
For a description of this report and its business uses.

Apply the Concept
Consider how you intend to use the Class Maintenance Facility form (18RSCR) in your organization. Who will be responsible for this task?

Detailed Directions

This section provides detailed instructions for the tasks discussed in this section.

Tasks

Setting up a training class

To set up a training class, follow these steps:

1. Access the Class Schedule form (13RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Setup and Maintain Classes
Task: Setup or Maintain Class

For practice, access the Class Schedule form (13RSCR).

2. Click the Clear button

To avoid copying pre-existing information, click the Clear button on the toolbar to clear the text boxes on the form.

For practice, click the Clear button on the toolbar.

3. Select the Course

Select the specific course. This selection is carried forward to this form's associated panels.

As an alternative, select the List Course Options option in the Course Codes option list (TR33) and then click Save or press Enter to display a list of course options and their descriptions. Select a course code from the list, then click Save or press Enter.

For practice, select 'Human Resource Mgmt'.

4. Type the Start Date

Type the course start date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). This text box is carried forward to this form's associated panels.

For practice, type '01-01-1997'.

5. Select the Training Location

Select a specific training location from the drop-down list.

For practice, select 'Chicago'.

6. Type the Class

When training classes have the same course, start date, and training location values, the Class text box is used to separate individual training classes.

For practice, type '1'.

7. Type the End Date (optional)

Type the course end date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

For practice, type '01-03-1997' (US and Canada) or '03-01-1997'(elsewhere).

☞ *Steps 8 through 11 are optional. If these entries are not recorded, available information is transferred from the Course Directory form (10RSCR).*

8. Select the Training Area (optional)

Select the area responsible for the course from the drop-down list.

For practice, select 'Corporate Services'.

9. Enter the Duration (Hours) (optional)

Type the length of the class time in hours, with a five-character, one-decimal, numeric entry.

For practice, type '24.0'.

10. Enter the Minimum (optional)

Type a three-character numeric entry that is less than or equal to the entry for the maximum number of students who may attend this course based on space availability and/or instructor preferences.

For practice, type '5'.

11. Enter the Maximum (optional)

Type a three-character numeric entry that is greater than or equal to the entry for the minimum number of students required for the course to be held.

For practice, type '12'.

12. Select the Evaluation Required check box (optional)

Select this check box to have evaluation forms printed when the Class Evaluation report is run.

For practice, click the check box.

13. Enter Comments

Type any brief comments about the class in this text box.

For practice, type 'This class is an HR overview'.

14. Click Save or press Enter

The class is set up and the following message is displayed at the bottom of the form:

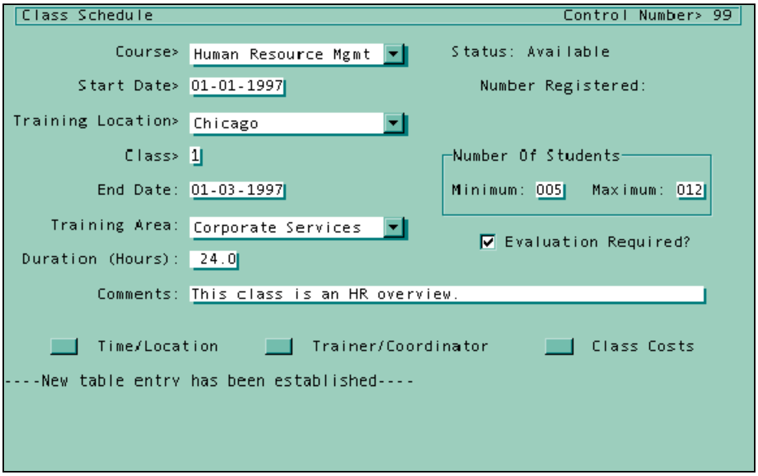
'—New table entry has been established—'.

The Status and Number Registered text boxes are displayed in Display mode at the top right of the form display. The Status is Canceled, Available (if seats are available), or Full (if no seats are available). These text boxes are displayed on every form panel connected to this form.

After scheduling a class, the other form panels are now available and can be accessed by selecting the appropriate command buttons at the bottom of this form.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

■ Definition of a training class ***(on page 83)***
For an explanation of a training class.

■ Uses of the Class text box ***(on page 84)***
For an explanation of the uses of the Class text box.

■ Using the Course/Class Selection menu ***(on page 85)***
For an explanation of the Course/Class Selection menu.

■ Class Evaluation report (24RRPT ***(see "Report Quick Reference" on page 243))***
For a description of this report and its business uses.

Setting up class time and location (optional)

To record time and location for a training class, follow these steps:

☞ *You may skip steps 1 and 2 if you have just completed the setup of a new class schedule and are still displaying the Class Schedule form (13RSCR).*

1. Access the Class Schedule form (13RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Setup and Maintain Classes
Task: Setup or Maintain Class

For practice, access the Class Schedule form (13RSCR).

2. Select a training course

Access the selections list by clicking on the Selections button on the toolbar. Then double-click the appropriate training course.

For practice, click the Selections button on the toolbar and select 'Human Resource Mgmt' dated '01-01-1997'.

3. Click the Time/Location command button

Select the Time/Location command button to access the Time and Location form panel. The Course, Start Date, Training Location, and Class sequence number text boxes are carried over from the Set Up form panel.

Up to three sets of each of the remaining text boxes on the form can be entered. This allows you to set up different start times and locations for different class dates. However, none of these remaining text boxes on this panel are required.

For practice, click the Time/Location command button.

4. Enter the Day(s) (optional)

This is a free-form text box to indicate the day(s) of the week on which the class is to be held, such as MW, M-Thurs, ALL.

For practice, type 'MTW'.

5. Enter the Start (optional)

Type the class start time in the format HH:MM. Use military time in this text box to indicate start times after noon.

For practice, type '09:00'.

6. Enter the End (optional)

Type the class end time in the format HH:MM. Use military time in this text box to indicate class end times after noon.

For practice, type '17:00' to indicate 5:00 P.M.

7. Enter the Room (optional)

Type a specific class room identifier in this text box.

For practice, type 'B'.

8. Select a Location (optional)

Select a specific location.

For practice, select 'Chicago Training Ctr'.

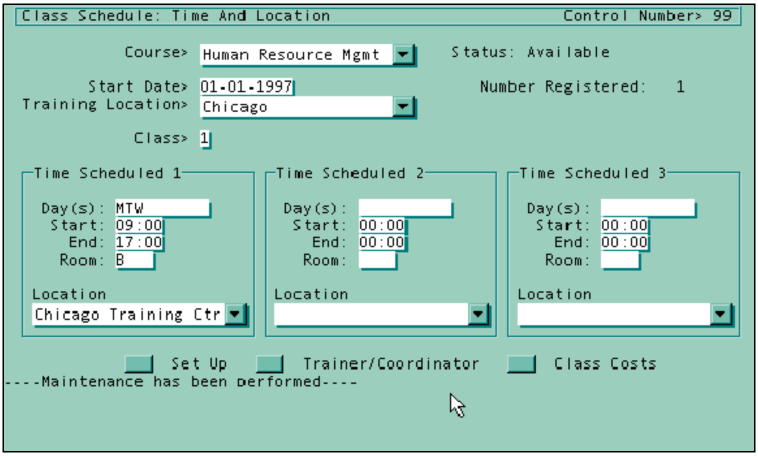
9. Click Save or press Enter

Time and location are scheduled and the following message is displayed:

'—Maintenance has been performed—'.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Class Schedule: Time And Location   Control Number> 99

Course> Human Resource Mgmt   Status: Available

Start Date> 01-01-1997   Number Registered: 1

Training Location> Chicago

Class> 1

Time Scheduled 1
Day(s): MTW
Start: 09:00
End: 17:00
Room: B
Location
Chicago Training Ctr

Time Scheduled 2
Day(s):
Start: 00:00
End: 00:00
Room:
Location

Time Scheduled 3
Day(s):
Start: 00:00
End: 00:00
Room:

Set Up   Trainer/Coordinator   Class Costs

----Maintenance has been performed----

See also:

- Uses of class time and location data ***(on page 86)***

For an explanation of the uses of class time and location data.

Checking trainer schedules online - optional

To view trainer schedules online, use the Individual Trainers Schedule inquiry form (55RSCR) .

1. Access the Individual Trainers Schedule form (55RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Setup and Maintain Classes
Task: Check Training Schedules

For practice, access the Individual Trainers Schedule form (55RSCR).

2. Select the Trainer

Select an entry to represent the trainer.

For practice, select 'Chicago Staffed'.

3. Enter the Start (optional)

Type the start date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). All classes with a start date equal to or later than this date will be listed.

If this text box is left blank, it defaults to the current date

For practice, type '01-01-1994'.

4. Enter the End (optional)

Type the end date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). All classes with a start date equal to or earlier than this date will be listed.

If this text box is left blank, all dates will be listed.

For practice, type '03-01-1997' (US and Canada) or '01-03-1997'(elsewhere).

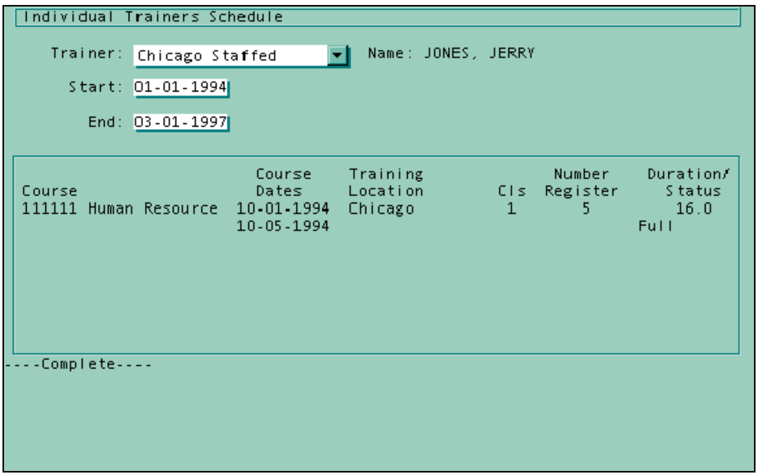
5. Click Save or press Enter

An individual trainer schedule is displayed on the form. The list shows all classes this trainer is scheduled to teach between the dates entered. When all the trainer schedule information has been reported, the following message is displayed:

'—Complete—'.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Scheduling class trainers/coordinators ***(on page 87)***

For an explanation of this scheduling class trainers/coordinators.

Checking trainer schedules on paper - optional

To check trainer schedules on a paper report using the Individual Trainer Schedule report (38RRPT) , complete the report schedule by entering the following report parameters:

Each trainer is reported separately. If the trainer is an employee, the employee's name is printed on the report. Totals are provided for duration in hours and number of participants. Canceled classes are not reported.

Note: *Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.*

1. Enter the From (date) (optional)

Type the start date in the From text box in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM format (elsewhere). Only current classes in effect as of this date are included on the report.

Note: *If this text box is left blank, the system date is used.*

For practice, type '01-01-1997'.

2. Enter the To (date) (optional)

Type the end date in the To text box in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM format (elsewhere).

Note: *If this text box is left blank, all classes equal to or later than the From date are reported. To report on classes from only one date, type the From date in both the From and To parameters.*

For practice, leave this text box blank.

3. Select the Trainer (optional)

Select the trainer.

Note: *If this list box is left blank, all trainers are reported.*

For practice, leave this list box blank.

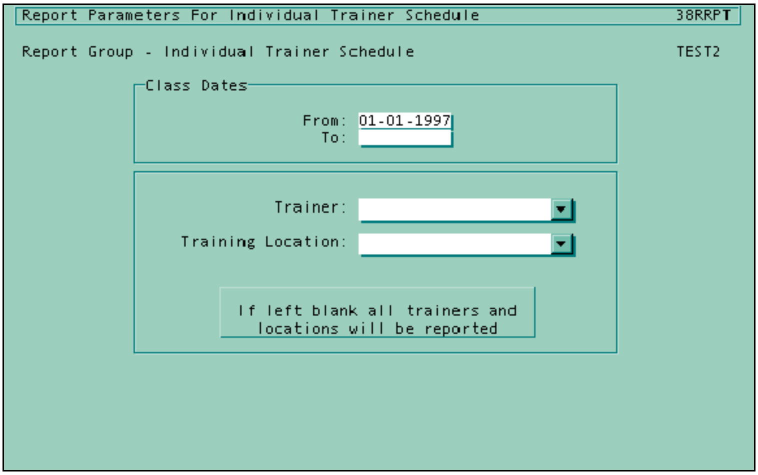
4. Select the Training Location (optional)

Select the training location.

Note: *If this list box is left blank, all training locations are reported.*

For practice, leave this list box blank.

When completed, the report parameters may look similar to the example that follows:



Report Parameters For Individual Trainer Schedule 38RRPT

Report Group - Individual Trainer Schedule TEST2

Class Dates

From: 01-01-1997
To:

Trainer:

Training Location:

If left blank all trainers and locations will be reported

5. Click Save or press Enter

Once it has been processed, this report provides a schedule of the trainer's upcoming classes.

For practice, click Save or press Enter.

See also:

- Scheduling class trainers/coordinators ***(on page 87)***

For an explanation of this scheduling class trainers/coordinators.

- Individual Trainer Schedule report ***(see "Report Quick Reference" on page 243)***

For a description of this report and its business uses.

Setting up the class trainer/coordinator (optional)

To record a trainer/coordinator for a training class, follow these steps:

You may skip steps 1 and 2 if you have just completed the setup of a new class and are still displaying the Class Schedule form (13RSCR).

1. Access the Class Schedule form (13RSCR)

Access this form by making the following selection from the Navigator.

Component:	Training Administration
Process:	Setup and Maintain Classes
Task:	Setup or Maintain Class

For practice, access the Class Schedule form (13RSCR).

2. Select a training course

Access the selections list by clicking on the Selections button on the toolbar. Then double-click the appropriate training course.

For practice, click the Selections button on the toolbar and select 'Human Resource Mgmt' dated '01-01-1997'.

3. Click the Trainer/Coordinator command button

Click the Trainer/Coordinator command button to access the Trainer/Coordinator form panel. The Course, Start Date, Training Location, and Class sequence number are carried over from the Set Up form panel. None of the remaining text boxes on this panel are required.

For practice, click the Trainer/Coordinator command button.

4. Select a Trainer

Select a trainer.

For practice, select 'Chicago Staffed'.

5. Enter the Days

This text box is used to track the number of trainer days for this specific class. It must be entered with one decimal.

For practice, type '3.0'.

6. Select a Coordinator

Select a coordinator.

For practice, select 'HR Classes'.

7. Click Save or press Enter

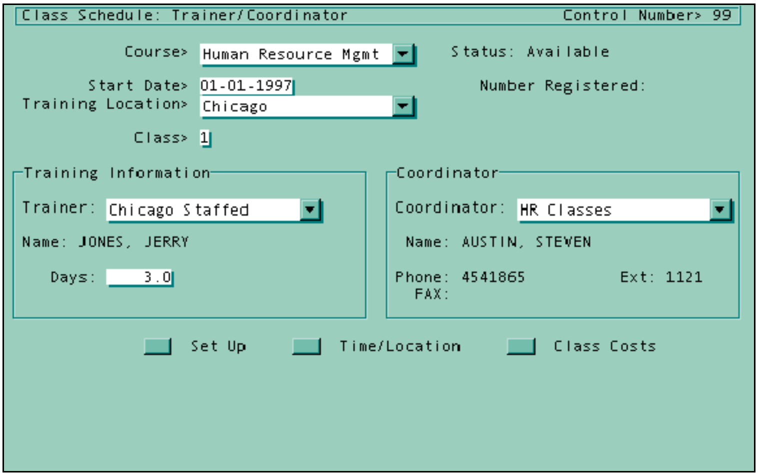
A trainer and coordinator are scheduled and the following message is displayed:

'—Maintenance has been performed—'.

The trainer Name is displayed in Display mode from the Provider Index form (19RSCR), if available. The coordinator Name, Phone, Ext, and FAX are displayed in Display mode from the Coordinator Index form (14RSCR), if available. Otherwise, these text boxes remain blank.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Scheduling class trainers/coordinators ***(on page 87)***

For an explanation of scheduling class trainers/coordinators.

Setting up class costs (optional)

To record class costs for a training class, follow these steps:

☞ *You may skip steps 1 and 2 if you have just completed the setup of a new class and are still displaying the Class Schedule: Trainer/Coordinator form (13RSCR).*

1. Access the Class Schedule form (13RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Setup and Maintain Classes
Task: Setup or Maintain Class

For practice, access the Class Schedule form (13RSCR).

2. Select a training course

Access the selections list by clicking on the Selections button on the toolbar. Then double-click the appropriate training course.

For practice, click the Selections button on the toolbar and select 'Human Resource Mgmt' dated '01-01-1997'.

3. Click the Class Costs command button

Click the Class Costs command button to access the Class Costs form panel. The Course, Start Date, Training Location, and Class sequence number are carried over from the Set Up form panel. None of the remaining text boxes on this panel are required.

For practice, click the Class Costs command button.

4. Select up to five Class Cost Categories

Cost categories are Equipment, Individual, Miscellaneous, Operating, Participant, and Per Head. Select each category from the Category option lists. A category is required if a Type or Cost Amount will be entered

Equipment, Individual, and Operating are typical class-level categories. Per Head and Participant indicate employee-level costs.

For practice, select 'Equipment'.

5. Select up to five associated Class Costs Types

Select each cost type. Examples of cost types are Overhead Projector and Large Monitor rental.

For practice, select 'Overhead Projector'.

6. Type up to five associated cost amounts

Type the associated cost using two decimal places. The Category, Type, and Cost Amount on each line are tied together and define a cost description and amount.

For practice, type '150.00'.

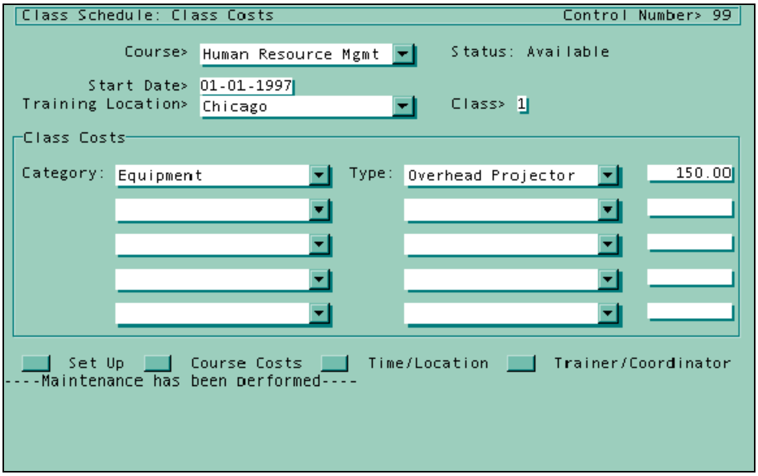
7. Click Save or press Enter

Class costs are set up and the following message is displayed:

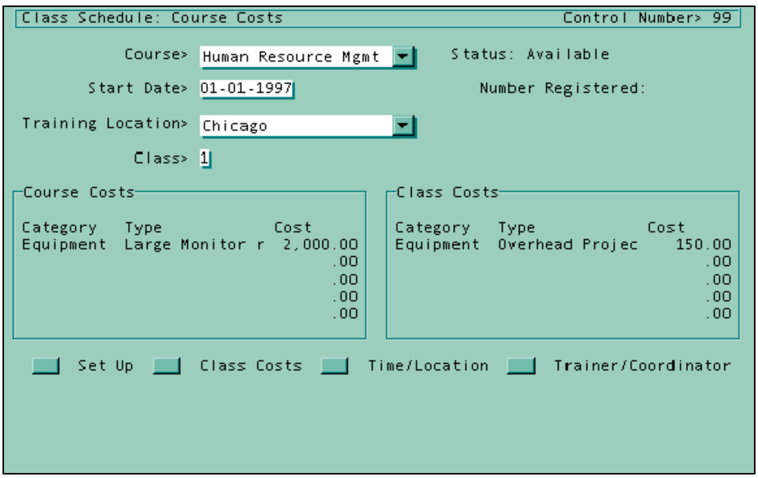
'—Maintenance has been performed—'.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Clicking the Course Costs command button at the bottom of this form panel returns you to another form panel in Display mode that displays all costs recorded at the course and class levels as of the class start date.



See also:

- Class costing options ***(on page 88)***

For an explanation of class costing options.

Changing class details (optional)

To change class details, follow these steps:

1. Access the Class Schedule form (13RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Setup and Maintain Classes
Task: Setup or Maintain Class

For practice, access the Class Schedule form (13RSCR).

2. Select a training course

Access the selections list by clicking on the Selections button on the toolbar. Then double-click the appropriate training course.

For practice, click the Selections button on the toolbar and select 'Human Resource Mgmt' dated '01-01-1997'.

3. Access the text box(s) to change

Select the text box or text boxes you want to change and enter the new information.

For practice, change the Maximum Number Of Students to '010'.

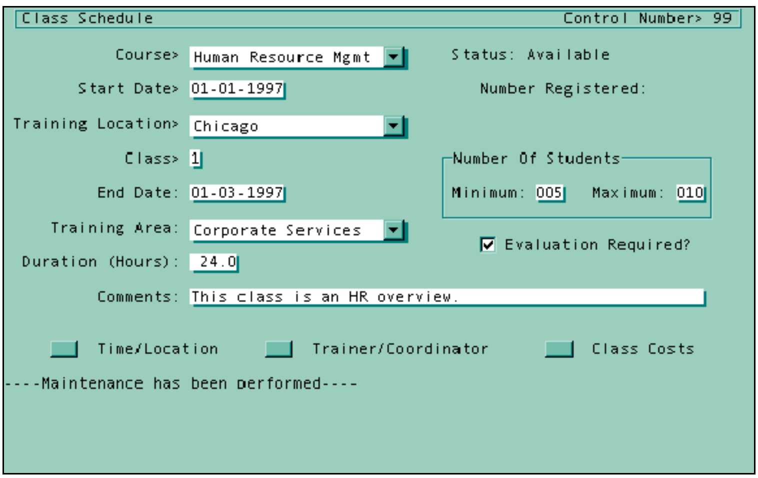
4. Click Save or press Enter

The record is changed and the following message is displayed:

'—Maintenance has been performed—'.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Class Schedule Control Number> 99
Course> Human Resource Mgmt Status: Available
Start Date> 01-01-1997 Number Registered:
Training Location> Chicago
Class> 1
Number Of Students
End Date: 01-03-1997 Minimum: 005 Maximum: 010
Training Area: Corporate Services
Evaluation Required?
Duration (Hours): 24.0
Comments: This class is an HR overview.
Time/Location Trainer/Coordinator Class Costs
----Maintenance has been performed----

Copying, canceling, and transferring a class (optional)

To copy, cancel, or transfer a class, follow these steps:

A class must already exist for it to be canceled, transferred, or copied from. For a class to be copied or transferred to, it can not already exist.

1. Access the Class Maintenance Facility form (18RSCR)

Access this form by making the following selection from the Navigator.

Component:	Training Administration
Process:	Setup and Maintain Classes
Task:	Copy, Cancel or Transfer a Class

For practice, access the Class Maintenance Facility form (18RSCR).

2. Select the Course

Select the appropriate course

As an alternative, select the List Course Options option in the Course Codes option list (TR33) and then click Save or press Enter to display a list of course options and their descriptions. Select a course code from the list, then click Save or press Enter.

For practice, select 'Human Resource Mgmt'.

3. Enter the Start Date

Type the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

After selecting a course, you can enter a question mark (?) in the Start Date text box and then press Enter to access the Course/Class selections. You can then select a course/class from this menu and return to this form. The Start Date, Training Location, and Class sequence number text boxes will be automatically filled in.

For practice, type '01-01-1997'.

4. Select the Training Location

Select the location.

For practice, select 'Chicago'.

5. Enter the Class

Type the sequence number associated with the training class in the Class text box.

For practice, type '1'.

6. Click the Cancel, Transfer, or Copy option button

Click the action to be taken on the existing class.

For practice, click the Copy option button.

7. If transferring or copying, enter data in at least one of these text boxes: New Date, New Location, and New Class

The New Date text box is the new date for the training class. The New Location text box is the new location for the training class. The New Class text box value identifies multiple training classes on the same date.

Any text box that is left blank defaults to the current information for the class.

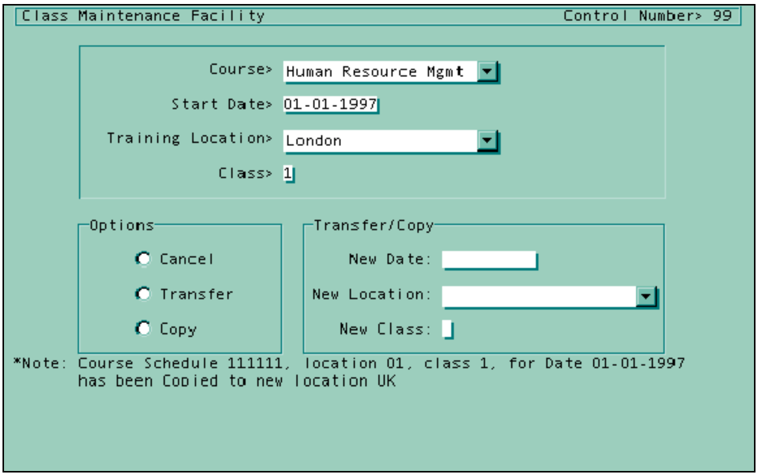
For practice, select 'London' in the New Location list box.

8. Click Save or press Enter

An informative message is displayed after the class has been successfully copied, canceled, or transferred. When the form is executed, the class is displayed with its new information.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Types of class maintenance and their results ***(on page 89)***

For an explanation of the types of class maintenance and their results.

Notifying students of a class cancellation

To produce a list of enrolled students when an entire class has been canceled using the Class Cancellation report (31RRPT) , complete the report schedule by entering the following report parameters:

☞ *This report is run after the Class Maintenance Facility form (18RSCR) is processed to cancel the whole class. Each employee is reported separately. There are no totals reported. Terminated employees are not reported.*

Note: Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.

1. Select the Course (required)

Select the course on which to report.

For practice, select 'Human Resource Mgmt'.

2. Enter the Class Start Date (required)

Enter the class start date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

For practice, type '01-01-1997'.

3. Select the Training Location (required)

Select the training location.

For practice, type 'Chicago'.

4. Enter the Class (required)

Type the class sequence number in the Class text box.

For practice, type '1'.

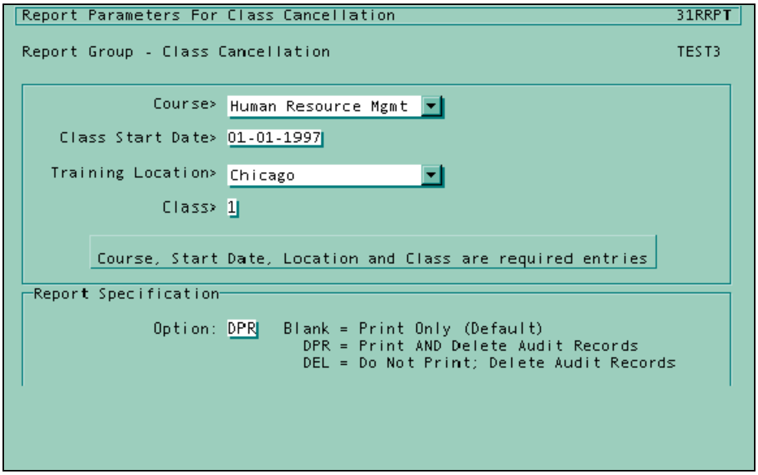
5. Enter the Report Specification Option

Type 'DPR' (to print the report and delete the registration records for the class) or 'DEL' (to delete the registration records for the class without printing the report).

Leave this text box blank to produce the report only.

For practice, type 'DPR'.

When completed, the report parameters may look similar to the example that follows:



6. Click Save or press Enter

Once it has been processed, this report produces a form to inform registered class participants that their class has been canceled.

For practice, click Save or press Enter.

See also:

■ Types of class maintenance and their results ***(on page 89)***
For an explanation of the types of class maintenance and their results.

■ Class Cancellation report (31RRPT ***(see "Report Quick Reference" on page 243))***
For a description of this report and its business uses.

Checking what classes have been setup - online - optional

You can display all upcoming classes, classes for a specific course, classes as of a specific date, classes at a specific training location, or any combination of these. Follow these steps to review available classes online using the Training Schedule form (53RSCR):

1. Access the Training Schedule form (53RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Setup and Maintain Classes
Task: Check What Classes are Setup

For practice, access the Training Schedule form (53RSCR).

2. Select the Course (required)

Select the training course.

As an alternative, select the List Course Options option in the Course Codes option list (TR33) and then click Save or press Enter to display a list of course options and their descriptions. Select a course code from the list, then click Save or press Enter.

If this list box is left blank, all courses are selected.

For practice, select 'Human Resource Mgmt'.

3. Type a Start Date (optional)

Type the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

After selecting a course, you can enter a question mark (?) in the Start Date text box and then press Enter to access the Course/Class selections. You can then select a course/class from this menu and return to this form. The Start Date and Training Location text boxes will be filled in automatically.

If this date is left blank, the current date is used.

For practice, select '01-01-1997'.

4. Select a Training Location (optional)

Select a training location.

If this list box is left blank, all locations are displayed.

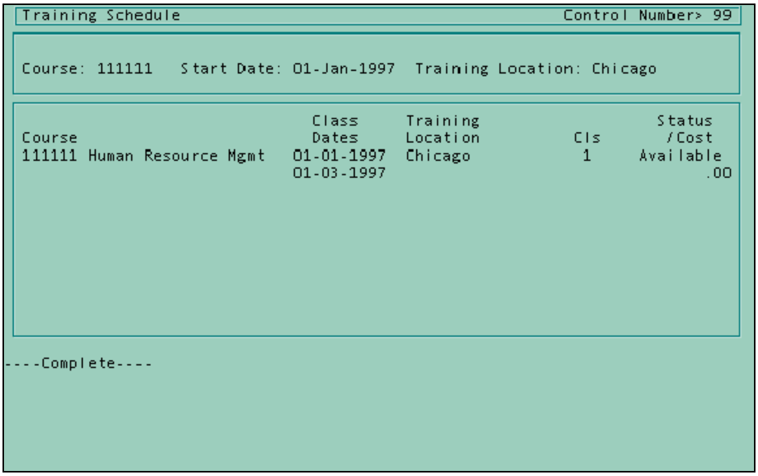
For practice, select 'Chicago'.

5. Click Save or press Enter

A schedule of upcoming training classes is displayed on the form.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



```
Training Schedule                                        Control Number> 99

Course: 111111   Start Date: 01-Jan-1997  Training Location: Chicago

                                Class      Training                    Status
Course                          Dates      Location          Cls        /Cost
111111 Human Resource Mgmt    01-01-1997  Chicago             1      Available
                              01-03-1997                                   .00

----Complete----
```

See also:

- Definition of a training class ***(on page 83)***

For an explanation of a training class.

Checking what classes have been set up - using a report - optional

To check the training schedule on a paper report using the Training Schedule report (29RRPT) , complete the report schedule by entering the following report parameters:

☞ *Each Training Location is reported separately. There are no totals reported. Canceled classes are not reported.*

Note: *Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.*

1. Enter the From (date) (optional)

Type the class start date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

If this text box is left blank, the system date is used.

For practice, type '01-01-1997'.

2. Enter the To (date) (optional)

Type the class end date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

If this text box is left blank, all classes equal to or later than the From date are reported.

To report on classes from only one date, type the From date in both the From and To parameters.

For practice, leave this text box blank.

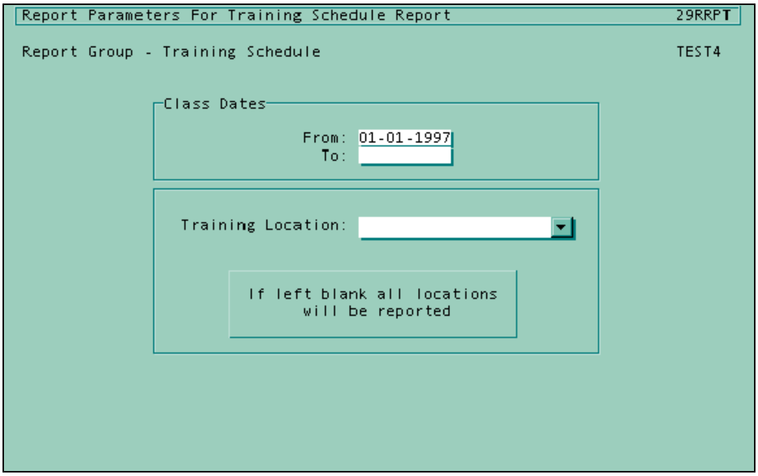
3. Select the Training Location (required)

Select the training location.

If this list box is left blank, all training locations are reported.

For practice, leave this list box blank.

When completed, the report parameters may look similar to the example that follows:



4. Click Save or press Enter

Once it has been processed, this report provides a schedule of classes that have been scheduled for a training location.

For practice, click Save or press Enter.

See also:

- Definition of a training class ***(on page 83)***
For an explanation of a training class.

- Training Schedule report (29RRPT ***(see "Report Quick Reference" on page 243))***
For a description of this report and its business uses.

Extended Practice

1. Set up a training class with the following characteristics:

   - Course of 'Flex Benefits'
   - Start Date of 'January 14, 1997'
   - Training Location of 'Chicago'
   - Class '1'
   - End Date of 'January 15, 1997'
   - Select 'Evaluation Required'

The remaining text boxes on this panel will populate from the Course Directory form (10RSCR).

Time and Location

- Days Scheduled of Tuesday and Wednesday
- First day, 9:00 AM to 5:00 PM; Second day, 8:30 AM to 4:00 PM
- Location is Chicago Training Center, Room C

Trainer/Coordinator

- Trainer is Cyborg Systems
- Days = 2
- Coordinator is Cyborg Class Coordinator

Class Costs

- Class Cost for Lunch and Refreshments is 6.00 per head

2. Copy the class you just established to another class on April 1-2, 1997, in New Orleans.

3. Change this New Orleans class in the following manner:

   - Minimum Number of Students is now 5.
   - Classes will be held in Room 3C of the New Orleans Training Center.
   - Wednesday's session is scheduled to end at 5:00 PM.

4. Use the Training Schedule form (53RSCR) to check that the two classes added in this practice session have actually been set up on the file correctly.

Review of Questions Answered

1. What is a class?

2. What four text boxes define a training class?

3. What tool can be used to display all available course options and courses?

4. What are the available class costing options?

5. What types of maintenance can be performed on classes?

CHAPTER 6

Setting Up and Maintaining Training Programs

In This Chapter

Introduction

Training Administration facilitates the setting up and maintenance of training classes to be given on a specific date(s). The information that can be recorded includes class location, class dates, class times, trainer/coordinator information, and class costs.

The information discussed in this section is essential to using Training Administration.

Tasks

You may complete the following tasks to set up training classes. Only the first task is essential. The tasks have been divided into two categories, Set Up Training Classes and Maintain Training Classes.

Prerequisites

Before you can begin to set up training classes, all the following tasks must have been completed.

Organization details

Before any data can be entered, you must ensure that your organization details have been set up.

☞ *Refer to* **Implementing Training Administration** *(on page 23) for more information.*

Training Courses

Before setting up training classes, it is important to enter all available training courses on the system and to set up objectives, prerequisites, and costs for each course.

☞ *Refer to* **Setting Up and Maintaining Training Courses** *(on page 43) for details on setting up and maintaining training courses.*

Training Classes

Before setting up training programs, it is important to enter all available training classes on the system and to set up the Time/Location, Trainer/Coordinator, and Class Costs for each class.

☞ *Refer to* **Setting Up and Maintaining Training Classe** *(see "Setting Up and Maintaining Training Classes" on page 79)s for details on setting up and maintaining training classes.*

Questions answered

The following questions are answered in this section:

1. What is a class?
2. What four text boxes define a training class?
3. What tool can be used to display all available course options and courses?
4. What are the available class costing options?
5. What types of maintenance can be performed on classes?

Makeup of training programs

A training program is composed of a series of up to 15 training classes that must be successfully completed by an employee. Training programs are set up on the Program Schedule form (15RSCR) and include the following types of information:

- Program Name
- Effective Date
- Description of program
- Up to 15 training classes

Students are registered into classes and programs, but never into courses. All classes within the training program must be set up previously on the Class Schedule form (13RSCR).

See also:

- Setting up a training program ***(on page 117)***

For detailed directions on setting up a training program.

- Modifying a training program ***(on page 119)***

For detailed directions on changing a training program.

- Deleting a training program ***(on page 121)***

For detailed directions on deleting a training program.

☞ *Refer to* **Setting Up and Maintaining Training Classes** *(on page 79)* *for more information on training classes.*

When to use a training program

A training program is used when a series of classes logically fit together in some way and when the classes must all be completed by a group of your employees.

For example, a training program could be set up to include four introductory classes to HR Management. An employee would have to complete all four classes successfully to complete the training program.

Apply the Concept
Consider whether your company would need to set up training programs. How would this help your employees? How would it help management?

Detailed Directions

This section provides detailed instructions for the tasks discussed in this section.

Tasks

Setting up a training program

To set up a training program, follow these steps:

1. Access the Program Schedule form (15RSCR)

Access this form by making the following selection from the Navigator:

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Setup and Maintain Classes
Task: Setup/Maintain A Program

For practice, access the Program Schedule form (15RSCR).

2. Click the Clear button

To avoid copying pre-existing information, click the Clear button on the toolbar to clear the text boxes on the form.

For practice, click the Clear button on the toolbar.

3. Select the Program

Select the Program.

For practice, select 'HR Mgmt Program'.

4. Enter the Effective Date

Type the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere). Subsequent student enrollments must match this date.

For practice, type '08-01-1994' (US and Canada) or '01-08-1994'(elsewhere).

5. Enter a Description

Type an up-to-50-character description of the training program.

For practice, type 'This program is comprised of HR Mgmt classes'.

6. Select the Scheduled Classes

Assign up to 15 scheduled classes to the program.

Assign classes 1 through 5 on this panel and 6 through 10 and 11 through 15 on other form panels. After assigning Classes on the first panel, use the command buttons that display at the bottom of the form to access the other panels.

For practice, select 'Human Resource Mgmt' in the first Scheduled Classes text box.

7. Enter the Start

Type the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Alternatively, after selecting a course, type a question mark (?) in the Start text box and then press Enter to access the Course/Class selections. Then select a course/class from this menu and return to this form. The Start, Training Location, and Class text boxes will be filled in automatically.

For practice, type '10-01-1994' (US and Canada) or '01-10-1994' (elsewhere) in the first Start text box.

8. Select the Training Location

Select the location at which the training will be held.

For practice, select 'Chicago' in the first Training Location text box.

9. Enter the Class

Type the class sequence number for the training class.

For practice, type '1' in the first Class text box.

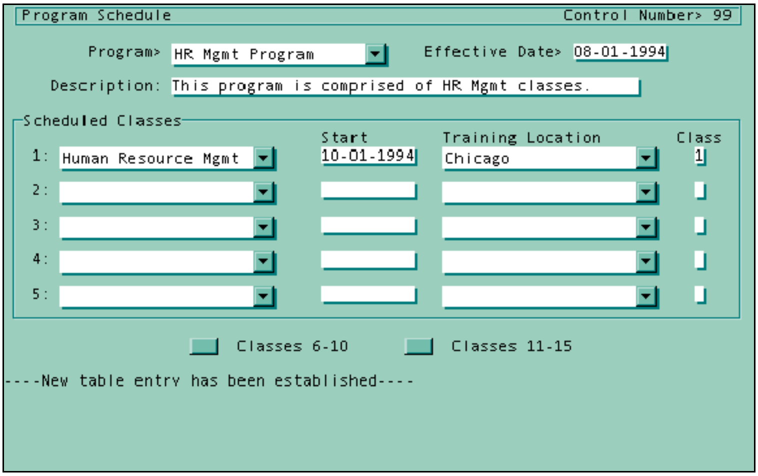
10. Click Save or press Enter

The program is set up and the following message is displayed at the bottom of the form:

'—New table entry has been established—'.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Makeup of training programs ***(on page 115)***

For an explanation of the makeup of training programs.

Modifying a training program

You can modify training programs by adding more classes to your programs (up to 15). To add classes, follow these steps:

1. Access the Program Schedule form (15RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Setup and Maintain Classes
Task: Setup/Maintain A Program

For practice, access the Program Schedule form (15RSCR).

2. Select a program

Access the selections list by clicking on the Selections button on the toolbar. Then double-click the appropriate program.

For practice, click the Selections button on the toolbar and then select 'HR Mgmt Program' with an Effective date of '08-01-1994'(US and Canada) or'01-08-1994'(elsewhere).

3. Add a training class to the program

Assign a training class to the program by selecting a class from the next available scheduled classes list box.

For practice, select 'Position Management' in the second Scheduled Classes list box.

4. Enter the Start

Type the start date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Alternatively, after selecting a course, type a question mark (?) in the Start text box and then press Enter to access the Course/Class selections. Then select a course/class from this menu and return to this form. The Start, Training Location, and Class text boxes will be automatically filled in.

For practice, type '09-10-1994'(US and Canada) or '10-09-1994'(elsewhere) in the second Start text box.

5. Select the Training Location

Select the location for the added class.

For practice, select 'Chicago' in the second Training Location text box.

6. Enter the Class

Type the sequence number for the added training class.

For practice, type '2' in the second Class text box.

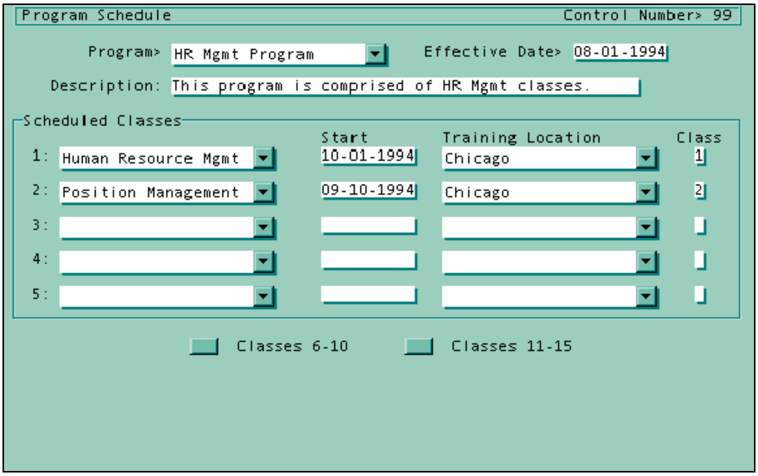
7. Click Save or press Enter

The training program is modified and the following message is displayed:

'—Maintenance has been performed—'.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Makeup of training programs ***(on page 115)***

For an explanation of the makeup of training programs.

Deleting a training program

To delete a training program, follow these steps:

1. Access the Program Schedule form (15RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Setup and Maintain Classes
Task: Setup/Maintain A Program

For practice, access the Program Schedule form (15RSCR).

2. Select the program to be deleted

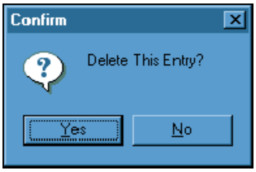
Access the selections list by clicking on the Selections button on the toolbar. Then double-click the program to be deleted.

For practice, click the Selections button on the toolbar and then select 'HR Mgmt Program' dated '08-01-1994'(US and Canada) or '01-08-1994'(elsewhere).

3. Click the Del Entry button

Delete the entry by clicking on the Del Entry button on the toolbar.

A Confirm dialog box displays.



For practice, click the Del Entry button.

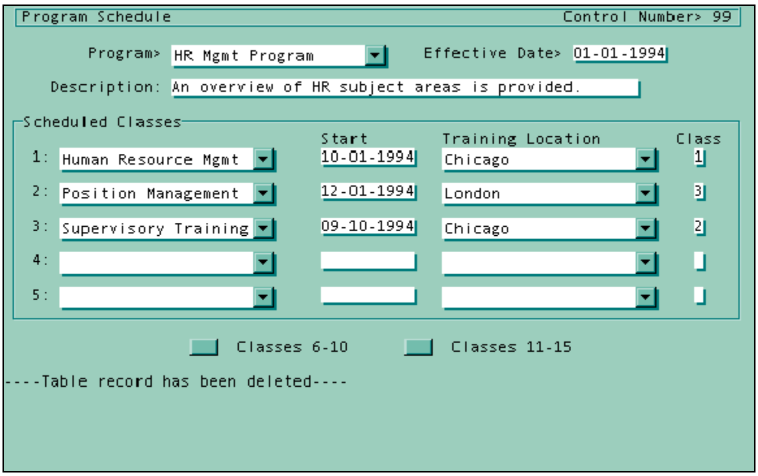
4. Click the Yes command button

Confirm the deletion by clicking on the **Y**es command button.

The message '—Table record has been deleted—' displays at the bottom of the form. The form displayed is the first form on the selections list.

For practice, click the Yes command button.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Makeup of training programs ***(on page 115)***

For an explanation of the makeup of training programs.

Extended Practice

1. Set up a training class with the following characteristics:

   - Course of 'Flex Benefits'
   - Start Date of 'January 14, 1997'
   - Training Location of 'Chicago'
   - End Date of 'January 15, 1997'
   - Select 'Evaluation Required'

   The remaining text boxes on this panel will populate from the Course Directory form (10RSCR).

   Time and Location

   - Days Scheduled of Tuesday and Wednesday
   - First day, 9:00 AM to 5:00 PM; Second day, 8:30 AM to 4:00 PM
   - Location is Chicago Training Center, Room C

   Trainer/Coordinator

   - Trainer is Cyborg Systems
   - Days = 2
   - Coordinator is Cyborg Class Coordinator

   Class Costs

   - Class Cost for Lunch and Refreshments is 6.00 per head

2. Copy the class you just established to another class on April 1-2, 1997, in New Orleans.

3. Change this New Orleans class in the following manner:

   - Minimum Number of Students is now 5.
   - Classes will be held in Room 3C of the New Orleans Training Center.
   - Wednesday's session is scheduled to end at 5:00 PM.

4. Use the Training Schedule form (53RSCR) to check that the two classes added in this practice session have actually been set up on the file correctly.

Review of Questions Answered

1. What is a class?

2. What four text boxes define a training class?

3. What tool can be used to display all available course options and courses?

4. What are the available class costing options?

5. What types of maintenance can be performed on classes?

PART 3

Entering Employee Training Data

In This Section

CHAPTER 7

Requesting Training for an Employee

In This Chapter

Introduction

Training Administration facilitates the entry of requests for employee training (required or elective) and the administration of those requests. This optional feature is designed to enable a training administrator or manager to identify the best course available for an employee to take when a training request is made on the employee's behalf. For example, a line manager may authorize training that meets certain objectives, but may not know what specific courses are available. Likewise, prerequisites for a particular course may not be fully known at the time of the request.

An authorized request can go to a training administrator who reviews it, identifies the course or courses that fit the objectives specified, checks to see if the prerequisites have been met, records the need for the employee to take the courses(s), and ultimately registers the employee for it.

In some organizations, employees can request certain types of elective training directly with a training administrator. Such training is not required for the job and may not need to have supervisory approval. Again, a training administrator can take such requests, match the employee's need to the type of courses available, determine that the prerequisites have been met, record the elective training desired, and complete the actual registration.

☞ *If logging training requests is not required in your organization, read only the section called 'Methods of checking training requests' and then read* **Registering an Employee for Training** *(on page 151).*

Tasks

You can complete the following tasks to process a training request for an employee:

- Identifying the most suitable course for an employee
- Checking the prerequisites for a training course on line by course
- Checking the prerequisites for a training course - using your chosen method
- Entering a request for training
- Checking training requests - online by course
- Checking training requests - online by class
- Checking training requests - on a report by course
- Checking training requests - on a report by employee

Prerequisites - Requesting Training for an Employee

Before you request training for an employee, the following task must have been completed.

Organization details

Before any data can be entered, you must ensure that your organization details have been set up.

☞ *Refer to* **Implementing Training Administration** *(on page 23) for more information.*

Training Courses

Before requesting training for an employee, it is important that all available training courses have been entered on the system and that the objectives, prerequisites, and costs for each course have been set up.

☞ *Refer to* **Setting Up and Maintaining Training Courses** *(on page 43),* **Setting Up and Maintaining Training Classes** *(on page 79), and* **Setting Up and Maintaining Training Programs** *(on page 113) for details on setting up and maintaining training courses, classes, and programs.*

See also:

- Types of course prerequisites and their uses ***(on page 132)***

For an explanation of types of course prerequisites and their uses.

Employee details

Before you can process their training requests, all employees for whom you have training requests must be set up as employees on the system.

☞ *Refer to the Using Human Resources Administration documentation for information about setting up an employee record.*

Questions answered

The following questions are answered in this Section:

1. When should the Training Request Facility be used?
2. How are training objectives used to identify suitable training courses?
3. What are course prerequisites and how are they used?
4. What methods of checking training requests are available?

Uses of the Training Request Facility

It is not essential to enter training requests. If training requests are not entered first, it means that registering an employee for a training class becomes the initial entry task. The Objective To Course Match form (56RSCR) (also known as the Training Request Facility) is, however, very useful if, in your organization, a training administrator is relied upon to help determine the best course fit for an employee based on certain criteria, and then record the needed training before actually processing the registration.

For example, if line managers initiate training requests on behalf of their employees, they need to either identify the type of course they wish an employee to attend or state the objectives they hope the employee will achieve. A training administrator may need to match these stated objectives to available courses and/or check that prerequisites are met before actually recording the employee's required training. The use of the Objective To Course Match form (56RSCR) (also known as the Training Request Facility) is simply a more structured approach to matching training needs with courses that will meet those needs and/or facilitating the prerequisite determination before recording the training requirement for an employee.

See also:

- Identifying the most suitable course for an employee (optional) ***(on page 136)***

For detailed directions on choosing courses for an employee.

Apply the Concept

Consider the way employee training is managed in your organization and determine whether it would be useful for you to use the Objective To Course Match form (56RSCR) (also known as the Training Request Facility).

Use of course objectives to identify suitable training courses

To enable staff to find the best course available for an employee, training objectives are matched with course objectives. For this process to be effective, it is important that all courses are set up with a full range of identified training objectives.

☞ *Refer to* **Setting Up and Maintaining Training Courses** *(on page 43) for more information on setting up training course objectives.*

The list of training objectives that have been identified for the available courses is displayed in the Objective list box on the Objective To Course Match form (56RSCR). Selecting a training objective from this form allows the system to search for the appropriate training course that satisfies the training objective. This is the only way to search for suitable training course(s) without knowing the name of the training course you wish the employee to attend.

Therefore, when setting up the training objectives, it is important to define them as clearly as possible to avoid confusion. It may be worthwhile to describe the training objectives for each training course in a number of different ways to ensure that people searching for a desired training objective can find what they are looking for.

If you do not want to use training objectives to define suitable training courses, it is not possible to use the Objective To Course Match form (Training Request Facility) (56RSCR).

See also:

- Identifying the most suitable course for an employee (optional) ***(on page 136)***
For detailed directions on choosing courses for an employee.

Apply the Concept
Assume one of the courses your organization offers to employees is 'Using Word for Windows'. What training objectives would you set up for this course?

Types of course prerequisites and their uses

Using the course prerequisite feature to control training requests and training registrations is optional.

Types of prerequisites

A prerequisite may be attendance of another course, the mastery of certain skills and abilities, or anything that is measurable, such as length of experience.

Options for checking that prerequisites are met

If your organization has decided to use the course prerequisite feature, it will be necessary—once a training request has been made or before a training registration has been processed—to check that the employee satisfies the prerequisites.

☞ *Refer to* **Setting Up and Maintaining Training Courses** *(on page 43) for more information on use of the prerequisite feature.*

The system will not automatically check to see that an employee satisfies the specified prerequisites. Checking, therefore, will be a manual task. Because a prerequisite is user-definable, it will be up to your organization to determine how best to check that prerequisites are met before finalizing a training request or a training registration.

Some examples of prerequisite information that can be maintained include the following:

Type of Prerequisite	**Where information is held on *The Solution Series/ST***
Education qualification	Formal Education form (30-SCR)
Attendance of a course	Training Scheduled/Taken form (31-SCR) Training Results/History form (30RSCR)
Qualification	Formal Education form (30-SCR) Skills And Competencies form (33-SCR) Certificates, Licenses And Permits form (28-SCR) Professional Association Memberships form (29-SCR)
Level of Experience	Skills And Competencies form (33-SCR)
Skill	Skills And Competencies form (33-SCR)

When to check that prerequisites have been met

Your organization will need to make a decision about when the prerequisites are checked. You may wish to check them as soon as a training request is received or just before a registration is processed.

See also:

- Checking the prerequisites for a training course - online by course - optional ***(on page 138)***
- Checking the prerequisites for a training course - using your chosen method ***(on page 139)***

For detailed directions on checking course prerequisites.

Entering training requests

The Training Required form (31RSCR) is used to record an employee's need for a training course. The information on this form can be entered or deleted manually, or is maintained automatically by the system for internal training classes under the following circumstances:

- Created/deleted by the Class Registration form (20RSCR) when a registration is canceled.
- Created by the Training Results/History form (30RSCR) when an employee has failed a class.
- After an employee successfully completes a training class, the training-required record is automatically deleted from the system.

The Registration Status display on the form shows 'Registered' or 'No Status', which is based on a system examination of the employee-level registration record to determine if a Course Number match is found. If a match is found, a status of 'Registered' is displayed. If no match is found, 'No Status' is displayed.

See also:

- Entering a request for training ***(on page 139)***

For detailed directions on entering training requests.

Methods of checking training requests

A number of facilities allow you to check that training has been requested and entered in Training Administration. You must choose which method is the best one for you. The options are:

Selection Option	**Format**	**Form/Report**
By training course	Online list of employees	Training Required inquiry form (33RSCR)
By training course	Hard copy report of employees	Training Courses Needed By Course report (47RRPT)
By class	Online list of employees	Class Registration/ Cancellation form (20RSCR)
By employee	Hard copy report of courses	Training Courses Needed By Employee report (48RRPT)

The first two options are the most popular. However, the third option is useful if, after checking the requests, you want to process them and register the employee using the Class Registration/Cancellation form (20RSCR).

☞ *Refer to* **Registering an Employee for Training** *(on page 151) for more details on the Class Registration/Cancellation form (20RSCR).*

The last option could be useful if, for example, you need further authorization from the employee's line manager before processing the request. This report could be distributed to the appropriate line managers for checking and approval.

See also:

- Checking training requests - online by course ***(on page 141)***
- Checking training requests - online by class ***(on page 142)***
- Checking training requests - on a report by course ***(on page 144)***
- Checking training requests - on a report by employee ***(on page 146)***

For detailed directions on entering training requests.

Apply the Concept

Consider how you intend to use the Objective To Course Match form (56RSCR) (also known as the Training Request Facility) in your organization. Who will check training requests? Which facility would be most useful for checking training requests?

Detailed Directions

This section provides detailed instructions for the tasks discussed in this Section.

Tasks

Identifying the most suitable course for an employee (optional)

To find a course that matches a training objective, follow these steps:

1. Access the Objective To Course Match form (56RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Enter Employee Training Data
Task: View Suitable Courses for Employee

For practice, access the Objective To Course Match form (56RSCR).

2. Select the Objective

Select the training objective to be achieved. If the training objective is not listed, then no courses are available with that training objective identified.

For practice, select 'Gain General Skills'.

3. Enter the time period over which you are searching for appropriate training

- Type the start and end dates in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).
- Either of the date text boxes can be left blank.
- If the start date is left blank, today's date is used as the default. If the end date is left blank, all courses satisfying the training objective will be listed.

For practice, leave the date text boxes blank.

4. Click Save or press Enter

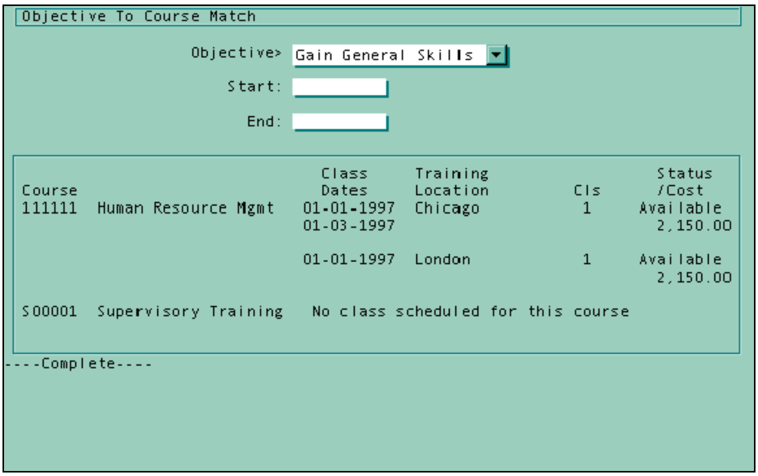
All courses that have objectives recorded on the Course Directory form (10RSCR) that match the objective entered here will be displayed at the bottom of the form. All scheduled classes for each selected course will be displayed for the time period entered. The Cost includes all Cost Categories of Equipment, Operating, and Miscellaneous.

The word '—Complete—' is displayed at the end of the list.

If the list of courses is too long to fit on the form, press Enter to scroll through the remainder of the list.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Uses of the Training Request Facility ***(on page 130)***

For an explanation of the uses of the Training Request Facility.

- Use of course objectives to identify suitable training courses ***(on page 131)***

For an explanation of the use of course objectives to identify suitable training courses.

Checking the prerequisites for a training course - online by course - optional

To identify course prerequisites online using the Course Directory form (10RSCR), follow these steps:

1. Access the Course Directory form (10RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Enter Employee Training Data
Task: Check Course Prerequisite

For practice, access the Course Directory form (10RSCR).

2. Select a training course

Access the selections list by clicking on the Selections button on the toolbar. Then double-click the appropriate training course.

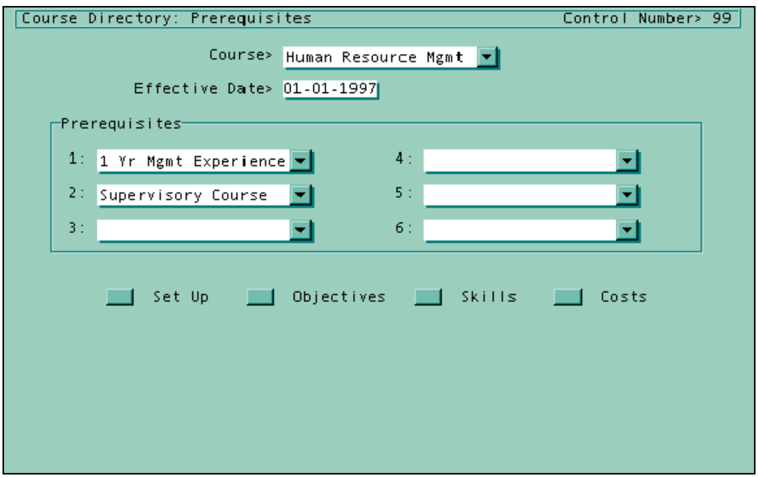
For practice, click the Selections button on the toolbar and then select 'Human Resource Mgmt' dated '01-01-1997'.

3. Click the Prerequisites command button

Once the correct course details are displayed, click the Prerequisites command button at the bottom of the form. The Prerequisites panel is displayed.

For practice, click the Prerequisites command button.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Types of course prerequisites and their uses ***(on page 132)***

For an explanation of this identifier.

Checking the prerequisites for a training course - using your chosen method

The action you take to check that the employee meets the prerequisites of the course will depend on the type of prerequisites set. The following are three examples of the types of prerequisites and how to check them.

Type of prerequisite	Where information is held on the system
Education qualification	Formal Education form (30-SCR)
Course attendance	Training Scheduled/Taken form (31-SCR) Training Results/History form (30RSCR)
Qualification	Formal Education form (30-SCR) Skills And Competencies form (33-SCR) Certificates, Licenses, And Permits form (28-SCR) Professional Association Memberships form (29-SCR)
Level of experience	Skills And Competencies form (33-SCR)
Skill	Skills And Competencies form (33-SCR)

Refer to the conceptual information about course prerequisites and their uses to determine how your organization is going to check prerequisites.

Entering a request for training

To request training for an employee, use the Training Required form (31RSCR) and follow these steps:

1. Access the Training Required form (31RSCR) for the specified employee

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Enter Employee Training Data
Task: Enter A Request for Training

For practice, access the Training Required form (31RSCR) for employee '2005'.

2. Select the Course

Select the appropriate course.

As an alternative, select the List Course Options option in the Course option list and then click Save or press Enter to display a list of course options and their descriptions. Select a course from the list, then click Save or press Enter.

For practice, select 'Human Resource Mgmt'.

3. Select the Type (optional)

Select the type of requirement, for example, required or elective.

For practice, select 'Elective'.

4. Enter the Date Required

Type the date by which the training is required, or the scheduled date of the course, if known. Type the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

For practice, type '03-01-1997'(US and Canada) or '01-03-1997'(elsewhere).

5. Select the Reason

Select the reason for the training request, for example, Acquire competency.

For practice, select 'Training plan'.

6. Leave the Status list box blank

The Status list box on this form is used to identify any unusual statuses for a training request. The status definitions are as follows:

Status	Meaning
None	A normal request
Class Canceled	The class has been canceled
Class Incomplete	The employee failed to complete the course
Employee Canceled	The employee registration has been canceled
Employee Failed	The employee failed the course

These statuses are maintained by the system automatically, except for the 'Class Incomplete' status, which requires manual entry.

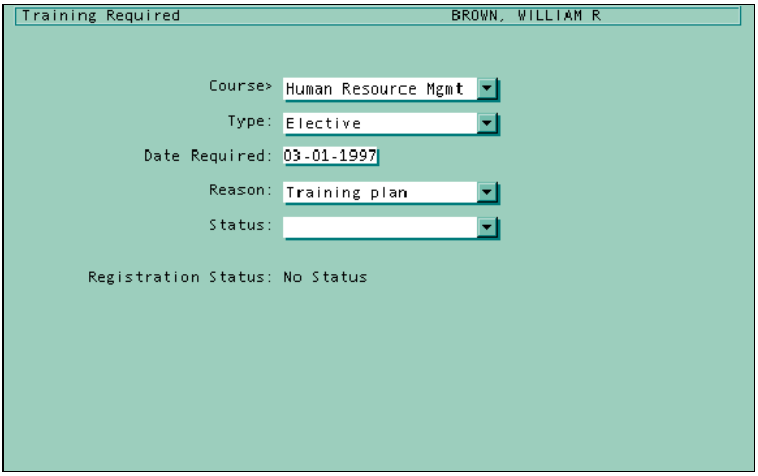
For practice, leave this list box blank.

7. Click Save or press Enter

The training request is created. If a Course Number match is found, a registration status of 'Registered' is displayed. If no Course Number match is found, 'No Status' is displayed.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Entering training requests ***(on page 134)***

For an explanation of entering training requests.

Checking training requests - online by course

To view training requests online by course using the Training Required inquiry form (33RSCR), follow these steps:

1. Access the Training Required inquiry form (33RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Enter Employee Training Data
Task: Check Training Required

For practice, access the Training Required inquiry form (33RSCR).

2. Select the Course

Select the course for which you wish to check training requests.

As an alternative, select the List Course Options option in the Course option list and then click Save or press Enter to display a list of course options and their descriptions. Select a course from the list.

For practice, select 'Human Resource Mgmt'.

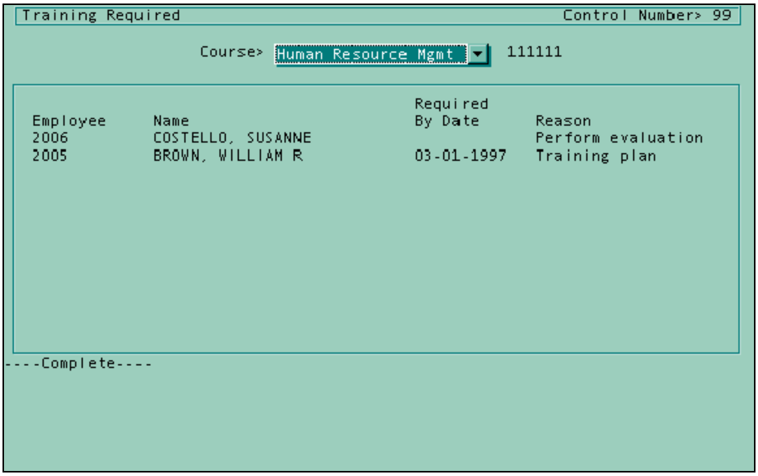
3. Click Save or press Enter

The training requests on file for the course are displayed. The following message is displayed when all the training required has been reported:

'—Complete—'.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Training Required Control Number> 99

Course> Human Resource Mgmt 111111

Employee	Name	Required By Date	Reason
2006	COSTELLO, SUSANNE		Perform evaluation
2005	BROWN, WILLIAM R	03-01-1997	Training plan

----Complete----

See also:

- Methods of checking training requests ***(on page 135)***

For an explanation of this identifier.

Checking training requests - online by class

To view training requests online by class using the Class Registration/Cancellation form (20RSCR), follow these steps:

1. Access the Class Registration/Cancellation form (20RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Register an Employee for Training
Task: Register Employees for Classes

For practice, access the Class Registration/Cancellation form (20RSCR).

2. Select the Course

Select the course you wish to check.

As an alternative, select the List Course Options option in the Course option list and then click Save or press Enter to display a list of course options and their descriptions. Select a course from the list, then click Save or press Enter.

For practice, select 'Human Resource Mgmt'.

3. Enter the Start Date

Type the start date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Alternatively, after selecting a course, enter a question mark (?) in the Start text box and then press Enter to access the Course/Class selections. Then select a course/class and return to this form. The Start Date, Training Location, and Class text boxes will be automatically filled in.

For practice, type '01-01-1997'.

4. Select the Training Location

Select the location.

For practice, select 'Chicago'.

5. Enter the Class

This will normally be '1' unless there are multiple occurrences of the same course on the same day.

For practice, type '1'.

6. Enter the Employee (optional)

If you are using this form to register or cancel a class for a particular employee, type the employee number in the Employee text box.

This text box can be left blank when inquiring about training requests received.

For practice, leave this text box blank.

7. Select the Type

Select an option that indicates whether the student has taken this course as a requirement or as an elective choice. This list box can be left blank when inquiring about training requests received.

For practice, leave this list box blank.

8. Enter the Confirmed (date)

If you are using this form to register an employee in a class, and the registration has been confirmed, type the confirmation date in the Confirmed text box in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

This text box can be left blank when inquiring about training requests received.

For practice, leave this text box blank.

9. Select one of the Options

Select one of the option buttons to register or cancel the class for the employee. If you accidentally select either the Register or Cancel option button and only want to update the form data, select the No Option option button.

Make no selection when inquiring about training requests received.

For practice, make no choice in this group box.

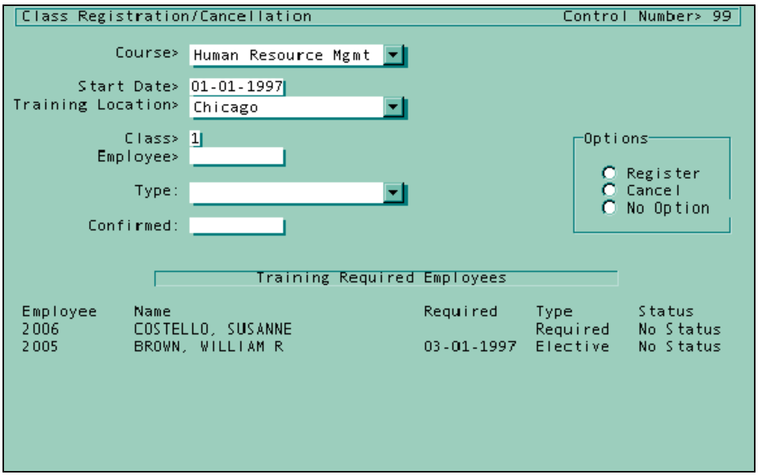
10. Click Save or press Enter

A list of employees who have requested the selected training course is displayed at the bottom of the form. Click Save or press Enter to see additional entries on the list.

If employees have been wait-listed for the course, their names will be displayed because they take precedence over those who require training.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Methods of checking training requests ***(on page 135)***

For an explanation of the methods of checking training requests.

Checking training requests - on a report by course

To view training requests by course on a hard-copy report using the Training Courses Needed by Course report (47RRPT) , complete the report schedule by entering the following report parameters:

☞ *Each course is reported separately. No totals are reported. Terminated employees are not reported.*

Note: *Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.*

1. Enter the From (date) (optional)

Type the start date of the period for which you want to report. Type the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Note: *If this text box is left blank, the system date is used.*

For practice, type '01-01-1997'.

2. Enter the To (date) (optional)

Type the end date of the period for which you want to report. Type the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Note: *If this text box is left blank, all employees with training required on a date equal to or later than the From date are reported.*

To report on training required for a specific date, type the From date in both the From and To text boxes.

For practice, leave this text box blank.

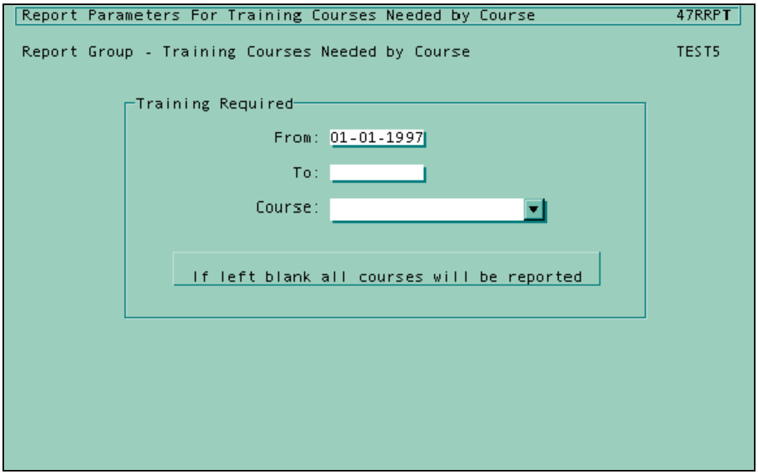
3. Select the Course (optional)

If you require a specific course to be reported on, select the course.

Note: *If this list box is left blank, all courses are reported.*

For practice, leave this list box blank.

When completed, the report parameters may look similar to the example that follows:



4. Click Save or press Enter

Once it has been processed, this report provides, by course, a list of courses that employees need to take.

For practice, click Save or press Enter.

See also:

- Methods of checking training requests ***(on page 135)***

For an explanation the methods of checking training requests.

Checking training requests - on a report by employee

To view training requests by employee on a hard-copy report, use the Training Courses Needed By Employee report (48RRPT) .

Each employee is reported separately. No totals are reported. Terminated employees are not reported.

Note: Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.

1. Enter the From (date) (optional)

Type the start date of the period for which you want to report. Type the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Note: If this text box is left blank, the system date is used.

For practice, type '01-01-1997'.

2. Enter the To (date) (optional)

Type the end date of the period for which you want to report. Type the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Note: If this text box is left blank, all employees with training required on a date equal to or later than the From date are reported.

To report on training required for a specific date, type the From date in both the From and To text boxes.

For practice, leave this text box blank.

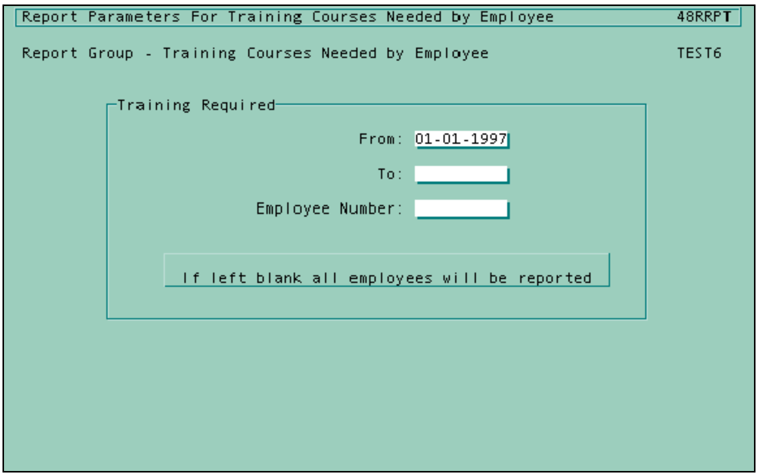
3. Enter the Employee Number (optional)

To report on a specific employee, type the employee number.

Note: If this text box is left blank, all employees are reported.

For practice, leave this text box blank.

When completed, the report parameters may look similar to the example that follows:



4. Click Save or press Enter

Once it has been processed, this report provides, by employee, a listing of training courses that employees need to take.

For practice, click Save or press Enter.

See also:

- Methods of checking training requests ***(on page 135)***

For an explanation of the methods of checking training requests.

Extended Practice

1. Identify the best course for Jeanette Isley in organization 999999 based on the details below. Once you have identified the suitable training course, check that she has satisfied any prerequisites, and then enter the training request.

   Facts: Jeanette Isley, Employee 1432, has expressed a desire to learn more about organization structure and managing positions. She already has earned an MBA and has talked to her manager about pursuing an opportunity soon to be available in the HR area that requires knowledge of organizational planning, position tracking, and succession planning. Her manager asked you to review this request and determine what course might be appropriate for Jeanette and also determine whether a class is scheduled before December 31, 1997. Enter the training request for this elective course.

2. Verify that the training request for Jeanette appears on the Training Required inquiry form (31RSCR).

Review of Questions Answered

1. When should the Training Request Facility be used?

2. How are training objectives used to identify suitable training courses?

3. What are course prerequisites and how are they used?

4. What methods of checking training requests are available?

C H A P T E R 8

Registering an Employee for Training

In This Chapter

Introduction

Training Administration facilitates the registration of employees for available classes. If a class is full, the employee is added to a waiting list for the next available class.

You can check employee registrations for a class or course, check class availability, and check the employees who are registered for a class.

Tasks

The tasks in this Section are divided into two functions: registering employees for training classes and registering employees for training programs.

Registering employees for training classes

- Checking class availability
- Registering employees for training classes
- Checking class registrations online
- Checking class registrations on a report
- Checking employee registrations online
- Checking employee registrations on a report
- Confirming class registrations - using confirmation letters
- Confirming class registrations - using a report reminder

Registering employees for training programs

- Registering employees for training programs
- Checking program registrations online
- Checking program registrations on a report

Prerequisites

Before you can register employees for training, the following tasks must have been completed.

Organization details

Before any data can be entered, you must ensure that your organization details have been set up.

Training Courses, Classes, and Programs

Before registering an employee for training, it is important to enter all available training courses and classes on the system and to set up the objectives, prerequisites, and costs for each course and class.

☞ *Refer to* **Setting Up and Maintaining Training Courses** *(on page 43),* **Setting Up and Maintaining Training Classes** *(on page 79), and* **Setting Up and Maintaining Training Programs** *(on page 113) for details on setting up and maintaining training courses, classes, and programs.*

Employee details

All employees who are being registered for training must have been set up as employees on the system.

☞ *Refer to the Using Human Resources Administration for information about setting up an employee record.*

Questions answered

The following questions are answered in this Section:

1. How are course and class availability checked?
2. How are training programs administered?
3. What is the waiting list process?
4. How are employee registrations confirmed?

Options for checking class availability

Before registering employees for training classes, it makes sense to determine which classes are available. There are several options for identifying the training courses and classes that are available for employee training. It is possible to review the class costs, time, location, and the number of students permitted to attend a particular class.

It is also possible to review which trainer is responsible for a particular class. This will also identify whether the trainer is internal or external while simultaneously identifying the number of students registered for a class. This functionality allows you to ensure that an employee who is a provider is not registered for two classes at the same time.

See also:

- Checking class availability ***(on page 160)***

For detailed directions on checking class availability.

Options for checking class registrations

There is a facility that enables staff to check the employee registrations for all classes or a particular class. This facility can determine which employees are registered, wait-listed, or both. With this facility it is possible to withdraw an employee from a scheduled class.

See also:

- Class Listing report ***(see "Report Quick Reference" on page 243)***

For a description of this report and its business uses.

Apply the Concept
Consider which options for checking class registrations will be used in your organization. Who will be responsible for this task?

The administration of training programs

Organizations may set up training programs consisting of up to 15 classes. Each class must then be taken by an employee to successfully complete the program.

You may enroll an employee in a program or cancel an employee's registration in a program.

You may list all employees who are registered for a specified program.

You may future-date the starting dates of possible training programs. Future-dated programs may be established and you may enroll employees in them at any time.

The Program Registration/Cancellation form (16RSCR) is used to enroll an employee in a program or cancel an employee's registration in a program.

When an employee is enrolled in a program, the system attempts to register the employee in each of the classes in the program, which are set up on the Program Schedule form (15RSCR). If a class is full, the employee is automatically wait-listed for that class.

When an employee is canceled from a program, the system cancels the employee's registration from all classes that have not been completed.

The class-level processing performed by this form is similar to the processing performed by the Class Registration/Cancellation form (20RSCR). This includes updating the number of seats filled, wait-listing, generating registration numbers, creating or deleting the employee-level registration, and so forth.

See also:

- Registering employees for training programs ***(see "Registering employees for training classes" on page 161)***

For detailed directions on program registration.

- Checking program registrations online ***(on page 177)***
- Checking program registrations on a report ***(on page 178)***

For detailed directions on checking program registrations.

- Student Program Status report ***(see "Report Quick Reference" on page 243)***

For a description of this report and its business uses.

The waiting list process

When an employee is registered for a class, the status of the class might be full. When a class is full, the employee may be wait-listed.

It may not be appropriate to wait-list every employee who registers for a class that is full. For example, an employee may withdraw from a class on very short notice. To simply enroll the next employee waiting for the class may cause problems if the employee does not work locally or is on vacation.

See also:

- Registering employees for training programs ***(see "Registering employees for training classes" on page 161)***

For detailed directions on class registration.

Options for checking employee registrations

You may inquire on the class or classes within a program in which individual employees are registered, wait-listed, or both.

You may set start and/or end dates for this inquiry. You might use this facility, for example, if an employee is on extended sick leave and you need to cancel the employee's registration on future-dated classes.

See also:

- ***Checking registrations for a training class***
For detailed directions on checking training registrations.

- ***Checking an employee's class registration***
For detailed directions on checking an employee's class registration.

- Employee Training Schedule report ***(see "Report Quick Reference" on page 243)***
For a description of this report and its business uses.

Registration confirmation

Confirmation of an employee being registered in a training class is produced by the use of a report that generates a confirmation letter for the employee.

The confirmation letter details the training class attributes, for example, the class location and dates.

See also:

- Confirming class registrations - using confirmation letters ***(on page 172)***

For detailed directions on confirming class registrations.

- Class Confirmation report ***(see "Report Quick Reference" on page 243)***

For a description of this report and its business uses.

- Class Reminder report ***(see "Report Quick Reference" on page 243)***

For a description of this report and its business uses.

Detailed Directions

This section provides detailed instructions for the tasks discussed in this Section.

Tasks

Checking class availability

To check training class availability, follow these steps:

1. Access the Training Schedule inquiry form (53RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Setup and Maintain Classes
Task: Check What Classes are Setup

For practice, access the Training Schedule inquiry form (53RSCR).

2. Select the Course (optional)

Select the course.

As an alternative, select the List Course Options option in the Course option list and then click Save or press Enter to display a list of course options and their descriptions. Select a course from the list, then click Save or press Enter.

If this list box is left blank, all the courses are displayed.

For practice, select 'Human Resource Mgmt'.

3. Type the Start Date (optional)

Type the date to start listing upcoming courses in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

If this text box is left blank, the current date is used.

Alternatively, after selecting a course, type a question mark (?) in the Start text box and then press Enter to access the Course/Class selections. Then select a course/class and return to this form. The Start, Training Location, and Class text boxes will be automatically filled in.

For practice, type '01-01-1997'.

4. Select the Training Location (optional)

Select a training location, for example, Sydney.

If this list box is left blank, all locations are reported.

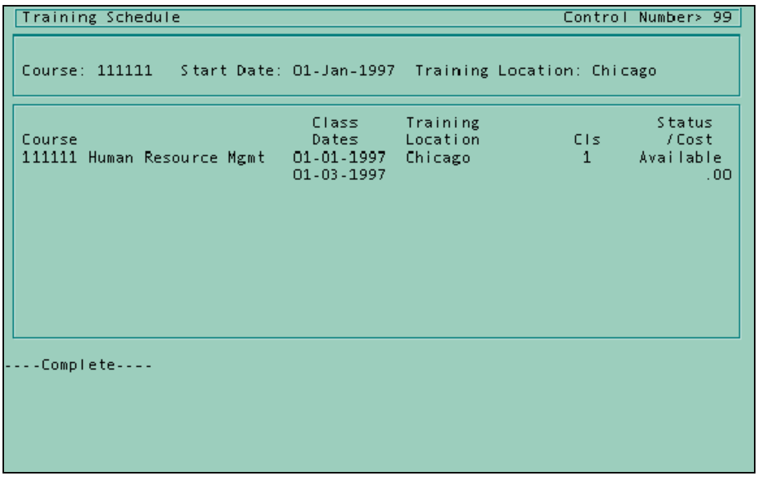
For practice, select 'Chicago'.

5. Click Save or press Enter

The upcoming training schedule information is displayed on the form.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Options for checking class availability ***(on page 154)***

For an explanation of this identifier.

Registering employees for training classes

To register an employee for a training class, follow these steps:

1. Access the Class Registration/Cancellation form (20RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Register an Employee for Training
Task: Register Employees for Classes

For practice, access the Class Registration/Cancellation form (20RSCR).

2. Select the Course

Select the appropriate course.

As an alternative, select the List Course Options option in the Course option list and then click Save or press Enter to display a list of course options and their descriptions. Select a course from the list, then click Save or press Enter.

For practice, select 'Human Resource Mgmt'.

3. Enter the Start Date

Type the start date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Type a question mark (?) in this text box to access the Course/Class selections. Select a course/class and click Save or press Enter to return to the form. The Start Date, Training Location, and Class text boxes are automatically propagated on this form.

For practice, type '01-01-1997'.

4. Select the Training Location

Select the training location, for example, Sydney.

For practice, select 'Chicago'.

5. Select the Class

This will normally be '1' unless there are multiple occurrences of the same course on the same day.

For practice, select '1'.

6. Enter the Employee (number)

Type the employee number of the person you want to register into the training class.

For practice, type '2010'.

7. Select a Type (optional)

Indicate if the training is Elective or Required.

For practice, select 'Elective'.

8. Type a Confirmed (date) (optional)

Type the registration confirmation date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

For practice, leave this text box blank.

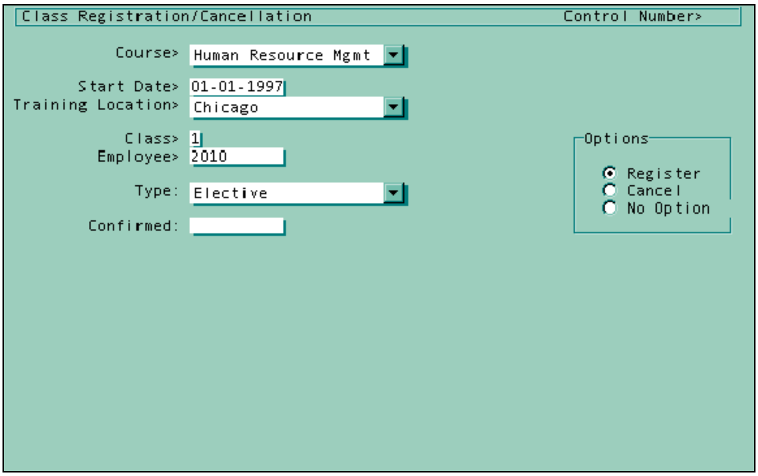
9. Select one of the Options

Select one of the option buttons to register or cancel the class for the employee. If you accidentally select either the Register or Cancel option button and only want to update the form data, select the No Option option button.

This text box can be left blank when inquiring about training requests received.

For practice, click the Register option button.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



10. Click Save or press Enter

The employee is registered for the class and the following message is displayed:

'*Note: Employee registered into class'

Whenever an employee is registered or canceled, employees who are wait-listed are displayed at the bottom of the form. If no employees are wait-listed, employees with training required are displayed.

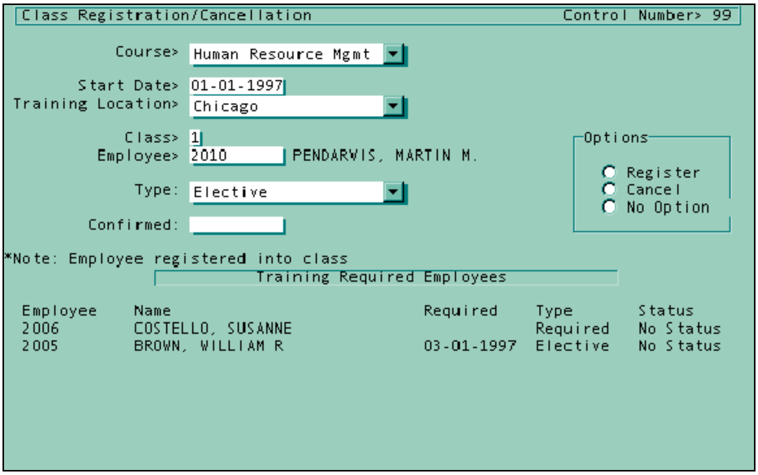
If the class is full and the employee can not be registered, three options are displayed along with a 'Class is full' message:

Option	Result
Wait List Employee	Adds employee to wait list.

Option	Result
Register in Another Class	Use the menu displayed to enroll employee in a different class.
Register Next Employee	Register or cancel a registration for another employee; Start Date, Training Location, and Class text boxes remain on the form.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Class Registration/Cancellation   Control Number> 99

Course> Human Resource Mgmt

Start Date> 01-01-1997

Training Location> Chicago

Class> 1

Employee> 2010 PENDARVIS, MARTIN M.

2006	COSTELLO, SUSANNE		Required	No Status
2005	BROWN, WILLIAM R	03-01-1997	Elective	No Status

See also:

- The waiting list process ***(on page 157)***

For an explanation the waiting list process.

Checking class registrations online

Use the Class Listing inquiry form (50RSCR) to display a listing of all employees registered or wait-listed for a training class.

1. Access the Class Listing form (50RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Register an Employee for Training
Task: Check Registration for a Class

For practice, access the Class Listing inquiry form (50RSCR).

2. Select the Course

Select the appropriate course.

As an alternative, select the List Course Options option in the Course option list and then click Save or press Enter to display a list of course options and their descriptions. Select a course from the list, then click Save or press Enter.

For practice, select 'Human Resource Mgmt'.

3. Type the Start Date

Type the start date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Type a question mark (?) in this text box to access the Course/Class selections. Select a course/class and then click Save or press Enter to return to the form. The Start Date, Training Location, and Class text boxes are automatically propagated on this form.

For practice, type '01-01-1997'.

4. Select the Training Location

Select the training location, for example, Sydney.

For practice, select 'Chicago'.

5. Select the Class

This will normally be '1' unless there are multiple occurrences of the same course on the same day.

For practice, select '1'.

6. Select one of the Options

Select the Registered option button to list registered employees.

Select the Wait Listed option button to list wait-listed employees.

Select the Both option button to list both registered and wait-listed employees.

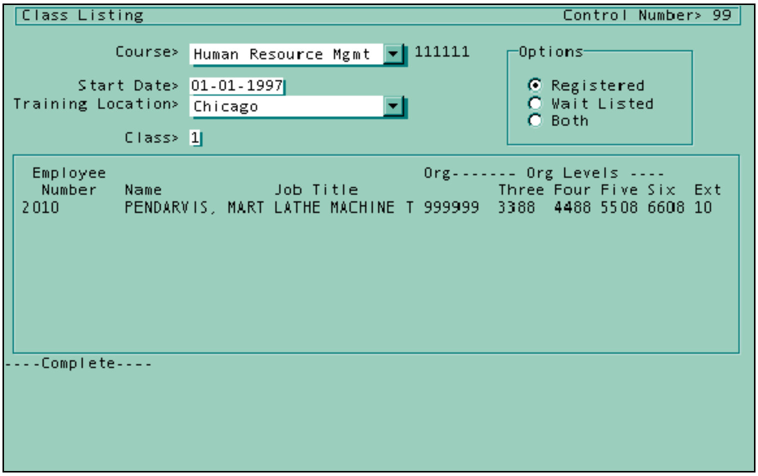
For practice, click the Registered option button.

7. Click Save or press Enter

The registered and/or wait-listed employees are displayed.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Class Listing Control Number> 99

Course> Human Resource Mgmt 111111
Start Date> 01-01-1997

- Options for checking class registrations ***(see "Options for checking employee registrations" on page 158)***

For an explanation of the options for checking class registrations.

Checking class registrations on a report

To produce a listing of all employees registered for a training class using the Class Listing report (32RRPT) , complete the report schedule by entering the following report parameters:

Each class is reported separately. The total number of participants for each class is reported. Terminated employees and canceled classes are not reported.

Note: *Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.*

1. Enter the From (date) (optional)

Type the date the class starts in the From text box. Type the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Note: *If this text box is left blank, the system date is used.*

For practice, type '01-01-1997'.

2. Enter the To (date) (optional)

Type the date the class stops in the To text box. Type the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Note: If this text box is left blank, all classes with dates equal to or later than the From date are reported.

To report on classes from only one date, type the From date in both the From date and To date parameters.

For practice, leave this text box blank.

3. Select the Course (optional)

Select the title of the course

If this list box is left blank, all courses are reported.

For practice, leave this list box blank.

4. Select the Training Location (required)

Select the location of the course.

If this list box is left blank, all training locations are reported.

For practice, leave this list box blank.

5. Enter Class (optional)

Type the class sequence number in Class text box.

If this text box is left blank, all classes are reported.

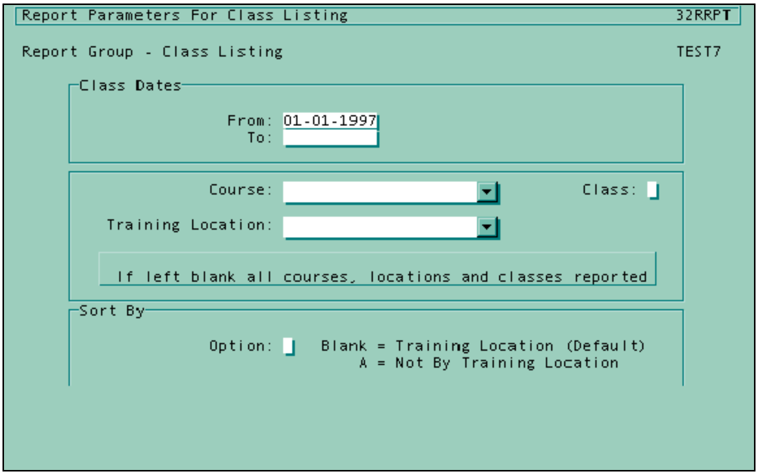
For practice, leave this text box blank.

6. Enter the Sort By Option (optional)

Leave the Option text box blank to accept the system default, which will sort by training location. If you want to show all employees regardless of training location, type 'A' in this text box.

For practice, leave this text box blank.

When completed, the report parameters may look similar to the example that follows:



7. Click Save or press Enter

Once it has been processed, this report provides a listing of all employees registered for a class.

For practice, Click Save or press Enter.

See also:

- Options for checking class registrations ***(see "Options for checking employee registrations" on page 158)***

For an explanation of the options for checking class registrations.

For a description of this report and its business uses.

Checking employee registrations online

Use the Employee Class Status inquiry form (57RSCR) to display a list of classes for which an employee is registered or wait-listed.

1. Access the Employee Class Status inquiry form (57RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Register an Employee for Training
Task: Check Employees Class Registration

For practice, access the Employee Class Status inquiry form (57RSCR).

2. Enter the Employee

Type the employee number of the employee for whom you want to display classes.

For practice, type '2010'.

3. Enter the Start (optional)

Type the start date for the classes in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

If this text box is left blank, the system date is used.

All classes with a Start Date equal to or later than this date will be selected.

For practice, type '01-01-1997'.

4. Enter the Stop (optional)

Type the stop date for the classes in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

If this text box is left blank, all future classes are displayed.

All classes with a Stop Date equal to or earlier than this date will be selected.

For practice, leave this text box blank.

5. Select one of the Options

Select the Registered option button to list classes for which the employee is registered.

Select the Wait Listed option button to list classes for which the employee is wait-listed.

Select the Both option button to list both registered and wait-listed classes.

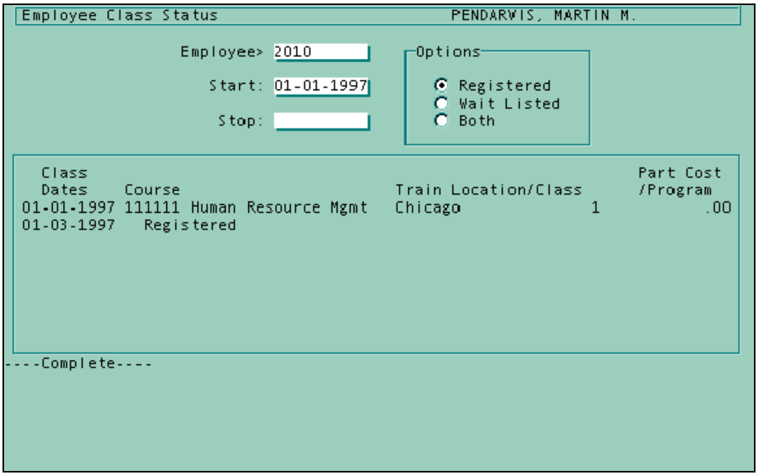
For practice, click the Registered option button.

6. Click Save or press Enter

The classes for which the employee is registered and/or wait-listed are displayed.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Options for checking class availability ***(on page 154)***

For an explanation of the options for checking class availability.

Checking employee registrations on a report

To produce a list of all the classes for which an employee is scheduled using the Employee Training Schedule report (20RRPT) , complete the report schedule by entering the following report parameters:

Each employee's training schedule is printed on a different page. There are no totals for this report. Terminated employees are not included.

Note: Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.

1. Enter the From (date) (optional)

Type the date the class starts in the From text box. Type the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Note: If this text box is left blank, the system date is used.

For practice, type '01-01-1997'.

2. Enter the To (date) (required)

Type the date the class stops in the To text box. Type the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Note: If this text box is left blank, all classes with dates equal to or later than the From date are reported.

To report on classes from only one date, type the From date in both the From date and To date parameters.

For practice, leave this text box blank.

3. Select the Training Location (required)

Select the training location.

Note: If this list box is left blank, all training locations are reported.

For practice, leave this list box blank.

4. Enter an Employee Number (optional)

Type an employee number if a only a specific employee is to be included on the report.

Note: If this text box is left blank, all employees are reported.

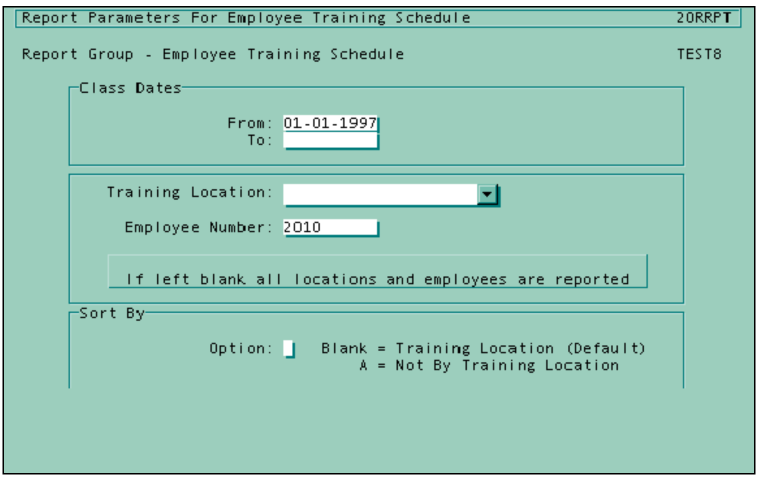
For practice, type '2010'.

5. Enter the Sort By Option

Leave the Option text box blank to accept the system default, which will sort by training location. If you want to show all employees regardless of training location, type 'A' in this text box.

For practice, leave this text box blank.

When completed, the report parameters may look similar to the example that follows:



6. Click Save or press Enter

Once it has been processed, this report provides a list of all the classes for which this employee is registered.

For practice, click Save or press Enter.

See also:

- Options for checking class registrations ***(see "Options for checking employee registrations" on page 158)***

For an explanation of options for checking class registrations.

Confirming class registrations - using confirmation letters

To produce a confirmation letter for each employee registered for the training class using the Class Confirmation report (23RRPT) , complete the report schedule by entering the following report parameters:

Each class is printed on a different page. There are no totals for this report. No reporting is done on canceled classes. Terminated employees are not reported.

Note: *Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.*

1. Enter the From (date) (optional)

Type the date the class starts in the From text box. Type the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Note: *If this text box is left blank, the system date is used.*

For practice, type '01-01-1997'.

2. Enter the To (date) (required)

Type the date the class stops in the To text box. Type the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Note: *If this text box is left blank, all classes with dates equal to or later than the From date are reported.*

To report on classes from only one date, type the From date in both the From and To parameters.

For practice, leave this text box blank.

3. Select the Course (optional)

Select the course.

Note: *If this list box is left blank, all courses are reported.*

For practice, leave this list box blank.

4. Select the Training Location (required)

Select the training location.

Note: *If this list box is left blank, all training locations are reported.*

For practice, leave this list box blank.

5. Enter the Class (optional)

Type the class sequence number.

Note: *If this text box is left blank, all classes are reported.*

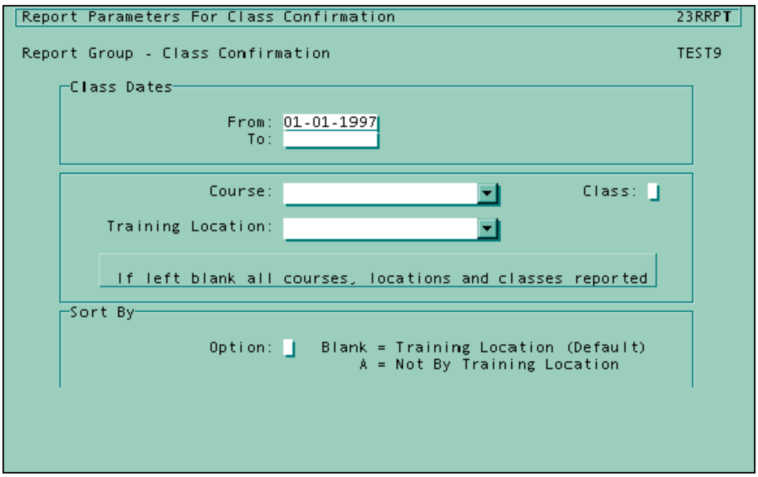
For practice, leave this text box blank.

6. Enter the Sort By Option (optional)

Leave the Option text box blank to accept the system default, which will sort by training location. If you want to show all employees regardless of training location, type 'A' in this text box.

For practice, leave this text box blank.

When completed, the report parameters may look similar to the example that follows:



7. Click Save or press Enter

Once it has been processed, this report provides a confirmation letter for each employee registered to attend the training class.

For practice, click Save or press Enter.

See also:

- Registration confirmation ***(on page 159)***
For an explanation of registration confirmation.

Confirming class registrations - using a report reminder

To produce a letter to employees reminding them they are registered for a training class using the Class Reminder report (25RRPT), complete the report schedule by entering the following report parameters:

☞ *If an employee is registered for a class, a reminder is printed. Each employee reminder is printed on a separate page. No totals are printed on this report. Terminated employees and canceled classes are not included.*

Note: *Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.*

1. Enter the From (date) (optional)

Type the date the class starts in the From text box. Type the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Note: *If this text box is left blank, the system date is used.*

For practice, type '01-01-1997'.

2. Enter the To (date) (required)

Type the date the class stops in the To text box. Type the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Note: *If this text box is left blank, all classes with dates equal to or later than the From date are reported.*

To report on classes from only one date, type the From date in both the From and To parameters.

For practice, leave this text box blank.

3. Select the Course (optional)

Select the course.

Note: *If this list box is left blank, all courses are reported.*

For practice, leave this text box blank.

4. Select the Training Location (optional)

Select the training location.

Note: *If this list box is left blank, all training locations are reported.*

For practice, leave this list box blank.

5. Enter the Class (optional)

Type the Class sequence number.

Note: *If this text box is left blank, all classes are reported.*

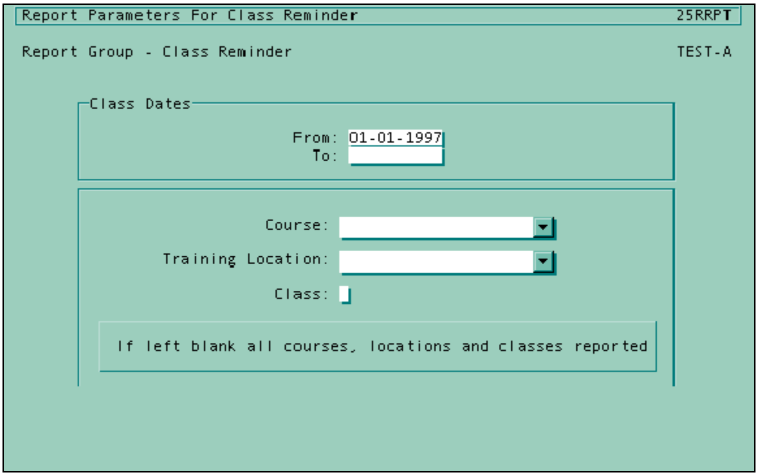
For practice, leave this text box blank.

6. Enter the Sort By Option

Leave the Option text box blank to accept the system default, which will sort by training location. If you want to show all employees regardless of training location, type 'A' in this text box.

For practice, leave this text box blank.

When completed, the report parameters may look similar to the example that follows:



7. Click Save or press Enter

Once it has been processed, this report provides a reminder letter to employees that they have been registered to attend a training class.

For practice, click Save or press Enter.

See also:

- Registration confirmation ***(on page 159)***
For an explanation of registration confirmation.

For a description of this report and its business uses.

Registering employees for training programs

Use the Program Registration/Cancellation form (16RSCR) to register employees for training programs.

1. Access the Program/Registration Cancellation form (16RSCR)

Access this form by making the following selection from the Navigator.

Component:	Training Administration
Process:	Register an Employee for Training
Task:	Register Employees for a Program

For practice, access the Program Registration/Cancellation form (16RSCR).

2. Select the Program

Select the Program title.

For practice, select 'HR Mgmt Program'.

3. Enter the Effective Date

Type the Effective Date of the program. This entry must match the date on the Program Schedule form (15RSCR).

For practice, type '01-01-1994'.

4. Enter the Employee Number

Type the employee number of the person to be registered in the training program.

For practice, type '1112'.

5. Select the Register option button

Select the Register option button to register the employee in the training program.

The description of the program and the name of the employee are displayed in Display mode after the above text boxes have been entered.

For practice, click 'Register'.

6. Click Save or press Enter

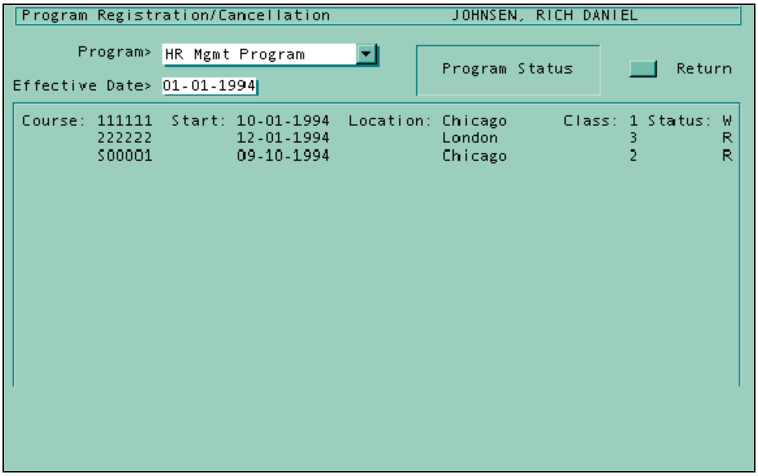
The employee is registered into, wait-listed for, or canceled from the program and from each of the training classes that make up the program.

In addition, a program status form panel is displayed that lists the classes for which the employee has been registered or wait-listed as a result of being registered for the training program.

Click the Return command button to return to the first form panel.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Program Registration/Cancellation JOHNSEN, RICH DANIEL

Program> HR Mgmt Program
Effective Date> 01-01-1994
Program Status
Return

Course:		Start:	Location:		Class:	Status:
	111111	10-01-1994	Chicago		1	W
	222222	12-01-1994	London		3	R
	S00001	09-10-1994	Chicago		2	R

See also:

■ The administration of training programs ***(on page 156)***
For an explanation of training program administration.

Checking program registrations online

Use the Program Inquiry form (52RSCR) to display a listing of employees registered or wait-listed for programs.

1. Access the Program Inquiry form (52RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Register an Employee for Training
Task: Check Registrations for a Program

For practice, access the Program Inquiry form (52RSCR).

2. Select the Program

Select the Program on which to report.

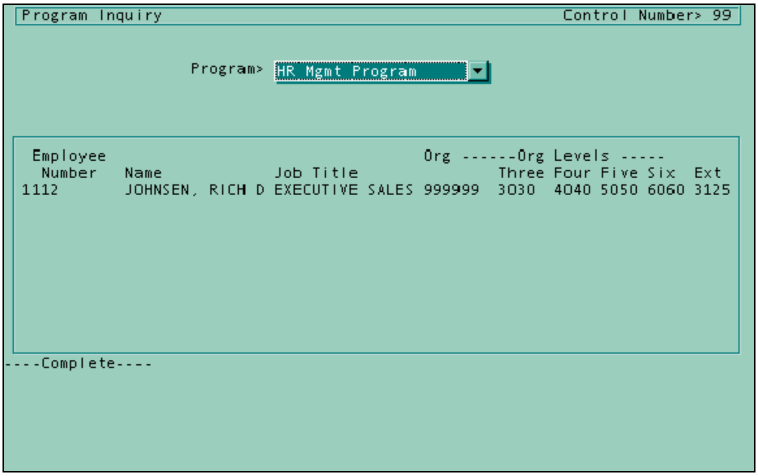
For practice, select the 'HR Mgmt Program'.

3. Click Save or press Enter

A list of registered or wait-listed employees is displayed. A '—Complete—' message is displayed when the whole program listing has been displayed.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- The administration of training programs ***(on page 156)***

For an explanation of the administration of training programs.

Checking program registrations on a report

To produce a listing of all employees registered for each training program using the Student Program Status report (26RRPT) , complete the report schedule by entering the following report parameters:

Each program is reported separately. No totals are printed on this report. Terminated employees and canceled classes are not included.

Note: Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.

1. Select the Program (required)

Select the program.

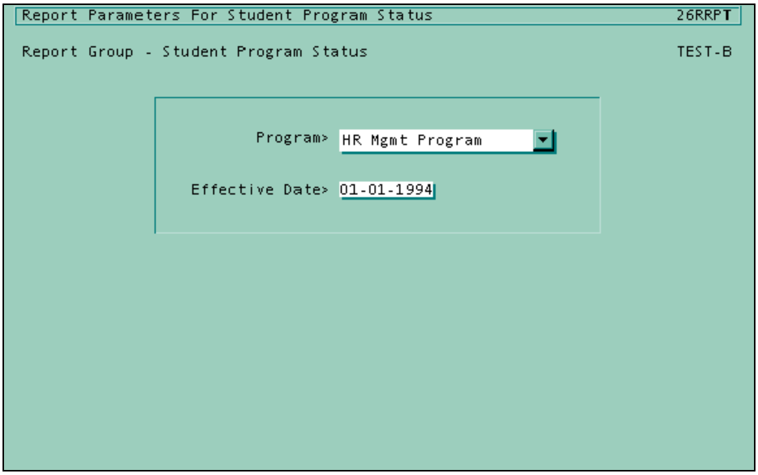
For practice, type 'Hr Mgmt Program'.

2. Enter the Effective Date (required)

Type the program effective date in MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM format (elsewhere).

For practice, type '01-01-1994'.

When completed, the report parameters may look similar to the example that follows:



3. Click Save or press Enter

Once it has been processed, this report lists, by program, all employees registered in the program and their class status.

For practice, click Save or press Enter.

See also:

- The administration of training programs ***(on page 156)***
For an explanation of the administration of training programs.

For a description of this report and its business uses.

Extended Practice

1. Register these employees for the Flex Benefits class in Chicago on January 14, 1997:

   - 1114
   - 1234
   - 2012
   - 3011

2. Register these employees for the Basic Mgmt Program in Chicago that became effective September 1, 1994 (and which you established in the Extended Practice in Section 6):

   - 1113
   - 1115
   - 1116

3. Display a listing of all employees currently registered and/or wait-listed for the Flex Benefits class scheduled for January 14, 1997, in Chicago.

4. Display a listing of all employees currently registered for the Basic Mgmt Program described in question 2 above.

5. Use the Employee Class Status inquiry form (57RSCR) to display all classes for which Employees 1234 and 1113 are registered and/or wait-listed as of September 1, 1994. What happens if you leave the date text boxes blank?

6. Look at the Class Schedule form (13RSCR) for these classes and determine whether the class is full or if space is available and also note how many students are currently registered:

   - Class 111111 in Chicago on October 1, 1994
   - Class 222222 in London on December 1, 1994
   - Class FB001 in Chicago on January 14, 1997
   - Class FB001 in New Orleans on April 1, 1997

Review of Questions Answered

1. How are course availability and class availability checked?

2. How are training programs administered?

3. What is the waiting list process?

4. How are employee registrations confirmed?

CHAPTER 9

Canceling Registrations

In This Chapter

Introduction

Training Administration facilitates canceling class and program registrations after they have been established. This is an optional feature that must be done only when circumstances dictate that registration information be canceled.

☞ *If you do not need to cancel registration information, skip this Section and read* **Processing Training Results and Evaluations** *(on page 195).*

Tasks

You can complete the following tasks to cancel registrations:

- Canceling a class registration
- Canceling a program registration

Prerequisites - Canceling Registrations

Before you can cancel registrations, all the following tasks must have been completed.

Organization details

Before any data can be entered, you must ensure that your organization details have been set up.

☞ *Refer to* **Implementing Training Administration** *(on page 23) for more information.*

Training courses

Before requesting training for an employee, it is important to enter all available training courses on the system and to set up the objectives, prerequisites, and costs for each course.

☞ *Refer to* **Setting Up and Maintaining Training Courses** *(on page 43),* **Setting Up and Maintaining Training Classes** *(on page 79), and* **Setting Up and Maintaining Training Programs** *(on page 113) for details on setting up and maintaining training courses, classes, and programs.*

Employee registrations

Before you can cancel registrations you must have already registered the employees for training classes or programs.

☞ *Refer to* **Registering an Employee for Training** *(on page 151) for details on registering employees for training classes and programs.*

Questions answered

The following questions are answered in this section:

1. How are employee class cancellations processed?
2. How are employee program cancellations processed?

Employee class cancellation processing

When an employee is canceled from attending a training class, the Number Registered and Status (if applicable) are updated accordingly on the Class Schedule form (13RSCR). A Training Required form (31RSCR) is also created for the canceled course with a Status value of Employee Canceled. If this form already exists for the employee for that course, the Status is updated in the same manner.

☞ *Refer to* **Setting Up and Maintaining Training Classes** *(on page 79) for more information on the Class Schedule form (13RSCR).*

☞ *Refer to* **Requesting Training for an Employee** *(on page 127) for more information on the Training Required form (31RSCR).*

See also:

- ***Canceling a class registration***

For detailed directions on canceling a class registration.

Apply the Concept
Canceling employee registrations is an optional system feature. Describe the advantages your organization would derive from using this functionality.

Employee program cancellation processing

When an employee is canceled from a training program, the employee is canceled from all classes in the training program. The Number Registered and Status (if applicable) are updated accordingly on the Class Schedule form (13RSCR) for each class.

☞ *Refer to* **Setting Up and Maintaining Training Classes** *(on page 79) for more information on the Class Schedule form (13RSCR).*

See also:

- ***Canceling a program registration***

For detailed directions on canceling a program registration.

Apply the Concept
Describe the primary difference between canceling an employee's registration from three separate classes that are not part of a program, and canceling an employee's registration in a program that is composed of the same three classes.

Detailed Directions

This section provides detailed instructions for the tasks discussed in this Section.

Tasks

Canceling a class registration

To cancel a class registration, follow these steps:

1. Access the Class Registration/Cancellation form (20RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Cancel Registrations
Task: Cancel a Class Registration

For practice, access the Class Registration/Cancellation form (20RSCR).

2. Click the Selections button

Access the selections list by clicking on the Selections button on the toolbar.

For practice, click the Selections button on the toolbar.

3. Select the class/employee you want to cancel

Double-click the class/employee you want to cancel.

The class information and employee number are returned to the form.

For practice, double-click the Human Resource Mgmt class dated '06-01-1998' (US and Canada) or '01-06-1998' (elsewhere).

4. Click the Cancel option button

Click the Cancel option button from the Options group box.

For practice, click the Cancel option button.

5. Click Save or press Enter

The employee is canceled from the training class and the following message is displayed:

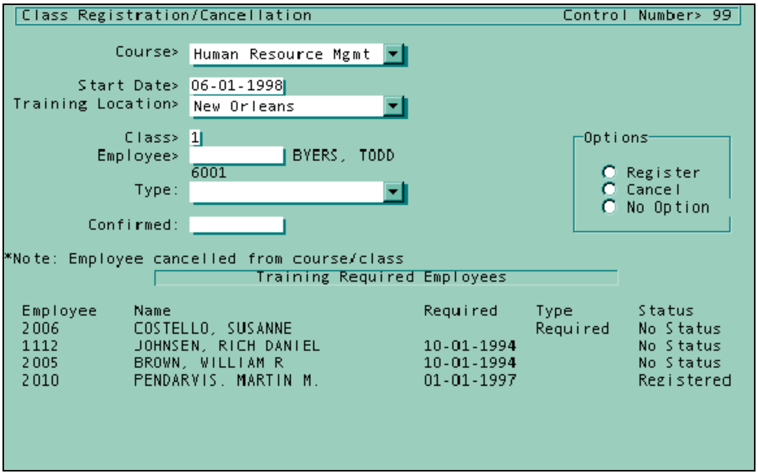
'*Note: Employee canceled from course/class'.

The names of employees who have training required or who are wait-listed are displayed at the bottom of the form.

Refer to **Registering an Employee for Training** *(on page 151) for more information on training required and the wait listing process.*

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Class Registration/Cancellation Control Number> 99

Course> Human Resource Mgmt

Start Date> 06-01-1998

Training Location> New Orleans

Class> 1

Employee> 6001 BYERS, TODD

Type:

Confirmed:

Options
- Register
- Cancel
- No Option

*Note: Employee cancelled from course/class

Training Required Employees

Employee	Name	Required	Type Required	Status
2006	COSTELLO, SUSANNE			No Status
1112	JOHNSEN, RICH DANIEL	10-01-1994		No Status
2005	BROWN, WILLIAM R	10-01-1994		No Status
2010	PENDARVIS, MARTIN M.	01-01-1997		Registered

See also:

- Employee class cancellation processing ***(on page 185)***

For an explanation of employee class cancellation processing.

Canceling a program registration

To cancel a program registration, follow these steps:

1. Access the Program Registration/Cancellation form (16RSCR)

Access this form by making the following selection from the Navigator.

Component:	Training Administration
Process:	Cancel Registrations
Task:	Cancel a Program Registration

For practice, access the Program Registration/Cancellation form (16RSCR).

2. Click the Selections button

Access the selections list by clicking on the Selections button on the toolbar.

For practice, click the Selections button on the toolbar.

3. Select the program from which you want to cancel the employee

Double-click the program from which you want to cancel the employee.

The program information is returned to the form.

For practice, double-click the 'HR Mgmt Program' effective '01-01-1994'.

4. Enter the Employee Number

Enter the employee number of the person you want to cancel from the program.

For practice, type '1112'.

5. Click the Cancel option button

Click the Cancel option button from the Options group box.

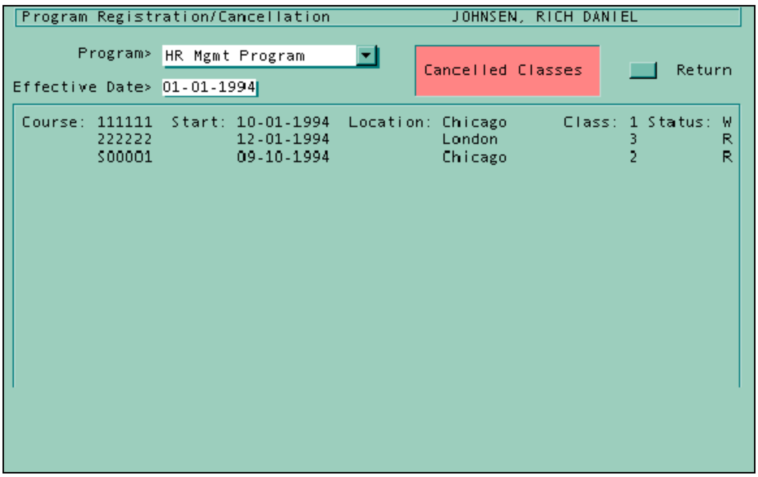
For practice, click the Cancel option button.

6. Click Save or press Enter

The employee is canceled from the training program and all classes in that program that the employee has not yet completed. A form is displayed listing the employee's canceled classes.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Employee program cancellation processing ***(on page 186)***

For an explanation of employee program cancellation processing.

Extended Practice

1. Access the Class Schedule form (13RSCR) and make note of the Status and Number Registered values for the HR Management class in Chicago on October 1, 1994.

2. Cancel employee 2004 from this HR Management class. What is the display at the bottom of the form (following the cancellation) telling you?

3. Return to the Class Schedule form (13RSCR) for this class and note how the Status and Number Registered values have changed.

4. Access the Training Required form (31RSCR) for employees 2004, and identify the processing that has occurred as a result of the cancellation.

5. Now that there is an opening in the class, register the first wait-listed employee: 1113.

6. Open the Class Registration/Cancellation form (20RSCR) and click the Selections button on the toolbar to list the classes that employee 1116 is registered for as a result of registering her in the Basic Mgmt Program in Chicago that became effective September 1, 1994. (She was registered in this program as part of the Extended Practice in Chapter 8.)

7. Cancel employee 1116 from the Basic Mgmt Program.

Review of Questions Answered

1. How are employee class cancellations processed?

2. How are employee program cancellations processed?

PART 4

Processing Training Results

In This Section

CHAPTER 10

Processing Training Results and Evaluations

In This Chapter

Introduction

Training Administration facilitates the entry of training results after a training class is completed, including employee class results and employee class evaluations. Entering training results accurately will allow you to view and analyze these results and improve your training programs and classes.

☞ *Skip this Section and read* **Completing and Analyzing Training Costs** *(on page 221) if your organization does not want to record training class results or evaluations.*

Tasks

You can complete the following tasks to enter training results and evaluations:

- Entering class results
- Viewing class results - online by class
- Viewing class results - on a report by class
- Viewing class results - online by employee
- Viewing class results - on a report by class
- Viewing class results - on a report by class results outstanding
- Collecting class evaluations
- Entering class evaluations

Prerequisites

Before you can enter training class results and evaluations, all the following tasks must have been completed.

Organization details

Before any data can be entered, you must ensure that your organization details have been set up.

☞ *Refer to* **Implementing Training Administration** *(on page 23)for more information.*

Training courses

Before entering training results, it is important to enter all available training courses on the system and to set up the objectives, prerequisites, and costs for each course.

☞ *Refer to* **Setting Up and Maintaining Training Courses** *(on page 43),* **Setting Up and Maintaining Training Classes** *(on page 79), and* **Setting Up and Maintaining Training Programs** *(on page 113) for details on setting up and maintaining training courses, classes, and programs.*

Employees registered

Before entering training results, it is important that all of the appropriate employees are registered into the training class(es) for which you want to enter results, and that the class has been held.

☞ *Refer to* **Registering an Employee for Training** *(on page 151) for details on registering employees for training classes and programs.*

Questions answered

The following questions are answered in this Section:

1. How are training class results processed?
2. What options are available when processing training class results?
3. What are the methods of viewing training class results?
4. How are training class evaluations processed?
5. What options are available when processing class evaluation results?

Class results processing

The following training class results processing occurs for each registered employee:

Class attended and passed

After an employee has attended a class and passed, and this is indicated on the Process Class Results form (22RSCR) for the employee, the following processing occurs:

- The employee's Training Required form (31RSCR) for the class is deleted.
- The employee's Training Results/History form (30RSCR) is updated with the results.
- The employee's Skills And Competencies form (33-SCR) is updated with the skills attained by taking the class.

Class attended and failed

After an employee has attended a class and failed, and this is indicated on the Process Class Results form (22RSCR) for the employee, the following processing occurs:

- The employee's Training Required form (31RSCR) for the class is marked with a failed indicator.
- The employee's Training Results/History form (30RSCR) is updated with the results.
- The employee's Skills And Competencies form (33-SCR) is not updated.

Class not attended or wait-listed employee did not get into class

A wait-listed employee who did not attend a class (because it was full, for example) would have a Training Results/History form (30RSCR) without the Class Attended box checked. So, if the class was not attended (by a registered or wait-listed employee) and the box is not checked, the following processing occurs:

- The Class Registration/Cancellation form (20RSCR) is deleted.
- A Training Required form (31RSCR) is created for the employee if the form does not exist.

It is possible that wait-listed employees might attend a class at the last minute because of a cancellation or extra spaces added to the class. Because of that possibility, the Process Class Results form (22RSCR) will process wait-listed employees as well, even though they were never officially registered. If the employee attends and passes the class, the following processing occurs:

- The employee's Training Required form (31RSCR) for the class is deleted.
- The employee's Training Results/History form (30RSCR) is updated with the results.
- The employee's Skills And Competencies form (33-SCR) is updated with the skills attained by taking the class.

See also:

- Entering class results ***(on page 203)***

For detailed directions on entering class results.

Class results options

There are two options available for recording class results. They are explained in the following sections.

Class results for selected registered employees

Training class results are entered on the Process Class Results form (22RSCR) for registered and wait-listed employees after a class has been held. Class results can be entered for individual employees by employee number.

Class results for all registered employees

Leave the employee number blank and click the Next command button on the Process Class Results form (22RSCR) to automatically scroll through and enter class results for all employees registered for a training class.

Class objectives

Class objectives are a very important component of entering class results. The objectives listed on the Process Class Results form (22RSCR) for a class are set up on the Course Directory form (10RSCR).

If an employee has taken and passed a class, you can check off the objectives that were met individually or select the All Objectives Met check box to select all objectives.

If an employee fails a class, you can not check any objectives (Reject).

See also:

- Entering class results ***(on page 203)***

For detailed directions on entering class results.

Apply the Concept
Define 'training class results' and identify the form used to record them.

Methods of viewing training class results

A number of facilities allow you to view training class results entered onto Training Administration. You must choose which method(s) is best for you. The options are as follows:

Selection option	Format	Form/Report
By class	Online	Class Results inquiry form (51RSCR)
By class	Hard copy	Class Results report (33RRPT)
By employee	Online	Training Results/History form (30RSCR)
By employee	Hard copy	Employee Training History report (21RRPT)
By training location	Hard copy	Class Results Outstanding report (45RRPT)

You have the option to record evaluation results without tying them to specific employees. You may also tie the results to the specific employee who did the rating.

- Viewing class results - on a report by class ***(on page 208)***
- Viewing class results - online by employee ***(on page 210)***
- Viewing class results - on a report by employee ***(on page 211)***
- Viewing class results - on a report by class results outstanding ***(on page 213)***

For detailed directions on viewing class results.

- Class Results report ***(see "Report Quick Reference" on page 243)***

For a description of this report and its business uses.

- Employee Training History report ***(see "Report Quick Reference" on page 243)***

For a description of this report and its business uses.

- Class Results Outstanding report ***(see "Report Quick Reference" on page 243)***

For a description of this report and its business uses.

Class evaluation results processing

The Process Class Evaluation Results form (23RSCR) is used to enter the results of evaluation forms filled out by class participants. These evaluation forms are printed by the Class Evaluation report (24RRPT). Up to 10 evaluation categories can have rating values recorded.

☞ *The Evaluation Required check boxes on the Class Schedule form (13RSCR) must be selected in order to produce the Class Evaluation report (24RRPT).*

See also:

- Collecting class evaluations ***(on page 215)***
For detailed directions on collecting class evaluation results.

- Entering class evaluations ***(on page 217)***
For detailed directions on entering class evaluation results.

- Class Evaluation report ***(see "Report Quick Reference" on page 243)***
For a description of this report and its business uses.

Apply the Concept

Define 'class evaluation results' and identify the form used to record them.

Class evaluation results options

Options for class evaluation results include up to 10 evaluation categories, explained in the following section.

Evaluation categories

Up to 10 evaluation categories can be set up in the Evaluation Category option list (TR39), numbered 01 through 10. These evaluation categories are the ones listed on the Process Class Evaluation Results form (23RSCR) and are unique to the Control Number or organization (not the class).

Note: *All organizations sharing the same Control Number for Training Administration tables share the same evaluation categories in option list TR39. Option lists TR17–TR26 are universal.*

Each evaluation category is tied to one of the rating value option lists (TR17–TR26). Each of the rating value options lists contain the values of Excellent, Very Good, Fair, and Poor. Example: the Evaluation Category option list value of Instructor is tied to the Evaluation 1 option list (TR17); the Evaluation Category option list value of Subject matter is tied to the Evaluation 2 option list (TR18), and so forth. Each of these option lists can also be set up to match the corresponding evaluation category.

Each of your Control Numbers can have its own evaluation category and rating value setup. Test Control Number 99 has been delivered with sample data for each of these option lists. Review these option lists and set up your own evaluation category and rating values for your Control Number(s).

See also:

- Entering class evaluations ***(on page 217)***
For detailed directions on entering class evaluation results.

Apply the Concept
Processing training results and evaluations is an optional feature of Training Administration. Consider how your organization currently records similar data (if at all), and describe how using this feature can improve training-related record keeping.

Detailed Directions

This section provides detailed instructions for the tasks discussed in this Section.

Note: *Results can be recorded only after a training class has been held.*

Tasks

Entering class results

To enter employee class results, follow these steps:

1. Access the Process Class Results form (22RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Process Results and Analyzing Costs
Task: Enter Class Results

For practice, access the Process Class Results form (22RSCR).

2. Select the Course

Select the appropriate course.

As an alternative, select the List Course Options option in the Course option list and then click Save or press Enter to display a list of course options and their descriptions. Select a course from the list, then click Save or press Enter.

For practice, select 'Human Resource Mgmt'.

3. Type the Start Date

The start date must be entered in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Alternatively, you can enter a question mark (?) in this text box and then press Enter to access the Course/Class selections. You can then select a course and return to this form. The Start Date, Training Location, and Class text boxes will be automatically filled in.

For practice, type '01-01-1997'.

4. Select the Training Location

Select the location, for example, Sydney.

For practice, select 'Chicago'.

5. Type the Class

This will normally be '1' unless there are multiple occurrences of the same course on the same day.

For practice, type '1'.

6. Type the Employee (optional)

Leave this text box blank to start the automatic process to enter class results for all employees registered for the class. Type an employee number to enter class results for an individual employee.

For practice, type '2010'.

7. Click Save or press Enter

A second form panel is displayed to enter class results for the employee. The class Start Date, Course, Location, and Class values are carried over from the first form panel. The Type and Train Units values are carried over from the Class Schedule form (13RSCR) if the information is available.

For practice, click Save or press Enter.

Note: If you do not have all the results back for this employee and you wish to skip this form for now, click the Bypass command button to go to the next employee.

8. Select a Type (optional)

If not carried over from the Class Schedule form (13RSCR), select a training type, for example, Elective.

For practice, select 'Elective' if this list box is not already filled.

9. Enter the Train Units (optional)

If not carried over from the Class Schedule form (13RSCR), type the number of training units.

For practice, this text box is already filled.

10. Select the School (optional)

Select the school if this class was taken externally.

For practice, leave this text box blank.

11. Enter the Major (optional)

Type the Major grade if appropriate.

For practice, type 'A'.

12. Select the Class Attended check box

Select the class attended check box after the employee has attended the training class.

For practice, select the Class Attended check box.

13. Enter the Minor (optional)

Type the minor grade if appropriate. You may use plus (+) and minus (-) signs in this text box.

For practice, type '+'.

14. Select the Result

Select the class result, for example, Passed or Failed.

For practice, select 'Passed'.

15. Enter the Absence Days (optional)

Type the number of days absent.

For practice, leave this text box blank.

16. Select the Absence Reason (optional)

Select the reason the employee was absent from class.

For practice, leave this text box blank.

17. Select the All Objectives Met check box(optional)

To indicate that all class objectives were met by the employee, select the All Objectives Met check box.

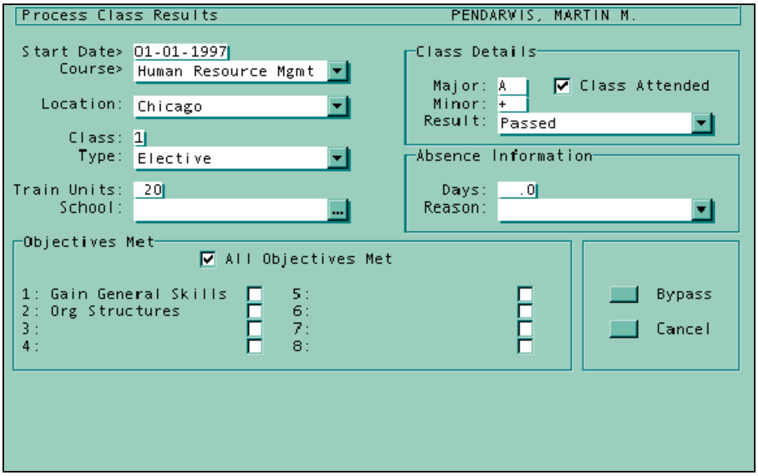
For practice, select the All Objectives Met check box.

18. Select the specific Objectives Met check boxes

If all objectives were not met, select only those check boxes for which the objectives were met.

For practice, leave the boxes blank.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



19. Click Save or press Enter

The next employee's record is displayed. Record the results and continue repeating this step until all results have been recorded.

You may also click the Bypass command button to skip an employee or click the Cancel command button to return to the first panel.

When all results have been recorded, the following message is displayed:

'*Note: The Session Result process is complete'.

For practice, click Save or press Enter.

See also:

- Class evaluation results processing ***(on page 201)***
For an explanation of class results processing.

- Class evaluation results options ***(on page 202)***
For an explanation of class results options.

Viewing class results - online by class

To view training results online by class, use the Class Results inquiry form (51RSCR).

1. Access the Class Results inquiry form (51RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Process Results and Analyzing Costs
Task: View Class Results

For practice, access the Class Results inquiry form (51RSCR).

2. Select the Course

Select the appropriate course.

As an alternative, select the List Course Options option in the Course option list (TR33) and then click Save or press Enter to display a list of course options and their descriptions. Select a course from the list, then click Save or press Enter.

For practice, select 'Human Resource Mgmt'.

3. Type the Start Date

The start date must be entered in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Alternatively, you can enter a question mark (?) in this text box and then press Enter to access the Course/Class selections. You can then select a course and return to this form. The Start Date, Training Location, and Class text boxes will be automatically filled in.

For practice, type '10-01-1994' (US and Canada) or '01-10-1994' (elsewhere).

4. Select the Training Location

Select the training location, for example, Sydney.

For practice, select 'Chicago'.

5. Type the Class

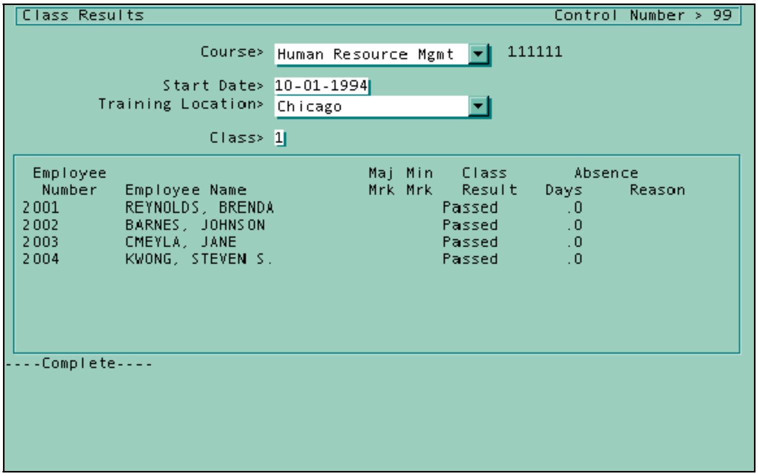
This will normally be '1' unless there are multiple occurrences of the same course on the same day.

For practice, type '1'.

6. Click Save or press Enter

The training results on file for the class are displayed on the form.

For practice, click Save or press Enter.



See also:

- Methods of viewing training class results ***(on page 200)***

For an explanation of the methods of viewing training class results.

Viewing class results - on a report by class

To view training results by class on a hard-copy report using the Class Results report (33RRPT) , complete the report schedule by entering the following report parameters:

Each Class is reported separately. The total number of employees for each class is reported. Terminated employees and canceled classes are not reported.

Note: *Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.*

1. Enter the From (date) (optional)

Type the date the class starts in the From text box. Type the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Note: *If this text box is left blank, the system date is used.*

For practice, type '10-01-1994' (US and Canada) or '01-10-1994' (elsewhere).

2. Enter the To (date) (optional)

Type the date the class stops in the To text box. Type the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Note: *If this text box is left blank, training results on dates equal to or later than the From date are reported.*

To report on training results for a specific date, type the From date in both the From and To parameters.

For practice, leave this text box blank.

3. Select the Training Location (optional)

To report on a specific training location, select the location.

Note: If this list box is left blank, all training locations are reported.

For practice, leave this list box blank.

4. Select the Course (optional)

To report on a specific training course, select the course here.

Note: If this list box is left blank, all training courses are reported.

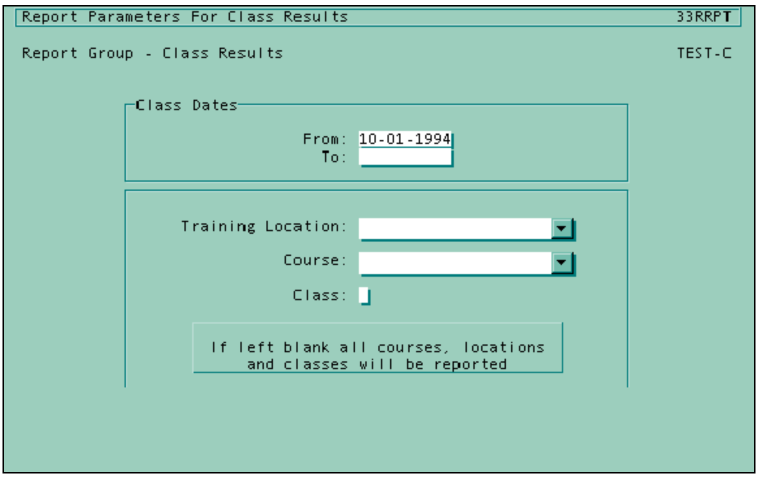
For practice, leave this list box blank.

5. Enter the Class (optional)

To report on a specific class, type the class sequence here. If this text box is left blank, all training classes are reported.

For practice, leave this text box blank.

When completed, the report parameters may look similar to the example that follows:



6. Click Save or press Enter

Once it has been processed, this report produces a list of employee class performances.

For practice, click Save or press Enter.

See also:

- Methods of viewing training class results ***(on page 200)***

For an explanation of the methods of viewing training class results.

- Class Results report ***(see "Report Quick Reference" on page 243)***

For a description of this report and its business uses.

Viewing class results - online by employee

To view training results online by employee, use the Training Results/History form (30RSCR).

If class results are processed by the Process Class Results form (22RSCR), this form is automatically updated with the information.

1. Access the Training Results/History form (30RSCR)

Access this form by making the following selection from the Navigator.

Component:	Training Administration
Process:	Process Results and Analyzing Costs
Task:	View Training Results/History

For practice, access the Training Results/History form (30RSCR) for employee 2001.

2. Click the Selections button

Click the Selections button on the toolbar to display of list of classes for this employee.

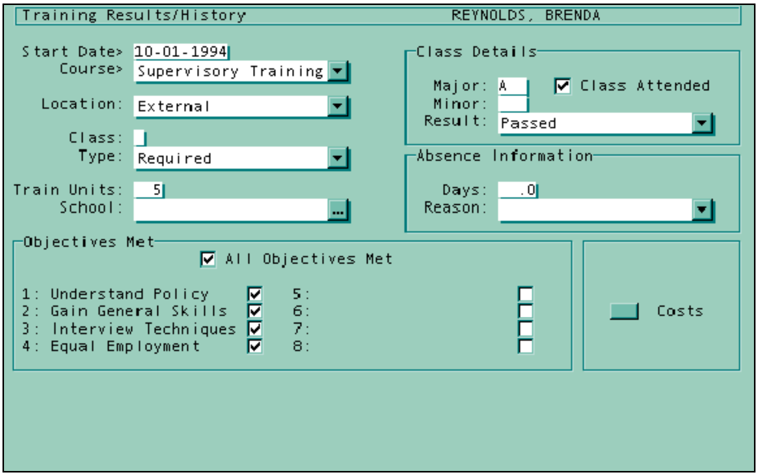
For practice, click the Selections button on the toolbar.

3. Select the class for which you want results

Double-click the class for which you want results. The selected class results are displayed. Selecting the Costs button brings up the Employee Training Class Costs form (34RSCR).

For practice, select the 'Supervisory Training' class.

If you completed the Guided Practice, the resulting screen should look similar to the example that follows:



See also:

- Methods of viewing training class results ***(on page 200)***

For an explanation of the methods of viewing training class results.

Viewing class results - on a report by employee

To view training results by employee on a hard-copy report using the Employee Training History report (21RRPT) , complete the report schedule by entering the following report parameters:

Each employee's training history is printed on a different page. There are no totals for this report. Terminated employees are not included.

Note: *Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.*

1. Enter the From (date) (optional)

Type the date the class starts in the From text box. Type the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Note: *If this text box is left blank, the system date is used.*

For practice, select '10-01-1994' (US and Canada) or '01-10-1994' (elsewhere).

2. Enter the To (date) (optional)

Type the date the class stops in the To text box. Type the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Note: *If this text box is left blank, training results on dates equal to or later than the From date are reported.*

To report on training results for a specific date, type the From date in both the From and To parameters.

For practice, leave this text box blank.

3. Select the Training Location (optional)

Select the location of the training.

Note: *If this list box is left blank, all training locations are reported.*

For practice, leave this list box blank.

4. Enter the Employee Number (optional)

To report on a specific employee, enter the Employee Number.

Note: *If this text box is left blank, all employees are reported.*

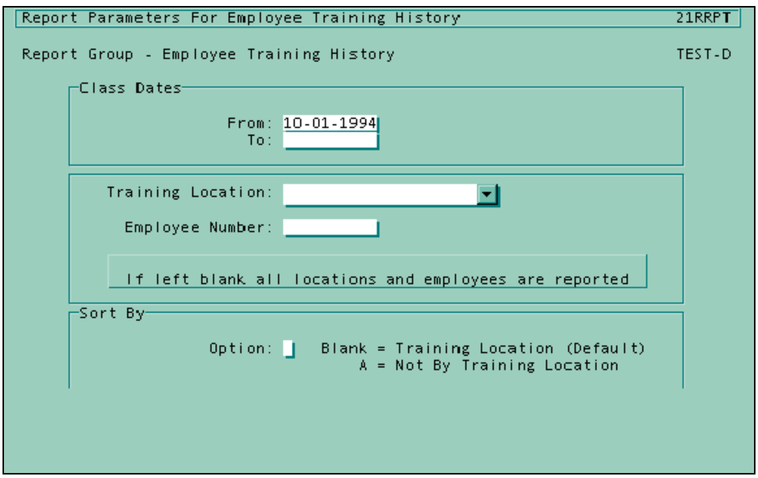
For practice, leave this text box blank.

5. Enter the Sort By Option

Leave the option text box blank to accept the system default, which will sort by training location. If you want to show all employees regardless of training location, type 'A' in this text box.

For practice, leave this text box blank.

When completed, the report parameters may look similar to the example that follows:



6. Click Save or press Enter

Once it has been processed, this report lists employee training history and the results of each training class.

For practice, click Save or press Enter.

See also:

- Methods of viewing training class results ***(on page 200)***
For an explanation of the methods of viewing training class results.

- Employee Training History report ***(see "Report Quick Reference" on page 243)***
For a description of this report and its business uses.

Viewing class results - on a report by class results outstanding

To view training results outstanding on a hard-copy report using the Class Results Outstanding report (45RRPT) , complete the report schedule by entering the following report parameters:

☞ *Each Training Location is reported separately. No totals are reported. Terminated employees and canceled classes are not reported.*

Note: Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.

1. Enter the From (date) (optional)

Type the date the class starts in the From text box. Type the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Note: If this text box is left blank, the system date is used.

For practice, type '10-01-1994' (US and Canada) or '01-10-1994' (elsewhere).

2. Enter the To (date) (optional)

Type the date the class stops in the To text box. Type the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Note: If this text box is left blank, training results on dates equal to or later than the From date are reported.

To report on training results for a specific date, type the From date in both the From and To parameters.

For practice, leave this text box blank.

3. Select the Course (optional)

To report on a specific training course, select the course.

Note: If this list box is left blank, all training courses are reported.

For practice, leave this list box blank.

4. Enter the Class (optional)

To report on a specific class, type the class sequence number.

Note: *If this text box is left blank, all training classes are reported.*

For practice, leave this text box blank.

5. Select the Training Location (optional)

To report on a specific training location, select the location.

Note: *If this list box is left blank, all training locations are reported.*

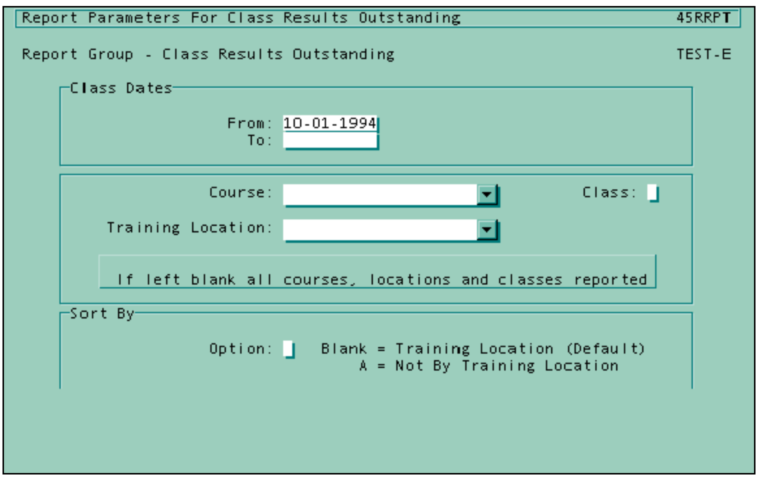
For practice, leave this list box blank.

6. Enter the Sort By Option (optional)

Note: *Leave the Option text box blank to accept the default sort, which is by training location. If you want to show all employees regardless of training location, type 'A' in the Option text box.*

For practice, leave this text box blank.

When completed, the report parameters may look similar to the example that follows:



7. Click Save or press Enter

Once it has been processed, this report provides a listing of class participants who have no outcome recorded.

For practice, click Save or press Enter.

See also:

- Methods of viewing training class results ***(on page 200)***

For an explanation of this identifier.

- Class Results Outstanding report ***(see "Report Quick Reference" on page 243)***

For a description of this report and its business uses.

Collecting class evaluations

To generate evaluation forms using the Class Evaluation report (24RRPT), complete the report schedule by entering the following report parameters:

Each evaluation form is printed on a separate page. No totals are printed on this report. Terminated employees and canceled classes are not included.

The Evaluation Required text box on the Class Schedule form (13RSCR) must be checked for this report to generate evaluation forms.

Note: Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.

1. Enter the From (date) (optional)

Type the date the class starts in the From text box. Type the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Note: If this text box is left blank, the system date is used.

For practice, type '10-01-1994' (US and Canada) or '01-10-1994' (elsewhere).

2. Enter the To (date) (optional)

Type the date the class stops in the To text box. Type the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Note: If this text box is left blank, training results on dates equal to or later than the From date are reported.

To report on training results for a specific date, type the From date in both the From and To parameters.

For practice, leave this text box blank.

3. Select the Course (optional)

To report on a specific training course, select the course.

Note: If this list box is left blank, all training courses are reported.

For practice, leave this list box blank.

4. Select the Training Location (optional)

To report on a specific training location, select the location.

Note: If this list box is left blank, all training locations are reported.

For practice, leave this list box blank.

5. Enter the Class (optional)

To report on a specific class, type the class sequence number.

Note: If this text box is left blank, all training classes are reported.

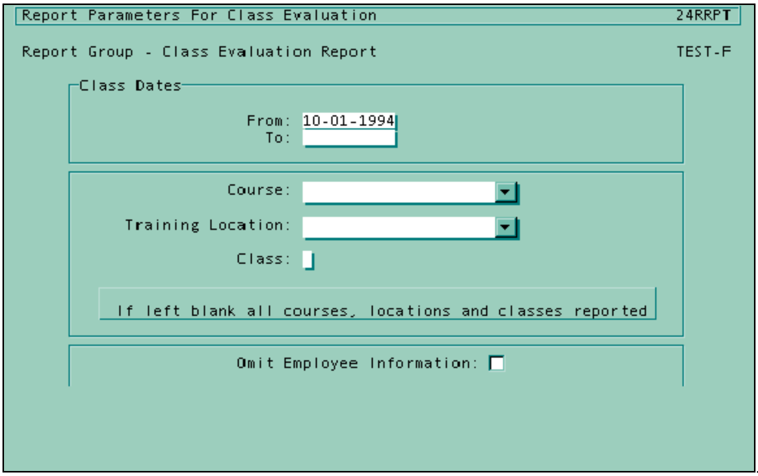
For practice, leave this text box blank.

6. Select the Omit Employee Information check box (optional)

In its delivered format, the system includes employee information on the evaluation forms. Select the Omit Employee Information check box to omit the employee information.

For practice, do not select this check box.

When completed, the report parameters may look similar to the example that follows:



7. Click Save or press Enter

Once it has been processed, this report provides an evaluation form for class participants to fill out upon completion of the training class. This form can be used as a source document when completing the Process Class Evaluation Results form (23RSCR).

For practice, click Save or press Enter.

See also:

- Class evaluation results processing ***(on page 201)***
For an explanation of Class evaluation results processing.

- Class Evaluation report ***(see "Report Quick Reference" on page 243)***
For a description of this report and its business uses.

Entering class evaluations

Use the Process Class Evaluation Results form (23RSCR) to record the results of evaluation forms filled out by class participants.

Note: *You may need to add your own evaluation categories to the Evaluation Category option list (TR39) prior to following these steps.*

1. Access the Process Class Evaluation Results form (23RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Process Results and Analyzing Costs
Task: Enter Class Evaluations

For practice, access the Process Class Evaluation Results form (23RSCR).

2. Select the Course

Select the appropriate course.

As an alternative, select the List Course options option in the Course option list (TR33) and then click Save or press Enter to display a list of course options and their descriptions. Select a course from the list, then click Save or press Enter.

For practice, select 'Human Resource Mgmt'.

3. Type the Start Date

The start date must be entered in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Alternatively, you can enter a question mark (?) in this text box and then press Enter to access the Course/Class selections. You can then select a course and return to this form. The Start Date, Training Location, and Class text box will be automatically filled in.

For practice, type '10-01-1994' (US and Canada) or '01-10-1994' (elsewhere).

4. Select the Training Location

Select the location, for example, Sydney.

For practice, select 'Chicago'.

5. Type the Class

This will normally be '1' unless there are multiple occurrences of the same course on the same day.

For practice, type '1'.

6. Type the Employee (optional)

Leave this text box blank to record class evaluations without tying them to a specific employee. Enter an employee number to tie the evaluation to a specific employee.

For practice, type '2001'.

7. Select Evaluations

Select the appropriate evaluation results in up to 10 evaluation categories. Five evaluation categories are on the first form panel and five are on the second form panel.

Click the More Categories command button to reach the second form panel. The Original Entry command button returns you to the first form panel and the New Entry command button starts the process over.

For practice, select some evaluation results.

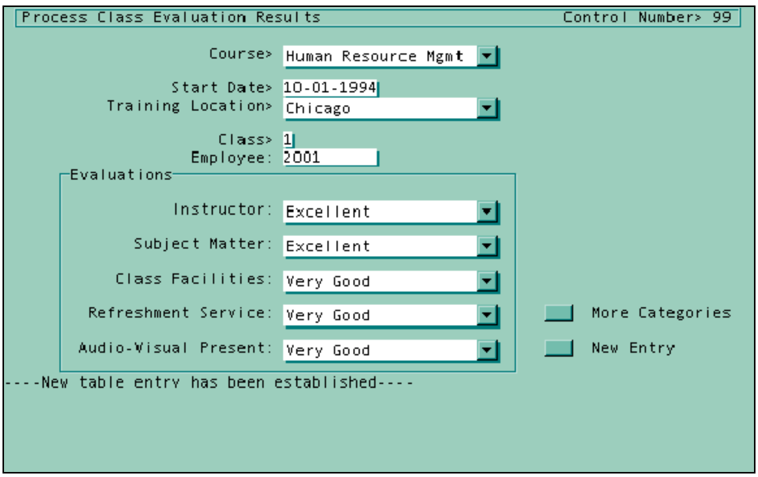
8. Click Save or press Enter

The employee class evaluation results are recorded and the following message is displayed:

'—New table entry has been established—'.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Class evaluation results processing ***(on page 201)***

For an explanation of class evaluation results processing.

- Class evaluation results options ***(on page 202)***

For an explanation of class evaluation results options.

Extended Practice

1. Access the Process Class Results form (22RSCR) for the Flex Benefits class in Chicago on January 14, 1997. Record results for all employees who attended the class:

Employee number	Training class results
1114	Employee passed the class, missed no days, and met all objectives.
1234	Employee passed this elective class but missed a half day because of a work conflict. All objectives were met.
2012	Missed one and a half days of class because of a death in family. This class should be recorded as Incomplete.
3011	Employee failed the class even though no class time was missed.

2. View the training results just recorded online by class by accessing the appropriate form.

3. View the Training Required inquiry form (33RSCR) for employee 3011. Explain the processing that has occurred.

4. Process the class evaluation results by employee for the two employees who successfully completed the class and met all objectives: 1114 and 1234. Both employees gave Excellent ratings to most categories, but Employee 1114 rated the Refreshment Service as Fair and Employee 1234 rated the Class Facilities as Very Good. Both felt all objectives had been met.

Review of Questions Answered

1. How are training class results processed?

2. What options are available when processing training class results?

3. What are the methods of viewing training class results?

4. How are training class evaluations processed?

5. What options are available when processing class evaluation results?

CHAPTER 11

Completing and Analyzing Training Costs

In This Chapter

Introduction

Training Administration facilitates viewing and analyzing the costs incurred developing and providing training classes. As described earlier, costs can be recorded at the course, class, and employee levels. This is an optional feature designed for organizations that want to track these costs and make decisions based on how much is being spent to develop and conduct training classes.

Tasks

The following tasks are associated with analyzing training class costs:

- Entering employee training class costs
- Viewing costs using the Employee Training Class Costs form
- Viewing costs using the Training Class Costs Summary form
- Viewing class costs by provider
- Viewing training costs to charge back to employees

Prerequisites

Before you can begin to analyze costs, the following tasks must have been completed.

Training Courses and classes

Before analyzing training costs, it is important to enter all available training courses and classes on the system and to set up the costs for each one.

☞ *Refer to* **Setting Up and Maintaining Training Courses** *(on page 43),* **Setting Up and Maintaining Training Classes** *(on page 79), and* **Setting Up and Maintaining Training Programs** *(on page 113)* *for details on setting up and maintaining training courses, classes, and programs.*

Questions answered

The following questions are answered in this chapter:

1. What are the cost categories?
2. What are the different types of costs?
3. What are the options when recording costs?

Cost Categories

There are various categories for costs. These are defined in option list TR14 on the Course Directory–Costs form (10RSCR).

As seen earlier, certain costs associated with the course level are set up on the Course Directory form (10RSCR), and certain costs associated with the class level are set up on the Class Schedule form (13RSCR). These include cost categories of Equipment, Operating, Participant, Per Head, and Miscellaneous. Costs established at the course level are carried through to the class level. In addition, training costs pertaining to a *specific employee* can be established on the Employee Training Class Costs form (34RSCR) and include costs for an employee to attend training like individual airfare and lodging, as well as prorated salary expense.

In all, three different employee-level cost categories are available: Participant, Per Head, and Individual. Employee-level costs that are the same for all class participants can be recorded at the course or class level as Participant or Per Head costs. Examples: Course fees of a certain dollar amount that apply to every Participant are typically recorded at the course level. A Per Head charge for lunch or breaks and refreshments for each person attending a particular training class gets recorded at the class level. If, however, you need to record additional costs associated with a specific employee, these are considered Individual costs and are recorded on the Employee Training Class Costs form (34RSCR).

All employee-level costs categorized as Participant, Per Head, and Individual display on the Total Costs panel of the Employee Training Class Costs form (34RSCR) as viewed for a specific employee. The total of all cost categories can be viewed on the Training Class Costs Summary form (35RSCR).

Apply the Concept

How would using the optional Analyzing Training Costs feature be helpful to your organization?

Types of costs

For each cost category, a cost type must be entered. Examples of cost types include Airfare and Room Rental.

Costing options

Class costs can be set up on the Class Costs panel of the Class Schedule form (13RSCR). This is an optional panel. Costs specified on this panel are different from those specified at the course level on the Course Directory form (10RSCR). For example, the cost of books might be standard for all classes within a course and therefore would need to be recorded at course level.

Alternatively, the cost for a course instructor fee might vary at the class level, since different instructors might charge different amounts. These costs could be recorded at the class level.

Costs can also be set up and viewed at the employee level using the Employee Training Class Costs Form (34RSCR). For example, the cost for supplying an alternative vegetarian meal for an employee might be associated with an individual employee cost. Other examples of individual employee costs are air fare, lodging, and prorated salary expense.

The salary expense amount can be included in the total employee costs for the training class. Three methods are available for calculating the salary expense amount:

- Entered Salary—Salary expense amount is entered manually in the Salary text box.
- Use HED 001—Salary amount is calculated using HED 001 (Regular Pay); the employee's hourly rate is multiplied by the number of class hours and is displayed in the Salary text box in Display mode.
- Use Salary Segment—Salary amount is calculated using the Salary Assignment/Changes form (40-SCR); the employee's hourly rate is multiplied by the number of class hours and is displayed in the Salary text box in Display mode.

The salary expense is then included in the total value for all class costs.

Other methods of viewing class costs include:

- Training Expenditure Charge-Back report (27RRPT)
- Training Expenditure Disbursement report (28RRPT)
- Training Class Costs Summary form (35RSCR)

See also:

- Entering employee training class costs ***(on page 227)***

For detailed directions on entering class costs.

- Viewing costs using the Employee Training Class Costs form ***(on page 230)***

Apply the Concept

Describe the tools available in Training Administration to help organizations view and analyze costs.

Detailed Directions

This section provides detailed instructions for the tasks discussed in this chapter.

Tasks

Entering employee training class costs

To enter training class costs associated with an individual employee, use the Employee Training Class Costs form. (34RSCR)

1. Access the Employee Training Class Costs form (34RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Process Results and Analyzing Costs
Task: Enter Employee Class Costs

For practice, access the Employee Training Class Costs form (34RSCR) for employee 2010.

2. Click the Clear button

To avoid copying pre-existing information, click the Clear button on the toolbar to clear the text boxes on the form.

For practice, click the Clear button on the toolbar.

3. Type the Start Date

The start date must be entered in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

For practice, type '01-01-1997'.

4. Select the Course

Select the appropriate course.

As an alternative, select the List Course Options option in the Course option list (TR33) and then click Save or press Enter to display a list of course options and their descriptions. Select a course from the list, then click Save or press Enter.

For practice, select 'Human Resource Mgmt'.

5. Select the Location

Select the location, for example, Sydney.

For practice, select 'Chicago'.

6. Type the Class

This will normally be '1' unless there are multiple occurrences of the same course on the same day.

For practice, type '1'.

7. Select up to five Categories

Select the cost categories. Categories of Individual, Per Head, and Participant indicate employee-level costs. A Category value must be entered if a Type or Cost Amount will be entered.

For practice, select 'Individual' in categories 1 and 2.

8. Select up to five associated Types

Examples of cost types are Overhead Projector and Large Monitor rental.

For practice, select 'Lodging' in type 1 and 'Airfare' in type 2.

9. Enter up to five associated Amounts

Enter the associated cost using two decimal places. The Category, Type, and Cost Amount on each line are tied together and define a cost description and amount.

For practice, type '150.00' in cost 1 and '185.00' in cost 2.

10. Select a Method (optional)

Select the method used to determine the salary expense. This salary expense amount can be included in the total employee costs for the training class.

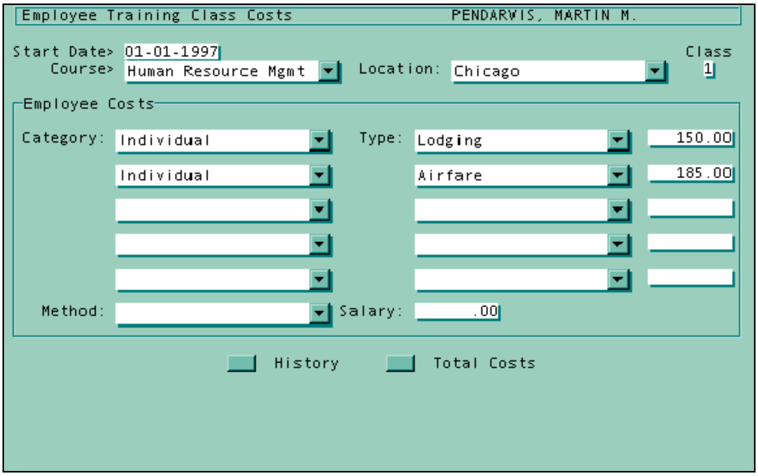
For practice, select 'Use HED 001'.

11. Enter the Salary (optional)

If the method code above is set to 'Entered Salary', enter the salary amount here. Otherwise, leave this text box blank.

For practice, leave this text box blank.

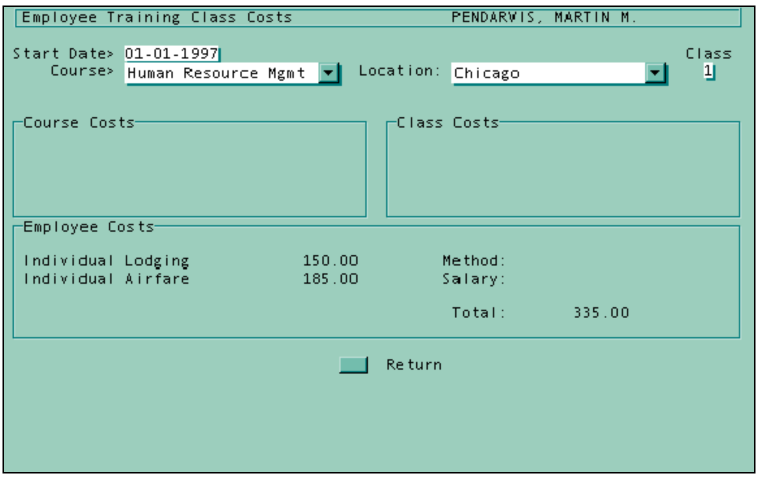
If you completed the Guided Practice, the resulting form should look similar to the example that follows:



12. Click the Total Costs command button

Employee-level costs can be viewed by selecting the Total Costs command button at the bottom of the form. The total value for all costs (including salary expense) is displayed in the bottom right corner of the Total Costs panel of this form. Any course or class costs associated with the employee will be displayed.

For practice, click the Total Costs command button.



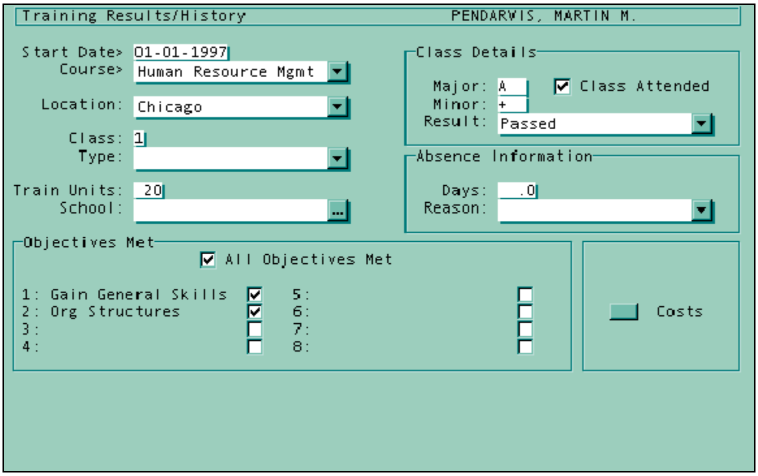
Select the Return command button to return to the entry form panel.

13. Click the History command button

You may click the History button at the bottom of the form to see the Training Results/History form (30RSCR) for this employee.

For practice, click the History command button.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Training Results/History PENDARVIS, MARTIN M.
Start Date> 01-01-1997
Course> Human Resource Mgmt
Location: Chicago
Class: 1

Costs

14. Click Save or press Enter

Employee training costs are set up.

For practice, click Save or press Enter.

See also:

- Costing options ***(on page 225)***

For an explanation of costing options.

Viewing costs using the Employee Training Class Costs form

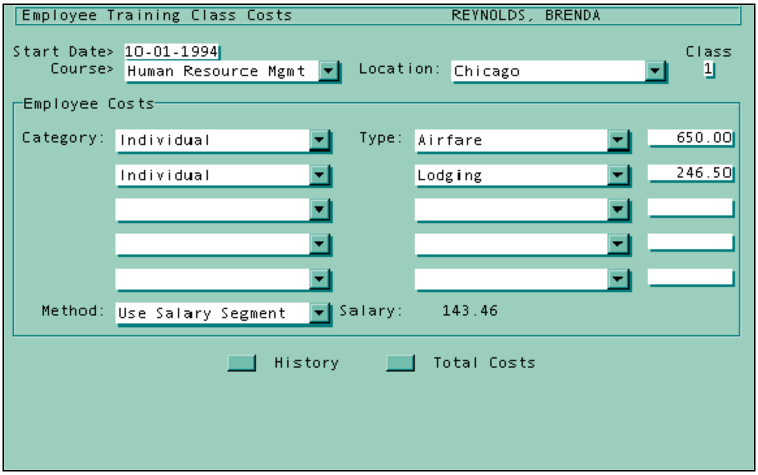
To display costs associated with a specific employee taking an internal or external training class, use the Employee Training Class Costs form (34RSCR).

1. Access the Employee Training Class Costs form

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Process Results and Analyzing Costs
Task: Enter Employee Class Costs

For practice, access the Employee Training Class Costs form (34RSCR) for employee 2001.



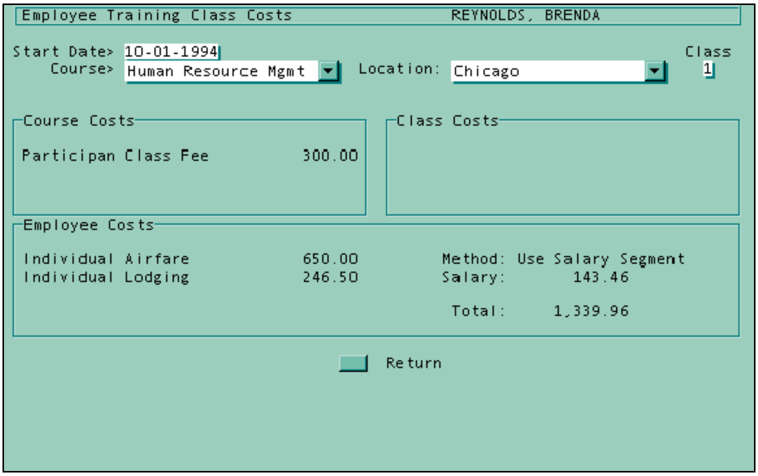
2. Click the Total Costs command button

Click the Total Costs command button to access the Total Costs form panel.

The total value for all course-, class-, and employee-level costs (including salary expense) is displayed in the bottom right corner of the form. Select the Return command button to return to the entry form panel.

For practice, click the Total Costs command button.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



Employee Training Class Costs REYNOLDS, BRENDA

Start Date> 10-01-1994 Class
Course> Human Resource Mgmt Location: Chicago 1

Course Costs
Participan Class Fee 300.00

Class Costs

Employee Costs
Individual Airfare 650.00 Method: Use Salary Segment
Individual Lodging 246.50 Salary: 143.46
Total: 1,339.96

Return

See also:

- Costing options ***(on page 225)***

For an explanation of costing options.

Viewing costs using the Training Class Costs Summary form

To view training costs, use the Training Class Costs Summary form (35RSCR).

1. Access the Training Class Costs Summary form (35RSCR)

Access this form by making the following selection from the Navigator.

Component: Training Administration
Process: Process Results and Analyzing Costs
Task: View Class Costs Summary

For practice, access the Training Class Cost Summary form (35RSCR).

2. Select the Course

Select the appropriate training course.

As an alternative, select the List Course Options option in the Course option list (TR33) and then click Save or press Enter to display a list of course options and their descriptions. Select a course from the list, then click Save or press Enter.

For practice, select 'Human Resource Mgmt'.

3. Type the Start Date

The Start Date must be entered in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

After selecting a Course, you can enter a question mark (?) in the Start Date text box and then press Enter to access the Course/Class selections. You can then select a course/class and return to this form. The Start Date and Training Location text boxes will be filled in automatically.

For practice, type '10-01-1994'(US and Canada) or '01-10-1994'(elsewhere).

4. Select the Training Location

Select a specific training location.

For practice, select 'Chicago'.

5. Type the Class

Type the Class sequence number associated with the training class.

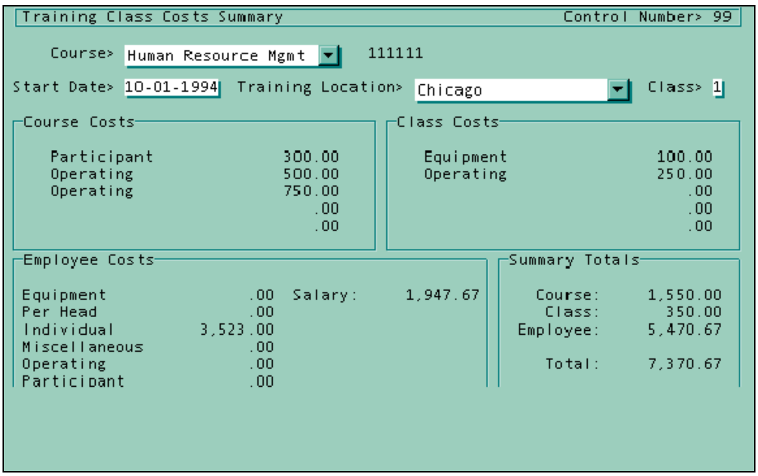
For practice, type '1'.

6. Click Save or press Enter

Course-, class-, and employee-level costs are displayed with a summary also included.

For practice, click Save or press Enter.

If you completed the Guided Practice, the resulting form should look similar to the example that follows:



See also:

- Costing options ***(on page 225)***

For an explanation of this identifier.

Viewing class costs by provider

To view training costs by provider using the Training Expenditure Disbursement report (28RRPT), complete the report schedule by entering the following report parameters:

☞ *The class cost is defined as the total of all costs with a cost category of Equipment, Operating, Miscellaneous, or Per Head multiplied by the number of class participants. Each provider is reported separately. The total costs for each provider are printed. Terminated employees and canceled classes are not reported.*

Note: Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.

1. Enter the From (date) (optional)

Type the date the class starts in the From text box. Type the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Note: If this text box is left blank, the system date is used.

For practice, type '01-01-1994'.

2. Enter the To (date) (optional)

Type the date the class stops in the To text box. Type the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Note: If this text box is left blank, training results for dates equal to or later than the From date are reported.

To report on classes for a specific date, type the From date in both the From and To parameters.

For practice, leave this text box blank.

3. Select the Training Location (optional)

To report on a specific training location, select the training location.

Note: If this list box is left blank, all training locations are reported.

For practice, leave this list box blank.

4. Select the Provider (optional)

To report on a specific provider, select the provider.

Note: If this list box is left blank, all providers are reported.

For practice, leave this list box blank.

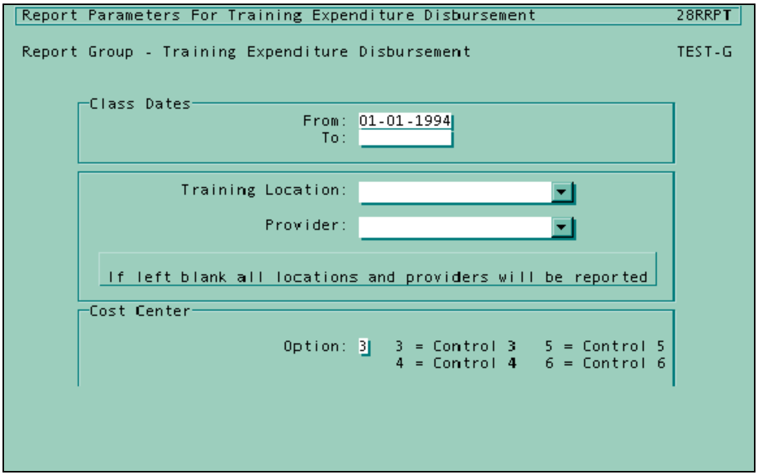
5. Enter the Cost Center Option

Enter the payroll level to be used as the cost center.

Type '3' for Control 3, '4' for Control 4, '5' for Control 5, or '6' for Control 6.

For practice, type '3'.

When completed, the report parameters may look similar to the example that follows:



6. Click Save or press Enter

Once it has been processed, this report summarizes the class costs by provider .

For practice, click Save or press Enter.

See also:

- Costing options ***(on page 225)***

For an explanation of costing options.

- Training Expenditure Disbursement report ***(see "Report Quick Reference" on page 243)***

For a description of this report and its business uses.

Viewing training class costs to charge back to employees

To view training costs to charge back to employees using the Training Expenditure Charge-Back report (27RRPT), complete the report schedule by entering the following report parameters:

This report provides a total cost for each employee. Terminated employees and canceled classes are not included.

Note: Refer to the Using The Solution Series: Administrative Solutions documentation for procedural help in setting up a report group, adding a report to it, and entering the report parameters.

1. Enter the From (date) (optional)

Type the date the class starts in the From text box. Type the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Note: *If this text box is left blank, the system date is used.*

For practice, type '01-01-1994'.

2. Enter the To (date) (optional)

Type the date the class stops in the To text box. Type the date in the format MM-DD-CCYY or CCYYMMDD (US and Canada) or DD-MM-CCYY or CCYYDDMM (elsewhere).

Note: *If this text box is left blank, classes on dates equal to or later than the From date are reported.*

To report on classes for a specific date, type the From date in both the From and To parameters.

For practice, leave this text box blank.

3. Select the Course (optional)

To report on a specific course, select the course.

Note: *If this list box is left blank, all courses are reported.*

For practice, leave this list box blank.

4. Select the Location (optional)

To report on a specific training location, select the training location.

Note: *If this list box is left blank, all training locations are reported.*

For practice, leave this list box blank.

5. Enter the Class (optional)

To report on a specific class, type the class sequence number.

Note: *If this text box is left blank, all training classes are reported.*

For practice, leave this text box blank.

6. Enter the Emp Nbr (optional)

To report on a specific employee, type the employee number.

Note: *If this text box is left blank, all employees are reported.*

For practice, leave this text box blank.

7. Enter the Cost Category Option (optional)

Type 'P' for participant costs or 'I' for individual costs.

Note: *If this text box is left blank, both categories are reported.*

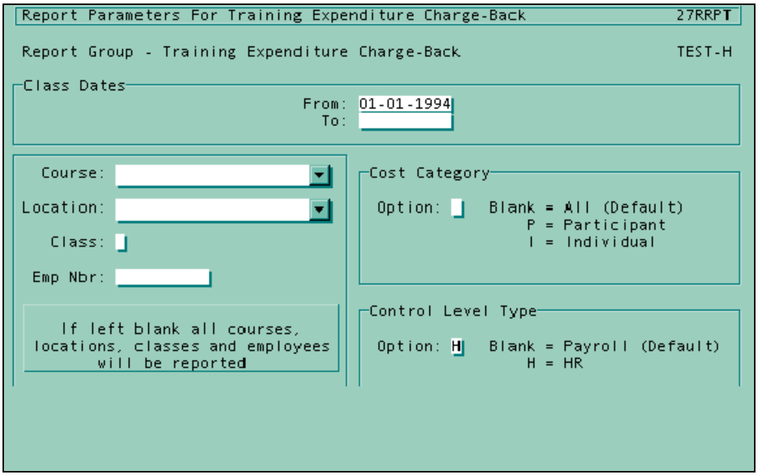
For practice, leave this text box blank.

8. Enter the Control Level Type Option

To report on HR organization levels, type 'H'. If HR organization levels are used, the Location % column on the report will be zero-filled.

Note: *To report on payroll levels, leave this text box blank.*

For practice, type 'H'.



9. Click Save or press Enter

Once it has been processed, this report lists class training costs that you may want to charge back to the employee.

For practice, click Save or press Enter.

See also:

- Costing options ***(on page 225)***

For an explanation of costing options.

- Training Expenditure Charge-Back report ***(see "Report Quick Reference" on page 243)***

For a description of this report and its business uses.

Extended Practice

1. George Welker's manager wants to track all costs associated with George's participation in the Flex Benefits class he is taking on January 14, 1997, including salary expense for the two days of training. Access the appropriate form to record these individual employee-level costs:

   - Air fare: 475.00
   - Lodging: 2 nights at 115.00 each
   - Salary: Allow George's salary segment to determine the amount of salary expense to be included in these costs.

2. Explain how the salary figure that appears was calculated. How can you verify that it is correct?

3. Click the Total Costs command button. What types of cost categories are included in the 'Total' that is displayed?

4. Return to the first panel and click the History command button. Review the information that displays. Click the Costs command button on this form. Where does it take you?

5. Check the Costs panel of the Course Directory for Flex Benefits. Are any of the costs listed there not reflected on the Employee Training Class Costs form (34RSCR)? If yes, can you explain why this is so?

Review of Questions Answered

1. What are the cost categories?

2. What are the different types of costs?

3. What are the options when recording costs?

Report Quick Reference

In This Appendix

Introduction

This section provides a quick reference guide to Training Administration reports covered in this section.

Class Cancellation (31RRPT)

The Class Cancellation report (31RRPT) informs registered class participants that their class has been canceled. Reported information includes:

- Training Location
- Course
- Course Description
- Class
- Trainer
- Class Dates
- Class Times
- Prerequisites
- Coordinator Information

See also:

- Notifying students of a class cancellation ***(on page 105)***

To learn about informing registered class participants that the entire class has been canceled.

Class Cancellation (31RRPT)

```
CORPORATION  99   ACME MANUFACTURING                  Class Cancellation       REPT                                    PAGE     1

```

Class Evaluation (24RRPT)

The Class Evaluation report (24RRPT) prints an evaluation form for participants to fill out upon completion of the training class. This form can be used as a source document when entering the Process Class Results form (22RRPT).

This evaluation form is printed for employees registered for a class who have the Evaluation Required check box selected on the Class Schedule form (13RRPT). If desired, this evaluation form can be printed without including any employee information to allow anonymous evaluations.

Each evaluation form is printed on a separate page and canceled classes are not included. Reported information includes:

- Employee Name
- Employee Number
- Course
- Course Description
- Training Location
- Class
- Class Dates/Times
- Time Scheduled
- Coordinator Name
- Coordinator Phone

See also:

Class Listing (32RRPT)

The Class Listing report (32RRPT) prints a listing of all employees registered for a training class. Each class is reported separately. The total number of participants for each class is reported. Reported information includes:

- Training Location
- Course
- Course Description
- Trainer Information
- Class/Class Dates
- Employee Name
- Employee Number
- Job Title
- Controls 3-6
- Work Phone/Extension

See also:

- Checking employee registrations on a report ***(on page 170)***

Employee Training Schedule (20RRPT)

The Employee Training Schedule report (20RRPT) lists all classes an employee is scheduled to attend. Each employee's training schedule is printed on a separate page of the report. Reported information includes:

- Controls 3-6
- Employee Name
- Employee Number
- Training Location
- Course
- Class
- Class Dates
- Training Information
- Coordinator Phone

See also:

```

Training Schedule (29RRPT)

The Training Schedule report (29RRPT) prints a schedule of classes that have been scheduled for a training location. Each training location is reported separately. Reported information includes:

- Training Location
- Course
- Course Description
- Class Duration (Hours)
- Participant Cost
- Class Dates
- Class
- Comments

Participant Cost is the total of course and class costs with a cost category of Participant, Individual, and Per Head.

See also:

- Checking what classes have been set up - using a report - optional

To learn about checking the training schedule on a report.

APPENDIX B

Practice and Review Answers

In This Appendix

Introduction

This appendix provides answers for the Apply the Concept practices, as well as the Extended Practice and Review of Questions Answered that are included at the end of each instructional chapter.

Implementing Training Administration

Apply the Concept

1. Describe the two primary differences between the Control Numbers as used in Training Administration and those used on other system tables.

   a) Entry on the Organization-To-Rules Cross-Reference For HR form (AX-SCR) is only two alphanumeric characters versus four.

   b) Rather than displaying the Control Number as a text box in the body of each table form, the Training Administration forms automatically generate the Control Number (from the Organization-To-Rules Cross-Reference For HR form (AX-SCR)) and display it in the form heading.

2. How many different types of Training Administration option lists are there? Give a few examples of each type.

   There are four types of Training Administration option lists:

   a) Course/Class option lists

   Examples: Level Required (TR01), Course Objectives (TR03), Course Results(TR09), Training Location (TR13), Course Subjects (TR30)

   b) Provider/Coordinator option lists

   Examples: Provider Index (TR38), Provider Type (TR07), Coordinator Index (TR27)

   c) Evaluation option lists

   Examples: Evaluation Category (TR39), Evaluation 1(TR17), Evaluation 2 (TR18)

   d) Additional option lists

   Examples: Registration Status (TR16), Training Required Reason (TR28), Registration Options (TR34)

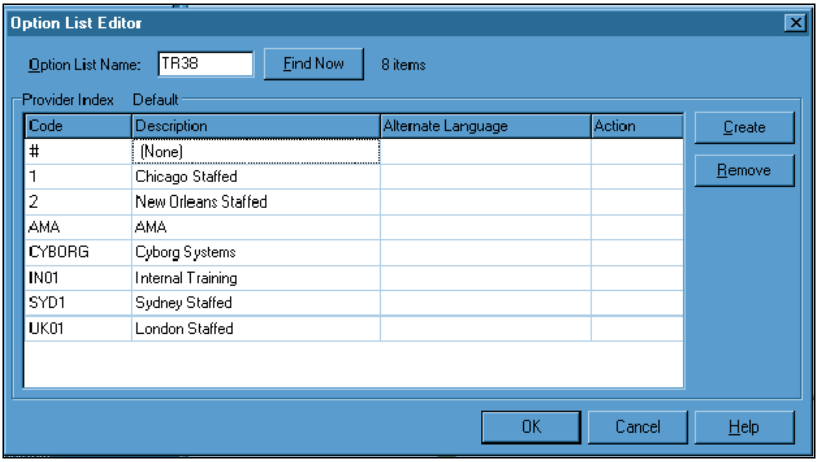
3. If your organization has five separate organizations but the training function is administered centrally using all the same tables and so forth, what value(s) would be entered on each organization's Organization-to-Rules Cross-Reference For HR form (AX-SCR) in the Training Admin text box?

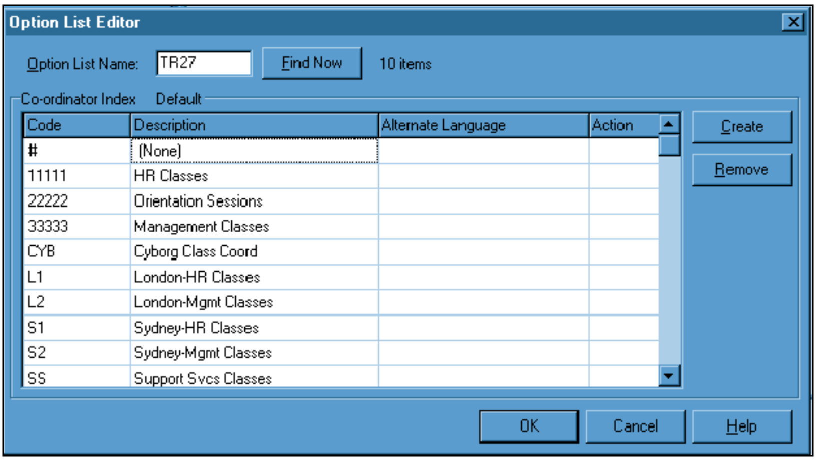
   Just one Control Number would be used, with each organization pointing to that same value.

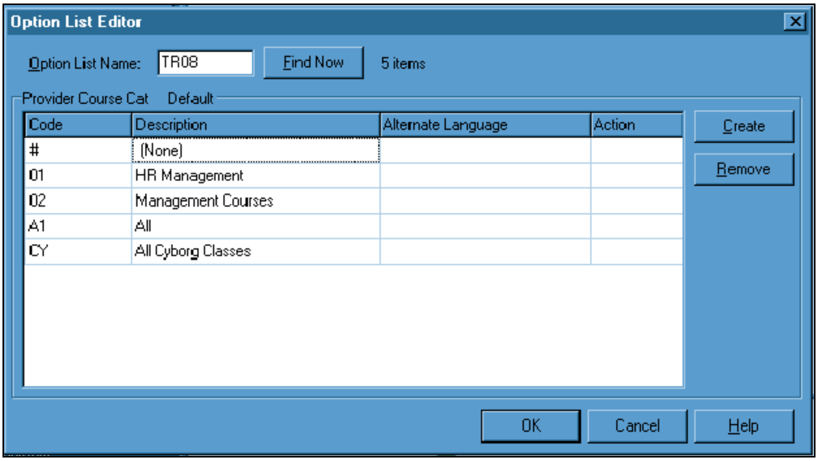
Extended Practice

Add the following codes to the option lists below using the Option List Editor (CSUPDT):

Option List	Code	Description
Provider Index (TR38)	CYBORG	Cyborg Systems
Coordinator Index (TR27)	CYB	Cyborg Class Coord
Provider Course Category (TR08)	CY	All Cyborg Classes







Review of Questions Answered

1. How are Control Numbers set up in Training Administration?

   The two-character Training Administration Control Number is defined on the Organization-To-Rules Cross-Reference for HR form (AX-SCR). Type the two-character Training Administration Control Number in the Training Admin text box. Rather than displaying the Control Number as a text box in the body of each table form, the Training Administration forms automatically display it the form heading.

2. How are Training Administration option lists set up?

   Using the Option List Editor (CSUPDT), production option lists can be modified to meet your company's requirements. Review the 38 sample option lists that are delivered with Training Administration and, except for a few option lists that should not be modified (as indicated in this chapter), modify the others to reflect the values unique to your organization.

Setting Up and Maintaining Training Courses

Apply the Concept

1. Define the term *course.*

   A course is a separate unit of instruction in a subject. For example, 'Using The Solution Series: Administrative Solutions' is a course. This may be applied to a training course provided internally or externally.

2. Define the term class.

   A class is an occurrence of a course that is specific to a location and a date. For example, 'Using The Solution Series: Administrative Solutions' on Thursday, December 21, in Chicago is a class of the course 'Using The Solution Series: Administrative Solutions'.

3. Define the term *program.*

   A program is a series of classes. For example, 'The Cyborg Training Schedule for January-June 1996' may be a program consisting of eight different classes.

4. What three types of costs can be recorded in Training Administration?

   Costs are recorded at three different levels within Training Administration: course, class, and employee. In addition to the different levels of cost, there are various categories to further define those costs. These are defined in Cost Category option list (TR14) on the Course Directory: Costs form (10RSCR). The categories of 'Equipment', 'Individual', and 'Operating' are carried through to the class level. Categories of 'Per Head' and 'Participant' indicate employee-level costs.

5. List two examples of employee-level costs.

   Categories of 'Per Head' and 'Participant' indicate employee-level costs.

6. What are the prerequisites to setting up training course details?

   Before any data are entered, you must ensure that all option lists are populated with course details, prerequisites, and objectives.

7. List two examples of skills/competencies that can be defined on the system.

   The achievement of certain skills (such as Claim Accounting, Procedure Writing, Project Presentation, Banking Regulations) can be defined in the Skills option list (MP01).

8. Consider the way course information is currently managed/tracked in your organization and determine whether it will be useful for you to use all or some of the optional panels included on the Course Directory form (10RSCR). Which ones will be most beneficial to you?

Your answer will be specific to your organization.

9. When setting up a new training course coordinator who is an employee (versus an external coordinator), what if anything do you do differently, when entering data on the Coordinator Index form (14RSCR)?

   By entering the employee's organization and Employee Number where indicated, the employee coordinator's name (as well as phone number and extension, assuming these text boxes were entered on the system) will be filled in automatically after clicking Save. If the coordinator is external, you must enter this information if you wish to view it online.

10. Consider how your organization might use the Provider Index and Coordinator Index and describe how you might customize these option lists to meet your needs.

    Your answer will be specific to your organization.

Extended Practice

1. Add these additional Options to the option lists listed using the Option List Editor (CSUPDT):

Option List	**Code**	**Description**
Course Options (TR33)	FB001	Flex Benefits
Course Subjects (TR30)	FBC	Flex Benefit Concpts
Course Objectives (TR03)	GFK	Gain Flex Knowledge
Training Cost Type (TR31)	BF	Breaks/Refreshments

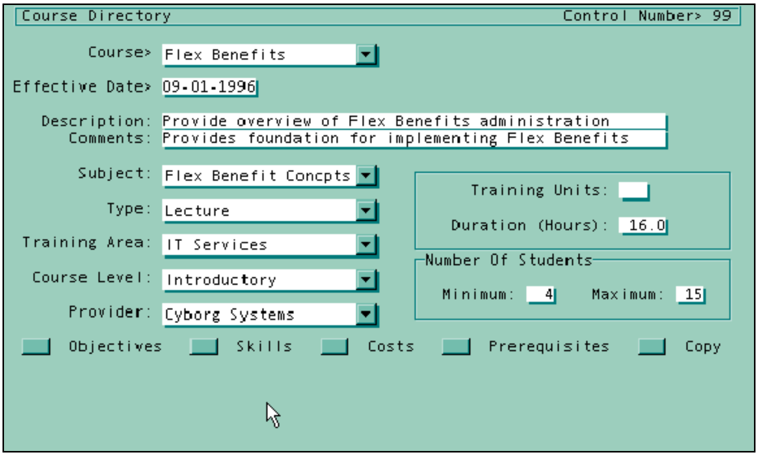
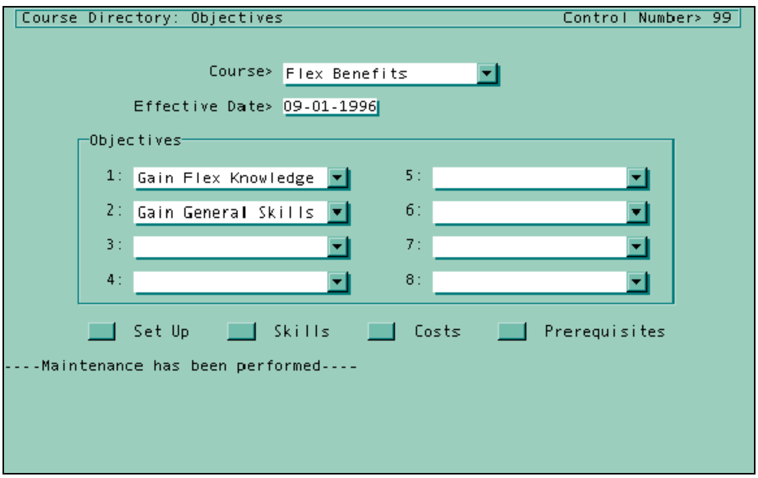
2. Set up a new course with these characteristics:

Text box	Entry
Course	Flex Benefits
Effective Date	September 1, 1996
Description	Provides an overview of Flex Benefits administration.
Comments	Provides a foundation for implementing Flex Benefits.
Subject	Flex Benefits Concpts

Text box	Entry
Type	Lecture
Training Area	IT Services
Course Level	Introductory
Provider	Cyborg Systems
Training Units	Leave Blank
Duration	16.0 Hours
Number of Students	Between 4 and 15

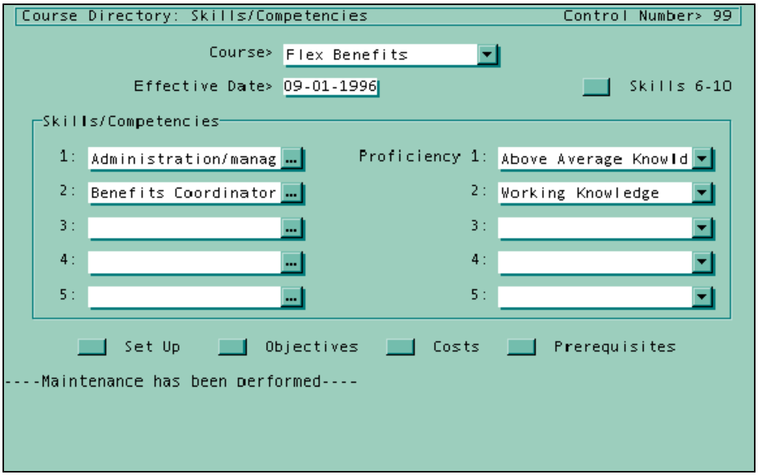


3. Select two appropriate course objectives for this course from the option lists.



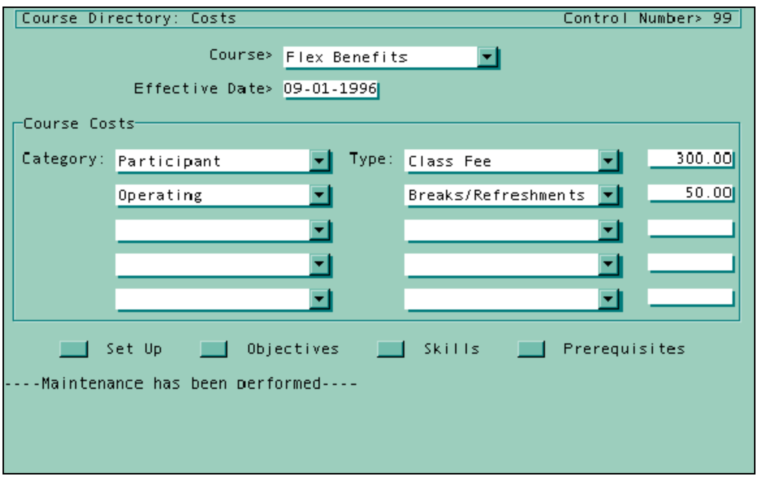
4. Select these skills and proficiency levels for Flex Benefits:

Skills/Competencies	Proficiency
Administration/manag	Above Average Knowld
Benefits Coordinator	Working Knowledge

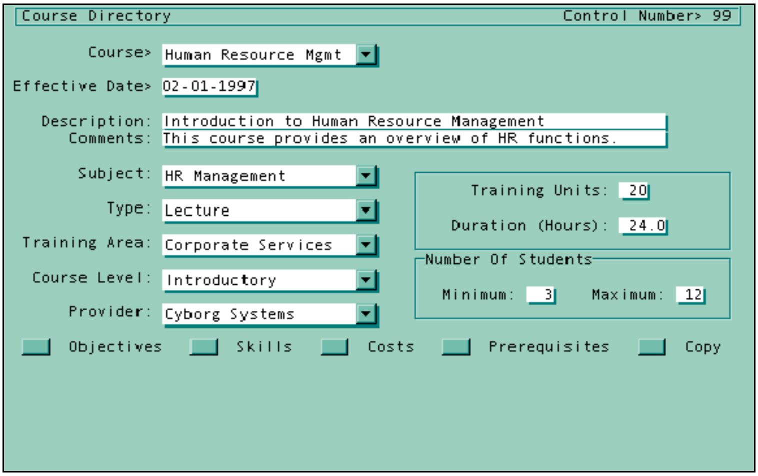


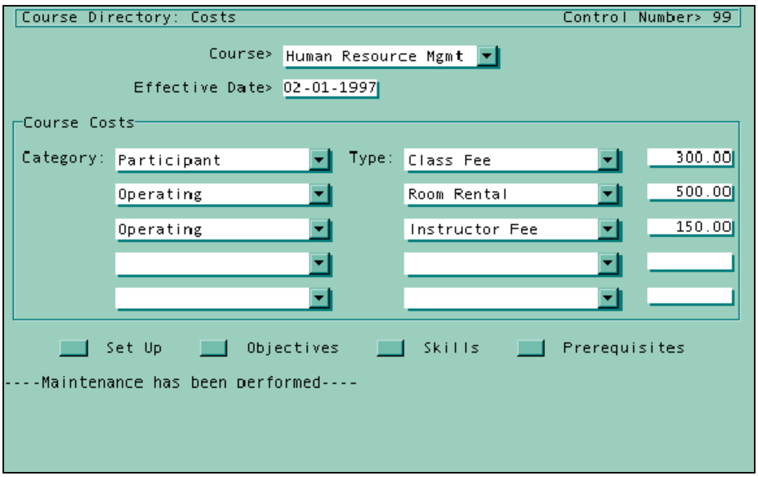
5. Set up these course-related costs for Flex Benefits:

Category	Type	Amount
Participant	Class Fee	300.00
Operating	Breaks/Refreshments	50.00



6. Return to the Set Up panel and select the course 'Human Resource Management' dated '01-01-1994'. Copy this same course with a new effective date of February 1, 1997. When the Set Up form is returned, modify the Provider list box to an entry of 'Cyborg Systems' and change the maximum number of students to '12'. Update the Instructor Fee cost to 1500.00 on the appropriate panel.

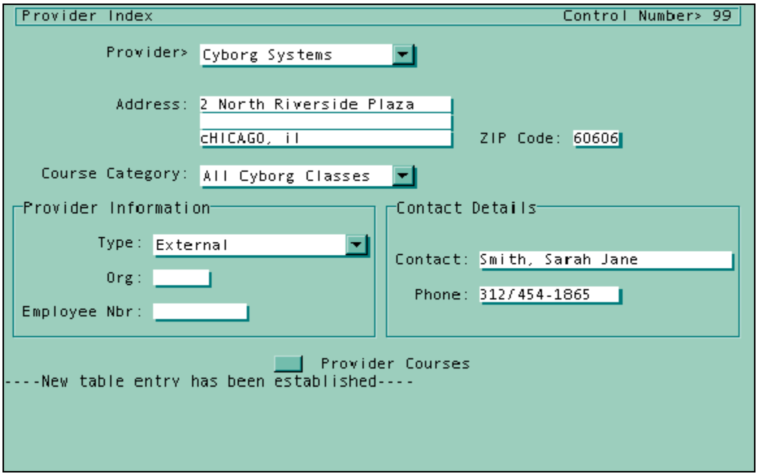


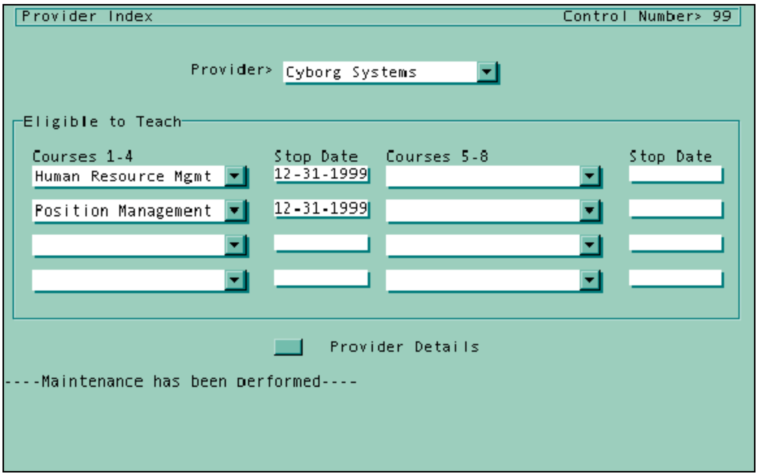


7. Set up a Course Development Costs form (11RSCR) for the Flex Benefits course, indicating a fee of 7500 for developing the course manual.

8. Set up a Flex Benefits course provider with these characteristics:

Text box	Entry
Provider	Cyborg Systems
Address, ZIP code	2 North Riverside Plaza, Chicago, IL 60606
Course Category	All Cyborg Classes
Type	External
Org	Leave Blank
Employee Nbr	Leave Blank
Contact	Smith, Sarah Jane
Phone	312/454-1865
Courses 1-4	HR Mgmt and Position Management courses
Stop Date	December 31, 1999 for both

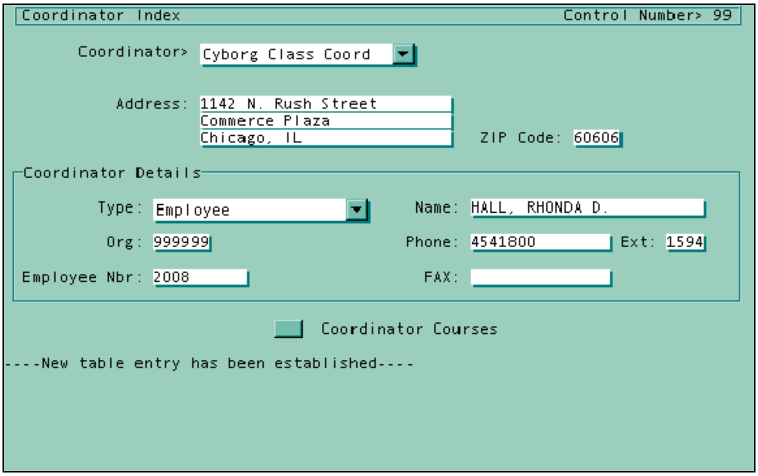


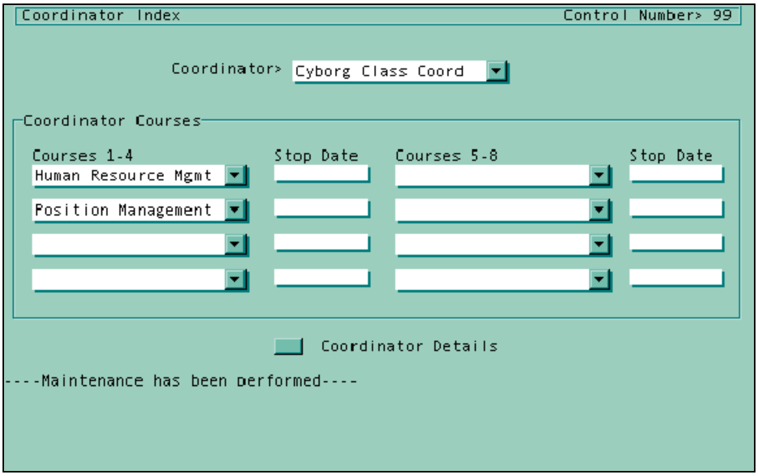


9. Set up a Flex Benefits course coordinator with these characteristics:

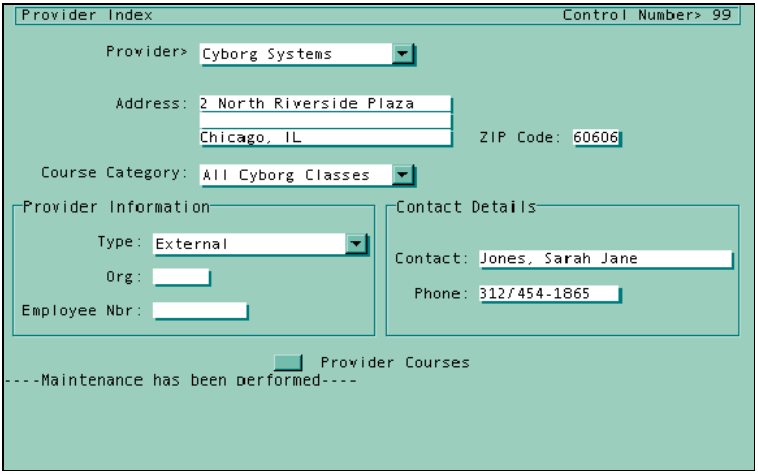
Text box	Entry
Coordinator	Cyborg Class Coord
Address	1142 N. Rush Street, Commerce Plaza, Chicago, IL 60606
Type	Employee
Name	Leave blank (self-populating)

Text box	Entry
Org	999999
Phone	Leave blank (self-populating)
Employee Nbr	2008
FAX	Leave blank
Courses 1-4	HR Mgmt and Position Management courses
Stop Date	Leave blank

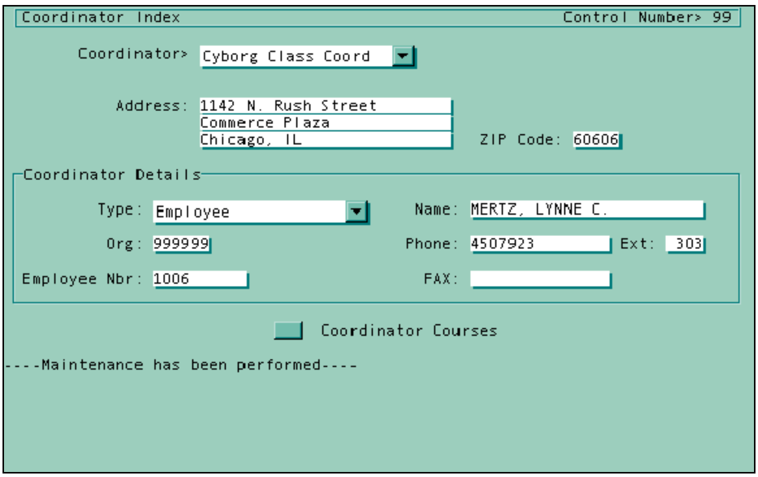




10. The contact listed for provider 'Cyborg Systems' just got married. Change the contact details to reflect a name change to 'Jones' and a new phone number of '312/252-6888'.



11. The Cyborg Class Coordinator just terminated her employment. The new Cyborg Class Coordinator is Employee '1006'. Make this change on the appropriate form.



Review of Questions Answered

1. What is a course?

   A course is a separate unit of instruction in a subject. For example, 'Introduction to Using The Solution Series: Administrative Solutions' is a course. This may be applied to a training course provided internally or externally.

2. What are training objectives and how are they used?

   The provider identifies an objective for each course. It may be a skill, a level of competency, and so forth. All courses set up on Training Administration can have training objectives associated with them. These can then be matched against an employee's training objective to find the best course for the employee to attend. The Course Objectives option list (TR33) can be modified to reflect a full range of course objectives your organization wishes to establish. These are tied to the different courses via the Objectives panel of the Course Directory form (10RSCR). Establishing course objectives is optional. However, doing so allows you to match these training objectives against an employee's personal developmental training objectives to find the best course for the employee to attend.

3. What types of costs can be recorded?

   Course-, class-, and employee-level costs can be recorded. Use the Course Directory form (10RSCR) Costs panel to enter course costs. Up to five cost categories and cost types can be entered from the drop-down lists available. The category, type, and cost amount on each line are tied together and define a cost description and amount. Defining course cost information is an optional step.

5. How are prerequisites and skills used?

   A prerequisite may be attendance at a particular course, proven mastery of certain skills and abilities, level of experience and so forth. Using the Prerequisites panel of the Course Directory form (10RSCR) to define skills and course-level requirements for a particular course is optional. If you use this panel, it is important to populate the Course Prerequisites option list (TR32) and to understand the relationship between prerequisites and skills as defined in this chapter.

6. How are coordinators and providers used?

   Details about course providers and coordinators can be defined in forms and then recorded at the class level to help organizations capture all training-related data. Queries and reports are available to provide administrative support and create management tools that determine instructors' schedules, courses taught, dates booked, and so forth, and that produce class confirmation letters containing provider and coordinator information along with all other relevant class information.

Setting Up and Maintaining Training Classes

Apply the Concept

1. Describe how the use of delivered online query forms such as the Individual Trainer Schedule inquiry form (55RSCR) and the Training Schedule inquiry form (53RSCR) can be helpful to you.

   These queries allow you to quickly view online all classes a trainer is scheduled to teach and to display an online view of upcoming training classes. You can display all upcoming classes, classes for a specific course, classes as of a specific date, classes at a specific training location, or any combination of these.

2. Describe the benefit to be realized by optionally printing hard-copy reports such as the Individual Trainer Schedule report (38RRPT) and Training Schedule report (29RRPT).

   These are the hard-copy versions of the two queries identified in question 1. The Individual Trainer Schedule report (38RRPT) provides a printed schedule of a trainer's upcoming classes. Data included are training location, course, course description, class dates, duration in hours, and number of participants. The Training Schedule report (29RRPT) lists all classes that have been scheduled for a training location. Report Scheduler parameters allow flexibility in selecting options to control what and how data are captured on the reports. Hard-copy reports are especially helpful to give to individuals who need this information but who do not have access to the system.

3. What types of specific class costs would you set for a new training course in your organization called 'Managing Diversity'? How would these costs differ from those established at the course level?

   Your answer will be specific to your organization.

4. Consider how you intend to use the Class Maintenance Facility form (18RSCR) in your organization. Who will be responsible for this task?

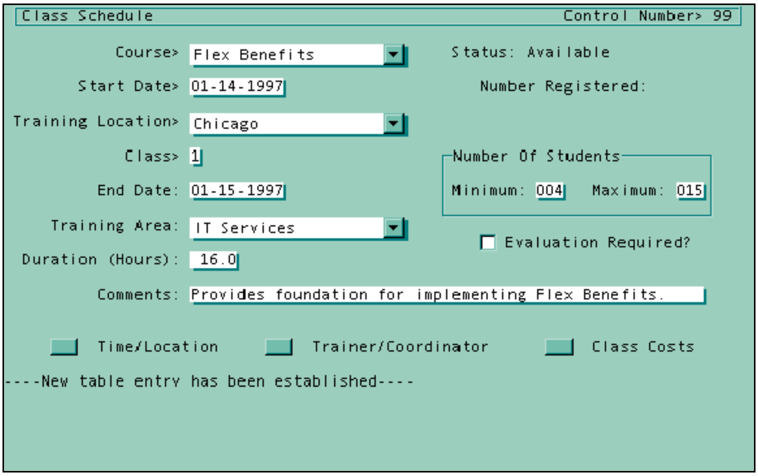
   Your answer will be specific to your organization.

Extended Practice

1. Set up a training class with the following characteristics:

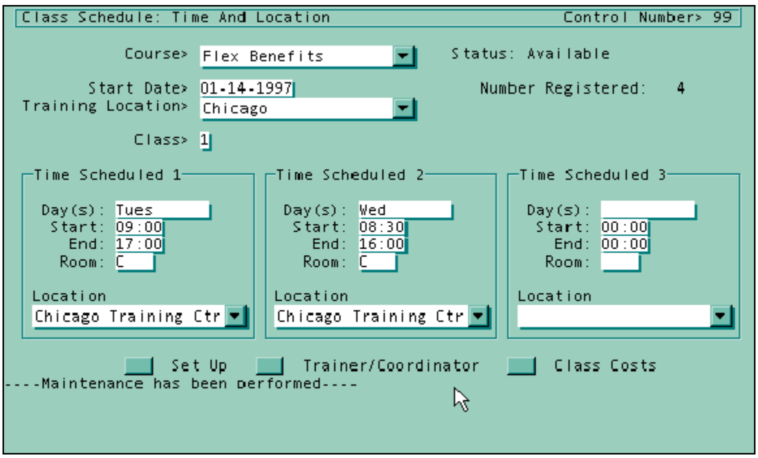
   - Course of 'Flex Benefits'
   - Start Date of '01-14-1997'
   - Training Location of 'Chicago'
   - Class '1'
   - End Date of '01-15-1997'
   - Select 'Evaluation Required'

   The remaining text boxes on this panel will populate from the Course Directory form (10RSCR).



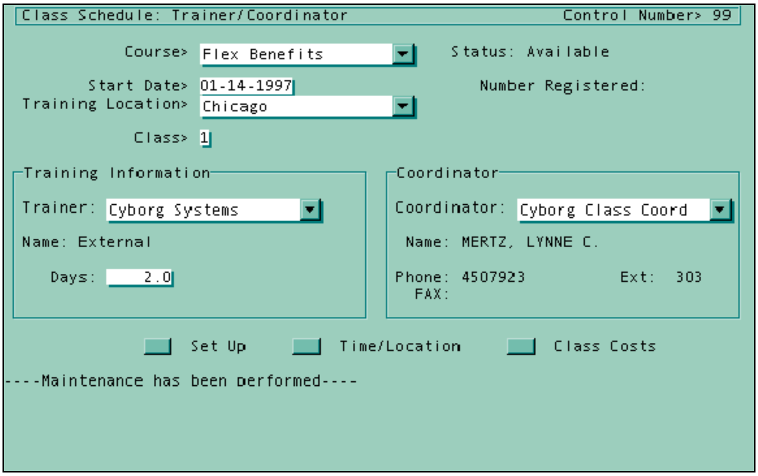
Time and Location

- Days Scheduled of Tuesday and Wednesday
- First day 9:00-5:00; Second day 8:30-4:00
- Location is Chicago Training Center, Room C

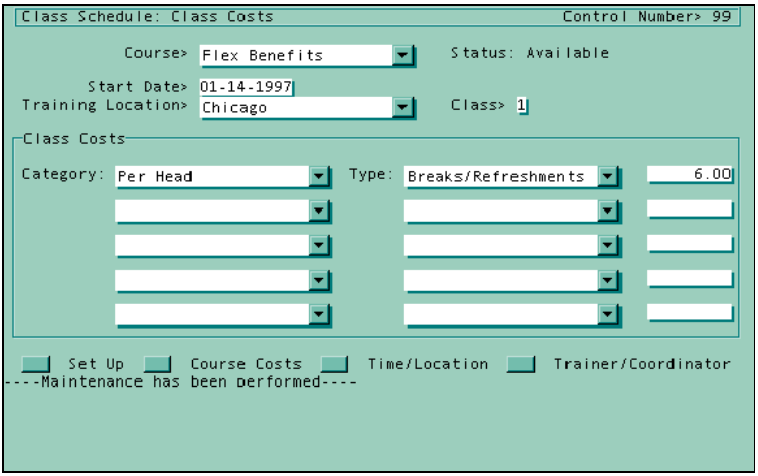


Trainer/Coordinator

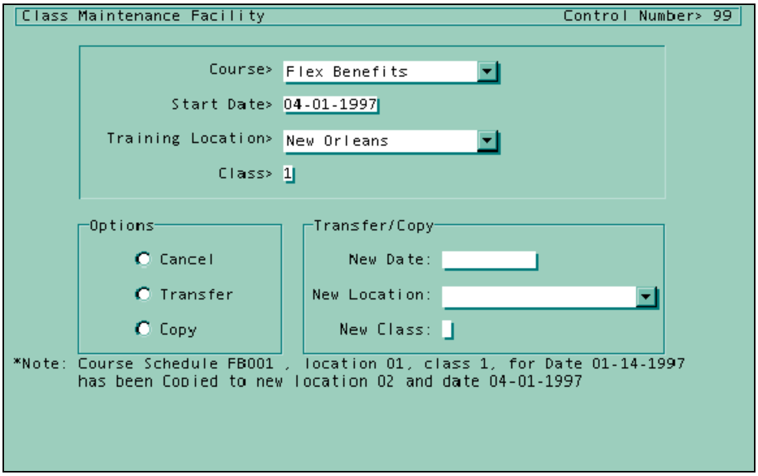
- Trainer is Cyborg Systems
- Days = 2
- Coordinator is Cyborg Class Coordinator



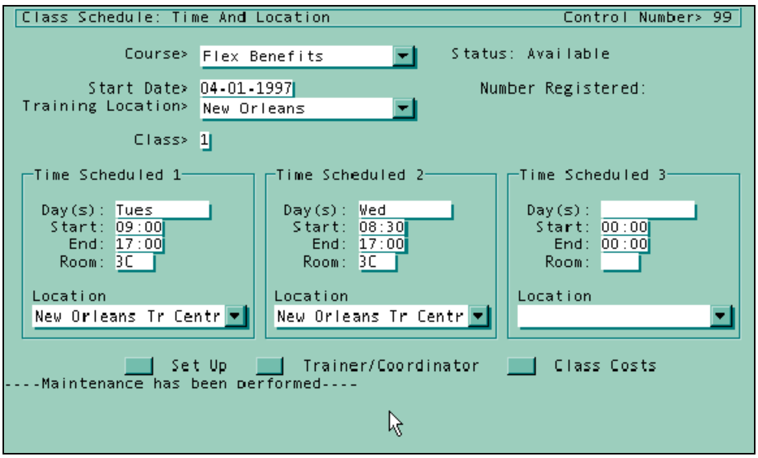
- Class Costs
- Class Cost for Breaks/Refreshments is 6.00 per head.



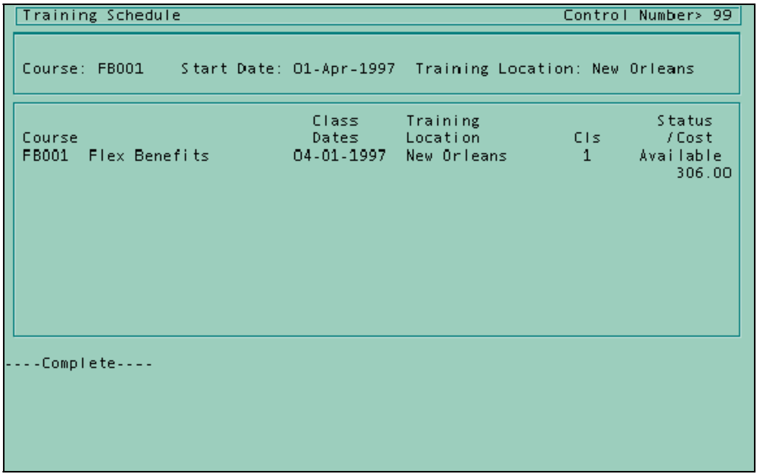
2. Copy the class you just established to another class on April 1-2, 1997, in New Orleans.



3. Change this New Orleans class in the following manner:
   - Minimum Number of Students is now 5.
   - Classes will be held in Room 3C of the New Orleans Training Center.
   - Wednesday's session is scheduled to end at 5:00 PM.



4. Use the Training Schedule form (53RSCR) to check that the two classes added in this practice session have actually been set up on the file correctly.



Review of Questions Answered

1. What is a class?

   A class is an occurrence of a course that is specific to a location and a date. For example, 'Introduction to Using The Solution Series: Administrative Solutions' on Thursday, December 21, in Chicago is a class of the course 'Introduction to Using The Solution Series: Administrative Solutions'.

2. What four text boxes define a training class?

   The four required text boxes that define a training class are Course, Start Date, Training Location, and Class.

3. What tool can be used to display all available course options and courses?

   The List Course/Class Options selection in the drop-down box of the Course Options option list (TR33) can be used to access the Course Selection Menu to see a full display of all available course options and courses. You can select a course from this menu and return to your initial form to complete your entry of class details.

4. What are the available class costing options?

   Class costs can be set up on the Class Costs panel of the Class Schedule form (13RSCR). This is an optional panel. Costs specified on this panel are different from those specified at the course level on the Course Directory form (10RSCR). While costs that are standard for all classes within a course are recorded at the course level, costs (such as instructor fees for different instructors) might vary at the class level and are recorded here. Costs can also be set up at the employee level using the Employee Training Class Costs form (34RSCR).

5. What types of maintenance can be performed on classes?

The Class Maintenance Facility form (18RSCR) can be used to transfer, copy, and cancel training class information.

Transferring a class moves the class to a new date or location. All currently registered and wait-listed employees are moved to the new class.

Copying a class copies all class information to a new date or location. Employee records are not changed.

Canceling a class cancels any employee registrations for that class and removes any employees from the wait list for that class.

Setting Up and Maintaining Training Programs

Apply the Concept

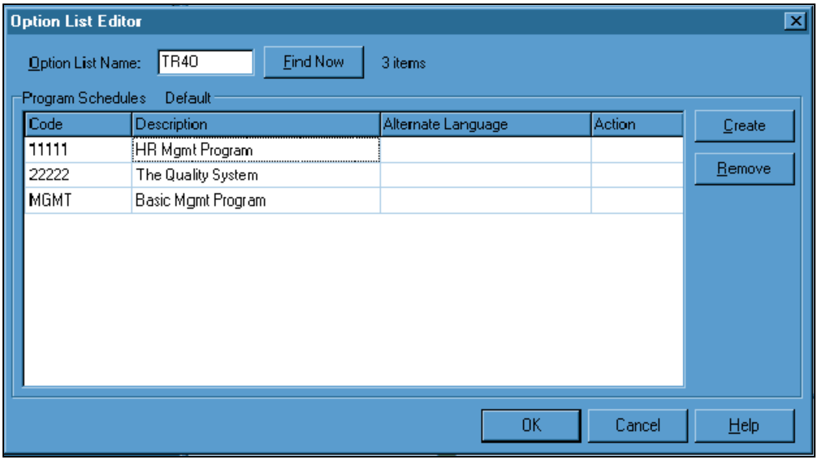
1. Consider if your company would need to set up training programs. How would this help your employees? How would it help management?

   Your answer will be specific to your organization.

Extended Practice

1. You have determined you need to set up a new training program for your employees. Using the Option List Editor (CSUPDT), add a code to the Program Schedules option list TR40:

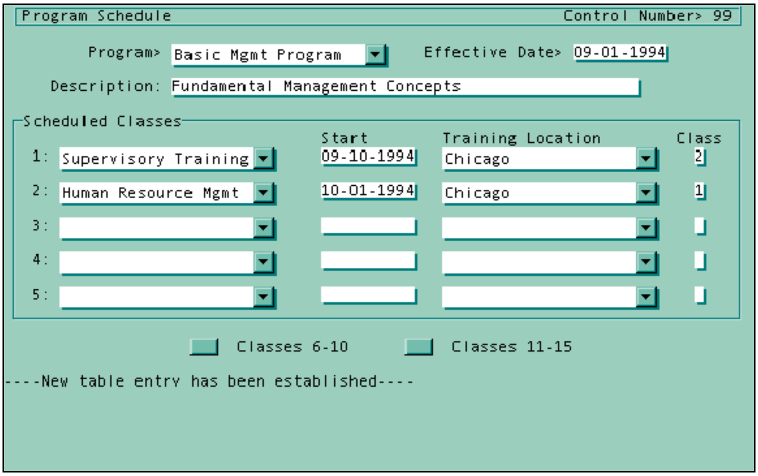
   MGMT Basic Mgmt Program



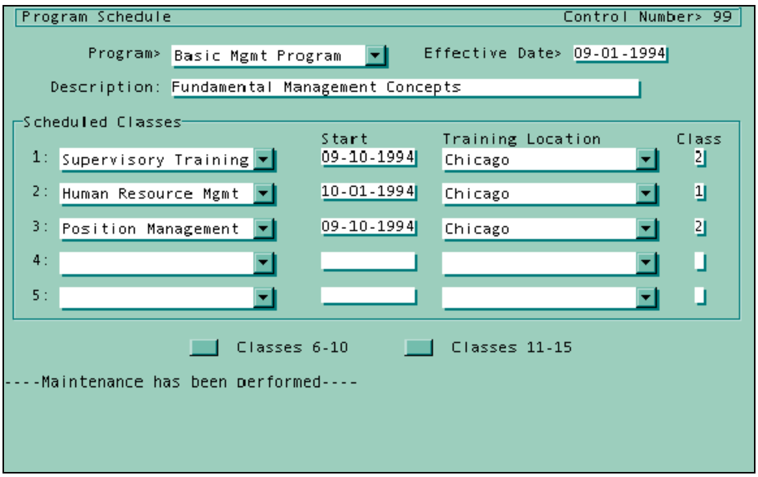
2. Using an effective date of September 1, 1994, set up a program called 'Basic Mgmt Program' to include these classes:

Supervisory Training	09/10/1994	Chicago Class 2
Human Resource Mgmt	10/01/1994	Chicago Class 1

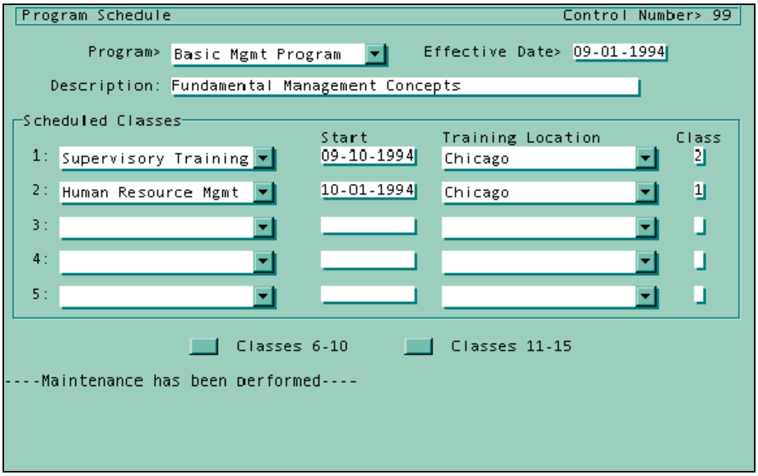
   This Basic Management program will be expanded as needed in the future.



3. Your company needs to add another class to the above program:
Position Management 09/10/1994 Chicago Class 2



4. You have just been told to delete a class from the above program. Delete the Position Management class that you added in step 2 above.



Review of Questions Answered

1. What are training programs and how are they used?

   A training program is composed of a series of up to 15 training classes that must be successfully completed by an employee or group of employees.

2. When are training programs used?

   Training programs are used when a series of classes logically fit together in some way and it has been decided that all component classes of the overall program are required by certain employees or groups of employees. An employee would have to complete each component to actually complete the training program itself.

Requesting Training for an Employee

Apply the Concept

1. Consider the way employee training is managed in your organization and determine whether it would be useful for you to use the Objective To Course Match form (56RSCR) (also known as the Training Request Facility).

   Your answer will be specific to your organization.

2. Assume one of the courses your organization offers to employees is 'Using Word for Windows'. What training objectives would you set up for this course?

   Your answer will be specific to your organization.

3. What prerequisites would you set for a training course in your organization called 'Advanced Word for Windows'? How do you plan to record and check these prerequisites using the full functionality of the system?

   Your answer will be specific to your organization.

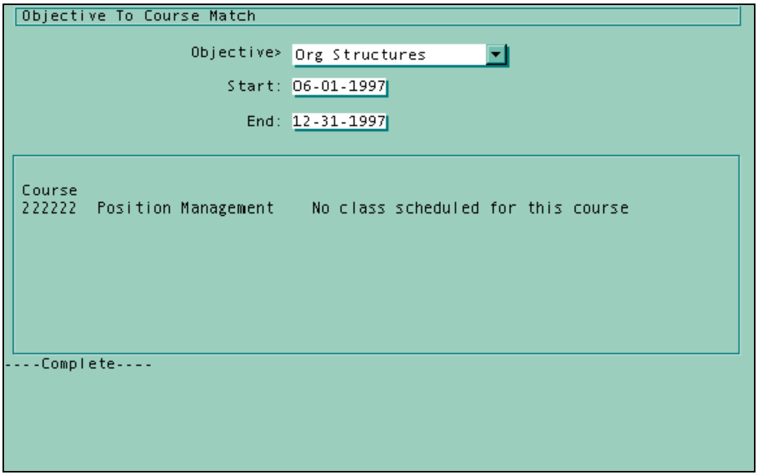
4. Consider how you intend to use the Objective To Course Match form (56RSCR) (also known as the Training Request Facility) in your organization. Who will check training requests? Which facility would be most useful for checking training requests?

   Your answer will be specific to your organization.

Extended Practice

1. Identify the best course for Jeanette Isley in organization 999999 based on the details below. Once you have identified the suitable training course, check that she has satisfied any prerequisites and then enter the training request.

   Facts: Jeanette Isley, Employee 1432, has expressed a desire to learn more about organization structure and managing positions. She already has earned an MBA and has talked to her manager about pursuing an opportunity soon to be available in the HR area that requires knowledge of organizational planning, position tracking, and succession planning. Her manager asked you to review this request and determine what course might be appropriate for Jeanette and also determine whether a class is scheduled before December 31, 1997. Enter the training request for this elective course.



Objective To Course Match
Objective> Org Structures
Start: 06-01-1997
End: 12-31-1997

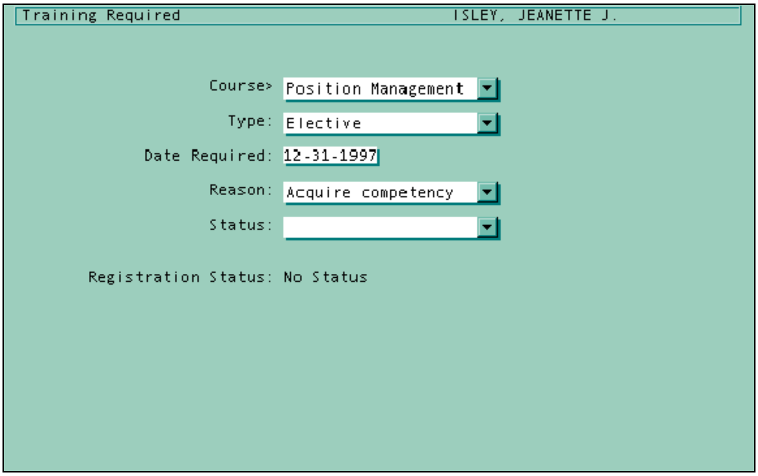
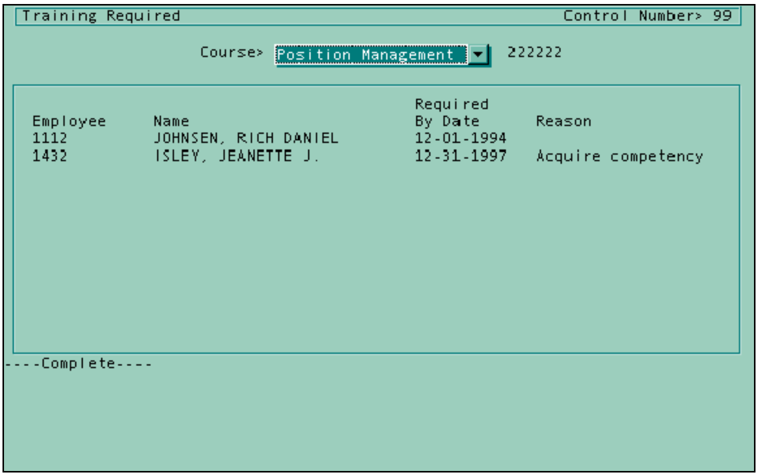
2:
3:
4:
5:
6:
Set Up
Objectives
Skills
Costs



2. Verify that the training request for Jeanette appears on the Training Required inquiry form (33RSCR).



Review of Questions Answered

1. When should the Training Request Facility be used?

   This optional feature is used in organizations that do not want the people (such as line managers) who are authorized to request training for employees to actually complete/administer the registration process. Instead, a training administrator would review the requests and register the employee for the appropriate class(es). If training requests are not entered first, it means that registering an employee for a training class becomes the initial entry task.

2. How are training objectives used to identify suitable training courses?

   To enable staff to find the best course available for an employee, training objectives are matched with course objectives. The list of training objectives that have been identified for the available courses are displayed in the Objective text box on the Objective To Course Match form (56RSCR). Selecting a training objective from this option list allows the system to search for the appropriate training course that satisfies the training objective established for the employee. This is the only way to search for the suitable training course(s) without knowing the name of the training course you wish the employee to attend. IMPORTANT: You cannot use the Objective To Course Match form (56RSCR) (also known as the Training Request Facility) if you do not use training objectives to define suitable training courses. And, if you do use training objectives, it is important to clearly define them to avoid confusion and make the entire process more effective.

3. What are course prerequisites and how are they used?

   A prerequisite may be attendance at a particular course, proven mastery of certain skills and abilities, or anything else that is measurable, such as length of experience. If your organization uses the course prerequisite feature, it will be necessary to manually check to see that an employee satisfied the prerequisites once a training request or training registration is received. The organization will have to determine how best and when to check prerequisites.

4. What methods of checking training requests are available?

   Four facilities can check training requests that have been entered onto Training Administration:

Method	Type of facility	Name of facility
By training course	Online list of employees	Training Required inquiry form (33RSCR)
By training course	Hard-copy report of employees	Training Courses Needed by Course report (47RRPT)
By class	Online list of employees	Class Registration/ Cancellation form (20RSCR)
By employee	Hard-copy report of courses	Training Courses Needed by Employee report (48RRPT)

Registering an Employee for Training

Apply the Concept

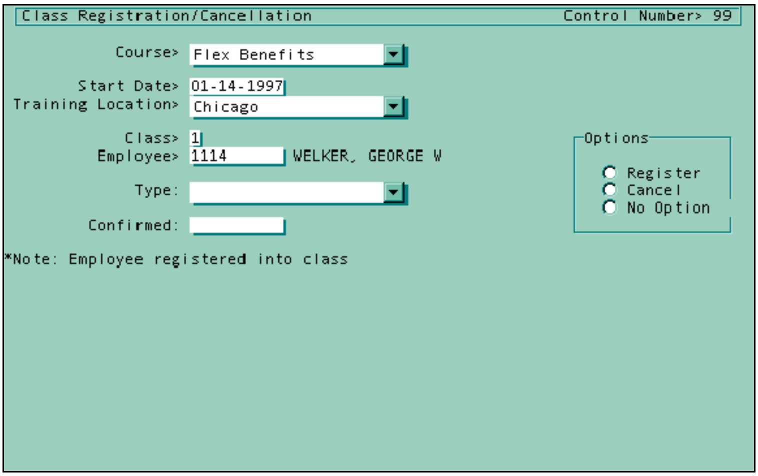
1. Consider which options for checking class registrations will be used in your organization. Who will be responsible for this task?

   Your answer will be specific to your organization.

Extended Practice

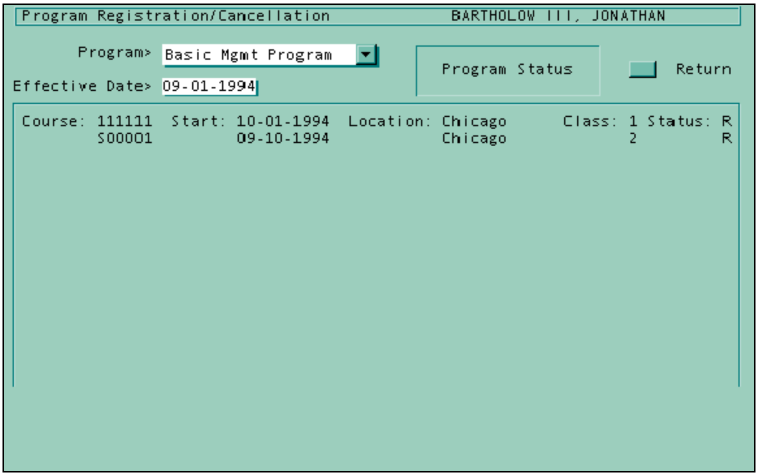
1. Register these employees for the Flex Benefits class in Chicago on January 14, 1997:
   - 1114
   - 1234
   - 2012
   - 3011

   The form will look the same for the other three employees.

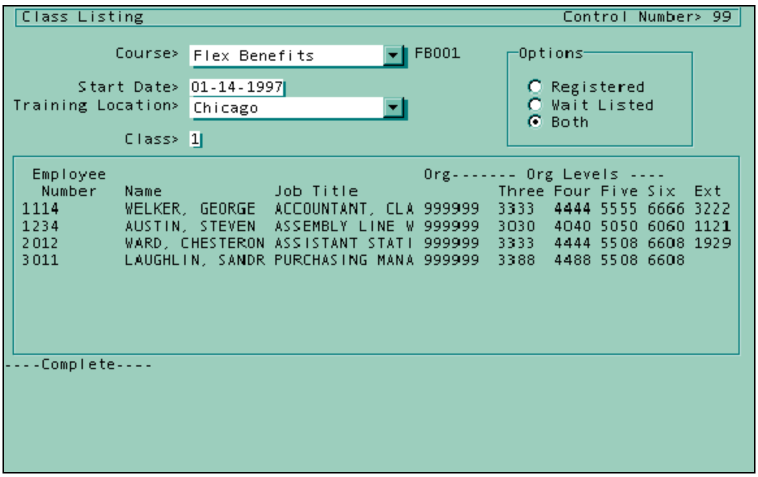


2. Register these employees for the Basic Mgmt Program in Chicago that became effective September 1, 1994 (and which you established in the Extended Practice in Chapter 6):
   - 1113
   - 1115
   - 1116

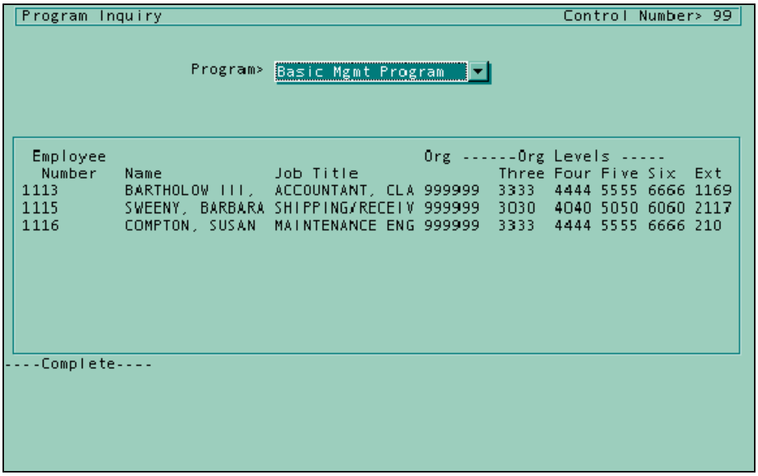
   The form will look the same for the other two employees.



3. Display a listing of all employees currently registered and/or wait-listed for the Flex Benefits class scheduled for January 14, 1997, in Chicago.



4. Display a listing of all employees currently registered for the Basic Mgmt Program described in question 2 above.



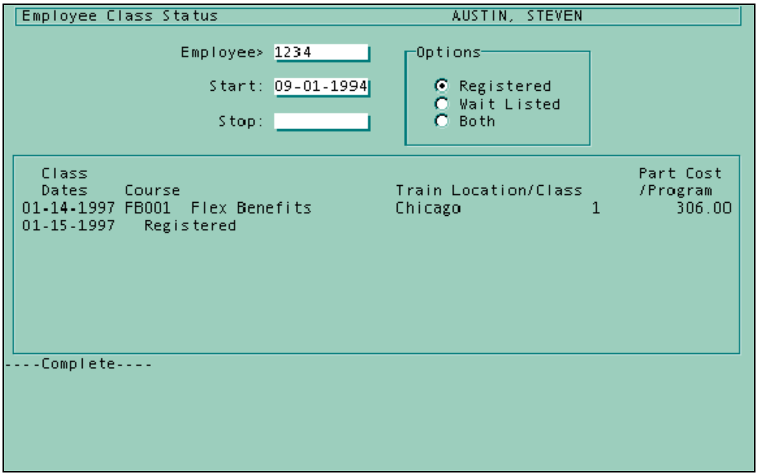
Program Inquiry   Control Number> 99

Program> Basic Mgmt Program

Employee Number	Name	Job Title	Org	Org Levels Three	Four	Five	Six	Ext
1113	BARTHOLOW III,	ACCOUNTANT, CLA	999999	3333	4444	5555	6666	1169
1115	SWEENY, BARBARA	SHIPPING/RECEIV	999999	3030	4040	5050	6060	2117
1116	COMPTON, SUSAN	MAINTENANCE ENG	999999	3333	4444	5555	6666	210

----Complete----

5. Use the Employee Class Status inquiry form (57RSCR) to display all classes for which Employees 1234 and 1113 are registered and/or wait-listed as of September 1, 1994. What happens if you leave the date text boxes blank?



Employee Class Status   AUSTIN, STEVEN

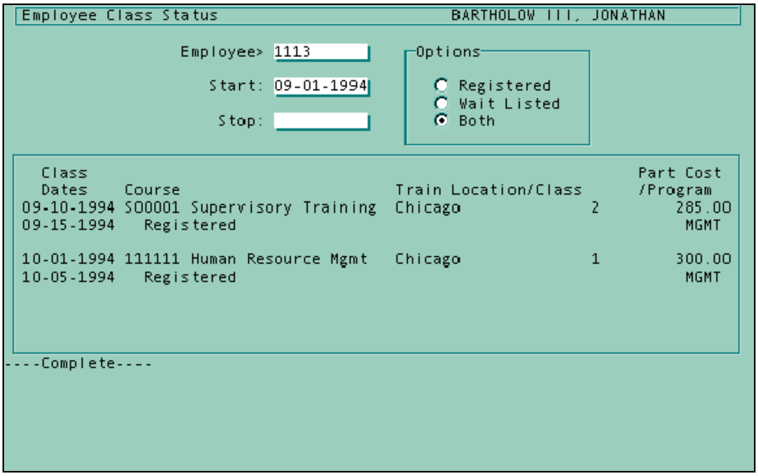
Class Dates	Course		Train Location/Class		Part Cost /Program
01-14-1997	FB001	Flex Benefits	Chicago	1	306.00
01-15-1997		Registered			

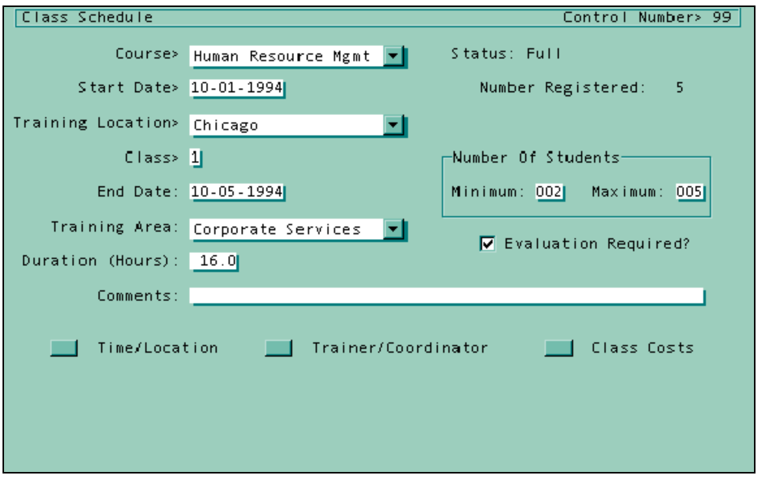
----Complete----



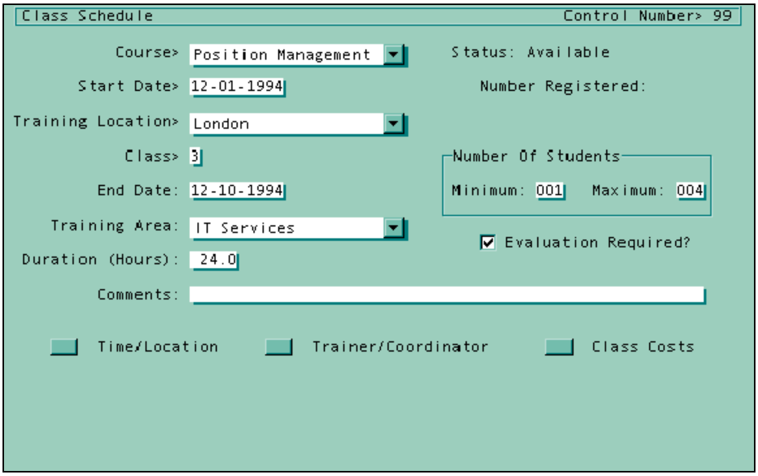
If the start date text box is left blank, the current date is used. All classes on dates equal to or later than that date are displayed. If the stop date is left blank, all future-dated classes are displayed.

6. Look at the Class Schedule form (13RSCR) for these classes and determine whether the class is full or if space is available, and also note how many students are currently registered:

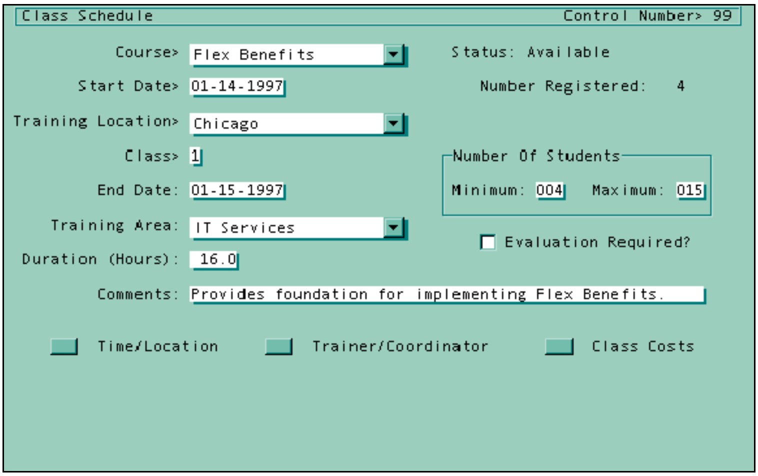
- Class 111111 in Chicago on October 1, 1994



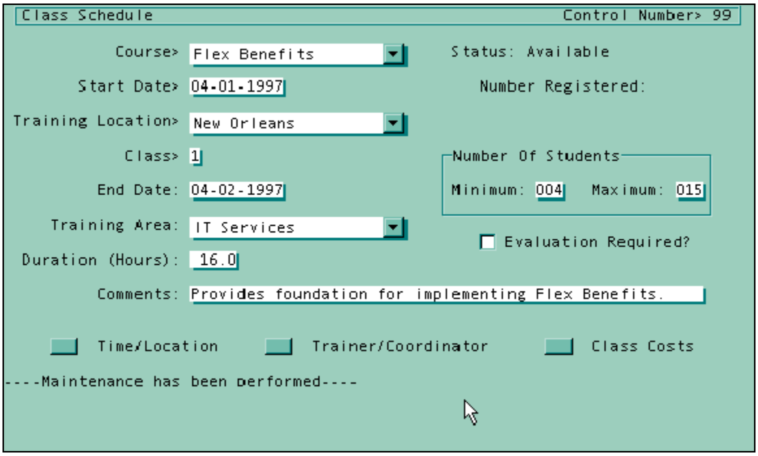
- Class 222222 in London on December 1, 1994



- Class FB001 in Chicago on January 14, 1997



- Class FB001 in New Orleans on April 1, 1997



Review of Questions Answered

1. How are course availability and class availability checked?

   There are a number of options for identifying availability for training courses or classes and for determining those employees who are registered and/or wait-listed. These options include the following:

   a) Training Schedule form (53RSCR)

   This form is used to display the upcoming schedule of training classes including Course, Class Dates, Training Location/Class Status (Available, Full, Canceled), and Class Costs.

   b) Class Schedule form (13RSCR)

   This form automatically updates the display of Status (Available, Full, Canceled) and Number Registered each time a student is registered in or canceled from a class. It also displays the minimum and maximum number of students established for a class.

   c) Class Listing form (50RSCR)

   This form is used to display a listing of employees registered or wait-listed for a scheduled training class.

   d) Program Inquiry form (52RSCR)

   This form is used to display a listing of employees registered or wait-listed for a training program.

   Paper reports are also available depending on the specific type of information you are seeking.

2. How are training programs administered?

Organizations may set up training programs that consist of up to 15 different component classes, all of which must be taken by an employee(s) to successfully complete the program. Facilities are available in the system that provide management tools to assist in effective administration of this task. It is even possible to future date new training programs and begin enrolling students prior to the start date.

3. What is the waiting list process?

   When registering an employee for a class that has a status of Full, there is a system option available to put that employee on a waiting list. Or, the employee could be registered for another class if one is available. Display forms such as the Class Listing form (50RSCR) and the Program Inquiry form (52RSCR) allow you to display the wait-listed employees in addition to, or instead of, those who already have been registered.

4. How are employee registrations confirmed?

   Confirming class registrations by producing a letter for the registered employee(s) is possible using the Class Confirmation report (23RRPT) and following the instructions included in this chapter. This confirmation letter details the training class attributes such as class location, time, and date(s). Another report, the Class Reminder report (25RRPT), is also available.

Canceling Registrations

Apply the Concept

1. Canceling employee registrations is an optional system feature. Describe the advantages your organization would derive from using this functionality.

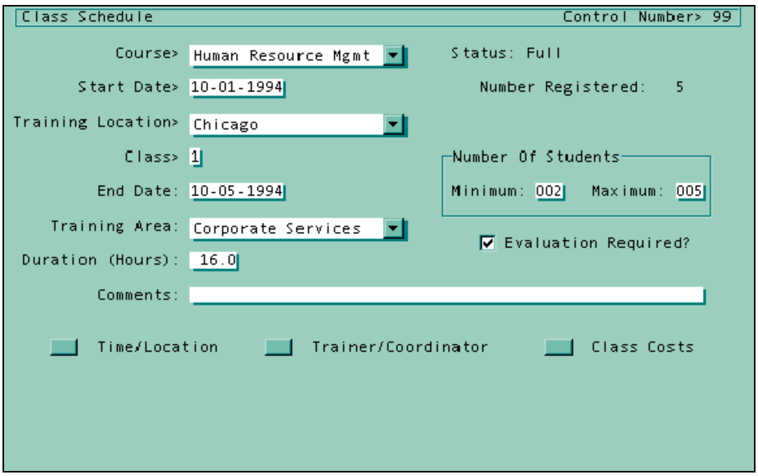
   Your answer will be specific to your organization.

2. Describe the primary difference between canceling an employee's registration from three separate classes that are not part of a program, and canceling an employee's registration in a program that is composed of the same three classes.

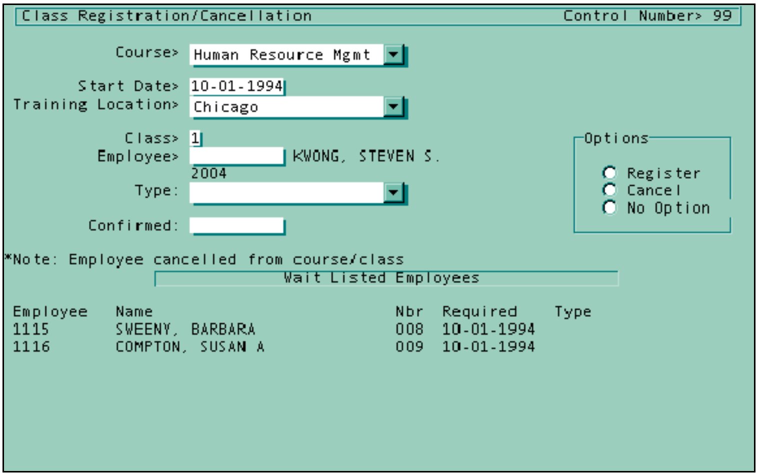
   When canceling three class registrations for the same employee using the Class Registration/Cancellation form (20RSCR), three separate cancellation entries need to be processed. If that same employee is registered instead for a program that is composed of the same three classes, canceling the program using the Program Registration/Cancellation form (16RSCR) automatically cancels the employee from all classes within that particular program.

Extended Practice

1. Access the Class Schedule form (13RSCR) and make note of the Status and Number Registered values for the Human Resource Management class in Chicago on October 1, 1994.

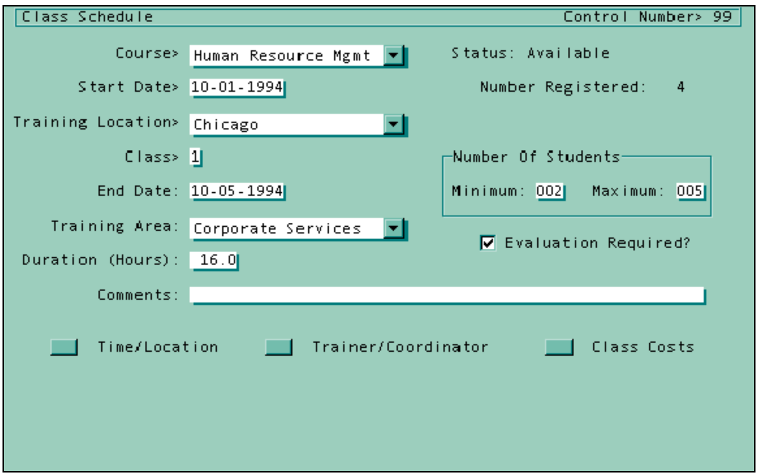


2. Cancel employee 2004 from this Human Resource Management class. What is the display at the bottom of the form (following the cancellation) telling you?



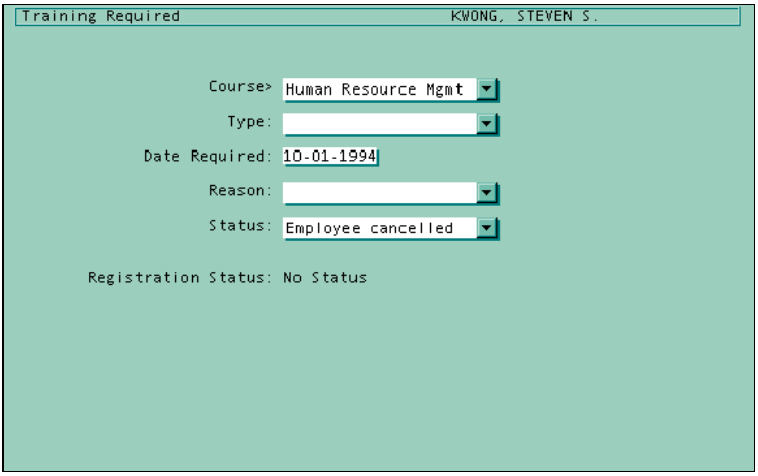
The message indicates a confirmation of the class cancellation and displays the wait-listed employees.

3. Return to the Class Schedule form (13RSCR) for this class and note how the Status and Number Registered values have changed.



The number registered is reduced to 4 and the class status is 'Available'.

4. Access the Training Required form (31RSCR) for employee 2004, and identify the processing that has occurred as a result of the cancellation.



Training Required KWONG, STEVEN S.

Course> Human Resource Mgmt

Type:

Date Required: 10-01-1994

Reason:

Status: Employee cancelled

Registration Status: No Status

This form is created or updated by the Class Registration/Cancellation form (20RSCR) when a registration is canceled.

5. Now that there is an opening in the class, register the first wait-listed employee 1113.

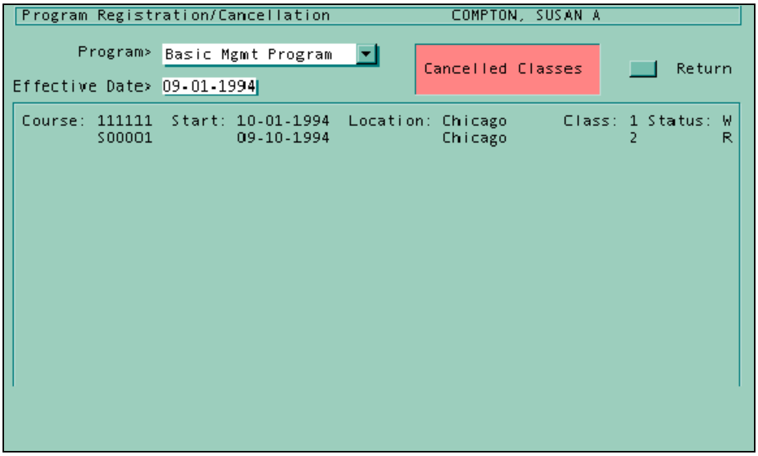
	S00001	Supervisory Training	09-10-1994	01	2	004	1116

7. Cancel employee 1116 from the Basic Mgmt Program.



Review of Questions Answered

1. How are employee class cancellations processed?

   Employee class cancellations are processed using the Class Registration/ Cancellation form (20RSCR) the same form used to register the employee for the class. When this is done, both the table-level and the employee-level class registration records are deleted. The Class Schedule form (13RSCR) text boxes of Status and Number Registered are automatically updated, and a Training Required form (31RSCR) is created with a Status value of Employee Canceled. If that form already exists for the employee, the Status value is updated in the same manner.

2. How are employee program cancellations processed?

   Once an employee's registration for a particular program is canceled, the employee is automatically canceled from all classes within that training program. The Program Registration/Cancellation form (16RSCR) is used to actually process the cancellation.

After Enter is pressed, a form panel is returned that displays a full listing (in Display mode) of all the employee's canceled classes within the program. The Class Schedule form (13RSCR) is automatically updated to reflect the revised Status (Available, Full, or Canceled) and/or Number Registered (actual number of employees registered after the cancellations were processed). This functionality ensures the integrity of training program data (and classes within that program) as well as individual employee training records.

Processing Training Results and Evaluations

Apply the Concept

1. Define training class results and identify the form used to record them.

   Training class results are the class details (such as class attendance and class results), absence information, and objectives met check boxes that are recorded on the second panel of the Process Class Results form (22RSCR).

2. Define class evaluation results and identify the form used to record them.

   Class evaluation results are the results entered on evaluation forms filled out by class participants upon completion of a class and recorded on the Process Class Evaluation Results form (23RSCR). Up to 10 evaluation categories can have rating values recorded.

3. Processing training results and evaluations is an optional feature of Training Administration. Consider how your organization currently records similar data (if at all) and describe how using this feature can improve training-related record keeping.

   Your answer will be specific to your organization.

Extended Practice

1. Access the Process Class Results form (22RSCR) for the Flex Benefits class in Chicago on January 14, 1997. Record results for all employees who attended the class:

Employee Number	Training Class Results
1114	Employee passed the class, missed no days, and met all objectives.
1234	Employee passed this elective class but missed a half day because of a work conflict. All objectives were met.
2012	Employee missed one and a half days of the class because of a death in family. This class should be recorded as Incomplete.
3001	Class results are missing. Bypass this employee.
3011	Employee failed the class even though no class time was missed.

Review of Questions Answered

1. How are training class results processed?

After training results are entered using the Process Class Results form(22RSCR), the actual processing depends on the following:

If the class was attended and passed: (1) The employee's Training Required form (31RSCR) for the class is deleted; (2) the employee's Training Results/History form (30RSCR) is updated; (3) the employee's Skills And Competencies form (33-SCR) is updated with the skills attained as recorded on the Skills panel of the Course Directory form (10RSCR) ; and (4) class results are updated on the Class Results form (51RSCR).

If the class was attended and failed: (1) The Training Required form (31RSCR) is marked with a Failed indicator and retained since the employee still needs to take the class; (2) the employee's Training Results/History form (30RSCR) is updated; and (3) *class results (showing Failed) are updated as viewed on the Class Results form (51RSCR).*

If the employee did not attend or was wait-listed but did not get into the class: (1) A Training Required form (31RSCR) is created for the employee if it did not previously exist; and (2) the employee level registration record is deleted.

2. What options are available when processing training class results?

   Class results can be entered for a selected registered and/or wait-listed employee by entering the employee number on the first panel of the Process Class Results form (22RSCR).

   By leaving the employee number blank, an automatic process to record class results for all employees registered for the class can be started. Use the Next button on the second panel of the of the Process Class Results form (22RSCR) to automatically scroll through each registered and wait-listed employee to record class results.

   If an employee has passed a class for which objectives have been established, you can select and check off the objectives that have been met or indicate that all objectives have been met.

   The Cancel option button is available to back out of the recording class results process and return to the first form panel.

3. What are the methods of viewing training class results?

   A number of options are available as listed below:

By class	*Online list*	*51RSCR*
By class	*Hard copy*	*33RRPT*
By employee	*Online list*	*30RSCR*
By employee	*Hard copy*	*21RRPT*
By training location	*Hard copy*	*45RRPT*

4. How are training class evaluations processed?

   Evaluation forms for class participants to fill out can be produced by the Class Evaluation report (24RRPT) if the Evaluation Required text box on the Class Schedule form (13RSCR) was checked. The Process Class Evaluation Results form (23RSCR) is then used to enter/record these results as filled out by class participants.

5. What options are available when processing class evaluation results?

   Class evaluations can be recorded without tying each evaluation to a specific employee, or by tying each evaluation to the employee who performed the evaluation.

   Up to 10 evaluation categories are available; these are unique to the organization, not to the class itself.

Completing and Analyzing Training Costs

Apply the Concept

1. How would using the optional Analyzing Training Costs feature be helpful to your organization?

   Your answer will be specific to your organization. However, it should include mention of how this feature facilitates viewing and analyzing the costs incurred with developing and delivering training classes. These, in turn, can be used to track related costs and make decisions based on how much is being spent to develop and conduct the various types of classes. In other words, this is another feature of the system that helps management make informed decisions about the future direction of the training function within an organization.

2. Describe the tools available in Training Administration to help organizations view and analyze costs.

   The Training Class Costs Summary form (35RSCR) displays a detailed breakdown of all costs associated with a training class (course, class, and employee costs). It also provides summary totals for all class types and total costs for all three costing options.

   The Training Expenditure Charge-Back report (27RRPT) lists class training costs that an organization may wish to charge back to employees.

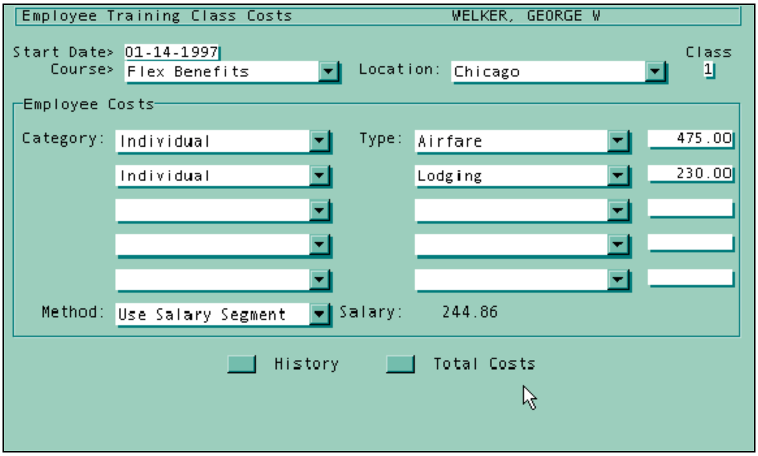
   The Training Expenditure Disbursement report (28RRPT) summarizes, by provider, class cost—defined as the total of all costs with a cost category of Equipment, Operating, Miscellaneous, or Per Head multiplied by the number of class participants.

   In addition, the Employee Training Class Costs form (34RSCR) provides an inquiry view of all employee-level costs by selecting the Total Costs button at the bottom of the form. Costs included on this panel have category Options of Individual, Participant, and Per Head.

Extended Practice

1. George Welker's manager wants to track all costs associated with George's participation in the Flex Benefits class he is taking on January 14, 1997, including salary expense for the two days of training. Access the appropriate form to record these individual employee-level costs:

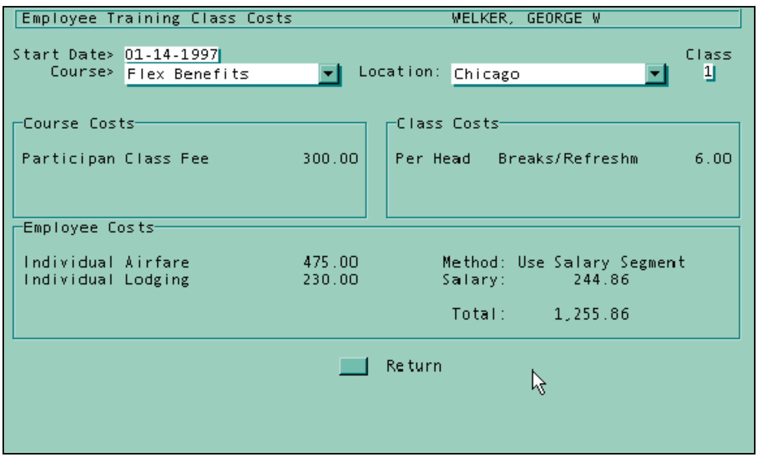
   Airfare: 475.00
   Lodging: 2 nights at 115.00 each
   Salary: Allow George's salary segment to determine the amount of salary expense to be included in these costs.



2. Explain how the salary figure that appears was calculated. How can you verify that it is correct?

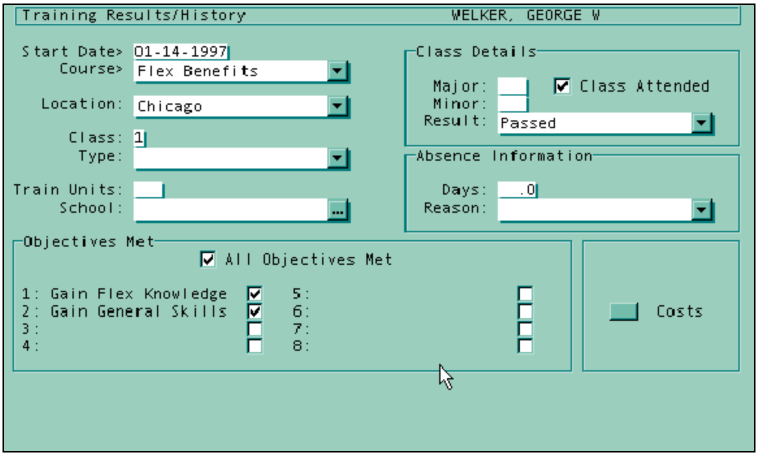
   Class hours are shown as 16 on the Class Schedule form (13RSCR). The method used to calculate this employee's prorated salary for the length of the class is taken from his salary segment on the Salary Assignment/Changes form (40-SCR). His hourly rate is listed as 15.3040. This rate times 16 hours equals 244.86, which is what displays in the Salary.

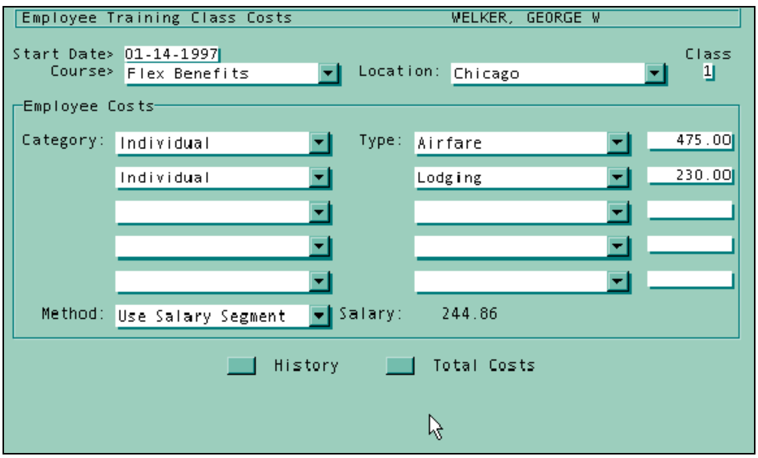
3. Click the Total Costs command button. What types of cost categories are included in the 'Total' that is displayed?



Only the cost categories of Individual, Per Head, and Participant will display on this employee-level class cost form (34RSCR). For this employee, only the categories of Participant and Individual are included in the total.

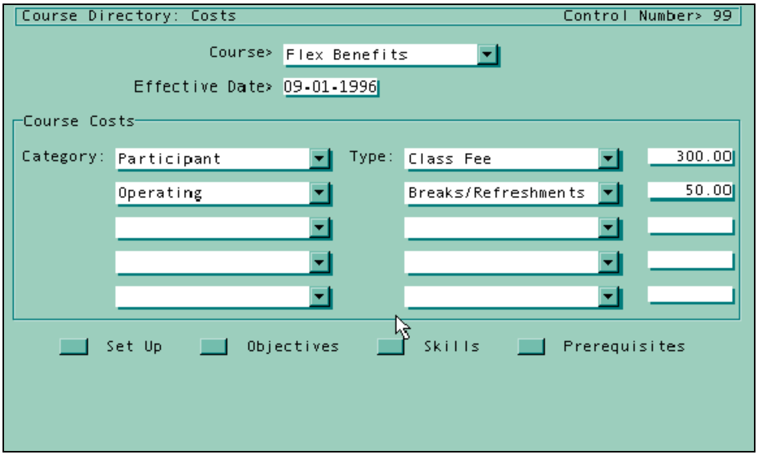
4. Return to the first panel and click on the History command button. Review the information that displays. Click on the Costs command button on this form. Where does it take you?





The History command button takes you to the Training Results/History form (30RSCR) for this class for this employee; clicking on Costs command button returns you to the Employee Training Class Costs form (34RSCR).

5. Check the Costs panel of the Course Directory form (10RSCR) for Flex Benefits. Are any of the costs listed there not reflected on the Employee Training Class Costs form (34RSCR)? If yes, can you explain why this is so?



Only the Operating costs associated with Breaks and Refreshments are not included at the employee level. Only the cost categories of Individual, Per Head, and Participant that can be associated with a specific employee will appear on the Employee Training Class Costs form (34RSCR).

Review of Questions Answered

1. What are the cost categories?

   As delivered, the system uses six cost categories: Equipment, Individual, Operating, Miscellaneous, Per Head, and Participant, as defined in the Cost Category option list (TR14). The categories of Individual, Per Head, and Participant indicate employee-level costs, while the others indicate either course- or class-level costs.

2. What are the different types of costs?

   For each cost category, a cost type must be entered as defined in the Cost Category option list (TR14). Examples include instructor fee, class fee, room and equipment rentals, lunch and refreshments, airfare, and lodging.

3. What are the options when recording costs?

   Costs may be set up at the course level using the optional Course Costs panel of the Course Directory form (10RSCR). Examples include cost of books and course fees, which might be standard for all classes within a course and therefore are set up at the course level.

   Costs may also be established at the class level using the optional Class Costs panel of the Class Schedule form (13RSCR). For example, different instructors may charge different fees for teaching the same course, so these costs differ at the class level.

   Last, costs associated with a specific employee can be set up using the Employee Training Class Costs form (34RSCR). Examples of employee-level costs are airfare, *lodging, and prorated salary expense based on the number of instructional hours for the class.*

Glossary of Terms

.EXE
A binary file containing a program in machine language that is ready to be executed.

.INI
A file that contains the parameters (values) used by the .exe file (program).

360-degree appraisal
Appraisals that include evaluations from an employee's managers and supervisors, peers, subordinates, and even customers, clients, and suppliers.

Absence data
Employee-level absence information that is entered on the absences forms.

Absence point
User-defined number that may be assigned for a particular absence and that can be totaled over time to determine if an employee is within the accepted number of absences for a time period.

Absence type
A classification of an employee absence, such as 'jury duty' or 'sick'. Employee absences are recorded by date and absence type.

Account timeout
The period of time that elapses before a user's account becomes invalid because of inactivity.

Accumulator id
A three-position, alphanumeric identifier for a benefits accumulator.

Acrobat
A suite of programs developed by Adobe Systems, Inc. For creating and distributing electronic documents. Programs in the suite allow you to create a portable document format (PDF) file for a document. You can then distribute the PDF file electronically to people who view the document with their freely distributed acrobat reader. People viewing a PDF file (or document) with the Acrobat Reader see the document with the exact layout intended by the author.

Action button
An action button performs an action such as saving the information you entered or telling the system you finished reviewing a page. An action button consists of an icon (or button) accompanied by underlined text (link text). For example, at various places throughout eCyborg Interactive Workforce you may see an action button displaying a check mark accompanied by the underlined text 'save changes'. You can click either the text or the button to save your changes to the page.

Activity code
Describes the clock transaction (ring) activity, such as clock start or meal end.

Activity types
With the time and attendance solution, you can set up the system so that an employee or group of employees may clock in and out for up to eight different activities: clock-in (1), break 1 start (2), break 1 end (3), meal start (4), meal end (5), break 2 start (6), break 2 end (7), and clock end (8).

Actuarial valuation
An examination of a pension plan to determine if contributions are being accumulated at a rate sufficient to pay the promised pensions.

Administration home page
The administration page that displays when a user logs on using his or her administrator user ID and password. The administration page displays links to individual administrator pages (eCyborg Interactive Workforce, Human Resources Administration, Benefits Administration, and Payroll Administration).

Administrative User ID
User ID created by an administrator with the role of eCyborg Interactive Workforce administrator. This ID

differs from the employee user ID generated for the administrator.

Aggregate tax method
Method of calculating taxes in which year-to-date income is used to project annual wages (using prorating), on which taxes are calculated. With this method, the amount of tax withheld can vary from pay period to pay period. This method is useful in preventing a salesperson from being over withheld as the result of fluctuations in commission over various pay periods. It is activated on the payroll solution by selecting aggregate/cumula tax (9) from the Withholding Method (PR09) option list on the Employee Tax Record Maintenance form. It is also referred to as cumulative tax calculation method.

Annualization
Process of calculating the annual amount of pay based on the number of pay periods and pay period amounts. Calculated by multiplying the number of pay periods in the year by the current taxable wages in the pay period.

Annualization factor
The factor that is used to multiply current pay period wages to determine annual wages. For example, a monthly pay frequency has an annualization factor of 12. The Payroll Solution typically calculates income taxes on the basis of annual wages. The annualization factor is entered by selecting an option from the Annualization (PP33) option list on the Company Pay Frequencies form for each pay frequency.

Annuitant
Someone entitled to receive or currently receiving payments from an annuity.

Annuity
A contract providing an income for a specific period of time.

Applicant
A person who is applying for a job or position in your organization. Internal applicants come from within your organization while external applicants come from outside of your organization.

Appraisal rating
A method of ranking the performance of an employee during a given period using options ranging from 1-outstanding to 5-unsatisfactory.

ASCII
American **S**tandard **C**ode for **I**nformation **I**nterchange. The basis of character sets used in almost all present-day computers; US-ASCII uses only seven bits to convey some control codes, space, numbers, most basic punctuation, and unaccented letters a-z and A-Z.

Ask Me wizard
A natural language, full-text search facility within the online help. This allows users to type in a question, the wizard interprets the question, and displays related topics.

As-of reporting
Ability to report on data for a specified date or date range.

Audit record
A snapshot of information entered on a form. Audit records are stored on the employee database and are displayed on audit reports in an is/was reporting format. Adjustments and time entries are stored as audit records and are extracted for a payroll run in which they update the employee's record.

Audit report
A report that is available after the running of a program; it lists created records as well as error messages for records that could not be created.

Audit trail
A report of changes made to your employee database, such as the Payroll Audit Trail (0101) report.

Authorized absence
Absences that are generally considered as paid time away from regularly scheduled work.

Automatic plan
A plan that has been defined with a default option and default pre- or posttax indicator (also known as core/default plan).

Average deferral percentage
Percentage used in nondiscrimination and compliance testing mandated by US law. The calculation is defined as the contribution divided by the compensation.

Average rating
A rating used for performance appraisal systems with categories weighted by relative importance, where the average score reflects the weighted scores.

Back
Takes the user back to the previous page.

Badge
Time and Attendance Administration can be set up to use two different types of badge readers. The type of badge your organization uses, is determined by your third party badge reader software. The two types of badges are magnetic badges and bar code badges.

Badge error
Occurs when a badge is used to create a clock transaction (ring) and an employee has not been assigned to the badge.

Badge number
Up to ten-character ID stored on employee badges and clock transactions (rings) that tie clock transactions (rings) to an employee on the ***Employee Database*** (on page 350).

Banner
Banner forms separate groupings on forms produced from the Federal, State/Local, and Employee Queues.

Batch
A group of transactions submitted to the batch payroll processing system. Also, a collection of time entries that corresponds to an employee group, such as department.

Batch control record
Precedes all transactions separated by group; used to identify the company to which the transactions in that group apply. By entering anticipated totals for dollars and hours on the batch control record, you may verify your totals against those accumulated by the system.

Batch layout facility
A program that produces a segment layout for loading forms via batch. This was formerly known as BATCHL.

Batch number
An alphanumeric field on the batch control record containing a user-defined value used to identify a unique group of time entries or transactions.

Batch processing
A processing method that runs in the background and requires limited intervention.

Benchmark job
A standard or point of reference for determining total job points.

Beneficiary
A person named by the participant in an insurance or pension plan to receive any benefit provided by the plan if the participant dies.

Benefits control number
A four-position, alphanumeric identifier that specifies which tables are accessed for an organization.

Benefits statement
Report that indicates the coverage and cost of each benefits plan in which an employee participates.

Big option list
A large option list that includes a search facility. This was formerly known as a big codeset.

Bridge loan
A loan made to assist a relocated employee in purchasing a new residence before the sale of their old residence is complete.

Browser
Software application used to locate and display web pages. Modern browsers give users access to graphics, text, and multimedia information, including sound and video.

Budget plan year
A twelve-month period over which a salary budget is effective.

Budget scenario
The result of creating one or more salary plans in order to see the effect of different increase policies on the budget.

Budget setting
The process of analyzing and selecting an organization's salary budget for the coming plan year.

Cafeteria plan
A specific type of flexible benefit plan that allows employees to select their benefits from a number of benefit plans. This term may be used interchangeably with flexible benefits plan.

Calculation option list
An option list that contains calculation formula. This was formerly known as a calculation codeset.

Candidate
A person who is applying for a job or position in your organization and is under consideration.

Career planning
Providing career incentives such as advancement and additional education and training for individual employees in order to meet projected organizational needs.

Carrier record
A carrier record supplies information from one application area to another application.

Case-sensitive
A program that distinguishes between uppercase (capital) and lowercase (small) letters. A case-sensitive program that expects you to enter all commands in uppercase will not respond correctly if you enter one or more characters in lowercase.

Catalog
A file (with the extension of .cat) that contains all the information necessary for Impromptu to access and retrieve information from a relational database. The catalog provides a business view of the data, as well as information about what database to access, where the database is stored, and how the tables in the catalog are joined in the datamart.

Category code
General term used to refer to the option selected from category (PP01 and PP02) option lists on the company earnings and company deductions forms. It is used to indicate the type of earning or deduction.

CE/H
Abbreviation for considered earnings/hours.

Change control facility
A facility for updating and comparing your system control repository. This was formerly known as MAINTI/MAINTO.

Check box
A standard windows control that displays a yes/no setting, either checked (yes) or unchecked (no).

Check digit
Unique identifier that is generated by the TBLCHK program and used by the system to check the table relationship records.

Checklist
A list of tasks to be performed in sequence. The checklist displays within the navigator area. Checklists link tasks and other checklists together to perform work flow functions. Users can display a checklist by selecting a checklist icon within the tasks in the navigator.

eCyborg Interactive Workforce specific—a list of tasks/pages generally displayed in a chart with hot spots (links) for the checklist items. The user clicks the link to access the page.

Checklist item
An item appearing within the navigator when a checklist is being displayed. Checklist items include tasks, dialogs and even other checklists.

Checklist item status
Defines the status of a checklist item. These can be:

- Available to perform
- Required
- Not available
- Already completed

Checklist margin
The area of the navigator that displays the checklist item status when a checklist is being displayed.

Checkmark
If in the done column of a eCyborg Interactive Workforce checklist, indicates that an item on a checklist is complete. Can also indicate OK, finished, submit, and so forth.

Class
A class is an occurrence of a course that is specific to a location and a date, that is being administered using Training Administration. For example, 'eCyborg: Using the Web Client′ on Thursday, December 21, in Chicago is a class of the course 'eCyborg: Using the Web Client'.

Class evaluation results
These are the results as entered on the evaluation forms filled out by the class participants upon completion of the class. These results are recorded on the class evaluation results form.

Client data file
File containing information replicated from the System Control Repository. Used by client workstations to improve response time, since editing can be performed locally. May be located on each client workstation or may be located on a server and be shared by multiple client workstations on the network. Formerly known as the Client Control File.

Clock in and out
Also referred to as swipe/swiping the clock. When an employee uses their badge to record an activity time, they must pass their badge through the badge reader. This action can be referred to as clocking in and out.

Clock transaction
Record containing the information needed to create time entries for payroll processing. Clock transaction (ring) information includes date, time, and badge number. A clock transaction (ring) is created when a badge is swiped through a clock.

Clock transaction warning
Occurs when a clock transaction (ring) time falls outside of an employee's schedule warning times.

Closing costs
The costs associated with the purchase of a new house.

CLP
Abbreviation for certificates, licenses, and permits.

Codeset
A list of valid code values and associated descriptions from which you may select an appropriate entry. This is now known as an option list.

Coefficient
Customer-defined value used in the formula to calculate a new salary grade midpoint value.

Combined register (2222) report
A report that provides a detailed printout of all earnings, hours, taxes, and deductions for all the payments and adjustments made on a payroll run. It is Report Generator 2222.

Command button
A standard windows control that initiates a command of sets an option (previously known as push button).

Common tax organization
A method of setting up taxation in an organization in which all necessary tax specification records are contained in a single organization. The common tax organization often handles tax specification records more efficiently, since it avoids duplication of the federal tax records and of any state or local records used by multiple companies.

Communication event
A letter or email that can be triggered automatically or manually within the system. Communication events are set up by the system administrator and usually include data from a form or record.

Compa ratio
The ratio of a given salary compared with the midpoint of the salary range. The formula is the salary divided by the midpoint.

Competency
A requisite capacity to perform a single or set of skills or activities.

Complement limit
A 'complement limit' is the maximum number of complement units that can be assigned to a position at any one time.

Complement position
A 'complement position' is a position that is included in complement control.

Complement unit
A 'complement unit' is the type of unit used to measure the value of a position, for example, headcount, fte or hours.

Compliance
Conformity in fulfilling legal requirements.

Component
The first level of functional organization on the navigator or menu, such as employee resourcing or employee development.

Component icon
An icon that denotes the current component. There are a number of components within the system. Each component appears as an icon on the navigator.

Component plan
Any plan included under the flex master plan or grouped together under a group master.

Condition
Predefined criteria that can be added to a report's filter.

Considered earnings
An employee's paid earnings that are to be accumulated, based on plan rules, for use in determining credited service or calculations of final benefits amounts.

Considered earnings/hours (CE/H) accumulators
Used only in benefits plans to accumulate the earnings and hours an employee has acquired toward eligibility for a deferred plan. Accumulators may be retained on a monthly, quarterly, or annual basis.

Considered hours paid
Actual number of hours for which an employee was paid and that are to be accumulated based on plan rules.

Considered hours worked
Actual number of hours an employee worked. These hours are to be accumulated based on plan rules for use in determining credited service for a plan participant (or for a non-participant if eligibility has been met).

Consolidated reporting
Option that enables packaged reports to be processed for all organizations (consolidated).

Customer-defined value used in the formula to calculate a new salary grade midpoint value.

Context-sensitive help
Information about an object and its current condition. It answers the question 'what is this?'

Contribution type
The type of contribution being made to a benefits plan. The system allows for the deduction and accumulation of up to five different contributions per plan: basic employee pretax, basic employee posttax, supplemental employee pretax, supplemental post-tax, and organization.

Control 1-2
A company or group of employees (now known as an organization).

Control levels
A hierarchy of values used to determine the breakdown of an organization for reporting purposes. The values are user-defined.

Control number
An alphanumeric designation assigned to a table to define the table records that will be used for each organization.

Conversion
A method for transferring data from either a manual or automated system into the system.

Co-ordinator
A coordinator is an instructional institution, organization or person who administers training courses.

Core plan
One of the plans that make up the minimum benefits in which all eligible employees are required to enroll—for

example, medical and life. Employees who fail to return enrollment forms with their benefit choices may be automatically enrolled in the core plans (also known as default plans).

Cost categories

Cost categories are classifications or divisions used to separate costs for training into broad groupings, for example, equipment or operating costs.

Cost types

Cost types are used to further define training costs. For example, the category of equipment could be further broken down into the cost type of overhead projector and monitor rental.

Costing

Projecting the future cost of a benefits plan contribution for budget purposes.

Course

A course is a separate unit of instruction in a subject being administered using the training administration solution. For example, 'eCyborg: Using the Web Client′ is a course. This may be applied to a training course provided internally or externally.

Course directory

A course directory is a list of all available courses.

CPI

Characters **p**er **i**nch

Credited service

The number of years of employment for which an employee is given credit for use in determining final benefits amounts.

Crew

A group of employees who rotate from one schedule assignment (shift) to another, following a rotation pattern.

Crew code

A unique, one-character, alphanumeric identifier of a crew.

Cross-reference keys

Provide direct query access to data within the system database.

CSL

Abbreviation for ***Cyborg Scripting Language*** (on page 347).

Cumulative data

Also called 'to-date data'. includes payroll earning, deduction, net pay, taxable wage, and tax to-date figures for employees.

Cursor

A special symbol, usually a solid rectangle or a blinking underline character, that signifies where the next character will be displayed on the screen. To type in different areas of the screen, you need to move the cursor. You can use the arrow keys or a mouse to move the cursor.

Customer-defined

Values that depend on an organization-specific definition--for example, option list.

CYB88X

An English Language root program used to set the production version switch to on or off, in addition to other automatic settings.

Cyborg Scripting Language

Cyborg's fourth-generation programming language, previously called English Language.

Data extract

Method for extracting information from The Solution Series for the purpose of subsequently loading it into eCyborg Interactive Workforce databases.

Data load

The process of moving data from one system or media to another. It encompasses data mapping, data extraction and conversion, and the actual loading of the data. Also the method of loading data extracted from The Solution Series into eCyborg Interactive Workforce databases using programming scripts.

Data mapping

The process of identifying, comparing, and matching data (field to field) to be converted from one system or media to another.

Database

A collection of information organized so that a computer program can quickly search for and select

specific pieces of data. Think of a database as an electronic filing system.

Datamart
Relational tables with a defined structure that have been designed to automatically accept full datamart extract data seamlessly.

Deduct credits by plan
A method of distributing flexible benefit credits. The total monetary value for credits is prorated based on the employee's pay frequency. Credits are given to employees as earnings added to their pay; the cost of individual employee plans are collected through payroll deductions and listed on the employee's payment stub.

Deduct credits by plan method
A method of distributing flexible benefit credits. Credits are given to employees as earnings added to their pay; the individual employee plan costs are then collected through payroll deductions.

Deduction
An amount subtracted from available net pay. Deductions can be involuntary (child support or maintenance) or voluntary (pension plans).

Deduction cycle
A predetermined schedule for taking voluntary deductions, based on the defined frequency.

De-enrollment
The process of shutting off plan benefits for an employee for reasons other than a separation activity.

Deferred compensation
Any benefit that is not immediately payable to an employee, but is instead deferred to a later date. This term refers to retirement vehicles, including all defined benefit, defined contribution, stock, and thrift/savings plan.

Deferred plan
Any benefits plan in which benefits are not immediately payable to an employee, but are deferred to some later date. This term refers to retirement vehicles, including all defined benefit, defined contribution, stock, and thrift/savings plans.

Delimiter
A character that tells the system where an item of data ends and another starts.

Dependent
An individual who relies or depends on another for his or her support.

Dependent number
A unique number in the eCyborg Interactive Workforce database that identifies an employee's spouse and his or her other dependents.

Detail page
A page in eCyborg Interactive Workforce that displays detailed information. Summary pages contain links to the detail for each record.

Dialog box
A secondary window that appears on the screen to present information or request input. Dialog boxes are generally temporary—they disappear after you enter the requested information.

Disability insurance tax
A tax required by some us states to be funded by employee-paid contributions to pay all or part of the cost of disability insurance coverage. On the Payroll Solution, us state disability insurance tax records are established as Type 4 taxes.

Disciplinary action
Action taken against an employee for violation of an organization policy or procedure.

Discretionary increase
A salary increase amount or percentage determined by a manager according to the guidelines established by the organization.

Display
Make data or images display on a computer monitor.

Display box
An area on a form in which data is displayed (formally known as an inquiry field).

Disposable income
For garnishment purposes in the us, an employee's earnings minus deductions required by state or federal law.

Distributed location
A customer location where data changes are replicated and may be distributed. A DL is identified to the system by a unique 5-position alphanumeric node ID.

Distribution
The process of passing data from a source DL to one or more target DLs.

Distribution rules
A set of parameters that determine how data will be distributed from one DL to another. These are defined at each DL by the owner using the distribution rules screens. Distribution rules are stored in tables that are not replicated (thus, they cannot be distributed).

DL
Abbreviation for ***distributed location*** (on page 349).

Double-click
Click a mouse button twice in rapid succession.

Drop-down list
A drop-down list is a view of the acceptable entry options available for a text box.

Drop-down list box
A standard windows control that displays a current setting but can be opened to display a list of choices. The user selects a choice by double clicking on the choice. The user can type into the field, and the system moves the list of choices to the last letter typed.

Dynamic SQL
Statements created by a program that must be interpreted and converted to executable sql statements at run time.

Earned income credit
A refundable amount that reduces the tax owed by certain low-income individuals in the us who meet adjusted gross income levels.

Earning
Money paid in return for work performed or services rendered. In Payroll Administration, earnings are separated by earning numbers into various categories such as regular pay, overtime pay, shift pay, bonuses, and so forth.

Earnings category
Used to categorize similar earnings. For example, all the overtime earnings can be grouped into category 01, all the shift differentials/premiums into category 06, and so forth.

EBCDIC
Extended **B**inary **C**oded **D**ecimal **I**nterchange **C**ode; binary code for alphabetic and numeric characters developed by IBM for its computers.

eCyborg Interactive Workforce Home
Button on every page that returns the user to the eCyborg Interactive Workforce Home Page.

eCyborg Interactive Workforce Home page
Home page that displays each time employees log on to eCyborg Interactive Workforce after completing the new user tasks on the New User Home page.

Effective date
Date on which an event takes place, for example, an enrollment or benefits plan change.

EIC
Abbrevation for ***earned income credit*** (on page 349).

EL
Abbreviation for English Language, now called CSL (Cyborg Scripting Language).

Electronic Performance Support system
Online tools that help users perform their job quickly and efficiently. EPSS can include online help, computer-based training (CBT), electronic manuals, wizards, and so on.

Email
Literally 'electronic mail'. This is a message that is sent to one or more people within or outside of your organization by an automated email software package.

Employee cancellation
An employee cancellation occurs when an employee is canceled from attending a training class or training program.

Employee Database
The file that contains organization and employee records. This is File02. It was formerly known as the Master File.

Employee Database record
The complete record for an employee. It may be composed of multiple physical records.

English Language
Former name of Cyborg's fourth-generation programming language, now called Cyborg Scripting Language.

Enrollment form
A customer-defined form used by employees to record their benefits elections and any associated dependent and/or beneficiary information.

Entitlement accrual
An accumulation of hours for an employee benefit, such as sick leave or vacation time, commonly known as an accrual.

Entity
Each Organization Unit, Job, Position, and Incumbent is an entity. Together they are entities.

Entry field
An area on a screen or browser page where the user can input information.

Entry form
An entry form is a form used to enter data.

Environment
The host platform and workstations where your Cyborg system resides, and any communication protocols. Also, a work space dedicated to a specific processing type. For example: development, test, and production.

EPSS
Abbreviation for ***Electronic Performance Support system*** (on page 349).

Establishment Reporting
Establishment Reporting occurs when an employer with several business locations chooses to file wage reports, broken down by location or unit, to the Social Security Administration. Each unit is identified by a four-character code, called an Establishment Number. The employer obtains approval from the SSA to use Establishment Reporting. Establishment Reporting does not apply to 1099s.

Event
The combination of a trigger (changes made to system data) and an action (the creation of an email or letter). Events always consist of these two component halves.

Excused absence
Absences from regularly scheduled work that can be considered as either paid or unpaid time off.

Extract file
A data file generated to be used by another system or application.

Federal Insurance Contributions Act
The United States Federal Insurance Contributions Act imposes two taxes on both employers and employees. Tax is withheld from an employee's wages to finance the Old-Age, Survivor's, and Disability Insurance (OASDI) social security program and the Hospital Insurance (HI) medicare program. Employers are then required to match the amounts withheld from employees. On the Payroll Solution, employee information for FICA-OASDI social security tax is entered on tax record 101 and FICA-HI Medicare tax on tax record 103.

FICA
Abbreviation for Federal Insurance Contributions Act.

Field
A data item on the database. This is usually displayed on a form as a text box.

eCyborg Interactive Workforce specific—A space allocated for a particular item of information. A tax form, for example, contains a number of fields: one for your name, one for your Social Security number, one for your income, and so on. Every field has a name (also called a field label).

Filter
Device used by report to select certain rows of information from the database, thus limiting the amount of data from the database to be viewed in the report.

Finished
Users click Finished when they have completed all information on a checklist or other *ESS* page.

Flat rate tax
A US local tax that is calculated as a standard percentage rate and that is calculated in the same way for all employees (that is, factors such as marital status do not enter into the calculation). For many such local taxes, Cyborg does not provide tax specification information on the Tax Authority File. Instead, you need to enter a Tax Specification Record for the tax on a Tax Specification Information form, indicating the tax rate in the Flat Rate text box.

Flex credits
Units granted to an employee in order to purchase benefits under a Flexible Benefits Program.

Flex Master Plan
Defines your Flexible Benefits Program and ties component plans together as a group. Employees are enrolled in the Master Plan and then select the benefit plans in which they wish to participate—for example, medical, dental, and life. Flex master plans are set up in Benefits Administration and used by eCyborg Interactive Benefits to display benefit plans to users for initial and open enrollment.

Flex plan
A benefit plan where, in addition to a core of basic benefits (if applicable), the organization/company allocates to each employee a credit for purchasing additional benefits tailored to their individual needs. Flexible benefit plans may include a flexible spending account.

Flexible Benefits Plan
A specific type of benefit plan that allows employees to select their benefits from a number of benefit plans. This term may be used interchangeably with cafeteria plan.

Flexible Benefits Program
A benefits program in which an organization may allocate to each employee a pool of credits or a monetary amount that is to be used to purchase benefits tailored to individual needs.

Flexible Spending Arrangement
A benefits welfare plan set up as an account in an employee's name that is used to reimburse the employee for certain personal expenses. In the United States, these accounts are provided by employers as a way for employees to pre-fund dependent care, legal services, or medical expenses with pretax currency.

Folder
Logical organization device for the content of a Cognos catalog.

Form
A window of information that appears within The Solution Series, including text boxes and other controls. This was formerly known as a screen.

Form area
An area of the window that contains a form.

Form Builder
A tool provided by Cyborg Systems for use with The Solution Series for designing forms.

Formal education
Education that is obtained from a college or university.

Forward
Displays the next page.

FSA
Abbreviation for Flexible Spending Arrangement.

FTE
Abbreviation for Full Time Equivalent.

FTP
File **T**ransfer **P**rotocol. A means of allowing a user on one computer to transfer files to and from another computer over a network

Full Time Equivalent
The ratio of total working time to the time that represents full time employment for a single employee. For example, an FTE of 0.5 means working half of the time that represents full time employment.

Funeral days
Absences from regularly scheduled work due to a funeral, which at the discretion of the organization, can

be considered as authorized or unauthorized, paid or unpaid time off.

Gap analysis
Comparison of a current state of being with a desired state of being. For example, you could perform a skill or competency gap analysis on individual employees or on the workforce as a whole, comparing the existing state of skills and competencies with the required state or level of skills and competencies.

Garnishment
A legal procedure authorizing a deduction from an employee's earnings to satisfy a legal requirement.

General ledger interface
A file that provides a balanced payroll journal for the period. This file contains journal entries for labor expenses, withheld deductions, income, disability, UI, and other withheld taxes, net pay, and company-paid taxes. The interface may also be produced on paper.

Go to details
Displays a new page with detailed information. Used on summary pages.

Graphical User Interface
The Solution Series provides integrated human resource and payroll functionality via the Microsoft Windows Graphical User Interface. These are the elements that display on your screen.

Grievance
A formal complaint made by an employee against the organization usually because of an unsatisfactory working condition or other work-related dispute.

Gross wages
The total of all earnings paid to an employee.

It is stored in the Total Pay (field 119 of the US Tax Authority File) field of the employee's US FICA tax record 101 (FICA-OASDI). This figure appears on the Combined Register (2222) report as Total Pay. It does not appear on US W-2 forms.

Group box
A standard Windows control that groups a set of controls.

Group plan
Defines any number of benefit plans tied together as a group. Group plans are used to define common eligibility and to cluster plans for reporting purposes.

GUI
Abbreviation for Graphical User Interface.

Handicap
Having a physical or mental disability that substantially limits activities especially in relation to employment or education.

Health and safety profile
Data on the employee record that includes information such as the employee's blood type, language, physician, emergency contacts, and any disabilities.

HED
Acronym for Hours, Earnings, and Deductions. Each earning or deduction must be established in The Solution Series with a unique identifying three-digit code. HEDs are used to record pay, hours worked, and deduction amounts and arrears for each employee.

Help
Hot spot on an eCyborg Interactive Workforce page that displays step-by-step directions for completing the page.

History record
Part of an employee's payment history; a snapshot of a check paid to an employee or an adjustment made to an HED or tax.

Holiday days
The time off that all employees are entitled to based on the decision of the organization or government regulation.

Home page
The main page of a Web site that generally serves as an index or table of contents to other documents stored as pages on the site.

HTML
Abbreviation for **HyperText Markup Language,** the authoring language used to create documents on the World Wide Web. HTML defines the structure and layout of a Web document by using a variety of tags and attributes.

Import facility
A tool delivered with The Solution Series that moves data from an external source to any organization or employee form.

Import record
A line in a spreadsheet or delimited file that contains employee or company data.

Inactive plan
A benefits plan that no longer allows employee enrollment.

Inactive tax record
An employee tax record that is no longer in effect for a given employee. Neither wages nor taxes are accumulated for the particular tax record. However, any wages and/or taxes already accumulated remain until clearing is performed. Such clearing is usually performed in preparing the Employee Database for a new year. The inactive records can be deleted at this time. The process of making a tax inactive is called deactivating.

Incumbent
An incumbent is an employee linked with a specific position. The linking of an employee with a Position is an incumbency. An employee may be linked to more than one position; in other words, an employee with multiple incumbencies. A position to which more than one employee is linked has multiple incumbents.

Information-level security
These records grant access to employee and table data via specific password records.

Initial Administrator
Only user whose user ID and password are created during installation. The initial administrator always has authority to all administrative functions: eCyborg Interactive Workforce, Human Resources Administration, Benefits Administration, and Payroll Administration, and can assign administrative roles to others by creating administrative user IDs and passwords.

Initial passwords
Password generated by eCyborg Interactive Workforce for each user ID extracted from The Solution Series. Users must create a user-defined password when they log on to eCyborg Interactive Workforce for the first time.

InitialAdmin
See Initial Administrator.

Inquiry form
A inquiry form is a form used to view data already entered.

Instructional text
Any paragraph(s) on the page that explain the function of the page or fields to the user.

Internal candidate
An employee of your organization who is applying for another job or position in your organization.

Internet
A global network connecting millions of computers.

Intranet
A network belonging to an organization, usually a corporation accessible only by the organization's members, employees, or others with authorization and used to share information.

Investment funds
Different options or accounts available to employees for allocating their contributions, usually applicable to thrift/savings plans.

IPEDS
Integrated Postsecondary Education Data System.

Job assignment
A job associated with a particular employee.

Job code
A designation for a job assignment.

Job streams
A generic reference, Job Control Language, for your operating system's command language.

Alternately: Jobstreams

Job type
A generic category that further defines a particular job.

Jury duty
This is compulsory service on court appointed juries. Employers are required by law to excuse jury duty

related absences. They are not, however, required by law to pay the employee during this time away from the job.

Label
Text that describes the information the user enters into the field.

Labor record
A record containing the hours, amounts, associated charge-to control levels, and function assigned on the employee's Payroll Home Location/Pay Allocations form.

Leave of absence
Occurs when an employee leaves the organization for a period of time, usually temporary, for personal reasons such as medical leave.

Log off
Logs the user off the system. When referring to the Log Off button, use initial caps.

Logical Employee Model
A collection of default employee information that is used to create a model. Logical Employee Model templates are used when hiring new employees to save time and ensure that critical information is established consistently and correctly. These were formally known as LMODELs.

LPI
Lines **p**er **i**nch

Mailing address
An address, other than your legal residence address, to which you have your mail sent.

Maintenance payroll run
A maintenance payroll run automatically updates organization and employee records, but it does not process time entries or generate payments, pay slips, or deposit advices. It is also used to create payment history records.

Major activity
Event that causes a change in an employee's employment status, such as a new hire, termination, or rehire.

Mandatory field
A field that requires the user to enter information before the user can exit the screen or page.

Map file
Stores the predefined relationships between an import file and a form.

Mass time entry creation
Creating time entries for a group of employees through one program execution, such as for a paid holiday.

Master File (0202) report
A Cyborg report that produces a formatted display of the data in an employee's current batch Employee Database record. This includes the wages and taxes accumulated for the employee, covering current, month-to-date, quarter-to-date, and year-to-date information for individual tax codes. It is report generator 0202.

Matrix ID
Unique identifier for each pay-for-performance matrix.

Menu
A list of choices; the choices are generally links that take the user to another screen or page.

Menu bar item
A menu that appears on the menu bar.

Message area
An area of the window that contains messages or selection lists relevant to the current form. The Message Area can be turned on or off.

Method code
One of many specific routines (usually delivered by Cyborg and identified by a two-character code) used to calculate earnings and deductions.

Midpoint
The middle of the span of currency from the minimum to the maximum of the employee salary grade.

Minimart
Relational tables you create so you can insert data from your Subset data extractions.

Monetary perquisites
A privilege or profit that an employee is entitled to that is incidental to regular wages or salary.

Moving expenses
The expenses incurred by an employee due to moving from one location to another for employment purposes.

Multiple master
A file compression technique that duplicates the current employee Permanent Master Record as many times as there are payments to that employee during one pay period. These multiple masters are detail records reflecting the amounts for the payment being made (current), and the adjusted MTD, QTD, and YTD totals. The system uses multiple master records to create history records showing the current payment figures only.

Navigation bar
In eCyborg Interactive Workforce the Navigation bar shows the name of the page you are using, for example, 'Mailing Address'. The top line of the Navigation bar shows the path you took from the Home page to reach the present page. Links on the Navigation bar let you return to the home page or log off the system.

Navigator
Left pane of the work area which forms the main method of moving through the forms. From the Navigator users select the component, process, and task in which they are interested.

Net credit method
A method allocating flex credits. An employee's cost of benefits is calculated as either a net cash earning or a net deduction from the employee's pay. The net amount is the difference, either plus or minus, between the credits allocated to the employee and the cost of his or her flex benefits choices.

New hire
Process of hiring a new employee for your organization.

New user
A user of eCyborg Interactive Workforce who has not yet completed reviewing and updating their personal information on the New User Home page.

New User Home page
Home page that displays for new users of eCyborg Interactive Workforce until they complete reviewing and updating their personal information.

Node
A Distributed Location.

Node ID
A unique 5-position identifier for a node. The naming convention is defined by the user.

Number registered
This is the number of employees registered for a training class. It is updated and displayed on the Class Schedule form.

Object
Each System Control Repository record type is assigned an object code. A single record type can have several object codes assigned to allow limited display.

Object key
A field that allows you to specify the System Control Repository record group you want to display. The value of this field is dependent on the type of information you want to display.

Obsolete plan
A benefits plan that will no longer be used.

Off cycle
An off-cycle payroll run is an additional payroll for the period just completed. An off-cycle payroll run is commonly used to process nonstandard payments, such as bonuses. It is sometimes referred to as an additional or bonus payroll run.

Online
Turned on and connected, for example, printers are on-line when they are ready to receive data from the computer. Users are considered on-line when they are connected to a computer service through a modem. That is, they are actually on the line.

Open enrollment
A period of time during which employees can enroll in or change their benefit choices for the upcoming year, generally in October or November.

Operator ID
A four-character code that identifies the user to the system.

Option
An item in the option list for a field. This was formerly known as a codeset item.

eCyborg Interactive Benefits and Benefits Administration specific—In Benefits, the plan coverage that an employee selects, such as single or family coverage.

Option button
A standard Windows control that allows you to select from a fixed set of mutually exclusive options (previously known as radio button).

Option list
An option list is a list of options that are available within a Text box. This was formerly known as a Codeset.

eCyborg Interactive Workforce specific—Options available in The Solution Series that the eCyborg Interactive Workforce administrator loads in to eCyborg Interactive Workforce. The options are then available in the drop-down list boxes in eCyborg Interactive Workforce.

Organization
A group of employees who are employed in a common structure, governed by the same set of rules or policies, and eligible for the same earnings and deductions For example, your organization may be structured into parts that represent employee groups such as active, union, retirees, applicants, and so forth.

Formerly known as a company or Control 1-2.

Organization Level 3
A customer-defined value used to determine the breakdown of an Organization for Human Resource reporting or selection purposes. This control level may be translated to a division, plant site, section, and so forth, as defined by you.

Organization Level 4
A customer-defined value used to determine the breakdown of an Organization for Human Resource reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Organization Level 5
A customer-defined value used to determine the breakdown of an Organization for Human Resource reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Organization Level 6
A customer-defined value used to determine the breakdown of an Organization for Human Resource reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Organization Number
A six-character user-defined code that represents an organization; the highest level of the organizational structure in Payroll Administration.

Formerly known as a Control 1-2.

Organization Unit
An organization unit ('Org Unit') is a grouping of Positions within an organization (for example, Accounts Department).

Organization Validation table
A table that validates that an organization is valid and payments can be made.

Organization-specific tax setup
A method of implementing Tax Specification Records in which each organization involved in tax processing contains all the specification records required to process taxes for its employees, as opposed to a common tax organization.

Override file
A file used to maintain COBOL or Report Generator changes to the system.

Packaged reporting
A processing mode in which a job is scheduled to be run at a certain time.

Paid absence
Employee absence that will be paid by the organization. A time entry will be created for this absence.

Parallel run
The process of executing the same programs simultaneously on two separate systems to obtain the same or similar results.

Parameter form
A form that is displayed when certain programs are called from the Navigator or menus. The form facilitates entering parameters for the program.

Password
A secret series of characters, generally user defined, that enables you to access a computer, a software application, or a file. On multi-user systems, each user must enter his or her password before the computer will respond to commands.

In eCyborg Interactive Workforce, the password ensures that unauthorized users cannot access user-specific information.

Password aging
The period of time that elapses before a user-defined password expires and the user must change his or her password.

Pay allocation
A means of allocating, on a percentage basis, employee labor hours and amounts to multiple sets of control levels 3 through 6 and function to accurately reflect employees whose labor must be charged to more than one area within an organization.

Pay document
A pay slip or deposit advice with its associated pay stub.

Pay frequency
The interval at which a group of employees is paid. Examples are weekly and semimonthly. Also referred to as a payroll period.

Pay schedule
A predetermined schedule for a calendar year, identifying period-end and payment dates for each pay frequency.

Pay stub
A preprinted form, corresponding to a check or deposit advice that lists all earning, gross pay, taxes, deduction, and net pay information for an employee.

Pay-for-performance matrix
Chart representation of the variables that result from the combination of salary increase information, how much to give and when.

Payment history record
A record documenting the detail information for a payment or adjustment. Multiple payment history records may be generated for an employee, reflecting multiple adjustments or payments. These records include all earning, deduction, and tax information included in the payment or adjustment.

Payroll home location
The location where the employee is normally assigned to work and where labor distribution information is charged. An employee's home location comprises specific Payroll Levels and is always assigned Allocation Number 01 on the Payroll Home Location/Pay Allocations form. The Function field may also be used as part of a home location, depending on your specific requirements.

Payroll Level 3
A customer-defined value used to determine the breakdown of an organization for Payroll reporting or selection purposes. This control level may be translated to a division, plant site, section, and so forth, as defined by you.

Payroll Level 4
A customer-defined value used to determine the breakdown of an organization for Payroll reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Payroll Level 5
A customer-defined value used to determine the breakdown of an organization for Payroll reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Payroll Level 6
A customer-defined value used to determine the breakdown of an organization for Payroll reporting or selection purposes. This control level may be translated to a division, plant site, section, and so on, as defined by you.

Payroll period
A defined period of time for which an employer pays wages to employees.

Payroll Process Control
A series of forms used during the Payroll Process to determine the type of run (payroll run or maintenance run). Allows you to specify the pay frequencies to be paid and which reports are to be produced.

Payroll run
Updates organization and employee records, processes time entries, calculates employee pay, generates pay documents and payroll reports, including the Combined Register. It also produces a variety of special interface outputs.

PCL
Printer **C**ontrol **L**anguage

PDF
A file format that captures formatting information from a variety of desktop publishing applications, making it possible to have formatted documents appear on the screen and be printed. To view a file in PDF format, you need Adobe Acrobat Reader, a free application distributed by Adobe Systems.

Peer-group appraisal
Appraisal that uses performance evaluations completed by an individual employee's co-workers or project team members.

Pending de-enrollment segment
Plans for which an employee is enrolled, but has lost eligibility, as listed on the Pending Plan Enrollment/De-Enrollment form.

Pending eligibility segment
Plans for which an employee is eligible but not enrolled, as listed on the Pending Plan Enrollment/De-Enrollment form.

Performance appraisal
A periodic assessment and ranking of an employee's skills and accomplishments.

Performance appraisal rating
A method of ranking the performance of an employee during a given period using options ranging from 1-Outstanding to 5-Unsatisfactory.

Performance rating
A method of ranking the performance of an employee during a given period using options ranging from 1-Outstanding to 5-Unsatisfactory.

Performance-related pay
Monetary payments made to employees based on how well an employee has fulfilled job expectations.

Perquisites
Property or privileges extended to an employee.

Personal days
Authorized absences that are generally considered as paid time away from regularly scheduled work, but can be either paid or unpaid.

Phonetic keys
The keys you use to access employee data using the phonetic spelling of an employee's last name.

Pixel
The smallest rectangular area of an image on a screen.

Plan deactivation
A process that makes a plan inactive and prevents future employee enrollment.

Plan ID
A three-position, alphanumeric identifier for a plan in the system.

Plan shutdown
The process of de-enrolling an employee from all benefits plans because of a separation activity.

Plan year
The 12-month period over which a salary budget is effective.

eCyborg Interactive Workforce specific—The calendar, policy, or fiscal year in which the records of a Benefits plan are maintained.

Policy tables
Highest level tables that are used to record the generic (or master) rules for an organization or group of employees. These included your organization's rules relating to working time procedures, such as clocking in and out, docking for lateness, and overtime. Each

policy consists of a Policy Master table and one or more Policy Activities table.

Pop-up menu
A menu that appears when you use the second mouse button within the system. This menu contains context sensitive commands and options that relate to the object you have clicked on.

Portable document format
See PDF.

Position
A specific role with an organization—for example, Accounts Manager.

Alternative definition: to place an object in a specified location.

Position Administration Control Number
Two-character alphanumeric value that tells Position Administration which tables to use for a specific company.

Position complement
A 'Position complement' is the value of a Position. The organization complement is the total value of all Positions included in the complement.

Position in range
The difference between a given salary and the minimum of the salary range, divided by the difference between the range's maximum and minimum, and expressed as a percentage.

Posttax
A contribution made after taxes have been withheld from earnings.

Premium
The amount of money an organization agrees to pay an insurance company for a policy or annuity, or the amount contributed by an employee to the employer to cover the employee's portion of the total premium.

Prenotification
Informing a bank or credit union that an employee will be using direct deposit with them in the future. Cyborg recommends that you fill out the Direct Deposit Information form two pay periods in advance of the first deposit date. This ensures that a prenotification record is provided to the bank or credit union in a timely manner.

Pretax
A contribution made before taxes have been withheld from earnings.

Primary account
The account set up in eCyborg Interactive Workforce to receive an employee's pay or reimbursement checks. After deductions and deposits to additional (secondary) accounts, the remainder of pay is deposited into the primary account.

Process
A subset of a component that logically groups tasks on the Navigator or menu. For example, the process 'Maintain Employee Details' contains tasks such as 'Basic Employee Information' and 'Personal Information'.

Alternate definition: An action that brings about a result.

Process bar
The graphical representation of a process on the navigator. Each process bar is within a Component.

Program
A program is a series of classes being administered using Training Administration. For example, 'The Cyborg Training Schedule for January-June 1996' may be a program consisting of eight different classes.

Alternative definition: a form or other program within the system, accessed directly from the Command dialog box. For example, form EF-SCR is a program.

Protected amount
The amount of disposable income protected from garnishment in the US This amount may vary from state to state.

Prototype HED
An HED defined on a benefits form for use in recording employee/organization contributions when an employee is enrolled in a benefits plan. This allows the setup and maintenance of payroll deductions using Benefits Administration.

Provider
A provider is an instructional institution, organization, or person who is available to teach training courses.

Push button
A button on the interface which appears depressed when clicked on (now known as command button).

Quartile
Points that represent the division of a salary grade range into four equal parts.

Query alternate keys
The keys you use to access the employee master record in an order other than by primary key.

Query primary keys
The keys you use to direct your QUERY program to a record type.

Quick Hire
The process of hiring an employee by entering one two-panel form with the required data elements rather than entering a series of forms.

Radio button
A button on a form that selects an option, the radio buttons that make a field are mutually exclusive (now known as an option button).

Recall
Return a laid-off employee to active status, usually with no affect to benefits.

Reciprocal taxation
Reciprocal tax withholding refers to agreements made between US states and (or) localities regarding income tax calculation and reporting for compensation paid to an employee who lives in one state or locality and works in another.

Record
A complete set of fields, such as the fields that make up a tax form or a name and address record.

Alternate definition: To set down for preservation in writing or other permanent form.

Recruitment
Process of finding and hiring new employees who meet the needs of your organization.

Recycle File
P05IN; A file that contains employee data and pay document information required for payment reconciliation. It also contains time entries to be processed and paid at a later date. This file is used to pass data to the next payroll or maintenance run.

Registration
Registration is the act of enrolling an employee in a class.

Registration number
A three-digit registration number is assigned to employees for tracking purposes when they register for a training class. This enables the order in which the employees registered to be viewed.

Rehire
The process of hiring a former employee of your organization. Typically, a break in service is incurred and benefits must start over (usually requiring a new adjusted seniority date if used in benefits tracking).

Reimbursement account
The account into which employee's travel and other expense type reimbursement checks are directly deposited.

Reinstatement
The process of returning a former employee to active status within a certain time period (such as 90 days), thus qualifying the employee to have certain benefits restored to the original hire date.

Reject time
The point at which an error condition will occur. An error condition must be manually corrected/approved and approved before a time entry can be generated by the system.

Relocation
The process of moving an employee from one organization to another geographic location, whether the move be domestic or international. This process also applies to applicants who are being relocated as part of the hire process.

Remaining net pay
The 'bucket' of money that is left after all employee deductions and taxes have been taken from the employee's gross pay. This 'bucket' of money can then be used for multiple deposits if the enterprise sets up multiple deposit HEDs.

Replication
The automatic process of writing changes made in the Employee Database and option lists and tables in the System Control Repository to the Replication Holding File (FILE08).

Replication Application
English Language program (DSAPLY) that reads records from the Replication Packet File (FILE20) produced by the Replication Reception program (DSRECV) and updates the System Control Repository and Employee Database accordingly.

Replication Distribution
Two COBOL programs that work together to distribute and receive updates. The Replication Distribution Program (DSTRIB reads either the Replication Holding File (FILE08) or a Replication Packet File (FILE20), selects data applicable to a specific DL and writes all necessary data to a new output-only Replication Packet File (FILE21). The resulting FILE21 will be processed on the remote DL via the DSRECV Replication Reception program.

Replication Holding File
FILE08. This file contains additions, changes, and deletions to the System Control and the Employee Database. Data is distributed from and written to this file, based on the data distribution rules configured for the target DL by the source DL.

Replication Packet File
(FILE21/20). This file contains data changes and is created specifically to update a target DL. This information may include Company/Employee data, tables and option lists, and time entry and adjustment records.

Report
The term report refers to a report produced on paper.

Report Generator
A program that produces the batch payroll and the batch payroll reports.

Report Group
A series of packaged reports that are created using the Report Group Activities form and are run together.

Report Group Scheduler
This is the program that allows you to schedule reports. This was formerly known as the Report Scheduler.

Report parameters
Specific guidelines for determining the information to be processed by a given report or program.

Requisition
A formal request to fill a vacancy or vacancies.

Requisition candidate
A candidate for a vacancy represented on a requisition.

Requisition limit
A total unit value of a requisition.

Requisition unit
The value of a requisition expressed as an FTE, hours, salary or headcount.

Retirement
Occurs when an employee retires from the organization.

Return
The activity of an employee returning as an employee to active status, usually following a leave of absence.

Alternative definition: key on keyboard used to perform a carriage return, can also be known as Enter.

Review process
A method used by an organization to evaluate an employee's salary or performance in a standard, timely manner.

Roll-up reporting
Option that enables packaged reports to be processed within organizations (roll-up).

Rotation pattern
A way of describing the working pattern for a group of employees (crew) who regularly work different shifts.

A crew is a group of employees who together regularly work the same schedules according to a rotation pattern.

Safety standards
Legally-mandated workplace safety standards.

Salary budget record
Defines, for each employee, the budgeted increase amount, percentage, and effective date for a specific salary plan year, and the prorated effect of this increase on the budget in terms of amounts and percentages for each employee.

Salary grade
A range of salary amounts associated with a particular job.

Salary grade range
A range of salary amounts associated with the salary grade for a particular job.

Salary plan
A set of rules or guidelines used to budget for salary increases for the coming year.

Salary plan year
A 12-month period over which a salary plan is effective.

Salary range
The span of salary amounts from the minimum to the maximum of the employee salary grade.

Salary review
A periodic evaluation of an employee's compensation.

Salary review authorization form
Hard copy format of the employee criteria necessary to review and approve proposed salary increases.

SAT file
The Solution Series form appearance table. Simple text file that reflects the form's layout.

Save Changes
Saves the page (form) the user completed. (When you click 'Save Changes', eCyborg Interactive Workforce saves the information on the page whether or not the user made changes.)

Schedule Activities table
Identifies activity types for each point in a work day where the process of clocking in and out should be dealt with. Each Schedule activity also contains time parameters that will be used to calculate whether an employee will be docked or credited time.

Schedule assignments
Also referred to as a schedule. This term refers to the details of the Schedule Master tables to which an employee is assigned. These details include the date the assignment took place, the Schedule Number and Sub-Schedule Number, and (if applicable), the crew to which the employee is assigned.

Schedule error
Occurs when a clock transaction (ring) time falls outside of an employee's schedule reject times.

Schedule Master table
Used to set up your organization's Time and attendance rules (such as HEDs and the minimum number of hours an employee must work before a meal deduction is made). A Schedule Master table is associated with a Calendar Routine, earnings Code, and Shift Premium table by entering the appropriate identifier.

Schedule number
A unique three-character alphanumeric identifier used to partially identify a schedule table.

Screen
Now known as a form.

Scroll bar
When information on a page takes up more than one screen of your monitor, the system adds scroll bars to the right side of the screen. On the scroll bar:

- Click the up arrow to move line by line to the top of the page
- Click the down arrow to move line by line to move to the bottom of the page
- Click the double arrows to move several lines up or down the page

Click and drag the bar in the scroll area to manually move up or down the page.

Search argument
The value from an employee's master record used to search benefits tables to apply plan rules to specific groups of employees.

Search type
The definition of a field from an employee's master record to use as the search argument.

Secondary account(s)
Additional account or accounts at financial institutions that employees set up in eCyborg Interactive Workforce receive a portion of their pay. A primary account must be defined before an employee can set up additional accounts.

Security Officer
The assigned employee who is responsible for the setting up and monitoring of the security your Cyborg system.

Self-adjusting taxes
Taxes for which the system automatically recalculates the tax on a cumulative year-to-date basis on each payroll run.

In the U. S. these include FICA taxes: Social Security (tax record 101) and Medicare (tax record 103). The purpose of this calculation is to avoid any differences (of pennies) in FICA tax paid versus FICA tax due at year-end due to rounding on a pay period basis. In addition, certain state disability taxes and employee-paid state unemployment insurance taxes also self-adjust.

Sequential Master File
P20IN; The batch processing version of the Employee Database. This file contains organization and employee data, tax tables, and the object code for programs.

Service interruption
A period of time during which an employee did not maintain an active working status in the organization.

Service method
A calculation option list that determines the method for calculating credited service.

Session
When users log onto a software application, they begin a session. When they log off, they end the session.

Alternate definition: The period of time during which a class is held.

Shift
An employee schedule assignment for a given day. For a rotation pattern, this is a Sub-Schedule Number.

Alternative definition: key on keyboard, typically used to describe key combinations for a shortcut key.

Shift premium
A premium (or differential) added to an employee's regular earnings, overtime earnings, or both. It is represented by a shift code or HED Number.

Shortcut menu
A menu that appears when you right-click within The Solution Series 4. This menu contains context-sensitive commands and options that relate to the object (form, Navigator, and so on) on which you have clicked.

Sick days
The time off that an employee is allowed to take due to illness as a result of an employment contract or organizational policy.

Solution View
An online utility that provides the tools for creating new forms, fields, and report programs without the direct use of Cyborg Scripting Language.

Source DL
The node that owns the data being distributed. Depending on the rules established, the same DL can alternate from source to target.

Special assessment
Extraordinary or temporary taxes, such as additional employer-paid or employee-paid contributions to state unemployment programs or to mandatory health insurance programs.

Spinbox
A control on the interface composed of a text box and increment and decrement buttons that allow you to adjust a value from a limited range of possible values.

Spreadsheet application
Software for recording ledger entries, creating worksheets, graphing data, and other accounting functions.

Standalone Time and Attendance
Customers who are using the Cyborg's Time and Attendance Administration but not the Cyborg's Payroll Administration.

Static data
Includes organization and employee information, such as name and salary.

Static SQL
Data Definition Language (DDL) and Data Manipulation Language (DML) statements embedded in application programs.

Status bar
The bar that appears at the bottom of The Solution Series window. The Status Bar displays useful information, such as your current session number, the currently displayed organization and employee, and so forth.

Statutory employee
Any of the four categories of workers who are independent contractors under common law and are treated by statute as employees. These include:
(1) a driver who distributes beverages (other than milk) or meat, vegetables, fruits, or bakery products; or who picks up or delivers laundry or dry cleaning, if the driver is your agent or is paid by commission.
(2) certain types of full-time insurance sales reps
(3) an individual who works at home on materials supplied by you that must be returned to you
(4) certain full-time traveling or city salespeople.

Social Security and Medicare (FICA) taxes may or may not be withheld. Income taxes are not withheld from a statutory employee. A statutory employee will receive a W-2 with the ‘Statutory Employee’ box checked.

Sub-schedule number
A two-digit numeric text box used to further identify a schedule table.

Succession planning
Finding and developing employees for placement into identified key positions that are expected to become vacant sometime in the future.

Summary page
To help you see information at a glance, eCyborg Interactive Workforce uses summary pages. The summary page displays a short view of detailed information. For example, all your emergency contacts appear on a summary page. You delete the contact or proceed to the detail for the contact from the summary page.

Summary plan
A customer-owned description of a benefits plan.

Supplemental wages
Wages that are separate from regular earnings may be classified as supplemental wages and taxed using the default method. The default method means using a set percentage specified by the tax authority. Examples of such earnings are bonuses and commissions.

Surplus
A 'surplus' is an exceeded complement position.

System administrator
An individual responsible for maintaining a multi-user computer system, including a local-area network (LAN). Typical duties include:

- Adding and configuring new workstations
- Setting up user accounts
- Installing system-wide software
- Performing procedures to prevent the spread of viruses
- Allocating mass storage space

System Control Repository
This is the file that contains system definitions for The Solution Series*,* (FILE01).This was formerly known as the Control File.

System Generator
A type of Report Generator that performs system functions, such as defining data elements and system messages.

Table
Contains an organization's rules and policies and controls what actions take place at the employee level.

Alternative definition: means of displaying information in columns and rows.

Table Definition Record
Table containing data about the Position Administration table records, including the location of keys to associated tables.

Target DL
The node that receives the data being distributed. Depending on the rules established, the same DL can alternate from target to source.

Task
The lowest level of organization on the Navigator or menu, generally equivalent to a form. checklist, or dialog.

Task icon
An icon denoting a task. Task icons describe the type of task, including Forms, Checklists, Dialogs and others.

Tax authority
A government agency to which an employer and employee has statutory tax obligations. The tax authorities for which you handle taxes exist at the federal, state/province, and local levels.

Tax Authority File
A Cyborg-supplied file that contains all the tax-specific information needed to calculate taxes for tax authorities. This includes wage-bracket tables for different marital statuses and information relating to allowances and standard deductions. The sources for the contents of this file are tax specifications published by the various tax authorities.

Tax code
The three-character to seven-character Cyborg-supplied reference code that identifies a tax and that serves as the link between the Tax Specification Record and the employee tax record.

Tax Maintenance File
One of the two Cyborg-supplied tax files. A Tax Maintenance File is a file issued by Cyborg in conjunction with a Tax Update Bulletin (TUB). It contains all the tax specifications that are being updated in the bulletin, in the form of tax specification transactions. These transactions are typically used as input to the batch maintenance run in which tax updates are applied.

Tax specification
Each tax authority publishes tax specification information that specifies how each tax must be administered. This information specifies how employers should calculate taxes and how taxes should be withheld from employees (if withholding applies). The tax specifications can be in the form of tax formulas and (or) tax tables.

Tax Specification record
A record on your Employee Database that contains the tax specifications for a tax. The record contains all the information, as obtained from the governmental authority, needed to calculate tax amounts for the tax. The record may contain more than one tax; for example, US state Tax Specification records contain information for both state income tax and state unemployment insurance. Once a Tax Specification record is activated, tax specification information from the Cyborg-supplied tax files can be loaded onto the record on your Employee Database.

Tax table
A set of information required to calculate a tax, for a specific set of employee parameters. Tax tables are stored and maintained in Tax Specification records. A table typically includes wage and bracket information and data relating to allowances, such as personal exemptions and to standard deductions. There can be several tables relating to marital and resident status in a given Tax Specification record.

Tax type
This term refers to various categories of taxes, for example, income, National Insurance, unemployment, disability, Social Security (FICA-OASDI), and Medicare (FICA-HI).

Taxability
The term refers to whether an hours, earnings, and deductions amount is to be included in taxable wages to be accumulated for a specific tax. If the hours, earnings, and deductions amount is excludable, then the amount is not included in taxable wages. If the hours, earnings, and deductions amount is taxable, then the amount is included in taxable wages. The term fully excludable or fully taxable implies that more than one type of tax is being referenced, for example, state income tax and state unemployment insurance in the US.

Taxable wage base
The taxable wage base represents the maximum amount of an employee's wages on which tax is levied and after which there is no liability. A wage base in the US

typically is in effect for FICA, unemployment taxes, and disability.

Tax-related Regulatory Bulletin
A TUB contains the updates to tax specifications supplied by Cyborg, consisting of a bulletin document, a tax file that contains the updated tax specifications, and a printed listing of tax specification transactions with the updates.

TDR
Table Definition Record.

Template
A basis from which to create a custom item. For example, you can use an existing Cyborg report as a template for your custom report.

Temporary password
A set of alphanumeric characters used with a user ID to limit access to a software application. The system requires that users replace their temporary password with a user-defined password within a certain number of days.

Termination
The activity of an employee no longer being employed by the organization.

Test environment
A separate organization or system partition used only for testing.

Text box
A control on the interface in which text can be entered and edited (formerly known as a field).

Text qualifier
The character surrounding an item between delimiters. All values between the qualifier are data items and are not scanned for a delimiter. This allows a delimiter character, such as a comma, to be a valid data item. Example:

"item 1","item 2","item 3, 4 and 5"

This string contains three data items:

Item 1

Item 2

Item 3, 4 and 5

Although the third item contains a comma, it is ignored as a delimiter because it is between the text qualifier of speech/quotation marks (").

Time entry
The form in which you enter the hours worked for an employee. This was formerly known as a Time Card.

Time entry extract file
A file of time entries external to the Time and Attendance Solution that is used to feed to payroll.

Time entry validation
The Time Entry Validation/Creation program identifies and assigns an activity, for example Clock In (1), to each clock transaction (ring) when performing the validation function. Each clock transaction must be assigned to an activity, in order for time entry hours to be calculated for an employee, for a particular shift. This program validates clock transactions (rings) and generates time entries.

Timeout
The period of time that elapses before a user's eCyborg Interactive Workforce account becomes invalid because of inactivity.

ToolTip
A standard Windows control that provides a small pop-up window that provides descriptive text, such as a label, for a control or graphic object.

Top-down appraisal
Appraisal made by a supervisor or manager of an employee's capabilities. Such an appraisal is generally based on the supervisor's or manager's day-to-day observation of an employee's work performance and will usually include an appraisal interview with the employee.

Trainer
Trainers are set up on the Provider Index Form. They are instructional institutions, organizations or persons who are available to teach a training class.

Trainer code
The trainer code is a four-character value that represents a trainer. This value resides in Option List TR38.

Training area
The training area is recorded on the Class Schedule Form. It is typically defined as the section of the organization to which the training applies, such as manufacturing.

Training class results
These are the class details and absence information recorded on the Process Class Results form. Details recorded include the objectives met when taking a training class.

Training class status
The status value is updated and displayed on the Class Schedule Form. It tracks whether the training class is canceled, full or available.

Training course code
The training course code is a six-character value that represents a training course. This value resides in Option List TR33 and is associated with a course title.

Training plan
A plan of training courses that an employee will attend in the future to achieve the necessary skills to perform a job.

Training reason
The reason for training is used to identify why a training request has been made. For example, the purpose of the training to act as a refresher, to acquire new skills, and so forth.

Training request
A training request is a request for an employee to attend a specific course or class. A formal request for training is not essential. This step could be omitted and the employee could be registered directly in the course of his or her choice.

Transfer
Process of moving an employee from one organization to another organization, such as moving an applicant from the applicant organization to the active employee organization.

Alternative definition: to move data or files from one computer to another

Trend analysis
Reporting or statistics that indicate the rate of change in costs and other elements of a benefits plan.

Trigger
A set of conditions that must occur for an email or letter communication event to start. This can involve the creation, deletion, or modification of forms or checklists within the system.

Tuition reimbursement
Remuneration made to employees for tuition expenses.

Type of training request
The type of training request indicated whether the employee was required to attend the training or whether he or she asked to attend the training.

Unauthorized absence
Absences that are generally not considered paid time away from regularly scheduled work.

Underlined text
In browser applications, text that provides a link to another screen or page.

Unemployment insurance tax
A tax required by some US states to be funded by employee-paid contributions to pay all or part of the cost of unemployment insurance coverage. On the Payroll Solution, state unemployment insurance tax records are established as Type 2 taxes.

Unpaid absence
Employee absence that will not be paid by the organization. A time entry will not be created for this absence.

Upward appraisal
Appraisal that calls for evaluations by those who work under the direction of the employee being evaluated.

URL
Acronym for uniform resource locator. A standard way of specifying the location of an object, typically a web page, on the Internet. URLs are the form of address used on the World-Wide Web. They are used in HTML documents to specify the target of a hyperlink which is often another HTML document (possibly stored on another computer).

User class
Cognos Impromptu assigns security according to configured user profiles. These security profiles are configured by your Impromptu administrator.

User code
A set of characters (up to eighteen alphanumeric characters) that, along with the password, identify the user to the system as a valid user user when they log on.

The user code is case-sensitive (upper case, lower case) and must be entered using the correct case.

User defined password
A set of alphanumeric characters created by users that allows them to view and update information in a software application.

User ID
A set of characters that identify you to the software application. The application contains a list of authorized users by user ID. When you attempt to log on, the system checks the list of authorized users to determine whether you have authority to use the application.

User profile
Used for security purposes to determine what you can and cannot do while you are using the system, and which parts of the system you can access. A user profile is created and maintained for you by a Security Officer. Each user of the system will have a user profile.

Vacancy
An open position that needs to be filled, or an unfilled complement position

Vacation days
The time off that an employee is entitled to as a result of an employment contract or due to length of service.

Validation
The process where the Time Entry Validation program identifies and assigns an activity to a clock transaction (ring) when performing the validation function.

Variant forms
Method of displaying country-specific variation of Cyborg-delivered forms.

Waive
The act of choosing not to enroll in an optional benefits plan.

Warning time
Used to set a period of time after which an employee will appear on the exception report for a particular activity. A Warning condition will allow the creation of a time entry. A Reject condition will not. This is part of the Time and Attendance Administration.

Welfare benefit plan group
First level of the logical organization of welfare benefit plans in eCyborg Interactive Workforce.

Welfare benefit plan subgroup
Second level of the logical organization of welfare benefit plans in eCyborg Interactive Workforce.

Welfare plan
Any insurance or other benefit plan that provides immediate benefits to a participant—for example, medical insurance.

What-if mode
Method for processing a report that allows viewing of information without updating of employee records.

Window
A standard Windows object that displays information. A window is a separately controllable area of the form that typically has a rectangular border.

Wizard
A form if user assistance that automates a task through a dialog with the user.

Work area
The Solution Series screen. It includes the menus, toolbars, Navigator, forms area, message area, and status bar.

Work instructions
Specific tasks to be completed during the migration of data and files from test to production.

Work restrictions
Restrictions that prevent an employee from participating in specific workplace functions.

Worker's compensation
Legislation in the US that provides compensation to employees who suffer work-related injuries.

Workforce competency
The capacity of the overall workforce to perform required functions and sets of activities.

XHTML
Extensible HyperText Markup Language, used by the help pages for eCyborg.

Year End Master File
P20OUT file from the final payroll run of the year
